3. The unequal division of the daily service for a period of one month, with an average work period of eight hours per day.

Work on the high seas that is of a permanent character shall be accomplished through division of the personnel into groups which will work in turn throughout the day and night to assure the proper management and care of the boat and those upon it. The organization of the work may include day and night shifts and collective and discontinuous service.

When a ship is in port, personnel is grouped in each class for day work. This work is discontinuous and is to comprise all the labor commanded by the captain. Even in ports, however, the watch service and night-guard service and certain other special work that must be continuous, such as that involving the heating of the ship, refrigeration, the attendance on electric dynamos, and service of passengers, may be accomplished through shifts which shall succeed one another day and night without interruption.

The effective work period is to be considered in all cases as that time during which the workmen are at the command of the captain outside their living quarters. However, in the ports all the period of presence aboard at the disposition of the captain is to be considered as a period of effective work.

SPECIAL RULES

The following special rules apply to all ships, whether steam or sail vessels, engaged in commerce in the larger sense, including vessels on long voyages and international coastwise trips:

Sea Service.

Bridge service.—In sea service all vessels of whatever class, subject to the exceptions indicated below, are required to have a bridge service organized in three shifts at least, thus establishing a strict eight-hour day. On such sailing ships and on such mechanically propelled ships falling into the class of cargo boats as are devoted to long sailings or international coasting trade, the bridge service may be temporarily organized on the basis of two shifts until an international agreement among the great maritime nations shall be organized enforcing the eight-hour day. In such cases, however, all hours in excess of eight hours per day give right to overtime payments or to a compensatory reduction of a later working period.

Engineering service.—With the exceptions mentioned below, all ships driven by mechanical power must have the employees in their engine rooms organized on the basis of three shifts. For this class also, therefore, the eight-hour day is established.

General maintenance service.—On ships of all sorts workmen in the general service must be so organized that each person is assured of eight hours uninterrupted rest and four hours in addition for meals and for his own affairs. The eight-hour day, strictly considered, is therefore still not demanded for men in this class.

Exceptions to the above rules are made in the case of certain cargo boats propelled mechanically and devoted to the coasting trade. In such cases the crew may be organized in two shifts for the bridge service and for the engineering service when the vessels are not at sea normally for 24 hours or more.

On all ships mechanically propelled, also, the crew may be organized in a single shift for bridge and engine-room service, when during each 24 hours the period of effective work is either (a) not greater than eight hours, or (b) not such as demands more than six consecutive hours on the bridge or five consecutive hours in the engine room, or (c) one which allows the crew a period of at least six hours uninterrupted rest.

Port Service.

In port, except in cases involving force majeure—of which the captain is the sole judge—and except as provided below, the

period of effective work which can be demanded from each man of the bridge service, engine-room service, or general service can not exceed eight hours a day, including service on watch or on night guard. In the case of those special services that demand permanent and uninterrupted functioning, such as heating, refrigerating, attention to electric dynamos, and attendance on passengers, the work conditions shall be as set out in the contract of employment or, in default of such determination, according to the usages in the home port of the vessel and on the basis of an average eight-hour day.

The period of daily work may be prolonged beyond eight hours, in order to carry out under exceptional circumstances the watch and night-guard service, or supplementary day and night work made necessary to hasten commercial operations, or the execution of repair work which demands the presence of specialists. These exceptions, however, must not increase the workday to more than 10 hours for daywork or to more than 9 hours for night work. The captain must enter on his journal the exceptional circumstances which justify the demand for extra work of these classes.

Special Regulations for Miscellaneous Services.

The new decree provides also special rules regulating the conditions of work on tugs and lighters, and in connection with buildings or engines employed in maritime work. There are also special rules for private boats and other special-class boats. The rigors of the law are also modified temporarily, in order to allow adjustment of existing equipment and practices to the new standard of employment.

Danzig Recognizes United States Tonnage Certificates

Mutual recognition by their port authorities of tonnage registers issued by the Free City of Danzig and by the United States has been achieved through the

action of the harbor council of Danzig for recognizing certificates of admeasurement issued by United States authorities. (Office of American Legation, Warsaw, Poland.)

Faster Boat for Rhine Freight Traffic

Consul General F. T. F. Dumont, Frankfurt-on-the-Main, March 5

The Rhenus Transport Gesellschaft m. b. H., one of the largest freight-carrying concerns of Germany, has recently acquired a boat equipped with two Diesel 250-horsepower motors capable of attaining a speed of 10 to 12 kilometers an hour against the current, a considerable advance over the speed of boats now in use for Rhine and Main River traffic.

The new boat measures 65 meters over all, with a beam of 8.70 meters, and draws 2.30 meters when carrying a cargo of 725 tons. The waste gases from the engines are utilized to heat the cabin, pilothouse, etc. An auxiliary dynamo connected with the engines charges the batteries that enable the cargo hoists, anchor windlasses, etc., to be worked when the engines are not running. The vessel is equipped with a new type of Flettner rudder.

The Diesel engines, method of heating, storage batteries, and improved type of rudder give the new boats such advantages over the present Rhine freight boats, in the way of rapidity and cheapness of operations, that the Rhenus Co. proposes to make them replace its fleet now operating between Rhine, Main, Belgian, and Dutch ports. To this end it has given orders for seven additional new-type boats, with others to follow later.

RAILWAYS AND ROADS

Proposed Autonomy for Rumanian State Railroads

Commercial Attaché Louis E. Van Norman, Bucharest, March 25

For several years the desirability of granting "autonomy" to the Rumanian State railroads has been discussed. In western phraseology this would probably be considered as financial independence and would mean that the railroads, while continuing under State authority, would have control over their own budgets, could use surplus revenues for betterments and extensions, and perhaps could even have authority to pledge resources and revenues for a foreign loan.

An outline of a project recently drawn up by the director general of the railroads, which will probably be voted on by Parliament during the present session, indicates that the contemplated autonomy is nothing more than a new project for the reorganization of the railroads. Under this plan the railroads would continue under the control of the Minister of Communications, functioning in peace times in accordance with civil laws and regulations, and during war passing under military control. In view of their service to the State and the general public the lines would continue free of taxation.

Administrative Organization and Policies.

There are to be two organs of control, to be known as the "Council of Administration" and the "Direction General." The council will be composed of nine members, eight to be named by the Minister of Communications and the ninth by the Minister of War. Of the eight, three are to be engineers, one a financial expert, one an authority on legal matters, one a business man, and one an agricultural authority. These

members will be elected for four years, with the right of reelection.

It is proposed that the council concern itself chiefly with the fixing of rates, since it is expected that under the new system the lines will be self-supporting. Nothing less than full rates are to be charged, free passes being abolished. Under the new arrangement the budget of the State railroads would no longer appear on the national budget, except when there is an actual net income, in which case it would be turned in to the National Treasury. Before such net income could be realized, however, 45 per cent of the gross income would have to be used for upkeep and betterments, an undetermined percentage for the construction of new lines, and 10 per cent for bonus for the personnel.

Argentine Railroads Prosper

Trade Commissioner George S. Brady, Buenos Aires, March 19

The Argentine railroads have been experiencing a period of prosperity, and the arrival in Buenos Aires during March of the chairman of the London boards of the Central Argentine and the Buenos Aires Southern Railways is heralded as an indication of the adoption of big expansion policies by both these systems.

Practically all the foreign-owned lines in Argentina paid dividends of 6 and 7 per cent on their common stock for the financial year 1923-24, and the increased receipts since the beginning of the present year assure satisfactory dividends for 1925. Operating expenses have been greatly reduced since 1921.

The Entre Rios Railway has lately announced that it has paid up all back interest on its preference shares accumulated during the war period, and expects to be able to declare dividends on its common stock. The Buenos Aires Western on March 1 announced an interim dividend of 2½ per cent free of income tax on common stock, with prospects for a total of 6 or 7 per cent for the year.

The following table shows the increased receipts of the principal railways for the first eight months of the financial year 1924-25, as compared with an equal period of the previous year:

Statistics of Argentine railways, July-February

Railway	Mileage	Ownership	Gross receipts, July-February (in thousand pesos)	
			1923-24	1924-25
Southern.....	4,713	British.....	78,151	87,944
Central Argentine.....	3,305	British.....	86,031	89,365
Pacific.....	2,607	British.....	56,525	59,332
Western.....	1,882	British.....	34,821	37,706
Santa Fe.....	1,188	French.....	13,331	15,319
General Buenos Aires.....	790	French.....	9,942	11,999
Central Northern.....	3,055	State.....	6,560	6,572

Extensions and Improvements Authorized.

The London board of the Central Argentine has approved the electrification of the suburban line from Buenos Aires to Villa Ballester, and the board of the Buenos Aires Southern has approved a large program of new extensions, double-tracking, and a new station building for Buenos Aires. The Buenos Aires Pacific intends to begin work at once on a new terminal station in Buenos Aires, as well as other improvements.

Swedish Locomotive Builders Test New Invention

Consul General Claude I. Dawson, Stockholm, March 13

A new invention for power transmission on railway engines is being tested by Swedish locomotive builders which, if successful, is said to promise a considerable reduction in fuel consumption and other costs of running. The invention, according to local press reports, comprises a new method of transmitting power from Diesel motors to the driving shafts by means of hydraulic motors. A Swedish firm has commenced building an engine in which this invention will be embodied. A patent has been applied for in several countries, and no information concerning the details of the invention will be available until letters patent have been granted. The first engine of this type is expected to be ready for testing purposes about the middle of 1925.

Argentine Road Funds for 1925

Under the Miter Law of 1907, 3 per cent of the net receipts of the railroads of Argentina is applied to the conservation and construction of roads in the vicinity of the railroad stations. The amount to be thus expended during 1925, as reported by Commercial Attaché E. F. Feely and Trade Commissioner G. S. Brady, at Buenos Aires, is 1,391,570 paper pesos (\$556,628); this will be distributed among the Provinces and Territories for use on a total of 2,240 kilometers of roads.

[The amount allotted to each province may be ascertained on application to the Transportation Division.]

Exhibits Available

Persons interested in the following reports may obtain them from the Transportation Division or through the district and cooperative offices of the Bureau of Foreign and Domestic Commerce by requesting the proper exhibit number:

26316—*Madrid*.—Annual report of the Madrid subway for 1924. (Transmitted by Commercial Attaché C. H. Cunningham, Madrid.)

225—*United States*.—Steamboat-inspection rules amended; 36th supplement to general rules and regulations, issued by United States Steamboat Inspection Service. (Copies of the 36th amendment, containing the amendments of rules in full, may be obtained from any board of local inspectors of the Steamboat Inspection Service.)

166947—*Kovno*.—Lithuanian export trade through the port of Libau, Latvia. (Transmitted by Vice Consul C. M. Gerrity, Kovno.)

226—*Peking*.—Operating conditions on the northern lines, Chinese Government railways; comparative statement prepared in the office of the Chinese Director General of Railways. (Transmitted by Assistant Commercial Attaché A. H. Evans, Peking.)

167073—*Coblenz*.—Rhine shipping, its present situation and its problems; a detailed study of traffic movement, rail competition, rates, improvements, and projects, etc. (Transmitted by Vice Consul C. E. Macy, Coblenz.)

166525—*Port Elizabeth, South Africa*.—Prevailing freight rates on principal commodities shipped from Port Elizabeth to London and the United States, as of March 1, 1925. (Transmitted by J. R. Perry, clerk in consulate, Port Elizabeth.)

224—*Tokyo, Japan*.—A summary of the annual statement of the Japanese Government Railway for 1924. (Transmitted by M. Katsumata, Japanese secretary, Tokyo.)

225—*Rome, Italy*.—Annual report of the Italian State Railways for 1923-24, including four graphic charts that show financial results, receipts of traffic densities, carloadings and tonnage, and variations in numbers of employees. (Transmitted by Commercial Attaché H. C. MacLean, Rome.)

167103—*Birmingham, England*.—British and German railway rates, giving comparative rates from Birmingham to the principal ports and those operative in Germany over like distances. (Transmitted by Vice Consul Oscar F. Brown, Birmingham.)

New Polish Aviation Company Formed

Consul Donald R. Heath, Warsaw, March 20

A Polish company is being organized for the inauguration of regular aerial communication between Posen and Warsaw during May, 1925. The trip will require from three to three and one-half hours. (Consul Donald R. Heath, Warsaw, March 20.)

American Consulate at Bushire, Persia, Closed

The State Department advises that it has been decided to close the American consulate at Bushire, Persia, and that the records and archives are being stored in the American consulate at Bagdad.

Shanghai Lumber Market Weak

The Shanghai, China, lumber market is dull and imports are likely to be less than were anticipated, according to a cable dated April 20 from Commercial Attaché Julean Arnold, Peking. Attempts have been made to dispose of some small quantities by auction but without success.

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

RECENT GOLD MOVEMENT TO AUSTRALIA

Consul Norman L. Anderson, Melbourne

The movement of gold from the United States to Australia, which took place in the early part of the year, is explained in some quarters as purely a trading feature, made possible and profitable by the fact that the Australian pound was at a small premium in relation to the British pound and the American dollar, and regarded as having no special significance in regard to the question of a return to the gold standard by Australia. Another authority, however, states that the banks are not so much concerned with profit making on the import of gold as with the necessity of building up cash reserves.

Bank opinion generally is believed to be opposed to the view of the chairman of the board of directors of the Commonwealth Bank (Mr. J. J. Garvin) that the banks already had large stocks of gold, and holds that a further building up of the gold reserve is necessary during the period of adjustment if the Commonwealth is to be made a free gold market once more. It is to be noted in this connection that the act prohibiting the export of gold from the United Kingdom expires on December 31, 1925.

Transfer of Gold from New York to Australia—Gold Production.

The underlying computation in the transfer of gold from New York to Australia is described by a reputable authority as follows:

A bank pays £96 10s. for £100 of English money. This is transferred to New York, where conversion is affected at, say, \$480, containing sufficient gold to produce the equivalent in Australia of about £98 12s. 8d. Deducting 30s., representing transfer charges and cost of minting in Australia, from the £98 12s. 8d. leaves £97 2s. 8d., or a profit to the bank of 12s. 8d.

Gold production in the Commonwealth during 1924 amounted to 674,115 fine ounces, as compared with 695,116 in 1923. The output for the five years 1910 to 1914, inclusive, amounted to 11,795,115 fine ounces, as compared with 3,827,669 for the five years 1920 to 1924. The gradual decline is illustrated by the following data, showing the production by years since 1910:

Years.	Fine ounces.	Years.	Fine ounces.
1910 -----	2,720,005	1918 -----	1,273,188
1911 -----	2,484,068	1919 -----	1,068,102
1912 -----	2,328,406	1920 -----	943,654
1913 -----	2,207,433	1921 -----	758,005
1914 -----	2,055,203	1922 -----	756,779
1915 -----	1,946,908	1923 -----	695,116
1916 -----	1,665,827	1924 -----	674,115
1917 -----	1,456,169		

Final Settlement of the Cuban Floating Debt

Based on report from the American Embassy, Habana

Following the termination of the work of the Cuban Debt Liquidation Commission, a law was enacted on February 18, 1925, relative to the final disposition of the floating debt of Cuba. This law provides for the payment of the remainder of bonuses to Government employees, and for the balance of the floating indebtedness. It stipulates that from funds on hand in the

treasury not pledged for other obligations \$3,822,079 shall be used for the payment of 50 per cent of the bonuses due the officials and employees of the Government, the Provinces and the municipalities, the remainder to be provided for in the budget of the next fiscal year.

Disposition of the Floating Debt.

From disposable funds in the treasury \$3,500,000 are to be applied toward payment of 25 per cent of the claims approved by the debt commission, after deduction of sums already paid the creditors by virtue of Executive Decrees No. 761 of 1923 and No. 62 of 1924. (These decrees provided for payment of the floating debt in the proportion of 70 per cent of the approved claims against the Department of Public Works, and 30 per cent of the claims against the other departments.) The payment of 25 per cent on the present balance of these claims, which is now being made by the treasury, will leave a balance of 22.5 per cent still due on claims against the Department of Public Works and of 52.5 per cent on all other claims.

In Four Annual Installments.

Provision is made for the final liquidation of the claims by stipulating that in each of the annual budgets for the next four fiscal years there shall be included a credit sufficient to cover the payment of one-fourth of the balance, with interest at 6 per cent per annum accruing from date of the 25 per cent payment provided for in the law of February 18, 1925. The floating debt, therefore, should be fully paid up by the end of the fiscal year 1928-29. Provision is also made in the law to the effect that said payments shall not be modified nor revoked by a subsequent law.

Objection to the original bonus and floating-debt payment bill, as presented in the House of Representatives, has been overcome by providing that these payments shall be made out of disposable funds and funds not pledged for special obligations. This change will be effected by having the final surplus of the 1923-24 budget go into the disposable funds of the treasury.

Czechoslovak Official Bank Discount Rate Increased

Commercial Attaché James F. Hodgson, Prague

The banking office of the ministry of finance increased the official discount rate from 6 to 7 per cent, effective March 25, 1925. The rate for advances on collateral remains unchanged at 8 to 8.5 per cent. It is reported that one of the reasons for this change was the disparity of the Czechoslovak official discount rate and the discount rates of the neighboring countries, especially Germany and Austria.

Security Values Depressed—Highest Rate Attained.

The immediate effect of the increase was to depress values of securities quoted on the Prague stock and money exchange. Bank shares also declined to some extent, but showed more resistance than the industrial shares.

The 7 per cent discount rate is the highest that has been in effect since the formation of the Republic of

Czechoslovakia, and has only been reached once before, from December 20, 1922, to January 14, 1923. The lowest discount rate was 4.5 per cent for the period May 28 to November 28, 1923.

Chinese Railway Earnings Increase

Assistant Commercial Attaché, A. H. Evans, Peking

The total income of the Chinese Government railways for the nine months ended September 30, 1924, amounted to 86,075,930 silver dollars (1 dollar = \$0.54), according to figures recently published by the Chinese Government. Although this sum represents an increase of 10,362,277 dollars, or 13.7 per cent, over the nine months of the year previous, the last 10 days of the period under review showed a decline amounting to 563,768 dollars, attributable to the interference in railway operations by the military authorities. Movements of troops, moreover, are paid for in military script which, while helping to swell the total figure for income, is practically valueless as a circulating medium, except at a very great discount.

Austrian Exchange Regulations Modified

Commercial Attaché H. Lawrence Groves, Vienna

The Austrian Government has abolished all of the heretofore existing exchange restrictions by a decree published in the *Bundesgesetzblatt*, March 25, 1925. The national bank will continue to serve as a clearing house for all exchange transactions and will publish the official rates of exchange. The decree makes provision for the licensing of exchange dealers and specifies what records these must keep. The official exchange quotations of the national bank will be published daily in the official quotation sheet of the Vienna bourse. Foreign exchange dealers and brokers will be required to pay to the national bank amounts necessary to defray the expenses of clearing exchange transactions.

In reality this new decree restores an almost free exchange market. This change and the relatively strong position of the national bank as the central force in the exchange market have produced favorable comment.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

NEW COMPARATIVE LAW SERIES ANNOUNCED

A monthly mimeographed special-circular service, The Comparative Law Series, has been inaugurated by the Division of Commercial Laws. It will discuss subjects of special interest to foreign law counsel. The first number, which appeared in April, contained the following articles: Drafts Payable Abroad in Dollars; The New Guatemalan Trade-Mark Law; Commercial Arbitration in Rumania; and the report of an English case interpreting the phrase, "price for bar gold in London." The April issue may be obtained upon request to the division.

Settlement of Commercial Disputes in Danzig

Consul Edwin C. Kemp, Danzig

An American merchant in Danzig, having occasion to settle a commercial dispute with a Danziger, has two means available other than by private agreement—by arbitration and by court action.

Arbitration the Simplest Procedure.

Arbitration is by far the simplest and cheapest method and is obligatory if included in the contract. Danzig commercial law recognizes and gives binding effect to arbitration awards in the settlement of commercial disputes if a provision is contained in the commercial contract requiring that disputes arising thereunder shall be settled by arbitration, and if awards are in accordance with the civil process regulations, and stamped and approved by the court.

Should no arbitrators be mentioned in the commercial contract, and it provides that disputes be settled by arbitration, each party appoints one arbitrator. The party making claim informs the other of his appointment with the request that he appoint one arbi-

trator within a week's time. Should the latter fail to appoint an arbitrator in the period given, the second arbitrator may be appointed by the court upon the request of the party making claim. The arbitrators can give their decision after hearing the argument of both parties. They are not authorized to administer oaths to any party or persons or to experts. Should the arbitration award be issued and approved correct and stamped by the court, court proceedings may follow to force the acceptance of the arbitrators' decision.

The costs of arbitration amount to 3 per cent of the amount involved, or a minimum of 30 Danzig gulden (about \$6). The Danzig Chamber of Commerce has a general commercial court of arbitration for the conduct of commercial arbitrations, on the pattern of German courts of the same character. The Danzig law is practically the same as the German law in this respect.

Foreign Plaintiffs Must File Security for Costs.

Failing a provision or an agreement for arbitration of a commercial dispute, the case is tried in the Danzig court. Before any action will be taken by the court, however, foreigners, including Americans and only excluding Poles, are required to make a cash deposit with the court covering all costs of the case.

Civil court cases in Danzig are divided into four parts—filing, first pleading, testimony, and second pleading—for each of which the lawyers' fees, and court costs are the same, with the exception of second pleading, for which only half the schedule can be charged. If a case is dismissed before the testimony, the lawyer can only charge twice the amount of the schedule; if testimony is heard, three times the amount; but for a case including pleading after the testimony, he can ask only three and one-half times the amount of the schedule, the court charging the same.

If a foreigner (except a Pole) brings suit against a Danziger, or vice versa, the foreigner is required by

law to deposit in advance, before any action is taken by the court, a sum equal to three times the basic fee, to cover three parts of the trial procedure, with an equal amount to cover the charges due the opposing lawyer. At the conclusion of the case a refund is made of the unused amount. For example, if a foreigner brings suit against a Danziger to a value of 3,000 gulden, he is obliged to deposit with the court in advance 360 gulden for court fees and 360 for the opposing lawyers' fees, or twice three times 3 per cent of 3,000 gulden plus 30 gulden, and make a similar arrangement with his own lawyer, if he retains one. By virtue of a treaty, these rules do not apply to law suits between Danzigers and Poles.

Inconvenience of Rule Balanced by Its Necessity.

This requirement for a guaranty deposit for all court costs before any action is taken by the court in Danzig holds possibilities of embarrassment to American merchants, particularly the small trader with limited capital. Should he arrive in Danzig with a shipment of goods which represents the greater part or all of his capital, and this fact become known to an unscrupulous Danziger, the latter might possible attach the goods on a false representation, and the foreigner, having insufficient funds, and no further collateral upon which to raise a loan, might have to see his goods sold, and be unable to take any steps to protect himself from what would be plain robbery.

A number of unscrupulous characters, on the other hand, have taken advantage of Danzig's small area and its accessibility to start proceedings in court, and when it seemed evident that the decision would be unfavorable to them, disappeared, leaving the court unpaid. The rule, therefore, apparently is justified as a protection for the court and the legal profession against such characters. The American dealer coming to Danzig should be aware of the local regulations, and be prepared to meet them.

Commercial Law Briefs

Report on Taxation in the City and Canton of Berne Available.

The Division of Commercial Laws has received a report from Consul Thornwell Haynes on taxation in the city and canton of Berne, Switzerland, which will be loaned upon request. Refer to No. 167360.

Brazilian Income-Tax Returns Due June 1.

The principal modification of the Brazilian income-tax law, published in the Official Gazette of March 31, 1925, provides that it shall not be necessary to file 1925 returns based on the 1924 income until June 1, 1925. (Commercial Attaché W. L. Schurz, Rio de Janeiro.)

Chilean Income-Tax Laws Being Revised.

The present Chilean Government is enacting numerous laws and modifications to existing laws. At a recent meeting of the Junta de Gobierno, approval was given to a decree-law complementing the income-tax law. The text of this has not yet appeared in the Diario Oficial, but, according to excerpts in the press, a progressive surtax will be established on all incomes of 10,000 pesos or more. An income of 10,000 pesos will pay a tax of 0.5 per cent, and for incomes above this amount a graded tax will be assessed, beginning with 0.08 for each thousand pesos above 10,000 up to 100,000 and increasing to 0.7 for each 10,000 pesos in excess of 700,000 pesos. This section of the law becomes effective on June 1. Certain modifications to the

income-tax law itself also have been introduced, which are to be effective from January 1. (Commercial Attaché Ralph H. Ackerman, Santiago.)

New Argentine C. I. F. Decision Will Be Loaned.

Quite contrary in tenor to the case of *Amsinck v. Staudt*, in which inspection of the merchandise shipped on a c. i. f. contract was allowed before payment of the draft, the case of *Amsinck v. Buzzacaroni*, decided March 11 by the Commercial Court of Buenos Aires, holds squarely that title in a c. i. f. contract passes at the port of shipment and the voyage is for account and risk of purchaser. A copy of the decision, which has been appealed, transmitted by Commercial Attaché Edward F. Feely, Buenos Aires, is on file in the Division of Commercial Laws and is available for loan. Refer to T. F. c. i. f.

Amendment to Porto Rican Trade-Mark Law Proposed.

It is expected that a bill will be introduced into the Porto Rican Legislature to amend the trade-mark law of Porto Rico, Act No. 66, of July 28, 1923, to make it correspond more closely to the Federal statutes of the United States. The proposed amendment has been precipitated by conflicting opinions as to whether it is necessary to register American trade-marks under Act No. 66, or whether certificates of registration in the United States may be filed under section 17 of the Porto Rican trade-mark law in conformity with the old practice. The executive secretary has ruled in favor of filing. (Trade Commissioner L. W. James, San Juan, Porto Rico.)

Official Trade-Mark Publication of Peru Available.

Two copies of the Registro Oficial de Marcas de Fabrica, published by the Ministerio de Fomento of Peru, have been received from Trade Commissioner H. Bentley MacKenzie. This register contains a digest of trade-mark registrations made during the first six months of 1924, under Nos. 4460 to 4701, inclusive. The publication is issued in accordance with the decree of July 21, 1923, providing for a semiannual register of trade-mark registrations for the convenience of persons desiring to obtain evidence of registration after their records have been lost and for assistance in searches. The register is regarded as a public record and is admissible in evidence in court. The copies in the division are placed at the disposal of parties who wish to consult them, and will be loaned for a period not exceeding 15 days.

See also list of "Bureau's special circulars available" in this issue.

Situation in Czechoslovak Iron and Steel Industry

Little change in the iron and steel industry of Czechoslovakia was recorded during February. The Government's furnace at Isovee was again fired on February 22 after several months of inactivity, and it is reported in the local press that the Mining & Foundry Co. of Morava-Ostrava intends to start work in the three blast furnaces at Trzynietz. The Prague Iron Industrial Co. has also resumed operations at its works in Kralovy Hradec. Germany and Rumania sent in some demands for sheet iron during the month, and the Skoda Works in Bohemia and Moravia also received orders for some of their products from Poland and Ireland. (Consul S. E. O'Donoghue, Prague, March, 21.)

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

GENERAL TARIFF CHANGES

IRISH FREE STATE

Cable from Consul Charles M. Hathaway, Jr., Dublin, April 22

Revision of Customs Tariff.

Important changes in the customs duties on imports into the Irish Free State are embodied in the new budget introduced into the Free State Parliament on April 22. Certain duties are abolished or decreased, while others are increased and new ones imposed.

The import duties on tea, raw cocoa, coffee, and chickory are abolished. The rate on sugar is reduced from $2\frac{3}{4}$ pence to 1 penny per pound, and the British preferential (amounting to one-sixth of the full rate) on sugar is abolished.

All wearing apparel, blankets, and blanketing are made dutiable at 15 per cent ad valorem. The $33\frac{1}{3}$ per cent ad valorem rate applying on certain colored empty glass bottles has been extended to include all empty glass bottles and jars. All furniture wholly or partly of wood, and bedsteads of any material become dutiable at $33\frac{1}{3}$ per cent ad valorem. The existing 10 per cent rate on soap is increased by 10 per cent in case of toilet and shaving soap, soap powder, and substitutes.

Subsidy on beet sugar.—The budget also provides a subsidy averaging about 23 shillings per hundred-weight on beet-sugar production over a 10-year period.

IMPORT AND EXPORT RESTRICTIONS

CZECHOSLOVAKIA

Consul General C. S. Winans, Prague, March 23

Reduction of Import License Fees on Laces, Embroidery, and Ceramic Dyes.

By a decree of the Czechoslovak Ministry of Commerce, February 13, 1925, the license fees on laces and embroideries made of cotton, linen, or silk (items 192, 198, 211, 212, 247, 248) were on and after February 18 reduced to one-half of 1 per cent of the invoice value. In order to benefit by this reduction, however, applicants for licenses to import must submit, in addition to the customary application, a statement certified by the local Chamber of Commerce that the quantity of goods requested is in proportion to the extent of the applicant's operations, that he is a manufacturer of underwear or clothing, and that the embroideries and laces are to be worked up by him in connection with his manufactures and are not for separate sale. Further, it is decreed that any misuse or evasion of this regulation will be severely fined. The import license fee on ceramic dyes (item ex. 126) has been canceled from March 1, 1925.

Abolition of Import Licenses on Certain Commodities.

The Ministry of Commerce has abolished the requirement for licenses upon importation of the following commodities:

Effective February 16, 1925.—(Item 125) Cocoa butter; (item 150) minerals, not otherwise specified, not including kaolin and

burnt lime; (ex. 120) smoked herrings, (ex. 121) fish, not otherwise smoked; (item ex. 488-a&c) lead and zinc.

Effective March 1, 1925.—(Ex. item 290) Duplex paper for reproduction of transfer pictures; (item ex. 294) transfer pictures; (items 423, 424, 426, and 427) porcelain, porcelain goods and earthenware, and electric insulation accessories of porcelain.

Effective March 8, 1926.—(Item ex. 150) Clay and mineral substances, except manganese ore.

Changes in Export License Fees.

The Czechoslovak Ministry of Commerce has announced that beginning February 25, 1925, the fee for export licenses on waste containing lead (item ex. 488-c) is fixed at 3 per cent of the invoice value, and that after March 1 that on coal will be reduced from 1 per cent to one-half of 1 per cent of the invoice value.

Removal of Certain Export Restrictions.

It has also been announced that it will no longer be necessary to obtain a license for the exportation of the following goods from Czechoslovakia:

Effective February 16, 1925.—(Item ex. 150) Burnt lime and kaolin.

Effective March 1, 1925.—(Item 423) Electric insulation and installation accessories; (items 424, ex. 426, and ex. 427) porcelain and porcelain goods; (item 656) clay waste (broken earthenware); and (items 648 and 649) works of art, including copper and steel engravings, lithographs, wood engravings, as well as photographs, paintings on wood and metals (not precious), on canvas and stone, pictures, originals, and drawings on paper, if the artist himself exports the work of art and if the shipment is accompanied by a statement certified by the proper district political office that the article is the work of the exporter.

DENMARK

A. B. Fenselau, Commercial Attaché's Office, Copenhagen, March 31

Repeal of Law Prohibiting Coloring of Margarine.

The law prohibiting the coloring of margarine in Denmark has recently been repealed by Parliament. The use of aniline color is still forbidden, however.

ECUADOR

Cablegram from Consul Richard P. Butrick, Guayaquil, April 25

Exportation of Rice, Beans, and Other Necessary Foodstuffs Prohibited.

The recent decree prohibiting the exportation of foodstuffs from Ecuador included only rice, beans, and other similar foods necessary for home consumption. The exportation of cacao, coffee, bananas, and spices is not prohibited.

[A notice of the prohibition on the exportation of foodstuffs from Ecuador appeared in COMMERCE REPORTS of April 27.]

FINLAND

Kommersiella Meddelanden, Stockholm, March 31

Import Restriction on Grains, Seeds, Vegetables, Tubers, and Straw.

By a notice issued on March 7, 1925, ground and unground grains, seeds, vegetables, tubers, and straw may, until further notice, be imported into Finland only when special permission is granted by the Ministry of Interior.

[This measure has been taken to prevent the spreading of the foot-and-mouth disease.]

FRANCE

Eugene A. Masuret, Trade Commissioner's Office, Paris, April 9

Removal of Export Prohibition on Herrings and Sardines.

The export prohibition on herrings and sardines from France, established by decree of December 18, 1924, has now been removed, according to a decree of April 3 published in the Journal Officiel for April 4, 1925.

[Notice appeared in COMMERCE REPORTS for February 2, 1925, regarding the establishment of the export prohibition on whole herrings, fresh, salted, and smoked; herrings without head and tail, salted or smoked; boned herring, salted or smoked; and sardines, fresh or salted.]

Cable from Ambassador Myron T. Herrick, Paris, April 23

Permission to Import Frozen Fresh Pork Extended.

The relaxation of the French prohibition on the importation of American frozen pork has again been extended until May 31, 1925.

[A notice of the extension of this relaxation until March 31, 1925, appeared in COMMERCE REPORTS of March 9, 1925.]

GERMANY

Commercial Attaché Charles E. Herring, Berlin, April 4

Iron Pyrites Do Not Require Export License.

Iron pyrites (ex. 237L) are no longer subject to license for exportation from Germany, by an order of March 30, effective April 7, 1925.

HUNGARY

Consul General W. S. Reineck, Budapest, March 8 and 28

Limited Private Importation of Tobacco Permitted.

A recent decree of the Hungarian Ministry of Finance, published February 24, 1925, permits the importation and sale of small parcels of tobacco by a limited number of specified firms and individuals in Budapest. Under the terms of the concessions the firms in question are not permitted to purchase tobacco or tobacco products for stock in excess of the amount regularly allowed for their personal consumption, which is limited to 5,000 cigarettes or 7½ kilos of any other manufactured tobacco products per year. The concessionnaires may not sell foreign tobacco or tobacco products in an open place of business. They may, however, solicit on a cash basis individual orders and import on behalf of any customer an annual quantity not in excess of the above amounts. Private persons may also import tobacco for personal use upon permit from the Ministry of Finance. For larger imports a *special* license will be necessary. It is understood that these special licenses will not be easily obtainable. The concession is valid until December 31, 1927.

[Tobacco is generally under government monopoly in Hungary. A fuller discussion of the import of this concession will be found under the "Tobacco Section" of this issue.]

LATVIA

Acting Commercial Attaché C. J. Mayer, Riga, March 12

Government Control of Exportation of Livestock.

A new law regulating the exportation of livestock from Latvia was published in Valdibas Vestnesis March 7, 1925. Under this law the exportation of livestock is subject to control under the supervision of the Veterinary Administration. Exportation of livestock can be effected only upon a certificate as to the condition of health and suitability for export. Firms desiring to engage professionally in the exportation of

livestock must be registered at the Veterinary Administration. Special fees are assessed for the examination and registration of exported animals, which will be determined by the Ministers of the Interior, of Finance, and of Agriculture.

Exportation may be made only through certain customhouses and under regulations to be later issued by these three Ministers.

RUMANIA

Consul E. E. Palmer, Bucharest, March 6

New Import Regulations for Fruits, Preserves, and Sweetmeats.

The Rumanian Director General of Customs issued new license regulations governing the importation of certain fruits January 28, 1925. Fresh fruits, except lemons and oranges, may be imported free of license upon payment of the luxury import taxes. No special authorization is now required for the importation of jams, fruit, and roots preserved in honey, sugar, or sweetened alcohol, candied fruits, sirup, jellies, preserves, fruit paste, candies of all kinds, "Turkish delight" (rahat), which are also subject to luxury import duties.

The importation of the following articles is under license, subject to the payment of the ordinary customs duties:

[Dried and preserved tropical fruits (except olives, coffee, capers, nuts, almonds, raisins, figs, locust beans, and dates, as well as all such articles which are used for the manufacture of oils and for medical purposes and which are free.)]

COMMERCIAL TREATIES AND AGREEMENTS

AUSTRALIA—CANADA

Cable from Trade Commissioner Lynn W. Meekins, Ottawa, April 28

Further Negotiations on Trade Agreement.

According to a statement made by Premier King on April 27, at Ottawa, Canada will send a trade commissioner to Australia to conduct further negotiations regarding the trade agreement now pending between Canada and Australia. There is apparently little chance of ratification of the agreement by the Canadian Parliament during the present session.

CANADA—WEST INDIES

Trade Commissioner Lynn W. Meekins, Ottawa, April 18

Preferential Trade Agreement Conference.

It has been announced officially at Ottawa that the Canada-British West Indies Conference, for the purpose of discussing the possibility of extending greater tariff preference to certain products and for improving transportation facilities, will be held at Ottawa on June 19. The governments of Bermuda, Leeward Islands, Windward Islands, Barbados, Trinidad, British Guiana, Jamaica, and British Honduras have accepted the Canadian Government's invitation to send representatives. The Bahamas are also expected to participate.

[Under the Canada-West Indies Trade Agreement as now in force, the Canadian duties on products of the British West Indies are fixed at not more than 50 per cent of the general rates applying to similar products from any foreign country, special rates being extended to certain West Indian products, such as sugar, cocoa beans, rum, and onions. The concessions to Canadian goods in the British West Indies (except Bermuda) range from 25 to 50 per cent below the general rates.]

CZECHOSLOVAKIA-POLAND

Cable from Commercial Attaché James Hodgson, Prague, April 24
New Commercial Treaty Effective.

Effective May 13, 1925, a new most-favored-nation commercial treaty has been concluded between Czechoslovakia and Poland, and signed on April 23.

This treaty will later be placed before the Parliaments of the two countries for ratification.

[The United States has most-favored-nation status in both countries.]

GERMANY-PORTUGAL

Consul A. W. Killefoth, Berlin, March 2

Extension of Provisional Trade Agreement Ratified.

The German Reichstag ratified on February 24 the modified extension to January 2, 1926, of the provisional commercial agreement with Portugal.

[See COMMERCE REPORTS for February 16, 1925, for previous announcement regarding this extension.]

TARIFF CHANGES ON SPECIFIC ARTICLES**BRITISH INDIA**

Cable from Assistant Trade Commissioner E. G. Sabine, Bombay, April 18

Modification of Import Duty on Cigarettes.

The British Indian import duty on cigarettes has been changed from 75 per cent ad valorem to 7 rupees per thousand for cigarettes not exceeding in value 10 rupees 8 annas per thousand, and 10 rupees 8 annas per thousand for cigarettes exceeding in value 10 rupees 8 annas per thousand.

MEXICO

Cable from Consul General A. W. Weddell, Mexico City, April 27

Suspension of Import Duty on Corn.

The import duty of 0.02 peso per gross kilo on corn has been suspended for two months by a Mexican decree of April 27, 1925, effective from that date.

CUSTOMS REGULATIONS**BOLIVIA**

William B. Southworth, Secretary of Legation, Asuncion, Paraguay, March 7

Puerto Suarez Becomes a Free Port.

Puerto Suarez, on the upper Paraguay River, has been declared a free port by the Bolivian Government, according to an official report of March 4, 1925. Puerto Suarez is the only Bolivian port giving access to the Plata River system.

[See COMMERCE REPORTS of January 19, 1925, for notice of proposal to make this town a free port.]

SPAIN

Cable from Commercial Attaché Charles H. Cunningham, Madrid, April 21

Modification of Invoice Requirement.

A royal decree of April 22, effective June 1, 1925, provides that an original invoice, with a copy on plain paper, must be filed with the Spanish customs at the time of entry of each shipment of goods arriving in Spain on or after June 1. The original invoice will be returned to the importer after checking by the customs officials and the copy retained. This revised ar-

range is designed to avoid disclosing business secrets. Invoices do not require translation into Spanish and a consular visé is not necessary.

[This decree supersedes the decrees of January 12 and February 6, 1925, which provided for the presentation of original and duplicate copies of invoices on shipments to Spain after May 1, 1925. See COMMERCE REPORTS for January 26 and February 23, 1925.]

INTERNAL REGULATIONS AFFECTING TRADE**CHILE**

Consul George A. Makinson, Valparaiso, March 18

Bounties for Production of Beet Sugar.

According to a decree of March 7, 1925, effective April 1 the Government of Chile will pay a bounty of 0.30 Chilean paper peso for each kilo of sugar containing over 96 per cent of sucrose produced from domestic beets.

This bounty will be paid only to those factories erected subsequent to the enactment of the law and prior to March 7, 1933, which have an annual productive capacity of 1,000 tons of 96 per cent sugar and are located in zones approved by the Government, and will be paid for a period of 10 years only, beginning with the date upon which each factory begins to produce. No bounties will be paid to factories which may be erected after a maximum productive capacity of 20,000 tons has been reached.

Assistant Trade Commissioner Clarence C. Brooks, Santiago, March 26

Prices of Condensed Milk Fixed and Reduction of Import Duty on Materials for Its Manufacture Authorized.

With a view to protecting a national industry and reducing the cost of articles of prime necessity, the Chilean Government has passed a decree, effective March 21, 1925, governing the sale of condensed milk and the importation of raw materials used in its manufacture.

The wholesale prices of the national brand of condensed milk and similar products have been fixed in the Provinces of Tacna, Tarapaca, Antofagasta, Atacama, and in the Magallanes Territory at a maximum of 70 paper pesos per box of 48 cans of 460 grams each c. i. f. provincial or territorial ports, and wholesale merchants in these provinces may not sell at more than 75 paper pesos a box. The retail price in the provincial or territorial ports may not exceed 1.70 paper pesos a can and in the interior 1.80 paper pesos. Re-shipment of condensed milk from any port in the specified provinces or territory to any other point in Chile is prohibited.

The Chilean Executive has been authorized to reduce the import duty and freight rates on foreign raw material which may be required in the manufacture of condensed milk, with a corresponding change in the sales price of the milk, if such reduction exceeds 10 pesos per case.

LATVIA

Acting Commercial Attaché C. J. Mayer, Riga

Excise Tax on Yeast and Baking Powder.

A new Latvian excise law establishes the following excise taxes on yeast and baking powder, effective April 1, 1925:

Domestic-made compressed yeast, 1.30 lats per kilo; imported yeast, compressed, 2.60 lats per kilo; and dried "Florylin" (baking powder) and similar products, 65.50 lats per kilo.

[Lat=\$0.103.]

The yeast is to be supplied in packets containing 400, 200, or 100 grams each.

NORWAY

Minister Lauritis S. Swenson, Oslo, March 27

Proposed Increase of License Fee on Commercial Travelers.

A bill is being prepared for submission to the Storting raising the license fee charged foreign commercial travelers who visit Norway from 100 crowns to 200 crowns per month, with 50 crowns additional for each

firm in case the salesman represents more than one. At present fee of 100 crowns covers all firms represented.

(Continued on p. 310)

Chinese Salt Industry Uses Steel Pipes

The salt wells at Tzelintsing, China, use steel pipes for obtaining brine from the wells. These are imported into the district in large numbers. (The Chinese Economic Bulletin, March 14.)

COMMERCIAL INTELLIGENCE

A. S. Hillyer, Chief, Commercial Intelligence Division

LISTS OF DRUG AND CHEMICAL BUYERS AVAILABLE

In order to assist American exporters in developing foreign outlets for their merchandise the Commercial Intelligence Division is making a world-wide survey of buyers in foreign countries who might be interested in purchasing medicinal and pharmaceutical preparations, drugs, chemicals, paints and varnishes, dyes, insecticides, toilet articles and preparations, professional and scientific instruments. Since July 1, 1924, over 200 separate lists of importers and dealers specializing in the above commodities have been compiled.

The tabulations, in addition to giving names and addresses, indicate the relative size and importance of the various firms, the character of their business, and in some detail the specific lines they handle. The listings are comprehensive and the number of concerns runs into the tens of thousands.

The lists mentioned below have been mimeographed and copies may be obtained either from the Bureau of Foreign and Domestic Commerce or from its district and cooperative offices. Similar lists covering other countries were issued prior to July, 1924, and are likewise available; many others will be issued during the coming months.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

RECORD TRADE OF CHOSEN FOR 1924

Consul General Ransford S. Miller, Seoul, Chosen

Notwithstanding the general business depression which has prevailed in Chosen (Korea) and Japan for some time, and the recent political disturbances in China, the trade of Chosen in 1924 registered a new high mark in volume and, moreover, for the first time in 20 years showed a favorable balance of trade in general commodities.

Trade Affected by Conditions in Japan and China.

The principal factors affecting the trade of the period were (1) the favorable rice crop and unusually heavy shipments to Japan and China; (2) the suspension of import duties on building materials and articles of daily necessity during the first three months of the year, which increased the importation of such articles during that period; (3) the plethora of stocks which, together with the imposition of the "luxury tariff," retarded imports during the summer months; (4) the political disturbances in China which at first accelerated and later retarded the normal course of trade during the autumn; and (5) the opening of a new direct steamship line between Chosen and Shanghai, which tended to increase the foreign market for Chosen products—especially fruits, cement, and sugar.

Large Increase in Total Trade.

The total exterior trade for the year amounted to 638,632,000 yen (average value of the yen during the year=\$0.4119, compared with \$0.48 in 1923 and par of \$0.4985)—an increase of 111,176,000 yen (17 per cent) over the previous year and of 135,600,000 over the banner year, 1919, notwithstanding the fact that the general level of prices in that year was 17 per cent higher than in 1924.

Exports during the year totaled 329,000,000 yen and imports aggregated 309,590,000. Compared with 1923 there were increases of 67,300,000 yen (26 per cent) in exports and of 43,800,000 yen (17 per cent) in imports. In 1923 the excess of imports totaled 4,100,000 yen, while in 1924 the export balance in general commodities amounted to 19,500,000.

In exports the largest item was rice, which, owing to the good crops of the previous year and the high prices prevailing in the autumn of 1924, amounted to 164,500,000 yen, or an increase of 50,500,000 over the preceding year. Exports of ginned cotton, soya beans, and fish also showed minor increases, while shipments of tussah silk (from Manchuria to Japan), lumber, bean cake, and iron decreased to about the same extent.

In imports rice and millet, cotton textiles and yarns, silk tissues, woolen tissues, sugar, paper, wheat, flour, and tobacco showed increases ranging from 1,000,000 to 9,000,000 yen, while tussah silk, coal, manures, cotton, cement, and rails decreased from 2,000,000 to 4,500,000 yen.

The following table shows the trade by principal commodities for the past two years:

Principal commodities in trade of Chosen

Items	1923		1924	
	Japan	Other countries	Japan	Other countries
EXPORTS				
Rice and paddy.....	Yen 112,954,288	Yen 949,144	Yen 163,439,111	Yen 1,044,333

Trade with Japan and China Larger.

The trade with Japan, representing 81 per cent of the total exterior trade of Chosen in 1924, may be regarded as domestic rather than foreign, because of the close geographic, political, and economic relations between the two countries. Total trade with Japan in 1924 amounted to 518,400,000 yen, an increase of 109,700,000 yen over the previous year. Imports, totaling 211,800,000 yen, accounted for an increase of 44,300,000, while the exports, 306,700,000 yen, recorded a gain of 65,400,000. The excess of exports, totaling 94,900,000

yen, was 21,200,000 yen greater than in the previous year.

During 1924 exports to Japan of rice, cotton, soya beans, fish, and hides recorded increases, while shipments of tussah silk, manures, timber, and iron declined. In imports there were gains in rice, cotton goods, cotton yarns, wheat flour, and woolen textiles, and marked declines in cement and raw cotton.

Trade with China constitutes the bulk of the actual foreign trade of Chosen, the 1924 total of 94,400,000 yen representing 15 per cent of the total exterior trade of the country and 85 per cent after excluding trade with Japan. During 1924, exports to China aggregated 21,390,000 yen and imports from that country amounted to 73,000,000 yen. In comparison with 1923 there was an increase of 1,500,000 yen in exports and a decline of approximately the same amount in imports.

American and British Participation in Trade of Chosen.

The United States is next in importance, accounting for 4 per cent of the total exterior trade of Chosen in 1924. Exports to the United States during the year totaled 126,516 yen, while imports from America amounted to 11,172,839. In comparison with 1923 an increase of 27,658 yen in exports and 265,454 in imports was recorded.

Chosen's principal imports from the United States are petroleum products, machinery, wheat flour, automobiles and parts, lumber, and railway materials. Petroleum products and automobiles and parts recorded increases during the 11 months ended with November, 1924, while imports of wheat flour and machinery declined.

Great Britain ranks after the United States in the trade of Chosen, imports from that country during 1924 aggregating 5,460,000 yen, a decline of approximately 510,000 compared with 1923. Unfavorable exchange and the effect of the "luxury tariff" account for the greater part of this decline.

Trade by Principal Countries Compared.

The following table shows the trade of Chosen by principal countries during the past two years:

Chosen's trade by countries

Countries	1923	1924	Countries	1923	1924

Declared Exports from China to United States

Consul General Edwin S. Cunningham, Shanghai

The declared exports from China during 1924 amounted to \$129,133,386, as compared with \$176,966,503 in 1923—a decrease of about 28 per cent. De-

clines were recorded for many of the most important articles, yet there were also large increases shown for some of the leading commodities.

Largest Decline in Silk Exports.

Decreases were noted in shipments of silk, silk piece goods, silk embroideries, silk pongees, silk cocoons, tea, wood oil, hair nets, cowhides, and goat, kid, and squirrel skins. The decline in the exports of silk was the largest, amounting to \$37,423,054, due chiefly to the high prices asked by the Chinese silk dealers—which were considerably above the bids. A similar situation is apparent in the tea industry, although to a less extent than in the case of silk. Tea dropped from \$2,908,985 in 1923 to \$1,796,682 in 1924.

Other large decreases were attributed directly to the unsettled conditions throughout China in the last half of the year. In the case of the declared exports of wood oil, which declined \$1,830,871 during 1924 in comparison with 1923, the difficulty was due to interrupted transportation facilities. The shipping of goods to and from the interior was brought almost to a standstill. The drop of \$2,012,131 in the exports of hair nets is traced to the popularity of bobbed hair in the United States. With the decline in the Mah Jongg fad, exports of Mah Jongg sets have fallen from \$1,522,644 in 1923 to \$806,930 in 1924.

Declared Export Items Showing Increases.

Substantial increases were evident for exports of sheep's wool, straw braid, cotton laces and embroideries, peanut oil, shelled peanuts, and unshelled walnuts. Large stocks of wool were on hand in warehouses at the various ports at the time of the outbreak of the civil disorders and were not affected by the disturbed conditions. Furthermore, the price of wool rose sharply. These two factors account for the large increase of \$4,156,429 in 1924 declared exports of wool. The large crop of peanuts explains the advance of \$1,557,766 in shipments of this commodity. The gains recorded for declared exports of walnuts (\$586,750) and cotton laces and embroideries (\$1,096,442) were due to the increased demand for these commodities. If civil disturbances had not so badly disrupted conditions in the interior it is believed that practically every article, with the single exception of silk and silk goods, would have shown a large increase in 1924.

Leading Commodities Exported.

The following table shows the value of the most important commodities exported to the United States during 1924 in comparison with 1923:

Items	1923	1924	Items	1923	1924
Casings, hogs, sheep, beef, etc.....	\$3,075,990	\$2,784,023	Wood oil.....	\$13,841,562	\$12,010,501
Eggs and egg products.....	8,918,053	5,936,088	Tea.....	2,908,985	1,796,682
Hides.....			Carpets.....	3,442,978	4,430,260

			Total.....	176,966,503	129,133,386

Far Eastern Trade and Economic Notes**Netherlands East Indian Trade Advancing.**

Netherlands India data for 1923, recently made available, show a substantial increase in total foreign trade as well as a favorable balance of trade over the previous year. Exports of 1,378,123,000 florins (\$523,687,000 at the average exchange rate of \$0.38 for 1923) and imports of 653,703,000 florins (\$248,370,000) left an excess of exports of 724,520,000 florins (\$275,313,000). These figures are indicative of the material readjustment which has characterized the trend of foreign trade of these islands in recent years. A careful analysis of the commodities entering into this trade, and the countries competing for it, has been prepared by Trade Commissioner J. F. Van Wickel, Batavia, Java. This information is available, as Special Circular No. FE-293, obtainable from any district office of the Bureau of Foreign and Domestic Commerce, or from the Far Eastern Division.

National Exhibition Proposed for Bangkok.

A national exhibition is planned for Sala Deng, Bangkok, Siam, in celebration of the fifteenth anniversary of the accession of the present King of Siam, which occurs in November of this year. The exhibition is expected to open in December and to last for a period of one to three months. It is especially desired to show Siamese agricultural and manufacturing possibilities, as well as to develop an interest in Siamese raw products. It is also hoped that local import firms will feature the imports of the country. A commission appointed under the presidency of the Minister of the Interior, and including representatives of the other principal ministries of the Government, is intrusted with the work of the exhibition. Further details will be announced at a later date. (Consul Charles H. Albrecht, Bangkok.)

EUROPE

Samuel H. Cross, Chief, European Division

THE FRENCH LABOR MARKET AND FOREIGN LABOR IN 1924

Commercial Attaché Chester Lloyd Jones

The activities of the public employment offices and the figures indicating the seasonal flow of foreign labor in France have come to be recognized as barometers indicating the general conditions of employment in agriculture and industry. An examination of the returns shows that labor conditions in France during 1924 continued normal. Public employment offices established in the departments and cities found jobs for jobless men and women in greater number than before, the total reaching over one and one-half millions.

More than half of this number, or 770,093, involved employment in which the person hired lives with the family of the employer. Such engagements are considered by the French authorities as especially to be encouraged, for they represent a certain permanence of employment and thus contribute to the industrial strength of the country. Of this class of jobs, about two-thirds were taken by men and one-third by women.

Short-time jobs to the number of 181,546 were filled, the division between men and women here also being in the proportion of two to one. The greater part of engagements of this sort occurred in the foodstuffs industry.

The next most important class of jobs comprised those secured for dock workers in the seaports, who are usually furnished in gangs or groups. Total employments of this sort in 1924 reached 560,464.

The number of unemployed for whom jobs were found by public offices in France during the years 1917-1924 is listed below:

	Number		Number
1917 -----	159, 791	1921 -----	1, 073, 450
1918 -----	326, 513	1922 -----	1, 277, 946
1919 -----	882, 472	1923 -----	1, 446, 426
1920 -----	1, 078, 294	1924 -----	1, 512, 103

Seasonal Swing of the Labor Market.

The number of jobs filled varied normally from month to month during 1924. The low point was in the first quarter of the year, when workers placed numbered about 27,000 per week. From this point the number gradually rose as spring work on the farms increased, and reached 29,000 per week in May; after that the rise continued steadily to the high point of 35,000 in September, when agricultural work was at its height. Thereafter the average gradually fell to the end of the year, when the weekly turnover was 26,000.

Foreign Labor Introduced Under Contracts.

The number of foreign laborers introduced into France under agreement with the governments of the States from which the laborers come or independently of such agreements reached a total of 239,365 persons in 1924, of which the Ministry of Labor brought in 197,176 and the Ministry of Agriculture 42,189. On the other hand, 47,752 foreign workers left France, leaving a balance for the year of 191,600 persons.

The figures of immigrant labor as reported by the public authorities are not complete, for they represent only those workmen who come into France on contracts previously arranged. Some foreign workmen obviously find their way into the country with only the ordinary traveler's passport. They may then take up work if they wish, but must in that case take out the special "carte d'identité" prescribed by law. It is impossible to tell to what degree these unregistered workmen would increase the returns announced by public authorities.

Sources and Distribution of Immigrant Labor.

As in previous years, foreign laborers coming into France are drawn chiefly from two groups of countries. The border countries, particularly to the south, are represented by large numbers of workmen who have for many years been coming and going with the seasonal activities in agriculture but who now come for work of a more permanent character in various regions

of France; a similar immigration occurs from Belgium. The immigration from the countries of eastern Europe, however, is more recent and has come to its present importance only in postwar years.

Number of foreign workmen introduced into France in 1924, by sources and kind of labor undertaken

Nationality	Industry	Agriculture
Belgian	23,779	10,935
Spanish	6,695	8,287
Italian	83,851	18,096
Portuguese	6,615	7,491
Polish	23,265	14,783
Czechoslovak	4,401	5,689
Russian	3,592	547
Diverse	22,842	2,707

The number of the immigrants who find occupations in the liberated regions still continues high, in spite of the slowing down of activities in that part of the country. In the devastated regions, 104,112 workmen sought occupation during 1924. Of this number 46,844 were Italian, 23,217 Belgian, and 22,579 Poles.

French Revenues in First Quarter of 1925

Based on cable from Commercial Attaché Chester Lloyd Jones, April 21

Revenues of the French Government from normal and permanent sources in the first three months of 1925 totaled 6,525,000,000 francs, of which the amount collected during March was 1,979,000,000 francs, a slight increase over February, but considerably below the January figure. Direct taxes during the three months' period produced 1,481,000,000 francs, while indirect taxes and monopolies brought in 5,012,000,000 francs. In addition to the revenues from ordinary sources, there were exceptional revenues amounting to 210,000,000 francs, as well as revenues from posts, telegraphs, and telephones aggregating 371,000,000 francs.

New Price Index for Rising German Wages

Consul A. W. Kliefoth, Berlin, March 25

As a result of representations of the German labor unions headed by the metal union, a new cost-of-living index has been formulated by the German Statistical Office. This index will replace the former one as the basis for wage negotiations and awards by official arbitration. German wages have been nominally on a price-index basis in many industries for several years, the first such index having come into use in February, 1920. Wage agreements on this basis, however, were not always maintained in practice during periods of heavy unemployment.

With no price reductions foreseen and with the expectation of an increase in rentals (now 66 per cent) to 100 per cent of pre-war by October 1, wage disputes will probably increase in the near future. A complete analysis of the new cost-of-living index, by Consul A. W. Kliefoth, can be had by calling for report No. 166922.

Industrial Conditions in the Milan District

Consul C. Carrigan, Milan, Italy, March 24

Prevailing conditions in the mechanical industries of Northern Italy are good; every line is reported as working to capacity with the exception of heavy railroad machinery, for which the Government is not placing any orders. On this class of goods Italian

manufacturers find it impossible to compete in foreign markets with German manufactures.

Lack of Skilled Labor.

The general lack of skilled labor is felt in most industries, caused apparently by the difficulty of persuading new workers to come to the larger industrial centers, such as Milan, Brescia, and even Pavia, on account of the housing problem. Up to the time of the war, workmen were willing to come to the cities with their families; a family could live in one or two rooms, the husband working in a factory and the wife and children working as domestic help. This class of people is better paid now, and unless a family can find a small apartment they prefer to remain in the country. Another difficulty is caused by the scarcity of trained men for higher-class jobs. No men were trained along these lines during the war nor during the years immediately following. The demand for labor has brought about higher wages and has caused an attitude of indifference, which the employers find it difficult to control.

The recent strikes in the metallurgical industries are ascribed by their authorities primarily to these conditions. The strikes in Lombardy, which were carried on with little disturbance, are now terminated so far as return to work is concerned, and conditions appear normal again. The question of increased wages, however, can not be considered yet settled, for the Italian Federation of Metallurgical Workers in ordering a return to work declared that the wage question is to be discussed further.

Many Fairs in Germany This Year

Assistant Trade Commissioner Margaret L. Goldsmith, Berlin, March 18

More fairs are being conducted in Germany than in any other country of the world, with resultant of lack of concentration that is disadvantageous to foreign and domestic trade. Altogether, 22 fairs are being held during 1925, distributed among 10 cities in all parts of the country. Some are special fairs, such as the "Book and Art Fair" in Breslau, the "Jewelry Exhibit" in Stuttgart, and the "Office Appliance" fair in Berlin. Others are regional and partially international, as the "Eastern German Fair" in Koenigsberg, the Frankfurt and Cologne fairs in the Rhineland, and the Breslau Fair. The largest and best-known international exhibition is the Leipzig Fair.

Continued low domestic purchasing power, together with high production costs, has failed to check the increasing number of exhibitions during the past three years; but a tendency is now gaining ground to rely more on traveling salesmen and to confine exhibiting to the long-established fairs with an international reputation.

[Full information concerning European fairs is available at the Bureau of Foreign and Domestic Commerce and at the United States Chamber of Commerce, Washington, D. C.]

Additional information regarding Europe appears in this issue under the following sections:

Tariffs and trade regulations:

Canada-West Indies hold preferential trade agreement conference.

Czechoslovakia-Poland—New commercial treaty effective.

Transportation:

New hours of labor for French seamen.

Proposed autonomy for Rumanian State railroads.

Bureau's special circulars available.

BUREAU'S SPECIAL CIRCULARS AVAILABLE

Numerous mimeographed circulars are issued by the bureau in addition to its various regular and special publications. These circulars are distributed to those interested, including persons and firms whose names are on the Exporters' Index, and copies may be obtained from the bureau or its district offices. The 87 circulars listed below were issued by 24 different divisions during the week ended April 27.

AGRICULTURAL IMPLEMENTS DIVISION

- No. L-31. Market for Lawn Mowers in Canada.
No. E-39. Market for Internal Combustion Engines in Haiti.

AUTOMOTIVE DIVISION

- No. 38. Automotive Market News Bulletin.

CHEMICAL DIVISION

- No. 58-C. World Notes on Drugs, Medicinals, and Toilet Preparations.
No. 59-C. World Notes on Drugs, Medicinals, and Toilet Preparations.
No. 59-D. World Notes on Paints, Varnishes, and Pigments.
No. 90. Sicilian Sulphur Production.
No. 91. Danish Trade in Fertilizers.
No. 92. Concentration of the German Chemical Industry.

COAL DIVISION

- No. 275. The Belgian Coal Situation in 1924.
No. 295. British Coal Situation.
No. 321. Coal, Coke, and Patent Fuel Imports at Rio de Janeiro During February, 1925.
No. 323. British Coal Situation.

COMMERCIAL LAWS DIVISION

- No. 76. Taxation in Germany Proposed Modifications.

ELECTRICAL DIVISION

- No. 360. Domestic Market for Electric Household Appliances in Germany.

EUROPEAN DIVISION

- No. 38. Economic and Trade Developments.

FAR EASTERN DIVISION

- No. 34. Far Eastern Trade News.

FINANCE AND INVESTMENT DIVISION

- No. 5. Far Eastern Financial Notes.
No. 4. Latin American Financial Notes.

FOODSTUFFS DIVISION

- Foodstuffs 'Round the World:
Canned and Dried Fruits.
Fishery News.
Grain and Grain Products.
World Dairy and Poultry News.
Foreign Notes on Meats, Fats, Oils, and Livestock.
No. 68. The Dried Fruit, Canning, and Preserving Industries of Australia.
No. 70. February 1 to 28, inclusive, Developments in Smyrna Raisin Industry.

HIDE AND LEATHER DIVISION

- No. 446. Market for Kid Upper Leather in Poland.
No. 424. Production of Hides in Eastern Cuba.
No. 428. The Supply of Hides and Skins in the United States by Years, with Percentage Due to Imports.
No. 429. Geographic Location of the Spanish Leather Industry.
No. 443. Polish Sole Leather Market.
No. 444. Polish Market for Cattle Side Upper Leather.
No. 445. The Polish Market for Calf Upper Leather.
No. 448. Lithuanian Tanning Industry.
No. 451. French Livestock Statistics.

IRON AND STEEL DIVISION

- No. H-6. Foreign Hardware Bulletin.
No. 353. Market for Lamps and Lanterns in Portuguese East Africa.

- No. 355. Italy's Hardware Imports during 1924.
No. 356. Tenders for Fittings for Wagon Construction for the Royal State Railways of Siam.

INDUSTRIAL MACHINERY DIVISION

- No. 526. Machinery Trade in China in 1924.
No. 529. Greek Ministry of Communications Asks for Estimates on Dredging Machinery, Lighters, and Floating Cranes.
No. 530. American and German Machinery Trade with the Netherlands.
No. 531. Canadian Tariff Changes.
No. 536. German Pulverized Coal Internal Combustion Engine.
No. 537. Depressed Foreign Market for British Pumps.

MINERALS DIVISION

- No. 34. Foreign Trade Notes.
No. 196. Petroleum Exportation and Production in Tampico in 1924.
No. 197. Petroleum Exports of Tampico in February, 1925.
No. 198. Mineral Oil Imports and Exports of British India.

LATIN AMERICAN DIVISION

- No. 49. Latin America at a Glance.
No. 164. Routing a Salesman Through Venezuela and Colombia.
No. 165. Commercial Travelers' Route in Mexico.
No. 169. Living and Office Operating Expenses in Mexico.

LUMBER DIVISION

- No. 342-A. Italian State Railroads Having Difficulty Filling Tie Requirements.
No. 414. Ready Cut and Weir Houses in England.
No. 418. Liverpool Mahogany Auction Market.
No. 423. Amended Dumping Regulations in Canada.
No. 428. Railroad Ties in South India.
No. 431. 1924 Exports of Poles and Piling by Countries of Destination.
No. 433. Lumber Press Releases, Two Weeks Ending April 11, 1925.

PAPER DIVISION

- No. 32. "Side Runs" of the Paper Division—Weekly News Letter.
No. 33. "Side Runs" of the Paper Division—Weekly News Letter.
No. 60. Special Series—Competition in the Argentine Paper Market.
No. 62. Special Series—Notes on the German Paper Industry.

RUBBER DIVISION

- No. 854. Weekly News Letter.
No. 857. March Imports of Golf Balls.
No. 858. March Imports of Rubber Tires.

SHOE DIVISION

- No. 474. Bombay Market for Leather Traveling Requisites and Leather Sundries.
No. 475. Boot and Shoe Industry in the United States.
No. 476. Canadian Imports of Leather Boots and Shoes.
No. 480. United States Exports of Leather Manufactured Goods, First Quarter of 1925.

SPECIALTIES DIVISION

- No. 114. Planos in Portugal.

STATISTICAL DIVISION

- Statement No. 61. Domestic Exports and Imports of Gold and Silver, from and into the United States, by countries, during the month of March, 1925.

(Continued on p. 307)

PUBLICATIONS OF THE DEPARTMENT OF COMMERCE

Publications issued by the Department of Commerce during the last month that have the most direct interest to readers of *COMMERCE REPORTS* are listed by bureaus below. Where prices are given copies should be purchased from the Superintendent of Documents, Government Printing Office; in other cases copies may be obtained from the issuing bureau. A complete list of all publications available for distribution will be mailed on request made to the Division of Publications, Department of Commerce, Washington.

OFFICE OF THE SECRETARY

Simplified Practice Recommendations:

- No. 26. Steel reinforcing bars.
- No. 27. Cotton duck (sail and wide).
- No. 31. Loaded paper shot shells.
- No. 35. Steel lockers (single and double tier).

The above may be secured at 5 cents each.

BUREAU OF FOREIGN AND DOMESTIC COMMERCE

Monthly summary of Foreign Commerce of the United States, February, 1925. Parts I and II. Part I contains statistics of exports of domestic merchandise and imports by articles for February, 1924 and 1925, and for the eight months ended February, 1924 and 1925. Part II contains summaries of export and import trade; monthly average import and export prices; statistics of trade in cotton and wool; tonnage of vessels entered and cleared; commerce with Alaska, Porto Rico, and Hawaii. Price for single number, Part I, 10 cents; Part II, 5 cents. Annual subscription, including Parts I and II, \$1.25.

Government Aid to Merchant Shipping, by Grosvenor M. Jones, with comment by the Transportation Division on changes since 1916. Special Agents Series No. 119 (revised edition); 470 pages. Part I is merely a reprint of the original report issued in 1916. Part II is a review of changes which have taken place during and since the World War, with particular reference to the methods by which nations have adapted to these new conditions their policies concerning merchant ships. Price, 50 cents.

Lumber Markets in the Netherlands, by Axel H. Oxholm. Trade Promotion Series No. 4; 233 pages. The market for all classes of lumber is discussed in great detail and important phases of the market are emphasized. The book contains 35 illustrations; 3 maps; and numerous tables, including official statistics of the Dutch lumber trade for 1911-1913 and 1921-1923. Price, 45 cents.

International Trade in Wheat and Wheat Flour, by J. A. LeClerc. Trade Promotion Series No. 10; 290 pages. The basic facts underlying the world's trade in wheat and wheat flour form the material of this report. The statistical information has been organized into 128 tables, and various aspects of production and trade are shown by means of the 51 charts included. Price, 40 cents.

International Trade in Cotton, by Leslie A. Wheeler. Trade Promotion Series No. 13; 100 pages. This study deals with the exportation and importation of unmanufactured cotton for all countries in which such trade is significant. The text is supplemented by means of 69 tables and 10 charts. Price, 15 cents.

World Trade in Canned Salmon, by Rupert L. Purdon. Trade Promotion Series No. 14; 48 pages. The canned-salmon industry is the most important branch of our fish industries. The world survey shows the status of the United States salmon trade as compared with that of competing countries—Canada, Japan, and the United Kingdom. The report contains 13 tables, 1 map, and 20 charts. Price, 15 cents.

Taxation of securities in Europe, compiled by Mitchell B. Carroll. Trade Information Bulletin No. 326; 25 pages. The pamphlet is designed to serve American companies that are placing securities in foreign markets and those that are planning to incorporate under the laws of the countries included within the scope of the report. Price, 10 cents.

Cotton-Goods Market in the Netherlands East Indies, by Edwin B. George. Trade Information Bulletin No. 327; 25 pages. The United States has but a small share in this important market, which is supplied chiefly by the Japanese, the British, and the Dutch. Types of goods in demand and sources of supply are fully discussed. Price, 10 cents.

Foreign Markets for Confectionery: III. Europe, Canada, the Near East, and Africa, compiled in the Foodstuffs Division. Trade Information Bulletin No. 328; 25 pages. The bulletin embodies the results of a survey made in order to ascertain means of developing new markets for United States confectionery and to extend markets already in existence. Price, 10 cents.

Caribbean Markets for American Goods: I. Central America, by Hector Lazo. Trade Information Bulletin No. 329; 18 pages. In this bulletin is presented an analysis of Central America as a purchaser of United States goods. A suggested salesman's route through Central America is included. Price, 10 cents.

Ice-Making and Cold-Storage Plants in the United Kingdom, compiled in the Industrial Machinery Division. A survey of the extent of ice-making and cold-storage development in the United Kingdom has been made with the view to revealing possibilities of extending the market for American refrigerating equipment. Price, 10 cents.

British West Africa, by Thomas R. Wilson. Trade Information Bulletin No. 331; 36 pages. It is to the interest of American business to become better acquainted with the West African field, owing to the importance of this group of countries as a growing market. Price, 10 cents.

Foreign Trade of the United States, Calendar Year 1924, prepared in the Division of Statistical Research. Trade Information Bulletin No. 332; 91 pages. This is the third of a series of annual bulletins summarizing the trade of the United States. The report contains 44 tables and 44 charts. Price, 10 cents.

Marketing of American Meat Products in Export Trade, by J. E. Wrenn. Trade Information Bulletin No. 333; 60 pages. The methods employed in the sale of meat and meat products abroad are discussed in this bulletin, which is the fourteenth of a series on world trade in agricultural products. Price, 10 cents.

Boot and Shoe Industry and Trade of Egypt, by Richard A. May. Trade Information Bulletin No. 334; 10 pages. The possibilities of Egypt as a market for footwear are presented in this review of the situation in that country by Trade Commissioner May. Price, 10 cents.

Uniform Through Export Bill of Lading, by W. R. Low. Trade Information Bulletin No. 335; 43 pages. This discussion of the uniform through export bill of lading prescribed by the Interstate Commerce Commission presents the views of various shipping factors concerning the value of this type of shipping document. Price, 10 cents.

British Financial Conditions in 1924, by Charles E. Lyon, trade commissioner. Trade Information Bulletin No. 336; 23 pages. The important place of British finance in international affairs gives special interest to this review. Price, 10 cents.

Labor, Wages, and Unemployment in Italy, by H. C. MacLean, commercial attaché, Rome. Trade Information Bulletin No. 337; 16 pages. The rapid growth of Italy as an industrial nation, the efficiency of Italian workmen, and the low scale of wages in Italy are factors of importance that are reflected in conditions in the economic world at large. These matters are discussed in this bulletin. Price, 10 cents.

Ice-Making and Cold-Storage Plants in Canada, compiled in the Industrial Machinery Division. Trade Information Bulletin No. 338; 26 pages. This bulletin continues the series on markets for refrigerating equipment in foreign countries. Price, 10 cents.

Automotive Trade and Industry of Hungary, by Walter S. Reineck, American consul, Budapest. Trade Information Bulletin No. 339; 13 pages. This report has been prepared as a guide to conditions in the automotive industry and trade in Hungary and in the smaller surrounding countries. Price, 10 cents.

BUREAU OF STANDARDS

Report of the National Screw Thread Commission (revised, 1924). This is the first revision of the progress report of the commission's report published in 1921. Each class of product is discussed in a separate section of the publication, which contains 172 pages, with 90 tables, 43 illustrations, 5 appendices, and index. Price, 25 cents.

A Method of Determining the Dew Points of Fuel-Air Mixtures, by Roy J. Kennedy. Scientific Paper No. 500; 17 pages; 10 charts. Price, 10 cents.

Specific Heat of Superheated Ammonia Vapor, by N. S. Osborne, H. F. Stimson, T. S. Sligh, jr., and O. S. Cragoe. Scientific Paper No. 501; 46 pages; 9 tables; 11 charts; 1 halftone. Price, 15 cents.

Comparative Wearing Qualities of Pima and Ordinary Cotton Used in Mail Bags, by F. R. McGowan, Charles W. Schoffstall, and A. A. Mercier. Technologic Paper No. 277; 11 pages; 3 tables; 3 charts; 2 halftones. Price, 10 cents.

Effect of Twist on Physical Properties of a Number 7s Yarn, by F. R. McGowan, Charles W. Schoffstall, and A. A. Mercier. Technologic Paper No. 278; 11 pages; 1 table; 9 charts; 2 halftones. Price, 10 cents.

Testing of Fire-Clay Brick with Special Reference to Their Use in Coal-Fired Boiler Settings, by F. R. Geller. Technologic Paper No. 279; 43 pages; 12 tables; 19 illustrations. Price, 20 cents.

Reclamation of Gasoline Used in Dry Cleaning, by O. O. Hubbard. Technologic Paper No. 280; 13 pages; 3 illustrations. Price, 5 cents.

Specification for Hand-Operated Grain Hopper Scales. Circular No. 199; 19 pages; 4 tables. Price, 10 cents.

United States Government Specifications:

Heavy rust-preventive compound. Circular No. 200.

Quicklime for structural purposes. Circular No. 201.

Quicklime and hydrated lime for use in the manufacture of calcium arsenate. Circular No. 203.

Gypsum plaster. Circular No. 205.

Limestone, quicklime, lime powder, and hydrated lime for use in the manufacture of sugar. Circular No. 207.

The above are promulgated by the Federal Specifications Board for use in the purchase of materials for the various Government departments and agencies. Price, 5 cents each.

BUREAU OF FISHERIES

Growth and Degree of Maturity of Chinook Salmon in the Ocean, by Willis H. Rich. Document No. 974; 76 pages; 27 tables; 42 illustrations, including 16 halftones; bibliography. Price, 35 cents.

Seasonal Distribution of the Plankton of the Woods Hole Region, by Charles J. Fish. Document No. 975; 89 pages; 4 tables; 81 charts; bibliography. Price, 40 cents.

Fishery Industries of the United States, 1923, by Oscar E. Sette. Document No. 976; 319 pages. The report deals with technologic investigations of the Bureau of Fisheries, the fishing industry of the United States, and statistics of the fishing industry and of products landed. Price, 25 cents.

Digestive Enzymes in Poikilothermal Vertebrates, by Walter A. Kenyon. Document No. 977; 20 pages; 14 tables; bibliography. Price, 10 cents.

Iodine Content of Preserved Sea Foods, by Arthur W. Wells. Document No. 979; 3 pages. Price, 5 cents.

COAST AND GEODETIC SURVEY

Results of Observations Made at the Magnetic Observatory at Vieques, P. R., in 1921 and 1922. Serial No. 292; 98 pages; 10 reproductions of magnetograms showing principal magnetic storms. Price, 15 cents.

Results of Observations Made at the United States Coast and Geodetic Survey Magnetic Observatory near Tucson, Ariz., 1921 and 1922. Serial No. 293; 99 pages; reproductions of magnetograms showing principal magnetic storms. Price, 15 cents.

Tide Tables, Atlantic Coast of North America, 1926. Serial No. 295; 454 pages; 7 tables; index. Price, 15 cents.

Same. Pacific Coast of North America, Eastern Asia, and Island Groups, 1926. Serial No. 296; 454 pages; 6 tables; index. Price, 15 cents.

BUREAU OF NAVIGATION

Measurement of Vessels. Fourth edition; 133 pages; 52 diagrams. The report contains regulations interpreting laws relating to the measurement of vessels, together with the laws of the United States, the Suez Canal regulations, and the Panama Canal Rules. Price, 20 cents.

American Documented Seagoing Merchant Vessels of 500 Gross Tons and Over, April 1, 1925. Serial No. 89. Price, 10 cents a copy; yearly subscription, 75 cents.

Radio Service Bulletin, April 1, 1925. Serial No. 96. Contains list of new stations, changes in preceding lists, and information concerning radio regulations, current publications, and other matter. Single copy, 5 cents; annual subscription, 25 cents.

NOTE.—All orders for radio publications listed by the Bureau of Navigation and all inquiries concerning these publications should be addressed to the Superintendent of Documents, Government Printing Office, Washington, D. C. Do not make remittances to the Bureau of Navigation or to radio inspectors.

LIGHTHOUSE SERVICE

Light List, Pacific Coast of the United States, 1925. Corrected to January 1. Price, 30 cents.

Survey of Current Business is a monthly supplement to Commerce Reports and is published in cooperation with the Bureau of the Census and the Bureau of Standards. The subscription price of the Survey of Current Business is \$1.50 a year; foreign subscriptions, \$2.25.

BUREAU'S SPECIAL CIRCULARS AVAILABLE—Continued

(Continued from p. 305)

TRANSPORTATION DIVISION

No. 9. **Tenders for Fittings for Wagon Construction for the Royal State Railways of Siam.**

No. 21. **Foreign Shipping News.**

No. 21. **Foreign Railway News.**

STATISTICAL PRESS NOTICES

Exports of Grains, Grain Products, Feeds, and Hops.

Imports of Jute, Flax, Hemp, Manila, Sisal, and Kapok.

Exports of Grains and Flour from the Principal Ports of the United States to Foreign Countries during the week ending April 25, 1925.

Imports of Raw Wool at Boston, New York, and Philadelphia during the week ending April 18, 1925.

Exports of Pork Products from Principal Ports of the United States during the week ending April 18, 1925.

Exports of Grains and Flour from the Principal Ports of the United States to Foreign Countries during the week ending April 18, 1925.

TEXTILE DIVISION

No. 78-A. **World's Wool Digest.**

No. 103-B. **What the World's Cotton Goods Markets are Doing.**

No. 364. **Résumé of the Report made to the Balfour Committee, Board of Trade, by the Committee of the Cotton Spinners' and Manufacturers' Associations.**

No. 374. **Netherlands Market for Knitted Outerwear.**

No. 375. **United States Imports for Consumption of Countable Cotton Cloths during the Month of January, 1925.**

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The Department of Commerce announces the following further figures covering business movements in March:

Production Increase over February.

Increases over February occurred in the March production of western pine and southern pine lumber, silica, face and clay fire brick, automobiles, rubber tires, and newsprint paper—even when allowance is made for the larger number of working days in March. The production of both bituminous and anthracite coal showed decreases, while coke, maple flooring, and silver production increased, but not in the proportion to the increased working time.

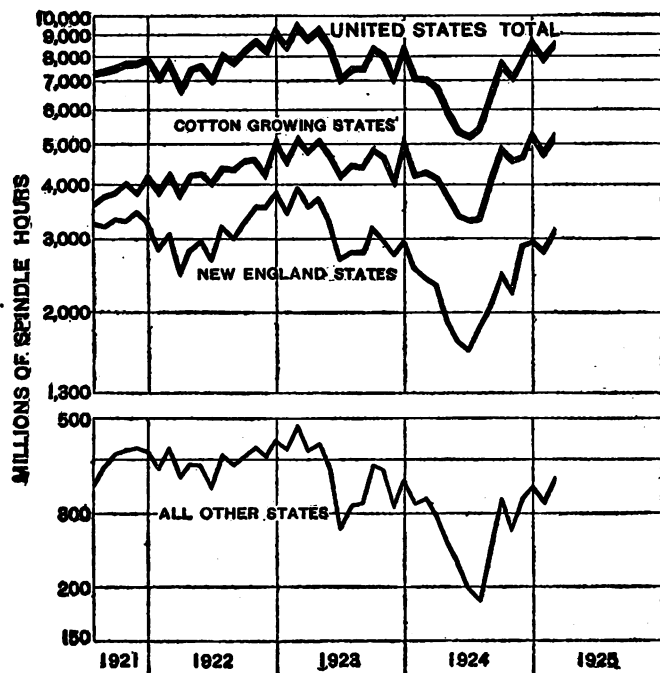

Production Compared with March, 1924.

Compared with March, 1924, increases occurred in the production of yellow pine lumber, silica brick, rubber tires, automobile trucks, and newsprint paper. Decreases occurred in the production of western pine lumber, maple flooring, clay fire brick, face brick, bituminous and anthracite coal, passenger automobiles, and silver.

Shipments, Stocks, and Bookings.

Shipments of structural steel, southern and western pine lumber, pneumatic tires, inner tubes and solid tires were greater than in February, as were bookings of fabricated structural steel, stocks of southern and western pine lumber, and rubber tires. Compared with a year ago, the bookings of structural steel, and stocks and shipments of southern pine lumber, and of tires were greater, while stocks and shipments of western pine were less. Slightly fewer cotton spindles were active than in February but there was an increase over a year ago.

COTTON SPINDLE HOUR ACTIVITY

Data from Survey of Current Business.

The following table gives such data from the May issue (No. 44) of the Survey of Current Business as have been received up to April 23, 1925.

All items given in the following table correspond with similar information in the issue of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the Survey, where specific descriptions

of the data and their sources are given. In addition to figures given from Government sources, there are also incorporated for completeness of service the figures from other sources generally accepted by the trades, the authority and responsibility for which are noted in the Monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for \$1.50 per year.

¹ Revised.

TARIFFS AND TRADE REGULATIONS

(Continued from p. 299)

FOREIGN MAILS AND PARCEL POST

CHILE

Assistant Trade Commissioner Clarence C. Brooks, Santiago, March 22

Surtax on Parcel Post Importations.

A surtax of 15 per cent of the import duties on merchandise entering Chile by parcel post has been established by a decree of the Government Council, to become effective May 18, 1925.

MADAGASCAR

Consul James G. Carter, Tananarive, February 18

Requirements for Mail Packages Containing Dutiable Merchandise.

Effective from April 1, 1925, all packages of merchandise sent by mail to Madagascar should bear on the outside cover a green label (about 2.36 inches by 1.18 inches) containing the indication, "A soumettre a la Douane," together with mention of the nature, origin, weight, and value of the merchandise. Packages bearing these indications will be delivered after verification of the contents and payment of customs duties, consumption taxes, etc., that may be applicable.

[Similar requirements have been in force for packages imported into France by mail since 1923.]

Swedish Lumber Prices Decline

Advance sales of Swedish lumber up to April 15, 1925, for delivery during the coming season amounted to 940,000 M feet, according to a cable from Trade Commissioner T. O. Klath, Stockholm. Owing to Russian competition prices are declining, particularly for shipment to the United Kingdom. It is said that Russian sales to that market so far this year amount to over 200,000 M feet. Estimates place probable Russian 1925 exports of softwood lumber, largely shipped from the White Sea and Leningrad, at approximately 495,000 M feet.

During March Sweden exported 25,900 M feet of sawn lumber, including 610 M feet of box shooks.

Commercial Services Rendered by Bureau and District Offices

Correspondence Division, R. H. Brasel, Chief

The following table shows the number of commercial services rendered by the Bureau of Foreign and Domestic Commerce in Washington and its 10 district offices in the United States during the period July 1, 1924, to April 11, 1925, and the week ended April 18, 1925:

Class	Period July 1, 1924, to Apr. 11, 1925	Week ended Apr. 18, 1925

Domestic commerce.....	89,583	979

¹ Does not include services rendered by foreign service of the bureau (32 posts, 80 representatives) and by the cooperative offices maintained by the bureau in 32 chambers of commerce and boards of trade in the United States.

² Including petroleum.

³ Information reserved from "Foreign trade opportunity" announcements printed in each issue of the COMMERCE REPORTS. (Name and address of foreign inquirers interested in the purchase of American goods, including references, cable addresses, and other details.)

FOREIGN TRADE OPPORTUNITIES

Reserved information may be obtained from the Bureau and its district and cooperative offices by firms and individuals on the Exporters' Index upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: *Reported by American consular officers; †Reported by commercial attachés and trade commissioners; ‡Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

INVESTIGATION BY THE UNITED STATES TARIFF COMMISSION

PUBLIC NOTICE OF INVESTIGATIONS BY THE UNITED STATES TARIFF COMMISSION UNDER THE PROVISIONS OF SECTION 315 OF TITLE III OF THE TARIFF ACT OF 1922

Investigation No. 42 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Bent-Wood Chairs

The United States Tariff Commission, on this 23d day of April, 1925, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the following articles included within the class or kind of articles provided for in paragraph 410 of Title I of said tariff act, namely: Bent-wood chairs being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, That all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, That public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 23d day of April, 1925.

JOHN F. BETHUNE, Secretary.

Investigation No. 43 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Rag Rugs

The United States Tariff Commission on this 24th day of April, 1925, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to the following articles included within the class or kind of articles provided for in paragraph 1022 of Title I of said tariff act, namely: Rag rugs being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, That all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, That public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 24th day of April, 1925.

JOHN F. BETHUNE, Secretary.

HEARING BY THE UNITED STATES TARIFF COMMISSION

PUBLIC NOTICE OF HEARING BY THE UNITED STATES TARIFF COMMISSION UNDER THE PROVISION OF SECTION 315 OF TITLE III OF THE TARIFF ACT OF 1922

Investigation No. 37 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Men's Sewed Straw Hats

Notice is hereby given that at the convening of the public hearing heretofore set for May 4, 1925, at 10 o'clock a. m., in the investigation

by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922, with respect to the differences in costs of production of men's sewed straw hats, a request was granted to adjourn said hearing until 10 o'clock a. m., Thursday, May 14, 1925, when said hearing will be resumed at the offices of the Tariff Commission in Washington, D. C.

By order of the United States Tariff Commission this 4th day of May, 1925.

JOHN F. BETHUNE, Secretary.

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

JULIUS KLEIN, Director Bureau of Foreign and Domestic Commerce

Editorial Board: Griffith Evans, Grosvenor M. Jones, E. Dana Durand, Eugene S. Gregg, and Archibald J. Wolfe

"Grade-Marking" in the Export Trade

Recently the members of one of the largest lumber associations in the United States have decided to "grade-mark" their products in accordance with the grading rules established by the association. The association maintains an inspection service and will insure uniformity of quality for all its members. This organization will also settle disputes in regard to the quality of grade-marked lumber. Judging from experience in foreign markets where grade-marking has been practiced for generations, this experiment will no doubt be equally successful in this country.

The grade-marking idea is not restricted to lumber. There are a number of commodities in other lines which are sold on standard qualities and which can easily be grade-marked. In our export trade this grade-marking will be particularly important. Consumers in many foreign markets are not familiar with American standard qualities, and, since goods pass through many hands before they reach the ultimate consumer, there is often a considerable "juggling" of grades, with raising of prices and lowering of quality. This in turn often makes American goods not grade-marked unpopular abroad.

[ARNE H. OKHOLM.]

New Study of Labor and Wages in Italy

In recent years Italy has been making rapid strides as an industrial nation, until at the present time the number of industrial workers is approximately 3,000,000. Further increases are registered continually, and Italian manufactures are constantly finding new export markets, entering into competition with American commodities in many localities. In view of these circumstances, a study of labor and wage conditions in Italy is of growing importance to American manufacturers. Such a study is contained in Trade Information Bulletin No. 337, "Labor, Wages, and Unemployment in Italy," just published by the Bureau of Foreign and Domestic Commerce.

Certain Italian manufactures—such as textiles, automobiles, electrical machinery, hats, etc.—already have a large sale abroad, and more and more attention is being paid to the exploitation of foreign markets. Meanwhile a considerable measure of protection is afforded by the present customs tariff, and many new industries are springing up.

Notwithstanding the high degree of efficiency of Italian workmen, wages in Italy are considerably below the levels prevailing in the United States, or even in other European countries. While this manufacturing advantage is to some extent offset by the fact that Italy is obliged to purchase a large proportion of its raw materials from other countries, in manufactures where skill and labor costs are important factors Italian competition must be reckoned with in foreign markets.

The depreciation of the lira has also been a factor in giving Italy an export advantage, but during the past year the decline in lira value has not been marked, while the advance of internal prices, which has been one of the outstanding features in Italian economic life in recent months, will probably lead to wage advances great enough to offset, at least in part, the advantage derived from low exchange. [JULIUS KLEIN.]

Adopting a Foreign-Trade Motto

Many advantages may be gained by the employment of appropriate mottoes and slogans. The merchant who makes a happy selection of a clear, clean-cut, concise motto which embodies his business policy and who strikes upon a neat, effective slogan, which is truly descriptive of the product that he is marketing and which is sufficiently "catchy" to be an advertising asset, has succeeded in adding an intangible, yet valuable, aid to his enterprise.

The slogan, in appealing to the psychology of the customer, advertises the product, whereas the motto dictates home policy. Large exporters usually limit themselves to the selection of a proper motto, since, because of the nature of a slogan and the catchiness which its expression requires, it is difficult to hit upon one that can be conveniently and adequately translated into the foreign languages of certain of the export markets.

Of course, in the adoption of a motto, setting forth a foreign-trade policy, the exporter should bear in mind that changing economic trends may at times occasion a change in policy, and hence of motto. Furthermore, he must remember that a motto may be excellent in one locality and entirely unprofitable in another. By keeping well posted, however, as to developments in export markets, he is in a position to judge accurately as to the propriety of his motto and the effectiveness of his slogan.

[A. GAMER.]

World's Commercial News in Brief

The following are brief items compiled from data cabled by Government representatives stationed abroad, from official foreign publications, and from other sources. Countries included in the "Monthly Cable Reviews" are omitted from this section.

European Economic and Trade Developments

For reasons of Bureau administration, this heading includes also Canada

BELGIUM

Wage cuts of 5 per cent in the coal industry and of 6 per cent in the glass industry became effective on May 1. Metallurgical markets are considerably weaker, and many of the mills are reducing their activity, particularly because of the serious competition met from Luxembourg and the Lorraine district.

CANADA

A slight decline in wheat prices on the Winnipeg exchange early in the week was attributed to weak cables, lack of export demand, and reported improvement of crop conditions. The export of oats continued to improve, while other commodities moved in sympathy with wheat. It is locally expected that the return of Great Britain and other European countries to the gold standard will favorably reflect on grain values. Steel plants at work on rail orders continue at capacity. Importation of ingot nonferrous metals at Montreal has resulted in weakening demand for domestic products. The iron market is expected to react to the cut made last week in ore prices for 1925. A further fractional cut in prices of brass and copper was made during the week by Toronto firms, making the fifth reduction this spring. Sales of machine tools and plant equipment are reported to be improved.

DENMARK

Various strikes and lockouts that have lasted a month and a half are still in effect, with 150,000 workers out of employment. These conflicts are becoming a serious menace to economic stability, and there appear to be no prospects of an early settlement. In spite of these labor difficulties, the crown has advanced during the past month, and is now about 70 per cent of par. Although the transport workers have decided to refrain from participation in strikes, thus permitting the uninterrupted export of Danish farm produce, a decrease has occurred in these exports during the past two weeks. The bank of issue continues its deflation policy, which has in some measure tended to increase the number of commercial failures.

POLAND

Reports to the parliamentary budgetary committee indicate a deficit of 180,000,000 zlotys in the 1925 budget. This, joined with the unfavorable trade balance of 212,000,000 zlotys for 1924 and the continued money and credit shortage, emphasizes the difficulties of the business and economic situation. The internal debt of the State is said to be 145,000,000 zlotys and the external debt 1,599,000,000 zlotys, exclusive of the recent American loan. It is expected that a considerable area of land will be divided among small peasant proprietors during the year. Danzig continues to feel the

strain of depressed business conditions, with no immediate prospect of improvement. The present shortage of capital may be relieved by a loan of 37,000,000 gulden, which was recently approved by the League of Nations and which is to be floated in England.

GERMANY

Foreign-trade figures recently published show an increase in exports during March of 80,700,000 gold marks, and a decrease in imports of 13,000,000 gold marks. Reduced receipts of grains, textiles, and leather raw material account for the import decrease. Imports of tobacco, lumber, and copper showed advances. Increased exports were principally of chemicals, dyes, iron and steel, machinery, and textiles. The private-discount market now shows a turnover of from three to four million gold marks daily, at approximately 8 per cent. A further reduction of 1 per cent in the Reichsbank discount rate will be made when the market expansion justifies it.

HUNGARY

Government revenues have risen to such unexpectedly large proportions that a surplus has been attained in the first six months of the current fiscal year, and a small surplus for the year has been indicated. The crown has appreciated in terms of the English pound, with reference to which it was stabilized. Business is suffering from a decrease of demand, domestic as well as foreign, and from high production costs that depend on tax charges and the high cost of operating capital. The official discount rate has recently been reduced from 13 per cent to 11 per cent, but the rates actually paid are very much higher when loans can be obtained at all.

NETHERLANDS

The gold standard has been restored, effective April 29. The Government has fixed the price of gold at 1,653.44 guilders per kilo. Gold export is based on exchange rates of other gold-standard countries. Imports during March were valued at 204,000,000 guilders, and exports at 146,000,000 guilders, thus continuing the habitual excess of imports. In anticipation of the enforcement of new tariff regulations on May 15, importers are generally stocking up rather heavily, particularly in the automotive trade. In the lumber trade the most important development is the lowering of German transit freight rates to Holland for lumber products from Czechoslovakia.

NORWAY

The Norwegian bank of issue is steadily augmenting its holdings of foreign exchanges, which have now been brought up to about 60,000,000 crowns, or about double that held at the beginning of the year. This is

the result partly of direct purchases by the bank and partly of increased remittances from abroad derived from expanding exports, whaling activities, and the merchant marine. With the growth in industrial output unemployment has been decreased. The increased purchasing power of Norwegian exchange has facilitated imports of raw material. On the whole, the industrial situation is more encouraging than at any time since the end of the postwar boom.

SPAIN

The Government has authorized extensive public works in order to relieve the present serious unemployment. The economic situation is extremely depressed. The mining industry has failed to sustain occasional indications of improvement, and present conditions are very discouraging, as is also the case in the textile industry.

RUMANIA

Business depression continues in spite of recent rising quotations for lei exchange. The finance ministry has announced that the budgetary year 1924 closed with a surplus of four to five billion lei.

SWEDEN

Partly in consequence of the March labor conflicts, Swedish exchange has recently suffered a slight decline. The adverse balance of trade of the first four months of the year has created an economic strain, which is reflected in the continued reduction of foreign-exchange holdings of the Bank of Sweden and in the private banks. The lumber and iron and steel industries are considerably depressed and are suffering from concerted foreign competition. It is felt that basic prosperity must await the recovery of these two industries.

Far Eastern Trade News

CHINA

Little improvement is noted in the Shanghai district, China, according to the weekly cable from Commercial Attaché Julean Arnold, Peking. With the approach of the native settlement day the piece-goods market is featureless. Canton-Hongkong Chinese cotton piece-goods merchants are facing financial difficulties because of inability to distribute their stock purchased on quarterly payment basis, due to the disturbed conditions in the interior. The threatened strike among silk filature workers in Canton is expected to delay marketing of the new silk crop. Exports of raw silk from Canton during the first two weeks in April totaled 1,350 bales and sales for the same period amounted to 1,100 bales. The raw-silk market is somewhat duller. The tax on kerosene levied by the Canton government is still in effect.

Tientsin bankers report that north China export trade exceeds that for the corresponding period last year. Automobile sales have been excellent and, in some cases, dealers are short of stocks. The final estimates of the 1924 cotton and wool crops were 30 per cent below those of the previous year. The general import trade of north China, especially Manchuria, is reported good.

JAPAN

Preliminary returns of the foreign trade of Japan for the third 10 days of April show exports of 54,000,000 yen and imports of 75,000,000, according to the weekly cable from Acting Commercial Attaché Frank Rhea, Tokyo. In comparison with the preceding 10-day period exports dropped 3,000,000 yen, while imports declined 7,000,000. Returns for the three 10-day periods of April show exports of 164,000,000 yen and imports of 251,000,000, an increase, in comparison with March, of approximately 13,000,000 yen in exports, but a decline of 62,000,000 in imports. It is significant that both of the above totals are greater than for the corresponding month of last year, in spite of the abnormal demand for reconstruction materials obtaining at that time. The cumulative import excess for the first four months aggregates 453,000,000 yen. (prelimi-

nary figure) compared with 582,000,000 for the corresponding period of last year and 208,000,000 for the first four months of 1923.

INDIA

The business situation in British India during the week ended May 2 showed considerable improvement, according to cable advices from Assistant Trade Commissioner E. G. Sabine, Bombay. The rupee remained firm at the advance. Cotton was strong. The demand for Colombo tea of all descriptions was good at advancing prices. The hessian market became somewhat easier, reacting to reports that the growing jute crop was greatly benefited by recent rains which have fallen over a wide area. Trade figures which are now available for the calendar year 1924 show that India's exports were almost 1,000,000,000 rupees greater than for 1922, while imports showed little change. Many reasons have been given for this lagging of imports, while exports recovered to such a remarkable degree, but it is generally agreed that a revival of imports is to be expected in the near future.

AUSTRALIA

Following the action of the mother country, Australia has lifted the embargo on gold and has returned to the gold standard, according to a cable from Trade Commissioner E. G. Babbitt, Melbourne. From the point of view of foreign trade this action on the part of the Commonwealth will increase Australia's foreign purchasing power, and, for a time, at least, will tend to offset to a certain extent preferences enjoyed in that market by Great Britain. Wool sales at Sydney and Melbourne held during the week ended May 2 showed weakness, with the highest greasy wool bringing 33d. The wheat situation remains unchanged. Unemployment appears to be increasing, but the tendency may be regarded as largely seasonal. According to a statement made by State savings banks, almost 50 per cent of the total Commonwealth population has accounts in these institutions. Both the number of depositors and the amount on deposit have increased steadily during the past 10 years.

Latin America at a Glance

ARGENTINA

The week has shown a slight improvement in Argentine exports, and imports are greater than at this time last year. The wool market is stagnant. Deposits of gold under the provisions of recent legislation have increased paper peso circulation by 69,000,000. Bank deposits and loans are increasing. (Commercial Attaché Edward F. Feely, Buenos Aires, May 2.)

PERU

The state of depression existent in all lines of trade in Peru during recent weeks continues, although some progress has been made in the work of restoring transportation facilities, reports Commercial Attaché H. B. MacKenzie, from Lima.

ECUADOR

The Ecuadorian Government has bought out foreign interests in the Guayaquil-Quito Railroad according to a cable from Commercial Attaché H. B. MacKenzie, at Lima, Peru. This solution of a long-standing question of control removes many difficulties hitherto encountered in operating the road.

CENTRAL AMERICA

General conditions in Central America are fair, with good prices prevailing for export products.

MEXICO

Business in Mexico during the week ended May 2, is reported as slow with a general attitude of pessimism, according to Commercial Attaché Alexander V.

Dye. The shoe trade is very dull with many of the factories working only part time. A movement is on foot to establish again a cooperative association of henequen growers in Yucatan. An American company has recently begun the exploitation of large gypsum deposits on San Marcos Island off the coast of Lower California, according to Consul W. P. Blocker, at Guaymas. The fourth national convention of civil engineers will meet at Torreon from September 13 to 20, writes Consul B. F. Yost.

PORTO RICO

Collections are slightly better in Porto Rico, but care is still advisable in extending terms to small and unknown buyers. The assumed prolongation of the cane-grinding season indicates increased purchases this month by interior retail merchants and possibly by importers. (Trade Commissioner L. W. James, San Juan, May 2.)

CUBA

The general mercantile situation in Cuba is still slow and collections are becoming more difficult, reflecting the continued low price being received for sugar. The first sugar mill to close for this season was Central Nueva Paz, which exceeded its estimated outrun by approximately 20 per cent. This leaves 182 mills still grinding. Guma-Mejer have increased their estimate of the crop to 4,925,000 tons. Reports published in the Habana papers indicate that the labor situation took on a more optimistic tone during the week ended May 2. It now appears that the railroad difficulty will be adjusted without recourse to a strike.

MONTHLY CABLE REVIEWS

EUROPE

Samuel H. Cross, Chief, European Division

British Budget Encourages Business

Based on Cable from Acting Commercial Attaché Hugh D. Butler, London, May 1

The new budget for 1925-26, presented to the British Parliament on April 28 by the Chancellor of the Exchequer, is expected to provide some encouragement to British business. It lessens the income tax burden, makes available more money for home and overseas investment, increases the buying power of the middle class, and by the contributory health, old age, and "widows all-in" insurance, strengthens the workers' sense of security in industries.

The compulsory contribution is four pence per week by employer and four pence by male employee. Some industrial interests oppose this added burden and criticize the possibility of the expensive operations for maintenance of exchange parity, should American prices fall or should other untoward events depress sterling and thereby absorb future balances instead of providing a tax relief.

Imperial Preference Extended.

The increased duties and imperial preferences are not expected to make radical differences in American sales in this market of dried fruits, automobiles, silk, rayon hosiery, clocks and watches. The duty on imperial-grown dried figs, plums, raisins, which was formerly 6s. per hundredweight, is abolished after July 1. Duties on foreign imports are continued at 7s. Importers expect that imperial growers now losing money will advance prices to British distributors unless there is a future excess of production, hence American imports and margins are not expected to be seriously affected. The new duty on foreign automobiles is 83 1/3 per cent, and on imperial automobiles 22 2/9 per cent. American and British car price advances are expected, but not to last year's level, as British makers learned the advantageous effect of cut price on quantity. More severe competition is expected, but American makers expect to hold their ground. Heavy spring sales are under way. It is anticipated that more American cars will again be shipped from Canada.

American films, clocks, watches, and musical instruments are expected to revert to last year's status without special feature.

Customs Duties Placed on Silk.

Duties on imperial silk and rayon are one-sixth less than on that from other foreign sources. An excise duty on domestically produced rayon, yarn, straw, and waste is laid on manufacturers of rayon yarn, straw or waste, and they must pay an annual license duty of £1. The new duties of 38½ per cent of valuation will advance retail prices of silk and rayon hosiery to an extent varying from 4d. to 15d. per pair, and the popular 8s. 11d. American rayon hose will probably resume the 4s. 11d. position. (Detailed figures will be found in the tariff section of this issue.) These duties are proposed to go in effect on July 1.

The consensus of trade opinion is that, in view of the excise duty on domestic rayon, women will continue to buy. The production of British silk hosiery is relatively small, and the silk manufacturing group welcomes the new duties and may still pursue the application decided upon for protection under the "safeguarding of industries act." Manchester resents the new duties on rayon, as the consequent higher yarn prices thwart the chief aim of the industry's conference in April to reduce prices and create a wider demand.

Budget Well Received.

The budget was well received by London financial interests. Auto shares advanced, and Dunlop was in sympathy. The temporary advance in rayon shares was followed by a decline, owing to the doubts of any advantage from the protection proposed as against reduced demand at higher prices. Sterling advanced toward par. The estimated revenue for 1925-26 is £801,000,000, and expenditures £799,000,000.

The general industrial position was uneventful after the Easter interval. Production continues irregularly, similar to and generally a little lower than March, with a lull in new business partly due to budget expectancy. The value of exports of manufactured goods for the first quarter was 12 per cent above the first quarter of last year. Prices were lower than on January 1. Provincial clearing-house returns are reflecting greater goods turnover.

Safeguarding Committees Appointed.

The Bradford manufacturers' ballot returned 86 per cent favoring the application for safeguarding protection on worsteds. The imposition of luxury duties on silk strengthens the continuation, though some duty is likely on lace as the result of the board of trade investigation. The committee appointed by the board of trade last night recommended a 38½ per cent ad valorem duty on all kinds of lace, also on embroidery manufactured on net or eliminable fabric, whether forming part of or attached to the garments or other articles. No duty is recommended on solid dress fabric made on lace machines. The Government decision has not yet been announced. New committees are investigating the possible need of safeguarding duties for phosphates, gas mantles, and leather and fabric gloves.

Coal Industry Unfavorable—Iron and Steel Better—Shipping.

The situation in the coal industry is worse, with little hope of recovery in the next month. Pits continue to close down, and foreign competition is more severe, especially from Germany. The average daily production of iron and steel in April was estimated

slightly lower than March. The spring trade is satisfactory. There is continued competition in home markets, but less effective than in March.

Idle tonnage in British ports on April 1 was 393,062 tons. The improvement, however, was compromised by the number of ships overseas awaiting return cargoes. During April there were launched on the Clyde 24 vessels of 94,046 tons, representing this year's record month. New orders are reported scarce.

Other Industries Steady.

Rubber prices for the past quarter averaged 19.36, resulting in an increase on May 1 of 10 per cent to 65 per cent of the quota under the Stevenson scheme.

The lumber market has shown good consumption in particular housebuilding specifications. Prices are firm and being met without hampering the trade. Consumption is greater than arrivals at the moment, and considerable future orders are in the market.

Petroleum imports are less than the average, but will increase during the next few weeks. American participation is slightly down, except in lubricants. Non-ferrous metals are quiet but firm, except tin, which showed a steady advance during April.

The British hide market is steady, the tanners federation urging a further reduction of vat input in order to reduce production to near consumption demand. Leather is moving in small lots, dry hide bends being most active. Colored kid calf is most popular, patent next. There is no increase in the Irish Free State tariff on boots and shoes, but the Union of South Africa has withdrawn the 8 per cent preference heretofore given British footwear. Boot manufacturers are active, but the volume of new orders is not encouraging.

Italian Industries Continue Satisfactory

Based on cable from Commercial Attaché H. C. MacLean, Rome, April 30

The industrial situation in Italy continues sound, and export trade is making a good showing. The prolonged crisis in the security markets has ended, and Government finances are in a favorable condition.

No early conclusion of negotiations with Germany for a commercial treaty are expected. Negotiations for treaties with Hungary and Rumania are soon to begin.

Budget Deficit and Internal Debt Reduced.

The Italian ministry of finance has announced that only one-half of the surtax on incomes exceeding 10,000 lire, which became effective on January 1, will be collected during the year 1925. Government revenues in March amounted to 1,642,000,000 lire, or 148,000,000 lire more than in March of last year; expenditures reached 1,648,000,000 lire, or 45,000,000 lire more than a year ago. The deficit shown on the budget for the first nine months of the fiscal year amounts to 193,000,000 lire, or 16,000,000 lire less than for the corresponding period of the preceding fiscal year.

The internal debt on March 31 amounted to 91,699,000,000 lire, showing a net reduction of 1,600,000 lire during the month. Short-term notes outstanding were reduced to 18,980,000,000 lire, a cut of 786,000,000 lire. Nine-year treasury bonds were increased by 767,000,000 lire.

Issue Banks Reduce Circulation.

The combined statement of the three Italian banks of issue for March 31 shows circulation for the account

of the State as amounting to 7,072,000,000 lire, a reduction of 73,000,000 lire during the month; for the account of the autonomous section of the consortium for the subvention of industrial values as amounting to 3,746,000,000 lire, or a reduction of 375,000,000 lire; and for the account of trade, 6,875,000,000 lire, or an increase of 671,000,000 lire. This latter increase is the result of the demand for funds for monthly stock settlements, occasioned by the decline in prices. The total circulation of paper, including notes issued by the treasury on March 31, amounted to 19,993,000,000 lire, as compared with 20,514,000,000 lire at the close of the year 1924.

Bank Clearings Show an Increase.

Ordinary discounts had increased to 5,210,000,000 lire at the end of March from 5,041,000,000 lire at the end of the preceding month, and discounts of the consortium for the subvention of industrial values decreased to 3,746,000,000 lire from 4,121,000,000 lire. Deposits in private banks on February 28 amounted to 2,524,000,000 lire, or an increase of 118,000,000 lire from the preceding month. Loans and discounts, amounting to 7,498,000,000 lire, showed a decrease of 144,000,000 lire.

Bank clearings in January amounted to 79,189,000,000 lire and in February to 62,568,000,000 lire; the total for the two months showed an increase of 10,701,000 lire over the same period of 1924. Ordinary savings deposits on December 31 amounted to 12,221,000,000 lire, an increase of 1,645,000,000 lire during the year. Postal savings aggregated 9,685,000,000 lire, an increase of 6,400,000 lire during the year. Failures in February numbered 629.

Security Prices Rising.

As a result of assurances from the Government, allaying all fear of interference, and with the support of the larger financial and industrial interests, security prices have undergone a sharp rise, and the volume of business has been large, with a firm tone. Public confidence is reviving, but this recovery will probably be slow. Monthly settlements are no longer causing apprehension, and money is relatively easy. Call loans are at 5 per cent, as compared with $5\frac{1}{2}$ per cent last month, although discounts remain at 7 to 8 per cent.

Steel in Demand—Textiles Active.

On account of the large demand for steel, deliveries have been slow and orders are given ahead for a period of six months to avoid delay. Steady activity continues in the cotton industry. Wool manufacturers are fully occupied, and stocks are low. The export demand is strong, but the domestic market is less active. It is believed that the price of raw wool has now been stabilized, and this is inspiring confidence in the future. Raw-silk stocks are low, and manufacturers of silk textiles are well occupied with expanding exports and a growing tendency to export finished products in the place of raw products.

Shoe and Hat Sales Limited—Wheat Market Quiet.

The straw-hat industry has been somewhat depressed because of the limited domestic demand and the reduced volume of exports. The amount of business done by shoe factories has been limited, owing to increased prices.

The wheat market is extremely quiet and prices are unsteady, as buyers are awaiting some intimation of the real tendency of prices.

Railway Rate Increases Cause Protest.

The increase in railway freight rates on April 16 caused considerable protest on the part of manufacturers, resulting in a demand for revision. Passenger fares were increased by an average of 9 per cent on first and second class fares, and by 4 per cent on third-class fares, effective May 1. Car loadings between July, 1924, and February, 1925, increased 21 per cent over the corresponding period of the previous fiscal year. Freight movements in all ports during the first three months of 1925 increased 20 per cent.

Imports and Exports in February.

Wheat imports in February were valued at 464,000,000 lire; corn, at 24,000,000; cotton, at 237,000,000; wool, at 119,000,000; iron and steel scrap, at 33,000,000; pig iron, at 10,000,000; copper, at 31,000,000; coal, at 99,000,000; and mineral oils, at 49,000,000 lire.

Exports of raw silk for the same month were valued at 248,000,000 lire; rayon, at 45,000,000 lire; cotton yarns, at 28,000,000 lire; cotton textiles, at 149,000,000; wool, at 33,000,000; silk, at 42,000,000; automobiles, at 43,000,000; tires and tubes, at 26,000,000; citrus fruits, at 64,000,000; cheese, at 33,000,000; and olive oil, at 33,000,000 lire.

The agricultural outlook in all major products is excellent, but heavy storms have damaged the nut crops. The Milan fair closed on April 27, with sales estimated at 2,000,000,000 lire, and the number of visitors at 2,000,000.

Czechoslovakia Continues Deflation

Based on cable from Commercial Attaché James F. Hodgson, Prague, May 1

A slight recession in general industrial activity, most pronounced in the textile industry, is characterizing the present situation in Czechoslovakia. Note circulation has reached its lowest point, while balances abroad foreign currency, and its total cover have risen. Clearings for the month also showed an increase.

Export Trade Greatly Increased.

Exports for March showed an increase of 187,000,000 crowns, while imports showed an increase of 74,000,000 crowns.

Total exports in March amounted to 1,705,000,000 crowns (\$50,700,000) with increases in textiles, iron, coal, and glass, as against February exports up to 1,518,000,000 crowns (\$45,500,000). The imports in March aggregated 1,403,000,000 crowns (\$41,600,000), with increases in cotton, wool, chemicals, and fats and decreases in bread grains and flour; this compares with February imports of 1,329,000,000 (\$39,900,000).

A further improvement in foreign trade is expected from the commercial treaties recently made with Poland, Greece, and Sweden, and from the negotiations for commercial treaties with Spain, Hungary, and Switzerland. The Government now permits the export of three-fifths of the goatskins available, provided the rest are sold within the country at a price not exceeding 32 crowns (96 cents) per skin.

Daily car loadings in February averaged 13,634; in March, 13,125; of coal in February, 4,255, and in March, 4,042 daily.

Volume of Currency Further Reduced—Heavy Failures.

The statement of the banking department of the Government, dated April 23, shows a note circulation of 6,954,000,000 crowns (\$206,000,000), which is the

lowest point yet reached. Balances abroad and foreign currency rose to 561,000,000 crowns (\$16,600,000) from 554,000,000 on March 23, and the total cover for the currency rose to 3,127,000,000 (\$92,800,000) from 2,964,000,000 crowns. Clearings for the same month rose to 5,694,000,000 crowns (\$168,000,000) from 5,529,000,000 crowns.

March failures included 56 bankruptcies and 192 compositions, with combined losses of 622,000,000 crowns (\$18,400,000); this compares with 43 bankruptcies and 183 compositions, with total losses of 59,000,000 crowns, in February.

The law for establishment of an independent bank of issue has passed its second reading in the Senate without change. Important legislation is pending for the simplification of the fiscal system, principally through consolidation of various taxes and of a sliding-scale import tariff on cereals.

The Government is arranging for the renewal of 209,000,000 crowns (\$6,200,000) of short-term notes maturing May 1, with a premium feature as heretofore.

Annual declared bank dividends show a reduction of 2 per cent, but industrial dividends are generally higher.

Prices Decrease—Crops Satisfactory—Coal and Coke Production.

The index of retail prices on March 15 was 923, as against 929 on February 15, and the wholesale index on April 1 was 1,019, as against 1,084 on March 1.

Coal production in March totaled 2,642,000 metric tons, as against 2,442,000 tons in February, 2,648,000 in January, and 3,039,000 tons in December; coke production in March was 126,000 tons, as against 142,000 tons in February.

The Government reports that the prospects of the crop of winter grains is satisfactory and that spring sowings are well advanced; the weather is favorable.

Improved Conditions in South Africa

Based on cable from Trade Commissioner Perry J. Stevenson, Johannesburg, May 3, 1925, with cooperation of Consul R. P. Clark, Port Elizabeth.

Business in South Africa continues to improve slowly. Wholesale and retail trade is better and local industries are increasing their output. The financial situation in the Union is easier, the volume of overdue bills smaller, and the banks are extending loans more freely.

It is reported that London banks are buying control of the national bank, which would strengthen the general banking position. The situation is further benefited by the amalgamation of the Netherlands Bank of South Africa and the Transvaal Commercial Bank.

Agricultural conditions in the Union continue favorable. The damage to crops from rains was found to have been exaggerated.

Mines Active—Increased Gold Output.

Gold mining in the Transvaal is steady, with production in March showing an increase of 71,554 fine ounces over February. Valued at 85 s. an ounce, the same as last month, the declared valuation totaled £3,508,286, an increase of £306,105 as compared with February's valuation. The general tendency among the gold mines is to reduce costs. Buying of mine supplies and mining materials is well sustained. The output and value of coal and diamonds shows a slight increase.

The relations of mine owners and white mine employees has improved, as a result of the recognition of the mine workers' union. Natives employed in the gold, coal, and diamond mines at the end of March numbered 197,664, as compared with 200,816 at the end of February. The number of natives employed in the gold mines fell from 182,099 to 179,061.

Import and Export Market Situation.

Imports and exports are expanding. As the result of heavy rains, which disarranged transport facilities, the volume of imports and exports was reduced temporarily. Imports during March were valued at approximately £5,437,000, and exports at £8,487,000, including £5,647,000 of native gold. Agricultural implements stocks are low, merchants are indenting heavily, and prospects are excellent.

Adverse weather conditions are retarding sales of motor cars; but the general position is good, with a tendency to reduce prices for American cars. Orders for cotton piece goods are being placed freely and trade is improving. The lumber situation remains unchanged; stocks are ample and the demand is moderate.

The Port Elizabeth wool market is dull. Stocks, consisting mostly of short and faulty wools, are fairly heavy. Shipments of new mohair, comprising mixed hair only, are arriving and are meeting with a fair demand. Skin prices, with the exception of calfskins, are much easier. Ostrich feathers showed slight improvement.

LATIN AMERICA

Richard F. O'Toole, Chief, Latin-American Division

Slight Improvement in Bolivian Trade

Based on cable from Consul Stewart E. McMillin, La Paz, April 30

Although no decided change in Bolivian business as a whole occurred in April, some lines moved more satisfactorily than others. The demand for paints, sanitary supplies, and construction material has been promoted by building and street improvement in preparation for the approaching national centennial celebrations. The strong demand for lumber has not, however, been of sufficient duration as yet to create increases in prices, as stocks on hand are still large. Other lines that have not been so favorably affected

are dry goods, certain classes of machinery, and staple food products, such as sugar and flour, sales of which are the smallest recorded for the year. Collections have not been altogether satisfactory, and a tightening of credit in large mercantile establishments has had the effect of bettering exchange.

Some feeling is noticeable in business circles that trade has declined because of the impending May elections, but a belief is prevalent that thereafter a considerable improvement should take place.

Import and Export Trade.

Customs duties on imports in March were 20 per cent over those of February, collected principally on such

items as dry goods from Great Britain and the United States, iron and steel from Great Britain and the Netherlands, food supplies, mining machinery, and explosives from the United States, electrical goods from Germany, oils from Great Britain, and wool from Italy. Mineral exports for March exceeded those in February and were in metric tons as follows: Tin, 4,604 to Great Britain and 39 to Chile; lead, 1,205 to Great Britain, 540 to Germany, 535 to Argentina, 192 to the United States, 58 to Belgium, and 21 to Chile; silver, 421 to Belgium, 408 to the United States, 76 to Great Britain, and 5 to Germany; copper, 625 to the United States and 8 to Great Britain; antimony, 93 to Great Britain, 41 to the United States, 30 to France, and 30 to Germany; bismuth, 88 to Great Britain and 3 to Germany; zinc, 26 to Great Britain.

Brazilian Transportation Retarded

Based on cables from Trade Commissioner W. E. Embry, Sao Paulo, and Commercial Attaché W. L. Schurz, Rio de Janeiro, May 2

The directorate of the Central of Brazil Railway has resolved not to receive merchandise for Jahu Bauru and Agudos branches of the Paulista Railway and all

stations on the Noroeste Railway from Bauru to Porto Esperanca, thus affecting lines of a total length of about 1,000 miles. This decision is bound to further affect the economic life of the district served by the Noroeste Railway, which is already suffering from extremely poor transportation service. So far as imported material is concerned, the decision also means increased traffic over the already heavily burdened Sao Paulo Railway for transshipment.

The question of renewing the Sao Paulo Telephone Co. contract has caused popular protest, due to clauses allowing 40 years for the period of the concession and because of other unusual favors to the company, including the establishment of fees which would give the company large revenue.

United States Trade Again in Lead.

Statistics just issued covering Brazilian imports for the first six months of 1924 show the United States trade to have regained first place. The annual report indicates net earnings of the Bank of Brazil for the year 1924 as 99,666,000 milreis. The Germans have sold 4,000 tons of rails to the Sul Mineira Railway. The National Congress convenes on May 4.

FAR EAST

Philippine Foreign Trade Advancing

Based on cabled figures from Assistant Trade Commissioner E. B. George, Manila

Foreign trade of the Philippine Islands for the first quarter of the current year reached a total value of 148,838,000 pesos (1 peso=\$0.50), an increase of 17,246,000 pesos over the islands' trade for the first three months of 1924. Practically all of the advance was due to increased imports, which totaled 64,956,000 pesos for the quarter, compared with 49,136,000 for the corresponding period last year.

Imports Showing Gains.

Increases were registered for all imported commodities for which details are now available, except leather goods and cotton manufactures other than cloth. Imports of iron and steel and manufactures advanced 2,700,000 pesos in value, and of cotton cloths 1,500,000 pesos. The bulk of the increase in imports, however, was in the varied products which make up the miscellaneous items imported into the Philippines to the value of about 9,000,000 pesos monthly. The total value of such imports advanced from 21,813,000 pesos for the first quarter of 1924 to 31,410,000 during the first three months of the current year.

Small Export Gain Recorded—Balance of Trade.

Total export trade of the islands showed only a slight advancement of 1,400,000 pesos. Although abaca and coconut-oil shipments increased about 6,000,000 and 2,000,000 pesos, respectively, these increases were offset by reductions in exports of sugar, copra, and other products.

Because of the advance in Philippine imports the favorable balance of trade was reduced from 33,320,000 pesos for the first quarter of 1924 to 18,926,000 at the close of the first three months of the current year.

Principal Commodities Imported.

Details of the leading items entering into Philippine foreign trade for March, 1925, compared with that of March of last year, are shown in the following table:

Leading commodities in Philippine trade

Commodities	March, 1924	1925	
		March	First 3 months
EXPORTS			
	<i>Pesos</i>	<i>Pesos</i>	<i>Pesos</i>
Abaca (manila hemp).....	9,127,000	5,767,000	15,899,000
Sugar.....	15,960,000	14,131,000	33,464,000
Coconut oil.....	1,893,000	4,000,000	8,995,000
Copra.....	1,639,000	2,144,000	3,612,000
Copra cake.....	168,000	218,800	949,800
Cigars and cigarettes.....	852,000	1,002,000	2,472,000

Radio Developments in Norway

Although Norway's first broadcasting station, located at Oslo, was recently put into operation, the Norwegian Government has not as yet formulated a definite plan for the further development of radio. It is expected that the Norsk Radioforbund, a club for amateurs, will soon arrange with the Government for a definite broadcasting program. In the course of a recent meeting between members of this club and Government officials it was stated that those parts of Norway furthest removed from the heavily populated centers would be the first to receive the benefits of this proposed plan, in that special programs would be arranged for broadcasting through the country districts where there were few theaters or other places of amusement. (A. E. Fenslau, clerk to commercial attaché, Copenhagen.)

PREMIUM ON FRENCH EXCHANGE IN BRUSSELS

Trade Balance Requires French Franc Purchases—Tourists' Demands Heavier for French Currency—Purchases of Securities Less in Belgium

S. H. Cross, Chief, European Division

The tendency of the Belgian franc to parallel the fluctuation of French exchange is one of the most salient features of the current European exchange markets. Since 1919 the Belgian franc has followed the movements of French exchange with some consistency, though the French franc has usually remained at a premium over Belgian exchange, even during the period of stress in March, 1923, when both currencies fell to their lowest postwar level. At that time, although the spread between the two currencies decreased considerably, the Belgian franc never succeeded, as did the Italian lira, in passing the French franc.

Pre-War Exchange Favored French Franc.

Up to 1914, French exchange as a rule was at a premium in Brussels. The increase in national savings in Belgium produced free capital more quickly than it could be employed internally, and as a result considerable amounts were exported for investment. This process was effected in large measure through bankers and investment brokers in Paris. As a consequence of this accumulation of capital, Belgian purchases of foreign goods, both necessities and luxuries, tended to increase, and the trade statistics of the four-year period, 1910-1913 inclusive, show a growing unfavorable trade balance with France, due also partly to the absence of de luxe industries in Belgium.

Speculation Has Aided French Premium.

At the same time it was in the interests of speculators to perpetuate this premium on Paris at 20 centimes per 100 francs or more, for the situation facilitated profits from purchasing Belgian franc notes or drafts at a discount, turning the latter into silver 5-franc pieces of the Latin Union at the Belgian Banque Nationale, again converting the silver thus obtained into French notes or drafts, and repeating the process indefinitely. Furthermore, the diversion of capital toward France was encouraged by the higher discount rate in Paris, since it was the traditional policy to keep the Belgian bank rate low in order to favor stock and bond issues and general activity on the Belgian bourses. Under these conditions a 5 per cent premium on Paris was not unusual.

Belgian Franc Exceeded the French in 1920.

Upon the unpegging of the allied exchanges in March, 1919, other factors tended to restore the premium on French exchange in Brussels. The year 1919, which saw the resumption of trade and industry in Belgium after the stagnant period of occupation, found the Belgian market stripped of mercantile stocks, and as a result about 37 per cent of Belgian imports from France failed to be covered by shipments to that country. The situation changed somewhat during 1920. In that year Belgian exports to France exceeded purchased by approximately 9 per cent.

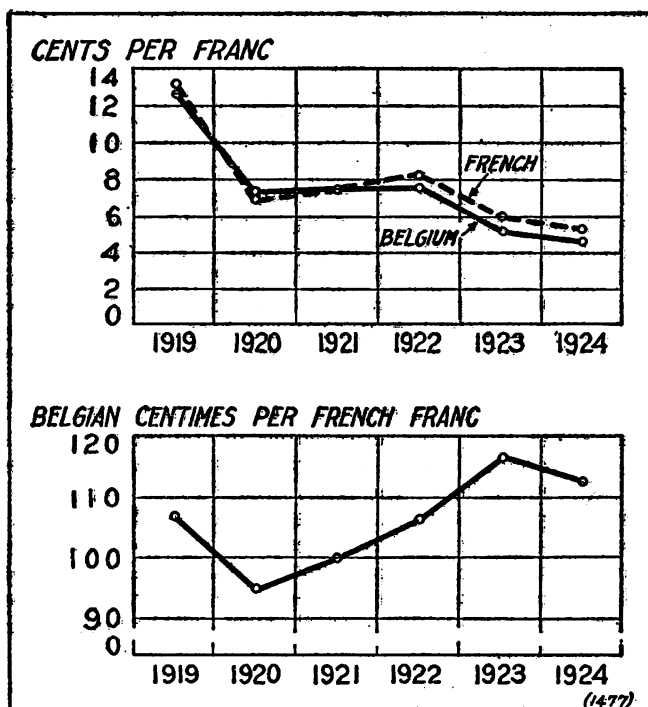

During this period two factors which later contributed to the restoration of the former premium on French exchange were largely inoperative—the increased French protective tariff, and the growing American tourist demand for French currency. Be-

tween September, 1919, and March, 1921, the Belgian franc was accordingly at a premium as compared with the French. Belgium at this juncture was realizing on foreign credits and profiting by the first payments made by Germany on its reparations claims.

Subsequent Years Have Restored French Premium.

Beginning with the second half of 1921, however, and up to the present time, the Belgian franc has followed the movement of the French franc at rates remaining at all times below the latter in terms of the stable currencies.

VALUES OF FRENCH AND BELGIAN EXCHANGE

NOTE.—The chart points for 1921, as regards both the French franc in terms of Belgian centimes and the French and Belgian francs in terms of American currency, do not show with entire accuracy minor discrepancies between the currencies, which were accurately 100.124 Belgian centimes, \$0.074554, and \$0.074461, respectively.

Certain Conditions Apparently Favor Belgian Franc.

It is not surprising that a certain parallel exists between the French and Belgian exchanges. The financial ties between the two countries were extremely close during the war. The two countries suffered equally from disturbed conditions in Germany and have been constantly identified in action on questions of foreign policy, especially as regards reparations and their collection. Moreover, Paris is the principal market for the Belgian franc. Nevertheless, it is difficult at first sight to understand the features underlying the premium on the French franc in Brussels.

Economic, commercial, and financial conditions in the two countries are by no means alike. On the one hand, the visible French commercial balance is more favorable than that of Belgium, and tourists in France bring in much larger capital than is the case in

Belgium. The internal debt of Belgium, averaging 4,260 Belgian francs per capita, is a lighter burden than that of France, which amounts to 7,100 French francs per capita. Moreover, under the treaty of Versailles, Belgium is free from obligations resulting from advances made by the Allies during the war, and also was guaranteed by the Spa agreement a priority on payment from Germany to a total of 2,000,000,000 gold marks, of which 1,700,000,000 have already been received and the remainder is provided for under the projects for distribution of the Dawes plan annuities.

Three Factors Decisively Favor French Premium.

Regardless of these factors apparently favorable to the Belgian franc, there are three important factors still operating in favor of a premium on French exchange in Brussels. The first two, the unfavorable trade balance with France and the tourist demands for currency, have already been mentioned; the third is the volume of foreign-exchange purchases through Paris, for Belgian account, in consequence of the narrowness of the Brussels-Antwerp exchange markets.

Trade Balance Favorable to France.

With the restoration of industry in the devastated regions and the reconstruction activities undertaken by the French Government, a considerable advance in industrial capacity appeared in France in 1921. This increased productivity, particularly in the line of metallurgy, exercised a depressing effect on French purchases of Belgian steel products. The effects, also, of the increased French tariff in 1921 may be judged by the cut in exports to France of Belgian glass products, from a value of 102,191,403 francs in 1920 to a value of 22,876,638 francs in 1921. Drastic reductions occurred, too, in purchases of Belgian cement and superphosphates. Moreover, the indirect traffic to France via Belgium, represented in the latter's resales of leaf tobacco, wool, and raw cotton, was diverted into direct traffic by the revival of French port activities along the Atlantic seaboard. Altogether, Belgian sales of manufactured products to France decreased in volume practically 50 per cent in 1921, so that a favorable trade balance in the preceding year was reduced to an unfavorable balance through an import excess of 6 per cent.

Belgian Unfavorable Balance Tends to Increase.

Since that time the unfavorable balance has gradually increased. In 1922 over 4,000,000,000 French francs' worth of merchandise were exported from France to Belgium, while only 1,737,000,000 francs' worth of purchases were made by France in Belgium; thus the unfavorable trade balance was somewhat over 2,275,000,000 French francs. In 1923 the unfavorable balance amounted to almost 3,400,000,000. Last year (1924), over 7,000,000,000 francs' worth of merchandise was shipped from France to Belgium, whereas only 2,655,000,000 francs' worth of merchandise were purchased in Belgium by the French. In other words, the unfavorable balance against Belgium at the end of 1924 had increased to 4,459,000,000 French francs.

Belgian Investments in France Maintain Premium.

Constant Belgian export of surplus capital to France and Belgian investments through Paris have served, in connection with the Belgian foreign balances created by interest payments on previous investments, to liquidate indirectly the unfavorable visible trade balance existing with France. At the same time, these have

constituted another factor in maintaining a premium on French exchange over Belgian. It is questionable, however, whether the volume of new Belgian investments abroad has been maintained at anything like its pre-war level, particularly in view of the growing demands for capital emanating from home industries. The total of Belgian foreign investments in 1924 was estimated as amounting to about 11,000,000,000 paper francs, yielding 550,000,000 francs of income.

French Exchange Helped by American Investments.

To this factor, which reacted directly on Belgian financial activity, should be added others which are operative more particularly on French exchange. These are the American purchases of French public and private securities, and the tourist demand for French currency or credits. It would seem that French internal issues have been attractive to American purchasers in consequence of better publicity and more general familiarity with their speculative features, while Belgian public utilities and industrial and municipal stocks have not been touched to the same extent in the United States.

Tourist Requirements Also an Important Factor.

It is difficult, of course, to determine the importance of the tourist demand for French currency. It is worthy of mention, however, that the spread between French and Belgian currency is most marked in tourist months.

If on a conservative estimate it is assumed that approximately 100,000 American tourists visit France between May and September and there spend \$1,000 apiece, this tourist business represents a sustained demand for French currency which in the end exerts a cumulative influence on the French franc. One of several American banking houses in Paris estimates its sales of francs to tourists in exchange for dollars at 2,000,000 francs per day. This demand is no doubt reinforced by a large volume of traffic from the British Isles.

Tourist traffic in Belgium, on the other hand, is mainly transient and the volume of individual expenditure is restricted, except in the case of the short season at Ostend and perhaps a limited period at Spa.

Currency Differential Controlled.

It appears that while Belgian exchange tends to follow seasonal movements in French exchange, as affected by raw-material purchases, by general business activity, and to some extent by reparations payments, the spread between the exchange values of the two currencies is perpetuated by the factors outlined. The Belgian Central Bank has, however, intervened from time to time to restrict this spread, and is understood to have sold for this purpose a large proportion of the proceeds of the 400,000,000 French-franc loan negotiated in Paris in 1923. Furthermore, the Belgian treasury in the last two years has been able to place at the disposal of the Banque Nationale for similar purposes considerable sums secured in French francs from reparations payments or from the yield of the Ruhr occupation. The use of these balances for manipulation of the premium on Paris is in accord also with the avowed policy of the Banque Nationale to employ a portion of the proceeds of the dollar loan recently floated in the United States as a "maneuvering fund" to limit fluctuations of the Belgian franc and bring about a degree of relative stability.

BRAZILIAN INDUSTRIAL DEVELOPMENTS.

Extensive Growth in Recent Years—Production Approximates Consumption in Many Lines

Richard C. Long, Latin American Division

American manufacturers contemplating the Brazilian field as a market for their products will do well to consider the importance that Brazil's manufactures have attained in different lines and also the probability that this industrial development will continue to increase, especially in southern Brazil.

The growth of Brazilian industry is of recent date. Prior to 1889, when the Republic was established, the country had only 626 factories. Progress in manufacturing advanced steadily but slowly, however, during the next 25 years—that is, until 1914—and has been promoted in the last 10 years by the war and by the depreciation of exchange.

Capital of Industrial Concerns.

The number of industrial concerns established during the period from 1915 to 1919 is estimated at 5,940 with a capital of 438,559,000 milreis. There were in 1920, according to statistics recently issued by the ministry of agriculture, commerce, and industry, 13,338 industrial establishments in Brazil with a total capitalization of 2,232,814,000 milreis (approximately \$502,383,150, at the average rate of exchange for that year), employing 365,615 persons, with an annual output of products valued at 2,989,176,000 milreis (\$672,564,600).

Wide Range in Manufacturing.

The range of manufacturing covers a wide variety of products, the major part of the production consisting particularly of those articles having their origin in the country's fields and forests, such as textiles, cigars and cigarettes, preserves, beef, and furniture. The remainder makes considerable use of imported products, iron and steel, leather, drugs, etc. In some lines of industry, the domestic production practically supplies the entire demand as is evidenced by the following statistics compiled by the Centro Industrial do Brazil, from returns of the consumption taxes for the year 1919:

Brazilian production and consumption, 1919

Article	National production	Imports	Total consumption	Percentage supplied by National production
	Milreis	Milreis	Milreis	
Tobacco	101,875,062	7,342,689	109,217,751	93.3
Drinks	300,944,231	37,952,850	338,897,081	88.8
Matches	34,732,123	4,225,146	39,957,269	99.9
Salt	16,701,713	6,643,336	23,345,049	79.8
Shoes	110,633,816	6,375,982	117,009,798	99.4
Perfumes	25,120,014	37,790,015	62,910,029	79.7
Pharmaceutical specialties	53,362,713	4,584,372	57,947,085	58.5
Preserves	114,303,209	192,070	114,495,279	98.1
Vinegar	6,594,618	20,917	6,615,535	97.1
Candles	14,823,667	31,446	14,855,113	99.8
Canes	119,951		119,951	79.2
Textiles of cotton, wool, linen, jute and silk	823,900,367	81,027,735	904,928,102	90.4
Manufactures of textiles not including knit goods	36,061,816	9,466,131	45,527,947	
Corsets	761,038		761,038	
Wall paper	3,574,273	73,274	3,647,547	98.1
Playing cards	1,977,653	147,010	2,124,663	93.0
Hats	43,027,742	1,215,049	44,242,791	97.2
Photograph disks	4,106,138	165,136	4,271,274	96.0
Porcelain and glassware	7,012,226	15,009,680	22,021,906	32.0
Hardware	33,606,530	7,242,370	40,848,900	82.2
Roasted and ground coffee	41,309,413		41,309,413	
Butter	32,858,680	131,133	32,989,813	99.6

Production in Many Lines Approximates Consumption.

The output of tobacco products, matches, shoes, preserves, vinegar, candles, textiles, wall paper, playing cards, hats, and butter almost equals consumption. Other important products, manufactured in quantities approximating consumption, are furniture, building bricks and tile, refined sugar, wrapping paper, cheese, confections, vegetable oils, Indian corn, and manioc meal, soap, cheap jewelry, and stamped metal ware. Leather and electric lamps are also important manufactures.

Industries Active—Establishments Classified.

Most important is the textile industry, which has reached a highly developed state. Many of the finest grades of cotton produced equal in quality imported materials. Some of the world's most modern breweries are located in Rio de Janeiro and Sao Paulo. The shoe industry, which still consumes a good share of imported leather, has progressed rapidly and is turning out a stylish class of footwear. The furniture industry has kept abreast of the demand, and with the many kinds of wood available is producing a variety of fine products.

Establishments producing foodstuffs are largest in number, followed by those manufacturing clothing, etc., by the ceramic industry, woodworking and furniture factories, and textile mills. The classification of the industrial establishments in 1920 into their principal groups follows:

	Number of factories
Foodstuffs	3,969
Clothing, etc.	1,983
Ceramics	1,590
Textile (general)	1,211
Wood	1,207
Chemical products	950
Furniture	548
Cars and vehicles	535
Metallurgy	509
Leather and allied trades	424
Building industry	331
Industries relative to sciences, arts, and letters	47
Production and transmission of power	29
Total	13,338

The textile firms have the greatest capital, 706,415,000 milreis, followed by food products, chemical products, clothing, and timber.

Domestic and Foreign Capital Investments.

The greater number of factories, according to the last industrial census, were owned individually; the rest were partnership firms and corporations. Of the individual firms, the majority were Brazilian, having a capital of 278,394,000 milreis, the remainder being foreign, with a capital of 261,479,000 milreis. Partnerships were capitalized at 439,524,000 milreis. The greatest amount of capital was invested in corporations, being 1,127,387,000 milreis.

The leading foreign manufacturers from the point of number and capital invested were Italian, Portuguese, German, and Spanish. The United States was represented by only six firms.

Distribution of Factories.

The number of establishments by States in 1920, total capital invested, number of workers, and value of production, are shown in the following table:

Brazilian manufacturing establishments by States, 1920

State	Number of factories	Capital	Number of workers	Value of products
		<i>Milreis</i>		<i>Milreis</i>
Alagoas.....	352	30,452,000	6,989	40,519,000

Sergipe.....	237	16,678,000	5,386	28,827,000
Territory of Acre.....	10	107,000	22	197,000

Manufacturing in Sao Paulo.

Sao Paulo is the largest manufacturing center in Brazil. The following figures show how the value of the production of the factories in the State has increased from 1900 to 1922:

	<i>Milreis</i>
1900.....	69,752,000
1905.....	110,290,400
1910.....	189,370,000
1915.....	274,147,422
1920.....	795,915,200
1921.....	804,378,007
1922.....	1,937,662,300

Taking 40 of the balance sheets of factories covering operations during 1923 of concerns located in Sao Paulo city, the percentage of net profits to paid up capital was 33. Most of the concerns, the balance sheets of which were taken at random, were strengthening their position by placing large sums to reserve, the average dividend paid being less than 15 per cent.

Factories in Sao Paulo city have been operating far below normal in recent months due to shortage of power occasioned by severe droughts, but new power sources are being developed.

The increase in quantity of production of some Sao Paulo factories from 1900 to 1921 is shown in the following table:

Increase in production of Sao Paulo factories

Year	Cotton factories	Boots and shoes	Hats	Jute fiber	Matches	Beer
	<i>Meters</i>	<i>Pairs</i>	<i>Number</i>	<i>Meters</i>	<i>Boxes</i>	<i>Liters</i>
1900.....	33,540,000	1,600,000	1,060,000	14,200,000	28,300,000	8,000,000
1905.....	36,646,000	1,980,000	1,400,000	17,850,000	32,850,000	14,200,000
1910.....	75,833,470	3,608,287	1,372,867	10,087,756	61,637,189	18,975,519
1915.....	121,589,728	4,865,021	2,477,253	33,462,805	183,345,047	27,939,360
1921.....	197,184,698	7,293,380	2,098,167	25,366,900	95,228,400	32,800,631

Development of the Textile Industry.

Sao Paulo's chief industry, the cotton textile, has made remarkable progress during the last 20 years in the number of mills, which increased from 17 in 1900 to 54 in 1921, and the capital invested which amounted

to 22,931,000 milreis in 1900, while in 1921 it had increased to 106,188,000 milreis. The products of the cotton mills include stockings, raw cloth, knit goods, plain and colored cloth, calico, zephyrs, canvas, duck, cretonne, damask cloth, and similar products. Factories for woolen goods in 1920 produced 6,712,000 milreis worth of cashmere, flannel, blankets, etc. Four jute mills produced 40,000,000 meters of jute fiber. The raw material used was imported from India, but lately some use has been made of national fibers mixed with jute. Silk factories produced fabrics and ribbons valued at 2,750,000 milreis.

Boots and Shoes, Hats, and Foodstuffs Produced.

The total production of boots and shoes in 1921 reached 7,293,386 pairs, and footwear to the value of 6,234,858 milreis was exported to other Brazilian States. The hat industry is well advanced and equipped. In 1921, it produced 2,098,167 woolen, felt, and straw hats. A small part of this output was exported. Among the food industries, that of beer, wine and spirits is large, the value of exports of such commodities reaching 18,206,674 milreis in 1921. Large quantities of biscuits, other food products, tin and bottle goods and confectionery are also produced.

Glass, Earthenware, Paper, and Other Manufactures.

The manufacture of glass and earthenware products has made noticeable progress. The paper mills have an annual production of 11,800 tons of paper for printing, letters, and wrappers, as well as 3,000 tons of cardboard. Leather factories use about 250,000 ox and sheep skins annually, while the tannin employed is extracted from domestic plants. The prepared hides are used in the manufacture of boots and shoes, trunks, saddlery, etc. Other factories in the State manufacture metal goods, agricultural machinery, furniture, and rope and string. There are also iron foundries and potteries.

Four large meat-packing plants in the State, with a combined capital of 36,000,000 milreis, have a total annual production of over 50,000,000 kilos. In addition to these refrigerating plants, numerous plants are engaged in the preparation of xarque or jerked beef.

Extent of Sao Paulo Industrial Developments.

Taken as a whole, there were 2,715 of the more important industrial establishments with 82,221 workers, and a combined capital of 464,698,430 milreis in Sao Paulo, besides numerous smaller workshops. Sao Paulo's manufactured goods are known all over Brazil. Total exports to other Brazilian states now exceed 300,000,000 milreis. Products are also being sent to Argentina and Uruguay.

The Federal District Also an Important Industrial Center.

Following Sao Paulo in manufacturing comes the Federal District with its 1,542 plants in 1920, a total capitalization of 441,669,000 milreis and an output valued at 677,553,000 milreis.

The textile industry leads in the Federal District with a total capital of 172,088,000 milreis and an output valued at 94,346,000 milreis; 20 woolen textile and knit goods factories capitalized at 15,667,000 milreis produced goods worth 21,990,000 milreis. The boot and shoe industry occupied 164 factories, and made footwear worth 60,236,000 milreis. Furniture factories numbering 117 had an output valued at 13,050,000 milreis. Eight flour mills turned out a product worth

78,773,000 milreis—an amount next in value to that of textiles. Tobacco factories produced 43,625,000 milreis worth of tobacco, cigars, and cigarettes. Breweries made beer valued at 38,927,000 milreis. Sugar refineries valued their output at 37,368,000 milreis. Many other factories produced hats, clothing, cars and other vehicles, pastries and preserved fruits, pharmaceutical specialties, metal products, ice, candies, soap, perfume, wood products, and bags.

Developments in Rio Grande do Sul—Rio de Janeiro.

The third industrial center of Brazil is the State of Rio Grande do Sul which in 1921 had 1,773 factories with a capital of 250,689,000 milreis, 24,661 workers and their output was valued at 474,600,000 milreis. The manufacture of jerked beef, or xarque, is the principal industry of the State, together with the preparation of cattle by-products. The State also has cotton, wool and silk mills which turn out a variety of products, including stockings and knitted wear. Shoe manufacturing is developed to a high degree as well as other leather manufactures such as belting, and traveling equipment. Other industries operating successfully in Rio Grande do Sul are those producing hats, tobacco, metal objects, soap, candles, furniture and household ware, perfumes and toilet articles, and tile and bricks.

Next in line as a manufacturing State comes Rio de Janeiro, which in 1920 had 454 factories capitalized at 126,206,000 milreis and an annual production of 184,161,000 milreis. The principal industries are textiles, boots and shoes, tanneries, sawmills, sugar refining, and the preparation of foodstuffs.

Minas Geraes, Pernambuco, and Others.

Minas Geraes, the birthplace of Brazilian manufacturing, had 1,244 factories in 1920, capitalized at 92,225,000 milreis and employing 19,579 workers. The total production of these factories in 1920 was 174,160,000 milreis. The principal industry is the textile, the weaving of cotton cloth in Minas Geraes dating back to the eighteenth century.

There is a considerable production of cotton goods, knitted wear and stockings, and there are large machine shops, sugar-cane mills, furniture factories, boot and shoe factories, breweries, tanneries, cheese factories, flour mills, foundries, soap and candle, and tobacco factories.

Following Minas Geraes, comes Pernambuco, with 443 factories in 1920, capitalized at 90,564,000 milreis and a production of 138,371,000 milreis in 1920. The chief industries are sugar refining, cotton textiles, jute spinning and weaving, fruit preserving, cigarette making, furniture, brick and tile factories, hats and shoes, and alcohol.

Other States of Brazil in which manufacturing has attained some importance are Parana, Bahia, Santa Catharina, Para, Alagoas, and Parahyba.

Brazilian Government Aiding Manufacturing.

The World War forced Brazil, as many other countries, to rely largely on its own resources and many infant industries grew up very rapidly. Since then, the high import tariff and depreciated exchange have been of great assistance in lessening competition from abroad. The willingness of the Government to assist in establishing new industries has also been a great factor. This assistance takes various forms. A recent budget bill passed by Congress, for instance, author-

izes the Ministers of Agriculture and Commerce to spend 1,000,000 milreis for establishing an electrometallurgical plant for experimental purposes in connection with the School of Mines in Ouro Preto. It also permits the granting of favors, including exemptions from taxes, to companies engaging in the manufacture of by-products of domestic coal, such as benzine and tar. Similar favors may be granted to the first concern using aninga and other Amazonian fibers for making pulp and paper.

Companies using domestic minerals for making rails and metallic superstructures, as well as war material for the Government, may be granted a guaranty of interest not to exceed $1\frac{1}{2}$ per cent.

Additional favors and in some cases cash prizes will be granted to assist in the development of other industries, and the Government has in a number of instances offered and granted loans of substantial sums—particularly to companies engaged in the development of the coal mining, caustic soda, nitrogen fertilizer, steel, and other industries.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

UNITED STATES FOREIGN TRADE IN DRIED FRUITS IN 1924

Exports of Dried Fruits in 1924 Reached 200,000 Tons, Valued at \$30,000,000—Germany, Great Britain, and Canada the Leading Buyers

Samuel Lebow, Foodstuffs Division

The year 1924 witnessed not only a revival from the slump which occurred in the dried-fruit export trade in 1923, but also the greatest export movement, in point of tonnage, in the history of this trade, exports amounting to nearly 200,000 tons valued at \$30,000,000. The imports of dried fruits were also the largest in some years.

Factors Contributing to 1924 Trade.

Probably the outstanding causes of the remarkable increases in our exports of dried fruit during the past year are short European prune crops; better prospects for European stabilization, with its attendant heavy German buying, particularly of prunes; prevailing low prices in the principal prune markets; and the results of intensive advertising abroad by the American raisin industry.

The following table shows increases in every commodity, with the total more than double that of the previous year and with prunes standing out as by far the most important single item.

Exports of dried fruits from the United States

(Thousands of units in both quantity and value)

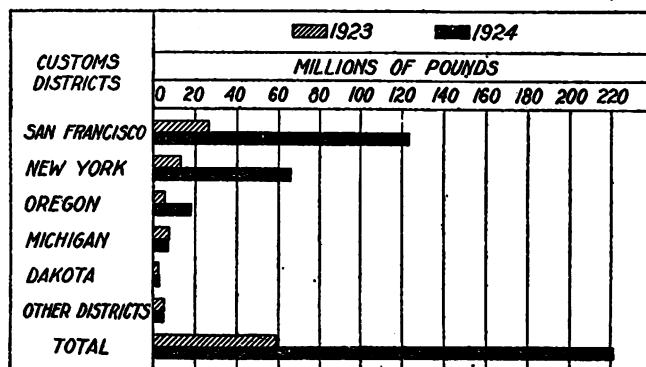

Fruits	1922		1923		1924		Per cent change in quantity, 1923 to 1924
	Pounds	Value	Pounds	Value	Pounds	Value	
Prunes.....	94, 216	\$9, 212	59, 104	\$5, 211	220, 912	\$13, 218	274
Raisins.....	93, 891	11, 476	77, 814	7, 627	92, 140	7, 027	18
Apples.....	17, 391	2, 210	16, 708	1, 547	29, 740	3, 639	78
Apricots.....	9, 858	2, 373	20, 169	2, 383	30, 456	3, 845	51
Peaches.....	5, 764	755	4, 656	432	12, 552	987	170
Other.....	9, 944	1, 243	12, 206	1, 244	13, 150	1, 448	8
Total.....	231, 064	27, 269	190, 657	18, 444	398, 950	30, 164	109

A comparison based on value shows that out of nearly a billion dollars' worth of foodstuffs exported in 1924, dried fruits, as a class, stood in sixth place and comprised 3 per cent of the total. Out of the total dried fruits exported, prunes comprised 55 per cent, and prunes and raisins together 78 per cent.

Germany the Best Customer for Prunes.

For many years Germany has been the best market for American prunes and during 1924 exceeded its best pre-war purchases by some 40,000,000 pounds. Even as far back as 1904, Germany took 28 per cent of our total exports of prunes. In 1913 that country's share

of our total prune shipments abroad rose to 41 per cent. The war interrupted this trade, and for several years following the war Germany was financially unable to purchase the American product. The heavy demand from Germany for American prunes began during the closing months of 1923 and continued through 1924. A total of nearly 90,000,000 pounds of this fruit, valued at over \$4,000,000, was shipped to Germany from the United States during 1924—practically 40 per cent of the total shipped to all countries. An apparent discrepancy of over 45,000,000 pounds will be noted in comparing Germany's imports from the United States with American exports to Germany during 1924. This discrepancy is undoubtedly due to the

Exports of dried prunes from United States, by customs districts

large transit trade which is carried on in the Hamburg free zone and which is not shown in the German statistics.

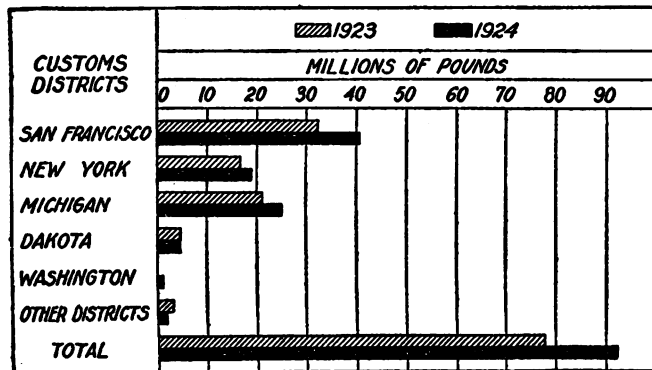

Proposed Changes in German Import Duties on Prunes.

An interesting development during the year has been the proposed increase in the German duty on boxed prunes from 15 gold marks per 100 kilos (1.6 cents per pound) to 20 gold marks per 100 kilos (2.1 cents per pound). On prunes imported in sacks, it is expected that the old rate of 4 gold marks per 100 kilos (4 mills per pound) will be retained. The differential between the two types of packing has encouraged and developed a repacking industry in Hamburg to such an extent that the demand from Germany during the past year has been largely for prunes in sacks. In defense of this practice German packers make the claim that the packing can be done at much cheaper rates in

Germany than in United States. American exporters, however, contend that the German consumer has not benefited thereby, in view of the fact that German packed prunes are sold at competitive prices with the American-packed product. In addition, it is claimed that with this repacking industry has sprung up the practice of an indiscriminate blending and mixing of prunes of different brands and sources. An increase in the duty on boxed prunes making the differential even wider will tend, it is feared, to encourage such practices. Late information from Germany, however, indicates that the Hamburg Dried Fruit Association is in favor of a lower duty on boxed prunes and that the Government has been petitioned to bring the rate down to 8 gold marks per 100 kilos (8 mills per pound). The final outcome is still a matter of conjecture.

Other Customers for Prunes.

The United Kingdom, this year our second best customer for dried fruits, was also second in purchase of prunes. Purchases of this fruit were four times those of the pre-war period and double those of 1923. The increased exports to the Netherlands, our third customer, have been attributed, at least in part, to the demand created by the establishment in Rotterdam of packing houses similar to those in Hamburg. France, normally a heavy consumer of prunes and invariably a large importer of American prunes in years of short crops, was faced in 1924 by one of its periodic shortages and bought heavily from the United States. Canada greatly increased purchases of American prunes, as did also the Scandinavian countries, Finland, Belgium, New Zealand, Mexico, and Argentina.

Exports of dried raisins from United States, by customs districts

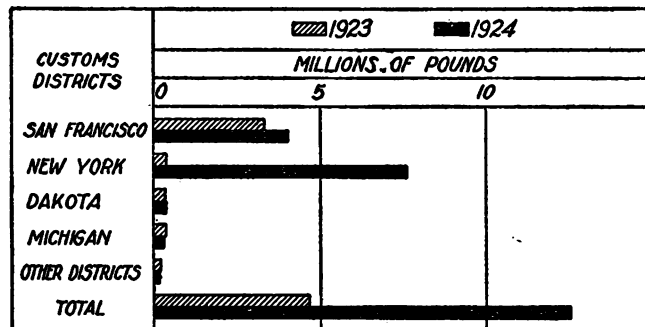

Canada the Leading Market for California Raisins.

Canada ranks among our best customers for dried fruits, and the large purchases of raisins make the Dominion our best market for that product—such imports in 1924 reaching approximately 45 per cent of the total shipments to all countries, and showing an increase of 22 per cent over shipments in 1923.

One of the outstanding features in this trade last year was the proposed trade agreement between Canada and Australia in September—still awaiting ratification by Canada—whereby, among other concessions, Australian raisins and currants were to be admitted into the Dominion free of duty. The proposed agreement would carry even further the advantage to the Australian products by bringing into effect an advance in the general duty from two-thirds of 1 cent to 3 cents a pound.

British Market for Raisins.

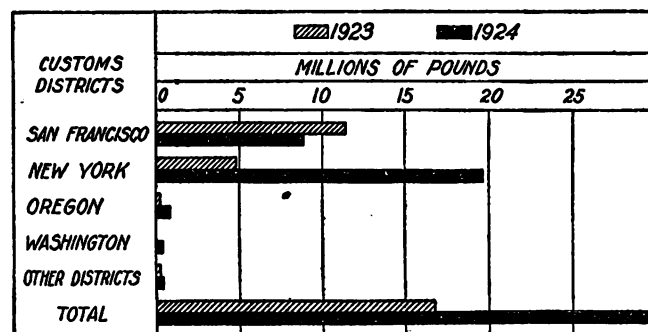

Although United States exports of raisins to the United Kingdom, which is our second customer for this commodity, rose from 17,000,000 pounds in 1923 to 19,000,000 pounds in 1924, raisins have not yet recovered from their slump following the heavy shipments in 1922, when we held first place as a supplier of raisins in the British market. That year, it may be remembered, was the year of the Smyrna fire, when shipments of raisins to Great Britain fell off, with a consequent demand for the American product. During the following year, 1923, Smyrna was again in the market and led all other countries, but it is interesting to note that in 1924 Australia jumped to first place, displacing both Smyrna and the United States.

Exports of dried peaches from United States, by customs districts

Other Dried Fruits Much in Demand.

Dried apples, apricots, peaches, and the products coming under the classification "other dried fruits," make up 22 per cent of the total dried fruits exported in 1924. Germany took approximately 47 per cent of the dried apples exported, 43 per cent of the peaches, and 32 per cent of the apricots. Next to Germany, named in order of their importance as buyers, some of the best customers in 1924 for our dried apples were the Netherlands, the United Kingdom, and Sweden; for our apricots, the Netherlands, United Kingdom, Canada, Sweden, Belgium, and Denmark; and for peaches, the United Kingdom, Canada, the Netherlands, and Sweden.

Exports of dried apples from United States, by customs districts

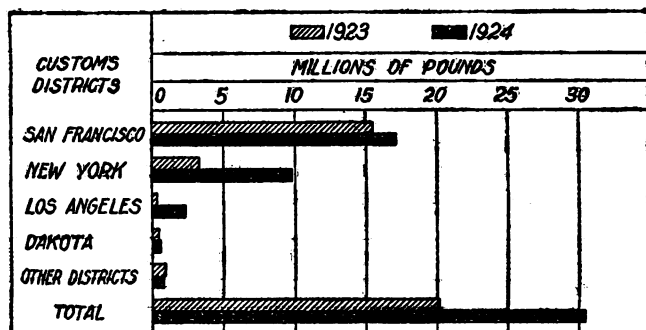

Exports by Customs Districts.

The accompanying charts show graphically the relative importance of the principal shipping districts for the United States export trade in dried fruits.

San Francisco the Leading Export Port.

Fully 81 per cent of the total exports of dried fruits were cleared through the San Francisco and New York customs districts. San Francisco handled 50 per cent

of the total shipments, while New York was second with 31 per cent, part of which originated on the Pacific coast. The importance of Michigan as the second raisin export district will be understood when it is remembered that the great proportion of the Canadian shipments are cleared through that district.

Exports of dried apricots from United States, by customs districts

Import Trade in Dried Fruits.

Although a large exporter of dried fruits, the United States imports annually considerable quantities of those fruits which we do not raise in appreciable amounts, particularly figs and dates. While the imports of these two commodities have steadily increased until in 1924 they exceeded all previous records, the imports of raisins and currants have shown an opposite tendency.

Current and Raisin Imports Decline.

At one time the United States was considered by Greece, our largest supplier of currants, as one of its

best customers for that product, but we bought less in 1924 than ever before, dropping from 57,000,000 pounds in 1921 to less than 14,000,000 pounds in 1924. Our imports of raisins have also shown a steady decline from the 46,000,000 pounds imported in 1920. That was the largest quantity which has ever entered the United States, and of that amount nearly 26,000,000 pounds came from Spain.

While Spain and Smyrna have been the principal sources of our imported raisins, Australia supplied small amounts in 1920, but none in 1924. British South Africa entered the market with very small amounts in 1920, but imports from that source gradually rose to 3,000,000 pounds in 1923, and that country took first place among our raisin sources. A considerable falling off, however, is noted in the imports for the past year.

Additional information regarding foodstuffs appears in this issue under the following sections:

Cable review, Europe:

Italian crop outlook excellent.
Czechoslovak crop situation satisfactory.
South African crop conditions favorable.

Latin America:

Trade conditions in eastern Nicaragua.
Costa Rican foreign trade increase.

Tariffs and trade regulations:

Canada—

Removal of import restriction on live fowl from Connecticut.

Labeling of ice-cream containers.

Greece—Increase in conversion rates for wheat flour.

Peru—

Import duties and fees on certain foodstuffs temporarily suspended or reduced.

Change in method of assessing export duties on sugar, Alcohol monopoly abolished.

United Kingdom—British preferential rebate on certain foodstuffs increased.

"Great variety of circulars issued by bureau."

"Foreign trade opportunities."

Exposition of Interior Navigation and Hydraulic Exploitation

An International Exposition of Interior Navigation and of the Exploitation of Hydraulic Forces will be held at Basel, Switzerland, from July 1 to September 15, 1925, according to Journée Industrielle of April 9. In order to present as complete a program as possible for the exploitation of hydraulic forces in connection with the problem of converting natural water courses into navigable waterways by construction of dams and locks, the exposition will embrace not only the production of energy in low waterfall plants but also in high waterfall plants, although the latter are only indirectly useful to internal navigation.

To firms, associations, authorities, administrations, etc., interested in these branches, the exposition offers an opportunity to inform the public of their activities. Engineers, architects, builders, manufacturers, etc., also can present their projects and products. Articles exhibited will not be passed upon by a jury, and no prizes will be awarded. (Eugene A. Masunet, clerk to trade commissioner, Paris.)

TOBACCO

Tobacco Section, Foodstuffs Division

MISCELLANEOUS NOTES ON EUROPEAN TOBACCOS

The present demand of the European markets is largely for cheap tobacco, but this fact need not be regarded entirely in the light of a trade dampener, since it is a well-known fact that goodly amounts of cheap tobacco can be utilized without being seriously felt by the industry.

The following miscellaneous notes concerning European tobaccos are based upon reports submitted by Prentiss M. Terry, who, as a representative of the Department of Commerce, is studying tobacco markets in Europe. As the purport of these notes is to view the situation in perspective, only the outstanding features have been mentioned, but the question of the preference of cheap tobaccos prevails throughout.

United Kingdom Consuming More Colonial Tobacco.

The tobacco market of the United Kingdom during 1924 was one of steady progress toward stability. Stocks were well maintained and well balanced but seldom excessive. A good but short crop in the United States (which is England's chief source of supply) were two factors conducive to good prices.

Great Britain has made an effort to develop the tobacco industry in its numerous colonial possessions. The reduction in British import duties on colonial produce has been a special incentive, and tobaccos of Empire growth on which duty was paid at reduced rates have increased in quantity from 1,493,886 pounds in 1919 to 8,911,946 pounds in 1923. Colonial tobacco which entered at a reduced rate constituted only 1 per cent of the tobacco imported into the United Kingdom in 1919, but made up 6.9 per cent of the imports in 1923. It is generally expected that a further increase in the rate of preference will be granted at the next budget. Canada is probably the most successful colonial tobacco producer.

Total imports of tobacco into the United Kingdom for the year 1924 amounted to 182,673,583 pounds; total exports were 19,475,329 pounds; after drawback returns were deducted, 127,918,085 pounds were cleared for home consumption. There remained in warehouses on December 31, including carry-overs, 368,294,000 pounds. For the first two months of 1925, imports amounted to 26,109,810 pounds; exports, 2,305,486; home consumption, 20,216,443; and there was in warehouses on February 28, including carry-overs, 365,618,000 pounds. The greater part of the stock in warehouses is the property of various manufacturers, the unused stock being much smaller in proportion than the stock sold.

Belgian Market Quiet.

The Belgian tobacco market during the first three months of 1925 was rather quiet. Orders were rare with a decreased demand in certain Provinces.

Lots of the new Paraguay and Dominican crop have been offered for shipment at low prices. Both of these crops are fairly abundant, and of inferior quality—hence, the low prices.

The first shipments of the new crop of Brazilian tobaccos have just arrived in Europe, but they are as yet

too small to give a definite idea of quality. The prices are easier for inferior varieties, but the better grades are maintained at almost their former levels.

Demands for oriental tobaccos are restricted and there is a feeble tendency shown for Chinese and Algerian tobaccos.

It is reported that approximately 15,000 hogsheads of tobacco are on hand in Belgium. There was a decided drop in arrivals of tobacco from the Near East during March as compared with February, only about 8,000 bales arriving in March and 22,000 bales in February.

Italy Striving for Increased Production.

Tobacco production in Italy has increased considerably during the past few years. In 1924 the area under tobacco was 91,427 acres, compared with 75,860 acres in 1923. Up to the present time the whole of the crop has been worked up by the monopoly itself, but Italy apparently means to increase its exports of tobacco. Italian growers, however, lack experience, and Italy does not produce the wood essential to the firing process, which is so necessary to the aroma and flavor of the dark fired types of tobacco.

Taxes on Greek Tobacco Make Competition Difficult.

During 1924 tobacco in Greece paid a revenue to the Government of about half a million drachmas. Tobacco taxes in Greece are much higher than in Bulgaria, which takes only 15 per cent from tobacco in taxes; or in Turkey, which takes only 12½ per cent. Because of such high taxation, Greece has been thrown into unfavorable competition with Turkey and Bulgaria. Efforts are being made to create more favorable conditions for the exportation of Greek tobacco.

Russian Tobacco a Small Factor in Levantine Market.

The tobacco crop in Transcaucasia for 1924 is said to surpass in quality that of the previous year. In Moscow the Tabakssyrje company has superseded the tobacco syndicate, which went into liquidation some time ago. The founders of the Tabakssyrje company are the tobacco trusts of Petrograd, the Crimea, and the Ukraine, as well as the Mosselprom, the Head National Economic Council, and the Rostow Tobacco Factory.

Russian tobaccos, which used to play a very important part, have become of very little account in the Levant tobacco market.

Changes in Canadian Tobacco Tax

In an article entitled "Canada as a possible tobacco competitor," published in *COMMERCE REPORTS* of April 27, the statement was made that leaf tobacco produced in Canada was subject to an excise tax of 20 cents per pound. Later information from Canada states that this tax referred to manufactured tobacco other than cigars and cigarettes. Prior to March 24, 1923, there was a tax of 5 cents per pound on leaf tobacco produced in Canada, but this tax has been abolished and at the present time leaf tobacco produced in Canada is entirely exempt from excise tax.

CHEMICALS

Charles C. Concannon, Chief, Chemical Division

THE DYE MARKET IN ARGENTINA

Large Variety of Dyes Consumed—Competition for Trade—Suggestions to Those Interested in Market

Vice Consul E. Kitchel Farrand and Assistant Trade Commissioner Sherwood H. Avery, Buenos Aires

The dye market in the Argentine Republic is probably one of the most competitive in the world. Prior to the World War, Germany was dominant. It is estimated that in the five-year period 1909 to 1913, inclusive, Germany furnished 86 per cent of the dyes imported into Argentina while the United States accounted for only 4 per cent.

The war necessarily changed this state of affairs. Communications with Germany stopped, and that country did no export business with Argentina during the war years. With the improvement in the quality of American dyes, the United States attained the position formerly held by Germany and furnished from 40 to 87 per cent of the dyes.

Competition with Germany Keen.

The close of the World War permitted the German firms who had formerly dominated the market to attempt to regain their former position. The organization for the distribution of dyes was soon revived along its former efficient lines and the struggle between the American firms attempting to retain and the German firms attempting to regain the market became very keen. At present, price and service are the principal competitive factors. The American product stands as high in the opinion of the Argentine consuming public as the German, but competition is very keen.

The efforts of the German firms in regaining their markets have been fairly successful. While complete statistics showing the countries of origin of the principal imports have not been published, it is estimated that at the present time Germany is supplying about 60 per cent and the United States 35 per cent of the dyes used in the country. Some progress has been made by the American firms since this estimate was made, however, and it is thought that the present contribution of the United States amounts to approximately 45 per cent of the dyes imported.

Imports by Countries of Origin.

The following table shows the imports of aniline dyes into the Argentine Republic by countries of origin from 1913 to 1922, inclusive:

Argentine imports of aniline dyes

Countries	1913	1916	1920	1921	1922
	<i>Kilos</i>	<i>Kilos</i>	<i>Kilos</i>	<i>Kilos</i>	<i>Kilos</i>
United States.....	452	247,287	318,615	54,298	80,614

The principal users of dyes in this market are manufacturers of textiles, paper, hats, matches, paints and varnishes, soap, and the leather trade. Larger establishments, such as the textile factories, have very modern dyeing plants but many of the smaller still retain the old tub method of dyeing. The inhabitants of the interior are in the habit of dyeing their own fabrics. The dyes used by the natives come chiefly from Bolivia. The Indians in the interior use vegetable dyes of their own manufacture for the coloring of blankets, rugs and other articles.

The Government does not permit the use of dyes for the coloring of food products, so this class of dyes does not enter into the trade.

Source of Supply—Methods of Distribution.

Germany, the United States, and Switzerland, in the order named, are the principal suppliers of dyes to Argentina. Italy is a much more important source than it was before the war, while France appears to have definitely lost its pre-war status.

The large German and Swiss dye manufacturers have established their own branch houses in Argentina and actively push the sale of their products through agents who keep in touch with the trade. United States firms are represented in this market by one concern only, which is upholding the American interests in this market excellently, and, during the last few years, especially the last two, has made considerable progress.

German, Italian, and Swiss firms grant gratuities and bounties to the purchasers, but that is not the policy of the American houses. This gives the foreign trader some advantage. Immediately after the World War European firms dumped large quantities of dyes in this market, hoping to regain their former trade

through a price war. This attempt was not completely successful but did tend to make the market one of the most competitive in the world.

Terms of Sale—Keeping Stocks.

It is the practice to grant terms of 30 or 60 days on local sales while sales direct from the factory are paid for by a sight or 30-day draft. In the case of direct shipments, the local trade seems to prefer them being made under the c. i. f. Buenos Aires arrangement.

The local branches of the dye houses must keep a large stock of dyes on hand so that they can immediately fill local orders. As has been stated before in this report, price and service are the principal competitive features of the market. It is obvious that an efficient service can not be rendered the local buyers when it is necessary to send replacement orders to the United States and then wait a month or two for the new supplies to arrive. For this reason, the market must be anticipated and provision made for rapid replacement of sales.

Buenos Aires a Logical Distributing Center.

The city of Buenos Aires is the logical distributing point for Argentina, Uruguay and Paraguay. Shipments may be made to Uruguay and Paraguay from the Buenos Aires customhouse without obtaining entry of the goods into Argentina, and all goods consigned to Paraguay must be transshipped from Buenos Aires or Montevideo, Uruguay. It is the usual custom to have a main house in Buenos Aires for the River Plate district and then establish branches or agencies in the more important commercial centers of the district. This method has proven satisfactory.

Prior to the war the Germans held many demonstrations, thereby popularizing the use of their products. This practice is now seldom followed. The usual advertising methods are in vogue, but the dye companies do not advertise in this market to a great extent. The bulk of the sales are not made direct to the consumer and it is felt that the best advertising is the direct contact with the purchaser. The method of entering the Argentine market should be taken up with the agency chosen for the work in Buenos Aires. Definite arrangements should then be made.

Conditions in the Argentine Dye Market.

The Argentine Republic presents a very good market for dyes but that market is at the same time a highly competitive one in which a company must not expect immediate returns but look to the future. The present market is being amply cared for by existing sources of supply, but with the increase in the population and wealth of the country as well as educational demonstrations, the demand should increase and accordingly swell the volume of business.

The textile industry especially shows every indication of becoming more important than it now is. Great interest is evident in the cultivation of cotton in the Republic, and the textile industry is reacting favorably to this factor. It is estimated that at present there are approximately 60,000 cotton and wool spindles in operation in the Argentine Republic, and about 2,000 cotton looms. The optimistic claims of the cotton growers are being carefully investigated by the factory owners and, if it is safe to rely on a great increase in the production of cotton, the number of looms and spindles will naturally increase to a great extent.

People closely connected with the dye industry state that while it might be possible to build up a paying

trade in package dyes, this type of merchandising is highly competitive.

Procedure Advisable for American Firm.

To any American firm contemplating entering the Argentine market perhaps the best advice would be to send a representative into the field to investigate conditions on the ground. It is felt that little satisfaction will be obtained by correspondence. There are many houses in Buenos Aires who would be glad to secure the agency for American dyes if for no other purpose than to prevent competition with a competitive line. At the same time the firm should be personally acquainted with conditions in Buenos Aires so that, when an agent is finally appointed, the full support of the house can be given that agent. No established firm in Buenos Aires is strong enough to combat competitors without the full support of the home office, and many cases have come to the attention of this consulate general where good agents were forced to relinquish their representations because American firms had half-heartedly entered the market and, not understanding local conditions, treated the agent as a customer and not as a partner.

Trade of Zanzibar in 1924

The foreign trade of Zanzibar during 1924 aggregated 124,220 long tons, valued at 60,120,000 rupees. This was a decrease of 1.2 per cent in weight and of 5.1 per cent in value, as compared with 1923. Of these trade totals, imports accounted for 81,815 tons valued at 29,643,457 rupees—a decrease of 1 per cent in weight and an increase of 1.7 per cent in value; exports comprised 42,405 tons valued at 30,476,542 rupees, the figures representing a decrease of 1.6 per cent in weight and of 10.9 per cent in value. (Rupee exchange averaged \$0.3111 in 1923 and \$0.3178 in 1924.)

Cotton Piece Goods the Largest Item of Import.

Cotton piece goods again constituted the chief item in the import trade, but showed a decrease in both quantity and value, their value in 1924 being 5,568,619 rupees as against 8,497,679 rupees in 1923. Imports of rice and grain were valued at 4,827,629 rupees, as compared with 3,961,770 rupees in 1923. Next in order were copra, valued at 1,718,308 rupees; sugar, at 1,446,067 rupees; and ivory, at 1,182,667 rupees. All these showed increases over 1923. Other considerable imports included tobacco, foodstuffs, gasoline, petroleum, flour, and silver coins.

United States Ranked Second as Market for Cloves.

In the export trade, cloves as usual were the largest item, amounting to 169,309 hundredweight valued at 12,152,211 rupees in comparison with 200,623 hundredweight valued at 15,924,888 rupees in 1923. A noticeable change in the cloves trade was the drop in shipments to the United Kingdom, from 78,708 hundredweight in 1923 to 28,320 hundredweight in 1924. India was the principal buyer of cloves in 1924, taking 77,333 hundredweight; the United States ranked second, with 34,925 hundredweight. Clove stems, copra, and soap were the only other domestic products whose exports were of any importance.

COAL

Charles P. White, Chief, Coal Division

THE COAL EXPORT SITUATION

United States Exports of Bituminous Coal Still Below 1924 Average—British Situation Unfavorable—Ruhr Production

Exports of bituminous coal from the United States during March, 1925, including shipments to Canada, were still considerably below the average for 1924, though registering a partial recovery from the low point of the preceding month. The total for March of this year was 918,746 tons, compared with 820,407 tons in February, 1925, and 1,135,284 tons in March, 1924. Anthracite shipments, amounting to 200,953 tons in March, reached the lowest figure recorded in 1924 or 1925 and compared with 288,971 tons shipped in the preceding month. Consignments of coke in March aggregated 65,980 tons and constituted a record shipment for any month in 1924 and 1925; the February total was 61,130 tons. Total coal exports for March amounted to 1,119,699 tons, compared with 1,109,378 tons in February, 1925, and 1,444,527 tons in March, 1924.

Destination of Exports.

The following table shows the distribution of overseas exports of bituminous coal and coke:

United States exports of bituminous coal

Situation in British Coal Industry Worse—Production and Exports.

The situation in the British coal industry grows progressively worse with little hope of recovery in May, states Acting Commercial Attaché Hugh D.

Butler, London, in a radiogram dated May 1. Pits continue to close down and foreign competition is more severe, especially from Germany. Best Admiralties are quoted from 26s. to 26s. 9d. (\$6.30-\$6.48), seconds from 25s. to 26s. (\$6.06-\$6.30), and Tyne primes at 16s. 9d. (\$4.06). Freight rates from Wales and Tyne to West Italy are 8s. 9d. (\$2.04).

Recent British coal-production figures were as follows for the week ended—

	Long tons
March 21.....	5,257,900
March 28.....	5,261,900
April 4.....	5,293,390
April 11.....	4,493,690

There was an increase in the exports of coal from the United Kingdom during March over February. The principal destinations of British coal exports during February and March, 1925, are shown in the following table:

British exports of coal, coke, and patent fuel

[Long tons]

Items and countries of destination	February, 1925	March, 1925
Coal:		
France.....	1,039,197	1,006,074
Italy.....	614,807	552,965
Germany.....	313,013	339,300
Netherlands.....	439,494	59,356
Belgium.....	350,542	288,700
Argentina.....	276,032	345,963
Brazil.....	42,236	95,115
Chile.....	6,945	3,687
Uruguay.....	39,569	84,996
Other countries.....	1,601,324	1,529,342
Total.....	4,344,008	4,392,269
Coke.....	143,797	148,373
Patent fuel.....	191,511	97,333

Little Change in Italian Coal Market.

There is little change in the Italian coal market, cables Commercial Attaché H. C. MacLean, Rome, on May 2. The demand is limited, and stocks at Genoa are larger, amounting to 170,000 metric tons. There are 20 steamers floating, and considerable American coal is available. On account of the abundance of reparations coal, the Italian Government has closed its British purchasing office. Owing to unremunerative rates idle shipping tonnage is increasing, with a corresponding reduction in demand for bunker coal. Prices are lower, British best steam coal being quoted at 35s. 6d. (\$8.60) and seconds at 34s. (\$8.24), against quotations of \$7.35 for American steam coal. British gas coal is quoted at 27s. 9d. (\$6.72) and seconds at 26s. 6d. (\$6.42), against American gas coal at \$7.80, all prices being c. i. f. Genoa. Freight rates from the United Kingdom are 9s. 3d. (\$2.24) and from the United States \$2.85.

German Coal Crisis Continues.

Coal production in Germany during March amounted to 11,000,000 metric tons, of which 9,000,000 were produced in the Ruhr and 1,000,000 in Upper Silesia, states Commercial Attaché C. E. Herring, Berlin, in a radiogram dated April 28. The sales crisis continues, and miners' shifts have been cut. Stocks on hand in the Ruhr are estimated at 8,000,000 tons. Miners' basic wages were raised on March 24—for hewers, from 6.10 marks to 6.60 marks per shift; for skilled labor, from 5.65 marks to 6.10 marks; and for unskilled labor, from 5.15 to 5.30 marks. Prices for some sorts of Ruhr coal increased slightly, effective April 1, but the increase is not general. Imports of coal, including anthracite and unrefined cannel coal, during February amounted to about 728,000 tons. Exports about balance the imports and sold in new markets, including Argentina and Dutch Indies, against British competition.

French Industrial Demand Slackening.

Imports of coal, coke, and patent fuel into France during March amounted to 2,087,000 metric tons, of which it is unofficially reported that 1,005,000 tons came from the United Kingdom, at an average price of £1, according to Commercial Attaché Chester Lloyd Jones, Paris, in a radiogram dated April 30. Reparations coal receipts are satisfactory. The May quota will probably be the same as for April, namely, 670,000 tons. Orca coke receipts from April 1 through April 22 totaled 234,000 tons. The industrial demand is slackening in response to further contraction in industrial activity. Household buying is fair, owing to continued coolness of the weather. Prices of the principal industrial coals of the Nord and Pas-de-Calais are unchanged, though concessions are expected to maintain the present rate of production. The household price is following the summer schedule.

Belgian Market Dull.

Production of coal in Belgium during March amounted to 2,030,000 metric tons, with stocks on hand on April 1 estimated at 1,690,000 tons, states Commercial Attaché Fayette W. Allport, Brussels, in a radiogram dated April 23. Reparations deliveries received during the first 20 days of April totaled 144,000 tons, showing a marked decline. Prices are steady and the market is dull. Foreign competition is less keen, because of the higher sterling and French franc rates, the increase in the French internal price, and the restriction of Government permits on German imports. Labor will probably accept the proposed 5 per cent reduction on May 1, reserving opposition for a similar cut and discontinuance of the free coal bonuses proposed for June 1. A later cable of May 1 states that the miners have accepted a 5 per cent wage cut.

Alexandria, Egypt, Market More Active in April.

The Alexandria, Egypt, coal market was more active in April and prices are unchanged, states Trade Commissioner Richard A. May, Alexandria, in a cablegram dated May 4. Arrivals amounted to 55,000 metric tons and stocks on hand are estimated at 71,000 tons.

Large Increase in Argentine Coal Imports.

Imports of coal into Argentina from April 1 to 23 amounted to 246,000 metric tons from the United Kingdom and 6,000 from the United States, cables Commercial Attaché Edward F. Feely, Buenos Aires, on

April 25. This is considerably higher than the 139,000 tons imported from March 1 to 28. C. i. f. prices are 39s. (\$9.40) for British coal, \$8.45 for American, and 24s. 6d. (\$8.32) for German grades.

Chilean Coal Situation Unchanged.

The Chilean coal situation is unchanged, states Commercial Attaché Ralph H. Ackerman, Santiago, in a cablegram dated April 25. There is a slight demand for foreign coal for nitrate ports, although no large transactions have been reported. Prices remain at the same levels as during last month, such slight variations as appear being due to the charter market. Domestic quotations for northern ports are from 80 to 82 pesos (\$9.02 to \$9.24).

United States Coal Continues to Underquote British at Rio de Janeiro.

Coal stocks at Rio de Janeiro, Brazil, are estimated at 80,000 metric tons, cables Commercial Attaché W. L. Schurz, Rio de Janeiro, on April 25. Imports from April 1 to 25 amounted to 65,000 tons, including 15,000 from the United States. There are 40,000 tons of coal en route, of which 30,000 tons is American. British coal is quoted at 39s. (\$9.40) and American at \$8.25. Freight rates from the United States are \$4.25 and from the United Kingdom 16s. (\$3.86).

Output of Vienna Mint in 1924

The output of the Vienna Mint in 1924 was the greatest since its foundation, according to a report of the budget committee of the National Assembly. Only a small proportion of the coins struck, however, was for Austrian account, the great bulk going to Poland, Bulgaria, north and east Africa, and even Afghanistan, in the shape of the old Maria Theresa dollar. Altogether, the Vienna Mint turned out 341,000,000 coins, calling for 7,000 pounds of silver every day of the year. Orders received in 1925 already total 538,742,000 coins, of which 280,000,000 will be for foreign countries. The Vienna Mint is practically the only Government enterprise which does not require subsidies. (Warden M. Wilson, American Legation, Vienna.)

American Consular Officers on Leave

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Davis, Raymond.....	Paris, France.....	June 21	Care of Marshall Davis, Esq., Casco Mercantile Trust Co., Portland, Me.

INDUSTRIAL MACHINERY

W. H. Rastall, Chief, Industrial Machinery Division

AMERICAN AND GERMAN MACHINERY TRADE WITH DUTCH EAST INDIES

German Machinery Trade Declines—American Sales Increased 100 Per Cent Last Year—Demand for American Oil Well Equipment and Machine Tools

Prepared in the Machinery Division from United States Customs figures and from report by Vice Consul Erik W. Magnuson, Stuttgart

German machinery weighing 2,566 metric tons was shipped to the Dutch East Indies in 1924 as compared with 6,874 tons in 1922 and 6,259 tons in 1913, a marked decline in the volume of Germany's machinery trade in that market. The trade of the United States in industrial machinery, on the other hand, has increased by 100 per cent yearly since 1921. In 1922 exports of American machinery to the Dutch East Indies amounted to \$303,230, in 1923 to \$795,766, and last year to over \$1,500,000. This gain in sales of American machinery in the Dutch East Indian market in 1924 occurred in the face of vigorous competition from the Netherlands, Germany, and Great Britain.

Decline in Exports of German Sugar Mill Machinery—Machine Tools.

The demand for German machinery by the sugar industry in the Dutch East Indies amounted to 1,892 metric tons in 1913 and 1,774 tons in 1922, fell off to only 91 tons in 1923, and ceased entirely in 1924. German exports of both metal and woodworking machine tools also declined from 343 tons and 151 tons, respectively, in 1923 to nothing in 1924.

Gains in Grain Cleaning and Milling Machines.

On the other hand, more grain-cleaning machinery was exported from Germany to the Dutch East Indies in 1924 than in 1922 and 1923. Exports of milling machines also increased last year—199 metric tons in 1924 as compared with 114 tons in 1923 and 171 tons in 1922. Shipments of German baking machinery, including equipment for the manufacture of macaroni and vermicelli, have been maintained at about an even level for the past three years.

The following table, taken from official German export statistics, gives exports of machinery from Germany to the Dutch East Indies for 1913, 1922, 1923, and 1924:

Exports of German machinery to the Dutch East Indies

[In metric tons]

Class of machinery	1913	1922	1923	1924
Portable engines (locomobiles).....	69	-----	-----	124
Steam engines.....	449	172	32	-----

Total.....	6,259	6,874	2,600	2,566

Favorable Opportunity for Sale of American Equipment.

The expansion of the Dutch East Indian market for American machinery is shown by the fact that the trade of the United States in this equipment increased by 162 per cent in 1923 over 1922 and that this gain was not only maintained in 1924 but grew to a further gain of nearly 100 per cent over that of 1923. A favorable opportunity exists for the sale of American industrial machinery in the Dutch East Indies, providing manufacturers are willing to give special study to the requirements of the market and to the sales problems involved.

Position of Market Compared With Other Countries.

The Dutch East Indies ranks twentieth among world countries as a market for American machinery, absorbing nearly as much of this equipment as Italy (within \$12,000) and several hundred thousand dollars more than such markets as Belgium and the Netherlands. The possibilities for American trade with these islands are in part indicated by 1921 machinery exports amounting to over \$5,000,000, in which year the Dutch East Indies ranked thirteenth among world countries as a market for industrial machinery of American manufacture.

Exports of Oil Well Machinery Show Greatest Increase.

Shipments of mining, oil well, and pumping machinery amounted to \$119,466 in 1922 and \$566,645 in 1923. American exports of this equipment in 1924 amounted to \$933,008—a gain of about 80 per cent over the preceding year. Increased sales of oil well machinery played the greatest part in this advance. The following table gives exports of mining oil well, and pumping machinery from the United States to the Dutch East Indies for 1922, 1923, and 1924:

United States exports of mining, oil well, and pumping machinery to the Dutch East Indies

Class	1922	1923	1924
Mining and quarrying machinery:			
Rock drills.....	-----	\$2,460	\$379
Ore crushing and sorting machinery.....	\$33	111	7,008
Amalgamation, flotation, and other concentrating machinery.....	1,951	1,219	-----
Other mining and quarrying machinery.....	15,825	20,425	31,905

Well-drilling apparatus.....	8,300	365,408	250,107
Other oil well machinery.....	57,324	161,662	472,743
Pumps:			
Centrifugal.....	1,232	-----	-----
Steam.....	14,297	2,405	67,146
Other power pumps and pumping machinery.....	20,504	12,955	103,720
Total.....	119,466	566,645	933,008

Increase in Exports of Construction and Other Machinery.

American exports of construction and conveying equipment to the Dutch East Indies increased from

less than \$40,000 in 1923 to over \$200,000 in 1924. A gain in sales of dredging machinery was the leading factor in this advance. Machine tool exports from the United States also increased last year—from about \$22,000 to nearly \$50,000, or more than 100 per cent.

The following table gives United States exports of industrial machinery, according to the six major classifications, for 1922, 1923, and 1924:

United States exports of industrial machinery to the Dutch East Indies

Class of machinery	1922	1923	January to June, 1924	1924
Power generating, except electric.....	\$31,033	\$66,120	\$66,505	\$119,885
Construction and conveying.....	20,970	31,317	7,249	206,490
Mining, oil well, and pumping.....	119,466	566,645	344,273	933,008
Metal working.....	14,471	22,533	15,462	48,146
Textile, sewing, and shoe.....	7,059	8,925	2,553	5,695
Other machinery and parts, except agricultural.....	110,231	100,206	76,364	141,630
Total.....	303,230	795,766	512,396	1,454,854

[Further details on the market for American machinery in the Dutch East Indies were given in an article in this section of COMMERCE REPORTS, issue of

October 6, 1924. Advice is offered by Vice Consul Winslow, of Soerabaya, and by Consul Hoover, of Batavia, regarding sales methods and other questions bearing on the marketing of American machinery.]

Industrial Exposition in Bolivia

An international industrial exposition will be held at La Paz, Bolivia, on August 6, 1925, in connection with the celebration of the Bolivian Centennial of Independence. The Bolivian Government, through its legation in Washington, D. C., extends a cordial invitation to American machinery manufacturers to participate in the exhibition and has arranged for duty free importation of exhibits, adequate space for the erection of pavilions, and a reduction of freight rates on products shipped for exhibition purposes. American manufacturers of mining machinery especially will doubtless be interested in this means of bringing their products to the attention of prospective buyers.

Further information regarding the exposition may be had by addressing the Bolivian Legation, Washington, D. C.

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce, or its district and cooperative offices, by mentioning the country and reference number given. Where no reference number is given, further information is not available.]

British City to Increase Water Supply Capacity.

The water committee of the Birmingham City Council had decided upon the construction of an additional section of pipe for a length of 1½ miles to increase the capacity of the municipal water supply system. Sixty-inch steel pipe is to be used, and the estimated cost is £50,000. Reference No. 168342. (Vice Consul Oscar F. Brown, Birmingham, England.)

New Railway to be Constructed in Australia.

Specifications are now under preparation prior to the calling of tenders for the construction of a line from Kyogle, New South Wales, to South Brisbane, which is to form a part of the uniform gauge scheme. It is estimated that the work will involve an expenditure of £3,500,000. Of this amount the Federal Government will subscribe £1,968,000; New South Wales, £1,137,000; and the Queensland government £400,000. In connection with the building of this railway line, it will be necessary to bridge the Clarence River, which, it is estimated, will cost £500,000, and will be carried out by the local State government. (Vice Consul W. T. Costello, Sydney.)

City in England Decides on Municipal Building Program.

The city of Coventry, which is suffering from a housing shortage, has decided upon a municipal building program which calls for the erection of 1,694 dwellings, 1,007 by the corporation, and the rest by private enterprise. A site for the new houses has already been purchased by the Municipality. (Vice Consul Oscar F. Brown, Birmingham.)

Construction of New Wharves Proposed in Vancouver.

If the Vancouver Harbor Board succeeds in obtaining the requested appropriation of \$1,350,000 from the Dominion Government, it will proceed with the construction of two new wharves to cost approximately \$500,000; a wharf especially designed for fishermen, at a cost of about \$240,000, and other construction work consisting of an addition to No. 1 elevator, and other important improvements. (Assistant Trade Commissioner Walter J. Donnelly, Ottawa, Canada.)

Spanish Government Assists in Dwelling Construction.

In accordance with its decree of October 10, 1924, the Spanish Government has now issued an obligation of 180,000,000 pesetas to assist in the construction of cheap houses. (Commercial Attaché Charles H. Cunningham, Madrid.)

Montevideo Port Administration in Need of Locomotive Cranes.

The Port Administration of Montevideo has issued a call for bids for the provision of six locomotive cranes for the port railway, advises Acting Commercial Attaché L. B. Clark, Montevideo, Uruguay. A set of the specifications and conditions governing the licitation are available to accredited American concerns upon application to the machinery division of the bureau. The final date for presenting bids is fixed at 3 p. m., on July 8, 1925.

Hotel Proposed in Newfoundland.

Private interests have approached the Government with a proposal to erect a 150 room reinforced concrete hotel at St. John's, the estimated cost of which would be \$700,000. The Government is asked to give free site, free importation of building material and furnishings, and the guarantee of a sinking fund of \$13,500 a year to cover the redemption of bonds to the

amount to \$450,000. Reference No. 167952. (Vice Consul George H. Barringer, St. John's.)

Oil Mill Concession Granted in Brazil.

The State of Para has granted a concession for the installation of a plant to shell and clean oil seeds and nuts and to extract vegetable oils. The concession, which is to run 20 years, provides for the exemption of the concern from all State taxes, existing or that might be created, except export taxes; export taxes on the concessionaire's output are to be reduced 50 per cent during the first 5 years, 25 per cent during the next 5, and a reduction for the next 10 years is to be agreed upon by the State and the concessionaire 10 years from the date of signing the contract. Reference No. 168245. (Consul Jack D. Hickerson, Para.)

Passage of Newfoundland Highroads Bill Practically Assured.

A bill providing for an outlay of approximately \$2,000,000 for the construction and reconditioning of highroads in Newfoundland has passed the committee stage of both Houses and will, therefore, become a certainty. Out of the \$2,000,000 to be spent on highways the highroads bill calls for the expenditure of \$1,110,000 for constructing 220 miles of road at \$5,000 per mile, \$740,000 for reconditioning roads of the Avalon Peninsula at a cost of \$1,000 per mile, and \$150,000 for six bridges. Most of the roads would be 22 feet wide with 14 feet of gravel. Reference No. 168324. (Vice Consul George H. Barringer, St. John's.)

New Call for Bids Issued for Building a Bridge in Uruguay.

A new call for bids for the construction of a bridge over the Yaguaron River between Uruguay and Brazil (see Construction News, April 28, 1924, and May 19, 1924) has been issued, according to Consul O. Gaylord Marsh. Plans, specifications, and drawings are not available, but they may be had on application to the Ministerio de Relaciones Exteriores, Montevideo, at a cost of 36 pesos. A copy of the new call for bids, however, is available to accredited American concerns at the bureau's district office, 734 Customhouse, New York City.

Authority Given for Railway Construction in Spain.

A royal decree of March 24 confers authority on the Ministry of Fomento (Spain) to contract for the grading and construction of the third division of the first section of the railway from Val de Zafan to the Mediterranean at an estimated cost of 5,476,575.25 pesetas. (John F. Martin, secretary in American consulate, Madrid.)

Building Construction Encouraged by Polish Government.

In order to stimulate construction of dwellings the Ministry of the Treasury, Poland, has worked out a bill providing for credits and various privileges and exemptions to be granted to individuals and concerns building new residential houses or extending or adding upper stories to the existing houses. Reference No. 167155. (Consul Donald R. Heath, Warsaw.)

PAPER

O. M. Butler, Acting Chief, Paper Division

PRESENT CONDITIONS IN THE EUROPEAN PULP AND PAPER INDUSTRIES

Increased Demand for Paper in Polish Market.

A shortage in the paper market is being experienced in Poland, domestic production being outdistanced by the unprecedented activity in the publishing trade, and in spite of the large imports of foreign paper the supply is still inadequate. All transactions are on a strictly cash basis. (Consul Donald R. Heath, Warsaw.)

The Polish Chemical-Pulp Industry.

The production of chemical pulp in Poland has steadily increased during the past four years, the output during 1924 reaching a total of 29,793 metric tons compared with 29,996 tons in 1923; 23,498 tons in 1922, and 20,422 tons in 1921. Domestic consumption decreased to some extent during 1924 owing to the general depression in industry following the stabilization of the currency and the high taxes imposed in connection with the Government's financial reform. (Consul Donald R. Heath, Warsaw.)

German Pulp and Paper Production.

A total of 574,654 metric tons of mechanical pulp and 730,311 tons (metric ton=2,204.6 pounds) of chemical pulp were produced by the German mills during 1924. The greater part of the output was absorbed by the domestic paper mills, only 19 per cent of the chemical pulp and 2 per cent of the mechanical pulp being marketed abroad. Paper production by mills of the German paper association was reported

to reach a total of 1,649,622 tons, of which 354,622 tons represented newsprint. Production by the board mills was reported at 276,364 tons. Approximately 35 per cent of the newsprint production, 30 per cent of the other classes of paper, and 15 per cent of the output of boards were exported.

Swiss Paper Industry Below Normal.

The four mills in the Berne district are still operating on a reduced schedule, following the domestic overproduction after the war and also the increased imports of foreign papers. Prices have fallen despite the increased costs of raw materials. Paper manufacturers report a small increase in production during the past few months. (Consul Thornwell Haynes, Berne.)

Estonian Paper Industry Active.

The Estonian paper mills in 1924 report an output of 15,144 metric tons of mechanical pulp and 13,327 tons of chemical pulp, in addition to 29,763 tons of paper, according to the annual statement of the A. G. Nordische Papier u. Sellstoffwerk. The value of paper and paper manufactures during 1924 reached a total of 940,000,000 marks (380 Estonian marks=\$1 at current rates of exchange). Products worth 700,000,000 marks were exported and worth 240,000,000 marks were sold on the domestic market. The large paper mills have organized themselves into a new syndicate, which began its activities on February 2 under the title "Estonian Paper Joint Stock Co." Unlike other Estonian industries, the paper industry

is not showing any effects of the present trade depression. (Commercial Attaché C. J. Mayer, Riga.)

Effect of Lockout on Swedish Pulp and Paper Industry.

It is estimated that the recent labor conflict in Sweden caused a loss in production of 15,000 metric tons (metric ton=2,204.6 pounds) of mechanical pulp, 40,000 tons of chemical pulp, and 11,000 tons of paper. Prices, however, show little or no effect of the conflict. Of the anticipated 1925 production, 65 per cent of the

sulphite pulp, 80 per cent of the soda pulp, and 65 per cent of the mechanical pulp have been contracted for, a number of the sales being for 1926 delivery. There is reported to be an increased demand for high grade chemical pulp by the Italian silk industry. (Commercial Attaché T. O. Klath, Stockholm.)

IRON=STEEL=HARDWARE

Luther Becker, Chief, Iron and Steel Division

GREATER ACTIVITY IN AUSTRIAN IRON AND STEEL INDUSTRY

Assistant Trade Commissioner Elbert Baldwin, Vienna, April 10

The iron and steel production of the Alpine Montangesellschaft, controlling virtually the total of Austrian production, in the first quarter of 1925 remained considerably behind the unusually high levels reached during the corresponding period of the preceding year, but showed a marked recovery from the critically low volume prevailing at the close of 1924. This improvement has been progressive. In January the value of total sales was less than \$900,000, but in March it had risen to \$1,100,000 and therewith restored pre-war levels. It is expected that this level will be sustained during the next quarter.

Vienna and Railways Largest Purchasers.

Recent sales were 70 per cent domestic and 30 per cent for export, the latter largely to Yugoslavia. The Austrian Federal Railways and the city of Vienna absorbed approximately 40 per cent of the domestic sales; individual industries, such as the automobile, car building, electrotechnical, etc., accounted for a further 20 per cent to 30 per cent, and the remainder of production entered into trade for other distribution.

The following table gives details of the production of the Alpine Montangesellschaft for the first quarter of 1925, with comparable figures for the two preceding years and also the tonnage of unfilled orders and the number of active furnaces:

Activity of the Alpine Montangesellschaft

Period	Production				Unfilled orders at end of period	Blast furnaces in operation
	Iron ore	Pig iron	Ingots	Miscellaneous manufactures		
	Metric tons	Metric tons	Metric tons	Metric tons	Metric tons	Number
January.....	128	14,160	20,703	14,792	41,204	2
February.....	16,271	22,409	20,822	15,930	38,432	2
March.....	57,700	33,695	26,354	21,590	47,972	3
First quarter:						
1925.....	74,099	70,264	67,879	52,312	47,972	3
1924.....	214,986	168,146	94,730	69,636	31,445	3
1923.....	249,465	73,225	58,011	38,539	31,620	6

Prices Remain Firm.

The level of unfilled orders at the end of March is the highest since November and December of 1923 and with these exceptions the highest since the war. Iron and steel prices remained constant throughout the first three months of 1925. A considerable factor in the

costs of the Austrian products is the social tax burden which is said to be the heaviest in Europe and which, according to calculations of the company, represents 10.7 per cent of its production costs for coal, 16 per cent for iron ore, and 2.6 per cent for rolling-mill products.

Program for Increased Plant Equipment.

The proceeds of the \$5,000,000 loan placed by the Alpine Montangesellschaft in New York City during March will be used to convert outstanding obligations of approximately \$3,500,000, and the balance for investment purposes. The investment program of the company will itself require some \$3,000,000 for eventual realization and includes the following individual projects: Fohnsdorf lignite coal mines—extension of shaft equipment, construction of a coal washing plant, centralization of coal handling and transmission equipment; Seegraben lignite coal mines—centralization of coal handling and transmission equipment; Koeftach lignite coal mine—opening up of a new surface mine, purchase and installation of appropriate machinery; Eisenerz iron ore mine—staggered open-air shelves and blast furnaces, installation of new iron-ore equipment, roasting ovens and by-product blast furnace attachments; Donawitz rolling mills—extension of gas works to permit consumption of lower grades of coal, releasing better grades for sale, installation of further low-pressure boilers and a reserve steam turbine in the electric power plant, and various improvements to rolling mills.

Possibility of American Sales.

It is possible that the projected developments will afford an opportunity for the sale of major American coal mining, iron ore, blast furnace, and iron and steel rolling-mill equipment. The rolling mills of the company at Zeltweg were purchased as a unit in the United States and other equipment is of the same origin. The company is bound to no considerations in matters of purchase other than performance relative to cost.

French Dealers Urged to Give Publicity to Costs

Trade Commissioner Daniel J. Reagan, Paris, April 16

French iron and steel fabricators, dealers, and hardware merchants have been subjected to a series of price increases during the first quarter of 1925, which, while in part passed on to the consumers, have been to some extent absorbed because of the competition in this market during the period. The formation of an entente among the producers of primary iron and steels

has had the effect of sustaining the new price levels established in the domestic market and has initiated discussions among the secondary consumers with a view of establishing a counter entente to protect their interests against possible excessive price increases.

Although this has not been successful so far, according to Le Nord Industriel, the dealers in the different regions and local factory depots are being urged, particularly by the Association of Iron Merchants, to make a close survey of the new costs resulting from these price increases and, after studying their own costs, to publish their rates, together with the various cost factors in accordance with the methods of the different localities, while taking into consideration the tonnages and deliveries required by their various categories of clients.

Advantageous to Purchasers—Desire to Offset Criticism.

This policy has been urged as a means of establishing a quasi-public control of prices, which it is believed would assure the covering of general expenses and profits. From the point of view of the clients this publication of prices is claimed to serve as a guarantee regarding their reasonableness. Furthermore, it should minimize competition among purchasers.

The idea is being urged also upon retail hardware dealers. It is suggested that they select from their many products at least a certain number of those in which the turnover is more active as a means of making known to the public the fairness of the charges. Evidently this suggestion has been made in the desire to offset the criticism that many commercial houses are now realizing extraordinary profits merely because the prices are on a very high level.

Swedish Iron and Steel Industry in Bad Condition

Trade Commissioner T. O. Klath, Stockholm, April 8

The Swedish iron and steel industry is at present in a precarious position, according to a recent statement of Järnkontoret, which corresponds to the American Iron and Steel Institute. While the general depression prevailing in most Swedish industries has shown some signs of improvement during the past few months, this is not true of the iron and steel industry. During 1924, for the first time in many years, imports of iron and steel into Sweden exceeded exports.

Government Requested to Raise Import Duties.

In order to assist the Swedish industry, with its high production costs, to compete on a more fair basis, Järnkontoret finds it necessary to request the Government to increase by 60 per cent all present import duty rates applying to iron and steel. While this increase would probably not entirely prevent the importation of foreign products, it would enable many Swedish plants now closed down to reopen and place others now operating at a loss on a better competitive basis, in addition to relieving the unemployment at the iron mines and steel works.

French Exports of Iron and Steel for First Quarter

Commercial Attaché Chester Lloyd Jones, Paris, April 27

Exports of iron and steel from France during the first three months of 1925 included 165,000 metric tons of pig iron and 444,000 tons of blooms, billets, and bars, according to unofficial export returns recently re-

leased. This represents a notable decrease for the trade in pig iron and an increase for that in rolled products compared with the exportation for the corresponding period of 1924.

Iron, Steel, and Hardware Notes

Australian Wire Rope Works Begins Production.

Production has been begun at the Newcastle, New South Wales, works of the Australian Wire Rope Works (Ltd.). Winding, stranding, and closing machines have been installed which are claimed to be capable of producing ropes for all local requirements, except the very long lengths and heavy weights used by the Melbourne cable tramway system. The large closer is said to be able to complete a rope in one length up to 7 or 8 tons in weight. British standards of breaking stresses are to be maintained. Production of ropes of 5 inches and 6 inches circumference, having a breaking stress of 79 and 113 tons, respectively, is to commence at once. (Vice Consul Haskell E. Coates, Melbourne.)

Gain in Iron and Steel Imports into Dutch East Indies.

With the exception of galvanized-iron roofing, the iron and steel trade in the Dutch East Indies showed a marked improvement in 1924 over 1922 and 1923. Nevertheless the United States is being pushed out of the market by the lower-priced German products and now holds an unimportant position in the trade. In no single trade has the United States shown such a marked withdrawal in recent years as in the wire-nail trade. In 1922 the United States was the most important supplier of this commodity, having shipped 68,845 kegs out of a total importation into Java of 107,663 kegs. In 1923 the American share dropped off 45 per cent, and in 1924 the United States provided only 1 keg of the 325,007 kegs imported. (Vice Consul Rollin R. Winslow, Soerabaya, Java.)

German Competition in Denmark.

With the continuation of the Danish labor conflicts, increased activity is evident on the part of German firms doing business in this market. German agents are taking advantage of the shutdown in most Danish industries and, through the ability of firms in Germany to make delivery 14 days after the order has been placed, are obtaining a large share of the business which would otherwise have gone to Danish concerns. It is particularly in products of the iron industry that German competition is keen. German enamel kitchenware, which had been practically forced from the Danish market, is now regaining a foothold. (Adolph Fenselau, office of the trade commissioner, Copenhagen.)

Additional information regarding iron-steel-hardware appears in this issue under the following sections:

Cable review, Europe:

Italian demand for steel large.

British industry better.

Latin America: Costa Rican foreign trade increase.

Tariffs and trade regulations: Japan—Revised import duties on certain iron and steel plates and sheets.

"Great variety of circulars issued by bureau."

RUBBER

Everett G. Holt, Acting Chief, Rubber Division

ITALY'S TRADE IN RUBBER AND RUBBER MANUFACTURES IN 1924

Assistant Commercial Attaché A. A. Osborne, Rome

Italian imports of rubber, gutta-percha, and manufactures were valued at 183,709,970 lire in 1924, compared with 160,380,788 lire in 1923—an increase almost entirely the result of the increased value of imported raw materials.

Crude rubber imports in 1924 totaled 9,017 metric tons valued at 100,623,562 lire; in 1923, 8,729 metric tons valued at 88,738,666 lire; and in 1922, 6,548 metric tons valued at 46,312,971 lire.

Large Increase in Gutta-percha Imports—Tire Imports.

Crude gutta-percha imported amounted to 381 metric tons valued at 15,044,773 lire in 1924, a considerable increase over the 1923 imports of 118 metric tons valued at 3,995,180 lire.

Pneumatic tires and tubes have shown a gradual gain in the quantity of imports as indicated in the following table:

Italian imports of pneumatic tires and tubes

Countries of origin	1922		1923		1924	
	Metric tons	1,000 lire	Metric tons	1,000 lire	Metric tons	1,000 lire
Austria.....			24.3	733	21.3	537
France.....	513.0	13,262	517.2	12,325	829.0	18,236
Germany.....	107.0	2,769	141.3	2,509	57.4	1,219
Great Britain.....	401.9	17,764	432.5	12,829	327.6	11,644
United States.....	97.6	3,268	227.0	6,346	114.4	3,041

Total.....	1,208.2	39,491	1,419.4	37,052	1,444.1	37,014

Other Important Imports.

Aside from pneumatic tubes and casings, the total imports of the principal rubber and guttapercha manufactures (not given separately by countries of origin) are as follows:

Italian imports of principal rubber and guttapercha manufactures

Class	1922		1923		1924	
	Metric tons	1,000 lire	Metric tons	1,000 lire	Metric tons	1,000 lire
Rubber scrap and remnants.....	0.9	2	358.9	263	813.0	962
Rubber thread.....	36.9	1,013	41.5	1,938	41.0	1,963
Solid tires and rims.....	126.4	1,987	113.9	1,319	169.2	1,720
Transmission belts, including rubber mixed with textile materials.....	44.7	1,130	67.7	1,955	60.3	1,997

Articles of clothing and for traveling, of waterproofed cloth.....	99.6	4,711	82.2	5,217	53.4	3,349
Other rubber manufactures.....	131.5	3,303	153.6	4,191	224.5	4,072

Exports of Rubber and Gutta-percha.

Italian exports of rubber and gutta-percha exceeded the imports for 1924 and for the two preceding years. The exports in 1924 were valued at 260,446,117 lire,

compared with 185,406,478 in 1923 and 156,428,145 in 1922. Exports were practically all made up of rubber manufactures, among which pneumatic tires and tubes were predominant; in 1924, they totaled 7,345 metric tons valued at 199,475,594 lire (in value approaching 80 per cent of total rubber goods exports and exceeding total imports in the same year), compared with exports of 4,908.3 metric tons valued at 127,253,496 lire in 1923, and 3,819.5 metric tons valued at 121,156,224 lire in 1922.

Solid tires and rims made of rubber ranked second to pneumatic tires and tubes as an item of value among exports, amounting to 2,112.4 metric tons valued at 31,298,522 lire in 1924, to 1,744.1 metric tons valued at 27,193,280 lire in 1923, and 11,064,486 lire in 1922.

Destination of Exports of Tires and Tubes.

By countries of destination, quantities of exports of pneumatic tires and tubes, also of solid tires and rims, are given for 1924 and the two preceding years in the following table. Values of exports of pneumatic and solid tires by the chief countries of destination are not given separately but are combined in the official statistics.

Italy's exports of tires and tubes

German Tire Exports Low This Year

German tires occupied an important position in international trade before the war; and during 1922 and 1923, when the number of automobile casings exported increased from 192,000 to 252,000, it appeared likely that much of the pre-war trade might be regained. In 1924, partly as a result of the German currency

stabilization, the export tire trade became increasingly difficult for German companies, and exports for the entire year numbered 142,927 automobile casings and 182,174 inner tubes.

Exports have continued at a low rate during the first two months of 1925, and it seems unlikely that the total for this year will equal that for 1924. During January and February, 1925, 21,886 casings and 27,405 inner tubes were exported from Germany, as compared with 34,771 casings and 38,048 tubes in the same period

last year. The principal markets for casings this year are Argentina, 4,997; the Netherlands, 2,938; Austria, 1,967; Great Britain, 1,341; British India, 1,401; and Switzerland, 982. Shipments to certain other markets were as follows: Egypt, 656; Dutch East Indies, 659; Brazil, 569; Czechoslovakia, 403; Mexico, 338; and British Malaya, 309.

See also List of "Great variety of circulars issued by bureau."
"Foreign trade opportunities."

MINERALS

Guy C. Riddell, Chief, Minerals Division.

INCREASED LEAD OUTPUT IN SPAIN

Commercial Attaché Charles H. Cunningham, Madrid.

The principal lead mines of Spain are in the Province of Jaen, which is credited with almost half of the total Spanish production. The Province of Cordoba ranks second and Murcia third. The mines of Cartagena, La Union, and Mazarron are in the Province of Murcia, which some years ago took first place among producers.

Production Figures Compiled—Principal Companies.

It is believed by local interests that complete statistics for the Spanish production of lead in 1924 will show an increase of about 10 per cent over the output of 1923. The following table, compiled from reliable but unofficial data, contains figures for only two Provinces in addition to the three important sources named, and, therefore, can not be regarded as conclusive:

Spanish production of lead concentrates and refined lead

Provinces	1922	1923	1924
Lead concentrates:	<i>Metric tons</i>	<i>Metric tons</i>	<i>Metric tons</i>
Jaen.....	70,620	76,625	87,570
Cordoba.....	45,406	49,534	46,085
Murcia.....	20,710	19,312	23,168
Other.....	30,918	36,064	22,538
	167,654	182,135	179,361
Refined lead:			
Jaen.....	30,997	33,995	38,416
Cordoba.....	33,092	37,506	43,593

Output of Important Mines.

La Sociedad Minera y Metalurgica de Penarroya, a French company, is the principal owner of lead mines in Spain, and has lead, zinc, and silver smelters of great importance in Cordoba. Practically all of the lead in that Province is exploited by this company. It also has important mines in Jaen. The diminishing Cordoban production has been ascribed to the lack of adequate means to drain the mines, which have become flooded. The mines have not been developed to their full extent on account of lack of capital, but the present increased prices for lead are having a stimulating influence.

The principal mining company of the Province of Jaen is the Sociedad Minera Metalurgica Los Guindos, capitalized largely by German and Spanish interests, which at present averages 20,000 tons of galena annu-

ally. This concern also has constructed a modern plant in Malaga, with an annual capacity of approximately 28,000 tons of lead, which may be readily enlarged to accommodate 50,000 tons. Two important smelters are operated in Jaen, one by English and the other by French capital. Each has a capacity of about 20,000 tons a year.

The Sociedad Minera y Metalurgica de Mazarron, financed largely by Germans, owns the leading lead mine in Murcia. The company is equipped to produce as much as 36,000 tons of lead annually but at present the output amounts to only 17,000, while the company imports lead-bearing minerals from points as distant as Australia. Another plant in this Province, belonging to the Mancomunidad Zapata and financed by Spanish capital, can produce approximately 10,000 tons annually.

The remaining lead mines in Spain have Spanish owners, and, for the most part, are poorly capitalized, operate on a hand-to-mouth basis, and are little more than surface worked.

Quality of Ore Varies—Quotations—Distribution.

There is a considerable variation in the quality of Spanish lead ores. In Jaen the first-class ore has 80 per cent lead and 0.45 per cent of silver, while the second-class has 62 per cent of lead and 0.3 per cent of silver. The Cordoba average is 61 per cent lead and 0.1 per cent silver, and the Murcia average has 52 per cent lead and 0.2 per cent silver.

Quotations on lead in Spain depend largely upon the London market, and the price is fixed locally by a commission which is partly influenced by London quotations regulating the price under Government supervision.

Foreign shipments of Spanish lead go principally to Amsterdam, Leghorn, Liverpool, London, Rouen, and Spezia. About 20 per cent of the annual production is consumed within the country.

German Imports of Nonferrous Metals in 1924

Trade Commissioner W. T. Daugherty, Berlin, April 1

The German importation of the more important non-ferrous metals increased considerably in 1924 over that of the preceding year—attributable to the partial recovery of industrial consumption, with the abandonment of passive resistance and the resumption of operations in the occupied Ruhr and Rhineland.

Imports of raw copper in 1924 averaged about 9,200 tons monthly, against only 7,000 in 1923; lead, 4,390

tons against 2,900; zinc, 3,600 tons against 2,800; and tin, 730 tons against 470. Compared with the corresponding imports of 1913, however, entrances of these metals were relatively deficient. Imports of raw copper during 1924 were only 49 per cent of the 1913 receipts; of lead, 62 per cent; zinc, 78 per cent; tin, 60 per cent; aluminum, 33 per cent; and nickel, 40 per cent.

Lower Postwar Consumption of Most Metals—Imports.

Generally speaking, the German consumption of the important nonferrous metals is a little more than one-third of pre-war, with the exception of aluminum, which is one-third again as much as in 1913. The local production of this metal was stimulated by the war and aluminum has replaced copper to a large extent in industry.

The following table shows imports of the more important nonferrous metals in 1923 and 1924, compared with 1913.

German imports of nonferrous metals

Products	1913	1923	1924
	<i>Metric tons</i>	<i>Metric tons</i>	<i>Metric tons</i>
Copper.....	225,392	83,501	110,290
Lead.....	83,781	34,770	52,160
Zinc.....	55,964	34,676	43,641
Tin.....	14,261	5,564	8,799
Aluminum.....	16,323	5,447	5,471
Antimony.....		1,330	1,539
Nickel.....	3,315	1,398	1,445
Silver.....	663	9	413

The United States was the source of 84,453 tons of copper, or 76 per cent of the total 1924 imports; 12,170 tons of lead, or 23 per cent of the total; and 523 tons of nickel, or 37 per cent. This country is not named, however, among the sources of any of the other metals listed.

Berlin Futures Bourse Opened.

The opening of the Berlin Futures Metal Bourse was set for April 20. Copper and lead will be dealt in. The suggestion that silver be handled was overruled. Seats on the bourse will be confined to members of the bourse association of Berlin and Hamburg. Members must have their headquarters in Berlin. Foreign firms can make bourse contracts only through commissionaires.

Latest reports from the Hamburg Metals Bourse are that business is weak; offers are plentiful against a depressed demand. The current political situation (presidential elections) is given as the reason for poorer business, but there is a popular impression that the opening of the Berlin bourse will stimulate transactions.

Italy's Mineral-Oil Imports in 1924

Commercial Attaché A. A. Osborne, Rome

During 1924 Italian imports of petroleum and petroleum products scored substantial advances in both quantity and value over 1923 records. Italian industry and commerce presented almost the aspect of a boom during the last part of the year, and the larger scale of operations affected the mineral-oil imports, which mounted from 5,630,656 quintals, valued at 636,849,374 lire, in 1923 to 7,294,274 quintals, worth 724,257,353 lire, in 1924 (1 lire averaged \$0.46 in 1923 and \$0.04358 in 1924; the metric quintal is equivalent to 220 pounds). A greater import of residuum largely accounted for

the increase. Unit values per quintal showed little advance over averages for 1923, which marked heavy declines from 1922 levels.

Imports for Three Years Compared—American Contribution.

The total imports for the past three years are tabulated by classes of products as follows:

Italian imports of petroleum products

Products	1922	1923	1924
	<i>Quintals</i>	<i>Quintals</i>	<i>Quintals</i>
Crude oil.....	81,212	254,648	207,177
Lubricants.....	667,894	733,423	751,740
Kerosene.....	991,825	1,140,779	1,176,602
Gasoline.....	1,148,817	1,326,362	1,584,352
Other products.....	5,904	3,903	5,878
Residuum.....	1,547,234	1,916,366	3,316,100
Paraffin wax.....	233,162	255,180	252,425
Total.....	4,673,548	5,630,656	7,294,274

Petroleum imports from the United States showed large increases in 1924, rising from 3,181,272 quintals, valued at 407,453,233 lire, in 1923, to 4,422,543 quintals, worth 484,528,588 lire, the following year. This increase is proportionally larger than the total increase, the United States contributing 56.5 per cent of the total quantity and 64 per cent of the value in 1923, and 60.5 per cent of the quantity and 66.9 per cent of the value in 1924. The 1922 share of the United States amounted to 2,278,878 quintals, valued at 363,630,746 lire.

Sources of Leading Imports Summarized.

The following table shows the sources of the more important petroleum imports in 1923 and 1924:

Imports of principal petroleum products into Italy

Mineral Exportation of Bolivia in 1924

Based upon reports from Consul Dayle C. McDonough and other sources

The figures for Bolivian mineral exportation in 1923 and 1924 indicate a prosperous condition of mining activities in that country. Nine minerals are listed among the exports of the two years, and all show larger totals in 1924 than in the preceding year—some con-

spicuously larger—with the exception of copper and silver. The total mineral exportation of 1923 was valued at 101,096,618 bolivianos, while the 1924 shipments had a value of 109,240,646 bolivianos, more than 60,000,000 of this amount representing exports during the first six months.

Conspicuous Gain in Lead Exports—Other Minerals.

There was a perceptible increase during 1924 in tin mining, which is by far the most important mineral industry of the country, but the expansion in trade is more conspicuous for some of the other products. The total exportation of lead in 1924 was almost four times that of 1923, although shipments in the second half of the year were somewhat less than those of the first half. The year's record made lead the second most important mineral in the country.

Copper exports showed a considerable decrease, and those of silver fell off to less than half the 1923 total in quantity. The value of silver exports, as expressed in bolivianos, however, was not greatly changed, owing partly to increased prices for silver and partly to the lower exchange value of the boliviano, which averaged \$0.318377 in 1923 and \$0.29676 in 1924. The 1923 silver exportation was valued at 9,368,505 bolivianos, and the 1924 at 8,673,047.

The exportation of bismuth and antimony increased considerably throughout the year. Zinc mining fell off sharply during the first half of 1924, but during the last six months the exports were larger than during the whole of 1923, so that the year's record shows a good increase.

Bolivian Mineral Production Summarized.

The following table shows the exports of the two periods of 1924, in comparison with those in 1923:

Bolivian mineral exports in 1923 and 1924

Plans for Tin Industry in Java

Trade Commissioner J. F. Van Wickel, Batavia, March 5.

At the budget conference held January 26, 1925, the director of public utilities of Java submitted a proposal to the effect that the extra profits made during 1924 by sales of government tin be utilized for the reduction of States loans and the construction of remunerative works. The proposal is based on the assumption that this source of income is gradually becoming exhausted. The known ore reserves in Banka, it is estimated, will yield a production of the present extent for a further period of 16 years, while those in Billiton may not maintain their current rate for even 10 years.

It was reported recently that Dutch and English interests were considering the establishment of a central tin-smelting works at Tandjong Prick, and that

the plan was under consideration by the Department of Public Utilities. An advisory committee has been formed and it is proposed that the government should join in the establishment of the smelting works, where the tin from Banka and Billiton will be treated.

Belgian Diamond Industry in 1924

Consul General G. S. Messersmith, Antwerp

The prosperity of the Antwerp diamond market in 1923 was not equaled in 1924, as the withdrawal of credit at a critical period during the year, disagreements between cutters and employers, and augmented costs of rough stones all contributed to a depression of the industry. The worst period came in February, when there were a number of failures and when prices declined from 10 to 25 per cent upon finished stones on sale at Antwerp. Production was greatly reduced, and it was estimated that 500 to 800 cutters were out of work during that month and March.

Reduced Margin of Profit.

Although conditions improved later in the year, the activity noticeable during the greater part of 1923 was not realized and dealers complained that the margin of profit had become so much reduced that the trade had lost much of its attraction. While there can be no question of the importance of the Antwerp diamond market, and of its ability to survive temporary periods of depression, declared export statistics for 1924 are significant of the serious decline in sales which took place during the year. The United States is quoted as purchasing approximately 90 per cent of the total output of Antwerp cutters, and in 1923 imported, as shown by invoices, cut stones to a value of \$29,600,000. In 1924, however, exports to the United States were reduced to a total value of only \$25,048,000.

Additional information regarding minerals appears in this issue under the following sections:

Cable review, Europe:

British market slightly down.

South African gold-mine production for March.

Tariffs and trade regulations: Greece—Increase in import duty on illuminating oil.

"Great variety of circulars issued by bureau."

"Foreign trade opportunities."

Finnish Lumber Exports and Advance Sales

Exports from Finland during March included 6,000 M board feet of lumber and 3,000 metric tons of ply wood. Advance sales of lumber up to April 15 for delivery during the coming season aggregated 930,000 M feet. (Cable from Assistant Trade Commissioner Emil A. Kekich, Helsingfors.)

Belfast Lumber Import Situation Unpromising

Imports into Belfast, Ireland, in 1924 included 9,687 M feet of planed lumber, 40,550 M feet of sawn lumber, and 26,087 feet of timber, according to statistics published by the Belfast Harbor commissioners. It can not be said that the tone of the market at present is strong. There is a noticeable absence of large building operations, and it is probable that lumber imports in 1925 will not exceed those of 1924. (Vice Consul Russel M. Brooks, Belfast, March 31.)

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF

United States Shipments of Cotton Goods to Its Noncontiguous Territories.

Shipments of cotton cloth from continental United States to its noncontiguous territories during March, 1925, showed an increase in the case of Alaska and Hawaii and a decrease in the case of Porto Rico, as compared with shipments during March, 1924. The March, 1925, shipments were as follows: To Alaska, 36,592 square yards, \$8,743; Hawaii, 809,605, \$207,841; Porto Rico, 3,728,854, \$654,083. Hosiery shipments were valued at \$2,555, \$14,765, and \$37,082, and other knit goods at \$4,406, \$31,014, and \$22,901, respectively, during March, 1925.

Silver Black Foxes Being Raised in Western Canada.

A firm in western Canada which has operated on a rather small scale has demonstrated that the climate in that section is particularly favorable for the raising of the silver black fox. This company sent about 100 pelts to London during 1924 and received satisfactory prices for them. The Dominion Department of Agriculture has recognized the new industry and has provided for the annual inspection and registration of the animals. The breeding of the silver black fox is likely to have an important effect ultimately upon the fur trade in that region. (Trade Commissioner Lynn W. Meekins, Ottawa, April 25.)

Embroidery Production in Azores.

The embroidery industry at Angra is the most important manufacturing industry in the Western Azores. Embroidered goods, the production of which was valued at approximately \$200,000 in 1924, has been the largest single item in the exports from this district during recent years. Five-eighths of the total production is exported directly and the remainder indirectly, the American market taking practically the entire amount. The principal materials used are linen cloth and cotton thread. These are obtained from Manchester, England, the thread being manufactured there and the linen cloth in Ireland. (Consul R. S. Castleman, Horta, Fayal, Azores.)

Istle Exporter Establishes Headquarters in Saltillo.

The agent of a large American importing concern, which purchases and exports istle grown in northern Mexico, has recently moved his offices from San Luis Potosi to Saltillo. The firm estimates that it can ship about 20 carloads, averaging 37,500 pounds each, of palma fiber to the United States every month and about 10 carloads of lechuguilla istle to Europe, and Saltillo is considered the more convenient center from which to carry on this trade. The total istle production in northern Mexico approximates 100 carloads per month, of which about 60 per cent is palma and 40 per cent lechuguilla. (Vice Consul Thomas S. Horn, Saltillo, Mexico, April 11.)

Samples of Chinese Gray Goods Available.

Samples of Chinese-made gray sheetings and drills received from Trade Commissioner G. C. Howard, Shanghai, have been sent to the New York district

office of the Bureau of Foreign and Domestic Commerce, where they will be made available for inspection by interested American firms. Chinese gray goods are being sold in Turkey, Egypt, the Philippine Islands, and the Netherlands East Indies, and in some of these markets are offering serious competition to American brands. Beginning with the May issue, the Textile Division's bulletin, Comparisons of International Cotton Gray-Cloth Prices, will quote Shanghai prices on these goods.

Gloves and Hosiery Lead in Dresden Exports to the United States.

During the first quarter of 1925 declared exports from the Dresden consular district to the United States of cotton gloves amounted to 207,666 dozen pairs, valued at \$591,087, and of cotton hosiery to 133,917 dozen pairs, with a value of \$427,544, as against 353,936 dozen pairs, worth \$1,046,319, and 144,021 dozen pairs, valued at \$322,291, respectively, during the first three months of 1924. Cotton hosiery shipments to the United States have steadily increased since 1923, notwithstanding the advance in the average price for the first quarter from \$1.82 in 1923 to \$2.23 in 1924 and \$3.19 in 1925. During the first three months of 1925 cotton gloves retained the lead among exports of all classes of merchandise from this district, while cotton hosiery, which ranked fifth in the first quarters of both 1923 and 1924, took second place. Shipments of cotton laces and embroideries to the United States were valued at \$391,207 during the first quarter of 1925, this commodity ranking third in point of value in exports. (Consul Louis G. Dreyfus, jr., Dresden, Germany, April 4.)

Conditions in Indian Cotton Mills Improved.

India has been fairly successful in the introduction of reforms contained in amendment 2 of 1922 to the cotton factories act, which brought establishments employing less than 50 people within the act, provided for a 60-hour week for adults, forbade the employment of women on night shifts, reduced maximum daily work hours for children to 6, and raised the minimum age for children from 9 to 12. In cotton spinning and weaving mills, the number of children employed has decreased almost 25 per cent, largely as a result of the vigorous measures taken to prevent children working in two mills during the same day. Unregistered establishments showed a higher proportion of children to adults than the larger mills, and the inclusion of the smaller plants under the act was designed to close this avenue for employment of very young children. The movement toward shorter hours is most marked in Bengal and Assam, while Bombay mills appear to work up to the limits permissible under the act, according to reports of the Bombay and Central Provinces, which also comment upon the effect of improved ventilation in producing greater contentment among mill operatives. (Assistant Trade Commissioner E. G. Sabine, Bombay, March 26.)

GROWING MARKET FOR AMERICAN COTTON GOODS IN SOUTH AFRICA

Trade Commissioner Percy J. Stevenson, Johannesburg, March 25.

Imports of cotton manufactures into the Union of South Africa declined from £6,969,624 in 1923 to £6,580,685 during 1924, of which the United Kingdom supplied £5,504,949 in 1923 and £4,932,710 worth in 1924, or 79 per cent and 75 per cent, respectively, of the total. In 1912, the British share was 80 per cent as compared with 81.7 in 1921 and 78.6 in 1922. The United States, which was a very small factor in this trade before the war, is making slow but steady gains despite the general decrease, having shipped £503,465 worth of cotton manufactures to the Union in 1924 against £456,384 in 1923. Since 1921, the percentage of the total supplied by the United States has consistently increased, from 4.3 in that year to 5.7 in 1922, 6.5 in 1923, and 7.6 in 1924. In 1924, Germany was the third most important source of these imports with a total of £239,987, followed by Belgium with £223,643, Italy with £207,847, and Japan with £155,705. Relatively, the importance of the various supplying countries has changed very little in recent years. Comparing 1922 and 1924, the only shift in rank has been that Italy and Japan, which were sixth and fifth, respectively, in 1922, have reversed their positions.

Piece Goods the Most Important Item Imported.

Piece goods constitute the bulk of the imports of cotton manufactures, accounting for £4,028,057 of the 1924 total. The United Kingdom, while still retaining about 80 per cent of the piece-goods business, furnished only £3,216,133 in 1924, or about £300,000 less than in 1923. The United States sent £386,279 worth of cotton cloth in 1924 as compared with £321,977 in 1923. Other suppliers of any importance ranked as follows: Italy, £109,664; Germany, £103,101; Netherlands, £38,370; France, £33,385; Japan, £31,807; Czechoslovakia, £27,699; India, £26,125; and Belgium, £25,633.

American Goods Gaining Ground—Increased Consumption by Manufacturers.

With the exception of the increased importance of Italy and the United States and the weaker position of Germany, the cotton-cloth trade has changed very little in comparison with the pre-war period. Both American and Italian prints have cut into the former German trade in this line, while American voiles, indigo-striped drills, and cretonnes are also being sold more freely. The United States is holding the trade in cottonades despite the introduction of imitations from Belgium, the Netherlands, and Italy. Japanese competition in gray goods is reported to be increasing.

One favorable development from the standpoint of the American exporter is the increasing consumption of cotton cloth by local manufacturers. The Government recently granted certain preferential treatment in the matter of customs duties on materials used in the manufacture of shirts and pajamas, and it is probable that this assistance will be extended to producers of other articles of clothing. As a result, old factories have increased their purchases, and new concerns have also entered the field. Certainly, the demand for the heavier cloths, such as prints, cottonades, and drills, has been materially stimulated and gives promise of permanency and even further expansion.

American Goods Handled by Indian Dealers.

The bulk of the trade in American piece goods is in the hands of Indian dealers who sell on a small

margin of profit. Some local experts in the business believe that the sale of American cotton cloth will eventually be seriously curtailed as a result of this method of distribution. As the margins of profit decrease, the lines become less attractive to the Indian dealers, with the exception of the very few who specialize in this class of goods. This has been the experience of some English manufacturers, and this lack of interest on the part of the distributor accounts for no small part of the decline in imports of British piece goods.

Hosiery and Underwear Imports Decrease—Competition Keen.

South African imports of underwear in 1924 were valued at £711,252, of which the United Kingdom supplied £507,968, Japan £95,457, the United States £63,316, and Germany £16,984. Hosiery shipments totaled £346,769, of which the United Kingdom is credited with £230,329, the United States with £46,256, Germany with £43,723, and Japan with £23,432. Compared with 1923, the total imports of hosiery and underwear decreased by about £90,000, while a decline in American sales was more than offset by the gains of Germany and Japan. American fleece-lined underwear is losing ground in this market on account of the competition from Japanese, German, and, to some extent, Canadian lines. In cotton hosiery the American product will, it is believed, find a greater market in 1925 than last year, when the offering of American hosiery on the London market curtailed direct shipments, especially during the latter part of 1924. It is claimed that the hosiery could be unpacked, dyed, and repacked in London, and then shipped to South Africa at a cost below American quotations for direct sales.

Outlook for 1925 Favorable for American Cotton Goods.

While the local cotton-goods trade is at present in none too satisfactory a position, the outlook for the balance of 1925 is more favorable. Wholesalers have heavy credits outstanding, and collections are slow and difficult. On the one hand, the farming communities are well supplied with cash, especially in the wool-growing areas. Unfortunately, however, for the wholesalers, many small storekeepers were caught by the slump in wool prices, and, until the maize crop is harvested, the credit situation will continue to be a problem.

Stocks, both wholesale and retail, are reported to be low or normal. American orders or indents are fairly good, considering the general trade situation, and in some cases are fully 50 to 100 per cent greater than during the first quarter of 1924. The cotton-cloth trade, as a whole, is expected to improve and the outlook for the sale of American piece goods during 1925 is fairly satisfactory.

With the improvement in sterling exchange, and the gradual return to the gold standard, American exporters should be able to compete more successfully in the piece-goods trade in 1925 than they did in 1924. It is probable, however, that a part of the advantage arising from the recovery of the British pound sterling will be offset by the higher freight charges now in force, and there are prospects of further increases in these rates.

Bids Desired on Wool Blankets and Clothing

The Textile Division has received copies of specifications under which bids may be submitted to the Philippine government on wool blankets and undershirts. Bids close at 11 a. m., June 30, 1925. Copies of this specification will be made available upon application to the New York district office of the Bureau of Foreign and Domestic Commerce or to the Textile Division at Washington. Refer to file No. 1721.

LUMBER

Axel H. Ozolski, Chief, Lumber Division

STERLING PARITY AND BRITISH LUMBER BUYING

J. C. Nellis, Assistant Chief, Lumber Division

The return of the pound sterling to par is likely to result in somewhat freer buying of lumber in the United Kingdom in ratio at least to the better British rate of exchange. An increase in lumber purchases may be expected also by reason of the strengthened financial position which will permit construction developments even larger than so far proposed. Furthermore, industrial demand should similarly increase. However, the United Kingdom is the focus of world lumber shipments and obtains its supplies of lumber from a dozen or more countries. Approximately 3,000,000 feet are imported each year, mostly softwoods which come from northern and eastern Europe and North America.

Increased Competition from Other Countries.

There is a surplus of softwood lumber this year in northern Europe, while eastern Canada is looking to the United Kingdom to replace the United States market which was lost to Pacific coast woods. These and other countries will make every effort to increase their sales to the United Kingdom. Our softwood exporters, therefore, may expect keen competition, except in exclusive United States grades or sizes. The shippers of hardwoods from the United States to the British market may also anticipate continued competition with European and Japanese hardwoods. Our exporters of specialties, such as doors and plywood, may likewise look for European producers to seek British business more than ever.

March Wood Exports and Imports

Exports of wood and manufactures thereof from the United States during the nine months ended March, 1925, were valued at \$100,437,953 as compared with \$115,971,500 in the corresponding period ended March, 1924, a decrease of approximately 13 per cent. This decrease is due to lessened exports of sawn softwood timber and lumber, while there were only slight increases of hardwood lumber and cooperage.

During March, 1925, these exports were valued at \$14,214,940 compared with \$12,346,454 in the same month in 1924. Of the sawn timber exported during March, Douglas fir was the greatest in volume with 36,700 M feet, of which 1,000 M feet were "treated." Southern pine was next with 19,200 M feet, of which 900 M feet were "treated." Exports of logs and hewn

timber amounted to 18,000 M feet which included 12,900 M feet of cedar.

Exports of Softwood Lumber—Railroad Ties.

Softwood lumber exports totaled 145,500 M feet during March, southern pine being the largest species with 61,400 M feet, going principally to the River Plate, 13,500 M feet; Cuba, 11,800 M feet; Mexico, 7,600 M feet; Germany, 3,600 M feet; United Kingdom, 2,800 M feet; Netherlands, 2,800 M feet; Dominican Republic, 2,200 M feet; Spain, 2,000 M feet; Canada, 1,800 M feet; and Belgium, 1,600 M feet.

Douglas fir was next in volume with exports of 60,400 M feet. The principal markets taking this species were Japan, 26,700 M feet; Australia, 7,800 M feet; China, 5,700 M feet; Peru, 5,000 M feet; Chile, 3,400 M feet; United Kingdom, 3,000 M feet; Mexico, 2,600 M feet; and the River Plate, 2,500 M feet.

Other softwood lumber exports included 11,700 M feet of hemlock, 3,000 M feet of redwood, 1,600 M feet each of spruce and cypress, and 1,300 M feet each of western and white pine.

Railroad ties, both hardwood and softwood, numbered 435,600 during March, of which 86,800 were "treated" softwood. Mexico took 131,300 of both kinds followed by Guatemala, Peru, Cuba, and Canada in order of importance.

Hardwood Lumber—Cooperage and Miscellaneous.

As usual, oak was the largest species of hardwood lumber exported during March, with 16,100 M feet, or approximately 51 per cent of the total. The principal markets taking it were the United Kingdom, 6,700 M feet; Canada, 3,800 M feet; Belgium, 1,800 M feet; River Plate, 1,700 M feet; and Netherlands, 700 M feet. Other hardwood lumber exported included 4,200 M feet of gum, 3,000 M feet of poplar, 1,800 M feet of ash, 1,100 M feet of mahogany, 1,000 M feet of walnut, and 600 M feet of chestnut.

Cooperage exports included 3,900,000 slack and 2,900,000 tight staves, 226,000 sets of heading, 141,000 sets of tight, 135,000 sets of slack cooperage shooks, and 38,000 empty barrels, casks, and hogsheads. Box shooks amounted to 11,750 M feet, of which 6,640 M feet were hemlock.

Among other items exported during March were 6,000 M square feet of veneer, 1,200 M square feet of plywood, 104,000 doors, 640 M feet of hardwood flooring, and 2,250,000 pounds of handles and handle dimension for tools and 1,400,000 pounds for agricultural implements.

Little Change in Imports.

Imports of wood and manufactures thereof in March, 1925, were valued at \$9,439,820 as compared with \$9,797,031 during the corresponding month in the previous year. For the nine months ended March, 1925, the total value was \$85,658,108 against \$87,720,526 in the same period ended March, 1924.

Softwood lumber was the largest import item with 130,000 M feet. Shingles numbering 190,600 and 406,700 laths were also imported, mostly from Canada. Other items included 94,000 railroad ties and 6,200 M feet of hardwood lumber.

March imports of mahogany logs were 5,300 M feet, coming principally from Central America, 2,500 M feet; Mexico, 1,600 M feet; and Africa, 900 M feet. About 2,200 M feet of mahogany lumber from the Philippines and 670 M feet of cedar logs were also received during the month.

Favorable Conditions Create Demand for Lumber

"The lumber market in Cuba is totally dependent on the price of sugar" says Consul Francis R. Stewart, of Santiago de Cuba. "If sugar is high it means prosperity for the entire island and satisfactory orders for American lumber are placed. The Cuban market for softwoods lumber alone amounted close to 200,000,000 feet last year."

Importance of Key Industries.

Every foreign market has some key industries on which the prosperity of the country is more or less dependent. These industries may not be large consumers of American lumber, but the wood-using industries may be dependent on the success of these key industries for their prosperity. An up-to-date lumber exporter therefore should closely follow the agricultural situation in Argentina, the wool industry in Australia, mining in South Africa, shipbuilding in Great Britain, the furniture industry in Italy and Belgium, and the wine crop in France and Spain, etc.

Study of Present and Future Market Possibilities.

Of course this knowledge of general economic conditions is only supplementary to the study of the actual lumber market. The United States is a great distance from most foreign markets and several months are required before lumber is in shipping condition. For this reason it is doubly necessary for our exporters not only to be posted as to immediate requirements, but they must also be well informed in regard to the market possibilities many months ahead in order to take proper advantage of the situation.

Siberian Lumber Industry Increasing in Activity

Trade Commissioner Mowatt M. Mitchell, London, England, and B. Balevsky, European Division

It will be a surprise to most American lumber exporters to learn that Siberian softwoods may be a competitor to be reckoned with in European markets in the future. A shipment of 1,500 M feet of Siberian softwood lumber arrived in London in 1924 from Krasnoyarsk, which lies on the Trans-Siberian Railway about half way between Tomsk and Irkutsk. This lumber was floated down the Yenisei River to its mouth and there loaded on a vessel for London proceeding via the Kara Sea and Arctic Ocean.

Efforts to Develop an All-Water Route.

This represents another effort to develop lumber exports from western Siberia by an all-water route. These attempts started long ago to replace the more expensive overland route via the Trans-Siberian Railway to Leningrad, other Baltic ports, or Archangel and thence to Great Britain by steamer.

The Soviet is endeavoring to improve transportation conditions from western Siberia and, if successful, it is thought that the exports of Siberian softwoods may reach sizable proportions. However, others are of the opinion that it can not be done on a profitable basis as long as present conditions continue.

Increased Export Shipments—Railway Project.

In addition to the lumber shipped from the Krasnoyarsk mills there are considerable quantities of softwoods exported from eastern Siberia through Pacific ports, principally to Japan and China. According to Soviet statistics 21,000,000 cubic feet were shipped during 1924 from the Maritime Territory bordering the Tartar Straits, as compared with 15,000,000 to 16,000,000 cubic feet in 1923. Lack of deep-water loading facilities at the port of Nikolayevsk on the Amur has hindered the development of lumbering in this territory as bars at the mouth of the Amur River prevent entrance of oceangoing vessels.

A project has been under consideration for some time to build a narrow-gauge railway from a point some little distance from the mouth of the river to De Kasri Bay, which is suitable for harbor development, being open for navigation nine months of the year, has deep water, and is protected from the prevailing winds.

Cut-Offs**Peru Lumber Imports in 1924.**

An estimate of one of the largest dealers in lumber gives the total imported into Peru in 1924 as between 50,000 M and 60,000 M feet. (Vice Consul Nelson Park, Callao, Lima.)

Swedish March Lumber Exports.

Sawn lumber exports from Sweden during March were valued at 6,409,000 crowns, or approximately \$1,727,225, according to a cable from Commercial Attaché T. O. Klath, Stockholm.

Porto Rican Building Below Normal.

Building activity in Porto Rico is less than normal with stocks of construction material fair, according to a cable dated April 26, 1925, from Trade Commissioner L. W. James, San Juan.

Shanghai Lumber Market Dull.

The Shanghai (China) lumber market was extremely dull with practically no price improvement at the first of April, according to a report from Trade Commissioner George C. Howard, Shanghai.

Norway Lumber Exports.

Exports of lumber from Norway during February were valued at 6,700,000 crowns, or approximately \$1,005,000, states a cable dated April 23 from Adolph Fenselau, office of commercial attaché, Copenhagen.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

INCREASED SHIPMENTS OF SHOES TO NON-CONTIGUOUS TERRITORIES

The United States, during the first quarter of 1925, supplied the noncontiguous territories with 432,440 pairs of leather boots and shoes, valued at \$876,270, an increase of 31.8 per cent over the quantity of similar goods shipped in the corresponding period of 1924.

Men's and Boys' Shoes Constitute Main Group.

Footwear for men and boys constituted 52 per cent of the shipments during the first three months of 1925. Alaska purchased 5,489 pairs for men and boys and only 870 pairs for women and children. Hawaii also showed preference for men's and boys' shoes with purchases of 47,651 pairs out of a total of 63,337 pairs. The trade with Porto Rico aggregated 171,721 pairs of men's and boys' and 191,023 pairs of women's and children's shoes.

March Consignments Show Upward Trend.

The March consignments, totaling 181,949 pairs, were distributed to Alaska, 3,213 pairs of shoes for men and boys, valued at \$11,943, and 738 pairs of shoes for women and children, valued at \$2,386; to Hawaii, 21,437 pairs of shoes for men and boys, valued at \$76,688, and 11,079 pairs for women and children, valued at \$57,223; and to Porto Rico, 55,610 pairs for men and boys, valued at \$132,314, and 89,872 pairs for women and children, valued at \$127,466. The March trade shows a fluctuation similar to that in 1924, with a decrease in the number of pairs consigned to each of these territories during February and a pronounced upward trend in March.

United States Imports of Leather Gloves Increase

The United States imported 1,773,895 pairs of leather gloves, valued at \$1,548,136, during the first quarter of 1925, an increase of 14.6 per cent over the quantity imported in the corresponding period of 1924 (1,548,134 pairs, valued at \$1,317,583). The imports of French gloves constitute nearly half of the total, amounting in 1925 to 854,077 pairs which, however, is a decrease of 63,432 pairs as compared with the 1924 period. Germany, the principal competitor of France in this line of goods, sold to the United States 575,151 pairs, an increase of 97,827 pairs as compared with the first quarter of 1924. Italy and the United Kingdom manufactured 93,556 and 26,932 pairs, respectively, for the United States trade, an increase in each instance over last year's supplies. In March, 1925, the imports of 655,246 pairs exceeded those of March, 1924, by 34,778 pairs.

British Exports of Leather Boots and Shoes Increase

The United Kingdom exported 248,296 dozen pairs (2,979,552 pairs) of leather boots and shoes during the first quarter of 1925, a quantity increase of 19.9 per cent over the exports in the corresponding period of 1924. Approximately 70 per cent of these exports were absorbed by four countries, namely, the Irish Free State,

80,060 dozen pairs, or 32.2 per cent; New Zealand, 38,916 dozen pairs, or 15.7 per cent; British South Africa, 34,699 dozen pairs, or 14 per cent; and Australia, 21,518 dozen pairs, or 8.7 per cent. During this period the United States and British West India islands received 4,606 and 4,605 dozen pairs, respectively. Canada purchased 8,455 and the Netherlands, 13,800 dozen pairs.

March Exports Represent Considerable Increase.

The March, 1925, exports, amounting to 90,504 dozen pairs, represent a substantial quantity increase over shipments of 66,888 dozen pairs in March of last year. The Irish Free State is largely responsible as the 22,454 dozen pairs purchased in March, 1924, increased to 33,703 in March, 1925. The uncertainty as to the budget to be introduced by the Irish Free State minister of finance probably influenced the heavier buying to some extent.

The larger demand from New Zealand, 11,323 dozen pairs as compared with 5,321 dozen pairs in March, 1924, was offset by approximately 3,000 dozen pairs less in the exports to British South Africa and by the decreased trade with the Netherlands and Canada. The Canadian market, however, shows a decline of only 200 dozen pairs. The United States purchased 1,169 and 1,168 dozen pairs in March of the respective years 1924 and 1925.

United States Exports of Leather Belting

The United States exported 887,872 pounds of leather belting, valued at \$1,338,450, during the nine months ended March 31, 1925, an increase of 11.7 per cent over the quantity of leather belting exported in the corresponding period ended March 31, 1924. The exports to Cuba during the nine-months periods of 1924 and 1925 amounted to 127,902 and 139,383 pounds, respectively; while those to British India were 84,986 and 98,843 pounds; Mexico, 64,677 and 95,649 pounds; and South America, 136,190 and 147,372 pounds. China, Canada, and the United Kingdom show slight decreases in trade.

Considerable Increase in March Shipments.

The March, 1925, exports of leather belting amounted to 96,729 pounds, valued at \$150,469, representing an increase of 13.7 per cent over the quantity exported during March of 1924. The principal countries of destination and the amount taken by each were the United Kingdom, 10,182 pounds; Canada, 12,788; Central America, 2,770; Mexico, 10,685; Cuba, 6,653; South America, 17,790; British India, 6,617; China, 11,312; Japan, 442; Philippine Islands, 1,046; and other countries, 16,444 pounds.

Canadian Imports of Leather Boots and Shoes

Canada, during the first two months of 1925, imported 100,683 pairs of leather boots and shoes, valued at \$237,725, comprising 46,796 pairs for men, 29,951 pairs for women, and 23,936 pairs for children, which was an increase of 4.9 per cent over the quantity

of similar goods purchased in the corresponding period of 1924. In the 1924 period the imports of men's shoes amounted to 46,586 pairs; women's shoes, 25,615 pairs; children's shoes, 23,770 pairs.

United Kingdom Leads in Countries of Origin.

During January and February, 1925, the United States supplied 31.9 per cent of the leather boots and shoes for men, and the United Kingdom furnished practically all of the remainder. The United States,

however, led in the importation of women's shoes, 55.2 per cent having been purchased from that source, while 40.9 per cent came from the United Kingdom. The United Kingdom was most important as a source of children's shoes, contributing 10,242 pairs, while Germany and the United States ranked second and third with respective totals of 7,898 pairs and 5,778 pairs.

See also "Foreign trade opportunities."

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

PROGRESS IN RURAL ELECTRIFICATION IN FRANCE

Commercial Attaché Chester L. Jones, Paris

The plans for furnishing cheap electricity for light and power to the rural communities in France are extensive, and the response of the rural population to the facilities created by the Government continues encouraging. Ways in which progress has already been made in the use of electricity by the farming population are: Pumping for ordinary farm uses and for irrigation, threshing, running of root cutters, straw cutters, oil-cake crushers, milk separators, hay presses, grain mills, butter mixers, electric washers, sweepers, and irons.

Economic Advantage Seen in Electrification.

It is hoped that the application of electricity to the numerous needs of the farmer will become more general throughout France in order to stop the drift of the rural population to the cities by making country life more attractive and agricultural labor less exhausting. At the same time it is hoped to build up country industries and perhaps to save the household industries, such as lace-making, which especially in the less fertile regions have shown a tendency to decline.

Before the war the demand for electricity in the country was much less than it now is because the rural population was unfamiliar with the benefits it could bring and because there was sufficient labor. At present a higher standard of life is enjoyed by the rural population, and further demands for improvement in rural living conditions are general. In addition, there is a shortage of farm labor. These conditions emphasize the importance of rural electrification.

Plans for Electrification and Government Aid.

The building up of a rural electric distribution net such as the Government already plans would involve the expenditure of approximately 4,000,000,000 francs. It can not be effective through local initiative, and the Government has agreed to give special support to rural electrification enterprises.

Public support is given to the localities which wish to secure electrical services by assisting them in three ways: Government engineers study the various projects without charge to the localities, and give their advice as to the best methods of procedure. When a development is decided upon, the Government grants a subvention. In addition, the Government may advance money at low rates of interest.

Rules Under which Subventions are Granted.

The grants given are determined by the proportion of the expense incurred for high, medium, and low extension services and by the number of inhabitants served by the distribution system. Advances at low rates of interest are obtainable by companies of collective agricultural interest, communes, syndicates of communes, syndical associations, cooperatives, and other agricultural associations. Here also the grants are determined by the expense per inhabitant served. Those made vary between 70 per cent and 100 per cent of the capital brought together by the local associations promoting the developments.

The Government also inspects the equipment under rules applying to all distribution of electric power, rural or urban, regulates the service rates, and the general conditions under which the plant must be exploited.

Transmission and Distribution.

As a rule, several stages have to be passed through before the power generated by a big central plant can be put at the service of the rural consumers. A line operating at very high tension usually brings the electricity from a producing center to several points in the surrounding territory, such lines regularly furnishing power for one or two departments. At these terminals the tension is reduced to within the 45,000 to 60,000 volt range for secondary transmission to another transforming station, where it is again stepped down to a tension of from 3,000 to 15,000 volts, and before the power is delivered to the consumer, it is brought down to a still lower voltage. Two voltages are adopted for final delivery—110-120 and 220-230. The latest rulings admit the latter tension for delivery of so-called first category current; that is, current which the rules allow to be delivered direct to the consumer.

The Rural Net Proper—Expense.

The construction of the distribution system necessitates fairly high initial expenses. An investigation of 1,000 communes shows that the average expense is about 190 francs per inhabitant served. The assistance granted by the State, either in the form of a subvention or as a loan, averaged in the above communes about 30 per cent of the installation expense. As a rule, the concessionnaire contributes about 20 per cent, and as a

consequence about 50 per cent must be contributed by the local organizations for securing electric service. Those latter organizations may also receive subventions from their own departments. The conditions under which such support is given vary greatly from one department to another.

Methods of Exploitation.

The rural electrical service may be either directly exploited by the group which sets it up or placed in the hands of a concessionnaire. The latter method is ordinarily employed. The concessionnaire then takes all the risks—usually a matter much easier for him than it would be for a local organization, which is often inexperienced in operation and of restricted means. Each of the concessionnaires, as a rule, runs a large number of the rural services under separate contracts. Generally it is provided that the concessionnaire must return to the organization from which he gets his right to operate part or all of the annuities paid by the latter on construction account. These annuities, when not thus completely covered, are paid by communal taxes, or partly by these and partly by payments from the concessionnaire. There are also cases where payment of the annuities is assured by a proportional levy on the amount of current consumed, thus putting the expense directly on those who benefit by the use of electricity.

Experience has shown that the hardest point to pass in financing rural-distribution enterprises comes in the first few years, when, as a rule, consumption of current is low and the returns therefrom for meeting construction charges are small. It is during this period that special departmental subsidies are frequently arranged.

Expenses of the Existing Rural Electrification Net.

Figures are not available indicating the amount of money actually invested by the various rural electrification enterprises in France. The total is difficult to ascertain, due to the varying degree to which the central, departmental, and communal governments, as well as special local organizations and the concessionnaires, have contributed. A fair idea of the growing popularity of rural electrification can be obtained from the following table showing the total subventions given by the Central Government for rural electrification from the period of June 1, 1920, to June 30, 1924:

Subventions granted for rural electrification

Year	Applications			Amount of the subventions granted
	Under consideration	Number subventioned	Total	
1920	244	10	304	France 169,651
1921	532	47	579	4,903,217
1922	809	92	901	7,831,517
1923	1,320	177	1,497	12,724,410
1924 (June 30, 1924)	696	108	802	16,463,165
Totals to June 30, 1924	3,704	429	4,222	42,091,700

Even this development is only a beginning of that which is hoped for by the public authorities and of that which seems in prospect if the enterprises now in existence continue to serve their clients as satisfactorily as they appear at present to be doing.

March Electrical Exports Increase

The value of electrical machinery, materials, and supplies exported from the United States during March, 1925, was \$7,720,406, according to preliminary figures. This is an increase over the same month of last year, when the amount was \$7,572,910. Further, it is the highest since June, 1921, and about 13 per cent above the monthly average for 1924. As compared with March of last year, there was a considerable decrease in the exportation of both alternating and direct current generators, which a large increase in steam turbine generator sets did not offset. There was, however, a decided increase in accessories and parts for generators, which caused exports of the generator class as a whole to be higher than the total reached a year ago. Self-contained lighting outfits increased 50 per cent, to \$66,311. Primary batteries increased to \$280,280, or by nearly \$100,000, but storage batteries decreased about \$120,000. Power transformers fell off 80 per cent, to \$99,856, and other transformers to \$176,002. Rectifiers, motor generators, and converters increased about 25 per cent, to \$55,375. Transmission and distribution apparatus as a whole increased \$118,676, or about 19 per cent. Though exports of motors under 1 horsepower increased to \$202,617, or approximately \$70,000 over March, 1924, larger motors and railway motors decreased practically \$300,000.

Decreases in Some Lines Offset by Increases in Others.

There was a decrease in the shipments of electric locomotives, starting and controlling equipment, accessories and parts for motors, domestic heating and cooking devices, and electrical porcelain during March of this year as compared with the corresponding period of last year. There was a considerable increase, however, in the exportation of electric fans, lamps, motor-driven household devices, copper wire, both bare and insulated, wiring materials and devices, and telephone equipment.

Exports of radio apparatus continued to increase, the total of \$604,769 reached in March, 1925, being approximately 200 per cent of the figure attained in March, 1924.

Australian Electrical Imports Increase

Trade Commissioner E. G. Babbitt, Melbourne

The Australian demand for electrical equipment shows steady improvement. According to figures recently issued by the Commonwealth statistician, imports of insulated wires and cables for the quarter ended December, 1924, totaled £486,005 as compared with £313,039 for the corresponding period of 1923. In other electrical lines, taken as a whole, imports during the last quarter of 1924 reached \$1,280,797, an increase of \$270,900 over the same period of the previous year.

Electrical Projects.

The interest of foreign countries in the Australian electrical field is evidenced by negotiations that are now in progress by the Metropolitan Vickers Electrical Co. (Ltd.), Manchester, England, for the purchase of a five-acre site in the Lidcombe-Auburn district of Sydney, New South Wales. It is proposed that the Metropolitan Vickers Electrical Co. will erect works on this site which will be used to carry out part of a contract which it has received to supply electrical equipment for rolling stock used on the new suburban electric railways. It is believed that when this con-

tract is completed, other electrical improvements will be undertaken. This contract was granted to the Metropolitan Vickers Co. on the agreement that a certain percentage of the work would be done in Australia.

Electrical Trade Notes

Swedish Transformer Sheets Exported to Russia.

A considerable shipment of Swedish industrial products, including 75 tons of transformer sheets, recently cleared from Stockholm for Leningrad. Additional cargoes will be shipped in the near future. (Trade Commissioner T. O. Klath, Stockholm, April 8.)

Small Electric Lighting Plant for La Chorrera.

The municipality of La Chorrera, Panama Province, has been granted the sum of \$15,000 for the construction of an electric lighting plant. The work is to be

performed under the direction of the ministry of agriculture and public works. (Consul George Orr, Panama.)

Prospective Market for Electrical Equipment in Russia.

It is unofficially reported that the Soviet-Russian Electro-Machine Building Trust has arranged with the Electrobank of Moscow to purchase through its foreign department, sufficient electrical equipment to supply the Russian demand for these manufactures. (Consul A. W. Kliefoth, Berlin, March 31.)

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

ITALIAN IMPORTS OF AGRICULTURAL MACHINERY INCREASE

Assistant Commercial Attaché A. A. Osborne, Rome

Imports of agricultural machinery into Italy in 1924 showed a considerable increase over 1923, and amounted to 8,913 metric tons, valued at 31,321,315 lire as compared with 5,880 metric tons, valued at 19,294,365 lire in 1923. (The normal value of 1 lira is \$0.19, present value about \$0.04.) The largest increase occurred in plows and mowers, as shown by the following table of imports:

Italian imports of agricultural machinery, by classes

Classes	1923		1924	
	Metric tons	Lire	Metric tons	Lire
Plows.....	1,647	4,044,307	2,414	7,136,693
Other implements for working the soil.....	55	167,180	64	311,363
Threshers.....	977	4,320,661	844	4,656,320
Mowers.....	980	3,483,747	2,462	9,437,992
Reapers.....	208	522,990	496	1,553,932
Cable-plowing apparatus.....	205	1,163,000	35	245,420
Hayrakes, tedders, etc.....			271	784,068
Hay cutters, choppers, etc.....			494	1,023,780
Others made of wood, n. e. s.....	32	31,619	5	23,107
All others, n. e. s.....	1,826	5,570,861	1,888	6,158,030
Total.....	5,880	19,294,365	8,913	31,321,315

Origin of Imports.

The largest imports of implements, in quantity, were from Germany, followed by the United States. The countries of origin for the past two years follow:

Italian imports of agricultural machinery, by countries

Countries of origin	1923	1924	Countries of origin	1923	1924
	Metric tons	Metric tons		Metric tons	Metric tons
Austria.....	632	356	Switzerland.....	15	206
Belgium.....	48	682	Hungary.....	36	116

Great Britain.....	370	283			

IMPLEMENT EXPORTS REACH NEW HIGH MARK IN MARCH

Exports of agricultural implements from the United States in March were the highest of any month during the past four years. They were valued at \$7,515,871, which total includes tractor shipments valued at \$3,000,902.

The value of implement exports in March was considerably greater than in February, which was \$4,435,309, and was also greater than in March, 1924, which was \$5,927,038. The principal item in these exports was tractors, which accounted for a large part of the increase. There was a decrease in exports of harvesters and binders from \$1,146,449 in March 1924, to \$645,750 in March this year. This was caused partly by a falling off in the French demand for American harvesting machinery. The value of horse and power plows exported decreased from \$542,371 in March, 1924, to \$471,325 in March, 1925. Exports of threshers also decreased, and amounted to only \$29,646. In general, there were decreases in the principal items except tractors, while there were increases in the exports of the less important items, including cream separators, harrows, cultivators, planters, drills and seeders, hay rakes and tedders, corn shellers, windmills, and feed grinders and crushers.

The total value of exports for the 9 months ended March, 1925, amounted to \$43,381,152, as compared with \$42,475,724 for the corresponding period last year.

"Foreign trade opportunities."

Postal Service Between Poland and Russia

Effective March 17, letters were accepted for transmission between Poland and Russia in accordance with regularly recognized international regulations and tariffs. After May 2, money may be forwarded by mail. (Office of Commercial Attaché, Warsaw Poland, March 15.)

SPECIALTIES

Warren L. Hoagland, Chief, Specialties Division

EXPORTS OF OFFICE APPLIANCES AND SUPPLIES, FIRST QUARTER 1925

The value of the exports of office appliances from the United States during the first quarter of 1925 totaled \$8,953,167, an increase of 24.7 per cent over the corresponding period of 1924. The following table shows the extent to which this gain was effective in the individual commodities composing this group:

United States exports of office supplies

Machines	First quarter—			
	1924		1925	
	Number	Value	Number	Value
Adding and calculating.....	6,795	\$1,739,647	10,571	\$2,267,766
Cash registers.....	4,711	960,964	5,812	1,246,652
Typewriters.....	69,652	3,976,002	84,142	4,722,542
Addressing and duplicating.....	1,083	150,456	1,553	156,455

The percentage increase in number and value, respectively, during the first quarter of 1925 in comparison with the same period in 1924 is as follows: Adding and calculating machines, 55.4 and 30.4; cash registers, 23.4 and 25.6; typewriters, 20.7 and 18.7; addressing and duplicating machines, 43.4 and 4.0.

Average export prices of office appliances are as follows:

Average export prices of office appliances

Machines	First quarter—	
	1924	1925
Adding and calculating.....	\$256.01	\$214.52
Cash registers.....	210.35	214.48
Typewriters (all classes).....	57.06	56.12
Addressing and duplicating.....	138.92	100.74

Typewriter Exports Classified.

The segregation of typewriter exports into the classes "Standard new machines," "Portable new machines," and "Used and rebuilt machines," the values of shipments, and the average prices for the first quarter of this year were as follows:

Typewriter exports in the first quarter of 1925

Class	Number	Per cent	Value	Per cent	Average prices
Standard new machines.....	54,384	64.8	\$3,689,359	78.1	\$68.31
Portable new machines.....	23,498	27.9	825,452	17.5	35.87
Used and rebuilt machines.....	6,260	7.3	207,731	4.4	33.50
Total.....	84,142	100.0	4,722,542	100.0	-----

Of the total value of exports of office appliances during the first quarter of 1925, 52.7 per cent was made up of typewriters; 25.3 per cent adding and calculating machines; 13.9 per cent cash registers; 6.3 per cent

cash register and typewriter parts; and 1.8 per cent addressing and duplicating machines.

Exports of office supplies during the first quarter of this year totaled \$1,570,625, a decrease of 0.5 per cent from the same period of 1924. Although exports in this group showed gains in the months of January and March over the same months of 1924, the trade, on the whole, was unmarked by any substantial gains. Exports of carbon paper and miscellaneous office supplies show the greatest tendencies to increase.

Argentine Typewriter Market Expanding

Trade Commissioner George S. Brady, Buenos Aires

The year 1924 was a record one for the sale of typewriters in Argentina, a total of 16,199 machines having been imported during the year, as compared with 12,516 in 1923, 9,752 during 1922, and only 6,383 during 1913. The typewriter market is an expanding one, and the prospects are good for increased sale during the next few years.

United States the Principal Source.

Seventy per cent of all typewriter imports during 1924 were from the United States. German and Italian prices have been considerably below those of the American companies, but the sales of the latter are made chiefly on quality and reputation. The most successful importers have been those with comprehensive organizations who have advertised extensively.

Competition of European Machines.

The European machines offering the greatest competition are the Continental (German), Mercedes (German), and Olivetti (Italian). Argentina imports of typewriters for the year 1924 by country of origin were as follows:

	Number
United States.....	11,183
Germany.....	4,503
Italy.....	391
Great Britain.....	58
Others.....	64
Total.....	16,199

Australia Offers Market for Toys

Consul Henry H. Balch, Adelaide

Australia offers a fairly good market for all classes of toys, and it is believed that American exporters have reasonably good opportunities for increasing their share of this trade. While the types of toys carried in stock are not as varied as those sold in the United States, toys are as much in demand in Australia, where the per capita buying capacity of the people is as high, as in the United States.

Principal Countries of Origin of Toys.

Japan, England, Germany, the United States, France, and Australia are the present sources of supply of practically all toys being sold.

Of toys made of celluloid, Japan is the chief source of supply. Those made of rubber—except balloons,

which are of United States origin—come principally from Germany and Japan; while England supplies most of the fur toys, tool sets, sporting goods, games and children's gift books. The better type dolls, including talking dolls and those which close their eyes, now come principally from Germany, though some are from the United States. Germany also supplies most of the small cheap metal toys used by younger children. Practically all nonmechanical toys made of tin are of Australian manufacture, as well as the cheaper types of scooters, tricycles, street cars, and the like. All better grade motor cars, wagons, trains, and tricycles, suitable for larger children, come from the United States.

During the war, and for some time afterwards, no German-made toys were imported. In this period, Japanese toy manufacturers made greater gains in Australia than those of any other country. The German toy trade in Australia seems now to be rapidly recovering, but principally at the expense of the Japanese toys.

American Toy Sales Might be Increased.

The American toys are recognized as being of superior quality and design. It should be fairly easy, therefore, to increase the present trade if the American manufacturers, or their sales representatives, push the matter energetically. Dealers say that they would especially like to know of any new American designs of toys that have not yet been sold in Australia. It is possible that considerable new trade may be developed in new types of toys which are particularly American in design.

Three or four of the largest department stores import all their own toy stocks direct from the foreign manufacturer, through the medium of their indent agents. The bulk of the toy imports, however, are handled by wholesale houses which supply the local retail houses throughout the Adelaide consular district—south Australia and western Australia.

[A list of dealers may be obtained upon application to the Commercial Intelligence Division.]

Progress in Belgian Furniture Industry

Consul General George S. Messersmith, Antwerp

The Belgian furniture industry at Malines, Bruges, and elsewhere evinced unusual prosperity during 1924 and was reported to be working on full time. Statistics covering the activity of the various phases of the furniture industry in Belgium showed that the number of individuals employed exceeded 50,000. The growing use of automobiles in Belgium and the consequent enlargement of facilities for producing bodies has increased demands for labor in wood finishing, while the demand of the railways for woodworkers to finish wooden passenger cars is stable.

Markets for Belgian Furniture.

The principal center of the furniture industry in Belgium is located at Malines, although there are certain other factories situated elsewhere, especially at Bruges and Ghent. Belgian furniture is renowned abroad and exports are made principally to France, England, the Netherlands, and the United States, in order of importance. There seems no doubt as to the future of the Belgian furniture industry, despite the

fact that the supply of native wood is by far inadequate to meet the demands of the industry. Imports of lumber appeared extremely high to these furniture industries during 1924, while the increases in costs of living have brought about renewed demands upon the part of personnel for higher wage levels.

Opportunity for Specialty Sales in Germany

Assistant Commercial Attaché Douglas Miller, Berlin, April 2

The German Association of Department Stores (Verband Deutscher Waren-und Kaufhäuser E. V.) 21, Potsdamerstrasse, Berlin W. 9 (Herr Laurisch), maintains a central buying organization for its 2,000 members. This membership embraces practically all the large department stores in Germany. There is a growing tendency for these establishments to purchase staple articles either of domestic manufacture or imported through central buying agencies, in order to keep down the cost of overhead and prevent buyers competing with each other and driving up prices.

Catalogues from American Firms Wanted.

The Association has recently been canvassing its members regarding the possibility of importing a number of American specialty products. American firms which desire to place their goods in German department stores, are advised to communicate directly with the German Association of Department Stores at the address given and submit catalogues, prices, terms of sale, and samples. Duplicate catalogues and price quotations should be sent to the American Commercial Attaché, 21, Budapeststrasse, Berlin W. 8, in order to keep the Berlin office advised of the negotiations and enable the Department of Commerce representatives to secure the widest possible distribution for such offers.

Special Reports on File in the Specialties Division

The Specialties Division has on file reports dealing with conditions in the bottling industry of a number of European countries. These will be loaned to interested firms for a period of five days on request.

There is on file in the Specialties Division a report on the Bolivian Market for Sewing Machines, which will be loaned to interested firms for a period of five days on request.

Market for American Stationery Paste in Austria

Although there is a good demand for stationery paste in Austria, the American product is unknown there. The retail price of stationery paste manufactured locally, packed in glass containers with well and brush, is \$0.35 per medium-size jar. The German product of the same size retails for \$0.50. On the basis of this comparison it is believed that the American product would be in a position to compete and find a lucrative market in that country.

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

THE GERMAN LEATHER SITUATION

Consul General F. T. F. Dument, Frankfort, April 3

Results at the various leather fairs held recently in Germany have not been satisfactory. German quotations in leather are said to be too high to allow satisfactory sales. This fact is illustrated by the increased imports of foreign leather into the country. The only articles in which exports are satisfactory are certain high-grade standard goods and specialties which are not made in other countries. The chief interest in sole leather is for stout oak-tanned goods. Advanced prices are almost impossible to obtain. Certain leather factories report that demand for light-weight sole leather under 3 millimeters in thickness has increased.

Export Embargoes

As neighboring States, such as Czechoslovakia, Austria, Poland, and Rumania, still retain their own export embargoes, German leather manufacturers urge the Government to refuse to lift the embargo until such time as other countries shall abolish theirs. While buyers normally agree to free export, they are opposed to it so long as present conditions remain. At the end of March the Federal ministry so far acceded to the wishes of the producers as to allow the filing of special applications for the exports of dried

hides and skins. These applications, however, may not be filed for the export of goat, kid, sheep, and lamb skins, on which an absolute embargo remains.

Reduced Operations of the Hungarian Leather Industry

Consul Walter S. Reineck, Budapest

The total importation of hides into Hungary in 1924 was valued at approximately \$1,200,000, while imports of leather and leather goods amounted to 1,887 metric tons, valued at about \$4,375,000. The chief countries of origin for raw hides and skins were Argentina, Germany, Italy, British India, and the Straits Settlements. The production of leather, which was only about one-third of capacity in 1924, was handicapped greatly by the decreased domestic production of hides and skins. The importation of wet and dry horse and cow hides during 1924 amounted to 4,280 metric tons. Leather exports totaled 545 metric tons, valued at about \$200,000, which was little greater than the exports for the previous year.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

ADMIRALTY JURISDICTION UNDER DIFFERENT SYSTEMS OF LAW

Guerra Brerett, Division of Commercial Laws

In the year 1866 the British vessel, *Maggie Hammond*, owned by a British subject domiciled in Nova Scotia, took on board for Morland & Co., British subjects also, a cargo of iron to be transported from Scotland to Montreal. On account of stress of weather, the vessel was forced to put in at Milford Haven, on the coast of Wales, whence it proceeded to Cardiff in an unseaworthy condition, for repairs. By the time that the repairs were completed, the master concluded that the St. Lawrence River was ice packed and no longer navigable for the year. He therefore left the iron in storage at Cardiff and took on another cargo for Baltimore. Upon arrival at Baltimore, the agents of Morland & Co. libeled the vessel for breach of contract.

All the parties to the case were foreigners of the same nationality, and the alleged breach occurred in a foreign country. On this circumstance the owners of the vessel predicated a plea of lack of jurisdiction, but when the case reached the Supreme Court of the United States, the court, citing Parsons on Shipping, said, in sustaining the jurisdiction:

In this country, says Mr. Parsons, it seems to be settled that our admiralty courts have full jurisdiction over suits between foreigners, if the subject matter of the controversy is of a maritime nature, but the question is one of discretion in every case, and the court will not take cognizance of the case if justice would be as well done by remitting the parties to their home forum. (The *Maggie Hammond*, 9 Wall. 435, 457.)

Where Parties Are of Diverse Foreign Nationality.

In the case mentioned the court accepted jurisdiction, but it is a matter of discretion, so that in general the court will refer foreigners of the same nationality to the courts of their own country. Where, however, the citizenship of the foreign parties is different, so that they have no common forum, the American courts usually will not decline to take cognizance of the controversy. Thus, when the Norwegian barque *Luna* and the Belgian steamship *Belgenland* collided in 1882 on the high seas, the former being sunk, and its master being rescued and brought to Philadelphia, where he libeled the *Belgenland*, the Supreme Court, upholding the jurisdiction, said:

But, although the courts will use a discretion about assuming jurisdiction of controversies between for-

eigners in cases arising beyond the territorial jurisdiction of the country to which the courts belong, yet where such controversies are *communis juris*, that is, where they arise under the common law of nations, special grounds should appear to induce the court to deny its aid to a foreign suitor when it has jurisdiction of the ship or party charged. The existence of jurisdiction in all such cases is beyond dispute; the only question will be, whether it is expedient to exercise it. (*The Belgenland*, 144, U. S. 355, 365.)

English Law in Accord with This Doctrine.

The principles expressed have had recent application in England in the now famous case of *The Jupiter*, which Trade Commissioner Mowatt M. Mitchell, London, has reported for the Bureau of Foreign and Domestic Commerce at various stages of the trial or trials relating to the disposition of the vessel of that name. A brief résumé of the case shows that the *Compagnie Russe*, the original owner of the *Jupiter*, was a Russian company originally doing business with a head office at Leningrad, and a trading center at Odessa, where its ships were registered. In 1919 it moved its ships and staff to Marseille, and claims since that time to have carried on its trade entirely from that port. The *Jupiter* had been sailing from Marseille, but freights becoming unprofitable it was laid up at Dartmouth, England, in charge of the master and other officers, where it still flew the flag of the Russian mercantile marine. Early in 1924 the master of the ship handed over its papers to the Soviet trade delegation in London, and the *Compagnie Russe* alleged that he was induced to so violate his trust by bribes and/or threats, and it issued a writ in rem relating to the possession of the ship. In this action of the company the Soviet Government intervened and asked that the writ and all subsequent proceedings be set aside on the ground that it was the owner of the vessel under a decree of January 21, 1918, which nationalized the Russian mercantile marine, and that it declined to sanction proceedings which would, in effect, implead the Soviet Government in the courts of England.

The case was heard by Mr. Justice Hill, who gave judgment in favor of the Soviet Government (40 *The Times Law Reports*, 673), and this judgment was upheld by the court of appeal (40 *The Times L. R.* 815 (1924) p. 236.)

Further Litigation Tests Admiralty Jurisdiction.

Trade Commissioner Mitchell, however, reports further that in September, 1924, the Soviet Government sold the *Jupiter* to *Cantiere Olivo, Sociedade Anonima*, and in October the *Compagnie Russe* issued a writ against the Italian purchasers, who thereupon sought to have the writ set aside. The Admiralty court dismissed the motion, saying that the ship lying in a British port was a subject matter over which the court had jurisdiction; and that, although the court had power to refuse jurisdiction, he did not think it ought to do so in this case. From the decision the *Cantiere Olivo* appealed, and the court of appeal dismissed the action without calling upon counsel for the *Compagnie Russe*.

In delivering the judgment of the court, Lord Justice Bankes stated that he found himself in general agreement with the decision of the Admiralty court and the reasons on which it was based, as it was a common practice now for British courts to adjudicate disputes between foreigners and to ascertain the foreign

law applicable and apply it. Counsel having been prevailed upon to admit that the court had jurisdiction, it became a matter of mere discretion on the part of the court whether it would exercise it; in the instant case the lord justice thought that the Admiralty court should not decline the jurisdiction. (41 *The Times L. R.* 321.)

Argentine Courts Likewise Assume Jurisdiction.

In the American case of *The Belgenland*, referred to previously, the supreme court, it will be remembered, said that the controversies are *communis juris*, that is, where they arise under the common law of nations, special grounds should be shown in order to induce the court to deny its aid to foreign suitors. Maritime law approaches, perhaps, more closely to universal common law or *jus gentium* than any other branch of private law. The rules that are followed under the Anglo-American system of law are derived from the same sources as those that exist in the Latin system; both are conventionally traced through the customs of the medieval Mediterranean city-states to the ancient maritime code of Rhodes, which was incorporated into the Roman law and thus secured to posterity.

The doctrine, accordingly, was applied in Argentina, which has the Latin system, in a case involving the United States Shipping Board liner *American Legion*, which collided with and damaged the Italian vessel, *Tomaso di Savoia*. The decision, a copy of which, in Spanish, and dated March 15, 1925, was transmitted to the Division of Commercial Laws by Commercial Attaché Edward F. Feely, Buenos Aires, accepts the jurisdiction of the ordinary courts of Argentina without comment and as a matter of course, turning most of its attention to the argument that, inasmuch as the *American Legion* was owned by the Shipping Board, an instrumentality of the United States, a foreign government, Argentine courts had no right to interfere. On the latter point the court said that in this instance the United States Government did not appear in "its character of a State *jure imperi*, in exercise of its political sovereignty, but in the character of a State *jure gestionis*, in exercise of its administrative faculties," and the Argentine courts consequently might take cognizance of the case.

Trade-mark Registrations Applied for in Japan

Acting Commercial Attaché Frank Rhea, Tokyo

In recent numbers of the Japanese Trade Mark Gazette, a number of applications have appeared for the registration of trade-marks which may conflict with American trade-marks used in trade in Japan. Details as to the application of certain of the trade-marks noted are given, for the interest of those parties who are using identical or similar trade-marks in Japan.

Wheel mate—for bicycles, tricycles, and accessories; No. 11468; application presented December 19, 1924, by U. Yamamoto.

Opposition against the registration of a trade-mark may be taken in Japan within 60 days following the publication of the mark. When the mark is once registered, the title of the registrant can be disputed in a trial for cancellation or annulment. These proceedings, however, can be brought only if the trade-mark had been registered in contravention of the provisions of the Japanese law.

TRANSPORTATION

P. E. D. Nagle, Acting Chief, Transportation Division

SHIPPING

Spain Extends Contract with Trasatlantica Company

Based on report from Commercial Attaché C. H. Cunningham, Madrid, April 13

The Spanish Government, by royal decree of April 6, 1925, has reaffirmed and strengthened its policy of maintaining steamship communications under the Spanish flag between Spain and the Spanish-speaking populations of North and South America, Asia, and Africa.

These communications have been maintained for over 60 years, mainly through the steamers of the Compania Trasatlantica, under subsidies and bounties which have varied from time to time in amount and conditions and which during the World War were curtailed or abandoned as Spain's neutrality gave her ships some advantages while submarine warfare impeded the performance of contract obligations. In the postwar period Spain hitherto has followed a waiting policy, resuming its mail subsidies only for short periods of two or three years.

Existing Subsidy Renewed and Services Extended.

The new contract with the Compania Trasatlantica is for a period of 26 years, and guarantees the company an annual subsidy of 28,305,000 pesetas (\$4,100,000, at present exchange) for monthly sailings from Barcelona and also hereafter from northern Spain to Argentina and Uruguay, touching at Brazilian ports; for the present services to Cuba and Mexico; through the Panama Canal to Chile and Peru; to New York and Cuba and Mexico; through the Suez Canal to the Philippines; and to Spanish settlements at Fernando Po and on the Atlantic coast of Africa. The contract averages about \$5 a nautical mile.

Government Guarantees Loans for New Ships.

For 1923 the accounts of the Compania Trasatlantica showed a loss of 15,589,000 pesetas, not covered by the subsidy. The special commission, which has devoted a year's study to the subject and on whose report the recent decree is based, finds that the Government can not afford to increase the subsidy beyond the amount already named, which is virtually the amount paid in 1924. Accordingly, the Government contracts to guarantee loans of the company to enable it to build 16 new steamships during the contract period. The new steamers are to be built in Spanish shipyards, unless the margin of cost is too high; and Government permission is required for construction abroad, except in the case of steamships for communications with the Philippines, plans for which must be approved by the Government.

Loans for Operating Deficiencies Also Guaranteed.

As the Government's guaranty for interest and amortization is back of the loans which the company may issue to build the new ships, the contract gives the Government a mortgage on such ships; furthermore, any amounts the Government has to pay for interest or amortization on the loans must be deducted from the annual subsidy. In case the subsidy proves inadequate to cover expenses the company is authorized to negotiate loans to meet deficiencies, and the Government agrees, if necessary, to meet the interest and amortization of such loans the same as on loans for new ships. The general effect of the contract is thus to put the credit of the Government behind the Compania Trasatlantica in a manner adapter from the British "trade facilities act" of 1921.

Plans for Railway Cooperation and Parcel-Post Service.

Finally, to secure the maximum cooperation of the railroads with the steamship company, the Government has appointed a commission of representatives of the railroads and of the Compania Trasatlantica to report within two months a plan for the operation of de luxe trains between Madrid, the seaports, and the frontiers, as well as for the inauguration of parcel-post service.

German Seamen's Wages Increased

Vice Consul John J. Muccio, Hamburg, April 6

A general increase of about 6 per cent in the wage scale of the German merchant marine went into effect April 1. This increase is based on a decision of March 28, 1925, by the arbitrator of the dispute between the Association of German Shipowners (Verein Deutscher Reeder) and the German Seamen's Union.

Greco-Russian Shipping Convention

Assistant Trade Commissioner C. M. Dickerson, jr., Athens

All ships bearing the Russian flag are for the first time accorded national treatment by Greece, as regards the payment of roadstead and lighthouse dues, according to a decree published in the Official Greek Gazette of March 15. Reciprocal treatment is granted to Greek ships by the Soviet Government. This arrangement will be in force until December 31, 1925.

Port Congestion at Santos Continues

Trade Commissioner R. M. Connell, Sao Paulo, Brazil

Merchandise accumulated on the Santos docks, on ships discharging, on ships awaiting discharge, and on ships due to arrive, totaled 243,000 tons for the week ended March 7, or well above the corresponding figures for last year, according to the Santos Dock Co.

Merchandise unloaded and in the Santos docks awaiting shipment to Sao Paulo and other interior points totaled 23,000 tons, and there were in addition about 2,000 tons of coal stored in provisional bins. Twenty-five steamers were alongside the docks, unloading a total of 45,000 tons of coal, inflammables, cement, and general merchandise, and 42 steamers were anchored in the stream awaiting space at the docks for the discharge of cargo aggregating 151,000 tons. So many steamers were still anchored in the stream a week later that passenger vessels could enter only with the greatest difficulty.

New Apparatus for Determining Ship's Position

Consul Howard A. Bowman, Trieste, Italy, March 11

Mr. F. Nuschak, an Italian subject and retired shipmaster, has invented an apparatus for mechanically determining the position of a ship at sea. The arcometer, as the apparatus is called, is a mechanical representation of the firmament; it consists of two circles, each 300 millimeters in diameter and so mounted as to move about on two axes at right angles to each other (meridian-equator). The meridian circle is furnished with a fixed semicircle representing the horizon. At angles of 90° to the horizon are two semicircles (hour circles). All of these arcs and circles are neatly graduated. Two micrometrical screws, slow-motion tangent screws, and the verniers are fixed at the base of the instrument. The verniers are equipped with enlarging prisms to enable the navigator to make his reading in dim light if necessary.

The coordinates of celestial bodies, altitude and declination, are set on their circles with slides or clamps, fixed with excenters. The hour angles are set on the equator by means of two slides, one of which has an hour circle attached. The other is furnished with an index to measure the motion of the second hour circle.

[Further details regarding the instrument and a photograph of it may be obtained on application to the transportation division.]

RAILWAYS

Anatolian Railways to be Improved

Consul Charles E. Allen, Constantinople, March 11

Improvements are in progress on the Anatolian railways between Haidar Pasha and Konia and between Eski Shehr and Angora. The main objective of the present administration, according to the director general of the railways, is to repair the lines and increase the capacity of transport. With this end in view, 150 tons of rails have been ordered from the Krupp Works, and the Hefel factory is building eight locomotives for use in the interior. Several projects are on foot for the construction of new lines and the extension of old ones.

Traveling on German Trains Slower Than Pre-War

Assistant Trade Commissioner M. L. Goldsmith, Berlin, April 3

German express trains travel so much more slowly than before the war that considerable inconvenience is experienced by both German and foreign business men, especially on such routes as Berlin to Hamburg. In 1914 the 286 kilometers between these two cities was

covered in 3 hours 11 minutes, whereas now it takes 4 hours 20 minutes. The journey from Berlin to Cologne, 587 kilometers, now takes 10 hours 6 minutes as compared with 7 hours 56 minutes before the war. In 1914 one could travel from Berlin to Koenigsberg, 601 kilometers, in 8 hours 31 minutes, while now it takes 10 hours 3 minutes.

Exhibits Available

Persons interested in the following reports may obtain them from the Transportation Division or through the district and cooperative offices of the Bureau of Foreign and Domestic Commerce by referring to the specific exhibit number:

159681b—Amoy, China.—Review of shipping and trade conditions at Amoy for 1924. (Transmitted by Consul Leroy Webber, Amoy, March 11.)

167914—Koenigsberg.—German-Baltic-Russian Railway Conference. Report of meetings which took place in January and February, 1925. (Transmitted by Consul Harold D. Clum, Koenigsberg, March 14.)

167527—Wellington.—Railway revenue of New Zealand railways for 10 months from April 1, 1924, to January 31, 1925.

as published in New Zealand press. (Transmitted by Vice Consul J. G. Hudson, Wellington.)
~~226—Shanghai.~~ Amended sanitary regulations for the port of Shanghai, including Woosung.

British Railroad Receipts Lower in 1924

Consul Lowell C. Pinkerton, London, April 4

Net receipts of the railroads of Great Britain in 1924 decreased by £3,335,389, according to preliminary

figures just issued by the Ministry of Transport. Receipts amounted to £203,400,000, as compared with £205,814,233 for 1923, and total expenditures for 1924 reached £166,900,000, as against £165,978,844 in the previous year. The net receipts for 1924, therefore, were £36,500,000, as compared with £39,836,389 for the preceding year.

[Details of receipts for the various classes of traffic may be obtained from the Transportation Division by referring to Report No. 167920.]

COMMUNICATIONS

Air Service in Latvia Reopened

Commercial Attaché C. J. Mayer, Riga, April 8

An agreement was signed recently between the Latvian Ministry of Communications and the Latvian Air Service Co. to the effect that air service be maintained during the summer of 1925. According to that agreement, the following lines will be operated by the above-mentioned company: (1) Riga-Memel-Koenigsberg-Riga; (2) Riga-Reval-Helsingfors. It is further planned to open communication by airplane inland lines between Riga and the Riga Beach, and between Riga and Dvinsk.

The air service will be opened on April 15. In the beginning the service will be maintained by 5-seater Junker airplanes, which will be replaced later by 11-seater machines. On the line Koenigsberg-Riga-Reval

five airplanes will be operated, giving one daily service in each direction.

The fares for the one-way trip, Koenigsberg-Memel, will be \$8; Memel-Riga, \$10; direct ticket Koenigsberg-Riga, \$15; Riga-Reval, \$12; and Reval-Helsingfors, \$6. Luggage up to 10 kilos will be conveyed free of charge, but for each extra kilo one-sixtieth of the passenger's fare will be charged.

The development of air service in Latvia is greatly handicapped by the absence of properly equipped airdromes, and the Latvian Air Service Co. is not in possession of sufficient funds for building a new up-to-date airdrome.

FINANCE

Grosvener M. Jones, Chief, Finance and Investment Division

AMERICAN BANKS ABROAD

During the past year there has been a great reduction in the number of American branch banks and offices and agencies in foreign countries, according to a listing made as of April 1, 1925.

Among the banks which are members of the Federal Reserve System, several changes have occurred. (For a list of American branch banks as of January 31, 1924, see COMMERCE REPORTS of March 24, 1924.) The Bankers Trust Co. of New York has placed a representative in Berlin. The Chase National Bank of New York City is now included in the group of American banks having branches abroad, this institution having purchased the remaining branches of the American Foreign Banking Corporation. The National City Bank increased its foreign ramifications by opening a new branch in Milan, Italy.

Changes Noted for Nonmember Institutions.

With regard to the nonmember institutions, the American Foreign Banking Corporation of New York City, as stated, has been entirely liquidated by selling its remaining three branches to the Chase National Bank of New York, which was its principal stockholder. The Asia Banking Corporation sold its assets to the International Banking Corporation. The Bank of Central and South America transferred its interest in affiliated banking institutions in Venezuela, Colombia, Costa Rica and Peru to the Royal Bank of Canada. The National Bank of Nicaragua, which was

one of the affiliated institutions of the Bank of Central and South America, is now entirely owned by the Nicaraguan Government. The Equitable Eastern Banking Corporation opened a new branch in Hongkong, and the International Banking Corporation increased its number of branches by opening an office in Batavia, Java.

List of Member Banks and Other Institutions.

The following list has been divided into two sections. The first comprises the member banks of the Federal Reserve System, and the second includes all other institutions:

MEMBER BANKS

Bankers Trust Co., New York.

Branches: France—Paris.

Representatives:

England—London.

Germany—Berlin.

Chase National Bank, New York.

Branches:

Cuba—Habana.

Panama—Panama.

Canal Zone—Cristobal.

Representative: England—London.

Equitable Trust Co., New York.

Branches:

England—London (2 offices).

France—Paris.

Mexico—Mexico City.

Farmers Loan & Trust Co., New York.

Branches:

England—London.

France—Paris.

First National Bank, Boston, Mass.**Branches:**

Argentina—Buenos Aires.

Cuba—Habana.

Representative: England—London.

Guaranty Trust Co., New York.

Branches:

England—London (8 offices), Liverpool.

France—Paris, Havre.

Belgium—Antwerp, Brussels.

National City Bank of New York, N. Y.

Branches:

Argentina—Buenos Aires, Rosario.

Belgium—Antwerp, Brussels.

Brazil—Pernambuco, Rio de Janeiro, São Paulo.
(Agency: Santos.)

Chile—Santiago, Valparaiso.

Cuba—Bayamo, Caibarien, Camaguey, Cardenas, Ciego de Avila, Cienfuegos, Florida, Guantanamo, Habana (sub-branches Galiano, La Lonja, Cuatro Caminos), Manzanillo, Matanzas, Nuevitas, Pinar del Rio, Remedios, Sagua la Grande, Sancti Spiritus, Santa Clara, Santiago, Yaguajay.

England—London (2 branches).

France—Paris.

Italy—Genoa, Milan.

Peru—Lima.

Porto Rico—San Juan.

Uruguay—Montevideo.

Venezuela—Caracas.

Representative: Denmark—Copenhagen.

OTHER INSTITUTIONS

Empire Trust Co., New York.

Branch: England—London.

Equitable Eastern Banking Corporation, New York.

Branches: China—Shanghai, Hongkong.

International Banking Corporation, New York.

Branches:

China—Canton, Darien, Hankow, Harbin, Hongkong, Peking, Shanghai, Tientsin.

Dominican Republic—Barahona, La Vega, Puerto Plata, Sanchez, San Francisco de Macoris, San Pedro de Macoris, Santiago de Los Caballeros, Santo Domingo City.

England—London.

India—Bombay, Calcutta, Rangoon (Burma).

Japan—Kobe, Tokyo, Yokohama.

Java—Batavia.

Philippine Islands—Cebu, Manila.

Spain—Barcelona, Madrid.

Republic of Panama—Colon, Panama.

Straits Settlements—Singapore.

Anticipated Surplus in Indian BudgetBased on reports from Assistant Trade Commissioner Don C. Bliss,
Bombay

The estimated total revenue of the Indian government for the year commencing April 1, 1925, amounts to 1,336,800,000 rupees, comparing with actual revenue of 1,331,663,000 rupees for 1923-24 and estimated revenue of 1,079,300,000 rupees for 1924-25. The 1924-25 estimate includes only the net revenue from the railway budget, and if the gross revenue is taken instead the figure for that year will be 1,332,300,000 rupees.

Estimated expenditures for 1925-26, including the railway budget, total 1,304,400,000 rupees, which compare with an actual expenditure of 1,307,763,000 for

1923-24. Estimated expenditure for 1924-25 does not include the railway budget and, therefore, amounts to only 1,045,700,000 rupees. Excluding the railway budget, the 1925-26 estimates amount to 1,017,800,000 rupees, showing a net reduction of expenditures of 27,900,000 rupees.

Reduction of Provincial Contributions.

The surplus of revenue over expenditure for the year just ended will total approximately 40,000,000 rupees. Surplus in the 1925-26 budget is estimated to amount to 32,400,000 rupees. Of this sum 25,000,000 rupees will be devoted to a reduction of the provincial contributions as follows:

Provinces	1924-25	1925-26
	<i>Rupees</i>	<i>Rupees</i>
Bengal.....	6,300,000	
Madras.....	24,800,000	22,200,000
United Provinces.....	24,000,000	18,400,000
Punjab.....	17,500,000	11,400,000
Burma.....	6,400,000	5,700,000

In addition, 5,000,000 rupees will also be distributed in a nonrecurring grant to the Provinces in the following proportions:

	<i>Rupees</i>
Bombay.....	2,200,000
Burma.....	1,800,000
Central Provinces.....	900,000
Assam.....	600,000

The remainder (2,400,000 rupees) will be held in reserve for contingencies.

The new budget is based on a rupee exchange rate of 1s. 6d.

Public Debt Summarized.

The public debt of India on March 31, 1925, amounted to 10,137,100,000 rupees, compared with 9,686,300,000 one year ago. The following table gives a summary of the debt on March 31, 1925; March 31, 1924; and March 31, 1914.

Public debt of India

Items	Year ended Mar. 31—		
	1914	1924	1925
In India:			
Loans—	<i>Rupees</i>	<i>Rupees</i>	<i>Rupees</i>
Long-term obligations.....	1,456,900,000	3,588,100,000	3,701,800,000
Treasury bills in the hands of the public.....		21,200,000	
Treasury bills in the paper currency reserve.....		496,500,000	496,500,000
Total.....	1,456,900,000	4,105,800,000	4,198,300,000
Other obligations—			
Post-office savings banks.....	231,700,000	247,900,000	259,200,000
Cash certificates.....		84,200,000	130,200,000
Provident funds, etc.....	109,300,000	392,000,000	431,600,000
Total.....	341,000,000	724,100,000	821,000,000
Total in India.....	1,797,900,000	4,829,900,000	5,019,300,000
In England (15 rupees to the pound sterling):			
Loans—			
War contribution.....	2,656,000,000	3,668,000,000	3,963,800,000
Capital value of liabilities undergoing redemption by way of terminable railway annuities.....	1,059,000,000	1,901,400,000	1,882,500,000
Total in England.....	3,715,000,000	4,569,400,000	5,117,800,000
Total debt.....	5,512,900,000	9,399,300,000	10,137,100,000

£70,800,893.

£60,095,487.

£58,836,487.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS

BELGIUM-SPAIN

Cable from Commercial Attaché Charles H. Cunningham, Madrid,
April 28

Modus Vivendi Effective May 1.

By the modus vivendi between the Belgium-Luxembourg customs union and Spain, published on April 28, and effective May 1, 1925, Spain grants most-favored-nation treatment on 425 items of the tariff, and second-column rates on all other articles, except the following, on which Belgium will enjoy the same rates as were granted in the treaty with Germany, or less than 20 per cent below the second-column rates, and not so advantageous as the rates applied on the same products imported from the United States by virtue of treaties previous to November 5, 1923:

(98) Railway sleepers; (502) detached parts of internal combustion engines; (512) steam locomotives and tank locomotives, for railways with gauge of 1 meter or more, weighing less than 55 tons; (514) component parts of steam locomotives; (593) ore-crushing machines; (629) generating sets and commutator machines, weighing more than 1,000 kilos; (633) interrupters, cut-outs, etc., weighing more than 1,000 kilos; (721) cycles; (722) motor cycles, with or without side car or special body for carrying goods; (729 and 730) automobile chassis with engine, and complete automobiles; (731) motor and electric lorries, vehicles, and trucks for carrying goods, motor omnibuses, motor cisterns or tanks, and framework with engine for lorries; (732) framework without engines, longitudinal bearers, suspensions, gearing, and separate parts not specially mentioned, for automobiles; (797) synthetic indigo; (886) nitrates of calcium, ammonia, and sodium, and other synthetic nitrogenous compounds; (1288) artificial silk yarn, untwisted, natural color or bleached; (1422) preserved vegetables; (1498) solid tires for carriages; (1500) inner tubes, used or not.

On the following items Belgium will receive the same rates as are granted to the United States and which are not received by Germany:

(525) Steam boilers and generators, multitubular, with fire tubes; (633) interrupters, cut-outs, etc.; (1185) yarn of hemp, linen, or ramie, counts up to 20, inclusive; (1234) yarn of wool or hair, single, dyed, of a length, per gram of up to 50.5 meters, inclusive.

On item (1186) yarn of hemp, linen, or ramie, counts 21 to 50, inclusive, a special reduced rate of 152 pesetas per 100 kilos (with tare allowance) is granted.

In exchange, Belgium will grant Spanish products most-favored-nation treatment on 157 items and special coefficients will be applied on 28 items of the Belgium tariff, including Spanish fruits, wines, olive oils, minerals, cork, soap, wool, and coal.

GREECE-RUMANIA

Assistant Trade Commissioner C. E. Dickerson, Jr., Athens, March 28

Temporary Extension of Commercial Treaty.

By a decree published in the Official Greek Gazette of March 14, 1925, the conventional tariff was made reciprocally effective for the period from March 10 to June 9, 1925, inclusive, on goods originating from Greece and Rumania.

The decree also provides that in case the new Greek import tariff should come into force during the above

period the minimum tariff rates are to apply to goods originating from Rumania and imported up to June 9, 1925.

[This agreement has been extended from time to time since its denunciation on January 10, 1923.]

UNITED STATES-SPAIN

Cable from Ambassador Alexander P. Moore, Madrid, May 2

Commercial Agreement Extended Indefinitely.

By an exchange of notes effected at Madrid on May 1, 1925, the existing commercial agreement with Spain, which was due to expire on May 5, has been extended for one year and thereafter for an indefinite period subject to termination on three months' notice.

Our trade with Spain will, therefore, continue under the same conditions as have been in effect since November 5, 1923.

IMPORT AND EXPORT RESTRICTIONS

CANADA

Cable from Trade Commissioner Lynn W. Meekins, Ottawa, April 28

Import Restriction on Live Fowl from Connecticut Removed.

A ministerial order of April 25, 1925, cancels the restrictions on the importation of live chickens, turkeys, and geese from Connecticut.

[Importations of live fowl from New York, New Jersey, Pennsylvania, and Indiana are still prohibited, unless accompanied by a certificate from an official of the United States Bureau of Animal Industry certifying that they are free from European fowl pest or other poultry disease. See *COMMERCE REPORTS* for January 19, February 23, and April 13, 1925.]

PERU

Commercial Attaché H. Bentley Mackenzie, Lima, April 7

Alcohol Monopoly Abolished.

By a Peruvian law of March 5, the alcohol monopoly formerly operated by the Peruvian Government has been abolished and an open market in this commodity restored.

POLAND

Consul General T. Jaeckel, Warsaw, March 25

Restrictions on the Importation of Radio Sets.

According to a recent order of the Polish Ministry of Commerce, persons importing radio apparatus into Poland must present to the customs officials an authorization before they will be allowed to take possession of the shipment. Such authorization may be obtained from the General Direction of Posts and Telegraphs and must show that the persons are permitted to own, or deal in, radio apparatus.

TARIFF CHANGES ON SPECIFIC ARTICLES

ARGENTINA

Cable from Commercial Attaché Edward F. Feely, Buenos Aires, May 2

Changes in Export Duty for May.

The following changes have been made in the Argentine export duty schedule for the month of May:

Articles	Duties in gold pesos per metric ton		Articles	Duties in gold pesos per metric ton	
	Former rates	New rates		Former rates	New rates
Oats.....	1.25	1.04	Entre Rios wool.....	67.50	37.40
Corn.....	1.98	1.77	Southern wool.....	39.60	27.05
Linseed.....	4.43	3.75	Cordeba wool.....	45.35	34.95
Barley.....	2.56	2.32	Western wool.....	37.60	32.40
Wheat.....	2.86	2.39	Quebracho log.....	.70	.71
Sheepskins.....	43.05	35.95	Quebracho extract.....	.96%	.92

The duties on other commodities subject to Argentine export duties remain unchanged.

[For changes in export duties for April, see COMMERCE REPORTS of April 13, 1925.]

BRITISH INDIA

Assistant Trade Commissioner E. G. Sabine, Bombay, March 26

Industries Which Have Applied for Protection.

A report placed before the Indian Legislative Assembly shows that the following industries have applied to the Department of Commerce for assistance, protection, or investigation of their cases by the tariff board:

Steel, locomotives, sulphuric acid (these three have been disposed of); cement, paper and paper pulp, printer's ink, magnesium chloride (these four are under inquiry); imitation leather and oilcloth, marble tiles, coal sulphates and acids, matches, gold thread and other allied goods, cement flooring tiles.

The following industries have complained that the duty on the manufactured article is lower than the duty on materials imported and largely used for their manufacture and it is proposed to refer most of these cases to the tariff board for investigation:

Electric wires and cables, machinery, sprinklers, brass and copper manufactures, Hastings and camel's hair belting, cotton canvas ply elevator belts, leather belting, galvanized steel poles and galvanized hardware, brasses and brass work for machinery, carriage underframes and parts of wagons, hackles, panel pins, tacks, rivets, etc., insulating material, brass and gun metal, water and steam fittings.

The following industries have complained that the duty on manufactured articles is equal to that on some of the materials imported and largely used for their manufacture:

Essential oils, manila rope, tea chests, and 3-ply wood, aluminum articles, and hosiery.

GERMANY

The Reichszoellblatt for March 20

Import Duty on Horses Reimposed.

By a decree of March 19, effective March 26, 1925, the exemption from import duty of horses (tariff item 100) imported into Germany, which was instituted in 1914, has been canceled and the former duties are now applied.

[These duties will be quoted by the Division of Foreign Tariffs upon request.]

GREECE

Assistant Trade Commissioner C. E. Dickerson, Jr., Athens, March 21

Increase in Import Duty on Illuminating Oil.

The import duty on illuminating oil imported into the New Greek Provinces has been increased as follows, by a decree of March 7, effective from the date of publication in the Official Greek Gazette for March 9, 1925:

Item No.	Article	Former duty, gold drachmas per 100 okes		New duty, gold drachmas per 100 okes	
		General rate	Conventional rate	General rate	Conventional rate
62-B	Illuminating oil for the New Provinces:				
	(a) In bulk or in tin cans, without wooden cases.....	35	30	32	70
	(b) In tin cans, packed in wooden cases.....	32	27	79	63

NOTE: No allowance is made for tare on tin cans and wooden cases.

[The ratio for the payment of the above duties is understood to remain at 6 paper drachmas to 1 gold drachma. Conventional rates apply to goods from the United States. In old Greece the importation of illuminating oil is under Government monopoly.]

Cable from Commercial Attaché R. O. Hall, Athens, April 29

Increase in Conversion Rate for Wheat Flour.

A decree of April 25, effective April 15, 1925, increases the ratio for the payment of customs duties on wheat flour imported into Greece to 6.50 paper drachmas to 1 gold drachma (formerly 4 to 1).

JAPAN

Acting Commercial Attaché Frank Rhea, Tokyo, March 23

Proposed Exemption from Import Duty for Certain Articles from Kwantung Province.

A bill approved by the Japanese Diet, and effective on promulgation, exempts from customs duty on importation into Japan the following articles when produced in the Kwantung Leased Territory:

(31) Fresh fruits; (72) sheep and goat leather, except lacquered leather; (141-2) extract of licorice; (145) glue; (148) gelatine; 151-2 bromine; (165) soda ash; (169) sulphate of soda; (204) naphthalin; (229) sulphate of magnesia and coal-tar products; (230) disinfectants composed principally of coal tar; (278) China grass twines and threads; (281) jute twines and threads; (283) woolen or worsted yarns; (284) mixed yarns of cotton and wool; (286) wild floss silk; (288) spun silk yarns; (289) silk threads; (296) China grass cords and ropes; (299) China grass fabrics and jute fabrics of materials produced in the Leased Territory; (301) velvets, plushes, and other pile fabrics of materials produced in the Leased Territory; (314) oil cloth of materials produced in the Leased Territory; (326) blankets of wool or of wool and cotton produced in the Leased Territory; (432) Portland cement; (436) fire bricks; (438) fireproof manufactures of clay not otherwise provided for, including crucibles, gas retorts, nozzles, stoppers, and the like; (441) glass in lump; (442) glass powder; (444) plate or sheet glass; (617) animal charcoal above a certain size.

[The date on which the measure becomes effective will be published in COMMERCE REPORTS when notice is received of its promulgation.]

Revised Import Duties on Certain Iron and Steel Plates and Sheets.

In connection with the discontinuance of the Anglo-Japanese conventional tariff, effective March 11, 1925, the Japanese import duties on certain kinds of iron and steel plates and sheets have been revised.

The former conventional duties of 0.30 yen per 100 kin on (item 462-4-A-3-a) silicon steel plates and sheets not exceeding 0.7 millimeter in thickness, of which silicon forms more than 1 per cent of the total weight, and 0.70 yen per 100 kin on (item 462-4-B-1-a) ordinary tinned iron and steel sheets, have been retained as the general tariff rates in place of the

former general duties of 15 per cent ad valorem on these items.

The duty on galvanized iron and steel plates and sheets, corrugated or not, is increased from the conventional rate of 1.20 yen per 100 kin to a general rate of 18 per cent ad valorem.

[Henceforth, pig iron, paints, linen yarns, cotton fabrics, woolen fabrics, mixed fabrics of wool and cotton, of wool and silk, or wool, cotton, and silk enumerated in the Anglo-Japanese conventional tariff are subject to the rates of the Japanese general tariff.

It is understood that goods shipped to Japan prior to the date of expiration of the Anglo-Japanese conventional tariff will be subject to the conventional duties specified therein as will also goods that have been received under bond in customs warehouses.

The duties on the above commodities will apply to all countries, including the United States. For earlier announcements of the lapse of the Anglo-Japanese conventional tariff see *COMMERCE REPORTS* for June 23, 1924, and November 10, 1924.

PERU

Commercial Attaché H. Bentley MacKenzie, Lima, April 2, 3, and 25

Import Duties and Fees on Certain Foodstuffs Temporarily Suspended or Reduced.

The Peruvian Government has passed several measures and proposes others to relieve the situation arising from the flood disasters. The import duties and consular charges on a number of foodstuffs have been abolished for a period of 60 days. Customs storage charges at the northern ports of Peru have also been waived.

The import duty on beef cattle has been reduced from 30 to 15 soles per head, and no other customs charges are levied on beef cattle.

A bill has been proposed to reduce by 1 sol the present import duty of 4 soles per metric quintal on flour. A proposal for the temporary removal of import duties on agricultural implements and building materials is expected.

Proposed Tax on Imported Motion-Picture Films.

The Peruvian Congress now in session has under discussion the imposition of an additional tax of 0.20 sol per meter on imported motion-picture films. The proceeds from this tax would be used as a fund for public instruction.

Change in Method of Assessing Export Duties on Sugar.

Export duties on sugar will be assessed on the basis of the latest sales price at the port of shipment in Peru in case the quotations on sugar are lower in the foreign market than in Peru, according to a decree effective March 23, 1925. The basis of assessment was formerly the price of sugar in New York and Liverpool.

SPAIN

Gaceta de Madrid, April 7

Shipments in Transit Not Affected by Revised Repertoire.

By a Spanish royal order of April 3, published April 7, 1925, provision is made whereby goods which had left their point of origin before January 18, 1925, the date on which the revised repertoire (index) to the Spanish tariff was published, will not be subject to any increase in duty which may have resulted from the revision of classifications.

UNITED KINGDOM

Cables from Acting Commercial Attaché Hugh D. Butler, London, April 29 and May 1 and Consul General H. L. Washington, May 1

New Import Duties Imposed and British Preferential Increased.

Important tariff changes were contained in the recent budget introduced into the British Parliament April 28, 1925. The "McKenna" duties are reimposed, two new duties are established, and the tariff preference to British Empire products increased. The duty changes become effective July 1, 1925.

The reimposed "McKenna" duties (which were repealed by the previous government as from August 1, 1924) consist of a 33 $\frac{1}{3}$ per cent ad valorem rate on noncommercial motor cars and parts, clocks and watches and parts, musical instruments and parts, and certain specific rates on motion-picture films. A preferential advantage of one-third of the full rate is provided for these goods from the British Empire.

The following new duties are imposed on raw and artificial silk and all manufactures of natural and artificial silk:

Silk cocoons and waste, not degummed, 1 shilling 6 pence per pound, degummed, 3 shillings per pound; raw silk, not degummed, 4 shillings per pound, degummed, 5 shillings 9 pence per pound; thrown, including yarns not degummed, 4 shillings 8 pence per pound, degummed, 6 shillings 8 pence per pound; tissues containing silk, not degummed, 5 shillings 3 pence per pound, degummed, 7 shillings 9 pence per pound; artificial silk yarn, thread, straw, and waste, 3 shillings per pound; tissues containing artificial silk, 3 shillings 6 pence per pound; articles manufactured wholly or partly of silk or artificial silk, not otherwise specified, including hosiery, 33 $\frac{1}{3}$ per cent ad valorem.

A preferential reduction of one-sixth of the full rates is accorded on all the above-mentioned products from any part of the British Empire.

An excise tax of 2 shillings 6 pence per pound has been placed on domestically manufactured artificial silk yarn, straw, and waste, and manufacturers of these products must pay an annual license charge of 1 pound sterling.

Hops are to be dutiable at 4 pounds sterling per hundredweight, with effect from August 16, 1925, while all extracts, essences, and preparations of hops will become dutiable according to the quantity of hops used in their manufacture.

The preferential rebate on sugar, molasses, glucose, saccharin, unmanufactured tobacco, wines, and certain dried fruits, when from British Empire sources, is increased. The new preference on certain dried fruits amounts to a total remission of the present duties of 7 shillings per hundredweight on figs, fig cake, apricots, plums, prunes, prunellas, and raisins, and 2 shillings per hundredweight on currants.

CUSTOMS REGULATIONS

PERU

Commercial Attaché H. Bentley MacKenzie, Lima, March 4

Requirement Concerning Bills of Lading.

The amount of freight paid on merchandise shipped to Peru must appear on all copies of a bill of lading, especially on those issued abroad; otherwise they will not be accepted by Government officials.

[This regulation is for the purpose of expediting the collection of the stamp tax on bills of lading which is based on the amount of the freight charges.]

SYRIA

Vice Consul Paul H. Alling, Beirut, March 27

Documentation of Merchandise.

The regulations for the documentation of merchandise shipped to Syria, which became effective on January 1, 1925, have been modified by the Syrian customs authorities.

Import duties are now to be collected on the basis of prices shown in true invoices, plus all necessary expenses to the port of entry, minus normal and actual rebates and discounts, subject, however, to the right of the customs authorities to contest the accuracy of any invoices.

Invoices are not required for articles appearing on the "fixed-price list," i. e., an official list of goods susceptible of being given standard prices, such as food products, building materials, coal and petroleum, but such articles must be accompanied by a certificate of origin viséed by the French consul.

The following certificate, signed by the manufacturer or seller of the goods, must appear on the invoice and be viséed by the French consul, for which visé no charge will be made:

We certify that the present invoice is true and the only one issued by us for the merchandise listed herein, and that it shows the exact value of this merchandise without deductions of any kind, and that the origin is exclusively * * *.

Certificates of origin or of price are not necessary for shipments of a value of less than 1,000 French francs, if shipped by parcel post, or less than 2,000 French francs, if shipped by ordinary freight accompanied by bills of lading. Parcel-post shipments of value of less than 1,000 French francs, however, should be accompanied by a declaration on International Postal Form C.

[For earlier announcements regarding the certification of invoices for shipments to Syria see COMMERCE REPORTS for December 1, 1924, and January 26, 1925.]

INTERNAL REGULATIONS AFFECTING TRADE

CANADA

Canada Gazette, Ottawa, April 18

Labeling of Ice Cream Containers.

Under a regulation effective from May 1, 1925, amending the pure food and drugs regulations of April 8, 1924, containers of ice cream, including tanks, cans, or other containers from which ice cream is sold or dispensed, are required to be labeled with the name and address of the manufacturer and shall bear a statement as to whether or not the contents have been pasteurized. All milk and cream used in ice cream should be previously pasteurized and emulsified, if possible. Ice cream is required to contain not less than 10 per cent of milk fat and no other fat may be used in its manufacture, and only 2 per cent of thickeners and stabilizers, such as starch, gelatine, and gum tragacanth, may be employed. Ice cream which has been refrozen shall not be offered for sale.

ESTHONIA

Vice Consul W. L. Peck, Tallinn, March 18

Commercial Traveler Regulations.

Foreigners arriving in Esthonia for business purposes are required to register their names with the income-tax collector within three days after arrival,

regardless of whether or not they intend to open an office. For the first business transaction carried out, a trade license of the "second category" must be obtained, unless the transaction is of such a nature as to require a license of the "first category." Licenses of the "first category" are required for wholesale trade, which is understood to include any sale of goods principally to merchants or industrials, especially on consignment, and the purchase of any goods valued at more than 15,000,000 marks (\$42,895) annually, which are intended for resale in Esthonia or abroad. Infringements of these regulations are punishable by fines up to 100,000 marks (\$268 at present exchange). Business men who are not permanent residents of Esthonia and do not own property in the country are required to pay their trade tax before leaving the country, whether its payment is due or not.

Samples which are appraised by the customs officials as being without value may be imported free of duty. The Minister of Finance is empowered to prescribe regulations relating to the importation of goods, reductions in tariff, exemptions from duty and the reimbursement of duties paid on samples. According to the regulations now in force, all samples may be imported free of duty, if security is given, equal to the amount of duty assessed. This security may be given by the importer or by a foreign legation or consulate. The guaranty paid is retained by the customs administration if the goods are not reexported within three months. This term, however, may be extended by the director of customs.

Before clearing goods from the customhouse the importer is allowed to remove samples necessary in the interests of business. The following may be withdrawn as samples: One-half liter of liquid goods, 100 grams of foodstuff, and 10 centimeters of cloth or other textiles. For all other goods, the quantity to be withdrawn as samples is determined by the chief of customs.

Business men and commercial travelers from countries with which Esthonia has concluded trade agreements including certain special privileges may be exempted from the regulations quoted above.

[The United States will be on a "most-favored-nation" basis as soon as the recently negotiated commercial agreement between the two countries has been ratified by the Esthonian Parliament.]

Consul H. B. Quarton, Tallinn, March 18

New List of Approved Medicinal Compounds.

A supplementary list of medicinal compounds which may be imported into Esthonia was published in the Esthonian Official Gazette of March 10, 1925. This list specifies certain preparations which require a doctor's prescription, certain others which may be sold by chemists in drug stores repeatedly with a doctor's prescription, and still others which may be sold without the necessity for obtaining a prescription.

[This list is on file in the Division of Foreign Tariffs, and specific information may be obtained upon request.]

Exports of Veneer and Ply Wood to Canada

There were 34,432 square feet of ply wood, valued at \$3,411, and 8,064,383 square feet of veneers, valued at \$209,500, exported to Canada from the United States during the first quarter of 1925.

EUROPE

Samuel H. Cross, Chief, European Division

GAIN IN ITALIAN EXPORT TRADE IN 1924

Philip M. Copp, European Division

The outstanding feature of Italian trade during 1924 was the improvement in the trade balance, despite the necessity of increased importation of raw materials resulting from the heightened activity of Italian industries. Both imports and exports increased as compared with 1923, the former from 17,189,000,000 lire to 19,388,000,000 lire and the latter from 11,086,000,000 lire to 14,318,000,000 lire. The unfavorable balance of visible trade was thus reduced from 6,103,000,000 lire in 1923 to 5,070,000,000 lire in 1924.

A number of "invisible" items tend to offset the normally adverse balance of visible trade; the leading two of these items are remittances of Italian emigrants and expenditures of foreign tourists in Italy, which may be estimated roughly at 2,500,000 lire each.

Foodstuffs and Textiles Show Greatest Improvement.

The general classification of foodstuffs showed the greatest export advance during 1924, and the fact that this improvement was accompanied by a considerable decline in foodstuffs importations makes this category largely responsible for the reduction of the import balances. Export of textile products registered an almost equivalent advance, though it was accompanied by a somewhat smaller increase on the import side.

Exportation of foodstuffs in 1924 reached a value of 3,751,000,000 lire, as compared with 2,384,000,000 lire in 1923. In this group, the category of fruits, nuts, and garden vegetables made an advance of 421,000,000 lire to 1,406,000,000 lire, while the imports were of relatively slight importance. First rank in point of export value was taken by almonds, their 287,000,000 lire representing an increase of 101,000,000 lire that resulted primarily from higher prices; second place was occupied by tomato preserves with a value of 197,000,000 lire, or an increase of 36,000,000 lire. Orange exports almost doubled in value, reaching 170,000,000 lire; lemons, though showing an advance of only 23,000,000 lire, reached a total of 131,000,000 lire.

Crop Conditions Govern Cereal Trade.

The most striking change in Italy's foreign trade in 1924 appears under the category "Cereals, legumes, tubers, and their edible derivatives." Exports in this class registered a rise of 408,000,000 lire, attributable chiefly to larger shipments of rice, wheat flour, dried beans, and potatoes; imports in the category showed a decline of 800,000,000 lire, of which more than 500,000,000 is accounted for by the reduced importation of wheat that followed the exceptionally heavy Italian crop of 1923. The relative failure of the 1924 crop led to heavy imports at the end of 1924 and at the beginning of the current year.

Textiles Only Group Where Exports Exceed Imports.

The increase in exportation of textile products is spread fairly evenly over the cotton, silk, wool, hemp, linen, jute, and other textile industries, in approximate

accord to their relative importance. Exports of cotton and cotton manufactures had a value of 2,229,000,000 lire, or 438,500,000 lire more than for the previous year; silk and silk products, a value of 3,128,000,000 lire (303,000,000 lire increase); wool, hair, and their manufactures, 500,000,000 lire (197,000,000 lire increase); and hemp, flax, jute, and other vegetable fibers with their manufactures, 645,000,000 lire (149,000,000 lire increase). Though the textile industry was less depressed than other Italian industries during the difficult years 1921 and 1922, it still is rapidly making further advances. Textiles constitute the only large division of Italian trade statistics showing an excess of exports over imports, the former reaching 6,612,000,000 lire in 1924 and the latter 5,424,000,000 lire.

Other Categories Register Minor Gains.

The outstanding export improvement, aside from those already mentioned, was in vehicle shipments, which attained a value of 508,000,000 lire as against 325,000,000 lire in the previous year; imports of vehicles were valued at only 101,000,000 lire. Automobiles constitute the leading item in this category, with a value of nearly 400,000,000 lire in 1924. Railway freight cars numbering 2,244, with a value of 51,000,000 lire, were exported in 1924 as against a total absence of such exports in 1923.

Beverage exports made a notable advance to 384,000,000 lire, from 224,000,000 lire in 1923. The wine production of 1923 was very great, and exports of that vintage in 1924 were at a much higher level; but the reduction in prices resulting from the abundant yield restricted profits and caused a crisis among wine producers which was with difficulty relieved.

A gain in exports of rubber manufactures is also noteworthy, their 1924 value reaching 260,000,000 lire as against 185,000,000 lire in 1923. Practically all of this advance is accounted for by a 72,000,000-lire increase in shipments of automobile tires, bringing their total export value to 199,000,000 lire. Hides and skins showed a rise of 51,000,000 lire, in which the leading factors were leather gloves, certain classes of tanned hides, and goat and lamb skins. Stones and nonmetallic minerals likewise showed advanced exports to the amount of 51,000,000 lire, owing to improved foreign demand for sulphur and marble.

While the foregoing are the principal gains registered, all other classes except three relatively unimportant groups also showed greater or less improvement.

Import Advance Also Widely Distributed.

Of the eight main categories of imports, only foodstuffs failed to show an increase, and the decline in this instance was due to lessened requirements of cereal products. The chief gain occurred in the importations of textile raw materials. Raw flax, hemp, and jute were purchased abroad in greater quantities, as were

also the yarns of these fibers and linen cloth. Raw cotton made a gain in imports of 566,000,000 lire and raw wool of 203,000,000 lire, but woolen cloth declined by 50,000,000 lire. Imports of Asiatic silk increased 137,000,000 lire, and takings of spun silk, silk waste, and raw artificial silk also were greater.

Advancing importation of unmanufactured and semi-manufactured iron and steel gave a further indication of the generally higher level of Italian industry, while rising imports of such machinery and apparatus as is not extensively manufactured in Italy display an enhanced purchasing power. Lumber imports rose by 194,000,000 lire to 668,000,000 lire, and imports of mineral oils were 97,000,000 above the 821,000,000 lire of 1923. Oil seeds and fruits and vegetable and animal fats had a combined increase of 310,000,000 lire, reaching a value of 954,000,000 lire. The most important decline was in imports of tobacco, the leaf tobacco dropping by 83,000,000 lire to 190,000,000 lire.

United States the Leading Source of Imports.

Imports from the United States, though only slightly higher than in 1923, continued to be more than twice as great as those from any other country. In the export trade, however, the leading country was France, followed closely by Switzerland, Germany, and Great Britain, with the United States ranking fifth.

The following table shows the relative standing of the various countries in 1923 and 1924:

Italy's foreign trade with leading countries in 1923 and 1924

(In million lire; exchange value averaged \$0.04002 in 1923 and \$0.04858 in 1924)

Country	Italian imports		Italian exports	
	1923	1924	1923	1924
United States.....	4,619.5	4,647.9	1,512.5	1,231.8
Great Britain.....	2,189.7	2,176.2	1,200.2	1,498.0
Germany.....	1,290.1	1,518.6	692.9	1,563.7
France.....	1,822.6	1,470.1	1,607.2	1,822.2
Argentina.....	1,053.0	1,103.2	740.7	829.6
Yugoslavia.....	489.3	556.9	336.0	370.3
Austria.....	325.6	453.3	885.2	683.8
Switzerland.....	375.8	414.2	1,201.4	1,608.3

Importation of Raw Materials from United States.

The five principal imports from the United States in point of value belonged in each case in staple food-stuffs or in raw materials; they comprised raw cotton, wheat, mineral oils, copper, and coal, and constituted more than 80 per cent of the total. Other items of importance were tobacco, bacon, machinery, lumber, and paraffin.

The leading exports to the United States were cheese, olive oil, raw silk, dried fruits, and tomato preserves.

Trade With Other Countries More Widely Distributed.

Coal is the outstanding article imported from Great Britain, constituting about half the total value of imports from this source. Otherwise imports of British origin are well distributed, the leading items being machinery, woolen cloth and other wool manufactures, unmanufactured wool, cotton textiles and other textile manufactures, and sheet iron and steel. Outstanding exports to Great Britain, in order of value, were fabrics and other manufactures of silk and artificial silk, leather gloves, cheese, and automobiles. These made up 40 per cent of the total shipments to that country.

Trade with Germany gained ground in 1924. Machinery imports occupy first place, but would be far

surpassed by coal if the value of the 3,652,000 metric tons imported on reparations account were included in the value statistics. In any case coal is in second place, followed by prepared hides, scientific instruments, and coloring materials. The main export item is silk, followed by raw silk, dried fruits, grapes and other fresh fruits, citrus fruits, and unmanufactured hemp.

Proximity to France produces a considerable interchange in both directions. Scrap iron, unmanufactured wool, fabrics and other manufactures of silk, coal, and fabrics and other manufactures of cotton form the chief Italian imports, while the outstanding export item is unmanufactured silk valued at 659,000,000 lire, followed by unmanufactured hemp, raw hides and skins, silk, waste, machinery, and wines.

Argentina is important as a source for importations of wheat, fresh and frozen meats, unmanufactured wool, raw hides, and corn; these items constitute 82 per cent of the total value of purchases from this source. Cotton textiles made up 37 per cent of the total exports to Argentina, although rice, olive oil, cotton yarns, and manufactures of other textile fibers also were important.

Imports from Switzerland are of relatively slight value, but the export trade ranks high. Unmanufactured silk contributed more than 40 per cent of the shipments to this northern neighbor; other important items were wines, eggs, and automobiles.

Greece-Rumania temporarily extend commercial treaty.

"Great variety of circulars issued by bureau."

Australia Attracts Alien Immigrants

Australia's net immigration gain during 1924 amounted to 45,216, as compared with 38,918 during the preceding year, according to figures released by the Commonwealth statistician. As heretofore, the principal sources were Great Britain and New Zealand, which contributed 50 and 25 per cent, respectively, in 1923 and 46 and 23 per cent, respectively, in 1924. Increases from other countries, however, indicate that the Commonwealth is growing more popular for emigrants other than those from other parts of the British Empire. During 1924 the percentage coming from foreign countries was 16 per cent as compared with only 10 per cent during the preceding year.

Fiji's Exports Show Decline

The Fiji Islands imported during 1924 goods valued at £1,066,574, or an increase of £77,514 as compared with the preceding year, while exports dropped £54,305 to £1,498,934 over the same period. Exports of sugar and molasses decreased in value during 1924, but bananas, rubber and copra registered increases. The quantity of copra exported during 1924 was less than in the previous year, but owing to increased prices the value was greater. The reverse was true of sugar, however, which was exported in greater volume but brought lower prices. It has been announced that a Canadian canning firm will make experiments in growing and canning pineapples in Fiji. (Assistant Trade Commissioner E. G. Pauly, Melbourne.)

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

FAVORABLE TRADE ENCOURAGES AUSTRALIA

Emmett A. Chapman, Far Eastern Division

Australians are greatly encouraged by the favorable turn which their foreign trade is taking. For the seven months ended January 31, exports exceeded imports by more than £2,500,000. With half the wool clip and almost all the wheat crop yet to be accounted for, it is likely that the favorable balance at the end of the year will be of comfortable proportions. The importance of a favorable trade balance to young and growing countries like Australia is well known. Old-established nations are able to offset unfavorable merchandise balances with invisible exports, but new areas can not do this since, with them, invisible imports are normally greater than invisible exports.

Ambitious Projects Planned.

During the fiscal years preceding 1924-25, Australia's excess of imports over exports amounted to £35,000,000 and, as a result, all sorts of dire predictions were made for the Commonwealth's future. Following the bountiful crop of 1924-25, accompanied by good oversea demand and satisfactory prices, however, uncertainty has given way to a strong feeling of optimism. Great sums are to be expended on immigration, public works, industrial development, and private enterprises of all kinds. It is likely also that there will be less organized effort to restrict imports. During the last few years, and especially during 1921-22, the tendency to restrict imports in an effort to reduce the unfavorable balance has been quite apparent. Bankers have hesitated to grant credits in some instances to importers who wished to bring in articles which might be dispensed with and effective assistance has also been rendered by Government agencies and the press.

Increase of 40 Per Cent in Exports.

During the first seven months of the fiscal year—July, 1924, to January, 1925, inclusive—exports aggregated £90,788,272, as compared with £64,798,020 for the corresponding period of the preceding fiscal year, or an increase of about 40 per cent. This great increase has resulted from the combination of a splendid clip and harvest, and the existence of a good world market for both wool and wheat. Exports of greasy wool alone during the 1924-25 period reached £38,819,920, as compared with £27,439,465 during the corresponding period of the preceding year, while scoured wool and tops also registered satisfactory gains. Wheat shipments increased from £5,513,902 to £8,248,203, but flour remained about the same. Most encouraging of all has been the increase shown in exports of butter, cheese, hides and skins and meat. Butter increased from £2,635,730 to £6,386,457; cheese from £39,707 to £191,505; beef from £953,798 to £1,007,006; mutton from £119,612 to £235,612; and hides and skins from £4,076,763 to £5,577,738. The only items of importance which registered declines were rabbits and hares, milk and cream, copper and manufactured articles, including boots and shoes, and jams.

Principal Commodities Exported.

Australia's principal exports during the seven months ended January, 1925, as compared with those of the corresponding period ended January, 1924, are given in the following table:

Principal exports from Australia

Items	Seven months ended January—		Items	Seven months ended January—	
	1924	1925		1924	1925
Butter.....	£2,635,730	£6,386,457	Wheat.....	£5,513,902	£8,248,203
Cheese.....	39,707	191,505	Flour.....	3,029,735	3,134,808
Meat:			Jams and jellies.....	122,815	44,482
Beef.....	953,798	1,007,006	Hides and skins.....	4,076,763	5,577,738
Lamb.....	119,291	235,612	Wool:		
Mutton.....			Greasy.....	27,439,465	38,819,920
Rabbits and hares.....	241,165	182,814	Scoured.....	3,446,554	4,750,716
Preserved.....	99,727	144,790	Tops.....	669,532	724,574
Other.....	372,188	440,236	Tallow.....	431,312	985,435
Pearl shell.....	216,214	322,765	Copper.....	279,833	183,046
Boots and shoes.....	13,777	8,871	Lead.....	1,612,790	2,344,664
Milk and cream.....	642,349	561,677	Leather.....	474,699	404,848

Substantial Increases Recorded for Import Commodities.

Imports during the period under review have also registered substantial increases. For the seven months ended January, 1925, the total of £88,181,458 was reached, as compared with £83,638,821 for the corresponding period of the preceding fiscal year. While the import increase is not proportional with the export it is nevertheless satisfactory when it is remembered that the import market ordinarily is not fully affected by a satisfactory export season until the following year.

All items of importance on the import list except foodstuffs, liquors, tobacco, rubber and leather, paper and stationery, and timber show increases, especially apparel, textiles, boots, jute, oils and waxes, and machines and machinery, including automobiles. Silk imports increased from £2,762,506 to £3,251,803; corn and flour sacks and bags from £1,490,498 to £2,543,439; petroleum spirits from £2,038,454 to £3,048,474; automobile chassis from £5,467,940 to £5,825,533; jewelry from £369,700 to £452,775; talking machines from £253,405 to £379,961; and fertilizers from £493,406 to £646,988. It is interesting to note the increase in purchases of goods which might be classed as luxuries, such as silks, phonographs, jewelry, and automobiles, while such staples as cotton, woolen, and linen piece goods remained stationary or declined. The increase in receipts of corn and flour bags and sacks is accounted for by the large wheat crops.

Principal Commodities Imported.

The principal classes of imports into Australia during the seven months ended January, 1925, as compared with the corresponding period of the preceding year, are given in the following table:

Principal imports into Australia

Items	Seven months ended January—		Items	Seven months ended January—	
	1924	1925		1924	1925
Foodstuffs:			Machines and machinery,		
Animal.....	£1,364,485	£1,268,884	iron, steel, etc.	£25,729,421	£27,118,59
Vegetable.....	3,688,052	3,875,278	Rubber, leather,		
Liquor.....	1,222,593	193,596	etc.	2,005,809	1,785,270

Trade with the United States Growing.

Australia's trade with the United States, both in imports and exports, is growing steadily. There has been a slight decline in imports of American goods since the beginning of the fiscal year, due largely to the slowing up of automotive products, but it is believed that this line will revive with the complete disposal of the present season's crops. During the year ended

June 30, 1924, the Commonwealth obtained one-quarter of its total oversea needs from the United States, a proportion as great as during the closing years of the war, and an amount more than three times greater in value than during 1918. The United States is also taking a larger proportion of Australia's exports. Australian wool and hides and skins are now being supplied to the American market in large quantities.

Although competition is tightening somewhat in the Australian market the outlook for Australian-American trade is very good. Most of the American lines are well established there and have won for themselves an enviable reputation. It is likely also that the position of United States products in Australia will be strengthened somewhat by Great Britain's reestablishment of the gold standard. While American exports, to that market during the present fiscal year may not exceed the record of 1923-24, they are expected, nevertheless, to be satisfactory.

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

DEVELOPMENTS IN CARTAGENA DURING 1924

Consul Lester L. Schnare, Cartagena, Colombia

The value of the foreign trade passing through the port of Cartagena, Colombia, during the year 1924 was larger than that of any previous year in the history of the port. The following unofficial figures show the imports, exports, and total foreign commerce for the years 1913, 1921, 1922, 1923, and 1924:

Value of foreign commerce at Cartagena

Commodity—	1913	1921	1922	1923	1924
	Pesos	Pesos	Pesos	Pesos	Pesos
Imports.....	3,133,438	9,880,781	6,620,069	9,092,549	12,729,632
Exports.....	6,942,576	12,437,786	4,543,822	8,236,889	10,315,986
Total.....	10,076,014	22,318,567	11,163,891	17,329,438	23,045,618

The par value of the Colombian peso is \$0.9733.

A very large proportion of the exports were made up, as usual, of coffee from districts in the interior, and affected the prosperity of this district only indirectly.

Construction Work Active.

A number of important developments occurred during 1924, some of which seem certain to materially alter conditions in this district in the near future and improve the prospects for the sale of foreign goods.

The beginning of actual construction work on the Ferrocarril Central (Central Railroad), to extend from Cartagena southward to the border of the Department of Antioquia, promises better communications with the interior of the country and the more intensive development of a large stretch of fertile country.

Construction work on the oil pipe line that will extend from Cartagena Bay to the oil fields in the vicin-

ity of Barranca Bermeja, Department of Santander, will involve the expenditure of many millions of dollars.

Deepening and Widening of the Dique Canal.

The work of deepening and widening the Dique Canal, which connects Cartagena Bay with the Magdalena River at Calamar, continued throughout the year with satisfactory results and brought about the establishment of a line of river steamboats between Cartagena and La Dorado, the head of navigation on the lower Magdalena River. This is one of the most promising construction projects affecting the prosperity of this port, because, when completed, it should result in the diversion of a very large portion of the commerce with the interior of Colombia to this port, since it will render unnecessary the transshipment of cargo and its transportation by railroad over any portion of the journey between the coast and La Dorado.

The consolidation, by purchase, of the two cotton mills of Cartagena is expected to result in a greatly increased output of cotton suitings, cheap drills, and men's undershirts and an increased consumption of raw cotton.

Costa Rican Foreign Trade Increased

Vice Consul R. W. Unckles, San Jose

Preliminary figures for the foreign trade of Costa Rica for 1924 show a substantial increase in both exports and imports. The total value of imports for 1924 was \$12,003,017, compared with \$9,785,841 in 1923; and exports in 1924 were valued at \$16,565,232 in comparison with \$12,833,190 in 1923.

Imports were greater than in any year since 1920, on account of the general prosperity of the country brought about by high prices abroad for all Costa Rican products, and on account of the large quantities

of building materials imported after the March, 1924, earthquakes. The value of exports as well was greater than in any year since 1919, principally due to the large coffee crop and high prices received for it.

Share of the United States Decreased.

The United States took 48 per cent of the Costa Rican exports, as compared with 54 per cent in 1923, and supplied 57 per cent of the imports, as compared with 59 per cent in 1923. The relatively large decrease in Costa Rican exports to the United States in 1924 may be attributed to increased shipments of coffee to London. Previously, San Francisco had been obtaining about 34 per cent of the total crop, but of the 1924-25 crop that market only received about 12½ per cent.

The price of local foodstuffs continues very high, with consequent suffering among the poorer classes. Corn and beans are being imported from other Central American countries and the United States.

Construction Material Market Firm.

New construction work continues, and the price of all construction material remains firm. The cost of locally produced lime is so high that it is found more economical to use imported cement. The large importations of lumber during June, 1924, apparently have had little effect on the prices of local lumber, as they still remain very high.

Corrugated roofing, which was imported in large quantities during last year on account of its temporary exemption from duties, is now found only in the hands of the few, and the price is gradually rising, so that it will not be long before the price asked for galvanized roofing will equal that demanded for roofing recently imported on which duties have been paid.

Trade Conditions in Eastern Nicaragua

Consul A. J. McConnico, Bluefields, April 7

The economic situation in eastern Nicaragua during the first quarter of 1925 was encouraging but showed no marked improvement over that of the last quarter of 1924. The banana market continued firm with high prices prevailing, and mahogany shipments were greatly in excess of those usually made at this period of the year. Furthermore, contracts were made to supply approximately 20,000,000 board feet of mahogany for the coming season.

Mercantile Business Shows Little Change.

Large exportation of the products of the district, such as bananas, mahogany, cedar, and gold, connote an inflow of money into the district and an improved financial condition, but it has not been reflected in the mercantile business. Wholesalers and retailers are unanimous in their assertions that conditions have remained the same as during the last quarter of 1924, that the volume of business has been no greater, and that collections are just as difficult as formerly. There has apparently been little increase in purchasing power.

Exports Increase.

Exports from Bluefield to the United States for the quarter ended in March, 1925, are compared with those of the corresponding quarter of 1924, in the following table:

Exports from Bluefields, Nicaragua, to United States, first quarter—

Article	1924		1925	
	Quantity	Value	Quantity	Value
Bananas..... bunches..	832,686	\$404,373	730,470	\$351,516

Total.....		698,401		1,159,110

Banana Market Steady—Coconuts.

There was no appreciable change in the banana market, the price remaining at \$0.50 for a bunch of nine hands. When the fruit commands such a price, cultivation is profitable and everyone engaged in the industry is benefited. The number of stems exported to the United States during the quarter was 730,470 valued at \$351,516, compared with 771,838 stems valued at \$327,577 for the December quarter of 1924—a decrease in quantity of more than 40,000 stems but an increase in value. During the March quarter of 1924 exports amounted to 832,686 stems valued at \$404,373.

The exports of coconuts from Bluefields to the United States show each year a decline and in consequence of the loss of the American market not so much attention is paid as formerly to the cultivation of this nut. Quantities of coconuts were shipped to Costa Rica and Panama in sailing vessels from which countries it is reported they were reshipped to the United States.

Mahogany and Cedar Shipments Heavy.

The mahogany and cedar shipments from eastern Nicaragua to the United States during the first quarter of 1925 were unusually heavy; they exceeded those of the December quarter—usually the largest of the year—by nearly 400,000 board feet of mahogany and more than 1,100,000 board feet of cedar. The heavy shipments of the March quarter were made possible by the torrential rains of December, permitting the mahogany contractors to float all their logs to the coast. Frequently when flood conditions are not so favorable, contractors are compelled to keep a certain percentage of their logs in the forest for the floods of the following June and July. From July 1, to March 31, 1924, there were approximately 17,500,000 board feet of mahogany valued at \$1,417,000, and 3,800,000 board feet of cedar valued at \$276,000 exported to the United States.

See also "Great variety of circulars issued by bureau" in this issue.

Increase in Belgian Lumber Imports

Lumber imports into Belgium in 1924 aggregated 2,029,411 tons, as against 1,334,150 tons in 1923, according to provisional statistics. The 1924 figures show large increases over the figures for 1913, when imports of lumber totaled 1,782,187 tons. Imports of lumber from the United States in 1924 reached 72,554 tons, according to the same source, while there were 56,107 tons in 1923, and 138,894 tons in 1913. (Consul General George S. Messersmith, Antwerp, Belgium.)

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The Department of Commerce announces the following further figures covering basic industrial and commercial movements in March:

Manufacturing production in March increased 2 per cent over February, when allowance is made for the longer number of working days, according to the index number of the Department of Commerce, and was 2 per cent higher than in March, 1924. The principal increases over February occurred in the output of automobiles, with a gain of more than 82 per cent, and in stone and clay products with 25 per cent, and slight increases were shown, when reduced to an average daily basis, in the output of iron and steel, paper, lumber, and leather. Increases over a year ago were made in all groups except foodstuffs, textiles, chemicals and oils, and nonferrous metals.

Output of Raw Materials.

The output of raw materials was 3 per cent greater in March than a year ago, the marketing of animal products increasing 4 per cent over a year ago, as computed by the Department of Commerce index numbers, while crop marketing increased 5 per cent, forestry products increased 9 per cent, and mineral production declined 3 per cent.

The index of unfilled orders declined during March and was 5 per cent lower than a year ago, iron and steel unfilled orders

being the same on March 31 as a year ago while orders for building materials declined.

Stocks of Commodities on Hand.

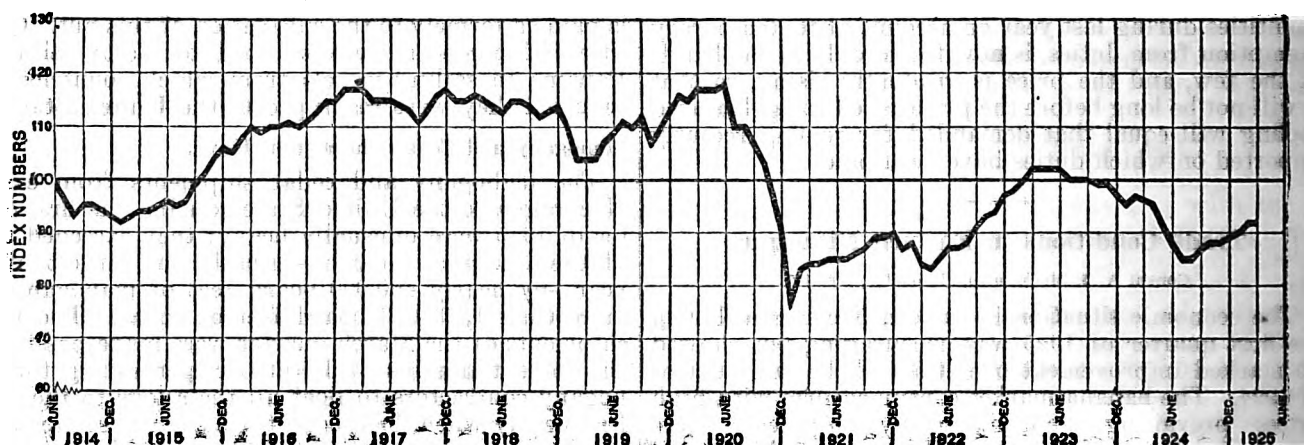

Stocks of commodities held at the end of March increased 1 per cent during the month, when allowance is made for seasonal tendencies, and 9 per cent over a year ago. Stocks in each group, however, except raw foodstuffs, declined during March, when seasonal factors are eliminated, while compared with a year ago all groups showed increased stocks on hand.

Data from Survey of Current Business.

The following table gives such data from the May issue (No. 45) of the Survey of Current Business as have been received up to April 30, 1925.

All items given in the following table correspond with similar information in the issue of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the Survey, where specific descriptions of the data and their sources are given. In addition to figures given from Government sources, there are also incorporated for completeness of service the figures from other sources generally accepted by the trades, the authority and responsibility for which are noted in the monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for \$1.50 per year.

¹ Revised.
² Not directly comparable with months prior to July, 1924, because of change in revenue law.

GREAT VARIETY OF CIRCULARS ISSUED BY BUREAU

Many circulars in mimeographed form are issued by the bureau in addition to its various regular and special publications. These circulars are distributed to those interested, including persons and firms whose names are on the Exporters' Index, and copies may be obtained from the bureau or its district offices. The 72 circulars listed below were issued by 19 different divisions during the week ended May 4.

AGRICULTURAL IMPLEMENTS DIVISION

No. E-38. Market for Internal Combustion Engines in Barbados.

AUTOMOTIVE DIVISION

No. 39. Automotive Foreign Market News Bulletin.
 No. 548. Reimposition McKenna duties on British Imports of Motor Vehicles (Exclusive of Commercial Vehicles), to be effective July 1, 1925.

CHEMICAL DIVISION

No. 96. Notes on the Chemical Trade in Italy.
 No. 59A. World Notes on Industrial Chemicals.
 No. 59E. World Notes on Fertilizers.
 No. 60A. World Notes on Industrial Chemicals.
 No. 60B. World Notes on Coal Tar Products.
 No. 60C. World Notes on Drugs, Medicinals, and Toilet Preparations.
 No. 60D. World Notes on Paints, Pigments, and Naval Stores.
 No. 95. Market for Caustic Soda in Netherlands India.
 No. 95. Market for Caustic Soda in Netherlands India.

COAL DIVISION

No. 313. Decline in Coal Production of Czechoslovakia.
 No. 316. Competition in the Italian Coal Market.
 No. 322. Czechoslovak Coal Industry During February, 1925.
 No. 328. South Wales Coke By-Products Industries, 1924.

ELECTRICAL DIVISION

No. 366. The Market for Vacuum Sweepers in Bristol, England.

EUROPEAN DIVISION

No. 39. Economic and Trade Developments.

FAR EASTERN DIVISION

No. 35. Far Eastern Trade Notes.
 No. 295. Hotels in the Far East.

FOODSTUFFS DIVISION

Foodstuffs 'Round the World—Fishery News.
 Foodstuffs 'Round the World—Grain and Grain Products.

Foodstuffs 'Round the World—Canned and Dried Fruits.
 Foodstuffs 'Round the World—Fresh Fruits.
 Foodstuffs 'Round the World—Foreign Notes on Meats, Fats, Oils, and Livestock.
 Foodstuffs 'Round the World—Tropical Products.

HIDE AND LEATHER DIVISION

No. 449. Grades and Classifications of Dried Goatskins Shipped from Shanghai.
 No. 450. Hide and Skin Trade of Nigeria.
 No. 452. Cause for Decline in Number of Sheep in France.

IRON AND STEEL DIVISION

No. 354. Mexican Market for American Enameled Ware.
 No. 357. Use of Central Heating Equipment in Palermo, Italy, Increasing.

LATIN AMERICAN DIVISION

No. 50. "Latin America at a Glance."
 No. 170. Living and Office Operating Expenses in Argentina.

LUMBER DIVISION

No. 432. Present Conditions in North of England Woodenware Market.
 No. 434. Lumber Trade of Eastern Cuba.
 No. 435. Mahogany and Cedar Log Exports Through Frontera, Mexico.

MINERALS DIVISION

No. 35. Foreign Trade Notes.

PAPER DIVISION

No. 61. Paper Production in Japan During January, 1925.
 No. 63. Finnish Pulp and Paper Market, February, 1925.
 No. 66. Foreign Markets for American Paper.

RUBBER DIVISION

No. 857. March Imports of Golf Balls.
 No. 858. March Imports of Rubber Tires.
 No. 860. Dealers Stocks of Auto Tires, April 1, 1925.
 No. 861. Notes on Foreign Markets for Rubber Reducing Corsets.

(Continued on p. 370)

FOREIGN TRADE OPPORTUNITIES

Reserved information may be obtained from the Bureau and its district and cooperative offices by firms and individuals on the Exporters' Index upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: *Reported by American consular officers; †Reported by commercial attachés and trade commissioners; ‡Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

HEARING BY THE UNITED STATES TARIFF COMMISSION

PUBLIC NOTICE OF HEARING BY THE UNITED STATES TARIFF COMMISSION UNDER THE PROVISION OF SECTION 315 OF TITLE III OF THE TARIFF ACT OF 1922

Investigation No. 37 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Men's Sewed Straw Hats

Notice is hereby given that at the convening of the public hearing heretofore set for May 4, 1925, at 10 o'clock a. m., in the investigation

by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922, with respect to the differences in costs of production of men's sewed straw hats, a request was granted to adjourn said hearing until 10 o'clock a. m., Thursday, May 14, 1925, when said hearing will be resumed at the offices of the Tariff Commission in Washington, D. C.

By order of the United States Tariff Commission this 4th day of May, 1925.

JOHN F. BATHMAN, Secretary.

A NEW "SERVICE STATION" FOR NORTHWESTERN EXPORTERS

A district office of the Bureau of Foreign and Domestic Commerce has just been opened at Portland, Oreg. The city's strategic location as an entrepôt for the Columbia River Basin and its position as one of the leading Pacific ports make it a logical center for the distribution of foreign-trade information.

James E. Peebles, former assistant manager of the Seattle district office of the bureau, will be district manager at Portland. He is thoroughly conversant with problems confronting shippers of the Pacific Northwest.

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

JULIUS KLEIN, Director Bureau of Foreign and Domestic Commerce

Editorial Board: Griffith Evans, Grosvenor M. Jones, E. Dana Durand, Eugene S. Gregg, and Archibald J. Wolfe

Balance of International Payments of United States

In any analysis of our foreign-trade balance sheet it is essential to take into account many items not appearing in the customs returns. Those items, currently styled "invisible exchange," are of such increasing importance in any sound conclusion as to the movement of our foreign trade, as to the situation of our credit structure, as to the ability of foreign countries to purchase our commodities or pay their debts, as to the probable trend of exchange rates, and as to the probable movement of gold and the ultimate trend of price levels, that they require comprehensive study by all whose interest lies in these subjects. Such a study is presented in Trade Information Bulletin No. 340, "The Balance of International Payments of the United States in 1924," just published by the Department of Commerce.

Our official statistics of exports and imports show that in 1924 we exported \$4,591,000,000 worth of merchandise; we imported \$3,611,000,000 worth of merchandise. There was thus a "favorable" balance of \$980,000,000 on the movement of recorded merchandise. Allowing for the estimated value of parcel post and smuggled goods, this balance is reduced to \$970,000,000.

Parallel with this movement of actual commodities were what have been termed the "current invisible items," amounts paid out in foreign countries through our tourists, through remittances of immigrants, through payments for foreign shipping and services of one kind or another, a total of \$1,178,000,000. On the other hand, we received interest on money owed to us by foreign individuals and concerns and by foreign governments, together with payments for the use of our ships by foreigners and expenditures of foreigners in the United States, amounting to approximately \$790,000,000. Therefore, on these items of current invisible exchange we had a net balance against us of \$388,000,000.

If now we put together the "favorable" balance on merchandise and the adverse balance on invisible items we find that our "favorable" balance on current transactions is reduced to \$582,000,000.

Of precious metals we exported \$172,000,000 and imported \$394,000,000, or we received a net balance of \$222,000,000 in gold and silver. This again reduces the favorable balance, this time to \$360,000,000.

During the year there were large movements of capital. In these movements foreigners apparently bought \$319,000,000 of securities in our markets, paid off in cash \$45,000,000 of maturing bonds, and discharged \$23,000,000 of the principal of debts owing to our Government—a total of \$387,000,000. On the other hand, our citizens bought in the market \$114,000,000 of foreign bonds and subscribed \$795,000,000 for new foreign issues in this country, besides reimporting about \$50,000,000 of American currency. In other words, we invested abroad during the year \$572,000,000 more than we received from foreign investors. This would give us a net adverse balance on all accounts of \$212,000,000 were it not for the fact that many foreigners—both those who borrowed from us and others—increased their deposits in our banks.—The increase in deposits actually reported by 68 large banks—\$216,000,000—was a little more than equivalent to this estimated adverse balance.

It should constantly be borne in mind that in calculations of this character, depending so largely on estimates, there is always the possibility of errors, although there is a tendency for some of these errors to neutralize each other. Consequently, although the unassigned balance is only \$4,000,000, it is possible that some of the items may be as much as \$100,000,000 away from the truth. Nevertheless some conclusions can safely be drawn. The increase in our merchandise exports as compared with 1923 was not accompanied by a corresponding increase in imports of merchandise or gold, but was paid for by means of credits, principally

in the form of long-term securities floated in this country, but the volume of such securities was greater than necessary for this purpose, and the funds thus made available to foreigners were to a large extent kept in this country as bank balances to be drawn upon as needed.

At the same time gold imports continued on a large scale until the month of December, which would not have been the case unless foreigners had bought large amounts of securities in this country besides paying some of their outstanding debts to us.

The year's developments gave the United States a stronger position than ever in international finance. The United States is now the world's greatest investor, and the dollar is widely used as a basis for international transactions even where the United States is not directly concerned, whereas 10 years ago the New York foreign exchange market was comparatively insignificant and the Nation was heavily indebted to Europe. Our total foreign holdings, excluding debts owed to our Government, amount to about \$9,000,000,000, having increased by about \$1,000,000,000 during the year.

The increasing importance of the invisible items in explaining our international trade is shown by the fact that in 1924 they were equivalent to roughly 22 per cent of our total exports and 34 per cent of our total imports, whereas in the period between 1896 and 1914 they were reckoned as only 8 per cent and 33 per cent, respectively. But their nature has changed more than their magnitude, and still changes from year to year. Consequently such studies as this, in spite of the impossibility of obtaining absolute accuracy, are well worth the preparation, and it is gratifying to observe that statisticians of many other nations are now beginning to publish studies of the same sort.

[HERBERT HOOVER.]

Mississippi Valley Foreign Trade Conference

A new and interesting development in American export trade will be witnessed in St. Louis when the Second Central Mississippi Valley Foreign Trade Conference opens there on May 21. The object of the conference is the stimulation of the export trade of the Mississippi Valley.

This section has long been recognized as a leading source of supply for Cuban and Mexican requirements of foodstuffs and manufactures. The conference will serve to promote interest in and increase trade with other Latin American markets and those of the Far East which Mississippi Valley export managers regard as the most logical fields for trade expansion.

Foreign-trade experts, including bankers, economists, and practical exporters, will address the conference. In addition to the addresses, exporters will participate in the sessions devoted to general discussion and the

visiting experts will be available for individual conferences on the second day.

This movement toward expansion of foreign sales is an indication of the revived spirit which characterizes export industries in the Middle West. The improvement that has taken place generally in the Latin American countries and the augmented buying power of other sections of the world resulting from more stable commercial conditions are distinctly reflected in this desire on the part of Mississippi Valley exporters to reach out farther and farther for markets for their products. If, as reported, both "growing pains and wanderlust" have attacked these exporters, it may be considered a desirable symptom.

[T. L. GAUKEL,
Manager Central Mississippi District Office.]

Commercial Services Rendered by Bureau and District Offices¹

Correspondence Division, R. H. Brasel, Chief

The following table shows the number of commercial services rendered by the Bureau of Foreign and Domestic Commerce in Washington and its 10 district offices in the United States during the period July 1, 1924, to April 18, 1925, and the week ended April 25, 1925:

Class	Period July 1, 1924, to Apr. 25, 1925	Week ended May 2, 1925
Total services rendered..... (The above total includes the following classified services in addition to many others which could not be identified under a specified group.)	1,649,962	45,086
Commodity:		
Agricultural implements.....	39,448	644

¹ Does not include services rendered by foreign service of the bureau (32 posts, 80 representatives) and by the cooperative offices maintained by the bureau in 33 chambers of commerce and boards of trade in the United States.

² Including petroleum.

³ Information reserved from "Foreign trade opportunity" announcements printed in each issue of the COMMERCE REPORTS. (Name and address of foreign inquirers interested in the purchase of American goods, including references, cable addresses, and other details.)

World's Commercial News in Brief

The following are brief items compiled from data cabled by Government representatives stationed abroad, from official foreign publications, and from other sources. Countries included in the "Monthly Cable Reviews" are omitted from this section.

European Economic and Trade Developments

For reasons of Bureau administration, this heading includes also Canada

AUSTRIA

Trade statistics for 1924, recently published, indicate that of Austrian imports approximately 23 per cent came from Czechoslovakia, 15 per cent from Germany, and 12 per cent from Hungary. Of exports, 13 per cent went to Germany, 11 per cent to Czechoslovakia, and 10 per cent each to Italy, Yugoslavia, and Poland. The new shilling currency is making satisfactory progress and bank notes and coins of the new denominations are to be issued rapidly.

BELGIUM

Insistence by operators in the coal industry upon a further 5 per cent wage reduction, to take place June 1, may further involve the already serious situation in this industry. The Port of Antwerp is said to be in a position to exceed Amsterdam in the diamond-cutting industry, which has become second in importance in this city, 90 per cent of the output being exported to the United States. The political crisis continues to obstruct normal business activity.

BULGARIA

The general economic outlook is encouraging in Bulgaria in spite of the crisis. The country is predominantly agricultural and present crop conditions are excellent, with grain sowings heavier than usual. Discount rates continue high, however, and the cost of living is increasing.

CZECHOSLOVAKIA

Substantial progress toward normal housing conditions in Czechoslovakia is effected by the passage of a law to increase rents. As in other central European countries, rents have been controlled by law since the war, and increases hitherto allowed have brought them only to 40 per cent of pre-war rates. The situation has made it unprofitable to invest private capital in building and the Government has had to grant large subsidies for the construction of new dwellings. There are indications that the official discount rate may be raised in order to attract foreign capital and to protect the currency. The principal items in exports to the United States during recent months have been linen goods, beads, glass, cotton goods, and earthenware. The cotton textile industry is very well employed.

CANADA

General business conditions in Canada during the week indicated a slightly increased activity. Shipping on the St. Lawrence River and Canal has reflected the improvement, particularly in Montreal. Increased building operations in Toronto have ab-

sorbed a considerable portion of former unemployment and have in some degree afforded relief from business depression. Favorable crop forecasts and the continued circulation of money recently paid by wheat pools to farmers has created a more optimistic feeling in the prairie Provinces. Wheat prices on the Winnipeg exchange have continued their gradual climb. It is estimated that 40 per cent of the wheat seeding has been completed throughout the prairie Provinces, a substantial increase over the corresponding period of last year. Increasing manufacture and marketing of shingles and curtailment of logging operations in keeping with demand have contributed to better conditions in British Columbia. In Nova Scotia the coal strike continues with no apparent settlement in sight.

DENMARK

Prospects for an early settlement of Danish labor conflicts are not encouraging. Losses in wage earnings are estimated at 10,000,000 crowns a week, and business on the whole, with the exception of agriculture, is more or less paralyzed. An official wholesale index has been prepared by the Danish statistical office and will be published monthly. According to this index, which is based on 1913 prices, the price level during January was 243, for February 240, and for March 236. Shipments of agricultural produce were slightly higher during the week. The hoof-and-mouth disease is less serious and an early resumption of meat shipments is expected. The crown has attained a new high level, and has already reached the maximum point contemplated for attainment at the close of 1926.

GREAT BRITAIN

The British House of Commons, on May 5, unanimously passed the Gold Standard Bill, the passage of which in the House of Lords is expected to be a mere formality. British purchases of bonds in the New York market have decreased. The Economist index number of wholesale prices shows a substantial decline for April, of approximately 27/8 per cent, with the downward trend evident in all groups.

ITALY

The general economic and business situation in Italy continues satisfactorily active. Postal savings throughout the country are increasing and the number of incorporations has risen considerably during recent months. The Treasury and trade deficits have been diminished. Port traffic is increasing.

GREECE

The Government of Greece on March 1 increased the customs duty on kerosene imported into Macedonia and Thrace. It is now believed that this will cause a

reduction in imports, inasmuch as the population has recently been increased, though individual consumption will be reduced. The general economic situation is improving and is reflected in recent increases in the exchange value of the drachma.

LATVIA

The Latvian match industry is quite active and several other industries have resumed full time operation. The expected revival of timber exports, however, has not materialized. Agriculture has had very favorable weather conditions and crop prospects are encouraging. The Bank of Latvia is contracting its foreign exchange holdings. It is estimated that the 1924-25 budget will leave a surplus of 10,000,000 lats.

LITHUANIA

Various industries in the export trade of Lithuania are well engaged. Credit stringency, however, still impedes business and foreign loans are sought. It is reported that one large loan has been obtained for railroad construction.

NORWAY

Norwegian exchange has risen again during the week and is now quoted at about \$0.17. The bank of issue is taking advantage of the situation to increase its holdings of foreign exchange. Wage agreements recently concluded in a number of industries provide for a 9 per cent increase in wages, entailing increased operating costs for these industries, a number of which are producing for export. As a consequence, demands for cheaper money have become more persistent, in the effort to offset in part the increased expenditures for wages. The discount rate has been reduced from 6½ to 6 per cent. Norwegian fisheries are in very good condition as a result of excellent foreign demand and plentiful supply.

POLAND

The Bank of Poland has issued a statement to the effect that the gold reserve back of the zloty currency amounts to 41.2 per cent of the bank's outstanding obligations. The last 100,000,000-franc installment of a 400,000,000-franc debt to France has been repaid. The press states that Polish pre-inflation bills of exchange are to be valorized at 10 per cent of capital and 3 per cent of interest. Recent foreign trade figures indicate that Germany is Poland's best customer, taking 38 per cent of its exports (principally coal from Upper Silesia) and supplying 34 per cent of its imports in 1924. The United States is second as a source of Polish imports. The Russian Soviet Commercial Mis-

sion is active on the Lodz textile market, financing its purchases through a credit and discount arrangement with the Bank of Poland. There is some agitation for lengthening the industrial working day to 10 hours to meet German competition.

SWEDEN

It is reported that the \$25,000,000 revolving credit obtained last year in New York for purposes of Swedish exchange stabilization has been extended for another year. It is stated that this credit has been utilized only to a very limited extent, but that the presence of such a reserve has favorably affected Swedish exchange. During the last fortnight the rate has de-

clined slightly and is now at a slight discount in relation to the dollar—a recession which is ascribed to the very heavy demand for foreign exchanges in connection with heavy imports and to the repatriation of Swedish bonds held abroad. Swedish imports of wheat, rye, and corn are increasing, and a continued heavy demand for these grains is expected. Sugar imports during the first quarter of 1925 were also heavier, as a result of the diminished yield of the Swedish sugar beet crop. Imports of mineral oils have undergone considerable expansion during this quarter and importation of raw materials for industrial purposes is increasing. Considerable export gains have been made in wood pulp and paper, matches, iron ore, and machinery. Lumber and pig iron exports, however, have diminished and these two important industries are considerably depressed.

YUGOSLAVIA

Proceeds of a recent American loan to Yugoslavia are to be used chiefly for railroad and port development, according to recent reports, and construction has already begun on several important projects. Serbia is to have direct access to the Adriatic. Croatia is to be connected with the ports of Sebenico and Spalato, and 200 kilometers of other lines are either finished or projected. This construction is not yet sufficient, however, to enable Yugoslavia to route its total commerce through Yugoslav ports. An important part of this commerce will still depend upon free zones in Salonika and Fiume. The budget is said to show a surplus for the first eight months of the present fiscal year. The wholesale price index declined 5 per cent during January. Trade fell off during the first quarter of 1925 as compared with the corresponding period for 1924, but the sugar and general crop outlook is good. Prices of pork and cereals are still high and industry in general is awaiting the outcome of proposed tariff and taxation reforms.

Far Eastern Trade News

JAPAN

There are prospects of a large silk crop in Japan this year, the spring hatching of egg cards being estimated at 7,900,000, an increase of 5 per cent in comparison with 1924, according to the weekly cable from Acting Commercial Attaché Frank Rhea, Tokyo. It is reported that negotiations between American bankers and the Daido Electric Co. for a second loan have been delayed, owing to the present easy conditions of the Japanese money market.

CHINA

Hongkong's total foreign trade for the first quarter of 1925 was considerably less than for the corresponding period last year, according to cabled advices from Commercial Attaché Julean Arnold, Peking. While the imports, amounting to \$17,302,000, were less, the American share was larger by \$230,000. The total exports for this period in 1925 totaled \$17,201,000, as compared with \$18,380,000 for the first three months in 1924.

The tax on kerosene imposed by the Canton government is still in effect.

Shanghai import and export markets are generally stagnant. Only necessary business is being transacted owing to the military situation in North China and the approach of the June settlement day. Banks are accommodating only firms of proven stability. The transportation situation is still badly demoralized, with no signs of improvement.

PHILIPPINE ISLANDS

Slightly better inquiries from the United States steadied the week's abaca market in the Philippine Islands, according to cable from Assistant Trade Commissioner E. B. George, Manila, May 8. Transactions reported during the week, however, were on a small scale. Prices for grade F were around 46 and 47 pesos per picul of 139 pounds and for grade JUS, 26 pesos (1 peso=\$0.50). The market for United Kingdom grades of abaca continued weak, with gradually receding prices. The week's copra prices at provincial buying points were 75 centavos higher than either the American or European equivalent for coconut oil. A number of local mills shut down and the operations of others were greatly curtailed. Resecado (dried copra) is now worth 14.25 pesos per picul, on the basis of provincial value, and production is low. Weather conditions are excellent for the new sugar crop and the outlook continues to improve.

INDIA

The rupee mounted steadily during the week ended May 9, keeping pace with sterling, according to cable advices from Assistant Trade Commissioner D. C. Bliss,

Bombay. In New York City the rupee dollar was quoted at \$0.3609 on May 9 as compared with \$0.3577 on January 9. The commodity market in Bombay was duller during the week, the tendency being for exporters to hold off and watch exchange developments.

India's foreign trade during March, both imports and exports, continued to advance. Imports aggregated 198,500,000 rupees as compared with 187,800,000 for February, while exports increased from 429,400,000 rupees in February to 453,500,000 for March. On the import side, Japan's contribution showed an increase over February, but receipts from the United Kingdom, Germany, and the United States declined. A considerable decline occurred in the share of Indian products taken by Japan and Great Britain, but shipments to the United States and Germany registered increases. Piece-goods imports were somewhat larger, with Japan's share of colored and greys increasing at the expense of Great Britain. In white piece goods, however, Great Britain continued to hold its own. Imports of automobiles and textile machinery showed considerable increases over February.

AUSTRALIA

Wool sales scheduled to be held at Adelaide and Brisbane during the week ended May 9 were postponed in accordance with the sales-curtaiment plan announced some time ago, according to a cable received from Trade Commissioner E. G. Babbitt, Melbourne. The wheat situation remains unchanged. The bureau of commerce and industry has been abolished by the Federal Government and will cease to exist at the end of May. The newly organized ministry of markets and migration will carry on the activities of the old bureau after that time.

Latin America at a Glance

ARGENTINA

Exports from Argentina, with the exception of meat, have moved very slowly during the week, with May 9. About 250,000 tons of shipping are at anchor, with cargo. Imports continue normal. Greater activity on the part of American firms is indicated by the increasing number of American salesmen. Congress is scheduled to convene on May 14. The new Italian submarine cable has been landed at Buenos Aires. (Commercial Attaché E. F. Feely, Buenos Aires.)

CHILE

Difficulties encountered in merchandising in Chile in recent weeks seem now to be slowly dissipating, and the outlook for better trade in many lines is correspondingly brighter. Customhouse receipts for the month of April totaled 12,684,000 gold pesos—an increase of 2,000,000 gold pesos over April, 1924. (Commercial Attaché R. H. Ackerman, Santiago, May 10.)

URUGUAY

Automotive imports into Uruguay were the greatest in April of any one month recorded, according to a report from Acting Commercial Attaché L. B. Clark, Montevideo, May 4. Passenger cars from the United States numbered 710, from Europe 10; and 217 trucks and 28 tractors were all from the United States. Other April imports were 26,000 tons of coal, of which 22,000 tons came from Great Britain and the remainder

from Germany; lumber, 157,000 pieces from the United States and 69,000 from elsewhere; petroleum products (origin not stated), 18,000 cases of fuel oil, 40,000 of kerosene, and 78,000 of gasoline.

April exports of wool amounted to 5,551 bales, of which Germany took 3,325 and the United States only 441 bales. Hide exports, 59,000 dry and 48,000 salted, all went to Europe.

Consul O. Gaylord Marsh reports that declared exports to the United States for April amounted to \$235,000, of which wool constituted \$35,000. In April of last year, wool accounted for only \$230 of the total of \$460,000.

ECUADOR

Ecuador has not yet recovered commercially and industrially from the damage and interrupted traffic caused by recent heavy rainfalls, the greatest damage being on plantations along the coast. Rains are now diminishing and the situation should improve during the month. The selling price for dollars ranged from 3.90 sucres on April 1 to 4.35 sucres on April 30.

April exports totaled 3,930,000 sucres in value, the principal item being cacao to the value of 3,440,000 sucres, of which 10 per cent went to the United States. Export commodity stocks reported on hand, in Spanish quintals, with their prices, are cacao superior, 60,050 at 48 sucres; rice, 4,000 at 32 sucres; hides, 828, at 55 sucres; cinchona, 285; coffee, 338, with very little cotton or kapok. April receipts of cacao of very good quality,

were 116,000 quintals. May deliveries should be about 100,000. Summer offers from Europe continue to be higher than those from the United States.

Transfer of administration of the Guayaquil-Quito Railroad to the Government is expected to take place about May 20, and traffic to be resumed some time about the first of June. The Government has effected a loan with which to pay the purchase price of the stock of the road. (Consul R. P. Butrick, Guayaquil, May 5.)

COLOMBIA

Exchange remains steady in Colombia at 101, which is slightly above par for the peso. American salesmen arriving at Bogota report that the business outlook is good. Coffee is moving from the interior toward the ports. Heavy rains damaged coffee trees in the departments of Cundinamarca and Tolima so that the crop may be less than last year. However, present heavy flowering on these trees gives promise of compensation in the November crop.

BRAZIL

Foreign trade figures of Brazil, stated in pounds sterling, show exports of 95,108,000 and imports of 68,949,000 for 1924, as compared with 73,184,000 and 50,543,000, respectively, in 1923. The leading export was coffee, 853,860 tons. Hides took second place, vegetable oils third, rubber seventh (21,568 tons), and cotton tenth (6,464 tons). The United States maintained first place in the foreign trade of Brazil throughout the year.

In his message to Congress, the President states the Government deficit for 1924 at 89,738,000 milreis, the

internal funded debt at 2,031,495,000 milreis, and the foreign funded debt at 102,623,294 pounds sterling, 336,206,500 francs and 67,050,500 dollars.

The coffee market is very slow and the Sao Paulo Government is said to have bought about 200,000 bags. Due to lack of coffee bills exchange has weakened considerably. The sight rate for May 8 reached almost 10 milreis to the dollar. (Commercial Attaché W. L. Schurz, Rio de Janeiro, May 9.)

TRINIDAD

Business conditions are still dull in Trinidad, with little improvement anticipated. Sugar grinding is almost completed and the output is expected to approximate 70,000 tons, compared with 52,000 last year. Very dry weather has prevailed throughout the island, but the rainy season is expected to set in shortly. British, Canadian, and American currency are now all at par and this should favor the expansion of American trade. (Consul H. D. Baker, Trinidad, May 9.)

PORTO RICO

No great improvement in the Porto Rican mercantile situation is noted and merchandise stocks are above normal. Collections are not improving rapidly, as has been usual at this period of the year. (Trade Commissioner L. W. James, San Juan, May 9.)

MEXICO

Business continues dull in Mexico with labor conditions unsettled. (Commercial Attaché Alexander V. Dye, Mexico City, May 9.)

MONTHLY CABLE REVIEWS

EUROPE

Samuel H. Cross, Chief, European Division

French Industrial Outlook Uncertain

Based on cable from Trade Commissioner D. J. Reagan, Paris, May 9

The general degree of production in France at present is satisfactory, although there is a lack of forward orders which will soon result in restricted activity unless buying is immediately resumed. Nevertheless, French manufacturers are becoming less pessimistic regarding the business situation.

A new Franco-German agreement regarding the sharing of the world potash market has just been signed. Press reports indicate that the signature of a Franco-German commercial *modus vivendi* is likely before the end of the month though no official confirmation of this report is obtainable.

Note Circulation Not Increasing.

The statement of the Bank of France for May 7 shows a note circulation of 41,000,000,000 francs, as compared with 43,100,000,000 francs on April 9, while the metallic reserve remains unchanged. Advances by the bank to the French Government now amount to 24,050,000,000 francs. Discounts of the Paris branch of the bank are again given separately, amounting to

4,870,000,000 francs in the May 7 statement, whereas at the end of February they amounted to only 2,590,000,000 francs.

Total debits and credits in the Paris clearing house during March reached 58,000,000,000 francs. This is a considerable advance over the low point of 48,000,000,000 francs reached during January. The average daily draft to cover was 1,122,000,000 francs in March, as compared with 919,000,000 francs in January.

Price Levels Slightly Lower—Unemployment Negligible.

The wholesale index number prepared by the Statistique Generale de la France showed a slight decline to 523 at the end of April from 524 at the end of March. The index number for vegetable foodstuffs, however, advanced four points, as compared with the end of the previous month, owing to renewed increases in the price of wheat. The index numbers for textiles and for minerals and metals also showed slight advances. Declines in all other classes accounted for the reduction in the general index number. A somewhat greater reduction is noted in the index number for retail prices in Paris, which was 409 at the end of April as compared with 415 at the end of March. However,

an increase in bread prices in Paris is expected as a result of rising quotations on wheat.

The number of unemployed in France on April 25 was 13,000, as compared with 15,000 at the end of March, according to the official record. No particular significance is attached to this decline, as unemployment is in any case practically negligible.

Coal Production Revives—Iron and Steel Business Weakens.

Production of coal and lignite in France during March advanced to approximately the January figure, after declining somewhat during February, chiefly as a result of the smaller number of working days. The price of reparations coke during May is unchanged from April. The proposed reduction of 30 per cent in the German transportation charges from the Ruhr to North Sea and Baltic ports is not expected to benefit French consumers of coal and coke.

Buying in the iron and steel industry is decreasing as a result of the unusual amount of forward buying during March. Prices are for the most part unchanged. April production is estimated at approximately the same as the March output, while recessions are expected during May unless domestic and foreign sales show an improvement.

Textile Industries Uncertain.

Cotton manufacturing in France continues with normal activity and stocks are decreasing. Buying of raw wool is hesitant in the expectation of lower prices, while manufacturing continues dull. Buying of silk is light and the industry is nervous over English tariff proposals. Linens are more active, but tulles are dull.

The market for raw hides is improved, with the exception of calfskins, which are weaker. Tanners are generally inactive and the weaker franc is causing the curtailment of foreign purchases with an increased demand for local hides. Exports of finished leather are satisfactory, but sales of shoes are unusually small. The retail shoe business is hampered by inclement weather.

Lumber Market Uneven.

The French market for lumber is unsteady, with activity at Bordeaux, and quietness at Lyon, Lille, Marseille, and Havre. Mines and industrial plants are delaying the placing of lumber orders and the stoppage of reconstruction work in the devastated regions has also had an adverse effect on lumber sales. Bad weather is delaying building throughout France. Automobile body building plants have decreased their demand.

The bulk of French petroleum imports during April came from the United States, which furnished 196,000 hectoliters of refined petroleum (kerosene) out of a total of 246,000 hectoliters, 732,000 hectoliters of gasoline out of a total of 992,000 hectoliters, and 180,000 hectoliters of lubricants out of a total of 202,000 hectoliters.

Agricultural Machinery Active—Industrial Machinery and Automobiles Quiet.

The great extent of activity in agricultural implement factories is indicated by the difficulty in making deliveries. Imports of agricultural machinery in the first quarter of 1925 showed a large decline as compared with the same period of 1924. Unusually heavy imports of harvesting machinery last year and the poor market in northern France account for the decrease. Exports of agricultural machinery in the first

quarter of this year showed a 60 per cent increase as compared with the corresponding period of 1924.

The industrial machinery market is quiet and domestic manufacturers are finding difficulty in obtaining banking accommodations. Increased German competition in the local market is anticipated as a result of the proposed Franco-German trade agreement. Machine tool imports have been 25 per cent higher than last year, Germany and the United States being the principal sources.

Automobile manufacturers have large stocks of finished machines and spare parts on hand and are making strenuous efforts to induce dealers to accept cars. Production schedules of the large factories have again been reduced. Business in light trucks is improving. Exports to Great Britain in anticipation of the revived duties have been heavy. Important price concessions are reported on large export orders.

Railway Receipts Advance.

The receipts of the principal French railways continue to show an advance as compared with last year. The total through April 15 of this year amounted to 2,651,000,000 francs as compared with 2,249,000,000 francs in the corresponding period of last year. Average daily car loadings in the first four weeks of April numbered 58,944 as compared with 62,976 in the first four weeks of March.

Agricultural progress is being retarded by the raw weather. The acreage planted to sugar beets is slightly less than last year; stocks on hand are diminishing normally.

Rumanian Outlook Somewhat Easier

Based on cable from Commercial Attaché Louis E. Van Norman, Bucharest, May 7

A slight improvement in Rumanian financial conditions is noted as a result of private debt settlements between British creditors and Rumanian debtors. The settlements stipulate that British creditors are to recover in sterling 35 per cent of their original loans, exclusive of interest, over a period of seven years.

Leu exchange is rising steadily. Quotations on the New York market were 0.48½ on May 8, 0.47½ on May 7, and 0.45 on May 1. Note circulation has declined again by 150,000,000 lei, from a total of 19,150,000,000 on March 7 to 19,000,000,000 on April 7.

Petroleum Production Increasing, but Exports Lagging.

Oil production is still increasing (187,000 tons in March against 168,000 tons in February and 170,000 in January). This outdistances the best pre-war attainment. Some additional transport facilities are becoming available, but export remains difficult. All petroleum companies have extensive operating programs.

Railroad rates were raised 30 per cent on May 1.

The lumber trade is active, there being exports to Greece and Egypt and inquiries from the United States. A daily average of 4,000 tons of sawn planks are reaching the ports from the interior.

Wheat Ordered Abroad.

Upward of 30,000 tons of wheat are said to have been ordered abroad, despite the fact that wheat ordinarily constitutes one of the prime crops and articles of export on which the country's prosperity depends. Cereal sowings for the coming year have declined 9 per cent, but crop prospects on this decreased acreage

are good. Corn exports continue light, with the exception of Yugoslav transshipments. This is probably on account of Argentine price competition.

Provisional export figures for the month of January are: Wheat flour, 10,000 tons; barley, 7,000 tons; oats, 3,000 tons; petroleum, 32,000 tons; lumber, 98,000 tons; firewood, 125,000 tons; and cattle, 32,000 metric tons.

The Argus cost of living index at the end of April stood at 4,498, as compared with 4,384 in March and 4,364 in February.

Private Radio Installations Permitted.

Laws permitting private radio installations and providing for the drastic regulation of emigration have been passed by the Chamber of Deputies. Other projects under discussion provide for the creation and development of free zones in the ports of Constantza, Braila, and Galatz for the standardizing and handling of the cereal crop and for the creation of a new fiscal autonomous régime for the State railways. The Chamber of Deputies adjourns on May 15.

German 1925 Budget Deficit

Cable from Assistant Commercial Attaché Douglas Miller, Berlin, May 8

Official budget estimates for the fiscal year of 1925, dating from April 1, provide for German tax receipts of 6,527,000,000 gold marks as compared with 5,243,000,000 for the 1924 fiscal year. Total expenditures are estimated at 7,205,000,000 marks, of which Federal

expenditures amount to 4,990,000,000 and allocation of provincial governments to 2,305,000,000 marks. The net deficit of 679,000,000 marks is to be covered in part by the sale of railway securities amounting to 430,000,000 marks. The remaining deficit will be covered by the flotation of a Government loan.

The new budget is drawn up with the same conservatism shown in the budget for 1924 when actual revenues were 40 per cent above estimates. It is considered probable that with the continuation of present business activity, the actual deficit will be considerably less, with the possibility of a surplus.

Wage Increases—Time Money—Prices.

As a result of labor arbitrations, average wages were increased 2.5 per cent as compared with the February figures which were for unskilled labor 55.5 pfennigs and for skilled labor 77.7 pfennigs per hour. Increases were most marked in the textile and paper industries, while other advances included the metallurgical, chemical, woodworking, building, and rubber industries. The seasonal decrease in unemployment due to agricultural activity has brought this figure down to the lowest level since the early part of 1923.

Time money in Berlin is now at 9.4 per cent per annum plus commission charges that average 4 per cent. This decline is attributed in part to the reduced stock exchange activities and to the influence exerted by the Reichsbank toward lower interest rates.

Wholesale prices continue to fall and the Frankfurter Zeitung stock index has decreased from 3,000 to 2,900 during the past week.

IMPORTS OF PRINCIPAL COUNTRIES AND SHARE FROM U. S., 1923

H. M. Strong, Geographic Expert, Division of Statistical Research

The world import map on the cover page of this issue of COMMERCE REPORTS reveals some rather striking relations, both in the import trade of the world and in the position which the United States occupies in that trade. The countries of western Europe account for by far the largest share of the world's imports and also take the largest value of imports from the United States. Adjacent North American nations procure the greater part of their imports from the United States, though in total value these imports are not as great as those going to Europe.

The United Kingdom the Greatest Buyer in World Markets.

This outline map is drawn on an equal area projection, which means that a square inch near the poles stands for as many square miles as a square inch near the equator.

A true comparison of areas can be made from the equal area map, and it is significant to see that the United Kingdom, one of the small countries, is the greatest buyer in world markets, as well as the most important purchaser of goods from the United States.

On the Mercator map, which commonly has been used for depicting statistical facts, the area of the countries toward the poles is very much exaggerated. For instance, on the Mercator map Greenland appears to be larger than South America, though in reality it is considerably smaller. Similarly on the Mercator map the United States is almost twice as large as Brazil, though, as a matter of fact, Brazil has a greater area than continental United States. Again, in western Europe, Sweden appears to be larger than France, though it is many miles smaller in area, while the

United Kingdom, which is little more than half of France in extent, appears to be almost as large as that country.

France, Germany, Denmark, Netherlands, and Belgium Important Purchasers.

France and Germany, by no means as large as China and India, are importing considerably more than these countries, due to their intensively developed manufacturing industry, which means that there is need for raw materials in the factories and foodstuffs for the people.

Three small countries in northwest Europe—Denmark, Netherlands, and Belgium—are shown to be important purchasers in the markets of the world. The two latter are only about one-tenth the size of the United Kingdom, yet the value of imports for each is considerably more than one-tenth those taken by the United Kingdom.

Imports into Canada, Argentina, and Italy.

A glance over the remainder of the map puts six other countries into approximately the same class as Netherlands and Belgium in value of imports from all countries, namely, Canada, Argentina, Italy, British India, China, and Japan. But note the vastly different areas, populations, and conditions in those several countries as well as the widely varying proportion of imports which each obtains from the United States.

Canada has an area somewhat larger than continental United States and a population of about 8,000,000, a large proportion of which is living in the St. Lawrence lowlands. Canada imports nearly 70 per cent of

its foreign purchases from the United States, and it is the large value of these goods which is principally responsible for the important position that Canadian imports, as a whole, occupy in world trade. Most of these goods are consumed in Canada, though some are re-exported to the United Kingdom or other European countries.

Argentina, less than one-third the area of Canada, has about the same number of people as Canada but buys more than three-fourths of its imports from countries other than the United States. A large part of these are manufactured goods imported for consumption into Argentina.

In Italy we have a small country but little more than 100,000 square miles in area, or about the size of Indiana and Illinois combined, and a population of 38,000,000, and somewhat more than one-fourth of its imports come from the United States.

Three Asiatic Countries Compared with Europe and the Americas.

The three Asiatic countries form, in some ways, a rather interesting contrast to the countries of Europe and the Americas. Large and dense population characterizes all three of them. However, a comparison of the three circles shows that Japan, the smallest of the group, with an area only slightly larger than that of

the United Kingdom, buys most generously of the three in world markets and more than one-fourth of its imports come from the United States. Cotton, wheat, and lumber figure largely in these purchases.

Another fact is worth noting: Japan, with an area of less than 150,000 square miles, possesses a population of almost 58,000,000, while China, with an area of more than 4,000,000 square miles, has a population of more than 400,000,000, while British India numbers more than 300,000,000 on its somewhat less than 2,000,000 square miles of area.

Japan, with its industrial development, has attained a more important position in world markets than have, as yet, China or British India, where intensive agriculture is the predominant economic activity. The trade of China, however, is confined almost entirely to China proper, which is that small part of eastern China with humid productive lowlands. The great desert reaches of Tibet, Chinese Turkestan, and Mongolia will never be populated densely and so demand much in the way of imports. China, fronting on the Pacific, is buying somewhat less than one-fourth of its imports from the United States, while British India is making only about 5 per cent of its purchases from the United States.

[In the next issue a map showing the distribution of world population will be published.]

TRADE SITUATION IN NEAR-BY LATIN-AMERICAN MARKETS

R. A. Lundquist, Chief, Electrical Equipment Division

A recent survey of business conditions in Venezuela, Colombia, Central America, and Mexico, while devoted primarily to the electrical field, indicates that business in the two first-mentioned countries is fairly good; in Central American republics, with the exception of Honduras, quite brisk, while in Mexico buying is generally from hand to mouth.

The Business Situation in Venezuela.

In Venezuela the development of oil resources is undoubtedly the basis for the satisfactory business situation. Governmental conditions are stable and there appears to be good employment throughout the country, with wages, especially in the oil regions, at a level which gives the people a fair purchasing power.

A hampering feature of our trade with Venezuela is the rigid manner in which customs officials enforce the tariff and customs laws, insisting upon the goods being declared in the precise terminology of the Venezuelan tariff. The slightest irregularity or omission in the documentation leads to fines, or possibly confiscation, with fines sometimes in addition. In the case of articles not specifically mentioned in the tariff it is difficult to secure from the customhouse authorities a ruling as to how this should be declared, inquiries of that nature being indifferently replied to only after long delay. In the case of doubt it is advisable for our shippers to consult the Bureau of Foreign and Domestic Commerce or a Venezuelan consul.

Conditions in Colombia—Central American Markets Favorable.

Hardly enough time was spent in Colombia to judge conditions there, but in the areas visited merchants generally felt that business was satisfactory, though it

hardly appeared to be quite up to the level of that in Venezuela, where the oil industry exerts a greater influence on the prosperity of the country than it does in Colombia.

With a steady fruit market and high prices for coffee the business men in most of the Central American republics report satisfactory business conditions. In Salvador and Guatemala especially the development of the countries is going forward steadily. Not only will these countries be tied together by railway lines within the next year or so, but in Guatemala especially there is a considerable amount of road work being done. In the city of San Salvador several million dollars are being spent in a complete repaving of the city with asphaltic concrete, which will undoubtedly react to produce improvements of a similar nature in other Central American cities of importance.

As a result of the good coffee market there should be a steady increase in land being devoted to that crop, and plantation owners are spending money in improvements. More and more machinery is being applied to the processing of coffee, and small water powers throughout Salvador and Guatemala are being utilized as sources of energy.

Conditions in Mexico.

Business in Mexico is in a state of uncertainty, and as a result merchants apparently are buying only to fill in their lines and are holding their inventories as low as possible. Wages are at a relatively high level, while relations between employees and workers are not such as tend toward an increased efficiency of labor. Strikes have been frequent and there is considerable unrest among the labor element. Mexico is a country where

continued development work is still a factor in its prosperity, and undoubtedly the dampening effect of strikes and other labor disturbances react to lessen the flow of money available for new development.

The automobile industry appears to be an exception to the general average of present business in Mexico, and the road-development work planned will tend to maintain rather satisfactory conditions in this field.

There is heavy emigration of Mexican labor to the United States, and while, beyond doubt, the restrictive legislation imposed by the United States and the consequent demand for unskilled labor is one factor in the situation, it is nevertheless true that there is heavy emigration from agricultural areas of Mexico of the very class which the much-talked-of agrarian legislation is supposed to be helping.

FINLAND CONCENTRATING ON AGRICULTURAL DEVELOPMENT

Assistant Trade Commissioner Emil Kekich, Helsingfors

The recent proposal of the Diet of Finland to raise funds for the promotion of agriculture, specifically by supplying credit to farmers for equipment, cultivation, and improvement of land, presages a development of unusual importance. This movement is in large part due to the steadily increasing influence of the agrarian element, and it has received added stimulus from the depression in certain Finnish industries suffering particularly from the failure of the Russian market. This demand for farm capital is also the natural consequence of the agrarian reform instituted in 1918 and 1919 through land-purchase legislation, which gave considerable impetus to the demand for equipment, buildings, labor-saving machinery, and agricultural instruction.

Relative Importance of Agriculture.

The significance of the efforts of the Finnish Government to improve agricultural conditions is perhaps best illustrated by the fact that, despite a comparatively severe climate, agriculture is the foremost factor in the economic life of the country. Finland's population numbers about 3,500,000, over 65 per cent of which is engaged either directly or indirectly in agricultural and forestry pursuits. The value of the harvest increased from about 300,000,000 Finnish marks in 1911 to a total of 4,086,000,000 marks in 1922, which represents an advance of approximately 40 per cent if the intervening exchange depreciation is taken into account.

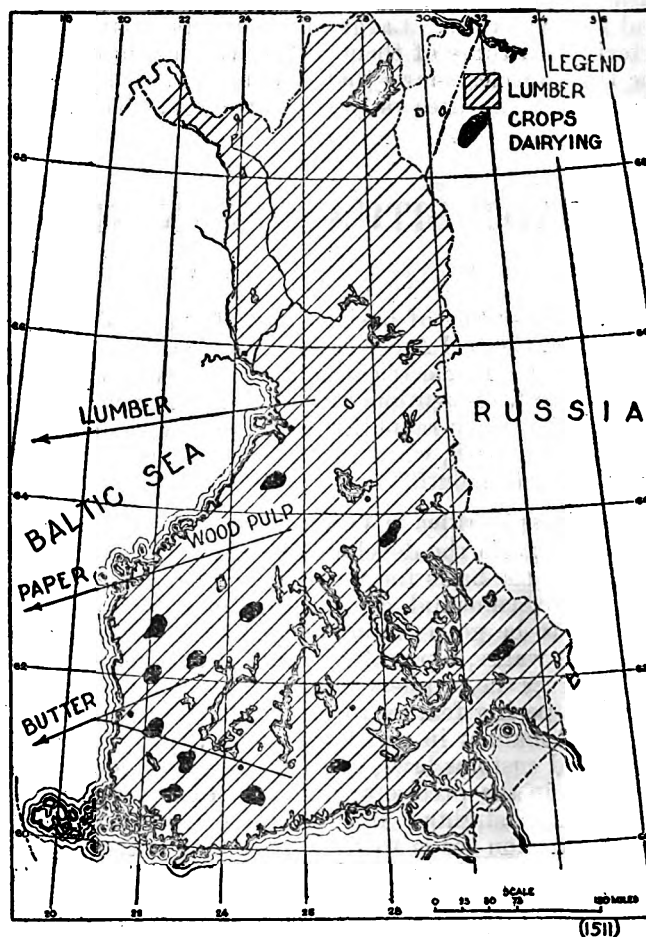

The total capital invested in agriculture in 1923 was estimated at 18,378,000,000 Finnish marks, or about \$491,000,000, including land, improvements, buildings, livestock, implements, crop and stocks, but excluding forest resources belonging to farmers. The growing forests, which are of prime importance in the wealth of the nation, were placed at the minimum estimate during 1924 of between \$500,000,000 and \$600,000,000, the combined agricultural and forest wealth totaling about 60 per cent of the entire national wealth.

Expansion Under Government Aid.

The area of cultivated land in Finland was increased between 1910 and 1920 by about 8 per cent, the total figure for 1920 being 4,991,593 acres. In 1921 this acreage was increased to 5,067,655, and in 1923 to 5,199,891. This measure of improvement was due to Government support; to the system of land purchases, which caused wider distribution of land; to the extent to which tenant farmers availed themselves of the opportunity to own land; to the cooperative movement; and to improved methods.

Under the land purchase act of 1918-19 every farmer tenant was given the opportunity to own land through

the payment of a redemption or purchase price, in Government guaranteed bonds, to the landowner. In 1901 only about 110,000 farms were cultivated by their owners. In 1920 this figure, as the direct result of the land purchase act, was raised to 182,500, the increase occurring mostly in the number of small or medium sized farms, until they now predominate. The legis-

Finland—Land utilization related to exports

lation has been of great social, political, and economic benefit to the nation in urging the Finnish farmer to maintain and improve his position.

Modern Farm Equipment Needed.

While Finland's progress in agriculture since the war has been marked, its resources in that field admit of much greater development; but certain improvements are vitally necessary to make permanent the

present status. The principal obstacles to the fulfillment of these needs are insufficient capital and lack of education. Hand labor, still used extensively in farming, is estimated to absorb about 65 per cent of the total expenditure for agricultural production. This proportion can be materially cut down by increased use of modern farm equipment.

The necessity of developing highways and of using modern equipment in working the farms is generally recognized, as well as the need of producing fertilizers and of reclaiming the extensive peat bogs in the country. The climate and soil are particularly adapted to forage crops. This fact has given rise to important dairying and cattle-raising activities, which it is the plan of the Finnish State to intensify. Furthermore, where prior to the war Finland imported about 60 per cent of its consumption of grain, this demand has now been reduced to about 50 per cent by the encouragement of home-grown crops.

Production Profits Comparatively Small.

The earnings of Finnish agriculture have been comparatively low up to the present time, and the average Finnish farmer has been seriously handicapped by lack of capital. The net profits of small farms in the period 1912-1914, according to State calculations, amounted to 5.2 per cent; of medium-sized farms, 4.2 per cent; and of large farms, 3.6 per cent. In 1921-22 small farms showed net earnings of 8.5 per cent; medium-sized, 9.4; and large, 9.2. In 1922-23, a good crop year, small farms showed net earnings of only 2.7 per cent; medium-sized, 5; and large, 7.7. In the 1923-24 period, a year of comparative dearth, small farms had a net profit of only 1 per cent; medium-sized, 3.7; and large, 5.5 per cent.

The small farms have been burdened particularly by greater overhead for buildings, implements, and livestock. According to 1922 figures, on the small farms a total capital of 1,035 Finnish marks per hectare was involved for implements, 1,721 for livestock, and 3,443 for buildings. The corresponding figures for medium-sized farms were 704, 1,213, and 2,692; and for large farms 539, 927, and 2,106. (One hectare equals 2.47 acres. The Finnish mark had an average value of 2.14 cents in 1922, of 2.673 cents in 1923, and of 2.508 cents in 1924.)

Such other factors as more intensive cultivation on the smaller farms, division of labor, and high labor costs inevitably led to the conclusion that the full possibilities of agriculture in the country could be exploited only through the widespread adoption of modern methods and implements and through drainage of the numerous lakes and swamps.

Need for Agricultural Credit.

Prior to 1916 credits to small and medium-sized farms were handled chiefly through the Mortgage Association of Finland, which is concerned mostly with loans on real estate in urban centers. Up to 1916 this institution had loaned a total of about 120,000,000 Finnish marks in this manner. During the period 1917-1920 the farmers liquidated outstanding obligations. After 1921, when inflation was checked, there was a new increase of indebtedness on the part of the rural population as materials, wages, and cost of production rose. Two items that figured conspicuously in these new obligations were the rise in labor costs and the shortage of cash reserves for capital improvements which forced farmers to make short loans at high rates.

Mortgage loans decreased from 85,000,000 Finnish

marks in 1917 to 83,000,000 in 1923, while short-term loans in the same period increased from 91,000,000 to 368,000,000. Loans of institutions, such as savings banks that granted credits to farmers, increased from 96,000,000 marks in 1917 to 198,000,000 in 1923. Co-operative societies increased their loans to farmers from 8,000,000 in 1917 to 142,000,000 marks in 1923.

In the period 1912-1914 the average indebtedness of the Finnish farmer amounted to 16.4 per cent of his assets, whereas in 1921 it had fallen to 6.6 per cent. In 1922 the trend was upward, attaining a percentage of 7.5. At present it is approximately at the same level as in the 1912-1914 period. It has been estimated that Finland requires a total agricultural credit of 3,300,000,000 Finnish marks, and according to inventories of the present financial situation, about 50 per cent of this sum must be secured abroad.

Government-Loan Project.

In February a proposal was submitted to the Finnish Diet that during the period 1925-1928 the Government should raise annually a foreign loan of 300,000,000 Finnish marks to meet the need of credit for agriculture, and should lend this to farmers on easy terms at a maximum of 6 per cent. The medium through which this distribution might be best effected was considered to be the Rural Banks' Central Credit Society, farmer members of which would be jointly and individually responsible for the loans. The amount of the loan should not exceed a maximum of 50 per cent of the value of the farm, buildings, and growing forests to be included in the appraisal. Another important feature is the provision that in the event of the two principal Finnish credit organizations—the Rural Banks' Central Credit Society and the Mortgage Association of Finland—finding it possible in the future to issue bonds for agricultural and other credits, these bonds shall be tax exempt and the institutions themselves shall be free from taxation.

Foreign Capital Already Applied to Agriculture.

On March 17 the Diet authorized the Government to float one or more loans abroad to a nominal total of 800,000,000 Finnish marks. This is to be used primarily for the Imatra hydroelectric power plant and secondarily for colonization credit, for granting working capital to small farmers, and for improving conditions in agriculture generally. The authorization thus given is to be valid until the end of 1926. Under it a loan of \$10,000,000 (400,000,000 marks) has already been contracted in the United States, and \$4,500,000 of this sum has now been allotted by the Government for agricultural credits. The authorization also provides that during 1925 a short-term credit in foreign currency to the extent of 300,000,000 marks may be raised and similarly utilized.

Postal Agreement, Irish Free State and New Zealand

A convention for the direct exchange of money orders between the Irish Free State and New Zealand effective April 1, is announced as concluded. Under this agreement the money-order business between the two countries will be direct, instead of through the money-order department of the British post office as heretofore. Furthermore, money orders will no longer be subject to the deduction in London of "through" commission, at the rate of 2d. per pound sterling. (Consul Harold M. Collins, Dublin, March 31.)

FRANCE SETTLES GOLD-FRANC CONTROVERSY WITH CHINA

Indemnity Proceeds to Be Released for Rehabilitation of Banque Industrielle and Franco-Chinese Enterprises

Elgin R. Groseclose, Special Agent, Finance and Investment Division

Cable dispatches from Commercial Attaché Julean Arnold, Peking, and reports from Commercial Attaché Chester Lloyd Jones, Paris, indicate that the following are the principal features of the agreement on April 12 between the French and Chinese Governments in settlement of the gold-franc controversy which arose in connection with the payments of France's share in the Boxer indemnity:

1. The indemnity due France, which now amounts to \$45,500,000, continues to be a first charge on the Chinese customs revenue until December 1, 1947, reffective as of December 1, 1924. The payments for the period 1922 (when the moratorium on the indemnity ceased) to 1924 are to be released unconditionally to the Chinese Government, and in lieu thereof the total time of payments will be extended two years, 1945 to 1947. The amount thus released amounts to approximately 10,500,000 silver dollars (1 silver dollar=\$0.54).

2. The indemnity is to be paid in gold, according to the principles involved in the French law of February 9, 1923, but the French Government has abandoned its insistence that the payments be made in gold francs in favor of an agreement by which payments are to be made in gold dollars.

3. The larger portion of the proceeds of the indemnity payments are to be devoted to the rehabilitation of the Banque Industrielle de Chine. This will be accomplished by an exchange of the present outstanding obligations of the Banque for 5 per cent gold-dollar bonds secured by the Boxer indemnity payments. The total value of these new bonds will amount to \$43,893,000. The debt of the Chinese Government to the Banque Industrielle is to be extinguished, and in addition that Government will receive 10,000,000 francs in paid-up shares of the Société de Gérance.

The balance of the indemnity payments due France are to be devoted to Franco-Chinese activities of a public and charitable nature.

Dispute Dates from 1922.

The gold-franc controversy, which has just been settled, dates from 1922. In 1921 the Banque Industrielle, one of the largest French institutions in China, became insolvent. The French Government at that time offered to remit its share of the Boxer indemnity on condition that such part of it as was necessary should be devoted to the rehabilitation of the Banque. For this purpose it was provided that a holding company, the Société Française de Gérance, should be created with a capitalization of 10,000,000 francs, subscribed chiefly by a consortium of French banks, and that the unliquidated debt of the Banque Industrielle should be consolidated in a new series of obligations assumed by the holding company. The Société Française de Gérance has been unusually successful so far in liquidating the affairs of the Banque. During the first nine months of its first year of operation it earned a profit of 3,075,236 francs. The second year its profits were 12,835,460 francs.

The dispute over the payment in gold of France's share of the Boxer indemnity arose at the time of the formation of the Société Française de Gérance. The

Chinese Government during the war period (1917 to 1922) had enjoyed a moratorium. By 1922, when payments on the indemnity were to be resumed, the foreign-exchange value of the franc had depreciated greatly. The Chinese Government contended that its indemnity payments should be made in francs by telegraphic transfer at the current rate of exchange, basing its contention on the agreement made in 1905 with the French Government that the Boxer indemnity payments (stipulated in haikwan taels) should be made in telegraphic transfers at the rate established in 1902 for gold francs in terms of taels; that is, on the basis of 1 tael equals 3.75 francs. The Chinese Government therefore held that the gold franc stipulated in the 1905 agreement did not refer to an amount in gold but to an amount in the standard currency of France, at that time the gold franc. The French attitude has been that payment was stipulated in so much gold, and this position has had the backing of the other Boxer indemnity powers.

History of the Boxer Indemnity.

The Boxer movement, which culminated in the Boxer uprising in 1900, requiring foreign intervention, began largely as the result of the occupation of Kiaochow in Shantung by Germany in 1894 in retaliation for the murder of two German missionaries. The attack on the foreign legations, which lasted from June 20 to August 15, 1900, when international troops came to the rescue, was settled by the protocol of 1901, signed by China and 14 powers. Under it China agreed to specific punishment of guilty officials and the payment of an indemnity of 450,000,000 haikwan taels, bearing interest at 4 per cent, spread over a period of 39 years and secured by the customs revenue. The principal and interest for the 39 years amount to 982,239,150 taels.

The amount of the indemnity was distributed among the powers as follows:

Distribution of Boxer indemnity

Countries	Percentage	Haikwan taels	Foreign currency

Indemnity Suspended in 1917—Remission.

In 1917, upon China's entrance into the World War, it was agreed to suspend the payment of the indemnity for five years. On May 25, 1908, the United States Congress had passed a resolution authorizing the Pres-

ident of the United States to return to China the sum of \$10,785,281. Later a further sum of \$1,175,836 was remitted, and again in 1921 the President was authorized to remit all further payments due the United States, amounting to \$6,137,553, exclusive of interest accretions.

The favorable results that have followed the American action in the remission of indemnity has led to similar proposals by other powers. Great Britain in 1922 decided to devote the further installments of the British portion to "purposes mutually beneficial to

Great Britain and China," and a bill to this effect passed its second reading in Parliament on December 11, 1924. Japan and Italy have also discussed similar action. Outside of Germany and Austria, whose payments were extinguished by the treaty of Versailles, and Russia, who agreed to remit the Russian share upon the Chinese withdrawal of its recognition to the Russian Imperial Embassy in Peking, and due satisfaction of certain prior claims, the action of the French Government is the first to follow the American example in the remission of the indemnity.

NATIONALIZATION IN THE RUMANIAN PETROLEUM INDUSTRY.

Acting Commercial Attaché L. E. Van Norman, Bucharest, March 25

There are already visible in Rumania some of the effects of the so-called "nationalization of the subsoil" policy, which was inaugurated less than a year ago by the enactment of the mining law promulgated July 3, 1924, and in the petroleum industry, at least, the outlines of the future exploitation program have begun to appear.

Rumania is the largest oil-producing country in Europe except Russia. Although its annual output is still less than 2 per cent of the world's total, its large oil reserves are regarded as among the country's greatest natural assets, and are of interest outside the country itself on account of the large investment of foreign capital in the Rumanian petroleum industry.

Crude Output Increasing Steadily—Production Data.

The best year for oil production in Rumania was 1913, the last normal pre-war year, when the total output amounted to 1,885,225 metric tons of crude. The figures compiled by the "Moniteur du Petrole Roumain" for 1924 reveal a total production for that year of 1,851,231 tons, or only about 34,000 less than the previous record. It is very probable that the year 1925 will show a substantial increase over 1924. In fact, crude production in Rumania has been increasing so steadily and regularly during the past three years that it seems possible to calculate it in advance with a fair degree of accuracy.

The following table shows the production, by quantity and value, of crude petroleum since 1913:

Rumanian crude petroleum production

Years	Production	Value	Years	Production	Value
	<i>Metric tons</i>	<i>Lei¹</i>		<i>Metric tons</i>	<i>Lei¹</i>
1913	1,885,225	131,965,750	1919	920,437	138,085,550
1914	1,783,947	107,036,680	1920	1,037,048	517,028,000
1915	1,673,145	83,657,250	1921	1,163,242	1,163,242,000
1916	1,244,093	74,647,380	1922	1,365,765	2,365,765,000
1917	517,491	77,623,650	1923	1,515,637	4,151,961,000

¹ 1 lei = \$0.1930 at par; \$0.019136 at average exchange for 1920; \$0.012519 in 1921 \$0.006969 in 1922; \$0.004937 in 1923; and \$0.004982 in 1924.

Leading Companies—Capacity and Transportation.

The most conspicuous of the companies engaged in production in 1924 was the Astra-Romana, a Royal Dutch-Shell company, whose total production for the year amounted to 450,589 metric tons of crude. This record was followed by that of the Steaua-Romana (Rumanian, British, and French), the Creditul Minier (Rumanian), the Phoenix Oil & Transport Co. (Brit-

ish), and the Industria Romana de Petrol (Rumanian). Of the remaining seven leading producers, one was American and the others represented Rumanian, French, Belgian, and British capital.

While there seems to be no reasonable doubt of a steady increase in the production of crude petroleum in Rumania, it is a question what can be done with the increased output of oil under existing economic and financial conditions in the country. The refining capacity available is still probably twice as great as the actual production, but transportation facilities are inadequate. The one pipe line, from the refining center (Ploesti) to the sea at Constanza, seems unable to function satisfactorily and railroad facilities, such as tank cars, locomotives, and terminal facilities, appear to be less and less equal to the task of transporting refined products. There is a good market for Rumanian oil in the Mediterranean and central European countries, and in the Levant generally. Lack of transportation, however, is a handicap, and, from all angles, it would seem that if the Rumanian oil industry is to develop to its full capacity something must be done to overcome the growing difficulties of these conditions.

New Drilling Accomplished—Exports of Refined Products.

According to data prepared by the Bucharest financial weekly, Bursa, 137,751 meters of new drilling were accomplished during 1924. For the five preceding years the record shows 16,002 meters in 1919, 18,480 in 1920, 47,127 in 1921, 84,052 in 1922, and 120,473 in 1923.

The small amount of drilling in the year immediately following the war was due, of course, to the abnormal conditions resulting from the German occupation and the destruction of the wells and field equipment after the evacuation by the Rumanian and other allied forces. By the beginning of 1925, not counting hand wells, there were 1,012 wells actually in production and 636 wells drilling, a record never before equaled in Rumanian history. The crude production of 1924 yielded at first distillation 363,177 tons of gasoline, 277,531 of refined oil and distillate, 150,366 of gas and lubricating oils, and 814,153 of residue.

A steadily decreasing proportion of the crude production has been refined for exportation during the postwar years. In 1913, 55 per cent of the production was refined and exported; in 1923 the percentage was 25, and in 1924 only 23.5 per cent. The exportation of crude and fuel oil is not permitted, although the Government has been urged to permit the exportation of the latter, as stocks on hand are said to be increasing

steadily. Exports of refined products amounted to 383,217 tons in 1923 and to 435,468 in 1924, the total in the latter year being divided into 162,566 tons of gasoline, 210,834 of kerosene, 26,809 of lubricating oil, and 35,259 of gas oil.

Larger Domestic Demand from New Provinces—Foreign Destinations.

The obviously increasing domestic consumption is largely in the new Provinces, which have so far added nothing to the oil resources but considerably to the country's capacity for consumption. The partially industrialized areas of Bucovina and Transylvania continually call for more gasoline, lubricating, gas, and fuel oils from the old Kingdom. Moreover, in the old Kingdom itself and in Bessarabia, the demand for kerosene has greatly increased.

The principal countries importing oil from Rumania, in approximately the order named, are Austria, Yugoslavia, Hungary, Bulgaria, Germany, Turkey, Egypt, Great Britain, and Greece.

Foreign Capital Invested—Legislation.

It is not possible to give definite figures for the investment of foreign capital in the Rumanian petroleum industry. An estimate of £35,000,000 (approximately \$170,000,000) has been made by a competent English authority for the close of 1924. It is estimated that fully 75 per cent of this amount has been furnished by foreign interests.

Any legislation by the Rumanian Government affecting the status of these foreign holdings, therefore, must have far-reaching consequences on the industry itself. The provision in the constitution as to the "nationalization of the subsoil," and the methods and regulations in the mining law of 1924, have for their principal object what the present liberal government calls "freeing the country's petroleum industry from the domination of foreign capitalists and the building up of a national industry in oil." At the same time, the Government has promised that "rights" (leases, concessions, etc.) acquired prior to the adoption of the new constitution in 1923 will be respected in both letter and spirit.

To Secure New Concessions Company Must Be Nationalized.

The principal feature of the mining law affecting foreign companies operating in Rumania is the requirement that in order to secure new concessions (all unleased lands, since the adoption of the new constitution, are considered State lands) such companies must agree to transform themselves into "nationalized enterprises" within a period of 10 years—in other words, permit Rumanian citizens to acquire a 55 per cent stock ownership in the company, with Rumanian citizens in control of the company's management. The part of outstanding interest to foreign companies is naturally that which affects their continued existence in this country unless they become "nationalized."

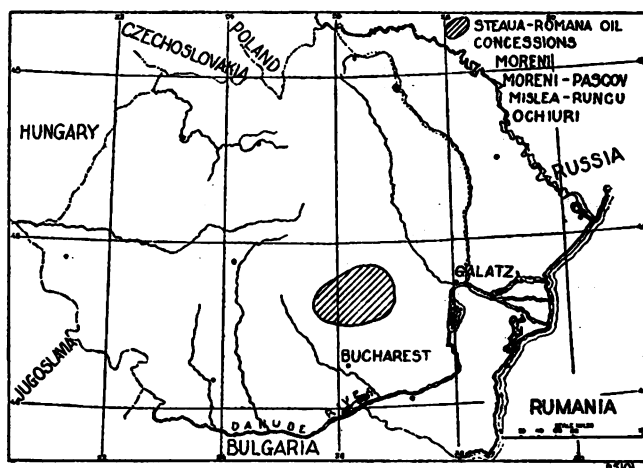

Lands Awarded to Steaua-Romana.

While, as a matter of fact, the effect of the mining law is not yet visible on the large foreign companies in general, "nationalized" or "unnationalized," in the case of the Steaua-Romana, the most important German enterprise in Rumania before the war, nationalization arrangements apparently have been made. The Monitorul Oficial has promulgated a so-called "Journal of the Council of Ministers," allotting to this company 9 perimeters of State oil lands for exploitation.

These 9 perimeters are situated in the districts of Moreni, Moreni-Pascov, Mislea-Runcu and Ochiuri, as indicated in the accompanying map, and cover a total area of approximately 125 hectares or a little more than 250 acres. A total area of 495 hectares will be allotted.

In accordance with the requirements of the mining law, the Steaua-Romana is obliged to pay a tax of 10,000 lei for each hectare obtained in concession as well as all district and communal taxes involved in the concessioning and exploiting of oil lands. The company, furthermore, will have to pay royalties (in nature) to the State from all production obtained from these lands.

An interesting condition under which these lands are awarded to the Steaua-Romana is that the Government (as laid down in the Journal of the Council of Ministers above referred to) fixed the maximum number of wells that can be put down during the life of the concession at 309, with the further requirement that 151 wells are the maximum number that can be drilled within a period of six years from the concessioning of the lands. The journal fixes the duration of the con-

cession at 30 years for the districts of Moreni and Pascov and 20 years for the Mislea-Runcu and Ochiuri districts.

The Steaua-Romana, with its 125 hectares of new State lands added to its extensive holdings of privately owned lands, and its modern refinery (the largest in Rumania) can now, apparently, be considered as practically "nationalized." It seems to be the general belief that within another year or two at the most the largest crude producers in Rumania will be the Steaua-Romana, Creditul Minier and the I. R. D. P. This would mean that the bulk of the country's crude-oil production would be under Rumanian control, and the "national oil policy," accordingly, would largely be carried into effect.

Text on Licenses and Taxes in Madagascar Available

The Division of Commercial Laws has received from Consul James G. Carter a complete text in French regarding licenses and taxes in Madagascar, covering, among other subjects, trading and professional licenses, personal taxes, and consumption taxes. It may be borrowed on request.

TEXTILES

Edward T. Pickard, Chief, Textile Division

UNITED STATES PRODUCTION OF COTTON GOODS IN 1923

Preliminary Figures Give Value of United States Cotton Goods Production at \$1,901,126,000 for 1923—74 Per Cent of Total Value in Woven Goods Over 12 Inches in Width

The cotton-manufactures industry in the United States comprises three branches—cotton goods, cotton small wares, and cotton lace goods. The cotton-goods branch, which is by far the most important, includes mills engaged primarily in any of the preliminary processes preparatory to spinning, in spinning, or in the weaving of piece goods. Both spinning and weaving are commonly performed in the same mill in the United States, but the finishing processes of dyeing, bleaching, and printing are usually carried on in separate plants. Although most mills spin yarn for their own use, a considerable number also spin yarn for sale to manufacturers of knit goods, small wares, insulated wire, and various other articles.

Growth of the Industry Since 1899.

The manufacture of cotton goods in the United States experienced an uninterrupted growth from census to census between 1899 and 1919, measured by value of products, which rose from \$332,806,000 in 1899 to \$2,125,272,000 in 1919. Production declined in 1921 to \$1,278,221,000, but in 1923 the total value of all products of the cotton-goods branch reached \$1,901,126,000, according to preliminary figures of the Bureau of Census, Department of Commerce. The 1923 total value represents an increase of 48.7 per cent over the 1921 output but a decrease of 10.5 per cent from that of 1919, while the volume of goods produced in 1923 exceeded by 1,450,000,000 square yards the total for 1914, the previous high-record year in point of quantity.

Location of the Industry—Increasing Importance of the South.

The cotton-goods industry is confined principally to New England and the South, although there are cotton mills in 30 States. On March 31, 1925, the Census Bureau reported 37,809,876 spindles in place in the United States, of which 17,431,118 were located in the cotton-growing States (mainly those lying along the Atlantic seaboard), 18,409,856 in New England, and the balance, 1,968,902, in other States. Massachusetts, possessing 11,629,728 spindles, easily takes first place, followed by North Carolina with 5,955,210, and South Carolina with 5,295,508. The Census Bureau's monthly reports on the activity of the cotton-spinning industry did not show spindles in place separately for New England until August, 1921. At the close of that month the total number of spindles in place in the United States was 36,595,232, of which 15,859,712 were in the cotton-growing States, 18,701,948 in New England, and 2,033,572 in other States. In recent months the number of spindles in place in New England has steadily

declined, while corresponding gains have been registered in spindles in the South.

Output of Cotton Goods Larger in 1923 Than in 1921.

Almost 74 per cent of the total value of the production of the cotton-goods industry in 1923 was in woven goods, over 12 inches in width, the output of which amounted to 8,264,220,000 square yards, valued at \$1,398,902,000—an increase of 23.3 per cent in quantity and of 46.2 per cent in value over that of 1921. The high percentage of gain in value to a large extent reflects the increased cost of raw cotton in 1923 as compared with 1921. The average price of middling upland cotton at New York was \$0.151 for the calendar year 1921, and \$0.287 in 1923, or almost double that of 1921. The production of practically every class of cotton cloth was larger in 1923 than in 1921, but marked gains were made in the production of tire fabrics and cords, and in cotton goods mixed with silk or rayon.

A considerable expansion was shown in the output of the southern mills, the production of the cotton-growing States (Alabama, Arkansas, California, Georgia, Kentucky, Louisiana, Mississippi, Missouri, North Carolina, South Carolina, Tennessee, Texas, and Virginia) increasing from 3,620,559,000 square yards, valued at \$422,342,000, in 1921 to 4,767,309,000 square yards, with a value of \$706,514,000, in 1923, while that of the New England States totaled 2,809,820,000 square yards, valued at \$444,436,000, in 1921 and 3,143,581,000 square yards, with a value of \$563,109,000, in 1923. These figures indicate the extent to which cotton manufacturing is increasing in the South, 1923 being the first year that the output of the cotton-growing States exceeded that of New England both in quantity and value. The unit cost of goods produced in New England in 1923 was about \$0.18 per square yard, while that of the South was \$0.15.

Classes of Goods Produced in the North and the South.

In general, mills in New England produce goods of finer construction and more subject to style fluctuations than do the mills in the South. In volume, sheetings and print cloths constituted 48.6 per cent of the 1923 output of the cotton-growing States, other important items being ginghams, shirtings, drills, denims, cotton flannels, tire fabrics, towels and toweling. Sheetings and print cloths also comprised about 27.8 per cent of the production of woven goods in New England mills during 1923, but the value of the output of a number of classes of fine goods closely approximated that of sheetings and print cloths. The following table, compiled from preliminary figures by the Bureau of the Census, shows the principal products of the cotton-goods industry for the United States in 1921 and 1923, and for New England and the cotton-growing States in 1923:

Principal products of the United States cotton-goods industry

[Quantity of woven goods in millions of square yards; yarn in millions of pounds; value in millions of dollars]

Class	United States				New England States		Cotton-growing States

¹ Details for the production of the classes not shown by regions are not yet available.² Excludes statistics for one establishment to avoid disclosing its operations.³ Excludes statistics for two establishments to avoid disclosing their operations.⁴ The figures for 1921 are not comparable with those for 1923.⁵ Statistics for New England can not be shown without disclosing the operations of individual establishments.⁶ No comparable figure available.**Spindle Activity and Cotton Consumption in 1924.**

Although no production figures are available for 1924, spindle activity and cotton consumption afford a fairly accurate basis for comparing the output in 1924 with that of 1923. From the manufacturer's standpoint, 1924 was one of the worst years in the history of the American cotton industry. The monthly average of active cotton spindles declined from 34,681,000 in the calendar year 1923 to 31,111,000 in 1924; the aggregate number of active spindle hours dropped from 99,508,000,000 in 1923 to 80,077,000,000 in 1924, and consumption of cotton by the mills declined from 6,521,000 bales to 5,512,000. During January, 1924, the cotton-spinning industry operated at 95.5 per cent of its single-shift capacity, from which point activity steadily declined, reaching the low of the year in July with operations at 60.3 per cent of capacity and cotton consumption for that month at 347,000 bales, the lowest figure since December, 1920. A marked recovery in activity occurred in September, the improvement continuing throughout the last quarter. During December cotton spindles operated at 90.4 per cent of capacity. The average monthly activity for 1924, however, was fully 20 per cent below that of 1923. The curtailment was greater in New England than in the cotton-growing States, the number of active spindle

hours in 1924 declining 30.4 per cent in New England and only 11.3 per cent in the South compared with 1923.

Causes of the Depression in 1924.

While the depression in the cotton-goods industry during the first half of 1924 may be attributed to a number of causes—uncertainty as to the supply of raw cotton, narrow margins between the price of raw cotton and cotton goods, hand-to-mouth buying on the part of merchants, and a general lack of demand from the consuming public—perhaps the most important factor was the heavy production of cotton goods in 1923, which had not been entirely absorbed by the domestic market. The depressing influence which this surplus exerted on cloth prices is indicated by the fact that during 1924 New York was the only market in which quotations on cotton gray goods were materially reduced, according to the Textile Division's compilation of prices for comparable gray cloths in the world's leading producing centers. The average price for 1924 on finished goods as well as on gray cloth was considerably below that of 1923.

Increased Production of Cotton Yarn in Austria

Assistant Trade Commissioner Elbert Baldwin, Vienna

Austrian imports of raw cotton in 1924 totaled approximately 122,000 bales of 500 pounds gross, compared with 105,000 bales in 1923 and 118,000 in 1922. Of these amounts, 62,000 bales in 1924, 47,000 in 1923, and 77,000 in 1922 were imported directly from the United States. In addition, a considerable quantity of American cotton is transshipped through other European countries, and credited to them in the official statistics of Austrian foreign trade.

Cotton Consumption in 1924, 20 Per cent Larger than in 1923.

Raw cotton consumed by the Austrian cotton mills amounted to 54,327,000 pounds in 1924, according to the Austrian Spinners' and Weavers' Association. This figure is 19 per cent higher than the consumption in 1923 and 11.5 per cent greater than that of 1922. The 1924 production of cotton yarn totaled 46,462,000 pounds, compared with 39,880,000 in 1923, and 42,610,000 in 1922. This recovery in 1924 is the more remarkable in view of the general industrial and financial crisis prevailing during the year. As a matter of fact, production of cotton yarns was curtailed during the months from June to October, largely as a result of the general economic situation, but by the close of the year, the monthly output of cotton yarn had been restored to a fair average while unfilled orders at the end of December, 9,789,000 pounds, exceeded those for any previous month during the past three years, and the stocks on hand, 3,397,000 pounds, were well below one month's production.

Principal Markets—Imports for Processing.

The improvement may be attributed largely to the better export demand in 1924, cotton-yarn exports averaging 2,000,000 pounds per month, or over 50 per cent of the average production, during the first nine months of the year. Hungary, Germany, and Rumania in the order named, were the principal markets for Austrian cotton yarn in 1924, smaller quantities going to Switzerland, Poland, Czechoslovakia, and Yugoslavia. Two-thirds of these exports are gray yarns, the balance comprising bleached, mercerized,

and dyed yarns. Included in the exports are small amounts of foreign yarns imported from Great Britain and Switzerland for processing and then re-exported.

This traffic in yarns for processing increased during 1924. Official statistics show that during the first half of 1924, Austria imported 514,000 pounds of gray yarn from Great Britain, 420,000 from Switzerland, and 780,000 from Czechoslovakia. Comparable figures for the whole of 1923 are: Great Britain, 728,000 pounds; Switzerland, 464,000; and Czechoslovakia, 1,197,000. It is impossible to determine what proportion of these foreign yarns are consumed by the Austrian weaving industry, but, in this connection, it is well to remember that Austria possesses only about 16,000 looms.

Tariff Agreements with Germany and Czechoslovakia.

More than one-half of the Austrian cotton-yarn production is for export. It is expected that this phase of the spinning industry will become accentuated rather than diminished by the inter-Central-European tariff agreements already concluded as, for instance, Austria's commercial treaties with Germany and Czechoslovakia, which became effective January 1 and 2, 1925, respectively, and which are intended to facilitate the exchange of raw and semimanufactured products between Austria and these countries, and to restore to a certain extent the former large economic industrial units which have been disrupted by political boundaries since the war. Similar agreements with Hungary and Yugoslavia are still in process of negotiation.

WORLD TEXTILE NEWS IN BRIEF

Argentine Wool Exports Reported.

Wool exports from Argentina totaled 16,000 bales during April, 1925. No activity was evident in the market on May 1. (Cable from Commercial Attaché Edward Feely, Buenos Aires, May 2.)

Canadian Wool Production Reported.

Wool production in Canada amounted to 15,111,719 pounds during 1924, a decrease of 427,697 from the 1923 figure. Exports of Canadian wool are sent to the United States and Great Britain, the former country taking 5,205,926 pounds, worth \$2,040,938, during the calendar year 1924, while Great Britain purchased 1,080,593 pounds, valued at \$524,217. Total exports amounted to 6,320,468 pounds, with a value of \$2,479,621. (Consul General Albert Halstead, Montreal.)

Cotton-Cloth Imports into India Increase.

Cotton-cloth imports into India during March, 1925, totaled 169,228,000 yards, a considerable increase over the total of 127,401,000 yards for the preceding month. The March imports comprised 70,543,000 yards of gray, 58,082,000 of bleached, and 40,603,000 of colored cotton cloth. The United Kingdom furnished 85 per cent of the gray, 97 per cent of the bleached, and 79 per cent of the colored cotton piece goods imported during March, while Japan supplied 13 per cent of the gray and 15 per cent of the colored. (Assistant Trade Commissioner E. G. Sabine, Bombay, May 5.)

Russia Exporting More Flax.

The competition between Russia and Latvia on the world's flax market has been very keen lately. Despite lower flax prices, the Russian economic organizations succeeded in placing one-third of their export supply of flax on the British market by the middle of February, largely as a result of facilitating terms of payment in various ways. Russia hopes to export about 65,000 tons of flax this year, an amount practically equal to the total flax exports from the Baltic countries, and large enough to enable Russia to regain its former lead as a source of this fiber. Foreign flax spinners have united in an effort to reduce prices of raw flax, and Russia and Latvia are endeavoring to safeguard their interests by negotiating an agreement whereby the two countries would not sell their flax below a certain price level. (Commercial Attaché C. J. Mayer, Riga, April 8.)

American Styles Influence German Lace and Ribbon Industry.

Manufacturers in Barmen and Elberfeld, who formerly specialized on cheap machine-made laces and

embroideries, leaving the Saxon lace makers to compete in the finer and more elaborate designs, are attempting to produce more modern types of laces and trimmings in order to regain trade from the United States which has become almost negligible. Rayon has been substituted for cotton in a great variety of articles produced in this district. Rayon trimmings and insertions are being bought for American account, and such goods are also being sold regularly in Latin America and the Near East. United States importers are buying a limited amount of colored embroideries, brilliant reds mixed with black and other striking combinations being popular. American fashions have led to a demand for bands, shoulder straps, and ribbons of rayon, sometimes reinforced with other threads, for women's underwear. Large orders for such ribbons are being received in this district, and the United States is also buying a considerable quantity of brocade made from rayon and various metal threads. (Assistant Commercial Attaché Douglas Miller, Berlin, April 20.)

German Garment Market Active.

A distinct increase of sales in the retail garment trade is reported for all sections of Germany. The wholesale trade, therefore, is experiencing a lively demand for goods which can be delivered immediately from stock. Where stocks are not available, orders for future delivery are being placed, although very early delivery dates are being insisted upon. Cloth and clothing manufacturers are working at top speed in order to supply the demands of the trade. Mills weaving heavier wool fabrics are not profiting from the general improvement. The recent drop in prices of raw wool has caused rather serious difficulties in cases where manufacturers' contracts call for a decrease in the prices of fabrics in the event of decreasing wool prices. Practically all German wool mills belong to a cartel, which forbids its members to drop prices on goods under contract. The Federal Minister of Economics has been requested to intervene in order to bring about a solution. (Consul Christian T. Steger, Dresden, April 15.)

Lancashire Cotton Manufacturers Hold Conference.

At a conference of the Lancashire cotton trade to study its common problems it was recommended that a permanent joint committee be appointed from the different sections for the study of all matters commonly affecting the industry in times of both prosperity and depression. Representatives from seven important groups now comprise the committee. These groups are

as follows: Shipping Merchants; Federation of Master Cotton Spinners' Association; Cotton Spinners' and Manufacturers' Association; Bleaching Trade Advisory Board; Employers' Federation of Cotton Yarn Bleachers, Dyers, and Sizers; Piece Dyers' Association; and Federation of Calico Printers. (Assistant Trade Commissioner C. Grant Isaacs, London, April 24.)

Additional information regarding textiles appears in this issue under the following sections:

Cable review, Europe: French industrial outlook uncertain.

Tariffs and trade regulations:

Estonia—New temporary free admission of raw jute.

Paraguay—Import duties put on specific basis.

United Kingdom—Duty on imports of laces and embroidery recommended.

"Foreign trade opportunities."

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

WORLD TRADE IN BISCUITS AND CRACKERS

United Kingdom, United States, and France Supply More Than Three-Fourths of the Biscuits and Crackers Entering the World Trade—Java, India, and Germany Leading Buyers in 1924—Western Hemisphere Supplied Largely by United States, While British Products Lead in European Markets

J. A. LeClerc, Foodstuffs Division

There are at least nine countries which are competing for the biscuit and cracker markets of the world. The six principal competitors of the United States for foreign trade in these commodities are the United Kingdom, France, the Netherlands, Germany, Belgium, and Canada.

Five of the principal countries dealing in biscuits and crackers (France, the Netherlands, Denmark, Canada, and Cuba) differentiate in their trade reports between the sweetened and unsweetened products. The United States, the United Kingdom, Germany, Belgium, India, and Java, which may be considered among the principal exporting or importing countries, group all products of this nature, whether sweetened or not, under one heading.

Exports of Leading Biscuit-Producing Countries.

The United Kingdom exported before the war more than half of all the crackers and biscuits entering the world markets, total exports amounting to nearly 46,000,000 pounds, valued at £1,336,000. The United States was second, with somewhat over 13,000,000 pounds, with a value of \$749,000; followed by France, with shipments of nearly 6,500,000 pounds, valued at 2,893,000 francs.

Changes in Biscuit Trade Since the War.

The Great War produced tremendous changes in the world markets. While the six principal exporting countries of pre-war years shipped a total of over 76,000,000 pounds, the average exports of these same countries during 1923 and 1924 were only 72 per cent as great. Gains were made by both France and the Netherlands, but the losses sustained by the other four countries more than counterbalanced these gains. The United Kingdom during 1923 and 1924 shipped an average of only 41 per cent as much of these products as during the pre-war years; Germany, 35 per cent as much; Belgium, 80 per cent; the United States, 91 per cent; while the Netherlands exceeded its pre-war shipments by 56 per cent and France by 137 per cent.

¹ Estimate.

Leading Importers of Biscuits and Crackers.

The seven principal pre-war importers of biscuits and crackers imported during 1923 and 1924 an average of 12,661,000 pounds, or less than one-third of the amount imported in pre-war years. France imported in the pre-war period nearly 12,000,000 pounds per year on the average, while the average for 1923 and 1924 was only one-sixth as much; Germany, which imported over 9,377,000 pounds before the war, imported only 21 per cent as much during 1923 and 1924; India's pre-war imports averaged 8,168,000 pounds, while those of 1923 and 1924 averaged only 2,511,000 pounds; the amount imported by the Netherlands in 1923 and 1924 averaged only 2,061,000, or 46 per cent of the pre-war imports. Java's imports during the past two years averaged 2,835,000, or 80 per cent of the pre-war average; Canada's were 1,161,000, or 53 per cent of the pre-war imports; and Belgium imported 300,000 pounds, or 17 per cent of its pre-war average.

An encouraging feature, however, is the appreciable gain made in 1924 over 1923 by the principal exporters, as shown in the second table. The chief importing countries purchased 15 per cent more of these products in 1924 than in 1923.

¹ Estimate.

Proportion of Sweetened and Unsweetened Products.

There is no way of determining the relative proportion of sweetened and unsweetened biscuits going into international trade except in the case of exports for French and Dutch products and in the cost of imports for products entering France, the Netherlands, Denmark, Canada, and Cuba. Of the biscuits and crackers exported from France and the Netherlands during 1909-1913 and 1922-1924, 27 per cent was unsweetened and 73 per cent sweetened. The pre-war price per pound of the combined exports from France and the Netherlands was for the sweetened 10.9 cents and for the unsweetened 4.5 cents. The average price per pound of the pre-war exports from the United Kingdom was 14.1 cents. The import price per pound into Cuba was for the sweetened 14.6 cents and for the unsweetened 6.7 cents; into Denmark the import price per pound was 11.8 and 8.8 cents, respectively. The same relative figures for the United States are not available.

Of the imports of the five principal importing countries (France, the Netherlands, Denmark, Canada, and Cuba) which separate sweetened from unsweetened biscuits, during 1922-1924, 38 per cent was unsweetened and 68 per cent sweetened, the average yearly amounts of the combined imports into these five countries being 2,326,000 pounds of the former and 3,811,000 of the latter.

Markets of Western Hemisphere Supplied Largely by United States.

Two-thirds of the pre-war exports to the principal countries of North America originated in the United States and one-fourth in the United Kingdom, while the exports from the Netherlands made up only 6 per cent. By 1923 the United States had acquired an even greater share of the North American markets. While the complete data for 1924 are unavailable at this time, it appears that the United States has maintained the same relative position that it had in 1923. The principal markets of the United States in North America in 1923 and 1924 were Cuba, Canada, Mexico, British West Indies, Santo Domingo, Jamaica, Dutch West Indies, and Bermuda. The United Kingdom and Canada also have a considerable trade with Cuba and the British West Indies.

As in North America, the chief countries of South and Central America obtain from the United States most of their needs in biscuits and crackers. During the pre-war years nearly 80 per cent of their imports came from this country, and in 1923 and 1924 at least that proportion. The countries making the largest purchases of these products from the United States in 1923 and 1924 were Colombia, Venezuela, Dutch and British Guiana, Panama, Honduras, and other Central American countries. Argentina and Brazil were supplied largely by the United Kingdom.

Europe Supplied Chiefly by British and Continental Markets.

The United States supplied before the war less than 1 per cent of Europe's purchases of biscuits and crackers. More than 60 per cent of the exports to Europe originated in the United Kingdom, while France, the Netherlands, Germany, and Belgium each supplied an average of nearly 10 per cent. Owing to lack of complete trade returns from France and Germany during 1923, it is impossible to analyze the European situation minutely. However, the exports from the United States to the chief European countries had increased from 135,000 pounds in pre-war years to 548,000 in 1923 and to 1,170,000 pounds in 1924. The chief countries of Europe looking to the United States for these products were the United Kingdom, Germany, and Poland. To these three countries the United States exported 435,000 pounds in 1923 and over 1,000,000 pounds in 1924. The chief European markets which are supplied by the United Kingdom are the Irish Free State (which takes the bulk of the United Kingdom's European shipments), Denmark, Norway, Sweden, France, Belgium, the Netherlands, and Turkey. While France, Belgium, Germany, and the Netherlands are themselves exporters of biscuits, they seem to take appreciable quantities of each other's goods. The United States is the only non-European country which does any considerable amount of business with Europe in these products.

Asia and Africa Show Decreased Shipments.

The bulk of the shipments to Africa before the war was made by the United Kingdom (nearly 90 per cent). The trade of the United States amounted to 200,000 pounds, or less than 2 per cent of the total. In 1923 and 1924 the trade of the United Kingdom with Africa amounted to less than one-half of the pre-war trade. While that of the United States decreased from pre-war figures, the loss is much smaller. The chief markets of Africa are British South Africa, British West Africa, and Egypt. The Belgian Congo seems to be supplied entirely by Belgium.

The total exports to Asia have likewise decreased, those from the United Kingdom during 1923 and 1924 being less than one-third of the pre-war average. Before 1914 the United Kingdom shipped nearly 12,000,000 pounds of biscuits to Asia, most of this amount going to India, the Straits Settlements, Java, Ceylon, the Philippines, Siam, China, and Hongkong. Such exports from the United States to all these countries amounted to less than 130,000 pounds, most of which went to the Philippines. The Netherlands shipped 1,300,000 pounds, chiefly to India, Java, and Ceylon, while Belgium's shipments amounted to 713,000 pounds, chiefly to Java. By 1924 the exports from the United States had increased to 601,000 pounds, our largest markets being China, Japan, the Philippines, and Hongkong; the Netherlands increased its exports to 2,387,000, of which 2,297,000 pounds went to Java; while the United Kingdom's exports to India alone fell from the pre-war figure of 5,961,000 pounds to 2,638,000 as the average of 1923 and 1924.

Countries Competing for the Biscuit Trade.

In analyzing the situation from the import standpoint it is seen that the chief competitor of the United States in the Canadian markets is the United Kingdom. Canada buys more goods of this nature from the mother country than it buys from its southern neighbor.

In the English market our nearest competitor is France, which supplies to the English almost as much as does the United States.

The United States had made no impression in the French market prior to the war; most of the foreign biscuits consumed by the French during that period were of English or Belgian origin. Later data are not available.

Nor does the United States seem to have secured a foothold in the Netherlands, Germany, Denmark, Belgium, Java, or British India, which comprise the other principal importing countries. The countries which supply the Netherlands are the United Kingdom, France, and Belgium; those which furnish Belgium are the United Kingdom, the Netherlands, and France; Denmark's foreign supplies of biscuits come from the Netherlands, the United Kingdom, Germany, France, and Belgium, in the order named. Java's supply is mostly of Dutch, English, and German origin, with, however, a considerable portion from Australia. India obtains biscuits mostly from the United Kingdom, a small proportion coming from Germany and Australia. It is of interest to note that Australia is a real factor in the markets of Java and India. These are the only 2 of the 11 principal markets in which Australia has any appreciable part whatever.

Cuba, likewise one of the chief markets for biscuits, looks principally to the United States and the United Kingdom for its supply. Cuba's imports before the war came about equally from the United States and the United Kingdom, but in 1923 the United States supplied 2,520,000 pounds, as against only 257,000 pounds by the United Kingdom.

Additional information regarding foodstuffs appears in this issue under the following sections:

Cable review, Europe: Rumanian outlook somewhat easier.

Tariffs and trade regulations:

Czechoslovakia—Proposed sliding scale import duty on cereals and other agricultural products.

Denmark—Reduction of import duty on herrings and duty-free importation of tomato sauce.

Estonia—New temporary free admission of wheat.

TOBACCO

Tobacco Section, Foodstuffs Division

TOBACCO PRODUCTION, CONSUMPTION, AND TRADE OF YUGOSLAVIA

Based on a report by Consul K. S. Patton, Belgrade

Prior to 1923 the production of tobacco in Yugoslavia was insufficient to supply the domestic consumption. Production, however, has increased very rapidly, having risen from 21,543,000 pounds in 1922 to 39,687,000 pounds in 1923, and to 59,524,000 pounds in 1924. Unfortunately, the large yields of 1923 and 1924 coincided with heavy crops in Greece and Bulgaria, with the result that the large surplus of the crop of 1923 could not be sold abroad. The same difficulty is expected with the crop of 1924, which is now being purchased from the planters and will be ready for market in September.

Production of Higher Grades Encouraged.

In view of the overproduction in the past two years the monopoly administration has adopted the policy of reducing the size of the crop and insisting on the production of higher grades of tobacco; consequently, the number of plants to be put out in 1925 has been diminished by 20 per cent, in comparison with 1924, and tobacco production has been forbidden in all regions

producing low grades of tobacco. In effect, this will mean that tobacco production will be restricted largely to Macedonia, Bosnia, and Herzegovina, which produce a high grade of tobacco but are not capable of growing other crops to advantage; and that the regions of Slavonia, Slavonia, and northern Dalmatia, heretofore the origin of inferior tobaccos, will be devoted to crops more suitable to their soil and topography.

Consumption and Exportation.

In spite of the heavy crops of 1923 and 1924 consumption in these years compares very unfavorably with that of 1922. Only 17,637,000 pounds were consumed in 1923, compared with 26,455,000 pounds in 1922. No definite data are available concerning the amount of tobacco consumed in 1924, but it is not expected to exceed 22,000,000 pounds. The only reason in evidence for this decrease, since there was a heavy surplus on hand, is the fact that the monopoly administration increased the prices of tobacco products.

Of the crop of 1923, 2,712,000 pounds were sold to Poland and 512,000 pounds to Czechoslovakia. There still remains an exportable surplus of 11,023,000 pounds. This quantity added to the exportable surplus of 37,478,000 pounds expected from the crop of 1924 makes about 48,501,000 pounds of tobacco in

Yugoslavia waiting to be marketed. Competition with Bulgarian tobacco has been so keen that, in order to dispose of the surplus of the crop of 1923, it would have been necessary to sell at a price less than was paid to the grower. The monopoly has, therefore, deemed it advisable to retain the surplus in the country until a time when it can be disposed of profitably.

Financing Monopoly Purchases—Prices Paid to Growers.

In order to be able to purchase the increased tobacco production from the growers the monopoly administration has been forced to float two foreign loans, one for \$300,000 to purchase the crop of 1923 and another for £1,000,000 to purchase the crop of 1924. Both loans were secured from a group of British bankers through the British Trade Corporation at a cost of $9\frac{1}{2}$ per cent and $9\frac{1}{4}$ per cent, respectively.

The prices paid to growers for the crop of 1923 ranged from 8 dinars a kilo (3.9 cents a pound) to 80 dinars a kilo (38.9 cents a pound). (The par value of the dinar is 19.3 cents, but the average value in 1923 in United States currency amounted to very little more than 1 cent.) Prices paid to growers for the crop of 1924 ranged from 10.5 cents to 62.8 cents a pound. Prices are fixed by the Minister of Finances on the recommendation of the monopoly administration and are announced in advance of the planting season, thus assuring the planter of an adequate return on his investment. This process in 1923 and 1924 worked to the disadvantage of the monopoly, inasmuch as the total results have been a decreased local consumption brought about by the local selling prices being high and an accumulation of stocks which could not be sold for what they cost.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

INSIST ON USING YOUR OWN BRAND

Exporters, particularly those who have successfully grade marked their lumber, are often approached by foreign concerns requesting that the American lumber be provided with the importers' brands to the exclusion of the shipper's brand. Although a temporary advantage may be gained by such procedure through an increase in price, it would be a poor policy on the part of the shipper to follow such a course. A well-established brand is one of the principal assets of a lumber exporter. If he agrees to put the importer's brand on his lumber, it simply means that any good will created in the field on behalf of his product does not benefit him but inures to the credit of the foreign importer.

Serves to Assure Future Business.

Another disadvantage to the exporter is the fact that if for any reason a difference should arise between the two parties the importer does not need to fear the loss of business because of losing this particular source of supply. It is his brand and not the brand of the American exporter with which his customers are familiar. Thus he is at liberty to terminate relations upon the slightest pretext and reap the benefits of the reputation which has been established by the American wood, accomplishing this by arranging to have the same brand applied to other stocks and possibly an inferior wood.

One of the principal American hardwood shippers stresses the importance of retaining the same brand and applying it to all the products of the firm, regardless of the ultimate destination, in the statement that, "We would drop the export business altogether rather than give up the use of our own brand."

American Gum in Export Markets

It required appreciation in foreign countries before our own people realized the qualities of gum lumber, and this wood was exported long before it was marketed on a large scale at home.

British Markets Holds Commanding Position.

The map on the second page of cover graphically shows the predominant position which England holds as a market for American gum. This country, which has always been the principal foreign purchaser, took 22,000 M feet, or almost half of the total exports, in 1924. Canada is next in importance, taking 8,000 M feet; Italy, 7,000 M feet; France, 3,000 M feet; Egypt, 3,000 M feet; Spain, 2,000 M feet; and Scotland, 2,000 M feet. A dozen or more countries took the remainder, each importing less than 1,000 M feet. Shipments of both red and sap gum lumber are included in these figures, but the exports of logs have been excluded.

Sap Gum Has Many Uses—Red Gum Resembles Walnut.

Sap gum is regarded favorably abroad and is used for a multitude of purposes, ranging from furniture parts to building moldings and ambulances. It is commonly known in foreign countries under the name of "hazel pine."

Red gum occupies a very peculiar position in the respect that it is considered a wood superior to common hardwoods, such as beech and similar species, but inferior to walnut. It resembles certain varieties of walnut so far as grain is concerned, and is therefore often called "satin walnut" in export markets. This fancy name has unfortunately been the bane of gum sales in some countries where it has been classified under the walnut group by customs authorities.

Importance of Proper Seasoning—Mediterranean Markets Promising.

While red gum does not compare with real walnut for high-grade furniture purposes, it nevertheless plays an important part as an ideal wood for medium-grade furniture. Its chief attraction is its grain. There do not seem to be any other hardwoods which can satisfy the demand for red gum on an equal price basis, and the exclusion of red gum in certain foreign markets would in most cases mean going back to less attractive woods, which need to be painted in order to conceal defects. The greatest trouble with gum seems to be that some exporters do not season it in the proper manner. When satisfactorily seasoned, it is an excellent wood for furniture purposes. Although red gum is

rather widely distributed, there is still a great deal to be done toward furthering the extent of the foreign markets.

The Mediterranean countries seem to be a very attractive field. In fact the gum exports to Egypt have grown from 44,000 feet in 1913 to 2,600,000 feet in 1924. Compared with 1923 figures red gum has shown decreases in the following markets: Canada, France, Egypt, Spain, Scotland, and Belgium.

Cut-offs

Reduction in German Transit Freight Rates.

German transit freight rates to the Netherlands on Czechoslovak lumber were generally lowered on April 1, according to Philip E. McKenney, office of commercial attaché, The Hague, Netherlands.

United States Imports of Philippine Mahogany.

Imports of mahogany into the United States from the Philippine Islands during March, 1925, consisted of 2,167 M board-feet of sawed lumber. No logs were imported. (Division of Statistics, Bureau of Foreign and Domestic Commerce.)

Rumanian Lumber Exports in 1924.

Preliminary figures, based on data furnished by the statistical division of the Rumanian Ministry of Finance, show Rumanian lumber exports in 1924 to have increased slightly over the 1923 total. Rough

softwood lumber exports in 1924 were 537,000 M feet, against 575,000 M feet in 1923; softwood logs amounted to 22,000 M feet, compared with 39,000 M feet in 1923; and other softwood exports aggregated 104,000 M feet in 1924, compared with 61,000 M feet in 1923. Exports of hardwood lumber for construction amounted in 1924 to 18,000 M feet, or over three times the 1923 export of nearly 5,000 M feet. (Commercial Attaché Louis E. Van Norman, Bucharest, March 30.)

Expanding Egyptian Market for Southern Pine.

The market for American southern pine continues to expand, and the irrigation department of the Egyptian Government, a large consumer of timber, rejected bids of central European pine. It is reported that this administration will require Government contractors in the future to furnish southern pine on all principal works. The market for this species remains firm. Several large parcels of American red gum arrived at Alexandria in March, most of which moved into consumption, so that stocks were not appreciably increased but remain about normal. (Trade Commissioner Richard A. May, Alexandria, April 9.)

Additional information regarding lumber appears in this issue under the following sections:

Cable review, Europe:

French industrial outlook uncertain.

Rumanian outlook somewhat easier.

"Foreign trade opportunities."

CHEMICALS

Charles C. Concannon, Chief, Chemical Division

THE CHEMICAL IMPORT TRADE OF THE UNITED KINGDOM

Large Increase in Imports—America the Leading Supplier—Germany Ranks Second

Lloyd A. Nolan, Chemical Division

The import trade of the United Kingdom in chemical and allied products is enormous, but is exceeded by the export, which is almost twice as great in value.

Total imports of chemicals in 1924 reached £16,172,031, compared with £14,919,032 in 1923, and £12,671,962 in 1922. (In 1922 £1=\$4.429; 1923, \$4.575; and 1924, \$4.417.) Exports of British-produced chemicals amounted to £25,497,000 in 1924 against £25,686,000 in 1923, and £20,261,197 during 1922, according to the board of trade returns. These statistics indicate a considerable increase in the import and a slight decrease in the export trade. For comparison it may be stated that the United States' importation in this group is 50 per cent greater than that of the United Kingdom whereas the exportation is approximately equal to the British. In marked contrast, however, both the total imports and total exports of the United States have been steadily increasing.

Chief Foreign Sources of Supply.

About 70 per cent of the chemical importation is furnished by the United States, Germany, Chile, France, Switzerland, Belgium, and the Netherlands, while the remainder comes chiefly from Italy, Japan, and British possessions. The United States, however, is the chief source of supply, having shipped 28 per

cent of the total in 1923, or £4,428,770, compared with 25 per cent during 1922, or £3,539,369. Exports from Germany amounted to 13 per cent in 1923, or £2,374,463, and 16 per cent in 1922, or £2,176,769. Chile ranks third, chiefly on account of nitrate shipments, having supplied 6 per cent in 1923, valued at £1,128,321, and 4 per cent in 1922, or £523,603. France, Belgium, Switzerland, and the Netherlands furnished less than 5 per cent each for the above-mentioned years.

Large Increase in Receipts of Industrial Chemicals.

Imports of industrial chemicals into the United Kingdom in 1923 aggregated £6,034,872, compared with £5,180,059 in 1922, or an advance of £854,813. These imports represent about 40 per cent of the total British import trade in chemical and allied products for the respective years under consideration. Germany is the leading source of supply, having exported £1,308,862 during 1923 compared with £1,212,173 in 1922. Receipts from America in 1923 were valued at £625,791, and totaled £532,999 during 1922. The Netherlands' share amounted to £312,691 in 1923 compared with £254,197 in 1922. France contributed £264,064 in 1923 and £240,482 in 1922. The remaining supplies are widely distributed among Chile, Belgium, Switzerland, Italy, Japan, and the British possessions.

The leading heavy chemicals imported into the United Kingdom, in the order of their importance, are calcium carbide, acetic acid and anhydride, iodine and iodides, ammonium nitrate, nickel oxide, acetone, cream of tartar, arsenic, potassium nitrate, tartaric acid, and caustic potash. Imports of calcium carbide amounted to £485,601 in 1923 and £392,343 in 1922, the bulk coming chiefly from Norway, Sweden, and the Serb-Croat-Slovene State. Receipts of acetic acid and anhydrides in 1923 amounted to £311,525 compared with £175,990 for 1922. Canada exports the bulk of this commodity, £218,137 in 1923 and £64,099 in 1922, followed by Germany with £42,952 in 1923 and £26,298 in 1922. Exports of this commodity from the United States dropped very sharply in 1923 over the previous year—£2,839 in 1923 and £42,476 in 1922.

Exports of sulphur from the United States to England reached 29,958 tons, valued at \$470,894, during 1923, in comparison with 38,069 tons, worth \$554,915, in 1922.

Receipts of Fertilizers Show Gains.

The chief fertilizers imported into the United Kingdom are sodium nitrate, superphosphates, guano and bone meal, basic slag, land pebble, and phosphate rock. Receipts of sodium nitrate from Chile amounted to 796,650 hundredweight, valued at £523,463, in 1922 and 1,419,285 hundredweight, worth £902,374, in 1923. Imports of basic slag in 1922 amounted to 72,093 tons (£255,054) and 91,120 tons (£266,079) in 1923. Belgium supplied the bulk, or 58,940 tons (1922) and 88,465 tons (1923). Receipts of superphosphates amounted to 107,336 tons, valued at £321,565, in 1923, compared with 47,419 tons, worth £207,000, in 1922. Belgium exported the bulk of superphosphate requirements, or 60 per cent, with small amounts from the Netherlands. Imports of guano and bone meal in 1923 reached 29,729 tons, £236,970, against 20,831 tons, £170,747, during, 1922.

The chief fertilizer exported from the United States to England, according to American statistics, is land pebble, shipments in 1923 amounting to 55,093 tons, valued at \$299,757, in comparison with 36,983 tons, worth \$270,300 in the preceding year. American superphosphate exports to England during 1923 amounted to 580 tons, valued at \$14,814, against 305 tons, worth \$34,515, in 1922. American shipments of high-grade phosphate rock in 1923 amounted to 3,543 tons, valued at \$28,344, none having been received during the previous year.

Large Import Trade in Paints, Pigments, and Varnishes.

British receipts of paints, pigments, and varnishes were valued at £3,521,711 in 1923 in comparison with £2,956,756 in 1922—an increase of £564,966. American exports of paints and paint materials aggregated £2,268,104 (1923) and £1,719,712 (1922) or about 60 per cent of the total receipts. Germany shipped £384,568 (1923) compared with £344,735 (1922) or approximately 20 per cent of the total. Other supplies came from France, the Netherlands, Belgium, and Canada.

British receipts of zinc oxide for 1923 amounted to 6,987 tons, against 5,638 in 1922. Belgium's share in 1923 reached 2,473 tons, compared with 2,284 in 1922. The Netherlands ranked second with 2,450 tons in 1923 and 1,389 in 1922. Germany contributed 1,010 tons in 1923, a decrease compared with 1,416 tons in 1922. America supplied 832 tons in 1923, against 236 in 1922—an advance of approximately 250 per cent.

British Market for Dyestuffs and Coal-Tar Products.

British receipts of dyes and coal-tar products amounted to £1,726,285 in 1923 and £1,834,741 in 1922—a decrease in value of £108,456. Germany furnished 32 per cent of the total in 1923 and 27 per cent for 1922; the United States, 34 per cent and 20 per cent, respectively; and Switzerland, 24 per cent and 44 per cent. Benzol is the outstanding item in this import group, having reached 9,027,515 gallons (£590,209) in 1923 compared with 5,583,982 gallons (£433,337) in 1922). In 1923 the United States supplied the entire demand, while during 1922 it furnished approximately 80 per cent. The classification, "other sorts of coal-tar colors," reached £917,728 in 1923 compared with £1,262,559 in 1922. Alizarine imports in 1923 were valued at £72,761 compared with £60,607 in 1922 and synthetic indigo reached £13,993 against £3,008 in 1922.

A comprehensive study, *The British Dyestuffs Industry*, by Trade Commissioner Frederick E. Breithut, covering production, import and export statistics of dyes and coal-tar products, was published by the Department of Commerce, May 19, 1924, as Trade Information Bulletin No. 231.

Larger Imports of Prepared Medicines and Drugs.

British receipts of medicinal and pharmaceutical preparations amounted to £1,124,991 in 1923 and £774,792 for 1922, an advance of £350,199, or about 50 per cent. The United States is the dominant factor in this market, having supplied £481,514 (1923) compared with £452,436 (1922), which is accounted for by large shipments of prepared medicines and liniments. Japan ranks next with £143,735 (1923) and £152,461 (1922), due entirely to exports of menthol and quinine. The Netherlands supplied £140,373 (1923) and £100,799 (1922). Germany, France, and Belgium exported the remaining requirements.

The great mass of the people in England are in the market more for cures than for preventives; consequently, a large part of prepared-medicine advertising emphasizes preparations for coughs, colds, grippe, and other ills resulting from prolonged bad weather. Prepared medicines of a restorative nature for treatment after a cold are in much demand.

Prepared medicines imported during 1923 were valued at £273,004, against £168,707 in 1922. The United States supplied almost the entire demand, or £219,508 (1923) and £139,255 (1922). Approximately 98 per cent of the liniments imported originate in the United States. Receipts of liniments in 1923 amounted to £157,791, compared with £194,947 in the preceding year.

Imports of quinine and salts were valued at £137,101 in 1923, compared with £106,318 in 1922. Receipts from the Netherlands reached £122,463 (1923) and £88,103 (1922), and from Japan, £11,946 (1923) and £14,755 (1922).

American Toilet Preparations and the British Market.

Imports of toilet preparations, including perfumes, into the United Kingdom during 1923 reached a value of £735,152, against £673,998 in 1922. Approximately 50 per cent of the imports originated in the United States. France furnished perfumes to the United Kingdom valued at £273,904 (1923) and £253,150 (1922), representing about 35 per cent of the total trade in perfumes and toilet preparations. Germany, however, contributed only £31,798 (1923) and £28,482 (1922), or about 4 per cent of the total.

Vice Consul Howard Donovan reports that "toilet preparations are used to about the same extent in Great Britain as in the United States, with the possible exception that rouge, face creams, and lip sticks are not used as much owing to the excellent complexions of English women, and it is undoubtedly true that 'make-up' is employed to a lesser extent in Great Britain than in the United States."

Toilet preparations are manufactured on a comparatively large scale, except dentifrices, as American tooth pastes dominate the British market. In all classes of toilet articles there is a wide range of selection, just as in the United States, while sales conditions and preferences are largely the same.

The outstanding export items in the toilet preparations' group shipped from America to the United Kingdom are dentifrices, talcum powders, creams, rouges, and cosmetics. Statistics indicating the quantity and value of these exports for 1922 and 1923 are given in the table of American exports, which accompanies this article.

Increased American Exports of Chemical Products to England.

Exports of chemical and allied products from the United States to England amounted to \$25,410,472 in 1923 and \$19,526,303 during 1922—an advance of \$5,884,169, or 26 per cent. America is more of a seller than purchaser of chemical products in the English market. This is evident when the export figures are compared with the value of American imports from England, which aggregated \$19,698,646 in 1923 and \$17,377,470 for 1922, a rise of \$2,321,176, or 12 per cent of the total value of receipts of chemical products.

The leading chemical products exported from the United States to England, in the order of their importance, are spirits of turpentine, rosin, benzol, carbon and lampblack, medicinal preparations, pyroxylin plastics, crude tar and pitch, dentifrices, denatured alcohol, and borax.

The table which follows, compiled from Commerce and Navigation of the United States, enumerates the quantity and value of the leading groups of chemicals, and the outstanding items of these groups, exported from the United States to England during 1922 and 1923:

Principal united exports of chemicals to England

Products	1922		1923	
	Quantity	Value	Quantity	Value
Coal-tar products.....		\$1,502,119		\$3,523,887

America and the British Market.

The United Kingdom is a large producer of heavy chemicals and carries on an extensive export trade in these products. From a trade promotion standpoint it is felt that the United States trade in chemicals can be materially expanded by a more intimate knowledge of the consuming demand of the United Kingdom as indicated by its imports and sources of supply. Similarly, a thorough study of the markets of the United Kingdom as presented by its exports may result in broadening the outlook of the American exporter, and the export phase of the United Kingdom's foreign trade, accordingly, will be considered in a forthcoming issue of COMMERCE REPORTS.

Additional information regarding chemicals appears in this issue under the following sections:

Tariffs and trade regulations: Paraguay—Import duties put on specific basis.
"Foreign trade opportunities."

AUTOMOTIVE PRODUCTS

Percy Owen, Chief, Automotive Division

DISTRIBUTION OF CARS AND TRUCKS IN PORTO RICO

Based on report from Erwin P. Keeler, office of the American trade commissioner, San Juan

Porto Rico has 76 municipalities, or small political divisions, that correspond closely to counties in the United States. These embrace a population of 1,299,800 (1920 census), which possessed 9,933 passenger cars and trucks on January 10 of this year. The real and personal wealth of the islands as of June 30, 1924, amounted to \$312,384,305. In the light of these figures the progress made by Porto Rico in developing motor transport assumes considerable interest, whether considered from the standpoint of the country as a whole or of its integral parts.

Disparity in Automobile Distribution.

Porto Rico as a whole has 131 persons to every automobile (passenger car and truck), a per capita wealth of \$240, and a relative distribution of approximately \$31,450 of assessed wealth to each automobile in operation. In reality, however, this wealth, population, and automobile ownership is segregated into two extremes that are fairly typified for all 76 municipalities by the contrasting status of San Juan and of Las Marias.

Concentration in San Juan.

San Juan, the political and social center of the island, but located off the northeastern coast of the mainland, alone possesses 2,751 motor cars and trucks and has a total assessed wealth of \$69,964,558 and a population of 71,443. That is, this one municipality, with more than one-fifth of the wealth and less than one-twentieth of the total population of the entire islands, owns more than one-fourth of the passenger cars and trucks in operation. With its territorial environs, it accounts for one automobile for every 26 of its population, has a per capita wealth of almost \$980, and makes \$25,432 of its assessed wealth represent one automobile.

Sparsity in Las Marias.

Las Marias, a rather mountainous and isolated coffee-growing district located in the west central part of the island, presents the other extreme of the picture. Here there are only 5 passenger cars and trucks to serve 10,736 persons, whose assessed wealth amounts to \$1,534,515. That is, in this inland district there is only one automobile for every 450 persons and approximately for each \$307,000 worth of property.

Similar Extremes Among Other Municipalities.

These extremes are representative of the very pronounced differences existing throughout the islands as regards population-automobile and wealth-automobile ratios. By no means do the remaining municipalities present a composite picture of more even distribution of automobiles than is illustrated by the two described above. For instance, out of the total 9,933 passenger cars and trucks registered in Porto Rico on January 10, 1925, the six municipalities comprising San Juan and its adjacent Rio Piedras and Bayamon in the northeast, Ponce and Arecibo in the west-central region, and Mayaguez in the extreme west (all together

forming but a small portion of the total 76 political divisions) account for almost three-fifths of the passenger cars and trucks registered. Moreover, these same municipalities comprised only one-fifth of the population, although possessing somewhat in excess of two-fifths of the total wealth. Their ratio of population to automobiles stood at the comparatively low figure of 50, as contrasted with 234 for the remaining municipalities.

Economic Reasons for These Divergences.

San Juan, Ponce, Mayaguez, and Arecibo are the largest cities in the island. Together with their surrounding trade territories, they have been thoroughly worked by automobile dealers, while the smaller towns and the more isolated rural sections have been given little consideration.

These cities are all trade centers, being either seaports or inland distribution points. All of them are connected with the interior points that make up their trading radii by an excellent system of highways, which have been made easily possible through the absence of any pronounced topographic barriers. Furthermore, these level and fertile plains have made for profitable agriculture. Here are the largest sugar, fruit, and vegetable growing areas wherein even the smallest landholder with the income which good fruit or cane land affords can purchase automobiles.

Sugar and Fruit Plantations Good Automobile Markets.

Among the small "colonos" or cane growers, as well as the fruit and vegetable producers, the first purchase often takes the form of a light truck to haul the cane to the central and the fruit and vegetable produce to San Juan or other shipping and consuming centers. In addition, many of the more wealthy American and native landowners live on their fruit farms and sugar plantations, especially in those districts forming the northern tier of municipalities along the seacoast.

Life on these farms is preferred to that in the cities by the people, because they are in a position to own passenger cars which can convey them to San Juan or other points over excellently surfaced and level roads within a comparatively short length of time. This factor aids greatly in increasing the number of automobiles registered in these northern coastal regions.

Tobacco and Coffee Plantations Offer Fewer Possibilities.

In the tobacco-growing districts, located mostly in the east central part of the island among the valleys and foothills, conditions in regard to distribution of wealth and highway facilities are more closely related to the coastal regions than to the coffee country found throughout the mountainous interior and especially in the west central municipalities.

The owners of the small coffee plantations, located in some cases in localities without roads and only accessible when traveled by native ponies, have neither the capital to make an original investment in auto-

mobiles nor the facilities for using them. It should be noted in this connection that coffee has yielded very small profits in Porto Rico during the past quarter century. Those large owners of coffee plantations who have been more successful in profiting from their crops than have the small holders frequently live in the larger cities, such as San Juan or Mayaguez. Hence their cars are registered in the latter places, although purchased from incomes derived from the interior municipalities.

Interior Municipalities Can Absorb More Automobiles.

Statistics are not available which would indicate the number of inhabitants, according to municipalities, who possess incomes or property valued above a certain minimum that would mark them as potential automobile owners. Nevertheless, and in spite of the fact that the chief wealth of Porto Rico is centered in the half dozen municipalities containing the largest cities and that these centers also boast the greatest number of passenger cars and trucks in proportion to population, there is reason to believe that many of the dealers have concentrated too much on these sales territories, with a resultant neglect of existent sales possibilities in the more remote regions. For example, Las Marias, with its five automobiles spread over a population of more than 10,000 persons owning real and personal property in excess of \$1,500,000, has manifestly not been worked to the full extent of its possibilities. Without doubt this is true also of other interior districts.

Although the poor character of roads in these mountainous sections has been a deterrent factor in keeping down sales, it can not be denied that there is a branch of at least one insular highway touching every municipality, which should provide access to the outlying districts. Probably not until the markets in the larger towns approach the saturation point, which has not yet been reached, will any real effort be made by dealers to look into the possibilities of those inner mountainous sections, whose wealth and population would suggest a greater automobile consumption than now exists.

Distribution Map for Porto Rico Available.

[A map showing the distribution of automobiles throughout the various political divisions of Porto Rico, with such other data bearing on population and wealth as is available, was prepared to accompany the above report. As the map could not be reduced sufficiently to come within the page space of *COMMERCE REPORTS* and still show all the information considered essential, it has been prepared for distribution in an unpublished form to those making request for it.

A copy of the map may be procured on application to the Automotive Division, through the proper district or cooperative office, by referring to Exhibit No. 388.]

INDUSTRIAL MACHINERY

W. H. Rastall, Chief, Industrial Machinery Division

1924 MACHINERY EXPORTS SHOW GRATIFYING INCREASE

Increase of 6 Per Cent in 1924 Machinery Exports—Gain in Shipments to Russia and Germany—Canada Still Our Leading Market

Final figures for the exports of industrial machinery last year have just become available and demonstrate a gratifying increase in this trade, in spite of the fact that European competition has been very severe, the increase being 16 per cent, as compared with 1922, when the depreciated condition of European exchange interfered so seriously with American exports. As compared with 1923, these returns show a gain of 6 per cent.

Trade with Germany Renewed.

Last year the United States shipped to Germany machinery valued at more than \$2,590,000—a fact which is a substantial testimonial to the merits of American machinery. In 1913 Germany took over \$5,000,000 worth of this equipment, but this trade was interrupted by the war and post-armistice embargoes which, however, are now removed, and if German buyers are able to find the necessary funds, there is every reason to expect further expansion of this business.

American Machinery in Demand on Quality Basis.

The United Kingdom last year purchased over \$15,000,000 worth of American machinery, which speaks highly of the qualities of American equipment of this

character. This volume is not so great as it was during the abnormal war years, but is about 50 per cent above 1913 and more than three times the value absorbed there in 1910. It also represents a very gratifying expansion over the trade of 1922. American manufacturers have every reason to be proud of their record in selling machinery in all countries which are commonly considered competitors in the production of this class of equipment. A study of the accompanying tables shows that American machinery has a reputation in the world's market that is unsurpassed. Germany, England, France, Belgium, Sweden, Italy—in fact, all machinery-producing countries—come to the United States in order to secure their highest classes of equipment. Regardless of the fact that American labor is costly and these markets are at great distances from our factories, American machinery is of such superior quality as to be in demand everywhere.

Increased Importance of Russian Market.

For some years conditions in Russia have made business with the United States very difficult, but in spite of existing conditions last year Russia absorbed \$956,000 worth of American machinery. This volume is in excess of that of 1910 but not so great as the business of 1913 or the war years.

Latin-American Business Greater Than That with Europe.

While American exporters generally consider Europe the most important group of export markets, last year the markets of Latin America absorbed more than one-third of our total machinery exports, while the volume to Europe was slightly less than one-fourth of the total. Also, this trade is growing, for the volume increased about \$8,600,000, or about 27 per cent, as compared with 1923.

Situation in Asia Varies with the Countries.

The trade with Asia was not quite so satisfactory. The volume of machinery shipped to Japan decreased by about \$1,000,000. Shipments to China declined about 20 per cent and the exports to British India also decreased. On the other hand, trade with the Dutch East Indies increased by 83 per cent, and both the Philippines and the Straits Settlements absorbed a greater volume of machinery from the United States in 1924 than in the preceding year.

The following table shows the distribution of machinery exports from the United States for selected years between 1910 and 1924 by continental groups:

United States exports of industrial machinery

(In thousands of dollars)

Destination	Fiscal years—		Calendar years—				
	1910	1913	1920	1921	1922	1923	1924
Canada, Newfoundland, etc.	14,113	30,637	63,157	26,966	23,010	27,719	32,297
Europe (except Balkans)	14,149	27,683	90,731	41,100	23,236	28,427	32,159

Changing Nature of Competition.

In pre-war years Germany furnished about 45 per cent of the machinery that entered into international trade, and the United Kingdom enjoyed a larger share in this business than did the United States. Since the war neither of these countries have been able to recover the pre-war position. It is true that while the mark depreciated German manufacturers were able to offer machinery on the world's markets at prices very much below American costs, but since the stabilization of the mark and the inauguration of the Dawes scheme German prices have been rising and the competition diminishing. Similarly, in pre-war years German manufacturers sold on credit to a considerable extent, but the interest rates are now high and banking conditions are such as to make those operations difficult.

British competitors have also been less active than in pre-war years, and there is reason to believe that British manufacturers have felt the German competition more than that of the United States.

Canada Most Important Market.

Canada for years has been the most important foreign market for American machinery. The United Kingdom may be considered to rank next in importance, Japan third, Cuba fourth, and Mexico fifth, and each of these countries may be expected to absorb more than \$10,000,000 worth of our factory machinery annually. The accompanying table shows in detail the volume of industrial machinery shipped to the countries indicated during recent years. It should be explained that in compiling this table only machinery as used in factories, mines, and construction work has been included. Agricultural equipment, office and household appliances, electrical machinery, and the like, have been carefully excluded.

Comparative rank and value of the foreign markets for American machinery

Country	1910		1913		1923		1924	
	Rank	Value	Rank	Value	Rank	Value	Rank	Value

The kinds of machinery involved and the comparative importance of the various groups are indicated in the following table:

Total exports American machinery by commodity groups

(In thousands of dollars)

Class	1923	1924
Power-generating machinery, except electric	\$15,135	\$17,757
Construction and conveying machinery	9,122	10,658
Mining, oil-well, and pumping machinery	20,289	22,837
Metal-working machinery	13,105	14,590
Textile, sewing, and shoe machinery	13,107	13,950
Other machinery, except agricultural	52,840	51,044
Total	123,598	130,836

[More detailed information regarding the exports of particular kinds of machinery can be secured by communicating with the Industrial Machinery Division, Bureau of Foreign and Domestic Commerce, Washington, D. C.]

"Foreign trade opportunities."

CONSTRUCTION NEWS

Compiled in the Industrial Machinery Division

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by mentioning the country and reference number given. Where no reference number is given further information is not available.]

Construction Projects in Canada.

Recent construction projects announced in Canada, as reported by Assistant Trade Commissioner Walter J. Donnelly, Ottawa, include an oil products factory, a \$300,000 water-storage dam, a \$350,000 vocational school, and two filtration plants, involving \$300,000 and \$125,000, respectively. Further details regarding these and other constructional activities are available to accredited American concerns which apply to the bureau or any of its district offices. Reference No. 35X.

Belgian Government to Increase Scheldt Channel.

Although the existing channels assure safe navigation for all of the vessels now calling at the port of Antwerp, it is the intention of the Government authorities to increase in depth the present channels of the Scheldt. It is planned to dredge the existing passes to a depth of 10 meters at low tide, which will assure a depth of 14 meters. This work will be carried out from the mouth of the Scheldt up to the Kruisschans lock, which is now under construction. The Kruisschans lock will give access from the Scheldt to a new large basin canal that is intended to form a new route of approach and departure for large vessels calling at Antwerp. (Vice Consul Julian F. Harrington, Antwerp.)

Branch Railway Lines Contemplated in Greece.

Projects are being elaborated for the extension of the railway system in the region of Saloniki. Bids will be received by the Minister of Ways and Communications at Athens for the construction of new lines approximating a total of 384 kilometers. The lines projected are the following: Saloniki to Anghista, Kozani to Larissa, Kozani to Kalambaca, Kozani to Verria, and Drama to Cavalla. Reference No. 169027. (Consul Robert F. Fernald, Saloniki.)

Extension of Irrigation Considered in New South Wales.

A number of irrigation schemes is under consideration by the New South Wales Government. The Premier announced recently that a commission appointed to report on the question of the extension of irrigation had recommended that an irrigation area of some 20,000 acres, including a small adjacent portion of Gol Gol, should be established at what was then referred to as Nine Mile, and be subdivided into farms of from 15 to 20 acres, the development of such area to be by gradual stages. (Vice Consul Haskell E. Coates, Melbourne, Australia.)

Plan for Economic Development in Dutch East Indies.

Details have been published of a plan for the economic development of West Java and South Sumatra requiring capital of approximately 115,000,000 florins and covering about 10 years. First on the program comes the construction of railways in Java, Sumatra, Borneo, and Celebes; next, the installation of hydroelectric plants in west, mid, and east Java, with irri-

gation and colonization schemes in Java and Sumatra and the government purchase of private lands following. Railway construction in Java includes the line Loemadjang-Kentjong-Poeger, the capital required being 2,500,000 florins; in the area traversed sugar factories are expected to be erected. Next come the Garoet-Tjikadjan line, capital 3,000,000 florins; Buitenzorg-Penjawoengan, capital 3,000,000 florins; and the Serang Tjiomas line, capital 1,500,000 florins. (Trade Commissioner J. F. Van Wickel, Batavia, Java.)

Municipal Improvements Proposed in Cobh, Ireland.

The Cork city commissioner, according to the Cork Examiner, has under consideration three plans for improvements in Cork city, involving an expenditure of £145,000: (1) The installation of a new filtration plant at the city waterworks, the estimates for which are as follows: Sedimentation chemical and filtration plant, £12,000; foundations, £1,500; building £6,000; intake and waste pipes, £700; fencing, £1,600; total £21,800; contingencies, £3,200; grand total, £25,000; (2) the asphaltting of 68,000 square yards of streets at a cost of £50,000; (3) the erection of 200 new houses at a cost of £70,000. (Vice Consul John S. Richardson, jr., Cobh.)

Cottonseed-Oil Mill to be Erected in Mexico.

A group of local business men have plans under way for the construction of a cottonseed oil mill in Ciudad Juarez, and work on the erection of the building and plant will begin in the near future. The capital of the new company will be \$50,000, and the capacity of the plant in the beginning will be from 20 to 30 tons of cottonseed per day, but as conditions warrant they expect to enlarge it. Reference No. 168444. (Consul John W. Dye, Ciudad Juarez.)

Finnish Railways to be Extended.

The program concerning new railway lines in Finland, included in the 1925 budget of the Finnish Government, embraced a total of five branches, namely, continuation of the Iisalmi-Ylivieska railroad, 154 kilometers of which will be completed by the end of 1925; the Kontionmaki-Nurmes line (109 kilometers); the Kaislahti-Trangsund line; the Matkaselka-Suomajarvi line; and the Karungi-Tangellonjoki branch. For these projects the Diet granted a total of 71,000,000 Finnish marks. In addition, 5,000,000 marks were granted for railroad branches in ports and at industrial plants, as well as for surveys of new lines. (Assistant Trade Commissioner Emil Kekich, Helsingfors.)

Hungarian State Railways Plan Extensions.

Tracks will be laid between Moson-Magyarovar and Győr to make this part of the State railway lines in Hungary double-tracked. Improvements are also planned on the Szekesfehervar-Borgond and the Ormospuszta lines and for some 24 stations. It is also planned to enlarge the Keleti and Ferencvaros stations at Budapest. The additional construction of houses is contemplated and present plans provide for a total of 252 apartments. Barracks to afford sleeping accommodations for 600 employees at various terminals in the

country are also included in the construction plans. (Consul Walter S. Reineck, Budapest.)

Montreal Considering Elevation of Tramways.

Construction of elevated tramways is under consideration by the Montreal Tramways Commission, as additional transportation facilities are necessary to alleviate the congestion which now exists in that city, and it is believed an elevated system would solve the question. Plans provide for lines running north and south on Park Avenue, St. Lawrence, St. Denis, Papi-neau, and Delorimier. It is expected that a definite decision will be reached within a short time. (Assistant Trade Commissioner Walter J. Donnelly, Ottawa, Canada.)

Large Garage to be Built in Vancouver.

Construction will shortly be commenced at Vancouver on what is said to be the largest garage and motor show rooms on the Pacific coast. The building will be three stories in height, 120 by 125 feet, and will cost about \$150,000. Show rooms and a garage will occupy the first floor and the two upper floors will be devoted exclusively to storage. Reference No. 168509. (Consul Harold S. Tewell, Vancouver, British Columbia, Canada.)

Two English Cities to be Connected by 100-Foot Highway.

Work is now in progress on a new highway extending from the city limits of Birmingham to the city of Wolverhampton. The new road is to have a length of 9¾ miles. Its estimated cost, including the construction of the necessary bridges, is £570,000, or an average of £58,460 per mile. The total width of the highway

is 100 feet; in the center is to be a 40-foot roadway, and on either side will be constructed a verge, grass covered, 20 feet wide. (Vice Consul Oscar F. Brown, Birmingham.)

Vancouver Lumber Mill to Improve Plant.

A large lumber mill at Vancouver contemplates spending \$1,000,000 on improvements to the present plant, including the purchase of new and modern machinery. Reference No. 168509. (Consul Harold S. Tewell, Vancouver, British Columbia, Canada.)

Coventry Gas Works to be Extended.

An extension of the municipal gas works at Coventry, England, has been decided upon, involving an expenditure of £350,000. This project is the second portion of a scheme of extension of the gas plant to cost in all £425,000, which was originally approved in 1919. It is estimated that by the end of the next four years an annual output of 2,600,000 cubic feet of gas will be required to meet the needs of the city, and a weekly output of 60,500,000 cubic feet in 1928-29. Reference No. 167899. (Vice Consul Oscar F. Brown, Birmingham, England.)

Catalogues of Building Material Requested.

The American vice consul at Dairen, Manchuria, has requested American trade journals or catalogues relative to building material and home architecture for the reference files of the consulate. He is desirous of being in the best possible position to answer inquiries and give information regarding American products which have a potential market in his consular district. The proper form of address is "American Consulate, Dairen, Manchuria."

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

USE OF FARM IMPLEMENTS IN YUGOSLAVIA

Consul K. S. Patton, Belgrade

Modern farm equipment is not used extensively in Yugoslavia, and modern implements are employed chiefly in the Voivodina, Croatia-Slavonia, and Bosnia. The agricultural holdings in the other Provinces of the Kingdom are divided into many small farms which are generally less than 5 hectares in size. The average equipment of such farms is a small plow, a drag-harrow, and hand tools such as a scythe, flail, and similar tools.

The sale of modern agricultural machinery is therefore confined chiefly to the Provinces mentioned above, although the agrarian reforms have caused the partitioning of many of the large estates in these Provinces so that there are now many holdings so small that the holders can not afford to purchase modern equipment. The principal agricultural products of Yugoslavia are small grain and corn, fruit and grapes, while livestock and dairy products are also important.

Implement Market Shows Improvement.

The sale of agricultural machinery in Yugoslavia has shown considerable improvement since the first of the year over the period preceding. This improvement has been manifest chiefly in the Voivodina, Croatia-Slavonia, and Bosnia. There is a progressive movement in these Provinces toward the use of modern im-

plements, but the general lack of ready money prevents many farmers from making purchases. Efforts are being made to encourage the use of modern implements by dealers and by the Hrvastke-Slavonske Gospodarsko Drustivo (Croatian-Slavonian Economic Association). This association has existed for 82 years and has organized a company for the sale of agricultural machinery. It has 72 branch houses and about 80 employees.

Domestic Production of Implements Unimportant.

The domestic manufacture of farming implements is very limited. Small hand implements, such as shovels, spades, hoes, and harrows, are made in a few factories, but most of the agricultural implements are imported. Few tractors are used, owing to the expense of maintenance and the lack of repair facilities.

Tractors are more popular in the Voivodina than in other Provinces; sales were good in 1924. There are many farms in the Voivodina region of 100 acres or more in size, and many of them are well equipped with modern implements. There are also several factories in this district, one of which, established in 1875, employs 200 workers and produces ordinary farm tools, power and hand wine presses, grinding machinery, gasoline motors, pumps, and well-drilling machinery. Several other firms manufacture corn planters and shellers, grain seeders, harrows, plows, farm wagons, and other farm equipment.

Source of Imports.

Importations of agricultural implements have been chiefly from Hungary, Austria, and other central European countries. Some purchases have been made from other European countries and from the United States, but the bulk of purchases have been made in the States formerly comprising the Austro-Hungarian Empire. Total imports, however, are not large, but the present tendency is toward the use of more modern methods of agriculture, and this is being stimulated by means of propaganda and educational work on the part of dealers and various organizations.

Opportunity for American Sales.

American implements are popular in Yugoslavia and are considered of better quality than those made in

other countries. As a result, American implements are in a position to compete with those of Germany, Austria, Hungary, and Czechoslovakia, where most of the implements used in the past have been purchased. The sample fairs which are held every year in Zagreb and Ljubljana, at which agricultural machines are exhibited, offer good opportunities to demonstrate American machines. The sale of American implements can be facilitated by the granting of credits of at least 90 days from date of delivery when such credit is warranted by the circumstances.

[A list of dealers in agricultural implements in Yugoslavia may be secured from the Agricultural Implements Division or from the district and cooperative offices of the Bureau of Foreign and Domestic Commerce by referring to C. I. 1505.]

COAL

Charles P. White, Chief, Coal Division

RECOVERY OF GERMANY'S COAL INDUSTRY

Rapid Increase in Bituminous Coal Production—Prussian States Lead in Output—Reversal of Position on World's Coal Market

Trade Commissioner William T. Daugherty, Berlin

Recovery in the industrial situation in Germany in 1924 was reflected in a larger coal production as compared with 1923. Bituminous coal output amounted to almost 119,000,000 metric tons in 1924, compared with 62,000,000 tons in 1923; lignite, 124,000,000 tons against 118,000,000 tons; and coke, 24,000,000 tons against 13,000,000 tons. In none of these products, however, was the 1922 level of production reached. Production of bituminous briquets totaled 3,743,000 tons; and lignite briquets, 29,665,000 tons.

Comparison With Previous Years Inaccurate.

Because production was so dislocated in 1923 on account of the Ruhr occupation, a comparison of production figures in that year would be unsatisfactory. Furthermore, a comparison with production in 1922 is not altogether accurate because, during the first six months of that year, production of the then German but now Polish part of Upper Silesia swelled the local figures accordingly.

Nevertheless, considering these circumstances, 1924 production in Germany compares favorably with 1922, although the lignite output of 124,000,000 tons in 1924 was considerably short of the corresponding 1922 figure, or 137,000,000 tons.

Bituminous Coal Output Recovery Rapid—Lignite Production Regular.

After the abandonment of passive resistance, bituminous coal production recovery was rapid. It became apparent in an output of over 10,000,000 tons in both March and April, 1924. In May the low production of but 2,621,000 tons resulted from the extensive strike of bituminous miners during that month.

Lignite output was fairly regular throughout the year, averaging about 10,363,000 tons a month. Lignite production exceeded the bituminous coal output by over 5,500,000 tons in the calendar year, but it must be remembered that raw lignite here only develops about two-sevenths of the heat value of bituminous,

i. e., the heat efficiency comparison of raw lignite, on the average, is as 2,200 calories to 7,700 calories, or 1 ton of bituminous coal to 3½ tons of lignite.

Prussian States Lead in Bituminous Coal Output.

The Prussian States controlled about 97 per cent of the 1924 bituminous coal production; the Ruhr district accounted for around 76 per cent of the total production; Upper Silesia, slightly over 9 per cent; the Bonn district, 6 per cent; Lower Silesia, 5 per cent; and Saxony, 3 per cent.

The Halle (Central German) district leads in production of lignite. Out of the total production of 124,000,000 tons, this district produced 61,166,000 tons, or 49 per cent; the Rhenish district (Bonn area), 29,488,000 tons, or 24 per cent; Saxony, 8,963,000 tons, or 7 per cent; and Lower Silesia (in the East Elbe Brown Coal Syndicate), 8,585,000 tons, or 7 per cent.

The Dortmund district (Ruhr) leads in coke production. It produced 19,883,000 tons, or 82 per cent of the total of 23,720,000 tons. The Bonn district produced 1,782,000 tons; Upper Silesia, 1,121,000 tons; and Lower Silesia, 893,000 tons.

Heavy Stocks on Hand—Imports and Exports.

At the beginning of 1924 Ruhr stocks amounted to about 2,500,000 tons; at the end of the year they had increased to around 4,500,000 tons. Stocks on hand during the latter part of April, 1925, were estimated at about 8,000,000 tons.

Germany's import trade in coal in 1924 was marked by a large decrease compared with 1923, the amount being about 13,202,000 tons of bituminous, anthracite, and unrefined cannel coal, against 25,212,000 tons in 1923. The exports amounted to 2,795,000 tons in 1924 against 1,209,000 tons in 1923.

Despite territorial losses under the peace treaty, Germany has the most extensive coal resources of any country in Europe and its export trade showed increased activities during the early months of the present year.

Poland and United Kingdom Are Chief Suppliers.

Of the total imports of 13,202,000 tons in 1924, Polish Upper Silesia supplied 6,563,000 tons, or about 50 per cent, and the United Kingdom, 6,014,000 tons, or about 46 per cent. The lignite imports, which totaled 2,078,000 tons, were supplied chiefly by Czechoslovakia, 2,076,000 tons, or more than 99 per cent, coming from that country. The coke imports which amounted to 339,000 tons came chiefly from Great Britain, 244,000 tons, or 72 per cent of the total, and from Polish Upper Silesia, 75,946 tons.

German Coal Syndicate Agreement Renewed

Trade Commissioner Daniel J. Regan, Paris, April 24

The recent meetings of the representatives of the Kohlsyndikat reported at Essen for the purpose of continuing this association have been followed with

great interest by the French coal and coke importers, and particularly the metallurgical interests in eastern France. Although the conclusion of an agreement was threatened by the strong demands of the representatives of the factory-mine group, the contract was finally renewed on the basis of current transactions until March 31, 1930, according to a report from Essen to the *Journee Industrielle*. Among the opponents of this renewal were the Wendel, Dahlbusch, and Stinnes representatives, who did not sign the agreement. However, as they formed a small minority, according to this report, it is thought that it will be possible to force them to sign, as was done when the agreement was last renewed.

RUBBER

Everett G. Holt, Acting Chief, Rubber Division

THE HUNGARIAN TIRE TRADE

Consul Walter S. Reineck and Vice Consul Harry L. Troutman, Budapest, April 14

The value of tires imported by Hungary during 1924 was 887,306 gold crowns, or approximately \$177,461; while those exported were valued at 333,342 gold crowns, or approximately \$66,668. The exports were made up almost exclusively of tires of domestic manufacture. Based on an average of one automobile casing weighing 12 kilos, the following figures indicate that approximately 9,640 tires were imported and about 3,500 exported.

Hungarian tire trade in 1924

Countries	Imports	Exports	Countries	Imports	Exports
	<i>Kilos</i>	<i>Kilos</i>		<i>Kilos</i>	<i>Kilos</i>
Austria.....	20,400	16,100	Czechoslovakia.....		3,200
Germany.....	37,600	200	Rumania.....		11,300
France.....	37,400		Yugoslavia.....		2,200
Switzerland.....	9,200		Netherlands.....	200	
Italy.....	2,000		United States.....	5,800	
Belgium.....	800	1,700			
England.....	2,100	7,400	Total.....	115,500	42,100

Tire Consumption in 1924.

It is estimated that from 12,000 to 13,000 tires were consumed during the year 1924. These figures represent a decrease compared with the previous year, notwithstanding the fact that the registration census shows an increase of 835 passenger cars and 72 trucks in operation in Hungary during the second half of the year. The total number of passenger cars registered on December 31, 1924, was 4,317, and that of motor trucks, 968. The decrease in tire consumption is due chiefly to the classification of tires as an article of luxury, imposing an additional tax of 10 per cent on all tires sold, and on account of heavy upkeep expenses many registered cars were not used to any great extent.

Sizes and Types of Tire Equipment Used.

The following sizes of tires are most in demand on this market. For the Magomobil (M.A. G.) cars manu-

factured locally, 710x90. Recently these have been substituted by 765x130 balloon tires. Smaller types of German and Italian cars use sizes 760x90 and 765x105. Sizes 820x120 and 835x135 are said to be the most popular; sizes 880x120 and 880x135 are used by medium types of touring cars; and size 895x135 is used by the majority of six-cylinder touring cars manufactured in Europe. Size 30x3½ inches has a fair sale.

Tires imported into Hungary are the metric clincher (nonskid) cord type in sizes 760x90, 815x105, and 820x120, and the inch-clincher (nonskid) cord type in size 30x3½.

Lower Prices Favor Locally Made Tires.

The prices of automobile tires in Hungary are above world-market prices. This was true prior to the removal of import restrictions on July 27, 1924, and has held since that time on account of the high protective tariff in force. Imported tires are chiefly of German, French, and Austrian origin. Recently the sale of American tires has shown some increase.

Cordatic tires (Hungarian make) in size 760x90 are sold at 1,350,000 crowns each (about \$18.90 at current exchange); the Dunlop of the same size at 1,650,000 crowns (about \$23.10); and the Michelin, Continental, and an American make of the same size at 2,000,000 crowns (about \$28). The 815x105 Cordatic tire is sold at 1,800,000 crowns (about \$25.20); the Dunlop at 2,175,000-crowns (about \$30.45); the Michelin and one American tire at 2,650,000 crowns (about \$37.10). The 820x120 Cordatic is sold at 2,300,000 crowns (about \$32.20); Dunlop at 2,700,000 crowns (about \$37.80); Michelin, an American tire, and Continental at 3,350,000 crowns (about \$46.90). The 30x3½ Cordatic tires are retailed at 1,400,000 crowns each (about \$19.60), and the Michelin at 2,100,000 crowns (about \$29.40 at current exchange. All taxes and dues in effect at the time of sale are added to these prices. Since the

apparent stabilization of the Hungarian crown, credit is being given in the trade up to 30 and 60 days.

High Customs Duties Hamper Tire Importation.

The Hungarian market for imported tires has been very seriously affected by the increase in the customs rates which became effective July 27, 1924, the date on which import restrictions were removed. From that date it was no longer necessary to obtain an import permit, but an almost equally great obstacle was placed in the way of Hungarian trade by the new customs rates.

Prior to July 27, 1924, a duty of 150 gold crowns (\$80) per metric quintal (220 pounds) was collected on imported tires. The customs duty on pneumatic tires, which includes both inner tubes and casings, according to paragraph 674/b of the new tariff schedule, is 360 gold crowns (\$72) per 100 kilos. It is therefore not surprising that the price of tires in Hungary exceeds the average price in the principal markets of the world.

Tire Production in Hungary.

The manufacture of automobile tires in Hungary showed considerable development during 1924. The Magyar Ruggyantaarugyar Reszvenytársasag (Hungarian Rubber Goods Factory, Ltd.) states that its output for the year was 10,000 tires. This is the only concern engaged in the manufacture of cord tires exclusively.

Merger of Factories—Monopoly Established.

The Hungarian press reports that the Hungarian Rubber Goods Factory (Magyar Ruggyantaarugyar

R. T.) and the Dr. Dorogi & Co. Rubber Manufacturing Co. (Dr. Dorogi es tarsa gummigyar) have effected a merger. According to present plans, it is not intended to abandon the Dorogi plant. Work at this factory will be continued also in the future under a separate management.

There are two other small factories manufacturing rubber goods which the reports state it is likewise the intention of the Hungarian Rubber Goods Factory to absorb.

The merger of the Hungarian Rubber Goods Factory and the Dr. Dorogi Co. gives the former organization a monopoly. In view of the high customs duties imposed on rubber goods in the new customs schedule, the Hungarian manufacturers should succeed in securing practically full control of the domestic markets. The Hungarian Rubber Goods Factory is the only domestic concern manufacturing tires. Since the discontinuance of the manufacture of fabric tires by that company, there has been a material improvement in the quality of their products, for they now manufacture a cord tire which enjoys a fair sale in the local markets and is exported to some of the surrounding countries. The company has a very well equipped department for the manufacture of rubber toys and in this particular line enjoys a considerable advantage over competitors through the low price of labor.

PAPER

O. M. Butler, Acting Chief, Paper Division

EXPORTS SALES OF PRINTING MACHINERY AND SUPPLIES

Exports of printing machinery from the United States during the first three months of the current year reached a total of \$2,879,956, an increase of \$86,398 compared with the same period in 1924. Shipments consisted of printing presses to the value of \$1,517,953, typesetting machines valued at \$958,369, and other printing machinery valued at \$403,634. March exports were somewhat better than those of the two preceding months, reaching a total value of \$1,140,091, an increase of \$295,129 over the corresponding month in 1924.

Market for Printers' Machinery in Brazil.

There is a limited demand for perforating, embossing, and die-cutting machines in the Brazilian market, according to a report from Consul R. R. Bradford, Rio de Janeiro. A large proportion of this class of machinery in use at present is of German manufacture, but during the past months there has been keen competition from Italian manufacturers, who have been able to undersell the German brands. American machines of this class enjoy an excellent reputation in this market, but are not sold extensively at present, owing to their high cost compared with European makes.

Market for Printing Materials in India.

Imports of printing machinery and supplies (exclusive of paper) into British India during the last nine

months of 1924 reached a total value of \$754,423. Printing presses, valued at \$461,712, represented the largest item, followed by printing inks, valued at \$137,712, and type, valued at \$64,982. Statistics covering countries of origin are not available later than the fiscal year ending March 31, 1923, during which period the United States furnished 20 per cent, the United Kingdom 63 per cent, and Germany 15 per cent.

Market for Printing Presses and Type in Egypt.

The printing presses found on the Egyptian market are principally of Italian, German, or Austrian manufacture, according to a report from Consul Ernest L. Ives, Alexandria. Italian presses are quoted at 100 to 120 Egyptian pounds (\$495 to \$593 at current rate of exchange), while German and Austrian makes are offered at \$296 and \$198, respectively. Together with France, Germany, and Italy also furnish the greater part of the type in use.

Imports of Printing Machinery into France.

Imports of printing presses and other printing machinery into France during the period 1920 to 1924, inclusive, reached an average value of \$869,000 yearly; exports and reexports during the same period averaged \$319,600. During 1924 imports of this class of machinery reached a value of \$891,337, while exports amounted to \$228,595.

Imports of Printing Machinery into Finland.

Imports of printing machinery into Finland during 1924 reached a total value of 2,090,277 Finnish marks

(\$32,416). Information is not available as to the source of these receipts. In 1923, however, when imports of this class of products reached a value of \$83,650, Germany furnished 75 per cent of the total receipts, the balance coming from Sweden and the Netherlands. Imports from the United States are not recorded later than 1922, when they were valued at \$18,025.

The Austrian Paper Products Industry, 1924

Assistant Trade Commissioner Elbert Baldwin, Vienna.

With certain exceptions, Austria can absorb only some 20 per cent of its output of paper products, and the prosperity of this branch of the industry is therefore dependent upon foreign markets. During the period of inflation Austrian production of this class of manufactures rose above pre-war levels. The dismemberment of the Empire and the establishment of import embargoes followed later by high import tariffs in the Succession States caused a severe depression in the industry and during this period many of the new plants which had sprung up during the postwar years disappeared.

Foreign Markets for Paper.

The only factories that have been able to maintain a greater than pre-war production are those manufacturing cigarette paper and cigarette tubes. Three plants cover all domestic requirements in this line and are able to export considerable amounts to Italy and to the British and Dutch East Indies. In general, however, exports of paper products declined from a monthly average of 550 tons during 1923 to 440 tons in 1924. Exports to Italy increased but, on the other hand, those to Poland, which in 1923 represented 16 per cent of the total shipments abroad, disappeared.

Decrease in 1924 Exports of Writing Papers.

The domestic market is of secondary importance in the writing paper trade. The Austrian overseas business is hampered by the high freight rates to Trieste which render competition with the German product difficult, while inferior grades of writing paper can not be profitably sold in the face of high customs duties in the neighboring markets, which in some cases, for example Poland, reach a rate of 75 per cent ad valorem. Exports declined from 2,334 tons in 1923 to less than 1,950 tons in 1924, losses being especially severe in such markets as Belgium, Yugoslavia, Italy, and Hungary, which had taken the largest proportion of the 1923 shipments, and which during 1924 curtailed their purchases by 10 per cent to 20 per cent. On the other hand, increased sales are reported to England, France, and overseas during 1924.

Specialty Sales Decreased—Demands for Paper Boxes.

The foreign demand for ledgers, notebooks, and copy books was less favorable in 1924 than in the preceding year, the monthly average of foreign sales dropping from 740 tons in 1923 to 320 tons last year, largely owing to the decrease in sales to Italy and Yugoslavia. The domestic market was disturbed by many insolvencies. Similar conditions obtained for products such as playing cards, toys, picture books, albums, paper napkins, and other articles of cardboard, papier-mâché, and imitation leather. The domestic market does not absorb a large share of these products and exports are hampered by high freight rates and heavy customs duties in the neighboring countries, while under the

high interest rates, although the volume of orders ahead is satisfactory, delayed payments have recently embarrassed the industry.

An exception to the generally unsatisfactory situation prevailing is found in the paper-box industry. The box factories report a good demand in the domestic market and an improvement in foreign sales.

Wages in Paper Industries.

At present 4,070 workmen are employed by factories producing various paper specialties, 3,000 by the paper box factories, 5,000 in the graphic trades, and 18,000 in the pulp and paper mills. Wages in the paper mills at the end of March were \$5.90 per 48-hour week for skilled and \$4.37 for common labor; while those in the paper specialties industries ranged somewhat higher, \$2.35 to \$4.56 for common labor and \$4.90 to \$7.30 for skilled labor.

Side Runs of the Paper Trade

Imports of Paper into Haiti.

Imports of paper and paper manufactures into Haiti during the fiscal year ended September 30, 1924, were valued at \$100,380, according to a report from Consul Maurice P. Dunlap, Port au Prince. Approximately 64 per cent of the imports came from the United States, followed by France with 17 per cent, Germany with 10 per cent, and the Netherlands with 4 per cent.

Market for Kraft Paper in New Zealand.

The consumption of kraft paper in the Auckland district is estimated at 1,750 tons per year, of which 750 tons are imported and the remainder supplied by the domestic mills located at Dunedin. Approximately 90 per cent of the imports are from Canada, which enjoys the advantage of a preferential tariff rate in the New Zealand market. Canadian kraft has recently been quoted at around £29 (\$138) per ton, c. i. f. Auckland. (Consul K. de G. McVitty.)

New Latvian Bank Note Unsatisfactory.

The Latvian Ministry of Finance has announced that the first consignment of the order for 1,000,000 bank notes in 20 Latish denominations placed with an English firm by the Bank of Latvia has arrived, but will not be put into circulation, as the print is entirely unsatisfactory. About 10 per cent of the order was delivered on the initial consignment. (Commercial Attaché C. J. Mayer, Riga.)

Australian Paper Imports.

Imports of paper and stationery into Australia during the last six months of 1924 were valued at \$15,511,875, a slight increase over those during a similar period in 1923, which were valued at \$15,368,923. Trade Commissioner E. G. Babbitt in his report calls attention to the fact that while receipts increased as compared with the previous year the share of the United States in this trade decreased from \$1,595,122 during the last half of 1923 to \$1,480,278 during the corresponding period in 1924. The chief competition in the Australian paper market is from the English and Canadian firms, which are favored by the preferential tariff rates, and from the Scandinavian firms, which are competitors in the lower-priced papers.

See also "Foreign trade opportunities."

ELECTRICAL EQUIPMENT

R. L. Lundquist, Chief, Electrical Equipment Division

UNITED STATES ELECTRICAL EXPORTS DECREASE SLIGHTLY

The total value of electrical exports from the United States during the first quarter of 1924 was \$20,253,343, or \$1,798,708 less than for the corresponding period of 1924. The average for the first three months of this year is \$6,751,114, which is about \$90,000 per month less than the monthly average of 1924, but about \$740,000 per month more than the monthly average of 1923.

Although the value of electrical machinery, equipment, and supplies exported during January was only about \$150,000 less than that for the same month of 1924, that of the February shipments was nearly \$1,750,000 under that for the corresponding month of 1924. This deficit was not fully overcome by the large gain made during March, though the exports reached a point not attained during any single month in nearly four years.

Alternating and Direct Current Generators.

Comparing the first quarter of 1925 with the same period of 1924, exports of both alternating and direct current generators decreased, while steam turbine generator sets, and accessories and parts for generators increased. As a group, the value of generating equipment exported decreased slightly over \$100,000, or about 8 per cent. The exportation of self-contained lighting outfits, however, increased about 50 per cent.

Exports of Radio Apparatus Double in Value.

Primary-battery exports increased by about 42 per cent to \$522,088, but storage batteries decreased about 25 per cent. Articles which more than doubled during the first quarter of this year as compared with the same period of last year are radio apparatus, telephone equipment, bare copper wire, and electric locomotives. Power transformers show a marked decrease, being valued at \$489,376, and \$1,257,528, respectively, in the 1925 and 1924 periods, and other transformers recorded a decrease of a little over 50 per cent. Electrical measuring instruments decreased about 22 per cent to \$7,235. Exports of motors under 1 horsepower increased 6 per cent, but motors as a whole decreased by 38 per cent to \$1,333,836. Starting and controlling equipment declined about 48 per cent. Electric fans and lamps were approximately the same during the two periods.

Potential Washing-Machine Market in New South Wales

Vice Consul Walter T. Costello, Sydney, Australia

The use of electric washing machines in the household has not been developed to a great extent in New South Wales. In the past very little effort has been made to promote the sale of this labor-saving device, but recently a few firms became actively engaged in an effort to create a greater sale for this equipment. One firm, which maintains a separate department for the display and operation of electric washing machines, is meeting with fair success. It is appreciated

that a great deal of pioneer work, consisting largely of educating the ultimate consumer to the advantages of the electric washer, will have to be done in order to bring about the desired demand.

Source of Supply.

There are a number of American electric washers on the market in New South Wales at present, but most of the agents are not willing to spend a great deal of time and money to develop this trade, because it is generally felt that it will be some years before the sale of washing machines will be substantial and profitable.

Price a Very Important Factor.

Price is a very important factor in marketing electric washing machines in New South Wales. After adding freight, duty, and landing charges the local selling price is high. The most popular machine on the local market at present is selling for £39 retail, and very few buyers are willing to expend this amount of money for an article about which they know very little.

Duty on Washing Machines.

Under item No. 172 of the Official Tariff Guide of the Commonwealth of Australia, 1921-22, washing machines for household use are dutiable at the rate of 25 per cent when imported from the United States and all other foreign countries. England enjoys a preference of 12½ per cent in exporting this class of goods to Australia.

Voltages.

The direct-current voltages are 32 for country-home electrical installations and 200, 220, and 440 for other installations. Most of the alternating current is generated at 50 cycles, but 40 cycles is used to a limited extent. The alternating-current voltages are 200, 220, and 230.

Market Possibilities.

An idea of the possibilities that the State of New South Wales offers as a market for electric washing machines may be gained when it is known that there are approximately 450,000 dwellings and homes in the State and that there are not more than 450 electric washers in actual domestic use in this district at present—less than one to every 1,000 homes.

Electrical Trade Notes

Radio Exposition to be Held in Madrid.

A radio exposition will be held in the Ice Palace of Madrid during November, 1925. Radio apparatus and telegraph material will be exhibited and American manufacturers are invited to display their products. (Commercial Attaché Charles H. Cunningham, Madrid.)

Work on Los Altos Railway Started.

It is unofficially reported that three German engineers, sent by the Allgemeines Elektrizitäts-Gesellschaft of Berlin to direct the construction of the Los Altos Railway in Guatemala, have arrived in Santa

Maria. They have started inspecting the right of way in preparation for the laying of the rails. The sub-minister of the German railways, Mr. W. Culemeyer, will act as superintendent. It is now understood that the company does not have a contract to install an electric lighting plant in San Marcos.

South Indian Railway Electrification Scheme.

It is understood that an estimate of about 33,000,000 rupees for the electrification and doubling of the lines

of the South Indian Railway Co. (Ltd.) in the suburbs of Madras has been sent to the home board by the authorities of the railway at Trichinopoly, and as soon as a reply is received from the board, which is expected within a fortnight, the estimate will be forwarded to the railway board at Delhi for the necessary sanction. (Assistant Trade Commissioner E. G. Sabine, Bombay, April 9.)

SPECIALTIES

Warren L. Hoagland, Chief, Specialties Division

GAIN IN EXPORTS OF WOODEN AND METAL FURNITURE

Exports of wooden furniture for March and the combined first three months of this year showed decided gains over a year ago. Total wooden-furniture shipments rose in March, 1925, to the value of \$366,789 from \$304,406 in March, 1924. This gain was made up chiefly of exports of office furniture, which rose from \$19,514 to \$46,453, and moderate gains in most other classes of furniture.

The quarterly increase of total wooden-furniture exports represents the difference between the trade for the first quarter of 1924, valued at \$886,727, and that for the first quarter of 1925, amounting to \$970,607. The gains in this period were made up largely of advances in the February shipments of store fixtures and institutional furniture.

Large Increase in Exports of Metal Office Furniture.

While the total metal-furniture export trade for the first quarterly periods recorded little difference in value, the March trade rose from a total value of \$435,778 in 1924 to \$501,615 in 1925. The large gains in filing cases and other metal office furniture for both periods more than offset the losses in safes and safety-deposit boxes and lockers.

Shipments of filing cases for the two March and first quarterly periods were as follows: March, 1924, 2,805, valued at \$95,705; March, 1925, 4,299, valued at \$139,309; first quarter, 1924, 7,652, valued at \$280,642; first quarter 1925, 10,880, valued at \$379,562.

The March, 1925, trade in filing cases set a new record number of monthly shipments and closely approached the record value reached in January, 1925.

United States Exports of Toys and Games, Optical, and Other Goods

Advances of 19 per cent were made in exports of toys and games for the first quarter of 1925 over that of 1924, figures for this group totaling \$702,447. Of this amount over half were rubber toys, valued at \$318,028. The increase was due entirely to this group, exports of rubber toys gaining 62 per cent. All other types of toys decreased.

Optical Goods.

Exports of optical goods for the first quarter of 1925 amounted to \$752,203, an increase of 9 per cent over the same quarter last year. Of this group spectacles and eyeglasses showed the largest gain, lenses not fitted to instruments being the only group showing a decline.

Athletic and Sporting Goods and Allied Products.

The group made up of athletic and sporting goods and allied products gained by 4 per cent over the first quarter of 1924, exports for the quarter totaling \$712,696. Exports of boat oars and paddles, valued at \$66,050, recorded the greatest increase, advancing by 51 per cent over the first quarter of 1924. Exports of bicycles, with a value of \$51,286, gained 49 per cent. The next largest increase came in fishing rods, reels, hooks, baits, and tackle, with exports valued at \$138,912, an increase of 23 per cent.

Photographic Goods.

Exports of photographic goods fell off 10 per cent in value from the first quarter of 1924, exports totaling for the first quarter of 1925, \$1,905,806. However, cameras and parts, valued at \$395,179, showed a gain of 20 per cent.

Firearms, Ordnance, Ammunition, and Fireworks.

The greatest losses came in firearms, etc., exports for the first quarter of 1925 showing a decrease of \$1,073,506, a loss of 52 per cent over the first quarter of 1924.

Exports of Domestic Washing Machines Show Large Gains

Exports of domestic washing machines for March, 1925, exceeded by a wide margin those for March, 1924, and contributed largely to the gain recorded for the first quarter of 1925 over the corresponding three months of 1924. The number of these machines shipped in March of this year amounted to 1,191, as compared with shipments of 640 in the previous March. The values of these machines for these periods were \$67,398 and \$35,611, respectively. For the first quarterly period the trade amounted to 2,348 machines, valued at \$135,974, in 1925, as compared with shipments of 1,228 machines, valued at \$73,865, in 1924.

Situation in Saxony and Sonneberg Toy Industry

Consul Louis G. Dreyfus, Jr., Dresden, Germany, and Consul Hernando de Soto, Leipzig, Germany

Saxony's shipments of toys to the United States held an important place in its export trade during the last two years. However, a large decline has been noted in the first two months of the current year. Declared exports for the months of January and February, 1925, totaled \$31,755, as compared with \$117,347 in January and February, 1924, and \$184,162 for the corresponding months of 1923.

The total shipments of toys to the United States for the 12-month period ended December 31, 1924, were 3,494,079 pounds, valued at \$744,094, as against 5,406,100 pounds, valued at \$916,096—a decrease of \$172,002 and 1,912,021 pounds.

Reason for Decreased Exports from Saxony.

Probably the most important reason for the large decline in toy shipments was the increase of the rate of duty. Then, also, prices follow the cost of raw materials until they are considered high by foreign buyers. Until November last year, Saxony's factories were still working on unexecuted orders of American purchasers. After these orders were terminated, the exports reached their lowest point. In December the total exports were only 30,946 pounds, valued at \$8,827. In January, 1925, 59,920 pounds, worth \$17,996, went forward to the United States, and in February, 1925, 67,328 pounds, valued at \$13,759. Exporters do not expect any large increase in the amount of these goods shipped to the United States in the near future.

Depression in the Sonneberg Industry.

In Sonneberg, Thuringen, one of the important toy-manufacturing centers of Germany, the number of unemployed has recently risen to 3,000. This means that approximately one-sixth of all the unemployed in the Free State of Thuringen come from the Sonneberg toy industry. The situation is considered serious, and a special meeting of representatives of Sonneberg business men and of the Thuringer Ministry of Commerce was held for the purpose of suggesting remedial measures. It was brought out in the discussion that the toy industry is suffering from money stringency, excessive taxation, high freight rates, and—above all—from the falling off in orders from the United States. In the opinion of the German manufacturers the latter is due chiefly to the competition of the American toy industry.

Market for Hand Fire Extinguishers in the Canary Islands

Consul Raleigh A. Gibson, Tenerife

The Canary Islands, especially the island of Tenerife, offer a good market for hand-operated chemical fire extinguishers. The demand for this type of fire fighting apparatus has been accentuated during the past month by several disastrous fires that have led to the publication of a royal decree requiring all theaters and other public places to be supplied with fire extinguishing equipment.

At one time, an English type of hand fire extinguisher was represented in this market, but owing to its poor appearance and high price the agency was dropped. Consequently a market which is practically noncompetitive is open to American manufacturers.

[Commission agents are recommended to handle the sale of this line in the Canary Islands and a list of such firms may be secured upon application to the Commercial Intelligence Division.]

Demand for Safes and Vaults in India

Assistant Trade Commissioner Don C. Bliss, jr., Bombay

Although in India there has prevailed for a long time a strong prejudice among bankers and large business firms against the use of modern safes, considerable interest has recently been roused which is bringing this

equipment into more favor. Several banks in Bombay have recently installed new types of vaults and it is believed that orders for safes from business houses in this city will soon be forthcoming in greater volume.

Good Field for Development.

The recent installations have been of British design but it is believed that certain American types could also serve the purposes desired. So far as is known no American safe company is energetically represented in India and a desirable entry in the Indian market could be made if the proper terms and salesmanship were employed.

There should be a large potential field for the sale of safe equipment in India, as the statement is frequently made that large quantities of valuables are stored on shelves in matchwood buildings. The only common type of safe used in India is the old English style safe with a large key.

[Lists of office equipment dealers in India can be obtained from the Commercial Intelligence Division upon request.]

Specialty Briefs

Saxon Musical Instrument Sales.

Although the number of Saxon exhibitors of musical instruments at the recent Leipzig Fair had considerably augmented as compared with previous fairs, and in spite of very elaborate sample collections, it is claimed that the orders placed were disappointing.

Catalogues and Trade Journals Wanted in Dairen.

Catalogues and trade journals pertaining to American sporting goods, pottery, and glass industries are requested by the American consulate in Dairen, Manchuria, for its commercial reference files so that it will be in the best possible position to answer inquiries concerning these American products.

Additional information regarding specialties appears in this issue under the following sections:

Tariffs and trade regulations:

Brazil—Regulations on imports of arms, munitions, and explosives.

Paraguay—Import duties put on specific basis.

"Foreign trade opportunities."

American Consular Officers on Leave

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name	Post	Expiration of leave	Address
Burri, Alfred F.....	Puerto Cortes, Honduras.	June 23	Department of State, Washington, D. C.

MINERALS

Guy C. Riddall, Chief, Minerals Division

THE NICKEL INDUSTRY IN WALES

Consul A. B. Cooke, Swansea, April 8

The nickel-manufacturing industry of this district is carried on by two concerns—the Mond Nickel Co. (Ltd.) and the Anglo-French Nickel Co. (Ltd.)—both located at Swansea. Both firms are engaged in the importation of raw material (chiefly matte from Canada) and the extraction of nickel and by-products therefrom. The products are disposed of both domestically and on foreign markets, the trade being about evenly divided between the two markets.

Exports from Wales Summarized by Countries.

The following table shows the exports of nickel in cubes and rondels, and of nickel sulphate from the district to the various world markets for the first quarter of 1925, as compared with the corresponding period of 1924:

Nickel exported from Wales

Countries of destination	Sulphate		Rondels and cubes	
	First quarter of—		First quarter of—	
	1924	1925	1924	1925
	Tons	Tons	Tons	Tons
Australia.....	3		32	
Belgium.....	16	43	29	45
Brazil.....			2	
Canada.....		14		
China.....	3	5		28
Denmark.....	70		16	8
France.....	115	155	256	380
Germany.....		165	380	315
Italy.....	20	16	165	320
Japan.....	69	93	275	35
Netherlands.....		6	5	32
Norway.....	65	20		
Spain.....	3	11	42	15
Sweden.....	2	20		42
United States.....	0		295	200
All other.....	1		11	
Total.....	376	548	1,417	1,392

The preceding statistics were compiled from published data based on daily returns of the local customs. It is probable that the shipments of nickel accredited to France in both years were mostly destined for the United States, in transshipment. Invoices certified in Swansea in the first quarter of 1925 show exports of 528 tons to the United States, most of them via French ports. The invoices also indicate the shipment to this country of 23 tons of nickel sulphate during the quarter, while none is shown by the table.

Nickel Industry Expanding.

The nickel industry is apparently in very healthy condition. The Mond Nickel Co. (Ltd.), by far the more important of the two concerns, has been almost steadily expanding its plant since its organization in 1900, and at present has under construction a considerable new addition. Besides pure nickel, it has a great output of by-products, chief of which are copper sul-

phate and nickel sulphate. The nickel industry, like many other local industries that must depend for their raw materials upon imports and for their markets largely upon foreign countries, has the great advantage of abundant fuel at hand and easy facilities to immediate tidal port for movement of both its raw material in and its finished products outward.

Yunnan Tin Situation in 1924

Consul M. S. Myers, Yunnanfu, March 21

The exportation of tin in slabs from Yunnan Province, China, as shown in the customs returns of the port of Mengtze, decreased from 8,743 short tons in 1923 to 7,683 in 1924. The exportation in 1922 amounted to 10,076 tons. With the exception of 74 tons shipped to Tongking, the export in 1924 was entirely to Hongkong. Tin accounted for 90 per cent of all exports from eastern Yunnan in 1924 and for 86 per cent in 1923.

Export Decline Attributed to Weather and Transportation.

The principal reasons for the decline in exportation in 1924 were unfavorable weather conditions and inadequate transportation facilities. The exceptionally long dry season beginning in the fall of 1923 was not broken until the middle of June, and during the greater part of this time there was no water for concentrating purposes, all producers except the Kochiu Tin Trading Co. being dependent upon rain water for washing their ore. During the latter part of the year the service of the Kapi Railway was greatly reduced, owing to the deterioration of the rolling stock, and pack-animal transportation was adopted. In December and January, 1925, pack animals were commandeered by the Government for military purposes, and consequently the transportation of both tin to the railway and fuel to the smelters was greatly affected.

In the early part of 1924 unusual activity characterized the mining industry, more laborers being employed than at any other period during the past few years. Later, however, some were discharged on account of the high cost of rice, and mining operations were further restricted by the heavy rainfall during the summer months.

Year Profitable for Producers—Prices.

Unprecedented prices prevailed during a large part of the year, the average quotation at Kochiu for 1924 being about \$67 per picul, or \$0.50 a pound. The depreciation of the local currency explains the high prices at Kochiu and also the unusual activity in this industry during the year. Had normal conditions prevailed, a much larger quantity would have been produced and exported, but, notwithstanding the reduced output, the year was profitable for producers. At the end of 1924 they had considerable quantities of tin on hand, which will probably be shipped to Hongkong as rapidly as facilities will permit. Unless the foreign market slumps, local prices will rise, owing to the downward movement of the local currency—a factor which will tend to stimulate production.

Decreased Activities of French Lime Industry

Vice Consul William W. Corcoran, Boulogne-sur-Mer.

There was a noticeable slackening in the capacity production of the French lime industry during 1924, as compared with its great extension during 1923 and other years immediately succeeding the war, according to statistics recently made available by the National Association of French Lime and Cement Manufacturers (La Federation des Chambres Syndicales de Chaux et Ciments de France).

The present capacity production of French lime manufactures, according to these statistics, amounts to 3,976,090 metric tons annually, or an increase of 145,475 tons over that of 1923. This is much less than the increase noted in preceding years, 1923 showing an advance of 631,315 tons over 1922. Since the end of 1924 no increases have been noted. The total capacity production, including hydraulic, extrahydraulic and clayey lime, amounted to 3,199,300 tons in 1922 and 3,830,615 in 1923.

Prices Practically Stationary—Imports and Exports.

Prices for all limes have remained practically stationary since 1923, according to manufacturers in the Pas-de-Calais region, where a great quantity of the country's chalk, lime, and cement is produced. Ordinary hydraulic lime is selling for 65 francs per metric ton on wagon at the factories, while extrahydraulic is

bringing 68 francs. (The present Franco-American rate of exchange is 18.9 francs to the dollar.)

The importation of ordinary lime into France has increased from 161,692 tons in 1921 to 379,347 in 1924, but that of hydraulic lime, which reached 639,689 tons in 1921, has decreased since 1922 until in 1924 it amounted to only 479,208 tons. The exportation of ordinary lime has varied only slightly, attaining the high point in 1922 with 23,667 tons and amounting to 16,993 tons in 1924. The exportation of hydraulic lime increased up to 1923, when it reached 270,359 tons, but in 1924 declined to only 104,980, a smaller total than for any of the three preceding years.

The Union of Belgium and Luxemburg supplied most of the imported lime in 1924—362,476 tons of the ordinary and 466,362 of the hydraulic. Most of the exported lime of both kinds went to Algeria, and the next largest consignments to Tunis, Morocco, Senegal, Egypt, and the Saar.

Additional information regarding minerals appears in this issue under the following sections:

Cable review, Europe:

French industrial outlook uncertain.

Rumanian outlook somewhat easier.

Tariffs and trade regulations:

Canada—Proposed tax on gasoline in Nova Scotia.

Paraguay—Import duties put on specific basis.

Rumania—Reduced export duties on oils.

Russia—Duty-free importation of cement.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

BETTER CONDITIONS IN BRITISH BOOT AND SHOE INDUSTRY

Harold A. Burch, Office of Commercial Attaché, London, April 21

The British boot and shoe industry came through rather trying conditions in the first quarter of 1925, as a result of the constantly advancing prices of raw materials, but was in a somewhat better situation toward the end of the period. The report that stocks had accumulated by about 23 per cent during 1924 also had a depressing effect. The Boot Federation twice warned its members of the necessity of revamping their costings because of the higher cost of raw materials. The quarter opened with a general feeling of optimism, but this point of view, which was attributable to the new governmental majority, did not continue, and caution was applied in buying after a few weeks.

Adverse Factors Handicap Production of Heavy Boots.

In the districts where heavy boots are manufactured for agricultural, mine, and foundry work a decided quietness has been felt as a result of two causes. The population which formerly purchased this type is now wearing a lighter boot, but the manufacturers are adjusting their production to meet the new demand. The exports to the Irish Free State have been interfered with somewhat by the duty imposed, while those to France have been hindered by the exchange situation.

Business in Better Grades Improving.

The trade in districts where the better and medium men's shoes are made, such as Northampton, was normal through the first two months, then fell off about

half, but has been gradually picking up. Districts making the high-class and ladies' medium footwear have been doing a fair business, although the manufacturers have complained steadily. The reason, no doubt, is that the owners of the large chain stores have not been free in placing their orders. The slipper trade, however, enjoyed a brisk business throughout the quarter.

Improvement in Export Trade.

The extent to which the foreign trade in boots and shoes has improved over the first quarter of 1924 is shown in the following table:

British foreign trade in boots and shoes for the first quarter of 1924 and 1925

(In dozen pairs)

Items	1924		1925	
	Quantity	Value	Quantity	Value
Imports:				
Leather.....	52,363	£318,665	65,640	£409,306
Rubber.....	42,141	89,695	83,336	199,880
Exports:				
Leather.....	207,057	1,050,743	248,206	1,145,147
Rubber.....	59,341	85,823	76,843	113,397
Reexports:				
Leather.....	4,340	33,103	4,625	31,681
Rubber.....	1,010	1,983	725	2,410

The principal markets purchasing British boots and shoes in the first quarter of 1925 and the total amount shipped to each (in dozens of pairs) are as follows:

Irish Free State.....	80,060
New Zealand.....	38,916
British South Africa.....	34,699
Australia.....	21,518
Netherlands.....	13,800
Canada.....	8,455
British East Indies.....	8,307
United States.....	4,606
British West Indies.....	4,605
Egypt.....	3,644
France.....	951
Other countries.....	28,735

Increased Shipments to Majority of Markets.

Interesting developments are noticeable in the destination of the British exports of boots and shoes wholly or mainly of leather. The greatest increase is found in the exports to the Irish Free State, having been 67,350 dozen pairs for the first quarter of 1924. The United States took over 2,000 dozen pairs more in the first quarter of this year than in the corresponding quarter of 1924, while substantial gains are also found in the figures for the Netherlands, Egypt, British East Indies, Austria, Canada, and British West Indies. Only the trade with Egypt and British South Africa declined, the latter having taken 41,134 dozen pairs in the corresponding quarter of 1924.

Considerable Increase in Italian Footwear Imports

Trade Commissioner A. A. Osborne, Rome

Total imports of leather boots and shoes into Italy in 1924 amounted to 380,904 pairs, valued at 25,268,769 lire, compared with 296,710 pairs, valued at 16,963,905 lire in 1923. The United States retained its primacy as the chief source of Italy's imported footwear, but its share for 1924, amounting to 153,725 pairs, made up less than half the total quantity. Imports from Czechoslovakia, Germany, and Switzerland made decided gains in 1924 over 1923, as likewise did footwear imported from France and Great Britain, but in both cases relatively small quantities were involved.

Share of United States Maintained at About 35 Per Cent.

The participation of the various kinds of footwear entering into Italy's import trade and the countries of origin are given in the following table:

Imports of leather footwear into Italy

Items	1923		1924

¹ Not recorded in official statistics.

Increased Imports of Leather Goods into Guatemala

Consul General Philip Holland, Guatemala City

The imports of leather goods into Guatemala during 1924 increased 39 per cent over 1923. Of the total imports, valued at \$181,000, the United States furnished 85 per cent, and its nearest competitor, Germany, furnished 7 per cent. England, France, Holland, and Honduras together furnished the remainder. The United States increased its sales from \$100,000 to \$153,000, an increase of 53 per cent over the previous year, while Germany's sales declined from \$19,000 to \$12,000, a decrease of 37 per cent.

See also "Foreign trade opportunities."

Agency Representation in Newfoundland

Recently a number of instances have been called to the attention of the bureau where American manufacturers have lost sales in Newfoundland because they lacked agency representation in that country. Newfoundland is a self-governing dominion, entirely separate and distinct from the Dominion of Canada. Imports into Newfoundland from Canada are subject to the same rates of duty as are those from the United States, no tariff preference being granted to Canadian goods.

The Newfoundland business man is usually independent in thought and action. When he desires to purchase goods or to obtain an agency from United States manufacturers he does so by direct methods, and he wishes reciprocal treatment from this side of the border. If the American exporter will keep this distinction between dominions in mind when appointing an agent to represent him in that region, he will do much toward cementing the friendship of the Newfoundland business man.

The United States supplies 37 per cent of the imports, although Canada is the principal source with 42 per cent. Last year Newfoundland imported nearly \$28,000,000 worth of goods, chiefly foodstuffs, tobacco, textiles, coal, leather goods, hardware, railway materials, electrical machinery, construction materials, and iron and steel products.

Payment of Government Debts in Mexico

According to a report from Commercial Attaché Alexander V. Dye, Mexico City, dated April 24, a decree has been issued to pay debts owed by the Government to merchants, as follows: On April 28, 50 per cent to creditors who hold individual claims not exceeding 20,000 pesos, and 10 per cent to those holding over that amount; on May 13, balance of accounts under 20,000 pesos and 15 per cent of the larger accounts; the remaining 75 per cent of ledger accounts to be paid in three equal monthly installments thereafter. In the case of drafts given in past years on the financial agency in New York City, monthly payments of 25 per cent—on May, June, July, and August 13—are to be made.

IRON=STEEL=HARDWARE

Arthur Becker, Chief, Iron and Steel Division

COMPARATIVE UNITED STATES AND BRITISH IRON AND STEEL EXPORTS IN 1924

The United Kingdom, which is the greatest exporter of iron and steel products, in 1924 shipped abroad more than double the volume shipped from the United States. Shipments of iron and steel products from the United States, which totaled 1,805,073 tons, were slightly less than 47 per cent of the British total exports. The British colonial possessions entered largely into the trade of both countries, having taken nearly 42 per cent of the shipments from the United Kingdom and 36 per cent of the United States exports.

Proximity the Chief Factor in Geographical Distribution.

The United Kingdom controlled the European and African markets, its trade heavily outweighing that of the United States, primarily because of proximity. However, the United States possessed an equal advantage in most of the South American countries, consequently the trade in those markets was dominated by the United States. The trade with the Far East, exclusive of British possessions, was about equally divided between the United Kingdom and the United States.

A complete comparison of the export trade of the two countries is afforded by the following table:

Iron and steel exports from the United Kingdom and the United States, 1924

EGYPT INCREASES ITS CONSUMPTION OF IRON AND STEEL

Importation of iron and steel into Egypt amounted to 142,401 metric tons during 1924, an increase of 38 per cent over the preceding year. Most notable among the advances made in the sales of the various foreign-made lines of iron and steel products were gains in bars and billets, rails, and fittings, and nails and screws. The following table offers a comparison of the detailed trade for 1923 and 1924:

Imports of iron and steel into Egypt

[In metric tons]

Articles	1923	1924
Pig iron.....	2,038	1,293
Scrap.....	407	161
Bars and billets.....	28,380	40,529
Angles and tees.....	1,431	1,546
Girders and joists.....	12,761	17,047
Iron and steel works, partly or completely constructed.....	2,432	4,162
Galvanized sheets.....	1,445	2,687
Tin plate for petroleum tins.....	4,924	4,959
Tin plate, other.....	2,362	2,311
Other sheets and plates.....	9,087	9,384
Cast-iron pipes and fittings.....	10,314	8,695
Wrought pipes and fittings.....	5,963	9,543
Rails and fittings (including sleepers).....	5,516	17,178
Hoops and strips.....	9,381	10,843
Cables, chains, anchors, grapnels.....	328	455
Wire rope.....	203	272
Wire.....	795	1,026
Wire netting and gauze.....	367	445
Nails and screws.....	2,926	7,715
Bolts, nuts, rivets, and washers.....	1,844	1,646
Studs for cotton bale hoops.....	12	141
Tool steel.....	204	863
Total.....	103,320	142,401

Comparatively Little Used for Construction—Good Market for Nails.

The enlarged importation of iron and steel in 1924 is due in part to brisk building activity in Alexandria and Cairo, although compared with the construction practices of the United States little iron and steel construction material had been employed except in connection with reinforced concrete. For this type of work a large quantity of iron bars was imported, mostly from Belgium, which also contributed the bulk of the girders and joists.

The impetus evidenced in the receipts of nails is an indication of the potentialities of this market for that product. The demand for nails from abroad is accentuated by the fact that only one firm in Egypt manufactures this article, turning out about 200 tons per year. Belgium dominated this trade in 1924 with Germany and France offering lively competition and the United Kingdom obtaining a small share of the business.

Belgian Semifinished Products Lead—British Manufactured Goods Important.

Belgian exporters of iron and steel were preeminent in the Egyptian market, supplying approximately 72,300 tons of the receipts. Almost half of the shipments were bars and billets. Belgium attained prominence also in the trade in girders and joists, sheets and plates not galvanized, and nails and screws.

The United Kingdom, with about 41,500 tons to its credit, occupied second place. British producers controlled the market for hoops and strips, supplying 90 per cent of the imports in this line. Furthermore, the British furnished 12,100 tons of rails and fittings out of a total of 17,178 tons imported. Other products in which British exporters held the commanding position were: Wire, wire rope, tin plate, studs for cotton bale hoops, and pig iron.

Receipts from the United States Almost Negligible.

Germany was third as a source for Egyptian imports of iron and steel (approximately 14,000 tons) with France nearly as important (about 10,900 tons). The share of American manufacturers in this trade was almost negligible. During 1924 Egypt imported from the United States 15 tons of sheets and plates not galvanized, 239 tons of iron or steel works, constructed or partly constructed, 352 tons of wrought pipes and fittings, 15 tons of wire, one-half ton of wire rope, one-half ton of nails and screws, and 47 tons of galvanized sheets, according to the published statistics of the Egyptian Customs Administration.

English Market for Hacksaw Blades

Consul William J. Grace, Sheffield, March 21

Not many years ago the American hacksaws and hacksaw blades were practically the only ones on the English market and an excellent reputation was established for them. Then British manufacturers, principally in Sheffield, commenced the manufacture of hacksaw blades. A very large trade has been built up by the British makers, who have carried on extensive campaigns for winning the public to their product, and a very serious and keen competition against the American article in England was created.

Advertising to Further Sales Campaigns.

If the effects of this competition are to be minimized, American producers should begin active campaigns to promote the sales of their product. Efforts should be made to revivify the one-time preference of the English workman for the American hacksaws and hacksaw blades, to retain the present customers, and to win back those who have been taken away by the British manufacturers. It is suggested that advertising and special inducements to retailers ought to be an effective means to that end.

British Competition in the American Market.

With regard to the efforts of the British makers to sell in the American market, a British firm is said to ship fair quantities of cobalt steel hacksaw blades to the United States. This is a high quality blade and is expected to make inroads on the sales of the American product. An ordinary tungsten blade of inferior quality is also made by this company and sells at a very low price.

American Hardware Again Found at Hamburg

Consul Thomas H. Bevan, Hamburg, Germany

Notwithstanding Germany's preeminence in the manufacture of all classes of hardware, a few American hardware products are again to be found in the principal hardware stores of Hamburg. Among the most important hardware products on sale are several makes of American saws, locks, and various kinds of

drills. It is believed, however, that the importation of American hardware is still comparatively insignificant. On the other hand, German hardware exports are increasing, not only to the neighboring countries of Europe, but also to such remote markets as South America, the Dutch East Indies, and Africa.

[Details of the exportation of hardware from Germany during 1922, 1923, and 1924, as well as interesting information concerning the possibilities of the German home market, are available and will be supplied to American concerns upon application to the Iron and Steel Division, Bureau of Foreign and Domestic Commerce, Washington. Inquiries should mention Special Hardware Report No. 1.]

French Increase Siderurgical Output

Cable from Trade Commissioner Daniel J. Reagan, Paris, May 9

The production of iron and steel in France during March included 689,000 metric tons of pig iron and 607,000 tons of steel ingots and castings, compared with 637,000 tons of pig iron and 569,000 tons of steel ingots and castings in February. The April production is estimated to be approximately the same as the March output, but recessions are anticipated for May unless domestic and foreign sales increase.

Iron and Steel Buying Decreased.

One blast furnace was placed in operation during March, making a total of 136 active furnaces, 37 furnaces ready to operate, and 47 furnaces under construction or repair. During April and early May iron and steel buying decreased as a result of the forward buying in March. The Entente prices for March were maintained for April and other quotations were generally unchanged.

Additional information regarding iron-steel-hardware appears in this issue under the following sections:

Cable review, Europe: French industrial outlook uncertain. Tariffs and trade regulations: Paraguay—Import duties put on specific basis. "Foreign trade opportunities."

(Continued on p. 433)

German Emergency Budget Provides for Loan

Pending the delayed passage of the regular 1925 budget bill, the German Reichstag, on March 27, enacted the "Law regarding the preliminary settlement of the Federal budget for the fiscal year of 1925" similar to the emergency budget law for 1924.

The new law authorizes the German Government to make the expenditures necessary for its operation during the fiscal year beginning April 1, 1925, including the maintenance of the Federal Administration and the fulfillment of its tasks and legal liabilities; but expenditures that are objected to by the Reichstag or by one of its committees are not permissible.

The law also authorizes the Federal Minister of Finance to secure a credit of 100 million Reichsmarks to meet nonrecurring, extraordinary expenditures, and another credit up to 150 million Reichsmarks to strengthen temporarily the ordinary means of the Federal Central Treasury.

The law expires on May 31, 1925; but should the passage of the regular 1925 budget bill be further delayed, a similar extension emergency expenditure will necessarily be made on that date. The German Government has been conducted on an emergency-budget basis since 1914. (Consul A. W. Klicfoth, Berlin, April 3.)

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

TRADE-MARK REGISTRATIONS APPLIED FOR IN JAPAN

Commercial Attaché Frank Rhea, Tokyo

In recent issues of the Japanese Trade Mark Gazette a number of applications have appeared for the registration of trade-marks which may conflict with American trade-marks used in trade in Japan. Inasmuch as the registration of a trade-mark in Japan amounts to conclusive evidence of title, unless opposed, canceled, or annulled according to the provisions of the law, details of the published applications are given for the interest of those parties who are using identical or similar trade-marks in Japan.

Published March 31, 1925

Acme—for shoe polishes; No. 11878; application presented October 15, 1924, by H. Kojima.

Cluster—for dyes, paints, and mordants; No. 11872; application presented October 3, 1924, by K. Tanaka.

Lemon soap—for soaps; No. 11874; application presented October 6, 1924, by Seiwa Kabushiki Kaisha.

Ocean—for rubber articles, like belts, hoses, packings, etc.; No. 11791; application presented December 17, 1924, by Japanese Bicycle Co. (Ltd.).

Paramount goods—for dyes, paints, and mordants; No. 11823; application presented March 17, 1924, by E. Teramoto.

Polestar—for rubber articles including belts, hoses, packings, etc.; No. 11790; application presented December 17, 1924, by Nippon Jitten-sha Kabushiki Kaisha.

Rolland—for toilet powder, tooth powder, and the like; No. 11940; application presented January 2, 1925, by Ito Kabushiki Kaisha.

Priority Patent Protection on Industrial Property Exhibited at Austrian Fairs

Assistant Trade Commissioner Elbert Baldwin, Vienna

A law enacted in Austria on January 27, 1925, establishes a priority in favor of persons owning inventions, samples, and trade-marks displayed at exhibitions and fairs in Austria. This law repeals article 6 of the Austrian patent law of January 11, 1897.

The present law offers a priority period of three months following the termination of the exhibition, during which persons who have exhibited inventions, samples, or trade-mark merchandise, may apply for protection on their industrial property. Anything that may have been done during the interval, such as the filing of an application by a third party, will not prejudice their right.

In order to obtain the benefits of the law, it is necessary for the management of the exhibition to file applications with the ministry of commerce claiming the priority. The protection is merely provisional, retarding the operation of the law as to priorities, and, after the three-month period has expired, the exhibitor must come in under the general law.

[A translation of the law and the regulations thereunder is on file in the Division of Commercial Laws and may be consulted.]

PERIOD FOR FILING FOREIGN PATENT APPLICATIONS IN CANADA

Assistant Trade Commissioner Walter J. Donnelly, Ottawa, April 27

A decision rendered by the Exchequer Court of Canada, November 11, 1924, pertaining to the Canadian patent act, which was not made public, is of utmost importance to American patentees, especially those who have been granted patents in the United States during the past two years and who have not applied for similar rights in Canada.

The decision affects the construction of section 8, wherein it is stated that an inventor electing to patent his invention in a foreign country before obtaining a patent for the same invention in Canada must apply for the patent in Canada within one year from the earliest date of filing his application in the foreign country.

Date of Filing Foreign Applications Extended—Amendment Requested.

The decision holds that applications may be filed in Canada without regard to corresponding foreign applications, provided that at the time of filing in Canada no patent has been issued thereon for more than two years. The date of filing foreign patent applications is extended one year, and, in addition, the two-year period commences on the date of granting the patent rather than on the date of filing.

The Canadian patent office has asked Parliament to amend the patent act so as to express more clearly the law in this respect and to reenact the intent of the clause.

Commercial Law Briefs

Indirect Taxation in Greece Increased.

Numerous indirect taxes of the Greek Ministry of Finance will be increased to 10 per cent in order to retire the floating debt, according to a cable from Commercial Attaché Ray O. Hall, Athens, Greece.

Income Tax Reduced in Ireland.

Because of a favorable balance of £2,000,000 in the Irish budget estimate for 1925, the income-tax rate of 5s. in the pound sterling, effective under the Finance Act of 1924, has been reduced to 4s. for 1925, according to cable advices from Acting Commercial Attaché Hugh D. Butler, London.

Proposal to Limit Urban Property Holdings in Mexico.

A bill has been introduced in the Mexican Chamber of Deputies to divide up city property in the same manner as farm land is divided up under the present constitution. The law as proposed would limit the ownership of city property to five houses by one owner. While it is not probable that this law will be passed, it is considered an adverse factor in the general situation. (Commercial Attaché Alexander V. Dye, Mexico City.)

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

THREE MONTHS' TRADE IN BRITISH HIDE AND LEATHER

Harold A. Burch, office of commercial attaché, London

The condition of the British leather industry at present is considered, on the whole, subnormal. Tanneries are not producing at capacity, and there is considerable unemployment in the trade. There have been a few failures of small boot and shoe manufacturers and small leather dealers which has caused a feeling of financial distrust. From reliable sources it has been gathered that any improvement in consumption will result in greater activity in all branches of the industry. This improvement is looked for in the near future because stocks are not abundant, either in the hands of tanners or leather dealers, since a steady movement of leather has taken place, especially in comparison with pre-war stocks.

Fundamental Conditions in Standard Makes Good.

Importers of American leathers are of the opinion that the percentage of sole leather imported from the United States is small. The same may be said of dressed side leather, but a considerable amount of both black and colored glazed kid has been imported and consumed. Large quantities of American patent side leather have also been imported. Although the

industry is operating under abnormal conditions, both branches of the trade (upper and sole leathers) are in a healthy condition for the standard makes. The substantial improvement in trade for the first quarter of 1925 over that of the corresponding period of 1924 may be observed in the following table:

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

REICHSBANK IN STRONG POSITION IN 1924

Consul A. W. Kliefoth, Berlin

The recently issued annual report of the Reichsbank for 1924 shows that net profits last year were more than twice as large as in 1913. The unusual volume of discount transactions was largely responsible for this development. Gross profits totaled 307,000,000 reichsmarks and expenditures 184,500,000, leaving a net profit of 122,500,000 (50,600,000 marks in 1913).

Distribution of Profits—Drop in Bills Discounted.

The profits were distributed as follows: 20 per cent, or 24,500,000 reichsmarks (in 1913, 4,400,000 marks), to the legal reserve; 55,600,000 reichsmarks (in 1913, 31,000,000) to the Federal Government as its share in profits; and 42,400,000 reichsmarks to stockholders. In accordance with the law of August 30, 1924, regulating the liquidation of the Rentenbank notes, the Federal Government's share is turned into the rentenmark-liquidation-fund. Of the stockholders' share, a dividend of 10 per cent was paid out on a capitalization of 90,000,000 reichsmarks (in 1913, 8.43 per cent on 180,000,000 marks) while the balance of 33,400,000 reichsmarks is turned into a special reserve from which dividends shall be paid in future years.

The report emphasizes the unique position of the bank during the first part of the year, when it was practically the only domestic source of credit, owing to

the lack of funds available in private banks as a result of postwar inflation conditions. At the end of the year, however, the large German private banks had strengthened their position to such an extent that they were able to assume a greater share of the discount business. (See Finance and Investment Division Special Circular No. 120.) Owing to the use of foreign credits the total amount of Reichsbank credits dropped from 2,451,000,000 reichsmarks on October 31, 1924, to 2,159,000,000 on December 31. As a result of the remarkable recovery of the large private banks, the Reichsbank will doubtless gradually restrict its operations to those usually performed by a rediscount or a bankers' bank.

Foreign Credits Discussed.

The report emphasizes the importance in the economic recovery of Germany of the influx of foreign credits. It is stated, however, that this development needs careful watching, in order to prevent the unrestricted use of foreign short-term credits for purely consumptive purposes, since such a tendency might affect the stability of the currency. Considerations of this nature led to the promulgation of the decree restricting the use of foreign credits by States and communities.

The report indicates that foreign credits intended for the promotion of German exports were in a different category; and were justified, since they could be

repaid with foreign currency realized directly from the sale of the exported merchandise, while foreign credits for use as operating capital were usually unobjectionable, provided they ran for longer periods and were extended at reasonable terms. The conversion of the last-named type of credits into domestic currency accounts in part for the rise in the Reichsbank's gold and foreign-exchange reserve during 1924.

Marked Increase in Gold Reserve—Discount Rates.

The gold reserve, which by the end of April had dwindled to 442,000,000 gold marks, on December 31, 1924, amounted to 760,000,000 reichsmarks. Foreign exchange received by the Reichsbank from domestic sources in 1924 approximately equals the amount it received out of the proceeds of the Dawes plan loan. The Reichsbank has been gradually transferring to Berlin its gold reserve on deposit abroad. At the end of 1924 gold deposits amounted to 207,100,000 reichsmarks, while gold reserves in the bank itself amounted to 552,800,000.

During the entire year 1924 the Reichsbank's discount rate was 10 per cent and the rate on collateral loans 12 per cent. The rate of interest on daily Berlin stock-exchange credits steadily declined from 100 per cent at the beginning of the year, until it reached the level of the discount rate.

Danish Banks Curtail Branch System

Commercial Attaché Harry Sorensen, Copenhagen

In the recently published review of Danish banking by the bank inspector, a development is revealed which is of considerable interest since it indicates a change of system in Danish banking.

During and immediately after the war many of the major Danish banks developed a very large number of provincial branches, besides extending the branch system considerably in Copenhagen and other large cities. During the last few years, owing to the necessity for economy, several of the larger banks have discontinued many of these branches, and the tendency, apparently, is to reduce the number still further.

At the close of 1922 the Landmandsbank, Handelsbank, and Andelsbank, three of the largest financial institutions, had 204 provincial branches. During 1923 this number was reduced to 182, through the closing of branches maintained by the Landmandsbank and the Andelsbank. The Handelsbank still has 27 provincial branches. During the year 1924 more branches were closed. From present indications, it is probable that both the Landmandsbank and the Andelsbank will continue the policy of reduction during 1925.

TRANSPORTATION

P. E. D. Nagle, Acting Chief, Transportation Division

AVIATION

New Air Routes to Stockholm

L. A. France, commercial attaché's office, Stockholm, Sweden, April 8

Three new air routes are about to be opened for communication with Stockholm, according to recent press reports. The German Ministry of Communications has granted a subsidy to Deutsche Aerolloyd to be applied on the building up and operation of an air route from Danzig to Stockholm via Visby—a city located on a small island on the west coast of Sweden. Metal airplanes of the Dornier type are to be used, and the route will be covered six times a week. It is expected that the line will be ready some time in May.

The German company Junkers Luftverkehr A. G. has requested permission from the German Government to operate an air route between Berlin and Stockholm. German planes will be used on the entire route. The section Blekinge (in southern Sweden) to Stockholm will require a duty, which will be refunded when the machines are taken out of the country at the end of the flying season. This duty has already been deposited with the Swedish customs administration.

A field will be constructed at Blekinge in order to break the journey from the German port of Warnemünde to Stockholm. As it is expected to begin night traffic in the near future, it has been deemed best to transfer the cargo into another machine at the Blekinge Field.

Italian Air Service to the Near East

Consul Leon Dominion, Rome, April 7

A convention between the Italian Government and the Aero Espresso Italiana for the operation of a commercial air service between Italy and Greece and Turkey has been approved by a royal decree published in the Italian Official Gazette of April 6.

The Aero Espresso Italiana is an Italian company organized to undertake commercial air transportation between Italy and the Near East. It has negotiated conventions with Greece and Turkey for landing stations in those two countries, but has not yet been able to secure permits to land at Saloniki and Smyrna. Until these are obtained it is intended that the itinerary between Athens and Constantinople will follow a route via Lemnos.

Subventions Provided by Italian Government

The Italian Government engages to pay the company an annual amount of 800,000 lire as subvention, and the company is authorized to utilize this contribution as guaranty for bonds it may issue. For purposes of this subvention the length of the one-way trip between Brindisi, Athens, Lemnos, and Constantinople will be computed at 1,487 kilometers (899 miles).

The company also obligates itself to maintain its fleet in an efficient condition, by which it is meant that 50 per cent of its airships will always be held in readiness with complete crews to make flying trips on request of the air commissioner.

SHIPPING

Lithuania Seeks to Improve Port of Memel

J. C. White, secretary American Legation, Riga, Latvia

The Lithuanian Government recently appointed a commission to determine what could be done to improve the port of Memel and to attract Lithuanian traffic through it. On visiting Memel, the commission found many shortcomings, among which were lack of direct railroad communications between Kovno and Memel, inadequate harbor facilities with respect to width and depth, insufficient time for declaring goods in the customs, and lack of sufficient warehouses. A definite program of improvements will probably be adopted in the near future.

Swedish Commercial Fleet Expanding

The ships now under construction in Sweden will increase the country's commercial fleet by nearly 9 per cent, according to the Swedish Shipowner's Association.

tion. Shipowners fear that the additional tonnage will have a depressing effect on freight rates. (Office of American Legation, Stockholm, April 9.)

Vera Cruz Plans to Regain Traffic

Consul John Q. Wood, Vera Cruz, Mexico, April 20

With the view of regaining the traffic that was lost by Vera Cruz in 1923, when strikes were numerous and ships were tied up and many importers diverted their goods to Tampico, there has been formed a commission composed of delegates from the Federation of Land and Sea Laborers of Vera Cruz and from the Patronal Association, an organization for the protection of business interests at Vera Cruz. This commission is now seeking to effect agreements that will prevent further conflicts between labor and capital, facilitate loading and unloading at the port, procure reduction of port charges, and obtain quicker dispatch by the customs service.

RAILWAYS AND ROADS

Indian Railway Notes**Electrification and Extensions Planned.**

An estimate of about 33,000,000 rubles for the electrification and doubling of the lines of the South Indian Railway Co. (Ltd.), in the suburbs of Madras, has been sent to the home board by the authorities of the railway at Trichinopoly; upon a reply, expected shortly, the estimate will be forwarded to the railway board at Delhi for the necessary sanction.

The program calls for the laying of 1,100 miles of new railway within the next five years, or about 200 miles a year. A part of this scheme has already been approved by the railway board. (Assistant Trade Commissioner E. G. Sabine, Bombay, April 9.)

Operating Statistics of State Railways Show Improvement.

Total gross earnings of all State railways for the week ended February 28 amounted to 21,900,000 rupees, or 400,000 rupees more than for the corresponding period in 1924. During the same week 138,242 cars were loaded on the principal lines, compared with a slightly smaller number in the same week last year. There were increases in loadings of coal, coke, oilseeds, cotton, and jute. (Consul General Julius G. Lay, Calcutta.)

Amalgamation Planned.

It has been definitely decided to amalgamate the Oudh and Rohilkhand and Eastern Bengal Railway, but action may be delayed, according to Commerce in its issue of March 7. (Consul General Julius G. Lay, Calcutta.)

Financing of Branch Lines Changed.

The Government of India, with the sanction of the Secretary of State, has issued a resolution which embodies new rules regarding the financing of railway branch lines. Branch and feeder lines have been constructed under agreements by which the State guaranteed a minimum return on the capital or undertook that the line should receive a rebate to bring up the earnings to a given sum. The chief disadvantage of this method has been pointed out as a multiplication of railway companies, with separate spheres of influ-

ence and concessions, separate construction staffs, and separate accounts. The Government has decided, according to press reports, that the branch-line policy should be abandoned, and that an endeavor should be made to reduce the number of the existing branch-line companies. (Consul General Julius G. Lay, Calcutta.)

Koenigsberg International Railway Conference

Consul Harold D. Cium, Koenigsberg, Germany

The tariff union for the "German-Lithuanian-Russian Railroad Traffic" formed by an agreement in 1923, held its first meeting in Koenigsberg in January and February, attended by Government representatives and railroad experts from Germany, Lithuania, Latvia, Esthonia, and Russia.

The union has as its object the "promotion of inter-communication between East Prussia and Lithuania on the one side and Russia on the other side, in connection with Latvian and Esthonian interests"—in particular, to reestablish through tariffs for passengers, baggage, express freight, and ordinary freight, to run direct through trains for passengers, and to settle certain technical questions important for the regulation of a rapid and smoothly running traffic.

The resolutions passed by the conference, which must be ratified by the respective governments in order to become effective, provide for the naming of several stations in Germany, Lithuania, and Russia where second and third class tickets may be issued, via Latvia. Through tariffs for passenger, baggage, and express traffic were arranged, as well as some plans for expediting through freight traffic. If the proposals of the conference are realized, the forwarding of express freight will be so expedited as to cover the Koenigsberg-Moscow haul in three days.

On account of the numerous difficulties inherent in the situation, only a beginning could be made toward their solution; but other meetings are planned for the future. The management of the union was placed in the hands of the German railway direction of Koenigsberg.

Information on Roads

The "roads section" of the Transportation Division maintains a file of information on roads in all parts of the world. A portion of this collection has been used as the basis for a survey of motor roads in Latin America, which was completed in February, 1925, and which will be issued on a date to be announced later. This survey constitutes the first comprehensive report on Latin American highways that has been made by the bureau, and is intended to satisfy a growing demand. It contains detailed information as to the extent of these roads and their classification, admin-

istration, cost, plans for future improvement, etc., supplemented by maps, charts, and photographs. The book will be of value to those interested in transportation in Latin America, and especially to the industries to whom wider markets are opened by the development of highway transportation.

Considerable information on roads in other foreign countries is available, and will be furnished on application to the Transportation Division.

See also Cable review, Europe: French industrial outlook uncertain.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS

HUNGARY-POLAND

Consul General, Budapest, March 31

Conclusion of New Customs Convention.

Hungary has concluded with Poland, on March 26, 1925, her first customs convention since the World War.

The text of the treaty is not yet available, but it is understood that Hungarian wines, paprika, salami (bologna), and fish will be admitted into Poland under most-favored-nation treatment. In return, Hungary has provided concessions by way of lower conventional rates of duty on Polish naphtha, benzine (under 700), gasoline, machine oil, paraffin, cotton yarn, woolen stuffs, and a number of articles of less importance to American trade. Detailed information as to the reductions provided or the date of effectiveness is not yet obtainable.

[These concessions to Polish goods will automatically apply to imports from all countries now enjoying most-favored-nation status. The United States has a most-favored-nation treaty with Poland, and the peace treaty with Hungary is still in effect, giving American products most-favored-nation treatment in that country pending the negotiation of a new commercial treaty.]

JAPAN-SPAIN

Cable from Commercial Attaché Charles H. Cunningham, Madrid, May 6

Extension of Commercial Treaty.

The most-favored-nation commercial treaty between Japan and Spain, due to expire May 5, 1925, has been extended for six months, upon the understanding that a new treaty will be negotiated during that time.

UNITED STATES-FINLAND

Department of State, Washington, May 2

Conclusion of Most-Favored-Nation Agreement.

By an exchange of notes on May 2, 1925, the United States and Finland have agreed to accord each other unconditional most-favored-nation commercial treatment. The part of the *modus vivendi* relating to import and export duties becomes effective on May 17, 1925, while all other matters in the agreement will become effective when the Finnish Government has notified the United States that it has taken the necessary legislative action. The agreement may be terminated after 30 days' notice from either party or by mutual agreement.

The principal classes of commodities on which reduced conventional rates have been established in the Finnish tariff, and which are now extended to products of American origin are the following:

Raisins; fruit conserves; confectionery; canned meats, fish, fruits, and vegetables; prepared mustard; mineral waters; tobacco products (other than cigars and cigarettes); certain textile fabrics of jute, wool, and silk; lace and trimmings; knit goods of silk; rubberized silk fabrics; clothing of silk or trimmed with silk or embroidery; silk umbrellas; artificial flowers; bags, portfolios, etc.; certain wood manufactures; blanks for cards, labels, etc.; wall paper; certain manufactures of ivory, celluloid, etc.; footwear; leather gloves; manufactures of gold, silver, and platinum; table knives and forks with handles of ivory, gilt, silvered, etc.; gilt or silvered scissors, etc.; firearms; vehicles of all kinds and rubber-tired wheels therefor (except vehicles for transporting timber and motor trucks); phonographs and other musical instruments (except pianos and organs); luxury articles of porcelain; perfumed and toilet soaps; ethers, esters, perfumery and toilet preparations; jewelry; toys and Christmas tree decorations.

[Detailed information regarding the conventional rates applying on the above articles will be furnished by the Division of Foreign Tariffs upon request.]

GENERAL TARIFF CHANGES

PARAGUAY

William B. Southworth, American Legation, Asuncion, March 6

Changes Under the New Tariff.

Under the new Paraguayan tariff, which is scheduled to become effective on September 1, 1925, most duties are specific instead of ad valorem on official valuations, as formerly, although in certain cases alternative minimum ad valorem duties are established. Some goods are subject to a compound duty, i. e., a specific plus an ad valorem duty. The free list has been extended to include a great many articles necessary for the development of national industry, agriculture, health, education, and religion.

The old system of official valuations and the 1½ per cent surtax will no longer be in force.

Some of the new duties of greatest interest to American exporters are as follows:

Toilet preparations.—(Item 280.) Liquid preparations in general for the teeth and mouth, 0.50 peso per legal kilo; (292) paste, powder, soap, and other preparations, except liquids, for cleansing the teeth and mouth, 0.75 peso per legal kilo.

Chemicals.—(Item 258.) Aniline, coal-tar colors, and all other chemical colors for dying not specified in the tariff: (a) In liquid form, 0.25 peso per legal kilo; (b) in other forms, 0.50 peso per legal kilo; (261) varnishes, driers, and gum lac, 0.20 peso per legal kilo. (Note: No article under 258 and 261 will pay a duty of less than 25 per cent ad valorem.) (269) Bituminous paints made from mineral tar (except aniline dyes or colors, not including varnishes and driers), 3 pesos per 100 gross kilos; (270) natural earthy paints, of ochre and similar earths, including cold-water paints, 4 pesos per 100 gross kilos; (276) all paints prepared in liquid, not specified, including enamels not specified, 7.50 pesos per 100 gross kilos. (Note: No article classified under item 276 will pay a duty of less than 25 per cent ad valorem.) (305) Citric and tartaric acid, 0.20 peso per legal kilo; (306) sulphuric, muriatic, and hydrochloric acids and phenol, chrome alum for commercial or industrial use, 10 per cent ad valorem; (325) sheep dip, 7.50 pesos per 100 gross kilos; (347) naphthalene in general for commercial purposes, 5 pesos per 100 gross kilos.

Petroleum products.—(Item 162.) Gasoline, naphtha, benzene, and similar products of distillation, 7.92 pesos per 1,000 liters; (163) paraffin and other mineral waxes in bulk, blocks, or other crude form and raw, 7.50 pesos per 100 gross kilos.

Building materials.—(Item 166.) Manufactures of asbestos, 0.15 peso per legal kilo; (169) lime in general, 0.50 peso per 100 gross kilos; (173) cement, Roman, Portland, hydraulic, clinker, and those similar, 0.25 peso per 100 gross kilos.

Nails, tacks, etc.—(Item 532.) Nails, tacks, etc., not specified, of iron, with heads of other material, 0.10 peso per legal kilo; (559) tacks and small nails of iron, 7.50 pesos per 100 gross kilos; (583) small nails and tacks of copper, 0.15 peso per legal kilo.

Safety razors (item 480) of whatever kind, 3 pesos per legal kilo.

Cameras, kodaks, and photographic apparatus, except plates and films (item 1154a), 20 per cent ad valorem.

Phonographic records (item 1171), 1.20 peso per dozen plus 10 per cent ad valorem.

Apparatus, machines, etc.—(Item 1175.) Phonographs, talking machines, and similar machines, 25 per cent ad valorem; (665) cinematographs, biographs, cinematographic apparatus, similar apparatus, and repair parts for same, 20 per cent ad valorem; (671) hand sewing machines, 1 peso each; (672) sewing machines with table or cabinet, 2 pesos each plus 5 per cent ad valorem; (ex-664) hand pumps for wells, 7.50 pesos per 100 gross kilos; (660) mimeographing and multigraphing machines and those similar, 15 per cent ad valorem; (661) platform scales of whatever system or material not specified, with capacity of more than 50 kilos, 1 peso per each 50 kilos of capacity or fraction of same; (662) scales of whatever system or material not specified, with a capacity of not more than 50 kilos, 25 per cent ad valorem; (663) Roman scales with steel-yard and weights for same, 0.10 peso per gross kilo.

Electrical equipment.—(Item 690.) Storage batteries, 20 per cent ad valorem; (ex-702) carbon batteries, 0.10 peso per legal kilo.

Automobiles, tires, etc.—(Item 710.) Passenger automobiles, 7.50 pesos per 100 net kilos. (Note: The duty on automobiles in no case can be less than 20 per cent ad valorem.) (715) Single-tube tires and inner tubes for pneumatic tires, 0.80 peso per legal kilo; (730) pneumatic tires or casings, whether plain or nonskid, for automobiles, 0.50 peso per legal kilo.

Hosiery (item 928b) of cotton, for men and women, 0.50 peso per dozen pairs; (1035b) of vegetable fibers, for men and women, 1.50 pesos per dozen pairs; (1067b) of wool, for men and women, 1.20 pesos per dozen pairs; (1102b) of silk or artificial silk, for men and women, 1.80 pesos per dozen pairs, plus 10 per cent ad valorem. Hosiery for children dutiable at 60 per cent of the rates given for hosiery for adults.

On free list.—Stone in general for lithographing; false teeth; fire bricks; copper fire extinguishers; stereotype plates; clocks for steeples; electric tools and instruments; electric transformers; airplanes and dirigible balloons, including spare parts; wagons and carts; cars for irrigation; solid-rubber tires for autotricks; invalids' tricycles and wheel chairs; wooden barrels, shooks, etc., and wooden fruit-packing boxes; films, exposed; crude rubber; coal and coke; and various chemicals and medicinal preparations used in combating epidemics and maintaining public health, or for use in industry.

[For former reference to the tariff revision, see COMMERCE REPORTS for November 24, 1924.]

IMPORT AND EXPORT RESTRICTIONS

BRAZIL

Boletim da Alfandega do Rio de Janeiro, Rio de Janeiro, March 14

Regulations on the Importation of Arms, Munitions, and Explosives.

An order, dated January 29, 1925, issued by the Brazilian Ministry of War regulates the importation and dispatch by land or sea of arms, munitions, explosives, and chemicals which can be used for explosive or aggressive purposes.

Importers or other interested parties desiring to clear consignments of arms, etc., are required to make an application to the Department of War Material or to the commandant of their military district asking for an examination of their goods.

[Details in regard to the other provisions of the order may be obtained upon request from the Division of Foreign Tariffs.]

ICELAND

Cable from A. E. Fenselau, Office of Commercial Attaché, Copenhagen

Abolition of Import Restrictions.

Icelandic import restrictions, established on May 7, 1924, have been abolished entirely, effective June 1, 1925, and replaced by ad valorem duties.

[By decree of May 7, 1924, the commodities under import restriction in Iceland were divided into two groups, and the Ministry of Economy empowered to grant permission for the importation of commodities in the first group when such commodities were deemed indispensable, and of those in the second group when special reasons supported the claim for permission. See COMMERCE REPORTS of April 28 and June 23, 1924, concerning import restrictions in Iceland.]

STRAITS SETTLEMENTS, MALAY STATES, AND CEYLON

Cable from Consul General Horace Lee Washington, London, May 1

Percentage of Rubber Exportable at Minimum Rate of Duty Increased.

The percentage of standard production of rubber which may be exported at the minimum rate of duty from the Straits Settlements, Malay States, and Ceylon has been increased from 55 to 65 for the quarter May 1 to July 31, 1925.

TARIFF CHANGES ON SPECIFIC ARTICLES

CANADA

Canada Gazette, Ottawa, April 25

Regulations Governing Collection of Export Duty on Power.

Regulations were established on April 18, by the Governor General in council, governing the collection by the Minister of Trade and Commerce of the export duty on hydroelectric power, amounting to three one-hundredths of 1 cent per kilowatt-hour (equivalent to \$1.95 per horsepower-year), effective from April 1.

The regulations provide that the duty shall be paid monthly by the contractor, the amount to be computed from figures giving the total kilowatt-hour output for export, shown on the monthly return. Contractors who fail to comply with the requirements are liable to a penalty of \$50 for every day during which such default continues.

[A copy of the regulations is on file in the Division of Foreign Tariffs, Washington, and additional information on

the subject will be furnished upon request. **COMMERCE REPORTS** for April 13 announced the imposition of the export duty on power.]

CZECHOSLOVAKIA

Commercial Attaché J. F. Hodgson, Prague, April 18

Proposed "Sliding Scale" Import Duty on Cereals and Other Agricultural Products.

A bill will shortly be presented to Parliament by the Czechoslovak Council of Ministers eliminating the present fixed contingents on agricultural products, cereals in particular, and substituting instead a sliding scale of import duties which will vary according to the internal prices of the different products.

DENMARK

Office of the commercial attaché, Copenhagen, April 1

Reduction of Import Duty on Herrings.

By a Danish law of April 1, 1925, the import duty on herrings, whole, seasoned, of an average weight of 100 grams each is reduced from 0.08 crown per kilo to 0.04 crown per kilo.

Duty-Free Importation of Tomato Sauce.

According to the same law, tomato sauce when imported into Denmark by canning factories for the production of canned fish may now be imported free of duty under certain regulations.

ESTHONIA

Consul H. B. Quarton, Tallinn, March 17

New Temporary Free Admission of Raw Jute and Wheat.

The Esthonian Government issued on March 6 and 13, 1925, new regulations permitting the duty free importation of raw jute and wheat to be manufactured for export under prescribed conditions. In each case the permit to import free of duty for further manufacture and export is dependent upon previous exportation of similar manufactured goods in prescribed proportionate quantities, which have been inspected by the customs and for which a certificate of exportation has been issued. The permit for temporary free admission is granted at time of exportation of the manufactured product.

In the case of raw jute, 120 kilos may be imported free of duty for one year from date of certification, for each 100 kilos of jute sacks or other jute articles previously exported.

When wheat is imported, 160 kilos of wheat may be brought in free of duty for each 100 kilos of first-class flour exported. The certificate is valid for a specified time not mentioned in the decree, but supposedly to be written into the certificate at time of issuance.

In both instances, provision is made for importation in installments to be entered against the certificate according to given regulations.

[If further details of procedure are desired information may be obtained upon request to the Division of Foreign Tariffs.]

GERMANY

Kurt Hildesheimer, office of commercial attaché, Berlin, March 31

Free Importation of Samples for Display at Fairs.

American manufacturers desiring to exhibit at large German fairs like Leipzig, Frankfurt, or Cologne will be interested to learn that samples may be imported for display at these fairs without the necessity of paying duty or securing an import license, by registering these samples at the customhouse in the exhibition city.

If these samples are then sold for retention within Germany, it is only necessary to pay the import duty, if the samples are of such goods as do not ordinarily require an import license. If, on the other hand, a license is ordinarily required, it then becomes necessary to apply for a license on such samples as are sold for retention within Germany, at the Foreign Trade Control Board (Reichskommissar fuer Aus-und Einfuhrbewilligung, Berlin W. 15, Lietzenburgerstrasse 18). This Foreign Trade Control Board always sends an official to the Leipzig Fair who is authorized to issue such import licenses.

If the import license is granted, the duty is paid on the machines at the customhouse in the exhibition city and the goods may be disposed of in any way desired. If the import license is refused the samples may be kept in the city of exhibition for another 12 months for display purposes without paying duty. It is requested by the customs authorities, however, that the samples be stored in a place where they can be easily controlled and counted.

RUMANIA

Consul E. E. Palmer, Bucharest, April 10

Reduced Export Duties on Oils.

An order published in the Monitorul Oficial of April 8, 1925, shows reduced export duties on light and heavy oils, as follows:

Light oils reduced from 6,000 lei to 1,000 lei per carload (10,000 kilos); heavy oils from 10,000 lei to 5,000 lei per carload.

A classified table was also published showing the essential qualities of the various classifications for light, medium, heavy, and cylinder oils for various uses, as understood in that country.

[This tabulation is on file in the Bureau of Foreign and Domestic Commerce, and complete information may be obtained upon request.]

RUSSIA

Minister F. W. B. Coleman, Riga, March 21

Duty-Free Importation of Cement.

The Union Soviet of People's Commissars has issued a decree authorizing the Soviet customs authorities to permit, on principle of reciprocity, the duty-free importation of cement originating in countries in which cement is free of import duty.

[Cement is on the free list in the United States, with a provision that cement coming from a country which imposes a duty on it shall be dutiable in the United States at an equal rate of duty.]

UNITED KINGDOM

Acting Commercial Attaché Hugh D. Butler, London, May 2

Duty on Imports of Lace and Embroidery Recommended.

The committee recently appointed by the British Board of Trade to investigate the need and advisability of placing a duty on lace goods imported into the United Kingdom has recommended to the board of trade that a 33½ per cent ad valorem duty be established for all kinds of lace, and also embroidery manufactured on net or eliminable fabric, whether forming part of or attached to garments or other articles.

No duty is recommended by the committee for solid dress fabrics made on lace-making machines.

The Government has not yet announced its decision as to the action it intends to recommend to Parliament with regard to the committee's recommendation.

INTERNAL REGULATIONS AFFECTING TRADE CZECHOSLOVAKIA

Commercial Attaché J. F. Hodgson, Prague, April 18

Changes in Luxury Tax on Automobiles.

A Czechoslovak Government decree of April 4, 1925, effective April 24, changes the provisions of the luxury tax on motor vehicles as follows:

Passenger automobiles, chassis, and automobile motors having a cylinder content of more than 1.95 liters (instead of 1.8 liters as at present) and disregarding the number of cylinders (formerly only cars of not more than four cylinders were exempt), shall be subject to the 10 per cent luxury tax. The luxury tax will be levied on automobile bodies for such automobiles and on automobile equipment consisting of dynamo-electric apparatus of more than 80 watts capacity, electric starters of more than 0.8 HP., and electric headlights of more than 200 millimeters in diameter. Automobiles, auto trucks, and automobile ambulances are not

subject to the luxury tax. All automobiles are subject to the usual 2 per cent sales tax in addition to the luxury tax. It is understood that no American cars fall within the exemption of cylinder content up to 1.95 liters.

[Notice of the luxury taxes previously in effect was published in COMMERCE REPORTS for June 2, 1924.]

CANADA

Trade Commissioner Lynn W. Meekins, Ottawa, April 25

Proposed Tax on Gasoline in Nova Scotia.

A bill introduced in the Legislative Assembly of Nova Scotia on April 17, and given second reading on April 21, provides for a tax of 3 cents per gallon (imperial gallon=1.2009 gallons) on gasoline used in the operation of motor vehicles in that Province, gasoline for other uses to be exempt from the tax. This tax will not come into force until a proclamation is issued by the Governor in Council, and it is improbable that it will be made effective before January 1, 1926.

EUROPE

Samuel H. Cross, Chief, European Division

FOREIGN TRADE OF SOVIET RUSSIA, OCT. 1, 1924, TO JAN. 31, 1925

Abstracted from "Foreign Trade," Moscow, March 23

The effect of the failure of last year's grain crop in the Union of Socialist Soviet Republics is plainly reflected in the statistics of foreign trade recently published. Figures for the first four months of the 1924-25 fiscal year, beginning October 1, 1924, indicate that foodstuffs are only 25.1 per cent of total exports, while raw and semifinished materials for industrial purposes stand at 73.8 per cent; this constitutes a reversal of conditions in the same period of 1923-24.

In accordance with the Government program, exports have been increased in such agricultural commodities as oil cake, oilseeds, and lumber, and in such minerals as manganese ore and petroleum products.

Total exports for the four months were valued, at pre-war prices, at 98,451,000 rubles and total imports at 74,024,000 rubles, resulting in a favorable balance of 19,427,000 rubles, as compared with one of 78,468,000 rubles for the first four months of 1923-24.

Principal Commodities Entering Into Foreign Trade.

The chief exports consisted of agricultural and forest products and dairy products, with grain showing only a small total, as above noted. Exports of petroleum products were valued at 13,000,000 rubles, and of manganese ore at 4,000,000 rubles.

Imports during the period under review were limited mostly to products and manufactures used in Russian industrial production, only a small proportion being intended for rehabilitation of industry. Foodstuffs increased considerably from the previous months, reaching 12.5 per cent of total imports. Of particular importance were receipts of sugar, tea, rice, herring, and coffee.

Distribution by groups and totals for individual commodities follows:

Russian foreign trade, October, 1924—January, 1925

[In gold rubles at current prices; 1 ruble=\$0.5146]

Item	Group value	Per cent of total value
EXPORTS		
Foodstuffs.....	40,372,000	25.1
Raw and semifinished materials.....	118,550,000	73.8
Animals.....	217,000	0.1
Manufactures.....	1,598,000	1.0
Total.....	160,737,000	100.0
IMPORTS		
Industrial materials and manufactures:		
Equipment and tools.....	11,170,000	8.4
Raw and semifinished materials.....	78,319,000	59.0
Agricultural material and machinery.....	4,940,000	3.7
Transport material and machinery.....	11,968,000	9.0
Fuel.....	353,000	0.3
Hygienic, sanitary, medicinal supplies.....	3,780,000	2.8
Foodstuffs, feedstuffs.....	10,671,000	12.5
Domestic and personal supplies.....	3,071,000	2.3
Luxuries, art works, antiques.....	114,000	0.1
Other goods.....	2,405,000	1.9
Total.....	132,851,000	100.0

¹ Current prices represent an increase of 75 per cent over the 1913 prices heretofore used by the Soviet Government as a basis for calculating foreign-trade values.

Trade by countries followed established lines, England leading, with Germany and the United States in second and third place. As usual, Latvia stands high in receipts of Russian exports, but most of these were transit goods. Imports from the United States consisted mainly of cotton.

Soviet Government agencies handled 76.5 per cent of exports and 88.3 per cent of imports; the cooperatives, under Government control, handled 15.1 per cent and 5.1 per cent, respectively. This left for private organizations only 8.4 per cent of exports and 6.6 per cent of imports.

Amortization of the Swiss Federal Debt

Commercial Attaché Chester Lloyd Jones, Paris, April 10

The total expenses to be amortized by the Swiss Government has reached the sum of 1,511,004,554 Swiss francs, according to a report submitted by the Swiss Federal Council to the Federation Assembly on February 27, 1925. The chief items in this total are the deficits in the ordinary and extraordinary accounts, aggregating 473,000,000 and 617,000,000 francs, respectively, and the mobilization expenses, amounting to 392,000,000 francs, which are to be amortized from the war tax.

Balanced Budget in 1926 to Free Amortization Funds.

In 1926 it is expected that the budget will be balanced for the first time in many years, and that this will be accomplished without using all the balance of the extraordinary war tax not yet paid in. The yield of this extraordinary levy up to January 1, 1926, is estimated at 346,000,000 francs, from which it will be necessary to subtract the extraordinary expenses already voted by the legislative body, or about 70,000,000 francs. There will remain, therefore, for use in amortizing the debt, a sum estimated at about 275,000,000 francs. During 1926 the war tax should bring from 65,000,000 to 70,000,000 francs into the national treasury. As the extraordinary expenses are expected not to exceed 25,000,000 francs, the year should put at the disposal of the Government between 40,000,000 and 45,000,000 francs for amortization of the debt.

Debt Payments to be Completed by 1935.

It is the intention of the Federal council to devote this sum, together with all similar amounts becoming available up to 1934 when the war tax will come to an end, exclusively to cutting down the public debt and not, as heretofore, to the needs of the treasury. According to the estimates of the council, the amount paid off by 1935 will have reached 360,000,000 francs.

To accomplish this result, however, not only must the war-tax income be devoted to cancellation of the debt but the present interest charges must continue to be carried, the difference between the actual interest payment and these charges being devoted to the further reduction of public obligations. In this way the actual interest charges would not operate to benefit the current budgets.

Competition Affects Northern Ireland Industries

Vice Consul Russell M. Brooks, Belfast, April 2

Continental competition has so adversely affected the shipbuilding and linen manufacturing industries of Northern Ireland that the revival of industrial activity confidently expected at the end of 1924 has not materialized. In shipbuilding lines Germany, France, and Holland are offering intensive competition. In the linen industry the chief sources of competition are Germany, Czechoslovakia, Austria, France, and Belgium. In view of the higher costs of production in Northern Ireland, the trades are stressing quality rather than price.

Belfast Building Motor Ships.

During the first quarter of 1925 a total of 18,300 gross tons of shipping was launched by the Belfast yards. At present one firm has 21 vessels under construction. Of this number 13 are motor ships, in which

the company is installing 26 sets of main Diesel engines.

Export Trade Affected by Sterling Exchange.

Foreign exchange rates are playing an increasingly important rôle in the export trade. It is estimated that, through higher costs of production and the rise in value of sterling, United States dealers are now paying from 12 to 15 per cent more for merchandise imported from Northern Ireland than in 1924. On the other hand, while the fall in the Belgian and French francs has enabled spinners and weavers to buy yarns and flax at lower prices, it has also permitted continental goods to compete with those of local manufacture.

Unemployment Increases.

On March 16, 1925, the total number of registered unemployed in Northern Ireland was 46,947, as compared with 43,485 on January 1 and with 38,389 on January 1, 1924. The number of workers on systematic short time on March 16 was 9,735. Arranged according to trade groups, shipbuilding and engineering workers accounted for approximately 29 per cent of the total unemployed, or 2 per cent more than on April 1, 1924; building trades and construction works accounted for slightly over 28 per cent, or 6 per cent more than on April 1, 1924; the flax, linen, and hemp trades accounted for more than 13 per cent, or 3 per cent more than on April 1, 1924. Other industries showed a slight decrease.

In view of the continued depression in the shipbuilding industry and the present state of the linen trade, it is not probable that unemployment there will show any marked improvement in the near future. Building operations now opening up may decrease the number of unemployed.

Agricultural Conditions Unsatisfactory.

Owing to the continuance of very adverse weather conditions during January and February, but little field work was done by Northern Ireland farmers. With milder weather in March much progress in plowing was made. Winter wheat, where sown, is reported to be looking fairly well, and supplies of hay and of purchased foodstuffs are ample; but there is a great shortage of root crops. Cattle and sheep on the range are reported to be in poor condition, and the number being fattened is much below normal as a result of the root-crop shortage and the high price of feeding stuffs.

Additional information regarding Europe appears in this issue under the following sections:

Tariffs and trade regulations:

Hungary-Poland conclude new customs convention.

United States-Finland conclude most-favored-nation *modus vivendi*.

Transportation—Aviation:

Italian air service to the Near East.

New air routes to Stockholm.

Transportation—Railways: Königsberg international railway conference.

Lumber Imports in Uruguay

Lumber imports into Uruguay during April consisted of 157,000 pieces from the United States and 69,000 pieces from all other countries, according to a cable dated May 4 from Acting Commercial Attaché Lew B. Clark, Montevideo.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

JAPAN'S FOREIGN TRADE DURING APRIL

Based on cable from Acting Commercial Attaché Frank Rhea, Tokyo

Japan's foreign trade continues to show a heavy balance in favor of imports, the preliminary returns for April showing exports of 168,500,000 yen and imports of 259,400,000. In comparison with March exports increased 17,100,000 yen, but imports declined 54,100,000. (Yen averaged \$0.4097 in March and \$0.4176 in April.) The excess of imports, totaling 90,900,000 yen, brings the unfavorable balance for the first four months of the year to 457,265,000 yen against 582,000,000 for the corresponding period last year.

Export Increase Recorded—Imports.

Exports during April exceeded any of the preceding months of this year and were 16,000,000 yen greater than during the same month in 1924. The outstanding features of the month's trade were an increase of nearly 15,000,000 yen in raw-silk shipments in comparison with March, and a new high record of 34,000,000 yen for exports of cotton textiles. Satisfactory gains were recorded also in shipments of cotton yarns, silk textiles, and potteries, although there were slight declines in refined sugar, knitted goods, aquatic products, and the iron and steel manufactures.

Although imports during April were much smaller than during March, the total for the month was nearly 12,000,000 yen greater than for the corresponding period last year, although at that time there was an abnormal demand for reconstruction materials to replace earthquake losses. This increase was due almost entirely to raw cotton, imports of which totaled 118,500,000 yen against 50,981,000 during April, 1924. This brings total imports of raw cotton during the first four months of this year to 449,600,000 yen, more than 74 per cent of the imports during the entire year of 1924. Another important feature of the April import trade was the large increase in arrivals of rice and paddy, which were valued at 13,100,000 yen, against 2,800,000 the previous month. On the other hand, there were sharp declines in imports of iron and steel products, wheat, woolen textiles, lumber, machinery, and woolen yarns. The decline in the case of iron and steel products was especially marked, the total of 4,800,000 yen being the smallest for any month of the past three years.

Trade by Principal Commodities Summarized.

The following table gives the value of trade by principal commodities for March and April:

Foreign trade of Japan during March and April, 1925
[In thousands of yen]

Items	March	April
Exports:		
Rice and paddy.....	800	200
Sugar, refined.....	2,300	2,200
Silk—		
Waste.....	1,800	900
Raw.....	40,000	54,900
Cotton yarns.....	10,100	11,200
Textiles—		
Silk.....	6,300	8,800
Cotton.....	33,400	34,000
Knitted goods.....	3,600	2,200
Potteries.....	2,500	2,900
Aquatic products.....	1,900	1,200
Iron and steel.....	400	700
Iron and steel manufactures.....	1,200	1,300
Machinery.....	1,300	1,000
Rubber tires.....	300	500
All other.....	46,000	46,500
Total.....	151,400	168,500
Imports:		
Rice and paddy.....	2,800	13,100
Wheat.....	9,200	6,200
Sugar.....	4,400	2,500
Oil cake.....	10,900	15,800
Cotton, raw.....	128,700	118,500
Lumber.....	8,400	6,600
Woolen yarns.....	6,400	4,400
Iron, pig, ingot, slab, bars, rods, plates, etc.....	15,300	4,800
Oil, petroleum.....	900	600
Woolen textiles.....	11,700	900
Machinery.....	8,400	7,000
Wool, raw.....		9,000
Volatile oils.....		800
All other.....	108,400	69,200
Total.....	313,500	259,400

GERMANY'S TRADE WITH BRITISH MALAYA ADVANCING

Based on report of Vice Consul Richard Ford, Penang, Straits Settlements, March 1

Germany's recovery of its pre-war market in British Malaya has been especially pronounced in recent years. The inability of other countries to compete on a price basis in the sale of manufactured products is, of course, the prime factor in Germany's post-war success.

Carefully established trade routes, assisted by German import and export houses in the important shipping centers, created a valuable outlet for German products in British Malaya prior to 1914. In addition to direct shipping, German goods often entered the region through Dutch, Belgian, and sometimes Italian ports, so that the actual volume of trade with Germany could not be definitely ascertained. This condition is true to some extent at the present time, and it is doubtful if the trade returns of British Malaya truly reflect the country's actual dealings with Germany.

Malayan-German Trade Increasing Since 1922.

The first indication of a resumption of trade relations after the war was in the fall of 1919, when a slight movement of raw materials from Malayan ports to Germany was soon followed by a return movement of German manufactured goods. Further trade expansion between the two countries, however, was slight until 1922. A steady increase since that year has brought the German manufacturer to virtually the position held in this market in 1914.

During the same period Germany's purchases of raw materials from the Malay Peninsula have also considerably exceeded its former demands. For the three years 1921 to 1923, inclusive, these purchases averaged £1,417,250 (approximately \$6,099,000) annually, compared with a yearly average of £1,164,000 (\$5,665,000) for the 10-year period 1906 to 1915, inclusive.

The following statistics from the trade returns of the Straits Settlements show the remarkable recovery of German activity in British Malaya since 1920:

Trade of Straits Settlements with Germany

Years	Imports from Germany	Exports to Germany
1906 to 1910 (average).....	£621,030	£975,000
1911 to 1915 (average).....	565,130	1,363,100
1920.....	230,390	306,950
1921.....	102,900	1,238,530
1922.....	292,385	1,791,564
1923.....	591,340	1,222,322

¹ Par value of the pound sterling is \$4.867; average exchange for 1920, \$3.66; 1921, \$3.95; 1922, \$4.43; 1923, \$4.575.

Final figures for 1924 are not yet available but throughout the last 15 months Germany's trade with the Malayan Peninsula has been on an ascending scale.

Character of German Goods Sold in Malaya.

The articles at present sold by the German manufacturer in British Malaya include practically all the goods made for this market previous to the war. On the list of imports from Germany are cutlery; many articles of hardware; office equipment, including safes, cabinets and typewriters; wearing apparel; textiles; toys; chemicals; lightweight machinery; sewing machines; and various articles of a household nature.

See also Transportation—Railways: Indian railway notes.

Stocks of Wool in United States Bonded Warehouses

Stocks of wool in United States bonded warehouses continued to show an increase at the end of March, amounting to 110,805,271 pounds, compared with 106,310,565 at the end of February. Combing wool showed the largest increase, approximately 7,000,000 pounds. This more than offset the decrease of 3,000,000 pounds in carpet wool. Clothing wool, mohair, and alpaca showed small increases. March figures are as follows: Carpet, 9,349,753 pounds; clothing, 21,171,666; combing, 74,785,210; mohair, 3,540,558; and alpaca, cashmere, etc., 1,958,084.

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

CUBAN TRADE INCREASED IN 1924

M. J. Meehan, Latin American Division

The external commerce of Cuba reached a total volume of \$724,594,585 in 1924, consisting of imports valued at \$290,525,585 and exports at \$434,069,000, according to the figures contained in the recent message of the President of Cuba to Congress. This figure is in excess of the volume of trade in the previous year by \$34,568,864, although the distribution of the trade was not quite as favorable as in 1923. The value of imports increased by \$21,574,479 while the value of exports increased by only \$12,994,357. The balance of trade in favor of Cuba in 1924 amounted to \$143,543,413, a decrease of over \$9,000,000 when compared with the balance of \$152,123,537 in the previous year.

Exports to the United States Decrease.

The value of exports to the United States declined from \$367,345,910 in 1923 to \$361,468,413 in 1924. This decline is more than accounted for by the value of sugar shipments; the quantity decreased only slightly. Shipments of molasses fell off somewhat in quantity, but on account of the high prices the value increased over 100 per cent. Shipments of tobacco to the United States increased in value during 1924 but fell off slightly in volume. Exports of stemmed tobacco declined in both quantity and value, while those of unstemmed tobacco gained in both quantity and value. Shipments of cigars fell off in volume but increased in value while scrap tobacco declined in both quantity and value. Asphalt, chrome, copper, and manganese ore exports increased in value over the 1923 figures but shipments of iron ore fell off in both quantity and value. Exports

of fruits to the United States showed only small variations, the value being slightly greater than that of 1923.

United States and European Markets Compared.

The share of the United States in the total export trade of Cuba showed a falling off from the previous year, the percentages being 87.2 and 83.2, respectively. This decline was occasioned by the greater volume of sugar moving to European countries, particularly to the United Kingdom. Cuba harvested a record crop of sugar, and, as the movement to the United States was not so heavy as in the previous year, it was necessary to send the balance to other markets.

Exports to European countries, with the exception of Spain, recorded increases over those for 1923. The largest individual gain was in the case of the United Kingdom, with a gain in purchases from Cuba of \$16,854,413 and its percentage of the trade from 7.6 per cent in 1923 to 11.3 per cent in 1924. Germany more than doubled its purchases, while France increased its share by over 60 per cent. The total Cuban exports to these two countries are not, however, very large.

Distribution of Imports Unchanged.

The share of the leading countries in Cuba's import trade showed little variation from the previous year. The share of the United States declined slightly, from 67.7 per cent in 1923 to 66.2 per cent in 1924, although registering an actual gain in value of \$10,324,756. European countries, with the exception of the United Kingdom, received a proportionate share of the increase, especially in the case of Germany, which passed France, and now ranks next to the United Kingdom in the value of goods furnished to Cuba, Spain still

holding second place. Importations from the United Kingdom recorded a drop of \$798,779.

The following table shows the exports and imports of Cuba, by countries, for the past four years. These figures indicate the gradual recovery which has occurred in Cuba since the slump of 1921. With the constant improvement in the economic situation and the gradual working off of accumulated stocks which has taken place in the past two years, imports have recorded favorable gains. The year 1924 marked the passing of the last of these accumulated stocks and saw the market once more restored to a normal purchasing basis.

Foreign trade of Cuba, 1921 to 1924

Countries of destination and of origin	1921	1922	1923	1924
EXPORTS				
United States.....	\$222,968,217	\$269,609,150	\$367,345,910	\$361,468,413

The trade figures reflect, in a measure, the favorable year which Cuba enjoyed in 1924. The sugar crop of 1923-24 reached a record figure and was generally marketed at favorable prices, although the monetary return, on account of lower prices, was not so great as on the smaller crop for the previous year. In view of large world crops, the price of sugar dropped steadily toward the close of the year so that the marketing of the first of the 1924-25 crop did not bring as satisfactory prices as were received for the previous crop. Although at times during the year business was impeded by labor difficulties and at least one political disturbance, the effect was temporary, and most lines enjoyed a satisfactory year. An index of the increased activity in business circles in Cuba during 1924 is furnished by the statistics of clearings of the Habana clearing house, which amounted to \$1,062,566,289, an increase of 27 per cent over the figure for 1923 and 73 per cent higher than those for 1922.

Increase in Argentine Foreign Trade

Argentina had a favorable balance of trade during 1924, following unfavorable balances for the years 1921, 1922, and 1923. In 1924, actual value of Argentine foreign trade amounted to 1,840,104,575 gold pesos, or an increase of slightly more than 12 per cent over 1923, according to official statistics contained in the Review of the River Plate, April 3, 1925.

Imports for the year decreased 4.6 per cent as compared with 1923, but exports increased 31.1 per cent over the same period. The actual balance of trade in favor of the country in 1924 was 182,684,589 gold pesos

as compared with an unfavorable balance of 97,068,834 gold pesos for the previous year.

Real Value of Imports—Prices.

The real value of the imports for the year amounted to 828,709,993 gold pesos, of which amount 30.3 per cent were duty free, as compared with 22 per cent for 1923. Customs receipts in respect of import duties, which amounted to 112,856,822 gold pesos for 1924, represent 13.6 per cent of the total value of the imports. Applying these duties exclusively to the value of the dutiable imports, they represent a charge of 19.5 per cent.

Prices of imports, which experienced a progressive increase until 1918, in comparison with the "nominal values" of the tariff of 1906, have declined steadily to and including 1924, the difference in that year between nominal and real values being 118 per cent.

Taking 100 as the basis for real prices in 1910, the price-measuring index number in 1923 was 218.8 per cent, and 210.2 per cent in 1924, or a decrease of 8.6 units in relation to 1923.

High Value of Exports.

The total value of the exports in 1924 was 1,011,394,582 gold pesos, as against 771,361,262 gold pesos in 1923, or a gain of 31.1 per cent. Exports subject to custom duties amounted in 1924 to 662,874,877 gold pesos, while 348,519,705 gold pesos were duty free. The value of duty-free exports represent 34.3 per cent of the total, as compared with 30.2 per cent for 1923.

The value of the exports in 1924 was one of the highest hitherto recorded, having been exceeded only by the figures for 1919 and 1920, in which years they amounted to 1,030,000,000 and 1,044,000,000 gold pesos, respectively.

Livestock Products—Greatest Increase in Meat.

The value of livestock products exported in 1924 amounted to 406,185,000 gold pesos, and gained by 25.4 per cent over 1923. Agricultural products to the value of 571,965,000 gold pesos were exported, the increase in this item being 38.2 per cent.

The total quantity of all products exported in 1924 amounted to 14,400,000 tons—an increase of 31.6 per cent over 1923. Of this increase, 18.2 per cent pertains to livestock products, and 38.1 per cent to agricultural products.

The greatest increase in livestock products was in meat. In 1923, 739,000 tons of meat, valued at 121,865,000 gold pesos, were exported, and in 1924, 953,000 tons, valued at 166,772,000 gold pesos. The increase in quantity represents 28.9 per cent and the increase in value 36.8 per cent. Meat exports in 1924—953,000 tons—are the highest in any one annual period.

Exportation of Salted Hides—Wool.

The exportation of salted hides showed an important increase in 1924. Shipments were 169,000 tons, or 36.8 per cent more than in 1923, their value being 62,087,000 gold pesos, or 41.3 per cent in excess of the previous year.

Unwashed wool exports declined, the 1924 shipments being 113,200 tons, as against 131,500 for 1923. The higher price of wool in 1924, however, increased the value of the exports, the figures being 69,493,000 and 58,695,000 gold pesos for 1924 and 1923, respectively. The average price of wool in 1924 was 613.52 gold pesos per ton, as compared with 445.96 gold pesos for 1923.

Important Increases in Agricultural Products Exported.

In agricultural products, the most important increases were in the exports of wheat, from 3,722,000 to 4,884,000 tons, or 18 per cent; wheat flour, from 82,000 to 175,000 tons, or 113 per cent; bran and pollards, from 192,000 to 253,000 tons, or 31 per cent; maize, from 2,859,000 to 4,527,000 tons, or 58 per cent; linseed, from 1,036,000 to 1,358,000 tons, or 31 per cent; oats, from 458,000 to 729,000 tons, or 59 per cent; barley, from 62,000 to 192,000 tons, or 209 per cent.

It is to the increases in quantities just stated that are due the increases in values, prices having exercised but little influence, as the market quotations for the products specified showed little variation either way between 1923 and 1924.

Customs and Port Revenues Gain.

Customs and port revenues for 1924 recorded a substantial gain over 1923. Import duties represented 13.6 per cent of the total real value of the imports in 1924, while export duties formed 1.7 per cent of the total value of exports.

Decline in Coffee Prices Affects Business in Guatemala

Stewart Eagan, office of Consulate General, Guatemala, April 16

The steady decline in the price of Guatemalan coffee for the past several months has affected business conditions throughout the country, as shown by general trade inactivity during the month of March. It is estimated that 65 per cent of the coffee shipments have been made, and it is reported that some of the shipments have been rejected by the foreign importers because of poor quality. Guatemalan coffee sold at \$28 a quintal (101 pounds) in November, at \$25 in February; and at \$23.50 in March. Due to this decline, and also to the fact that imports were heavy at the end of 1924 in anticipation of higher tariff on imports from France and the United States, effective January 1, imports during the first quarter of the present year have been light.

Agricultural Societies Unite.

The numerous agricultural societies, sent, in March, delegates to a national meeting held in the capital where a union of the societies was effected, with the purpose of producing a stronger organization. It is believed that this new organization, which consists chiefly of coffee growers, will assist in procuring better prices for coffee from the buyers as well as greater financial assistance needed for harvesting the crops.

New Highway Opened.

The public highway from Guatemala City to the west coast port of San Jose, which has been under construction for over a year, was opened for traffic during the month of March. The route passes through the towns of Antigua and Escuintla. The road is in fair condition now, the dry season, but it has no hard surface and will probably be impassable for vehicular traffic during the rainy season.

As a result of an agreement reached between the Governments of Guatemala and Mexico, a postal money order system has been established between the two countries. Such an agreement with the United States would materially facilitate our trade with Guatemala.

Wireless Station Opened—Railroad Construction.

The wireless station built for the Government at Livingston was turned over to it on March 6 and an appropriation has been made to provide for its operation.

The railroad being constructed by the International Railways of Central America from Zacapa, Guatemala, to the border of Salvador is nearing completion. When this line is completed, it will give Salvador direct rail connection with Puerto Barrios, the eastern port of Guatemala, and will facilitate transportation between eastern and southern ports of the United States and the Republic of Salvador.

Exports to United States Increase.

The total value of declared exports to the United States for March amounted to \$2,005,774 as compared with \$1,740,204 for the same month of 1924. Coffee shipments were valued at \$1,642,402, which was a slight increase in value as compared with March, 1924, but the amount shipped decreased from 8,375,706 pounds to 6,519,881.

Sugar, which was exported from the west coast only, showed an increase of 150 per cent in value of exports to the United States as compared with such exports during March, 1924. Sugar exports are generally irregular, being somewhat dependent upon local demand.

Banana shipments during March almost doubled in value as compared with exports during the same month of last year, but the volume increased only from 430,525 bunches in 1924 to 455,575 bunches during March, 1925. They were valued at \$0.25 a bunch in 1924 and at \$0.50 a bunch in 1925.

Cuban Sugar Campaign Prolonged

Trade Commissioner C. A. Livengood, Habana

Recent rains have affected the operations of Cuban sugar mills and a number have been temporarily suspended. Seventeen mills have completed their campaign for the present crop, leaving 166 on the active list as against 102 a year ago, which indicates the large amount of cane still available. Of the new sugar crop, 3,314,550 long tons had arrived at ports for exportation on May 2, and 2,154,230 long tons had been exported; while stocks in the island were estimated at 1,197,332 long tons. When compared with figures for the corresponding date of last year, an increase of 443,929 tons in arrivals at ports, and 253,947 tons in exportations is shown.

Price Tendency Downward—Labor Situation Unsettled.

The tendency of prices has been downward. Whereas the average price in warehouse, Habana, for raw sugars was 4.812 cents per pound for the month of March, 1924, and that for March, 1925, was 2.653 cents, and the price had dropped to below 2.5 in the latter part of April. The unfavorable effect of low sugar prices continues to depress business operations, and traveling salesmen returning from the interior report increases in the number of bad accounts, with some tendency toward an increase in suspension of payments.

No change has occurred in the labor situation on the Cuban Northern and the Cuba Railroads; the passive strike by the workers continues, although an open strike has not been declared. As many sugar mills will

terminate operations in a few weeks, a strike would cause less damage than would have been the case earlier in the season.

Government Finance—Import Duties.

The Cuban national debt, according to the report of the President to the Cuban Congress, has been reduced in amount by \$1,245,800 in the period from September 30, 1924, to February 28, 1925, the resulting debt on the latter date being \$99,580,400. In the same message, the stock of money in the Republic during the year 1924 was reported as \$390,479,348, distributed as follows: Gold, \$37,104,765; silver, \$12,367,500; nickel, \$1,894,051; notes, \$339,113,032.

The governmental revenues for the month of February available for application to the national budget amounted to \$7,092,902, in which figure the sum of over

\$250,000 collected for the account of special funds is not included. February revenues total \$7,066,728, a decrease of practically 10 per cent from the revenues for January, as well as a decrease from the revenues collected in February, 1924. Notwithstanding this decrease, the February collections exceed by more than \$1,000,000 the average monthly collections estimated in the annual budget.

Import duties showed a slight decrease as compared with those of January, the figures being \$3,931,159 and 3,999,939, respectively, as compared with a budgeted monthly income under this head of \$2,458,333.

IRON--STEEL--HARDWARE

(Continued from p. 410)

Difficulties of Polish Siderurgy

Consul Donald R. Heath, Warsaw

The smelting industry of former Russian Poland is threatened by the competition of Polish Silesian smelters, which are better equipped and enjoy the privilege of a longer working day. Although the Polish Silesian smelters are in a position to undersell the products of the lesser Russian Poland industry, their competition has not yet exhibited its full force, owing to the escape afforded to its product to Germany under the free export clause of the Upper Silesian settlement. That settlement expired on April 14, and if Poland was not successful in persuading Germany to extend the period the interior of Poland will be flooded with Upper Silesian iron, which, it is feared, will eventually cause a complete shutdown of the old Poland smelting works.

Negotiations with Germany looking toward an extension in some form of the period of free entry of Upper Silesian products have been in progress, but it is not known whether they have been successful.

Mexican Market for Oil Stoves

Mexico furnishes only a comparatively limited market for American oil stoves. There are several reasons for this lack of demand. Perhaps the most important factor restricting the use of oil stoves is the fact that fully 80 per cent of the inhabitants are of the "peon" classes who have for generations cooked on charcoal braziers. Besides a natural disinclination toward changes, the use of charcoal is inexpensive, whereas the price of oil and of oil stoves is above the means of the majority of the population. Another hindrance to the sale of oil stoves is the climate. Although artificial heating is a comfort during certain months and in the higher altitudes, it is not a real necessity and is not generally used.

Total Values Reflect Price Decline.

During 1922 Mexico took from the United States oil and gasoline stoves numbering 2,308, valued at \$27,087. Both the quantity and value decreased by

almost 30 per cent in 1923, Mexico furnishing an outlet for only 1,737 oil and gasoline stoves invoiced at \$20,168. In 1924 Mexico bought 2,308 American oil and gasoline stoves—the same as in 1922—but the value decreased slightly from that for 1923, amounting to \$19,953.

[Recently a request for information on the market for oil stoves in Mexico was circulated among the various consular officers. Excerpts from the data submitted by them has been compiled in Special Circular No. 360, which will shortly be released. American concerns desirous of obtaining a copy of this circular should communicate with the hardware section, Iron and Steel Division, Bureau of Foreign and Domestic Commerce, Washington.]

Exhibits Available

Persons interested in the following reports may obtain them from the Transportation Division or from the appropriate district or cooperative office of the Bureau of Foreign and Domestic Commerce, by requesting the specific number.

167137—*Madrid*. Report on facilities and procedure for the shipment of American goods to Madrid, Spain. (Consul A. W. Ferrin, Madrid, March 25.)

26944—*Rio de Janeiro*. Report on congestion at the Customhouse in Rio de Janeiro. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro, April 9.)

26946—*Rio de Janeiro*. Detailed report on port congestion at Santos, Brazil. (Assistant Trade Commissioner J. J. Marinnan, Rio de Janeiro, April 15.)

Railway Betterment Plans Pushed in Spain

Commercial Attaché C. H. Cunningham, Madrid, April 20

Improvement and extension projects to cost 3,000,000,000 pesetas and to be carried out during the next five years have been recommended by the Superior Railroad Council of Spain.

The Andaluces Railroad has secured permission to float a 30,000,000-peseta loan and to build extensions. The Norte Railroad has asked permission of the council to issue obligations for 200,000,000 pesetas in order to begin the electrification of sections of its road between Manresa and Barcelona, Madrid and Avila, Madrid and Segovia, and Alsasua and Zumarraga.

COMMERCIAL INTELLIGENCE

A. S. Hillyer, Chief, Commercial Intelligence Division

TRADE LISTS AVAILABLE

The Commercial Intelligence Division has recently compiled the following trade lists, of which mimeographed copies may be obtained from the Bureau of Foreign and Domestic Commerce or its district or co-operative offices by referring to the titles and file numbers:

Lawn mowers:

Importers and dealers—

Bulgaria.....	CI-1107
Cuba.....	CI-1108
Norway.....	CI-1105

British Coal Situation Slightly Improved

Radioletter dated May 8 from Acting Commercial Attaché Hugh D. Butler, London

The British coal industry is hopeful that the slight improvement which has been apparent during the last fortnight may lead to better conditions, or at least retard depression, as prices are showing some strength and certain pits which are in a weak position have not as yet been forced to close. However, no broad improvement is expected in the immediate future because of the heavy accumulations of stocks in the continental markets, including 8,000,000 tons in Germany. The German preferential rail rates also place British coal under a considerable handicap. The Italian State Railways are closing their Cardiff office May 31, because reparations deliveries from Germany and coal from Russia are meeting requirements.

Subsidy Little Favored—No Agreement on New Wage Plan

The industry estimates that the new old age pension bill will cost the coal trade £1,000,000. A subsidy has been suggested but finds little approval in Parliamentary discussion, even though 400 pits are reported closed and 160,000 miners unemployed. It is possible that the cooperative policy between owners and workers may be expanded.

The present wage plan expires in seven weeks, but there is absolutely no evidence of an agreement upon a new plan, although conferences continue. Of the pit-head costs in South Wales, totaling 18s. 6d., wages absorb 13s. 2d. and other workers' cost amount to 10 pence, or over 75 per cent of the total cost.

The total British production for the week ended April 25 amounted to 5,268,100 tons.

Restriction of German Municipal Borrowing Renewed by the Reichstag

Consul A. W. Killefoth, Berlin

The Federal decree of November 1, restricting the flotation of foreign loans by German States and municipalities, expired on February 28, 1925. The Reichstag on March 21, 1925, however, enacted a law making such loans subject to the approval of the Minister of Finance, in accordance with the regulations in which the several States have given their approval. (See Finance and Investment Division Circular No. 100.)

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The Department of Commerce announces the following figures covering business movements in April:

Early April Indicators.

Early production indicators for April showed increases over March in silk manufacturing activity and shipments of automobiles from factories, while decreases occurred in the output of pig iron, receipts of wool, deliveries of tin, ship construction, and locomotive shipments. Pig-iron furnaces in blast on April 30 showed a decrease of 8 per cent from the previous month. Trade indicators showed larger business in April than in March, in respect to sales of mail-order houses and 10-cent chains, while financial statistics increasing over March included new incorporations, new security issues, and business failures. Orders received by manufacturers of railroad equipment were less than in March, except for freight cars.

Comparison with April, 1924.

Compared with April, 1924, an increase of 1 per cent was noted in pig-iron production and other gains were recorded in silk manufacturing activity, locomotive shipments, automobile shipments, receipts of wool, and loadings of freight cars, while

decreases occurred in ship construction and tin deliveries. Trade and financial indicators increasing over a year ago included sales of mail-order houses and ten-cent chains, new incorporations, new security issues, and number of business failures, while liabilities of failing firms declined. Orders for railroad equipment and government receipts, expenses and debt were all less than a year ago.

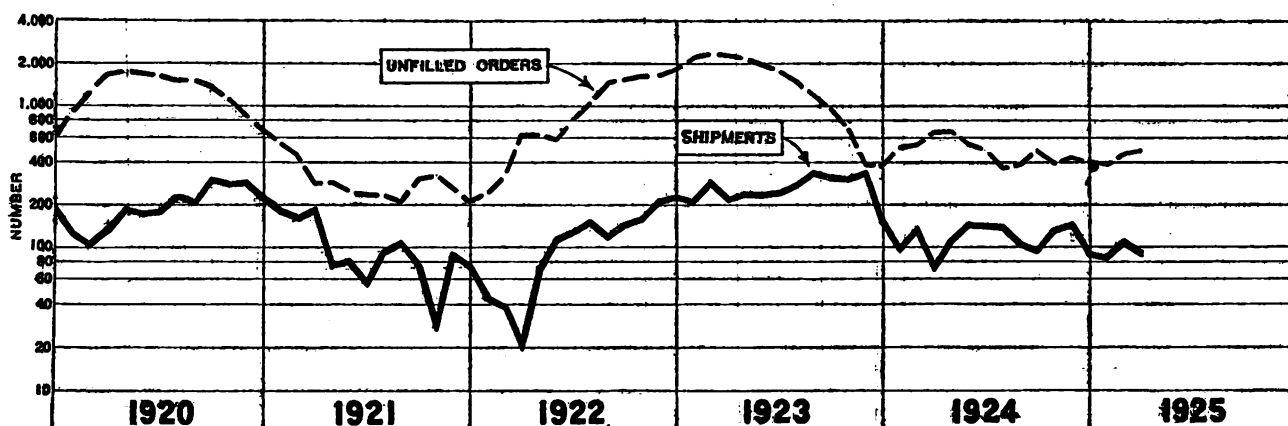

Data from Survey of Current Business.

The following table gives such data from the May issue (No. 45) of the Survey of Current Business as have been received up to May 7, 1925.

All items given in the following table correspond with similar information in the issue of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the Survey, where specific descriptions of the data and their sources are given. In addition to figures given from Government sources, there are also incorporated for completeness of service the figures from other sources generally accepted by the trades, the authority and responsibility for which are noted in the Monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for \$1.50 per year.

1 Revised.

FOREIGN TRADE OPPORTUNITIES

Reserved information may be obtained from the Bureau and its district and cooperative offices by firms and individuals on the Exporters' Index upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: *Reported by American consular officers; †Reported by commercial attachés and trade commissioners; ‡Foreign inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

GET YOUR NAME ON THE EXPORTERS' INDEX

The Bureau maintains a classified index of American merchants and manufacturers interested in overseas trade and supplies them, without charge, with reserved and confidential information on foreign trade opportunities and trade lists and with other helpful data received from commercial attachés, trade commissioners, consular officers, and other official representatives abroad.

The distribution of the confidential information reserved from the Foreign Trade Opportunity announcements, the lists of dealers and importers in foreign countries submitted by various official trade representatives, the confidential circulars released from time to time, and other confidential and semi-confidential material received in and prepared by this Bureau is confined in general to American firms recorded in this special index. This is a confidential list, the object of which is to make certain that important confidential information relating to specific opportunities for the sale of American goods abroad, collected at Government expense for the benefit of American business men, is made available only to American firms which will use it in selling American-made products exclusively.

In order to have names recorded on the Exporters' Index it is necessary to fill out a form, stating whether the applicant is a manufacturer, manufacturers' agent, or similarly engaged in commercial activity, and specifying the goods manufactured or exported and giving certain other details. This form (Form 57) may be had upon application to the Bureau or its district or cooperative offices.

DEPARTMENT OF COMMERCE

Secretary of Commerce: HERBERT HOOVER

BUREAU OF FOREIGN AND DOMESTIC COMMERCE

Director: Julius Klein

Assistant Directors: O. P. Hopkins, Louis Domeratzky, Thomas R. Taylor, John Matthews, jr.

Administrative Assistant: Wharton Moore.

Editor, Commerce Reports: Griffith Evans

REGIONAL DIVISIONS AND CHIEFS

Europe: Samuel H. Cross.

Latin America: Richard F. O'Toole.

Far East: Halleck A. Butts, acting chief.

San Diego, Calif.: H. R. Jackson, Chamber of Commerce.

Syracuse, N. Y.: F. M. Varah, Chamber of Commerce.

Toledo, Ohio: Leonard J. Gans, Chamber of Commerce.

Trenton, N. J.: George E. Mace, Chamber of Commerce.

Worcester, Mass.: Joseph H. Lane, Chamber of Commerce.

FOREIGN OFFICES AND REPRESENTATIVES IN CHARGE

American business men traveling in foreign countries should endeavor to get in touch with the foreign representatives of the Department of Commerce or the Department of State upon their arrival in a city where such representatives are stationed. These representatives are in a position to render definite assistance involving questions relating to trade and commerce, and welcome opportunities to place the facilities of their offices at the disposal of visiting American exporters. Cable addresses of foreign representatives of the Department of Commerce "Amcomat" in every case except Berlin, which is "Amcomatch," and Calcutta, which is "Amcomatch." Use Western Union five-letter code when cabling to foreign offices of the Department of Commerce. The cable address of American consular officers is "American Consul."

Alexandria, Egypt: Richard A. May, trade commissioner.

Athens, Greece: Ray O. Hall, commercial attaché.

Batavia, Java: Jesse F. Van Wickel, trade commissioner.

Berlin, Germany: Charles E. Herring, commercial attaché.

Bogota, Colombia: William Boaz, commercial attaché.

Bombay, India: Donald Renshaw, assistant trade commissioner.

Brussels, Belgium: Fayette W. Allport, commercial attaché.

Bucharest, Rumania: Louis E. Van Norman, commercial attaché.

Buenos Aires, Argentina: Edward F. Feely, commercial attaché.

Calcutta, India: E. J. Sabin, assistant trade commissioner.

Canton, China: Osborne S. Watson, trade commissioner.

Constantinople, Turkey: Julian Gillespie, trade commissioner.

Copenhagen, Denmark: T. O. Klath, commercial attaché.

Habana, Cuba: Carlton Jackson, commercial attaché.

The Hague, Netherlands: Fayette W. Allport, commercial attaché.

Hamburg, Germany: E. C. Squire, trade commissioner.

Helsingfors, Finland: Emil A. Kekich, assistant trade commissioner.

Johannesburg, So. Africa: Perry J. Stevenson, trade commissioner.

Lima, Peru: H. Bentley MacKenzie, commercial attaché.

London, England: M. W. Mitchell, acting commercial attaché.

Madrid, Spain: Chas. H. Cunningham, commercial attaché.

Manila, P. I.: Edwin B. George, assistant trade commissioner.

Melbourne, Australia: Elwood G. Babbitt, trade commissioner.

Mexico City, Mexico: Alexander V. Dye, commercial attaché.

Montevideo, Uruguay: Lew B. Clark, acting commercial attaché.

Ottawa, Canada: Lynn W. Meekins, trade commissioner.

Paris, France: Chester Lloyd Jones, commercial attaché.

Peking, China: Arthur H. Evans, assistant commercial attaché.

Prague, Czechoslovakia: James F. Hodgson, commercial attaché.

Riga, Latvia: Carl J. Mayer, commercial attaché.

Rio de Janeiro, Brazil: William L. Schurz, commercial attaché.

Rome, Italy: Henry C. MacLean, commercial attaché.

San Juan, P. R.: L. W. James, trade commissioner.

Santiago, Chile: Ralph H. Ackerman, commercial attaché.

Sao Paulo, Brazil: W. B. Embry, trade commissioner.

Shanghai, China: George C. Howard, trade commissioner.

Stockholm, Sweden: T. O. Klath, commercial attaché.

Tokyo, Japan: A. Bland Calder, acting commercial attaché.

Vienna, Austria: H. Lawrence Groves, commercial attaché.

Warsaw, Poland: Leighton W. Rogers, commercial attaché.

AIMS AND ACTIVITIES OF THE CHEMICAL DIVISION.

To foster and promote the introduction and sale of American chemicals and allied products in foreign markets is the primary object of the Chemical Division of the Department of Commerce. The field covered by the division is extensive and, because of the scientific and technical features involved, the innumerable ramifications necessarily present a problem of considerable magnitude and difficulty in attempting to coordinate activities to the point that the greatest service may be rendered where most needed. The following branches of industry are handled by the Chemical Division: Chemicals, general, organic, and inorganic; dyes and coal-tar chemicals; pigments, paints, and varnishes; fertilizers and fertilizer materials; botanical drugs, pharmaceutical and medicinal preparations; essential oils, perfumery, cosmetics, and toilet preparations; explosives and pyroxylin products; and naval stores, gums, and resins.

Though the primary purpose of the division is to assist in the exportation of chemical products, a large proportion of its activities has to do with questions and problems of a domestic character, since the industry, as a whole, although it has made rapid strides in assuming a prominent position among the nation's industries, is not long established and there is a lack of information or of sources from which information may be drawn by those interested. Assistance of a domestic nature is usually handled by the Chemical Division through correspondence and relates to sources of supply and probable consumers, and may involve matters of a scientific or technical nature.

Assistance to the import trade must necessarily be rendered by the Chemical Division, since many raw products not obtainable in this country must be obtained from abroad in order to manufacture finished products. Assistance in this respect is provided through correspondence in answer to specific inquiries or through the publication of articles indicating available sources of supply of these noncompetitive commodities. Monthly surveys of the entire field of chemical imports are prepared and published with a view to informing the trade in a general way as to the general import situation. A specific activity of considerable magnitude and of great value has been the collection, classification, and publication (within a few days after the close of the month under review) of all items appearing in paragraphs 27 and 28 of the present tariff act. These items are dyes and other coal-tar products. The value of this list lies primarily in the fact that American manufacturers or consumers are currently informed as to products of foreign origin with which they must compete or which may be available in the market for purchase at the immediate moment. Distribution of information is a problem which has been given serious consideration, in order that dissemination shall be as effective as possible. It has been impossible to properly serve the industry through the use of COMMERCE REPORTS, due to limited space available, as the division's sole means of periodic publicity and, for this reason and further to make use of material available and worthy of publication, a special mimeographed weekly service, supplementing COMMERCE REPORTS, has been inaugurated. This service is known as the Chemical Trade Bulletin and is distributed free to all who desire to receive it and, for the purpose of making distribution more efficient, analogous items are segregated into five sections, for each of which there is a separate mailing list. These sections cover the following subject: Heavy and industrial chemicals; dyes; drugs and medicinals; paints; and fertilizers. Every conceivable point involved in trade promotion is considered suitable, in making up this bulletin. The material appears in condensed form, the object being to give the reader complete information on the point at issue in the fewest possible words, if the subject can be completely yet briefly covered, or else to indicate the subject and the various phases connected with it on which further and more comprehensive information may be obtained upon making special request to the Chemical Division. Through the study and publication of reports received from the Bureau's foreign representatives the division assists exporters in indicating logical markets and in providing to properly qualified American firms confidential information on foreign trade opportunities, credit standing, etc. Special monthly surveys are prepared and published on domestic exports showing the trend of business.

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

JULIUS KLEIN; Director Bureau of Foreign and Domestic Commerce

Editorial Board: Griffith Evans, Grosvenor M. Jones, E. Dana Durand, Eugene S. Gregg, and Archibald J. Wolfe

Cuba as a Market for American Goods

In 1924 Cuba stood sixth in our export trade, being outranked by only the United Kingdom, Canada, Germany, France, and Japan, having purchased from us goods to the value of \$199,779,279. The Cubans enjoy a relatively high purchasing power, and since a large part of their requirements must be met by importations, per capita imports are high, amounting to \$86 in 1923.

The Cuban market represents a well-developed field of endeavor for the American exporter and is fairly well covered in most lines. The market has been expanded and the desires of the people stimulated by advertising and concentrated sales effort; nevertheless, there are many lines for which a trade can be built up and existing demands stimulated by proper cultivation. Economic conditions have shown steady improvement during the past two years and another such year will undoubtedly mark the elimination of the old indebtedness of many firms arising out of the slump of 1920 and will see the market once more restored to a normal purchasing basis.

Trade Information Bulletin No. 346, just published by the Bureau of Foreign and Domestic Commerce, deals with the present conditions of the Cuban market, what we sell there, the purchasing seasons, the foreign competition encountered, the variety and range of purchases, the use of advertising media, the method of canvassing the market, and other pertinent information.

The island's purchases from the United States cover a wide variety of products, but the largest single group consists of foodstuffs, which through a series of years have constituted 35 per cent of the total importations. Although Cuba is plentifully endowed in both soil and climate for the production of practically all essential food commodities, its energies have been concentrated on sugar and tobacco, to the neglect of most articles of ordinary food required for the maintenance of its population, and the bulk of food requirements must be imported.

The United States is a natural supplier of the Cuban market, inasmuch as it produces just those things that Cuba needs. It is by far the largest supplier of Cuba's requirements. The United States enjoys a preferred position in this market, particularly for the fol-

lowing reasons: Unusual commercial ties fostered by a reciprocity treaty which gives the United States a reduction of from 20 to 40 per cent in the Cuban customs tariff; large American investments which approximate nearly a billion and a half dollars and exceed those in any other Latin-American country; special facilities for trade and intercourse, such as established connections in commercial lines which extend to practically every class of business; a common monetary system; direct telephone connection; and a direct freight service, via Key West, to all points in Cuba.

[JULIUS KLEIN.]

The Indian Likes Samples

Commercial India has readily adapted itself to the methods used in European and American countries in effecting sales of merchandise to the local market. One of the most important and effective of these methods which have been adopted by the Indian merchant is the display of samples to prospective buyers, according to Assistant Trade Commissioner E. G. Sabine, of Bombay. The practice has become so common that it is now looked upon by Indian dealers as a necessary basis for doing business. It is very important, therefore, that American firms keep their Indian representatives well supplied with samples in order that their products may be satisfactorily presented to the trade. It is obvious, of course, that there are many lines which do not lend themselves to such presentation.

Samples, according to Mr. Sabine, not only serve to stimulate sales to the ultimate consumer in India but also assist greatly in placing lines of imported goods with the Indian merchant himself. The average Indian merchant hesitates to transact business or to entertain representation proposals without first having seen samples of the goods he is to represent.

Before sending samples, whether to private firms or to the American trade commissioner in India, American firms should first make arrangements with the Bureau of Foreign and Domestic Commerce regarding payment of duty which may be assessed by the Indian Government. The Foreign Tariff Division of the bureau will be glad to advise regarding Indian tariff rates.

[BENNETT A. CHAPMAN.]

World's Commercial News in Brief

The following are brief items compiled from data cabled by Government representatives stationed abroad, from official foreign publications, and from other sources. Countries included in the "Monthly Cable Reviews" are omitted from this section.

European Economic and Trade Developments

For reasons of Bureau administration, this heading includes also Canada

AUSTRIA

The reduced official discount rate of 11 per cent is not likely to encourage inflation to any degree, according to a report from Commercial Attaché H. L. Groves, Vienna, since the strict credit control exercised by the national bank has not been relaxed. The rate remains higher than that of any other European country except Hungary. Commercial credits still cost from 16 per cent to 25 per cent a year, which is a great burden on industry and trade. Unemployment on April 15 was reported at 164,000, as against 177,000 on April 1. Housing conditions in Vienna are said to be better now than before the war, following the requisitioning of many dwellings and the building of 1,000 new ones. Some 11,000 are now under construction.

CANADA

An increase of more than \$9,000,000 in the current loans of Canadian banks in March indicate a slight commercial and industrial improvement, although the total is nearly \$90,000,000 less than a year ago. Sales of automobile accessories, building supplies, hardware, and garden tools are increasing. The metal markets are more active, but most business is on a hand-to-mouth basis, with little buying for future requirements. Manufacturing is still spotty. Many factories are working on part time with slight profits, but there are notable exceptions, especially in the automobile, steel, and textile industries. New building contemplated during the past four months exceeds by \$90,000,000 the total for the same period of 1924. Ontario and British Columbia mines continue at peak production. The Dominion Bureau of Statistics index number of wholesale prices averaged 156.5 for April, as against 161.6 for March.

CZECHOSLOVAKIA

Foreign trade for March showed a considerable increase in both exports and imports over March, 1924, and the favorable balance was \$7,500,000 as against \$5,200,000, according to a report from Commercial Attaché J. F. Hodgson, Prague. Some 20 per cent of the employees in the Ostrava coal fields and metal shops have been discharged because of the bad state of business. Contracts have been let for the electrification of the railway in the vicinity of Prague.

DENMARK

The threatened conflict in Danish shipping has been averted by wage agreements that provide for a general increase of 5 per cent, effective until 1927. Although it is said locally that this arrangement does not comport with present conditions in the freight market, it may be taken as an indication of the desire to avoid further costly labor conflicts, which are already very serious in other industries. An attempted settlement

of these outstanding labor disputes has been unsuccessful, and the situation has been further aggravated by the declaration of a strike involving harbor and transport workers, resulting in a practical paralysis of foreign trade. While efforts will be made to dispatch farm-produce exports by voluntary labor, shipments will be seriously hampered. Agricultural exports have been somewhat reduced during recent weeks, and prices on bacon and butter are receding. A sympathy blockade on all traffic to and from Denmark is being threatened by Norwegian harbor workers.

FINLAND

Ground is being prepared for a reversion to the gold standard, inasmuch as the position of Finnish exchange has been more or less contingent on developments in pound sterling. It is expected that the new gold mark, when introduced, will be made the equivalent of 8 paper marks. The bank of issue now has foreign-exchange balances of about 1,100,000,000 paper marks. Finnish export trade is progressing favorably, and earnings in most cases are satisfactory. Unemployment is comparatively negligible, following the resumption of full-time operations in the export industries. Industries producing for domestic consumption, however, are still suffering somewhat from slow demand.

FRANCE

The finance ministry has announced that it will be necessary to raise an additional 3,500,000,000 francs in order to balance the 1925 budget, since it has been decided to remove from the regular budget an item of 1,500,000,000 francs estimated as income under the Dawes plan. Ordinary expenses will be 1,150,000,000 francs in excess of estimates; and there are extraordinary expenses, not included in the regular budget, amounting to some 1,250,000,000 francs. The military situation in Morocco may necessitate a considerable additional expense. The general business situation, although not actually depressed and although unemployment remains negligible, yet contains a number of unfavorable features. Chief of these is the general uncertainty as to future business and the lack of forward orders in several industries. Manufacturers, however, appear to be more optimistic than during the early part of the year. French foreign trade continues to show a favorable balance, but the value of both imports and exports is lower than during the early months of 1924.

GREAT BRITAIN

British shipbuilding concerns still find it difficult to secure contracts at home. A recent order for eight refrigerator ships is reported to have been secured by a British concern only through an arrangement between the company and the buyers to share the loss involved by accepting the British tenders, which were £20,000

per ship higher than the Dutch and German bids. Application of the McKenna duties, now scheduled for July 1, may be effected sooner if the present dumping of affected products continues. The Royal Commission on Food Prices, in its report recently submitted, recommends the creation of a food council with advisory powers, to watch price movements and operations in wheat, flour, bread, and meat; and later, should the supervision be warranted, in such other foodstuffs as milk, vegetables, fruit, and fish. Trade statistics for April show a decrease in exports and a much smaller decrease in imports, resulting in an increase in the adverse trade balance for the month. Trade for the first four months of 1925 shows an unfavorable balance of £140,000,000, as compared with £80,000,000 for the same period of 1924.

HUNGARY

Hungarian foreign trade in January and February was much reduced, as compared with the two preceding months, imports having been 20 per cent less and exports 39 per cent less. This decline was expected of imports, because dealers were overstocked and general purchasing power was low. The decrease in exports was mainly seasonal, since they comprise largely agricultural products. As compared with January and February, 1924, however, imports were nearly 50 per cent higher and exports about 20 per cent higher. The greatest increase in imports was a 248 per cent expansion in cotton textiles; these a year ago were subject to severe restrictions. The chief export, flour, showed a value increase of 50 per cent, although the quantity was 18 per cent less.

LITHUANIA

Foreign trade during the first two months of 1925 resulted in a considerable increase in exports and in imports higher than the corresponding figures for 1924. Germany continues to be the most important customer, taking over 50 per cent of Lithuanian exports and providing more than half of Lithuanian imports. Government receipts declined appreciably during the first two months of 1925, as compared with December, 1924, the February diminution resulting mainly from lower direct-tax returns. There has been some expansion in the note circulation during the first quarter of 1925, and a slight reduction in the foreign-exchange holdings of the bank of issue. A number of instances of cancellation of commercial contracts by Lithuanian merchants have been reported recently.

ARGENTINA

The lifting of the embargo on gold exports has had only a slight effect on exchange in Argentina and has brought no improvement in export demand. Imports continue in excess of last year. American bankers are negotiating for provincial loans. (Commercial Attaché E. F. Feely, May 16.)

CHILE

The effect of credit restriction in Chile in recent months is now being seen in an increasing number of failures among smaller houses. A number of automobile accessory dealers are restricting sales in the belief that the market is overstocked and that difficulties in collection will be encountered later on. Trade in other

ITALY

The recent activity of investment in Italian industrial enterprises was well sustained throughout April, according to a cable from Commercial Attaché H. C. MacLean, Rome. During that month the new investments reached 1,171,000,000 lire, while withdrawals of capital amounted to only 55,000,000 lire. The rapid expansion of the artificial-silk industry is one of the leading factors in this situation. Statistics of Italian trade during March indicate a continued advance in imports, principally as a result of heavy wheat purchases. Although exports also are increasing, the much more striking expansion in import trade is producing a trade balance that is considerably more adverse than last year.

NORWAY

Foreign trade during March returned very favorable figures. Note circulation is being gradually curtailed and loans and discounts considerably liquidated, the loans and discounts of the bank of issue having reached a new low level. Price levels continue downward, as a result of appreciating exchange and in conformity with declines in world price levels. It is locally expected that this downward tendency will be maintained.

POLAND

Coal has become the principal and most stable item in Polish exports. Production figures for 1924, recently published, indicate that 75 per cent of Polish coal came from Upper Silesia. The cellulose and automobile industries and the Danzig amber industry are reported active, with plans projected for construction of new factories. A merchant fleet corporation has been organized in Warsaw to establish a service between Danzig, Hamburg, Amsterdam, and London. A number of important commercial treaties are in process of negotiation, and some agreements recently concluded await ratification.

TURKEY

The Government is offering special facilities and privileges to persons establishing sugar refineries in Turkey, according to press reports forwarded by the consulate general at Constantinople. It also is encouraging wool production and is looking into its forest resources. The new olive crop is reported to be seven times as large as that of last year. The Turkish pound continues to remain fairly stable.

Latin America at a Glance

lines appears normal, although merchants complain of increasing difficulty in collecting outstanding accounts and the consequent necessity for obtaining extensions. Movement of freight over the southern railroad lines in April totaled 467,000 tons. (Commercial Attaché R. H. Ackerman, Santiago, May 16.)

BRAZIL

During the week ended May 16 coffee prices in Brazil fell about 3 milreis per 10 kilos and exchange weakened proportionately. Further Government support for the market is expected and an effort is being made to have the State of Minas accept the coffee institute system. Saturday's report from the coffee Bolsa showed appreciable increases over Friday quotations

for May, June, and July coffee, however, and coffee interests in Sao Paulo are doing everything possible, with State approval, to prevent a break in the market. There is no immediate improvement in sight for the Sao Paulo power situation. Industrial plants are still working partial time, and street-car service, elevators, lighting, and general public utility services are greatly reduced. Every possible substitute for hydroelectric power is being used, including Diesel engines, steam-power plants, and tractors. The possible social consequences of the power shortage are serious, due to the large number of unemployed caused by the shutdown of factories. However, there is a pronounced labor shortage on the fazendas in the interior and the surplus labor of Sao Paulo could well be diverted into the interior. (Commercial Attaché W. L. Schurz, Rio de Janeiro, and Trade Commissioner W. E. Embry, Sao Paulo, May 16.)

PERU

Somewhat better commercial conditions have been created in Peru during the week ended May 16 by a resumption of railroad communication between the capital and central interior regions. For the past month Lima has been suffering from an insufficiency of fresh food supplies and rising prices, while in the interior farm products have spoiled through inability to transport them to consuming markets. Conditions have not yet been restored to normal, but repairs to damaged roadbeds have been pushed ahead with all vigor, and hopes are high for a complete restoration of trade at an early date. (Commercial Attaché H. B. MacKenzie, Lima, May 16.)

HONDURAS

Business conditions in Tegucigalpa, Honduras, are reported as quite unfavorable, due to the practical state of siege of that capital and the consequent interference with commerce. Conditions are reported as being better along the north or Atlantic coast than on the Pacific coast. Merchants, particularly in the southern section, are overstocked because they bought in February and March for delivery during May, June, and July, and there has been very little movement of merchandise. The situation is expected to grow worse unless the siege of Tegucigalpa is lifted and some relief, such as a loan, obtained. A bank in Tegucigalpa reports smaller business, though there is still a scarcity of foreign drafts available. The exchange value of the peso has shown a decline from 2.036 to the dollar to 2.08 buying rate for drafts on New York and a selling rate for same drafts of 2.12 to the dollar. Caution in granting credits is advisable. Banana exports during April amounted to 1,200,000 bunches. (Cable from Consul George P. Shaw, Tegucigalpa, May 13.)

MEXICO

The bank employees are withdrawing their demands on the banks, but there is a general feeling of pessimism due to continued conflict between rival labor and agrarian groups, reports Trade Commissioner George Wythe, Mexico City, under date of May 16. The financial situation of the Federal Government continues to improve, and payments of 50 per cent of the smaller claims and 10 per cent of the larger bills were made during the week ended May 9. There has been considerable discussion in the press regarding the placing of contracts for road building from the proceeds of the gasoline tax, but it is authoritatively stated that no contracts have yet been placed. It is stated that it is

the present policy of the Government to allow a large fund to accumulate before any contracts are let. (Commercial Attaché Alexander V. Dye, Mexico City, May 9.)

PORTO RICO

The prevailing feeling of pessimism in business circles continues in Porto Rico, but collections and liquidations of accounts are improving. Import stocks are normal or better, but the inventories of interior retail merchandise are declining. (Trade Commissioner L. W. James, May 17.)

HAITI

The sugar campaign in Haiti is practically finished and the total output is expected to show a material increase over last year's, although complete figures will not be available for some time yet. Prices have remained low. The harvest of the cotton crop is now at an end. All other crops are reported as being very good. The financial returns for the first half of the fiscal year 1924-25 are regarded as satisfactory. Revenues have consistently exceeded the estimated figures, and it is expected that even with the important program of productive improvements which has been inaugurated during the present fiscal year, all of this work can be taken care of with the receipts of the present budget and still leave a surplus for debt retirements. The mercantile movement is fairly even, with stocks in the hands of merchants fairly large.

CUBA

Notwithstanding unfavorable reports relating to general business conditions in Cuba, receipts by the Habana customhouse for April were \$3,214,116, which is \$900,000 more than for April, 1924, and higher than for any previous month of the current year. The labor situation is unchanged and a railroad strike is considered improbable. With the sugar market continuing at low levels, business remains in a state of uncertainty. The Cuban Congress has agreed to close in June, and, as the following legislature does not open until November, legislation of major importance may not be expected at an early date.

Expansion in Persia's Foreign Trade

Consul George Gregg Fuller, Teheran

The foreign trade of Persia for 1924, according to preliminary statistics, attained a balance even more favorable than that of 1923. Imports increased to \$69,000,000 from approximately \$62,000,000 in 1923, and exports rose to \$75,000,000 from \$72,000,000.

The three greatest imports of Persia—cotton cloth, sugar, and tea—constituted about 57 per cent of all imports in 1924. The most notable increase occurred in the importations of coal and coke, although considerable advances were made in the case of cigarettes, artificial-silk cloth, iron and machinery, and pure-wool textiles.

Petroleum products again constituted the principal article of export and accounted for 50 per cent of the year's total. Previously, heavy oil has been the principal item of export, but during the past year it was superseded by gasoline, oil coming second, and kerosene fourth. Carpets took third place among the year's foreign shipments. The increase in the export values was especially marked in the case of gasoline, carpets, opium, raw cotton, wool, and skins.

MONTHLY CABLE REVIEWS

EUROPE

Samuel H. Cross, Chief, European Division

Labor Costs Increase in Germany

Based on cable from Assistant Commercial Attaché Douglas Miller, Berlin, May 16

German industry is maintaining its previous level of activity while awaiting Government action on the new taxation program, the enactment of the provisional tariff, and the ratification of commercial treaties. The effort of the administration to obtain an early decision on these urgent questions has been hindered by numerous controversies. Especially bitter opposition is manifest against the low taxation rates on large incomes (attaining a maximum of 33½ per cent), against the sharp increase in beer and tobacco taxes, and against the high duties for food imports in the proposed measures.

Heavy pressure is being exerted by export associations for an early enactment of a provisional tariff and the completion of commercial agreements as immediate necessities to export industries. The Government policy of shifting the burden of taxation from production to consumption is evident throughout the tax-revision program, and equally noteworthy is labor's increased opposition to this policy. Agitation for revalorization of paper-mark obligations on a higher percentage basis has been stimulated by the presidential election.

Irregular Improvement in Industry.

Improved domestic activity is reported in the steel, machinery, electrical, and automotive industries, in addition to increased export orders for iron and steel and machinery. The serious situation of the coal and shipbuilding industries is in marked contrast, and a slackening is evident also in chemicals and textiles.

Agricultural Prospects Excellent.

The favorable weather prevailing gives prospect for an excellent grain harvest and the temporary absorption of industrial workers in agricultural employment. This movement is reflected in unemployment figures, which have fallen from 427,000 on April 1 to 321,000 on May 1. Crop reports for early May, more favorable than those of the previous month, are rated above medium and compare favorably with May reports of the two previous years and with that for 1913.

Wage Demands Increasing.

An increasing number of wage demands, reported from all parts of the Republic during the past month, have resulted in marked labor unrest. A number of lockouts have occurred, especially in metal-industry branches, but no serious general strikes have been declared during the month. It is expected that during the next two or three months the general wage level throughout German industry will be increased between 5 and 15 per cent. The possibility of a rise in labor costs is a very serious consideration to a number of industries and is actively opposed by employers' associations. Official estimates show that the wage level has already increased 2.5 per cent in March, and by

approximately the same amount in April. The number of workers employed on a part-time basis has decreased during the past month, although part-time hours have increased from an average of 32.40 hours to 40-46 hours weekly.

Spring Fairs Disappointing.

The termination of the Frankfurt Fair ends the series of spring fairs in Germany. The small attendance of foreign buyers and the very unsatisfactory export orders were attributed to high price levels. In direct factory sales, however, many reductions were reported to prices beneath German domestic levels—running to 25 per cent below for cash payments in the case of some American buying agencies. Although this price cutting is represented as being below production costs, it seems apparent that it is actually a continuation of abnormal margins of profit that were customary during the inflation period, in spite of the fact that currency reform and general economic stabilization rendered them no longer justifiable.

Downward Reaction in Money Rates.

The tightening of the money market, recently noticeable, has resulted in a cessation of the decline of interest rates and in their reaction from 9.4 per cent during the first week of May to 10.8 per cent plus commissions, which average 4 per cent. A corresponding decline in the stock index, reported on May 10 as only 87.5 per cent of the January average, was apparently due to the stringency of the money market.

Official revised budget figures for the fiscal year ended March 30, 1925, show receipts to have been 7,718,000,000 marks, as compared with an estimated revenue of 5,243,000,000, and expenditures to have reached 6,664,000,000 marks, as compared with a budget estimate of 5,710,000,000. Federal expenditures amounted to 3,057,000,000 out of the total; provincial expenditures, to 2,629,000,000; indemnities to Ruhr industrialists on account of the occupation of the Ruhr, to 518,000,000; and for reparation account, to 460,000,000 marks. The gross surplus remaining over expenditures amounted to 1,049,000,000 marks.

Reichsbank Circulation Continues to Increase.

Reichsbank loans and discounts as of May 7 decreased to 1,492,000,000 marks, as compared with 1,578,000,000 on March 31, a period of quarterly payments. Circulation increased from 2,314,000,000 on March 31 to 2,386,000,000 on May 7. Gold reserve during the same period rose slightly, from 1,003,000,000 to 1,014,000,000 marks.

Wholesale Prices Decrease.

Wholesale prices continue to show a slight decrease, the Frankfurter Zeitung wholesale-price index falling to 142.3 per cent of pre-war on April 29 as against 144.3 on March 30. The textile and leather group dropped from 186 to 181 during this period; the food-stuffs group from 189.0 to 186.3, the mineral group from 138.9 to 135.5, and the miscellaneous group from

129.5 to 128.6. The only rise is shown in industrial finished products, which increased from 140 to 143.8 as a result of rising wages and increased labor costs.

Netherlands Prohibition on Gold Exports Relaxed

Based on cable from Commercial Attaché F. W. Allport, The Hague, May 16, with cooperation of consuls at Amsterdam and Rotterdam

Industries in the Netherlands are uniformly active, and the general situation is favorable. Wage increases are being demanded in spite of a decline in living costs.

Gold Exports Permitted.

The strong financial situation of the Netherlands is well illustrated by the removal of the prohibition against exportation of gold and gold bullion, so far as concerns other countries with free gold markets. This important step is favorably received as a further evidence of the sound economic condition of the country and of confidence in the continued stability of the currency at gold parity. The metallic reserves of the Netherlands Bank are now above 50 per cent.

Financial Conditions Favorable.

The note circulation of the Netherlands Bank on May 11 amounted to 916,000,000 guilders, of which more than half is covered by metallic reserves totaling 500,000,000 guilders. Bank loans amounted to 161,000,000 guilders, and discounts of foreign bills to 163,000,000 guilders. The April treasury issue was heavily oversubscribed, and 35,000,000 guilders were allotted at $3\frac{1}{8}$ to $3\frac{5}{8}$ per cent. March revenues showed an advance to approximately 36,000,000 guilders, as compared with 33,000,000 guilders for February.

Application of New Tariff Postponed.

The new tariff schedule will not be put into operation until July 1 at the earliest. The proposed luxury tax continues to meet with vigorous protest, and discussions of the measure have been postponed until the next parliamentary session.

The commercial treaty between Poland and the Netherlands was ratified on May 5, and ratification of the treaty with Hungary on a most-favored-nation basis is expected shortly.

Conversion Loans Predominate Among Security Issues.

Money rates in the Netherlands continue low and steady, with private discounts at $3\frac{3}{8}$ per cent, as compared with $3\frac{1}{4}$ per cent a month earlier. Security issues during March totaled 71,000,000 guilders, a considerable advance from the two preceding months. April issues were somewhat lower, however, due to a smaller number of conversion loans. A Rotterdam 5 per cent conversion loan amounting to 13,500,000 guilders, floated May 5 at $97\frac{1}{2}$, was greatly oversubscribed. The Province of Utrecht on May 11 issued a 5 per cent conversion loan of approximately 3,000,000 guilders at $99\frac{7}{8}$; Delft proposes to float a 5 per cent conversion loan for 3,000,000 guilders at 98 per cent at the middle of May.

Dullness continues in the stock market, but a slight upward tendency has been apparent since the restoration of the gold standard.

Wholesale and Retail Prices Decline.

During April a decline in foodstuffs prices brought about a reduction of the retail index number to 155. This was expected, in view of the previous decline in wholesale prices. The latter continued to drop during

April, the index number averaging 151 for that month against 158 in the previous month.

Industrial Situation Encouraging.

The renewal of collective wage agreements in various industries has led to a demand for increases in pay, despite the reduction in price levels. The local cotton industry has benefited from decreased cotton prices. Far Eastern markets are providing a favorable outlet for Netherlands production.

Coal production during March registered a substantial increase over the previous month; the large stocks on hand are depressing coal prices.

Exports to United States Increase.

Exports to the United States, declared through the Rotterdam consulate during the first four months of 1925, amounted to \$5,300,000, a considerable increase as compared with the corresponding period of 1924. The principal items in the trade were block tin, valued at \$1,722,000; antiques, at \$305,000; and fresh herring, at \$1,000,000.

Similar declared exports from the Amsterdam district reached \$4,000,000. The leading items were diamonds, with a value of \$1,665; tobacco, \$1,193; creosote oil, \$279,000; and pig iron, \$68,000.

Dullness in Belgian Business Unrelieved

Based on cable from Commercial Attaché F. W. Allport, Brussels, May 16, with cooperation of the consul at Antwerp

The general situation in Belgium is still characterized by uncertainty and inactivity, though indications of improvement may be discovered here and there. The situation with regard to Government revenues, which was very favorable during 1924, has become less hopeful. Local political uncertainty has been dispelled, at least temporarily, by the formation of a cabinet under M. Van de Vyvere. All but six members of the previous cabinet have been retained.

Tax Collections Becoming Less Favorable.

Revenues from taxation applicable to the budget for the year 1924 showed an advance of 189,000,000 francs over estimates, and reached a total of 2,987,000,000 francs; the receipts during 1925, however, have been considerably less favorable, with customhouse revenues and indirect taxes considerably below estimates. Revenues through March of the current year have totaled 651,000,000 francs, as compared with an estimate of 864,000,000 francs for the period. Belgian receipts from reparations during April totaled 8,500,000 gold marks.

Bank Discounts Decline—Advances on Securities Increase.

The discount portfolio of the national bank showed a continued downward tendency, declining from 1,334,000,000 francs on April 9 to 1,268,000,000 francs on May 7, as a result of the absence of new paper. Advances against securities, on the other hand, increased in the same period from 295,000,000 francs to \$345,000,000 francs. Hence the total volume of demand liabilities is substantially unchanged.

Commercial Financing at Low Level.

Belgian money markets are firm; little commercial paper is offered, owing to the continuance of the business depression. The advance of sterling and French exchange during the past month has lessened the local competition of French and British goods, and has also given a slight stimulus to sales of semifinished steels to Great Britain.

Industrial stocks have shown a general advance, with the exception of textile shares; these have become weaker as a result of the persistent dullness in this industry. The most important advances have been made by bank, metallurgical, glass, colonial, and coal shares. The improvement in the last named is due to the settlement of labor disputes in the industry.

Tariff Arrangement with Spain.

The commercial modus vivendi concluded between Spain and Belgium on May 1 admits a number of Spanish products to the Belgium-Luxemburg economic union on a most-favored-nation basis, and enables certain Spanish fruits to enter with duties under the present minimum rates. Reciprocal concessions have been granted by Spain for Belgian products. The agreement is to continue indefinitely, subject to denunciation on three months' notice.

Foreign Orders Help Metallurgical Industry.

Although metallurgical markets have not become actually prosperous, a slight improvement has occurred during the past week as a result of the important foreign orders. Sales prices, however, are reported to be too low to yield profit; but no further reduction of prices is expected in this industry. English buyers are said to be withholding large orders, awaiting adjustment of the market through wage reductions in the metallurgical and coal industries and the resultant lower coke prices.

Prospects for Coal Industry Improved.

The outlook for the coal industry has become somewhat brighter, though operators claim that sales at present prices will be a loss. The fusion of a number of producing countries in the south basin is planned with a view to reducing production costs and to increasing sales. The excessive coal stocks have been slightly reduced, but their liquidation presents a serious financial problem, particularly in view of more recent production at lower cost. A 5 per cent wage reduction proposed for June 1 has been postponed for a month in order to give opportunity to revise the agreement.

Glass Industry Stronger—Sales of Imported Goods Poor.

The plate-glass industry is now operating at 65 per cent of capacity, and sales are sufficient to absorb the current output and to effect a gradual diminution of stocks accumulated during 1924. Conditions in the window-glass industry have also improved somewhat. Wages were reduced by 6.2 per cent on May 1. Producers using mechanical equipment are apparently prospering at the expense of hand-glass shops.

The market for imported merchandise, as well as for domestic products, is generally unsatisfactory. The automobile trade reports the poorest sales for several years.

Steady Increase in Unemployment—Prices Fall.

The advances in unemployment, which began in the latter part of 1924, continued uninterrupted to April 1, the latest date for which a report is available. At that time the unemployed workers constituted 7.7 per cent of the total number registered at unemployment offices. At the beginning of March only 6.3 per cent of the registered workers were without employment, and only 2 per cent on April 1 of last year.

The continued decline in price indexes acts as a partial mitigation of the effect of recent wage reductions. The wholesale index for Belgium at the end of March

was 546, a decline of 5 points during the month. Retail prices are also tending downward.

Diamonds Lead Among Exports to the United States.

Exports declared from Belgium to the United States through American consulates during April amounted to \$4,991,000. The principal item was polished diamonds, with a value of \$1,500,000. Other important commodities were steel products, valued at \$500,000; plate glass, \$430,000; rabbit skins, \$310,000; cement, \$280,000; creosote oil, \$195,000.

Swedish Industries Busier but Outlook Uncertain

Based on cable from Commercial Attaché T. O. Klath, Stockholm, May 15

Swedish industries during the past month have maintained a somewhat increased degree of activity, with an attendant reduction in unemployment. As caution continues to prevail among merchants, business on the whole remains quiet. Commercial demand for money is increasing. As withdrawals of deposits have subsided to a considerable extent, the money market has tended to ease somewhat.

The generally dull tone in business seems to have been reflected in the annual commercial fair in Gothenburg, which closed on May 9. The results of this fair were disappointing, and foreign buying was particularly slight.

Varying Trends in Industries.

On the whole, industrial operations are undergoing a slight expansion, but the situation is not entirely satisfactory. Lumber sales for forward delivery during the current year have been brisk and now total 500,000 standards (990,000,000 board feet); the sales on a corresponding date of 1924 totaled 475,000 standards (940,500,000 board feet). Prices, however, are declining, and the outlook is described as discouraging.

In the wood-pulp industry the situation is excellent. No changes have occurred in prices, and sales are being made in very gratifying volume. Total sales thus far are estimated at 550,000 metric tons in the case of sulphite wood pulp, 200,000 tons in the case of sulphate, and 300,000 tons in the case of mechanical pulp. Only a fraction of the entire output for 1925 remains unsold. Paper mills are very active and sales are brisk.

In the iron and steel industry there has been a slight recrudescence in operations, as the number of furnaces in blast has been increased. The industry, however, is still suffering from foreign competition, and the price situation leaves much to be desired. Exports, however, are slightly higher.

Money Market Easier.

Deflation marks the policy of the Bank of Sweden. Note circulation has been reduced from 483,987,000 crowns in April to 470,000,000 crowns as of May 10. As the metallic reserve underwent only a slight reduction during the same period, from 233,630,000 to 233,250,000 crowns, the metallic cover increased to a little under 50 per cent. With a continued unfavorable balance of trade there was a further reduction in the foreign-exchange holdings of the bank of issue to 81,055,000 crowns from 93,346,000 crowns as of March 31.

Deposits of Swedish commercial banks declined during April, but the rate of withdrawals also diminished. Total deposits receded from 3,708,000,000 crowns in

March to 3,674,000,000 crowns in April. Loans and discounts moved downward slightly, from 4,364,000,000 crowns to 4,361,000,000 crowns as of April 30. Rediscounts of commercial banks with the Bank of Sweden expanded from 287,400,000 crowns in March to 294,287,000 crowns in April. Foreign exchange holdings of the commercial banks declined from 38,847,000 crowns to 25,685,000 crowns.

Clearings of the Bank of Sweden were slightly less during April, mainly because of Easter holidays. The total of all clearings reached 1,706,000,000 crowns, as compared with 1,814,800,000 crowns for March.

Swedish Exchange at Slight Discount.

Partly as a result of the resumption of gold payments by England, causing a return to par of the English pound in Sweden, and partly owing to the heavy demands for foreign exchange, there was a slight depreciation of Swedish exchange during the past month. The rate in relation to the dollar is now about 26.74 cents, which represents a discount of about one-half per cent.

A further reduction in the national debt was made during April to 1,734,000,000 crowns from 1,737,000,000 crowns in March.

Stock Exchange Dull.

The tendency on the stock exchange has been influenced by the general business situation, resulting in a drop in total turnover from 21,098,000 crowns in March to 14,698,000 crowns in April. Industrial shares showed considerable resistance, the index of representative shares increasing from 101.5 as of April 14 to 102 as of May 12. The index for banking shares, however, on the same dates declined from 88.1 to 86.6. Capital issues during April showed practically the same total as for March, namely, 8,100,000 crowns.

Wholesale Prices Lower.

The wholesale price index receded 4 points, from 164 in March to 160 for April. Commercial failures totaled 303, as against 308 for March. There was a slight increase in the number and amount of protested notes from 5,225, valued at 3,303,000 crowns in March, to 5,519 with a nominal value of 3,991,405 crowns for April.

Foreign Trade Remains Unfavorable.

Foreign trade, which during April, showed expansion both in imports and exports, is expected to result in a deficit of about 40,000,000 crowns, or about the same figure as for March. Practically all important items expanded in quantity, as shown by the following comparisons in metric tons (March figures in parentheses): Sugar, 6,964 tons (5,018); wheat, 30,400 (28,240); cotton, 2,419 (1,760); sulphur, 3,143 (1,060); iron and steel, 17,125 (14,950); mineral oils, 32,878 (14,240); coal and coke, 223,060 (139,001); copper, 1,337 (409,000). The number of imported automobiles rose from 1,209 in March to 1,615 for April.

Exports Rising.

Exports during April showed considerable gains over March in most instances. Iron and steel exports rose from 18,740 for March to 20,120 metric tons in April, wood pulp from 37,120 to 38,743; and iron ore from 530,500 to 597,214 metric tons. Match exports were slightly lower at 2,817 metric tons; paper exports were likewise lower at 21,351 metric tons, as compared with 22,970 metric tons in March. Shipments of rough lumber increased from 25,961,520 board feet in March to 43,303,120 board feet in April. Exports of cream

separators rose in value from 1,077,000 crowns in March to 2,825,000 crowns in April; of ball bearings from 1,184,000 crowns to 1,602,000 crowns.

Increased Exports to the United States.

Swedish exports to the United States, declared through the American consulates, rose from \$1,946,000 in March to \$3,855,000 in April. The values of the chief items, as compared with March figures (in parentheses), were as follows: Wood pulp, \$2,014,000 (\$700,000); paper, \$471,000 (\$299,000); and iron and steel, \$518,000 (\$456,000).

Promoting Trade with Baltic States and Russia.

At the Scandinavian Baltic Commercial Fair, which is to be held in Stockholm in June, there will be exhibits of products from Soviet Russia and the Baltic States. Sweden is giving considerable attention to these markets and promoting business there by the extension of credits. Recently a sum of 293,000 crowns was advanced to Esthonian merchants for purchases in Sweden of agricultural equipments, livestock, etc. Russian orders in Sweden are reported as increasing.

Continued Dullness in Spanish Business

Based on cable from Commercial Attaché C. H. Cunningham, Madrid, May 14, with cooperation of American consul in Spain

The general situation in Spain shows little improvement, though there was a slight renewal of banking activity in April. Depression is especially prevalent in the textile industry of Catalonia and in iron mining in the Biscay region, while unfavorable weather conditions have made agricultural prospects less promising. Exchange developments have favored imports from the United States at the expense of those from Great Britain.

Bank Clearings Increase—Security Transactions Decline.

Bank clearings during April showed a favorable development—at Madrid averaging 46,000,000 pesetas per business day, as compared with 39,000,000 pesetas during March, and at Bilbao reaching a total of 143,000,000 pesetas, as against 135,000,000. Barcelona debits and credits were practically unchanged, at 1,090,000,000 pesetas.

Transactions on the principal Spanish stock exchanges were reduced during April as compared with the previous month, but remain at a comparatively high level. The decline from the March level amounted to 10 per cent in the case of Barcelona and Madrid and to 30 per cent in the case of Bilbao.

Railway Stocks and Earnings Advance.

Quotations on the securities of banks and of explosives, tobacco, and tramway companies were depressed. Railway shares, on the other hand, showed considerable strength as a result of the increased dividend on Norte railway securities, amounting to 28½ pesetas per share as against 24 pesetas in the previous year. The general railroad situation is improved, with earnings steadily increasing and with good prospects for a general extension of the Spanish railroad system.

Unfavorable Features in Bank of Spain Statement.

The statement of the Bank of Spain early in May showed several unfavorable features, as compared with the situation a month earlier. Credit discounts declined by 109,000,000 pesetas, guaranteed credits by 30,000,000 pesetas, and current accounts by 10,000,000 pesetas.

The Government credit balance with the Bank of Spain was exhausted on May 1. No plan for financing has been announced. It is expected, however, that short-time obligations will be issued not later than July 1.

Government Financial Showing Satisfactory.

The first statistics of expenditures and receipts that have been issued by the Spanish Government for a considerable period have just appeared. They cover the six months ended December 31, and show revenue collections amounting to 1,400,000,000 pesetas as compared with 1,344,000,000 pesetas in the corresponding period of the previous year, while expenditures reached 1,320,000,000 pesetas as compared with 1,650,000,000 pesetas. Expenses for operations in Morocco have been higher, as was to be expected from the increased military activity in that region. Total expenditures reached 200,000,000 pesetas in the six months period, as against 130,000,000 pesetas in the like period of 1923. It is estimated that at the present time a deficit of approximately 15,000,000 pesetas weekly is being registered in Government operations.

Revenues of the tobacco monopoly during April exceeded those for the previous month, but income from stamps, lotteries, customs, and profits taxes showed a marked decline.

New Industrial Financing.

Although the Government has refrained from entering the investment market, a considerable number of industrial issues have been floated. The Norte railroad has put out an issue of 100,000,000 pesetas; extensive electrification developments and the purchase of new equipment are expected to be undertaken in the near future. The Andaluces railway has floated a 30,000,000-peseta issue, the Tangier-Fez railway one of 25,000,000 pesetas, and the Babcock-Wilcox Co. an issue of 8,000,000 pesetas. The Trasatlantica concern has recently floated 51,000,000 pesetas in securities, with a view to extending their equipment; this will involve the use of foreign materials.

The Banco de la Union Minera has been judicially declared under liquidation, and its liabilities are set at 92,000,000 pesetas, not including capital stock amounting to approximately 100,000,000 pesetas. A period of 15 days has been granted to the directors of the bank (against whom judicial proceedings have been instituted) for the establishment of guaranties. The Spanish Telephone Co. reports the successful flotation of 40,000,000 pesetas in preferred stock, the proceeds to be utilized in continuing their extension program.

A concession for an air-service route between Seville and the Canary Islands has been awarded, on condition that operation be started within a year. A Government appropriation is announced for the improvement of Spanish telegraph lines and for relaying the cable between Spain and the Canary Islands.

Trade Figures Record Slight Improvement.

Tentative statistics have just been issued covering Spanish foreign trade in 1924. The import trade totaled 3,225,000,000 pesetas, or 165,000,000 pesetas more than in 1923, and exports reached 1,780,000,000 pesetas, or 180,000,000 pesetas more than in 1923. The unfavorable balance has thus been slightly reduced. Exports of manufactured articles showed an increase of 60,000,000 pesetas, and of raw materials, 200,000,000 pesetas; imports advanced 400,000,000 pesetas.

Commercial Treaties Strengthen Export Markets.

During the past month commercial treaties have been signed with Canada and Belgium, which assure a favorable outlet for Spanish export products that have recently been depressed. The extension of the commercial arrangement between the United States and Spain secures for another year continuation of the present status and makes possible the uninterrupted importation into Spain of American automobiles, lumber, and petroleum.

Industries Dull, with Poor Outlook.

No improvement has occurred in the general industrial situation throughout Spain, and prospects for summer trade are dull. Building industries in general are moderately prosperous, though a 30 per cent unemployment is reported at Madrid. Consumption of hydroelectric power in Catalonia is at a lower level. The labor situation at Barcelona is tranquil; but 40 per cent unemployment is recorded in the textile industry, and the general industrial depression is unabated. However, new cotton, cement, and glass factories are being built. Exports of iron ore from Bilbao are unsatisfactory as a result of the slack British demand. Several of the smaller mines have closed following recent wage increases.

Agricultural Prospects Impaired.

The fruit and almond crops along the Mediterranean coast appear to be assured, but the development of wine grapes has been retarded by drought and frost.

The lack of rain in Andalusia, Aragon, and Estremadura has caused a 30 per cent impairment of the wheat crop in those Provinces. The Government decision to allow wheat importation has caused depression in the agricultural sections, although the authorized importation is apparently less than requirements. Sugar production during the year ended March 31 was considerably greater than in the previous year and a considerable surplus is in prospect.

The cost of living showed little change during March. The general foodstuffs index number for that month was 198 as compared with 197 for February; industrial materials declined to 189 from 190. The cost-of-living index figure for Madrid showed an advance of one point, to 190; that for Barcelona showed a reduction of the same amount, to 174.

Exchange Developments Favor Imports from United States.

The higher value of the peseta in terms of the dollar has favored imports from the United States, especially as the appreciation in terms of the pound sterling has been considerably less important. Important cargoes of oak staves, agricultural machinery, tobacco, phosphates, and automobiles have been received from the United States, and American ships are holding their own in carrying the merchandise. The lumber situation is unchanged; the demand for southern pine is good, and recent imports of Douglas fir have been favorably received. The importation of frozen beef has been unsatisfactory, and present plans are to purchase live cattle to relieve the shortage.

A slight seasonal recession has occurred in the automobile trade, but the exposition at Barcelona is attracting great attention, and important sales are anticipated. The demand for light trucks continues. Sales of moderate-priced and of luxury-type American cars are normal for the season. The sale of radio apparatus throughout Spain is increasing, and added interest is shown in the American product.

Declared exports from the Barcelona consular district to the United States in April amounted to \$526,000 as against \$493,000 in April, 1924. From Cadiz and Seville come reports of heavy shipments to the United States of cork, olive oil, and Huelva pyrites.

Cooperation Between Polish Government and Industry

Based on cable from Commercial Attaché Leighton W. Rogers, Warsaw, May 12

Budget debates and cooperation between the Government and industry, concerning the stimulation of production and the encouragement of export sales, have characterized the month of April in Polish economic circles. Little opposition is expected in regard to the Grabski economic program. The budget is expected to pass with minor changes.

Arrangements for Certain Debt Reductions.

The Government has announced its intention of canceling unused the final 100,000,000-franc installment of the 400,000,000-franc credit extended by France for the purchase of French war materials. It is reported that the ministry of finance has completed arrangements for the payment on July 1 of a third \$995,000 installment on a debt to private American manufacturers. British financiers have suspended negotiations on a £2,000,000 loan to the Union of Polish Sugar Industrials.

Recommendations to the Government from Business Men.

Industry in general has improved slightly. All branches have been urging the Government to increase the length of the working day from 8 to 10 hours, in order to meet German and Silesian competition. Business circles have been active also for the abolition of the industrial-turnover tax, for cheaper credits, and for a reduction in railway rates for export.

Trade Balance Acutely Adverse—Cotton Goods Active.

The adverse trade balance, due to a 100 per cent increase in imports in 1924, remains acute. The situation probably will be met by restrictions on the use of foreign luxuries and by increased tariff duties or by a system of licenses.

Russian buyers are renewing negotiations for textile purchases, but on terms less favorable than was offered last month. There is a good demand for the higher qualities of cotton goods.

Commercial treaties signed with Czechoslovakia are expected to aid the export trade, especially in coal.

Crop Conditions Encouraging—Living Costs Slightly Less.

Crop conditions are good, with no late frosts to affect winter plantings. An encouraging feature of spring sowings is a 100 per cent increase in the use of fertilizers. The agricultural strike threatened last month failed to materialize.

The note circulation in April advanced to 567,200,000 zlotys from 563,200,000 in March and 549,600,000 in February. The cost-of-living index figure averaged 183 for April, compared with 189 for March and 188 for February; the wholesale commodity index was 138 against 141 and 139. Car loadings for April fell to 8,307 from the 10,248 of March and the 9,672 for February.

Danzig Finds a Mortgage Bank.

Danzig has obtained permission from the League of Nations to float a foreign loan of £1,500,000, probably in London. Another attempt to mitigate credit shortage has taken form in the foundation of a first-mortgage bank (Danziger Hypothekbank Aktiengesellschaft), on the model of the reorganized German Rentenbank, which makes a specialty of advances to agriculture. The Danziger Hypothekbank has amalgamated with the former Roggenrentenbank (Rye Bank), and is to be under the supervision of the Free State Senate.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

Japan Markets Quiet During April

Acting Commercial Attaché Frank Rhea, Tokyo

Commercial conditions in Japan during April were characterized by some increase in general activity owing to the favorable conditions obtaining in the raw silk, cotton yarn, and cotton textile markets, although most import lines were very quiet and there were few indications of any marked improvement in the general business outlook.

Sales of Certain Commodities Below Average

Sales of electrical equipment during recent weeks have been below the average, although there are prospects of increased activity in the near future. The iron and steel market has been very quiet, imports during April having fallen to the lowest point recorded in the past three years. The automotive market has been somewhat overexpanded during the past year owing to the abnormal demand following the earthquake, and, in consequence, the immediate outlook is not very hopeful.

The construction of the Tokyo subways, which has been under negotiation for the past three years, has been deferred until financial arrangement can be completed.

Unfavorable Balance Continued.

Although preliminary returns of foreign trade during April indicate a fair increase in exports and a considerable decline in imports, the balance of trade was again unfavorable to the extent of over 90,000,000 yen, bringing the adverse balance for the first four months of the year to 461,000,000 yen (preliminary figures). Partial returns for the first 10 days of May show exports of 56,000,000 yen and imports of 63,000,000, an improvement over the corresponding period of April, when exports amounted to 55,000,000 yen and imports to 84,000,000.

Money Market Easier—National Debt.

The Tokyo money market is easier, the open-market discount rate for May 14 ranging from 7.30 to 8.40 per cent against 8.03 to 9.10 per cent for the corresponding period of April. Credit accommodations, however, are still very restricted, especially with respect to new commitments. Greater commercial activity is apparent from bank clearances of 6,760,000,000 yen during April, an increase of 171,000,000 over March.

The national debt of Japan at the close of April totaled 4,904,000,000 yen, an increase of 43,000,000 compared with the previous month. The entire increase was in domestic loans, which totaled 3,398,000,000 yen

at the close of April, while foreign obligations remained unchanged at 1,506,000,000. The figure for domestic loans includes extraordinary exchequer notes and other short-term obligations, which have been reported separately in previous statements.

Report of Japan Hypothec Bank—Notes in Circulation.

In spite of the easier conditions obtaining in the Japanese money market, the report of the Japan Hypothec Bank shows a contraction of capital expenditures during April, the total for the month having been 60,300,000 yen against 79,600,000 in March. The distribution of April payments was as follows: Government loans, none; municipal issues, 600,000 yen; commercial and industrial debentures, 43,000,000; and capital-stock payments, 16,700,000. This contrasts sharply with March, which showed Government loans of 63,400,000 yen and capital-stock payments of 14,200,000, with no municipal loans or private debentures.

Notes in circulation have shown a steady but slight downward tendency since the beginning of the year, outstanding notes of the Bank of Japan amounting to 1,243,000,000 yen at the close of April, compared with 1,262,000,000 the previous month and 1,626,000,000 at the beginning of the year. These totals do not include notes of the Bank of Japan held for retirement of issues of the Bank of Chosen, which amounted to 30,000,000 yen at the end of April, against 27,000,000 for March. In addition, there were outstanding at the end of April 22,000,000 yen in Government fractional notes, a decline of 1,000,000 in comparison with March.

Raw-Silk Market—Increase in Cotton-Yarn Production.

The raw-silk market has been fairly active owing to favorable reports from the United States, the principal consuming market, although the advance in yen exchange has been a deterrent factor. Shipments during April totaled 27,900 bales, an increase of 8,900 in comparison with March. April shipments to the United States amounted to 27,700 bales, against 18,900 the preceding month. Visible stocks in Yokohama amounted to 24,200 bales on April 30, compared with 22,000 at the close of March.

One of the most hopeful features of the present Japanese situation is the steady increase in the production of cotton yarns, the leading manufactured product. The report of the Japan Cotton Spinners' Association shows a total production during April of 205,000 bales, an increase of 9,000 compared with March and the largest total recorded in the past three years. This favorable showing is partially offset by the increase in warehoused stocks which totaled 26,000 bales at the end of April, against 24,000 the previous month.

Heavy Export of Cotton Yarn and Textiles—Raw Cotton.

Another favorable factor is the continued heavy export of both cotton yarn and textiles, the April totals having been 11,200,000 and 34,000,000 for yarns and textiles, respectively. The total for cotton yarns is the highest recorded since last August, while that for cotton textiles is a record for the past three years.

The continued heavy influx of raw cotton, which was valued at 118,500,000 yen in April and 449,600,000 during the first four months of the year, is reflected in warehoused stocks in Kobe, Osaka, and Yokohama, which aggregated 451,000 bales at the close of April, an increase of 74,000 compared with the same period of March and of more than 350,000 bales since the beginning of the year. Consumption during March amounted to 10,900,000 kwan (90,110,300 pounds),

against 10,700,000 kwan (88,456,900 pounds) in February. March imports aggregated 201,682,900 pounds, one of the largest totals ever recorded.

Decline in Cost of Living—Warehoused Stocks.

The cost of living has declined steadily since the beginning of the year, the index number of wholesale prices published by the Bank of Japan having fallen to 267 for April, a decline of 1.1 per cent compared with March and of 5.6 per cent in comparison with January.

Warehoused stocks in all Japan, according to the Mitsubishi report, aggregated 638,400,000 yen, an increase of 25,400,000 over March and the highest total recorded during the past two years. The most important changes during the month were increases in stocks of raw cotton, sugar, silk yarns, rice, wool, and dyes and paints, and declines in steel products, machinery, wheat, and woolen textiles.

The following table shows the value of stocks of principal commodities for the past two months:

Warehoused stocks as reported by Mitsubishi for March and April, 1924

Items	End of—		Items	End of—

Indian Business Quiet

Based on cable from Assistant Trade Commissioner E. G. Sabine, Bombay, May 16

The political situation in India during the month ended May 16 was quiet and uneventful. Business generally has been slow. Jute crop prospects continue favorable. New shellac is coming into the market in satisfactory quantities, but demand is slow, with a downward tendency in prices. Several strikes have occurred during the month. At Calcutta a walkout of the coolies and clerks employed in the hides and skins business during the early part of April succeeded in tying up the industry for a time. At present the employees of the Northwestern Railway are on strike, and considerable labor unrest exists also in Bombay among the cotton-mill workers.

Money Market Tight—Exchange.

The money market continues tight, but due to large deliveries and to the absence of gold receipts a slackening tendency is apparent. Borrowers are plentiful but trade demands are falling off. A substantial decrease in the note circulation has been effected and the Imperial Bank has repaid one-fourth of the amount borrowed earlier in the season from the currency department against inland bills, indicating that lower rates may soon be expected. The Imperial Bank's percent-

age of cash to liabilities stands at 18.00, as compared with 13.47 on March 13.

The exchange market continues strong, with the dollar value declining. On May 15 the buying rate in New York City for cable transfers payable in rupees was \$0.3629, as compared with \$0.3553 on April 15. This appreciation of the rupee in terms of dollars is reacting to the disadvantage of Indian exporters who ship to the United States, but importers of American merchandise, on the other hand, are being benefited. The gold market is weak and declining, with light stocks and holders of bullion unloading. An attempted cornering of April silver settlements suffered a complete collapse.

Duties Collected—Share Market.

Increases occurred in import duties collected on iron, steel, sugar, and silk, and in export duties collected on jute and rice, while declines occurred in collections on imports of cotton yarn, piece goods, mineral oils, railway materials, and tobacco. Cotton manufactures excise collections registered a decline.

The March share market index showed declines in cotton mill, electrical, bank, and miscellaneous stocks.

Improvement Expected in Piece-Goods Trade—Yarn Dull.

The demand for Indian cotton has been light, attributable to its position above parity with American prices. Only small business was transacted with Europe and the Far East. An inactive cloth market is keeping local mills quiet, but fluctuations are slight, with prices steady at the recent decline. The domestic piece-goods market is dull, with the position worse than during last month. Prices of imported piece goods have been reduced slightly. In Bombay conditions are fairly steady, but cautious buyers are keeping the market dull. Japanese gray shirtings are underselling both the English and the domestic products. It is generally believed that the piece-goods market will show improvement in the near future.

The yarn market is dull and depressed, with the tendency downward. English yarns are in about the same position, due to keen Japanese competition.

Cotton Receipts at Bombay—Jute—Shellac.

Cotton receipts at Bombay from September 1 to May 7 aggregated 3,000,000 bales, while exports during the same period reached 1,918,000 bales. Stocks with exporters, mills, and dealers at Bombay are estimated to be about 900,000 bales.

In spite of the slight damage done to the jute crop in northern Bengal by excessive rains, prospects continue satisfactory. New crop prices are easing off and very little old stock is being offered. Hessian prices are declining, and discouraging reports from foreign consuming centers are causing a slowing down at the mills.

Shellac prices are expected to decline in comparison with the general commodity decreases. New shellac is now coming into the market in fair quantities, but business is dull, with prices declining.

Inactivity in Hides and Skins—Tea—Other Commodities.

Hides and skins at Cawnpore continue dull and declining. The demand for goatskins and sheepskins is restricted to local tanners. Madras-tanned skins, particularly goat, are inactive. Raw goat skin prices, however, are firmer, due to increased inquiry from Europe and the United States.

Colombo tea sales continue very satisfactory, with the demand especially good for the commoner varieties.

The Indian tea crop is favorable, but the quality is somewhat disappointing. Owing to light supplies of rice and paddy there is a feeling that cleaned rice prices will be better.

The Bombay mill-stores market is depressed, with consumers restricting purchases to the minimum. Chemicals and sugar are featureless, with minor price changes. Wheat and linseed are firm and steady.

The demand for steel has been brisk during the past month, especially for corrugated sheets, attributable to upcountry requirements. Domestic pig iron has satisfied local demands at prices lower than the imported product. Stocks of copper and yellow metals are low, but anticipated arrivals are depressing the market.

Automobile and truck sales are seasonally slow and the market appears to be somewhat oversold. The position, however, is good. A general review of the industry during the past two years indicates a considerable broadening of the market.

Competition in all lines of machinery is keen, with prices being shaded to obtain orders. The market is steady, with no particular developments.

Good rains have been reported in several sections this month, and standing crops, particularly sugar, are doing well.

Cable Review of Australian Conditions

Based on cable from Trade Commissioner E. G. Balbutt, Melbourne, May 16

A general slackness was noted in Australian business during the month ended May 16. In keeping with the decision reached some time ago to curtail offerings until such time as prices are more satisfactory, several wool sales, scheduled to be held during the period, were canceled. The wheat market remained depressed and inactive and unemployment was more apparent. In spite of adverse factors, however, the general feeling is optimistic. Well-distributed rains have removed all danger of a drought, but floods caused considerable damage to the maize crop in certain sections. Wool on the London market showed some improvement, but the local situation remained unchanged.

Exchange Advanced—Other Finance.

Sterling-dollar exchange has advanced to \$4.825 for selling and \$4.865 for buying, as compared with \$4.77 and \$4.80, respectively, in the previous month, and \$4.34 and \$4.39, respectively, a year ago. This advance of the pound sterling during the past year has tended to increase Australia's foreign purchasing power by approximately 11 per cent in countries such as the United States, where exchange has been stable during the period, and even more in countries where the currency has shown a tendency to decline. Australia's purchasing power in Great Britain, the mother country, has not been affected to any great extent by this factor, since the exchange of each has risen at about the same rate.

The Federal Government announced during the month that it was ready to purchase the outstanding Commonwealth 4½ per cent stock and treasury bonds which mature in December of this year. Payment will be made by warrant, and the closing date for tenders is given as May 27.

The financial situation shows little change from last month. Savings deposits continue to increase, and farmers are liquidating old debts incurred during the past few years. Savings bank returns show that almost 50 per cent of the total Commonwealth popula-

tion has accounts in these institutions and that during the past decade there has been a steady increase both in the number of depositors and in the aggregate of deposits.

Shipping Board Steamers Sold—Unemployment—March Index.

During the month the Commonwealth Shipping Board sold 11 steamers, 7 being taken by Japanese interests, 1 by Italian, 1 by Greek, and 2 by British. According to an announcement made some time ago by the Commonwealth Government, the entire Government fleet, valued at £4,500,000, is to be sold as quickly as buyers can be found. A deficit of approximately £11,500,000 has been incurred by the fleet since its inauguration.

Unemployment appears to be increasing, particularly in Melbourne's textile, iron, building, and boot industries. At present about 10,000 workers are affected.

According to the March index number wholesale prices are declining, while retail prices are up somewhat.

Adverse Balance Recorded for March.

Owing to a decline of almost 50 per cent in wool exports during March trading for the month resulted in an adverse balance of £1,042,000. With the exception of motor cycles and dressed and undressed timber all principal items of import during March registered increases over the same month last year, while the total of all imports increased from £11,154,700 to £16,098,000. On the export side all principal items except greasy and scoured wool registered substantial increases. Wheat advanced from £1,691,400 to £6,075,000, flour from £513,880 to £825,200, butter from £608,460 to £973,300, and fresh beef from £30,280 to £373,300. Considerable increases were also noted in exports of fresh and dried fruits. The decline in wool exports is accounted for by the curtailment of wool sales already mentioned. Total exports during March reached £15,656,000, a considerable advance over March, 1924, when exports were valued at £14,023,600.

Trade in Leading Commodities Summarized.

The following table gives the value of Australia's principal items of import and export during March, 1925, as compared with March of the preceding year:

Trade of Australia in leading commodities

Items	March		Items	March	
	1924	1925		1924	1925
IMPORTS			EXPORTS		
Cotton and linen piece goods.....	£ 784, 177	£ 1, 013, 000	Greasy wool.....	£ 7, 242, 177	£ 4, 044, 100
Motor chassis.....	763, 320	946, 200	Scoured wool.....	572, 358	390, 700
Motor bodies.....	95, 291	65, 900	Dried fruits.....	25, 268	53, 700
Dressed timber.....	71, 870	51, 000	Fresh fruits.....	233, 833	272, 600
Undressed timber.....	176, 869	112, 800	Wheat.....	1, 691, 400	6, 075, 000
Machinery.....	330, 620	270, 100	Flour.....	513, 880	825, 200
Petroleum spirit.....	1, 020, 373	1, 154, 500	Butter.....	608, 460	973, 300
	342, 920	432, 100	Beef.....	30, 280	373, 300

Favorable Balance for Nine-Month Trade—Exports.

During the first nine months of the present fiscal year—July, 1924, to March, 1925, inclusive—Australia's trade balance has been favorable by £8,196,000, as compared with an unfavorable balance of £12,301,000 during the corresponding period of 1923-24, a fact that is particularly encouraging to Australian busi-

ness. Total exports during the 1924-25 nine-month period reached £125,567,000, as against £94,553,000 for the corresponding months in 1923-24, while imports increased from £106,854,000 to £117,371,000.

Wool exports from July, 1924, to April, 1925, inclusive, amounted to 1,502,000 bales, as compared with 1,409,750 during the same months of 1923-24, according to the Pastoral Review. Production during the same period, based upon receipts in store, increased from 1,984,000 bales to 1,607,950. Wheat and flour exports during March amounted to 475,500 and 47,200 long tons, respectively.

Slight Decline in Philippine Trade Movement

Cable from Assistant Trade Commissioner E. B. George, Manila, May 15

April import business of the Philippines was slightly weaker, due in part to the seasonal post-Easter quiet. Dullness was particularly noticeable in the textile market, but business in automotive lines was strong. The volume of abaca and copra exports was still restricted and prices of the former were weaker. Sugar shipments, however, reached large proportions.

Copra and Abaca Markets Quiet.

The majority of both local and American coconut oil mills bought very sparingly of copra during April and early May, forcing a small temporary price reduction. Business was done, however, at prices consistently above oil parities in the United States and Europe. Present copra production is about normal, but a decline during the next few weeks is anticipated by some factors in the trade.

The abaca market fell slowly and irregularly throughout April, steadying by the second week in May at the following price levels: Grade E, 48 pesos per picul of 139 pounds; grade F, 46 pesos; I, 36 pesos; JUS, 26 pesos; and JUK, 20 pesos. Fairly firm prices in the first week in April were due to the dealers' belief that buyers of both the United States and the United Kingdom were short of supplies and would be obliged to replenish their stocks after the Easter holidays. The persistence of both markets, however, in buying only small quantities for immediate requirements weakened the confidence of the dealers and brought about the ensuing price decline.

Bumper Sugar Crop Expected—Tobacco—Rice.

Although no exact figures are yet available, it is certain that this year's sugar production will be large. Many estimate a crop of 475,000 metric tons. Planting of the new crop continues under favorable weather conditions, the disadvantages of the early planting season being steadily overcome.

The local tobacco market weakened in April, with the export trade dull except for shipments of leaf to Spain.

Purchases of rice from Indo-China have been reported, but satisfactory prices of native rice and palay (unmilled rice) were maintained in April.

Automotive Sales Good—Textiles Overstocked.

Sales of passenger cars in April were very satisfactory. Business in light trucks is still improving and that in automobile accessories is showing a better tone. Business in tires is also advancing, dealers reporting April and early May as very favorable.

April's textile activities were poor in almost all staple lines, due partly to the let-down following the Easter season. The market is now overstocked in most

staples and shipments are still arriving. With the slackened demand prices are tending to lag.

Smaller Arrivals of Flour—Sardines and Salmon.

Arrivals of flour in April were considerably lower, approximating 155,000 bags, of which 132,000 were from the United States. Flour consumption is still low and local prices are relatively high. Stocks of all brands, therefore, are probably still well in excess of 500,000 bags. The flour market is adversely affected by the fluctuations in American prices, which tend to decrease ordering by importers and indenters, who dump their present heavy holdings on the market at cut prices, especially in the case of old flour.

Imports of canned sardines declined from 44,000 cases in March to 25,700 in April. With only fair consumptions, stocks are still rather heavy, although not considered dangerous. A more serious drawback on this market is the continuous unloading of supplies at a price sacrifice by the financially weak dealers. Arrivals of canned salmon were unimportant in April, not exceeding 2,500 cases. Consumption of this food-stuff is fairly good, but prices remain at a low level.

Seasonal Decline in Exchange—Banking Statement.

The banks' selling rate for telegraphic transfer was maintained at one-eighth per cent premium throughout the month of April, declining gradually thereafter to one-half per cent premium on May 12. This fall was due chiefly to the seasonal offerings of export bills, especially sugar, and the consequent reduction in the excess of bank reserves. Since the beginning of the year \$2,810,000 worth of exchange on New York has been sold by the insular treasurer.

The insular auditor's statement of May 2, covering all Manila banks, showed total resources of 239,000,000 pesos (\$119,500,000); loans, discounts, and overdrafts, 141,700,000 pesos (\$70,850,000); investments, 21,500,000 pesos (\$10,750,000); deposits, 28,500,000 pesos (\$14,250,000); and working capital of branches of foreign banks in Manila, 16,250,000 pesos (\$8,125,000).

Rehabilitation of Dutch East Indian Exchange Aids Business

Cable from Trade Commissioner J. F. Van Wickel, Batavia, Java, May 15

Netherlands East Indian exchange is now practically on a parity with gold (1 florin = \$0.402) with the recent reestablishment of the gold standard and virtual removal of the embargo on gold shipments. This advance in exchange has been gradually taking place since the latter part of 1924 and is indicative of the effective return to a normal business basis which has characterized recent months in the islands. As a result of this exchange improvement a considerable volume of funds held in the islands in temporary investments was withdrawn and remitted to the Netherlands. In consequence of this gold movement the emission of treasury notes in April was fully subscribed, but not heavily oversubscribed, as has recently been the case. The supply of money is now more nearly commensurate with financial requirements.

Improvement in Import Trade.

There has been a more noticeable improvement in the import trade during the last few months, although competition in import markets was keen. Imports for the first quarter of 1925 compared with the same quar-

ter of last year showed an increase in 94 and a decrease in 55 items.

The automobile trade has been active, sales good, and demand is expected to continue. With the arrival of 918 cars in Java during the first quarter, there is a probability that the market will become overstocked, especially with low-priced cars, unless current importations are curtailed.

Low stocks and slightly increased native demand for textiles enabled importers to maintain a fair margin of profit. The trade was less active in machinery and metals. Tire sales were good and all other import commodities normal.

Export Trade Quiet.

The export trade of the islands in April was generally quiet, owing to slack foreign demand and an unusual number of local holidays. The rubber market was firm for spot transactions and less active for future transactions; sugar inactive, and rice prices lower, both the result of increased crop estimates; tea and citronella quiet; copra and pepper firm; and kapoc slightly firmer. The tin market was weaker, with March shipments totaling 1,700 tons.

Siamese April Trade Declines

Cable from Consul C. H. Albrecht, Bangkok, May 10

The foreign trade of Bangkok, the port of Siam, declined in April from the March level. Imports fell over 1,200,000 ticals from the previous month's figure of 20,000,000 ticals. The decline, however, was due mainly to a decrease in imports of specie, imports of general merchandise remaining practically the same. A decline of about 1,000,000 ticals in the value of rice exports and of 300,000 ticals in the shipments of teak wood reduced April's exports to approximately 13,600,000 ticals.

Trade of Quarter Advanced.

The total foreign trade figures for the first four months of the year show considerable advancement over the corresponding period of 1924. Exports from January to April, 1925, inclusive, totaled approximately 78,800,000 ticals, compared with 60,346,580 ticals in the 1924 period, and imports amounted to 54,500,000 ticals, against 45,805,950 ticals for the first four months of last year.

Report of American Salesmen—Exchange.

American commercial travelers in Siam report better business throughout the country than was experienced at this time last year.

Exchange value of the tical at the close of April advanced over recent quotations to a selling rate of \$0.44 and a buying rate of \$0.455.

Trade in British Malaya Continues Active

Cable from Vice Consul Hugh S. Miller, Singapore, May 18

General business conditions in British Malaya improved during April. Money was in good demand, and trade again reached a high level, with approximate total exports valued at 76,356,000 Straits dollars and imports amounting to 70,000,000 dollars, thereby maintaining a favorable credit balance of 6,356,000 dollars. Continued interest in the trade of this region on the part of American manufacturers was indicated by increased arrivals of representatives seeking new connections.

Tin Exported—Exchange Tendency Steady.

Total exports of tin in April amounted to 5,915 long tons, 64 per cent of which went to the United States, 24 per cent to the United Kingdom, and 11 per cent to Europe. The average price of tin for the month was 119.10 Straits dollars per picul of 133½ pounds.

Exchange has been high for this season of the year, but, largely due to the high price obtained for rubber, more money was required to finance transactions of this commodity. The value of the Straits dollar showed a steady tendency, with a high rate of \$0.55½ and a low rate of \$0.56¾ on the gold dollar.

BRITISH LAW ON CHECKS

Bills of Exchange Act Protects British Bank in Cashing a Check in Good Faith and in the Ordinary Course of Business

A. J. Wolfe, Chief, Division of Commercial Laws

A few days ago a bank on the Pacific coast consulted the Division of Commercial Laws with regard to an unpleasant experience in connection with a check drawn on a bank in a British dominion. This check was drawn to the order of a designated person. An unauthorized individual obtained possession of the check, forged the indorsement of the payee, and cashed it by presentation to the Canadian bank's paying teller. When the fraud was discovered, in due course the American bank called upon the British bank to make good and the latter declined.

Provisions of British Bills of Exchange Act.

Unfortunately the inquirer had to be informed that the British bank was legally within its rights in refusing to make good. Under the British bills of exchange act, 1882, which codified the law relating to bills of exchange, checks, and notes, the British banker is protected in cashing a check in good faith and in the ordinary course of business. Section 60 of the bills of exchange act reads as follows:

When a bill payable to order on demand is drawn on a banker, and the banker on whom it is drawn pays the bill in good faith and in the ordinary course of business, it is not incumbent on the banker to show that the indorsement of the payee or any subsequent indorsement was made by or under the authority of the person whose indorsement it purports to be, and the banker is deemed to have paid the bill in due course, although such indorsement has been forged or made without authority.

What is Meant by Crossing of Checks.

In order to prevent the abuse of checks, the British have evolved a method of crossing checks, making it impossible for the check to be cashed otherwise than by depositing it with the payee's or indorser's bank. The crossing is generally done by drawing two parallel lines across the face of the check with the notation "and Co." written between them. The check may also be specially crossed by writing the name of a bank between two such transverse lines.

Under the British rule, the banker is never liable for paying an open check with a forged indorsement unless he has been ordered to stop payment. Of course, the use of crossed checks is not an infallible remedy, but it minimizes the opportunity for committing fraud. The crossing of the check does not affect the negotiability of the instrument, but simply makes it impossible to collect it over the counter. The crossing of the check is, under the British rule, a material part of the check and it is unlawful for any person to obliterate, add to, or alter the crossing except as authorized by the act. In the matter of paying checks, excepting the risk as to forgery of the drawer's signature, the British bank

is free from all liability as long as it exercises ordinary prudence and good faith.

A further protection is afforded in the case of crossed checks by marking them "not negotiable." While the addition of these words nullifies the negotiability of a check, it may be transferred. Under such transfer, even a holder for value has no better title to the check than his immediate transferor, and the true owner can recover its value no matter what has been done with it, although the banker who collects and the banker who pays are protected, provided they have acted in good faith, without negligence, and in the ordinary course of business. The words "not negotiable" can be added to a check only when it has been crossed under the provisions of the bills of exchange act.

Under the British practice, tradesmen who cash checks to oblige their customers run many risks, for which reason the cashing of checks for strangers is almost unknown in England. The tradesman will not cash a check unless he is well acquainted with his customer and knows that he can recover from him in case of any loss arising.

British Practice Summarized.

As in the United States, a check (British, cheque) is a negotiable instrument and differs from an ordinary chattle in that to it ordinarily does not apply the principle of common law that no person can give to another that of which he has not true ownership. Property in a negotiable instrument—that is, the right of ownership—passes by delivery; the holder in due course is not affected by any defect of title of any previous holder, but holds the instrument free from all equities.

This constitutes the negotiability of an instrument. It was a condition made necessary by mercantile commerce, for commerce would be greatly handicapped were it necessary to examine in each instance the whole history of a document transferred in the course of business. The character of negotiability has been through custom or statute by coins, bills of exchange, checks, bank notes, and certain bonds and stock warrants. In this particular analysis, however, we are concerned with the practice relating to checks only.

It is generally understood that the check originated in England. One of the earliest of checks is an order on a goldsmith, who was the forerunner of the banker, to pay a sum from the deposit to the bearer and to debit it to the depositor's account. This was in 1689. In due course the modern form of the check was introduced. The status of the check as a bill of exchange under the British practice was settled under section 73

of the bills of exchange act, 1882, reading: "A cheque is a bill of exchange drawn on a banker payable on demand."

Bills of Exchange Distinguished.

Between bills of exchange and checks, however, there are certain points of difference: (1) A bill of exchange must be accepted before the acceptor is liable upon it; a check is never "accepted" by a banker, and therefore the banker is never liable to the holder of the check for refusing payment of it. In this case if there is any remedy at all, it is for breach of contract between the customer and his banker. A check is an order to pay and not an assignment of a sum of money. (2) A bill must be duly presented for acceptance and payment, or the drawer will be discharged. The drawer of a check is not discharged by delay in presenting it for payment, unless, through the delay, the drawer's position has changed—as when he had sufficient money deposited to meet the check, but the bank subsequently failed before such delayed presentation. Under the British practice the drawer is in such case discharged to the extent of the damage due to the delay of the payee.

Reasonable Time Limit for Checks—The "Open" Check.

The payee must present the check within a reasonable time. According to the British practice, if the person who receives the check and the banker on whom it is drawn live in the same place, the check must be presented for payment on the day after it is received; if they reside in different places, the check must be forwarded for presentation on the day after it is received and the agent to whom it is forwarded must present it on the day after it is received by him.

Nonbusiness days are excluded in this computation. These rules apply only in case the bank fails. In ordinary practice the definition of reasonable time may be extended. The custom of bankers in England is not to pay checks presented after 6 (in some cases, after 12) months have elapsed since the ostensible date of issue.

An "open" check—that is, one which has not been crossed in accordance with the provisions of the British bills of exchange act, is an unconditional order in writing. If the check is not written on a check blank provided by a bank, which in British practice bears an engraved stamp, but is written on ordinary paper, an adhesive stamp must be affixed to it by the drawer. Checks of this character to which the stamp has been affixed by an intermediate holder have been held invalid.

The check is an order to pay on demand, and there are no days of grace. Payment must be made in money. The sum payable is written out in the body of the check and in figures in the lower left-hand corner. If there is a discrepancy between the two, the words govern the instrument, but the banker may return the check on this account with a notation of the discrepancy.

Fictitious Person as Payee.

A check may be an order for payment to a designated person or to his order or to bearer. In the first two cases the payee must indorse the check; where the check is payable to bearer no indorsement is required. Sometimes checks are made payable to fictitious persons. The law in England holds that the payee may be a fictitious person, which is an important point in

case of fraud or forgery on the part of some employee. In the case of *Clutton v. Attenborough* (1897, App. Cas. 90) the plaintiffs had a clerk who caused checks to be drawn payable to the order of a fictitious person, which checks were signed by a member of the firm as drawer in perfectly good faith. The clerk indorsed the checks in the name of the fictitious person and cashed them with the defendant, who also acted in good faith and took the checks for value. The checks were afterwards paid by plaintiff's bankers to the defendant's bankers, and the defendants were credited with the amount. It was held that the defendants were not liable to refund the money to the plaintiffs, since the checks were drawn by the plaintiffs payable to the order of a fictitious or nonexistent person and were therefore considered as payable to bearer, and the defendants, having taken them in good faith and for value, were holders in due course and had a perfect title to the checks.

If a check made payable to order is indorsed in blank, it becomes a check payable to bearer. If it is indorsed with a notation to pay to a third party or order, it remains a check to order.

The date, under the British rule, forms no part of the definition of the bill of exchange or check. If a check is issued undated, the holder may fill in the date. A check is not invalid because it is antedated, postdated, or dated on a Sunday.

Bank's Liability Absolute.

A banker is bound to know the signature of his customer. If the signature turns out to be a forgery, the banker loses the money. This is entirely different from the case cited in the beginning of this article, where the banker is held blameless in the case of a forged indorsement by the payee.

When a check appears to have been materially altered, the banker must refuse payment or be liable. A banker is liable in the case of a fraudulent alteration. Formerly it was held that if a customer had drawn a check so negligently as to facilitate an alteration or a forgery, he could not hold the bank responsible for any loss. Thus, if a customer drew a check for £50, and wrote the word "fifty" in such a way as to permit an insertion making it read "one hundred fifty," the banker was exonerated.

Certified Checks Not Used—Relation of Banker to Customer.

Curiously enough, the custom of certified checks does not appear to be in vogue, nor is there any provision with regard to them in the bills of exchange act of 1882. The use of certified checks is apparently a purely American practice and has led to curious complications in some of the countries where, under American influence or in foreign branches of American banks, checks have been certified. This happened in Cuba, where a number of certified checks had been issued and several banks which had certified the checks suspended payment simultaneously. The question then arose whether the debtor was discharged by having given a certified check, and it was found that the Cuban law had no knowledge of this particular instrument.

The relationship of the banker and his customer is regarded from some points of view as that of principal and agent and from other points of view that of debtor and creditor. The latter relationship involves the obligation on the part of the banker to repay the debt to the customer when and as called for.

ITALY'S POWER RESOURCES AND HYDROELECTRIC DEVELOPMENTS

Limited Coal and Petroleum Resources—Increased Capacity of Hydroelectric Power Installations—Transmission Lines—Construction Projects

Consul Ivo C. Fanti, Genoa

That Italy's coal and petroleum resources are very limited is well known. The total reserves of coal in that kingdom are estimated at 340,000,000 tons, according to Prof. G. de Marchi in his paper on "Italian Power Resources," submitted at the First World Power Conference. Almost no petroleum deposits are known to exist. The only beds of coal and lignite of any real importance are those in Tuscany and Istria.

COAL

Unless other coal deposits are discovered, Italy must continue to depend to a great extent upon foreign countries for its supply. The deposits that are the most accessible produce a lignite that has from one-fifth to one-third of the calorific value of soft coal; it is not suitable for the many uses requiring special sorts of coal; and it often contains impurities. The mine cost of the lignite is only slightly under the cost of foreign coal delivered at Italian ports, and therefore normally it pays to use it only near the place of production, as railway freight rates make the use of lignite unprofitable even at short distances from the mines.

Lignite Valuable as Reserve for Hydroelectric Plants.

It has been calculated that the lignite beds that can be worked would supply electrical generating plants of a combined capacity of between 150,000 and 300,000 kilowatts for from 50 to 100 years. Used only as reserves for hydroelectric plants the activity of these power stations would be extended for many years more.

As early as 1907 this mode of using lignite was started by the installation of an electric plant at Castelnovo, Valdarno. After the war, Government encouragement favored this method of profiting by lignite deposits, and various plants are now being installed, notably one at Mugello, Tuscany, and one at Pietrafitta, Umbria. Various projects have also been promoted for other plants.

Limited Domestic Production of Coal.

The coal deposits of Istria are mined with moderate intensity. Recently free entry has been authorized by the Government for machinery, metals, explosives, etc., necessary in this industry in order to do away with one of the causes of high cost of production.

Domestic production of coal in recent years, including the output from the territory received by Italy as a result of the war, has been around 1,000,000 tons per year. Only the lignite mines in the most favorable positions (especially those in Tuscany, which produce from two-thirds to three-quarters of the entire output) and the coal mines of Istria remained open after the war.

Importation Necessary for Industrial Existence.

Without the importation of foreign coal, it would be necessary for Italy to close the greater part of its factories and practically stop all home industry. This situation is one that can only partially be relieved by hydroelectric development—provided new industries continue to spring up as rapidly as at present.

Consumption Not Keeping Pace with Economic Expansion.

The approximate entire consumption of coal fuel (including coal, coke, lignite, and briquets) for 1913 was 12,000,000 tons, which represents the highest in an increasing scale in the pre-war years; during and after the war it fell, but in late years has been increasing, owing to improved conditions in mining and transportation, and to the better internal industrial conditions, notwithstanding the increased use of liquid fuel and development in hydroelectric plants.

In 1924, the estimated consumption—about 7,000,000 tons of which were utilized for industry, 4,000,000 tons for transportation, and 1,000,000 tons for domestic use—was again equal to the pre-war figure; but if the increase in population and the expansion of territory as a result of the war are considered, consumption is even now under the 1913 total. This fact is probably accounted for by the continued depression in certain Italian industries, especially siderurgical, and by the increased use of hydroelectrical power by other types of industry. The per capita consumption in Italy of coal fuel is estimated at about three quintals (660 pounds) a year.

National Expenditure for Coal.

The expenditure for imported coal by Italy, which in 1913 amounted to approximately 380,000,000 lire, increased to 2,800,000,000 lire in 1920 (exclusive of reparations coal from Germany), but the change is not so marked when the lire is converted at the average rate of exchange for each period into a currency with a gold standard, or \$73,340,000 and \$131,600,000, respectively. The approximate expenditure declined considerably in the fiscal year 1921-22 to 1,241,000,000 lire (\$56,837,800), increased in the following fiscal period to 1,446,000,000 lire (\$66,516,000), and again decreased in 1923-24 to 1,381,000,000 lire (\$60,211,600).

Present Importations Small but Regular.

At present, no large stocks are being imported by Italian firms, though importation is regular. This tendency to bring into the country the minimum amount necessary for immediate consumption is due to the prospects of abundant production in producing countries, the hope that Germany may continue competing with low prices, and the belief that freight rates may become even more favorable than now quoted.

PETROLEUM

The known petroleum resources in Italy are negligible, though some engineers believe that oil might be found at great depth.

Domestic Production Negligible.

The actual production in Italy from the few sections in which small amount of petroleum are found is very small. The output in Emilia, where most of the oil is produced, reached a maximum of 10,000 tons in 1911, but in recent years has remained under 5,000 tons, or hardly one-hundredth part of the needs of the country. Distillation of bituminous schists and

asphaltic rock, which exist in parts of the country, also contribute small quantities of oil. If it were not for a high protective duty, however, the industry would disappear altogether, it is believed.

Importation Largely of Refined Products.

The relatively rapid increase in the use of petroleum and its residues has caused a large increase in importations. In 1913 the total amounted to about a quarter of a million tons, compared with about two-thirds of a million tons during the fiscal year 1923-24, valued at approximately 650,000,000 lire. Only small quantities of crude oil are imported, as the refining industry has not reached a high degree of development in Italy. The annexation of Fiume, however, will relieve this situation somewhat, as the refinery of that city (now largely owned by the Italian Government) produces about 15,000 tons of refined oil and residue, and is said to be capable of a larger production. Gasoline and lubricating oils are the most important imports in this line.

United States and Mexico Chief Countries of Origin.

Although the actual amounts of crude oil and refined products imported from various countries vary from year to year, the proportions originating in each producing country are about the same.

Of approximately 22,500 tons of crude oil imported in the fiscal year 1923-24 about 14,700 tons came from Mexico and 5,800 from Persia. Of about 146,100 tons of gasoline, approximately 80,400 came from the United States, 35,500 from Persia, 15,800 from Rumania, and 11,200 from Egypt. Of about 117,100 tons of kerosene, 72,100 came from the United States, 11,100 from Rumania, 10,900 from Russia, and 6,900 from Persia. Of about 76,500 tons of lubricating oil imported, the United States furnished about 70,300 tons. Of residues, amounting to about 254,300 tons, the United States furnished about 126,400 tons and Mexico about 82,800 tons. Smaller quantities of mineral oil were also received from the Dutch East Indies.

The United States and Mexico are, therefore, the chief supplying nations; at the same time, Persian and Rumanian importation is on the increase, and importation from Russia has recommenced to some extent.

HYDROELECTRIC POWER

The data obtainable in Italy at present permit of merely a rough calculation as to the possible development of hydroelectric power in the Kingdom. It has been estimated that the utilizable power might amount to between four and five million kilowatts, permitting an annual production of 14.3 milliards of kilowatt-hours, equivalent to the power obtained from about 17,000,000 tons of coal, or approximately one and a half times the maximum quantity of coal consumed in Italy in a year.

Total Capacity Constantly Increasing.

The plants already installed by the beginning of 1925 had a capacity of about 1,700,000 kilowatts, and it is believed that within two or three years the total should be well over 2,000,000 kilowatts. Plants are under construction at present with a capacity of over a half-million kilowatts, and projects are under consideration for others with a total capacity of over 1,000,000 kilowatts. About seven-tenths of the electric power available is in the north, two-tenths in central Italy, and the remainder in the south and the islands.

The capacity of the plants using lignite, etc., is about one-half million kilowatts, and they are in most cases auxiliary to hydroelectric plants.

Location of Hydroelectric Power Stations.

The location of the various hydroelectric power stations in Italy and those under construction in 1924 are shown by the map on the third page of cover. This map was taken from volume 1 of The Transactions of the First World Power Conference, London, June 30 to July 12, 1924.

Transmission of Energy Facilitated.

The plants now installed, it is estimated, are capable of producing 7,000,000,000 kilowatt-hours per year, while the actual production last year amounted to about 6,000,000,000 kilowatt-hours. It is believed that within six or eight years Italy might be in a position to produce by hydroelectric plants about 10,000,000,000 kilowatt-hours, equivalent to the energy produced from about 12,000,000 tons of coal.

At the same time that plants are being installed, connections for the transmission of power from one part of the country to the other are being established. This network of transmission lines is most noticeable from Piedmont to Liguria and Lombardy, the Veneto to Emilia, Umbria to Lazio, and the Abruzzi to Campania. Large plants are now under construction in Calabria and Sardinia.

No Concurrent Diminution in Coal Consumption with Increase in Hydroelectric Development.

In the present fiscal year it is estimated that consumption will reach 6,500,000,000 kilowatt hours.

Of hydroelectric energy used in Italy, it is estimated that a little less than a tenth is utilized for illumination, practically an equal amount for transportation, and the remainder for the various industries.

American Consular Officers on Leave

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name	Post	Expiration of venue	Address
Burri, Alfred T.....	Puerto Cortes, Honduras.	June 23	Department of State, Washington, D. C.
Davis, Raymond.....	Paris, France.....	June 21	Care of Marshall Davis, Esq., Casco Mercantile Trust Co., Portland, Me.
Fullerton, Hugh S....	Antwerp, Belgium....	June 13	Department of State, Washington, D. C.
Lee, Frank O.....	Bradford, England....	June 28	1825 Phelps Place, Washington, D. C.
Waterman, Henry S....	San Jose, Costa Rica...	June 26	2914 Clay Street, San Francisco, Calif.
Wolcott, Henry M....	Bilbao, Spain.....	June 20	C/o Mr. C. M. Lord, 95 West One hundred and eighty-third Street, New York, N. Y.

Market for Paper Hats in South Africa

There is a large demand in Johannesburg for pressed-paper hats, which are used in the gold mines, according to a communication from Assistant Trade Commissioner Floyd E. Sullivan. The hat is described as made of pressed paper and modeled after the steel helmet used by the Army during the war.

DISTRIBUTION OF WORLD POPULATION

H. M. Strong, geographic expert, Division of Statistical Research

Large, or at least considerable, numbers of people are living on most of the lands throughout the world which are favorable for human habitation, the principal exceptions to this being southern Siberia, southern Brazil, Argentina, southeastern Australia, and South Africa. With these exceptions the present sparsely peopled areas are hot or cold deserts which can not support large populations.

Population Map on Cover Page.

The population map on the cover page of this issue of *COMMERCE REPORTS* depicts the distribution of world population on an equal area map. By means of this picture it is possible to compare density of population in the various countries, for on this map practically no allowance need be made, as on the more commonly used Mercator map, for exaggeration in area toward the poles. Consequently, to take two illustrations, the sparse distribution of people in eastern and northern Russia appears approximately as it exists, instead of being unduly thinned out, and the dots representing the dense populations of Belgium and the Netherlands are not separated more than they should be.

Density of Population in England, Japan, and Java.

Three island areas, England, Japan, and Java, stand out because of their dense population. In England the crowding of peoples is due to industrial development. In Japan it has been chiefly the result of intensive agriculture carried almost to the limit of production as related to subsistence, and only recently have the elements of manufacturing entered to further increase the density. Java represents entirely different conditions. It is a tropical island, within a few degrees of the equator, containing a large area of level, highly fertile, and well-watered land. Also the Dutch have maintained stable political conditions in Java for many years, thus favoring the development of a highly productive tropical agriculture. Java and Cuba, each a tropical island, are strongly contrasted. Both are approximately the same size, yet Cuba has about 3,000,000 people as compared with 34,000,000 in Java.

A dense population exists in three large continental areas: China, India, and the greater part of Europe—excluding the northern and northeastern parts. Northeastern United States within a line drawn from Boston to Buffalo to Pittsburgh to Philadelphia is the only region in the Western Hemisphere in any way comparable to these three in density of population.

Agriculture and Manufacturing as Factors.

The dense populations of continental Asia are based on intensive agriculture and relatively low standards of living. Only in recent years has manufacturing developed in the vicinity of Shanghai and Hankow, Bombay, and Bihar-Orissa section of India, southwest of Calcutta.

The crowded conditions in northwest Europe and to some extent in Italy have grown out of manufacturing. Here the people are not raising as much food and raw materials as they need, and consequently here where buying power is relatively high and demand large is the great import market of the world. (See map on inside cover page of *COMMERCE REPORTS* for May 18, 1925.) Northern France, western Poland, and

Czechoslovakia also have important manufacturing activities, so that the economic life of these people is colored strongly by manufacturing industries. In Poland and southern Russia is a thickly peopled agricultural land.

The Tropics Generally Rather Sparsely Populated.

The dense population in tropical countries like India and Java and the crowded conditions in some port cities of the Tropics have given an exaggerated idea of the large number of people living in these regions as a whole. The Tropics in general are rather sparsely peopled, as shown by a survey of the regions crossed by the Equator in South America, Africa, and the East Indies, though the coastal regions of Brazil and the sections around the Gold Coast in Africa are fairly well inhabited. In these areas agriculture and mining have stimulated growth of population, while markets in the United States and Europe create demand for the minerals and crops they produce.

Some plateaus in tropical regions, where climate is cooler than on the lowlands are conspicuously well peopled, namely, Abyssinia, Peru, Colombia, and Mexico.

Dearth of People Over Vast Expanses.

The dearth of people throughout the world over vast expanses stands out conspicuously. Some of these regions may acquire more people, but most of them can support only a scattered population.

The fertile black soil strip across southern Siberia can support a fairly dense population, but those lands in Asia, which are at present almost vacant, will for the most part remain sparsely peopled. In the desert area between the Caspian Sea and eastern China, some irrigated lands will claim a few people, but the high, dry, cold desert of western China can support but a few nomads. The greater part of Siberia and northern European Russia as well will remain sparsely populated. Had suitable conditions existed in northern European Russia, the overcrowded conditions of southern and western Russia long ago would have peopled these lands. Similarly, most of Siberia never can support a dense population because of its short growing season, low rainfall, and intense winter cold.

Arabia, the Sahara, southwest Africa, and the interior of Australia are deserts which never can be well peopled. The people now living in Australia occupy only the humid areas; on the northern and northeast coasts the climate is tropical with a rainy and dry season.

South America Has Vast Unsettled Regions.

South America on the whole is sparsely peopled. The vast unsettled region of Brazil and Bolivia near the Equator will not acquire a dense population under present conditions. The southern part of Argentina, except near the Andes, is relatively dry. The section west of the Pampas also is deficient in rainfall, irrigation being necessary to produce crops. In northeastern Argentina, however, where cotton and similar crops can be grown, settlement may occur. At present the well-peopled area of Argentina is on the Pampas or great level wheat lands, close to the River Plate and ocean shipping.

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

GERMANY'S FOREIGN TRADE IN ELECTRICAL EQUIPMENT

Quantity of German Exports About 20 Per Cent Below Pre-War

[The following is a digest, made by the Electrical Equipment Division, of an article which appeared in the *Elektrotechnische Zeitschrift*, April 2, 1925]

Germany's imports of electrical equipment in 1924 amounted to approximately 9,500,000 marks, against about 14,500,000 marks in 1913. In spite of restrictions, imports have not been so small as was generally believed. The following tables show Germany's imports and exports of electrical manufactures in 1913, 1923, and 1924:

Germany's imports of electrical manufactures

Products	1913	1923	1924
	1,000 marks	1,000 marks	1,000 marks
Machines, transformers, etc.	3,564	(1)	2,644
Incandescent lamps	1,036	988	1,778
Telegraph, telephone (also wireless) signaling apparatus	720	1,191	1,265
Installations for lighting and power transmission	2,745	(1)	716
Measuring, calculating, and registering apparatuses	1,658	834	1,844
Other manufactures	4,736	(1)	1,292
Total	14,449		9,539

¹ No value stated.

Germany's exports of electrical products

Products	1913		1923		1924	
	1,000 marks	Per cent of total	1,000 marks	Per cent of total	1,000 marks	Per cent of total
Machines, transformers, etc.:						
Up to 25 kilos per piece	2,887	0.9	5,587	1.93	5,211	1.79
From 25 to 100	7,223	2.23	6,773	2.34	5,343	1.84
From 100 to 500	14,426	4.45	12,393	4.27	9,235	3.17
Over 500	31,989	9.9	23,108	8.00	20,593	7.08
Complete armature commutators	7,875	2.43	7,080	2.45	5,425	1.87
Total	64,400	19.91	55,046	18.99	45,612	15.75
Storage batteries and plates	5,787	1.78	5,126	1.77	6,084	2.09
Cables	30,268	12.10	16,719	5.77	21,626	7.40
Insulated wire	21,750	6.73	16,966	5.85	17,670	6.10
Incandescent lamps	49,114	14.90	32,441	11.20	23,129	7.87
Equipment for lighting, power transmission, and other equipment not specifically stated	74,047	22.80	70,012	24.20	65,146	22.50
Heating and cooking apparatus	1,675	0.52	5,773	1.99	5,399	1.86
Telegraph and telephone (also wireless) signaling apparatus and parts thereof	14,980	4.63	26,081	9.20	37,988	13.10
Therapeutic apparatus	4,564	1.41	11,030	3.80	11,582	3.98
Instruments	24,230	7.50	29,538	10.20	30,566	10.50
Carbons	12,116	3.75	7,343	2.53	8,451	2.90
Other	13,240	3.97	13,247	4.80	17,250	5.95
Grand total	324,121	100.00	289,922	100.00	290,612	100.00

Exports of Certain Electrical Lines Decreased.

The total value of Germany's exports of electrical equipment during 1924 (290,612,000 marks) was nearly equal to the previous year, and only about 10 per cent below 1913. A noticeable falling off has taken place in the exportation of electrical machines and transformers; the total value in 1924 amounted to only 45,800,000 marks, as against 55,000,000 in 1923, and 64,400,000 marks in 1913; the sale of medium and

large-sized electrical machines has decreased, while that of small machines has increased. Exports of cable and insulated wire during 1924 were somewhat higher than those of the previous year, but much lower than those of 1913. A steady downward trend has existed in the exportation of incandescent lamps, the value in 1923 being 67 per cent of that of 1913, and in 1924 only 48 per cent of 1913. Although not so marked, a similar trend obtained in wiring materials.

Gains Recorded in Telegraph and Telephone Apparatus.

With the exception of storage batteries and cooking and heating apparatus, exports of most electrical manufactures from Germany have failed in recent years to reach the prewar totals, although there was a great increase, due largely to the development of radio, in the telegraph and telephone apparatus class. Export figures for wireless material are: 1,646,000 marks in 1913; 8,651,000 in 1923; and 19,207,000 marks in 1924. There has also been a steady increase in the amount of therapeutic apparatus exported and to a lesser degree, electrical instruments.

Exports grouped according to countries of destination are shown in the following table:

Germany's exports of electrical equipment to principal countries

Countries of destination	1913		1923		1924	
	1,000 marks	Per cent of total	1,000 marks	Per cent of total	1,000 marks	Per cent of total
Belgium	21,587	6.05	5,549	1.91	4,261	1.47
Denmark	8,529	2.63	3,714	3.01	4,061	2.08

Other countries	24,967	7.70	67,600	23.29	34,820	12.19
Grand total	324,121	100.0	289,922	100.0	290,612	100.0

Exports Largely to European Countries.

Most of the electrical equipment exported from Germany during 1924 went to other European countries; in countries outside of Europe the demand was relatively small. Exports to Great Britain during 1924, although exceeding those of the previous year by 18,035 marks, were 15,754 marks less than those of 1913. Exports to Soviet Russia, eastern Poland, Sweden, Switzerland, and Japan also show a considerable increase over 1923. In all other countries figures for 1924 compared with those of 1923 show a considerable decrease, especially to the Netherlands, Norway, Czechoslovakia, Rumania, Spain, and all over-sea countries. With the exception of Brazil, China, and the three northern European states, Finland, Netherlands, and Sweden, pre-war export values have not been reached. Especially to the allied countries, Belgium, France, Italy, and Russia, and also Spain, Germany's exports are far below those of 1913.

Decline in Exports Influenced by Changes in Territory.

Even though the decrease in electrical exports from 324,100,000 marks in 1913 to 290,600,000 marks in 1924, or about 10 per cent, is not as great as the falling off of total exports of all sorts from Germany (10,097,000,000 to 6,567,000,000 marks, or a decrease of 35 per cent) the figures representing exports of electrical equipment are regarded in Germany as being unsatisfactory. The world demand for electrical products has increased enormously since 1913, but the quantity exported by Germany in comparison with the last pre-war year, has declined about 19 per cent or even more than the export value. In order to correctly compare export figures of post-war with those of pre-war years, a considerable deduction must be made for the lost territories of Alsace-Lorraine, Danzig, and western Poland, as well as for the Saar district which are now subject to foreign tariffs. The total value of exports to these countries in 1924 amounted to 6,390,000 marks.

German Exports Compared With Those of Other Countries.

In what measure the proportion of the five most important exporting countries has shifted to the disadvantage of Germany, is shown in the following table.

Exports of electrical manufactures of the five most important exporting countries

Countries	1913		1923		1924	
	1,000,000 marks	Per cent of total exports of five countries	1,000,000 marks	Per cent of total exports of five countries	1,000,000 marks	Percentage of total

Regulations Affecting Electrical Enterprises in China

Assistant Trade Commissioner A. Viola Smith, Shanghai, April 18

The Chinese Government has recently promulgated regulations governing electrical enterprises and the issuance of licenses therefor. These regulations are not applicable in the foreign concessions within the various treaty ports, nor do they affect communication systems operated by the Government, plants which gen-

erate energy for use merely on owner's premises, nor extremely small plants. Registry with the Minister of Communications and general financial statements, detailed construction plans, etc., are required. A license must be obtained before the plant may be operated. The Government retains the right to regulate rates. Provision is made for the cancellation of registration and suspension of operation under certain conditions. Permissible materials and methods of installation are regulated in detail.

[Copies of the regulations may be obtained for loan from the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., by referring to No. 01814.]

Electrical Trade Notes**Swedish Telephone Plant in Verona, Italy.**

The Swedish company Allmanna Telefonaktiebolaget L. M. Ericsson has just opened its first exchange in Verona, Italy. Several additional ones will be built in southern Italy in accordance with the concession granted to this company. (L. A. France, clerk to commercial attaché, Stockholm, April 16.)

Importation of Radio Receivers Restricted by Norway.

Before radio broadcast receivers or parts thereof may be imported into Norway, permission must be secured from the director of telegraphs. This is the gist of a royal resolution dated April 3, which went into effect on May 1. Details may be obtained from the Tariff Division or the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., by referring to No. 275579.

Large Russian Orders to Swedish Industry.

It is unofficially reported that Soviet Russia has contracted with the Allmanna Svenska Elektriska Aktiebolaget (Asea), Vasteras, for the delivery of electrical machinery parts, and with the Karlstads Mekaniska Verkstad, Karlstad, for water turbines. The total value of these contracts is given as over 5,000,000 crowns. The parts for electrical machinery are understood to be for use in connection with the electrification of Russian rural districts. (Consul General Claude I. Dawson, Stockholm, April 24.)

Chilean Wiring Regulations Available.

The Cia. Chilena de Electricidad, anticipating the need of wiring regulations and equipment specifications in Chile, has prepared a set of rules governing electrical installations, reports Assistant Trade Commissioner C. C. Brooks, Santiago, April 8. These rules are being submitted to the electric services board for consideration, and it is believed that they will be adopted in their entirety. Any changes, if ordered, will be only of a minor nature. A copy of the regulations may be obtained for loan from the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., by referring to No. 27229.

Additional information regarding electrical equipment appears in this issue under the following sections:

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

Austrian Production of Agricultural Implements

Large Variety of Implements Manufactured—The Balkan Countries the Principal Markets

Consul Robert W. Heingartner, Vienna

The agricultural implement industry is one of the most highly developed in Austria. Its capacity is considerably in excess of domestic requirements and, therefore, the industry depends for its prosperity largely upon export trade.

Principal Output—Imports.

Practically all kinds of implements are manufactured, and the most important, from the point of view of quantity, are chaff cutters, threshers, turnip cutters, fruit presses, cream separators, and crop-cleaning mills. The Austrian industry also specializes in the manufacture of scythes and sickles, which are known throughout the world.

The industry is capable of a much more varied production than at present, but owing to local conditions the demand is largely for a limited variety of types, and production is confined to such types.

The imports of agricultural implements into Austria are limited chiefly to special types which have gained popularity, among them being Swedish cream separators, Czechoslovak cultivators, and German harvesting machinery.

Export Trade Chiefly with Eastern Europe.

The principal foreign markets for Austrian agricultural implements are, in the order of importance, Yugoslavia, Rumania, Bulgaria, Poland, Italy, Greece, and Hungary. Russia was an important pre-war market for Austrian implements, and that trade was practically lost following the war, but it showed favorable development during 1924. Russian purchases of Austrian machinery have been increased. They consist chiefly of walking types of implements. One factor hampering Austrian exports to Russia is the keen competition on the part of Germany and Czechoslovakia. Trade with Russia is also, of course, hampered by the attitude of the Soviet Government toward imports.

Decrease in Implement Exports to Yugoslavia.

The Austrian trade with Yugoslavia decreased during 1924, as a result of a poor harvest in some sections of Yugoslavia and the inability of Austrian manufacturers to furnish the long-time credits required. Most of the implements used in Yugoslavia before the war were made in Austria-Hungary, and Austria has retained the greatest share of the trade since the war. German sales of agricultural machinery to Yugoslavia in 1924 were also a factor in decreasing Austrian trade.

Small Exports of Implements to Rumania.

Although there is no agricultural machinery industry in Rumania the exports of Austrian implements to that country were almost negligible. Taxes on imported goods amounted practically to a protective tariff and served to seriously hamper trade. It is very difficult to make satisfactory credit arrangements with

Rumanian buyers, and for that reason exporters frequently hesitate to accept orders. Rumanian crops were unsatisfactory in 1924 and this, of course, reduced the already low purchasing power of farmers, so that purchases of agricultural machinery were small.

Austrian trade with Poland is subject to serious competition from the United States and Czechoslovakia, although Austrian trade is somewhat favored in that section of Poland which formerly belonged to the Austro-Hungarian Empire. It is also benefited because of the prejudices against trade with Germany, which exist in Poland. The high tax levied on imports into Poland is also a hindrance to trade.

Development in Trade with Bulgaria and Italy.

The implement trade with Bulgaria in 1924 was favorable, as compared with previous years, and showed some improvement. Bulgarian farmers did not suffer as much from crop failure as those in other eastern European countries, and the tobacco harvest in Bulgaria was exceptionally good, and partially covered losses from other crops. The chief articles exported to Bulgaria were threshers and plows.

Trade with Italy also improved. Exports consisted chiefly of threshers, but some tillage implements and cream separators were shipped. Sales to Italy were not large, however, as there was considerable competition from the Italian industry, from Germany, and from the United States.

Trade with Greece was practically negligible, and very few implements were sent to Hungary, although spare parts for Austrian-made machinery now in use were supplied.

Implements Made by Principal Austrian Manufacturers.

The largest manufacturer of agricultural implements in Austria is the firm of Hofherr-Schrantz-Clayton-Shuttleworth, whose most popular products are manure spreaders, threshers, mowers, tractors, chaff cutters, and turnip cutters. Maschinenfabriks Aktiengesellschaft N. Heid is best known for threshers and grinding and crop-cleaning machines. The Oesterreichische Werke Gemeinwirtschaftliche Anstalt specializes in the manufacture of hand plows, tractors, and cultivators. Ph. Mayfarth and Co. specializes in fruit presses. The Oesterreichische Industrie Werke Warchalowsky, and Eissler and Co. are known for the production of cream separators, and Aktiengesellschaft R. Ph. Wagner, L. & S. Biro, and A. Kurz are known for their plows, harrows, and cultivators. These firms are not now working at capacity, and a considerable increase in the export trade is necessary to enable them to operate their plants at full capacity.

Foreign Firms Selling Through Branch Houses.

Most of the foreign concerns which are successfully selling implements to Austria have branch houses or

general representatives with consignment stocks in Vienna. Vienna is not only a distributing center for Austria, but serves also to some extent as a distributing point for eastern and southeastern Europe. The American implement trade with Austria has been negligible since the war, and it is the general opinion locally that American implements can be imported only by the manufacturers granting long credit terms.

Domestic Business Satisfactory—Exports Decreased.

It is conceded that the general condition of the industry in 1924 was satisfactory so far as the domestic trade was concerned. Despite the poor harvest the farmers' profits were not greatly reduced, owing to the high prices which they secured. Good fruit and wine crops also resulted in a satisfactory trade in fruit

presses. The export business fell off considerably as compared with 1923. In order to carry on trade in the chief export markets extensive credit terms were required, and the Austrian industry was unable to grant such terms. The cost of production has been increased in the Austrian industry; higher wages are paid; there has been a reduction in working hours; and it is claimed that the efficiency of the workmen has also decreased. The increase in freight rates is also another obstacle to continued export business.

AUTOMOTIVE PRODUCTS

Percy Owen, Chief, Automotive Division

COMPETITION IN MAJOR CAR AND TRUCK MARKETS

When home-market sales lag current sales can be assisted by a further expansion in foreign markets. In order that the American manufacturer may have a clear picture of the degree and range of competition he may meet from other major producing countries that must resort to foreign markets in order to maintain their current production levels, the Automotive Division has collected the following data on export-production ratios and on export markets for six of the leading car and truck producing nations of the world.

EXPORT TRADE OF SIX LEADING PRODUCING COUNTRIES

The single factor most largely responsible for the present size and importance of the automobile industry in the United States is the demand within its own borders. This has resulted in mass-production methods, which have brought lower priced output and have enabled American cars to enter foreign markets in spite of heavy import duties and high taxes.

The present exploitation of foreign markets for American automobiles is measured by the fact that passenger cars and trucks exported from the United States during 1924 numbered 178,730 and were valued at \$131,733,983. The quantity which the home market does not absorb is measured by the export-production ratio of 5.1 per cent. The extent to which American automobiles are already meeting competition from other producing countries is measured by the way their foreign markets compare with ours in two respects—first, the amount of exports, expressed in actual numbers and in export-production ratios; second, the places where each producing country is finding its greatest number of sales.

Conditions Limiting the Collection of Data.

Statistics along these two lines are necessarily restricted to those which can be compared, and these in turn are still further limited by the fact that some of the producing countries have not kept their production and export figures for cars separate from the figures for trucks, or that such separation is too recent to get a picture of the trend back of the year 1924.

Consequently the figures can show only the six leading producing countries whose statistics are reasonably comparable, the five markets which most largely absorb the car and truck exports of these producing countries, and the year 1924 for the period covered.

In spite of these limitations the figures presented give a fairly complete picture of the degree of competition to be met by American exporters of cars and trucks, since the six countries selected account for almost 100 per cent of the total world production in these lines.

Trend in American Export-Production Ratio.

Some idea of the growth in American efforts to win foreign markets for its car and truck production may be gotten from the change in export-production ratios for the United States and Canada combined since 1913. (Separate figures for the United States are not available prior to 1924.)

With the exception of the year 1920, when European producing countries were unable to take advantage of the released buying needs the world over, the ratio of exports to production for American automobiles has been increasing. In 1913 it stood at 5.4; in 1920, at 8.8; in 1923, at 5.4; and in 1924, at 6.5.

Foreign assemblies have not been included in these figures, although they measure still further the increasing demand for American cars. If these were added to the straight exports during the past two years, the resultant ratio of exports—plus—foreign—assemblies to production would stand at 8.0 for 1923 and at 10.4 for 1924.

Dependency on Export Trade.

It is evident that Italy, Canada, and France are quite dependent on this foreign demand. Particularly is this true of France and Italy, where the many automobile factories have exported from 30 to 50 per cent of their output.

Although the United States stands last, exporting only 5.1 per cent of its production, its actual exports by number during 1924 amounted to 178,730, exceeding those of all the other five producing countries (including Canada) by more than 26 per cent. Therefore, the export trade of the United States must assume great numerical proportions—quite beyond the limits of any single competing country—in order to hold the present position it has won in diverting production to foreign markets.

This dependency of the six leading automobile-producing countries on foreign markets for maintaining their present production levels is brought out in comparison in the following table:

Comparison of the export and production of cars and trucks in the six major producing countries of the world, for 1924.

Producing country	Number		Percentage: Exports to production
	Exported	Produced	
Italy.....	18,928	135,000	54.0
Canada.....	58,655	135,246	41.9
France.....	48,127	145,000	33.2
Germany.....	2,310	18,000	12.8
United Kingdom.....	15,596	133,000	11.7
United States.....	178,730	3,504,100	5.1

¹ Estimated production figures; official statistics are not available.

Leading Markets Vary.

Australia, the leading automobile market during 1924 for the United States, Canada, and the United Kingdom, stood third in the list of Italy's largest markets. The remaining four leading markets of the United States were not represented among the select for any of the other producing countries. New Zealand, a very important market, registered only twice under this plan of comparison and then largely because its political status enables preferential tariffs to play an important part. The United Kingdom was favored in each instance by Canada, France, and Italy. The remaining countries that were considered important enough to be placed twice among the five leading markets of the largest producing countries comprise India, British South Africa, Belgium, Spain, and Switzerland.

Five Leading Markets for Dominant Producers.

The export figures given below reveal the curious fact that each of the competing countries—largely viewed—appears to have separate regions allocated to it as sales territories. There is, of course, some overlapping; and this would have been more evident had it been possible to consider detailed figures for more than five leading markets.

The figures also reveal the fact that of the United States total exports, amounting to 178,730, the five leading markets absorbed 85,206, leaving 93,524 for their remaining markets. In other words, American automobile exporters have adopted the adage "Don't place all your eggs in one basket." As a result there is hardly a country in the world that has not made acquaintance with cars and trucks originating in the United States. This very fact, however, will increase the difficulty for American exporters in maintaining a specific market against the pressure from specifically allocated competitors. Only in the case of Germany

is it found that less than 40 per cent of its total exports go to its five leading markets. For the remaining countries this percentage varies from 42.2 for Italy to 79 for Canada.

The extent to which the United States must meet the competition of these major producing countries, in respect to geographic distribution of markets, is brought out in the table that follows:

Five leading export markets of 1924, for passenger cars and trucks¹ produced in the six major manufacturing countries

Foreign markets	Number exported by producing country					
	United States	Canada	France	Italy	United Kingdom	Germany
Australia.....	42,522	16,102	—	1,623	3,951	—
Argentina.....	12,827	—	—	—	—	—
Canada.....	10,393	—	—	—	—	—
Mexico.....	10,082	—	—	—	—	—
Cuba.....	9,382	—	—	—	—	—
New Zealand.....	—	11,392	—	—	1,624	—
United Kingdom.....	—	6,965	8,078	2,494	—	—
India.....	—	6,482	—	—	1,539	—
British South Africa.....	—	2,802	—	—	719	—
Belgium.....	—	—	9,797	842	—	—
Spain.....	—	—	5,788	1,271	—	—
Algeria.....	—	—	5,319	—	—	—

Austria.....	—	—	—	—	—	104
Danzig.....	—	—	—	—	—	189
North Russia.....	—	—	—	—	—	98
Other countries.....	93,524	12,912	14,464	10,958	3,907	1,451
Total.....	178,730	56,655	48,127	18,928	15,596	2,310

¹ Complete and chassis for each country.

² Includes only passenger cars; truck figures, in official German export returns, are included under "all others."

NOTE.—The absence of figures does not mean absence of market, but that the market is not large enough to make one of the leading five being considered and is therefore included in "Other countries."

Growth of Paris-Morocco Air-Mail Service

The remarkable expansion of the air-mail service between Paris and Morocco is shown in the record of letters transported by the "Air Service Latecoere." The number thus carried increased from 4,562 during the month of January, 1920, to 485,788 of an aggregate weight of 9,355 kilos in January, 1925. The total carried during the year 1924 was upward of 4,000,000. (Consul J. Lee Murphy, Tangier, Morocco, April 4)

TEXTILES

Edward T. Pickard, Chief, Textile Division

ECUADOR'S TEXTILE INDUSTRY EXPANDING

Consul Richard P. Butrick, Guayaquil, April 10

The textile industry, which employs about 2,000 persons, is the most important single branch of manufacturing in Ecuador. Although the first textile mill was erected over 50 years ago, the real growth of the industry has occurred within the past decade, and more particularly in the last five years. During this period, a large plant has been established in Quito, a mill in Riobamba has considerably increased its output, and a concern in Ambata which started with only a few looms has grown to a mill with an annual production valued at 1,200,000 sucres (1 sucre = approximately \$0.22 at current exchange).

Mills Convenient to Power—Capitalization.

All of these mills are advantageously situated where either hydraulic or cheap electric power is available, and, at present, the mill in Riobamba is installing a new hydroelectric plant. The general policy of all manufacturers seems to be one of further expansion; old mills are being enlarged and new plants are being erected.

Most of the mills were started with a very small capital owing to the credit facilities accorded them by foreign exporters of textile machinery. The present capitalization of the textile mills in Ecuador is estimated at 8,500,000 sucres. The actual physical valuation of their property is considerably in excess of that amount, as many of the companies are investing all profits in additional machinery and added facilities, and it is believed that substantial sums are still due to some foreign manufacturers and exporters.

Cheap Labor Available—Working Conditions Good.

Labor is cheap, the wages of boy and girl operatives being equivalent to about \$0.30 per day. These operatives are practically all Indians who are industrious and show a certain aptitude for the work but their efficiency is only about 25 per cent of that of employees in English mills. Although the labor supply is generally inadequate for any large industry in Ecuador, the textile mills seem to have no difficulty in securing sufficient workers, probably because the nature of the work gives young girls a certain amount of independence and freedom which they do not enjoy as domestics. The location of the mills in the uplands is also a favorable factor in the labor situation, as the scarcity of workers is more pronounced in the coastal regions and the inhabitants in the interior do not like to move to the coast.

The technical supervisors and dye mixers are either English or American, or are trained in Europe or the United States. Working conditions within the mills are comparatively good. Some plants provide restaurant service and practically all have good sanitary installations.

Modern Machinery Being Imported by the Mills.

Most of the mills operating in Ecuador imported secondhand machinery in the beginning, but the present tendency is to purchase the most modern and im-

proved equipment. The bulk of this trade is with Great Britain. In this connection, the value of having English technical men employed in the industry seems clearly demonstrated. Not only is such a man interested in using machinery with which he is familiar, but he is also stimulated by patriotic motives and the fact that it is customary for him to receive a commission from the manufacturer from whom the machinery is purchased.

Capacity of the Mills—Goods Manufactured.

The total value of the cloth produced annually reaches about 11,000,000 sucres. The total potential capacity of the mills is estimated at about 25,000,000 yards per year, but only a few of the mills are now operating at capacity. Some of the equipment is inefficient or unserviceable, and some of it is so complicated that it requires more experienced and skilled operatives than the local industry has yet developed.

Various classes of cotton and wool goods are produced, but the industry thus far has confined itself to the manufacture of coarser fabrics, such as drills, canvas, khaki, sheeting, shirtings, towels, burlaps, baizes, blankets, shawls, and ponchos. Gray and coarse white goods predominate. Most of the mills dye their own yarns and weave yarn-dyed cloths, but there is some complaint that the dyes are not fast. At least one mill has facilities for printing. No very fine cloths are produced, and experienced men in the industry express the belief that mills in Ecuador will never be able to manufacture some grades of cloth.

Consumption of Dyestuffs.

The mills use about 25,000 kilos (kilo=2.2046 pounds) of dyestuffs annually, it is estimated. The dyes used are both basic and direct, the former being employed chiefly for woollens and the latter for cottons. The colors most in demand are black, blue, scarlet, crimson, yellow, green, rose, and khaki, listed in the order of their importance. Germany, the United States, and Italy rank, in the order named, as sources of aniline imported into Ecuador.

Cotton Cloth Exported Chiefly to Colombia.

Only about 75 per cent of the total production of textiles is consumed within the country, the balance entering foreign trade. Practically all the textiles exported go overland to southern Colombia where the demand for Ecuadorian fabrics is increasing. Occasionally shipments are made to Peru, and sample lots have been sent to other countries.

Imports of Textiles Show Little Change.

The importation of textiles seems to have suffered comparatively little from local manufacture, but might have increased to a greater extent had not the mills been established in the country. In 1913, the imports of cotton goods were valued at 2,500,000 sucres, and in 1923 at 7,000,000 sucres. The depreciated Ecuadorian currency, however, must be taken into account when

comparing these figures, the value of the sucre in 1913 being about \$0.4867, and in 1923 approximately \$0.216. The weight of the merchandise imported is not available, but it is thought that the quantity has varied but little in the past several years.

United States exports of cotton cloth to Ecuador in 1913 amounted to 2,926,299 yards, valued at \$178,054, and in 1923 to 4,950,536 square yards, valued at \$750,191. Ecuador's purchases of American cotton piece goods increased 83 per cent in volume in 1924, amount-

ing to 9,045,587 square yards, with a value of \$1,191,239 in that year. During the first quarter of 1925 the United States shipped 2,161,599 square yards of cotton cloth, valued at \$279,014, to Ecuador. Prints constituted over 30 per cent of these cotton-cloth exports during 1924 and the first three months of 1925.

[A list of textile mills in Ecuador, giving their capitalization, the value of their production, and the classes of goods manufactured, may be obtained from the Textile Division, Bureau of Foreign and Domestic Commerce, Washington, D. C. Refer to file No. L. A. 15038.]

WORLD'S TEXTILE NEWS IN BRIEF

Turkish Firm Desires American Market for Raw Wool.

A firm in Constantinople desires an American market for raw wool, according to a report from Consul Charles E. Allen, Constantinople. Further information will be made available to American firms upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington. Refer to file No. 169960.

Hungarian Textile Firms Insolvent.

Practically no business is reported on the Hungarian textile market. Importations have ceased owing to large stocks of textiles on hand which can not be sold at prices which would permit the purchase of new stocks. Forced sales and insolvencies which were frequent on this market prior to the first of the year, and which ceased during January, February, and the first half of March, are again being reported in increasing numbers. (Consul Alexander K. Sloan, Budapest, April 1.)

Italian Exports of Wool Cloth Increasing.

The wool-manufacturing industry of Italy centers around the city of Biella. There were 17 per cent more spindles in this city in 1924 than in 1921 and 4,350 kilos (kilo=2.2046 pounds) of combed yarn were produced. This amount was approximately one-third of the total output of Italy. The increase of wool cloth exported from Italy is also worthy of note, being 11,464,300 kilos in 1924, compared with 3,900,300 in 1922. (Consul Dana C. Sycks, Turin, April 14.)

Details of German Textile Wages Available.

Tariff or nominal wages in the German textile industry, comprising the 14 principal manufacturing districts, showed an increase of 2.6 per cent for skilled male help, 3.7 per cent for skilled female, 3.1 per cent for unskilled male and 3 per cent for unskilled female employees, according to a report from Consul Louis G. Dryfus, jr., Dresden, April 11. Further details of the wages during February will be made available to American firms upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington. Refer to file No. 169737.

United States Imports of Specified Kinds of Cotton Cloth.

United States imports of specified kinds of cotton cloth through the customs districts of New York, Boston, Philadelphia, Chicago, and San Francisco during April, 1925, totaled 8,252,837 square yards, valued at \$1,914,295, compared with 14,072,484 square yards, worth \$3,074,368, for the previous month and 14,631,196 square yards, with a value of \$2,939,216, during March, 1924. The total for April, 1925, is the lowest figure recorded since the tabulation of these imports was begun in March, 1924. The previous low was registered in August, 1924, and the high mark in December, 1924.

Carpet and Rug Exports from Persia.

Exports of carpets and rugs from Persia during 1924 showed a considerable increase over preceding years and amounted to 10,149,152 pounds, valued at \$10,502,406. Figures for 1923 totaled 8,221,577 pounds, worth \$9,309,772, and for 1922, 6,547,160 pounds, with a value of \$6,628,110. These exports represent practically the entire production. The proportion of rugs containing aniline dyes is decreasing. The output of wool rugs without aniline increased 60 per cent between 1922 and 1924, while those containing aniline showed an advance of only 38 per cent. There was a considerable increase in the shipment of silk rugs without aniline, but no increase in those containing aniline. (Vice Consul George Gregg Fuller, Teheran, April 9.)

British Trade in Silk Manufactures.

Imports of silk manufactures into Great Britain during the first quarter of 1925 showed an increase of £2,600 over the aggregate value for the corresponding period of 1924. Exports for the same period decreased by about £61,000 to an aggregate of £414,678. Imports of thrown silk amounted to 38,800 pounds, compared with 336 a year ago—the average price rising slightly. Imports of spun silk yarn also increased extensively but the average import price per pound was exactly one-half that of last year. Piece-goods imports showed an increase of 38 per cent in quantity and 27 per cent in value. Receipts of this class from the United States totaled 102,409 square yards, compared with 64,304 for the 1924 period. (Alfred Nutting, consular clerk, London, April 29.)

Linen Industry in Belgium.

The manufacturing of linen is the most important of the textile industries of the Ghent district, Belgium, in so far as the United States is concerned. This region is one of the large linen centers of the world. Shipments to the United States during 1924, valued at \$4,220,582, consisted principally of dress goods but also covered yarns, thread, and paddings. The bulk of this business was the result of large numbers of orders received during the latter part of 1923 and the first of 1924, for future delivery. Little interest was evidenced in the market during the latter part of 1924, owing to prices, which were considerably higher than in Ireland, to doubt as to the ability of manufacturers to deliver on time, and to the lack of demand in the domestic market. Wages increased 20 per cent during 1923 and another 15 per cent during 1924. These increases, as well as the prohibitive prices asked for raw material, and the handicap of an 8-hour day, contributed to the rise in prices on linen goods. During 1924, approximately 272,014 spindles and about 40,000 looms were in operation in the linen industry of this

district. Exports of flax waste to the United States amounted to \$141,778. (Consul C. E. MacEachran, Ghent, April 14.)

Additional information regarding textiles appears in this issue under the following sections:

Cable review, Far East:

Indian business quiet.

Slight decline in Philippine trade movement.

Japan markets quiet during April.

Review of Australian conditions.

Far East: Dutch East Indian import situation.

Latin America: British influence in the Argentine trade.

Turkey—American goods granted most-favored-nation treatment.

United Kingdom—Committee appointed to investigate lace and embroidery and fabric gloves industries.

List of circulars issued by the bureau.

Foreign trade opportunities.

RUBBER

Everett G. Holt, Acting Chief, Rubber Division

CANADIAN TRADE IN RUBBER GOODS IMPORTANT

Increased Exports of Casings and Inner Tubes and Principal Countries of Destination.

During the first three months of this year Canada exported 208,012 casings, 236,935 inner tubes, and 2,657 solid tires, as compared with 125,628 casings, 123,319 inner tubes, and 3,549 solid tires during the first quarter of 1924.

There were 77,132 casings exported in March as compared with 67,016 in February and 50,652 in March, 1924. Over 142,000 pounds of rubber belting was exported in March as compared with 54,000 pounds in March, 1924; and 64,643 pairs of rubber boots and shoes as compared to 24,378 pairs in the corresponding month last year.

Principal Markets for Casings.

The chief Canadian markets for casings during March, 1925, were the United Kingdom, 19,815; New Zealand, 15,393 (a very heavy monthly shipment for this market); Brazil, 5,812; Argentina, 5,170; British South Africa, 5,129; Straits Settlements, 4,935; Netherlands, 3,737; and British India, 2,519. Australia, the Dutch East Indies, Italy, and Japan each took over 1,000 casings during March.

Important Trade in Inner Tubes.

In inner tubes the United Kingdom took 16,179 during March; New Zealand, 13,805; Argentina, 11,128; Brazil, 10,935; and British South Africa, 5,460. Canada is exporting more inner tubes than casings, and the trend of the United States exports is now in this direction, though the number of tubes exported in recent years is lower than the number of casings. Our domestic trade indicates that more inner tubes than casings are consumed annually, and accordingly it would appear as though American exporters have found competition more difficult in the inner tube trade than in the trade in casings.

Rubber Belting Exports Expanding Rapidly—Hose Trade Light.

Canada is steadily forging ahead in exports of rubber belting, the total trade for the year ended March, 1925, amounting to 858,468 pounds, valued at \$443,894, as compared with 465,091 pounds, valued at \$269,243 for the preceding year. During March, 1925, relatively heavy shipments, 19,980 pounds, went to Finland, and other important markets were South Africa,

36,027 pounds; Brazil, 29,626; Argentina, 14,537; Sweden, 14,352; Italy, 7,218; and New Zealand, 6,303. Canada is also doing an increased export business in rubber hose, amounting to \$161,079 for the past year, compared with \$139,073 the year before, but this trade is as yet a minor factor except in a very few markets, the most important of which is British South Africa.

Waterproof Footwear Exports Good for Present Dull Season.

Considering the season, which is ordinarily dull for export business in waterproof rubber footwear, the Canadian export trade in rubber boots and shoes is surprisingly good, 64,643 pairs being shipped in March, compared with 24,378 the corresponding month last year. Most of the exports went to four markets—the United Kingdom, 37,753 pairs; New Zealand, 10,152; Newfoundland, 9,709; and Australia, 4,204 pairs. A good share of the exports to the United Kingdom and New Zealand were rubber boots.

Heavy Shipment of Canvas Rubber-Soled Shoes.

Canada is likewise a strong competitor in the canvas rubber-soled shoe trade, exporting 2,502,257 pairs in the year ended March, and 289,348 pairs during the month of March, 189,220 pairs being shipped to the United Kingdom. In this class of footwear the Canadian exports have a wide distribution in foreign markets. In March Canada shipped to Denmark 20,000 pairs; South Africa, 11,000; and Germany, almost 12,000; British Guiana, Trinidad and Tobago, Australia, New Zealand, and France each took from 4,000 to 7,000 pairs; Barbados, Jamaica, Belgium, Norway, and Turkey each from 2,000 to 4,000 pairs; and other British West Indies, British India, Irish Free State, Austria, Dutch East Indies, Guatemala, Haiti, and Switzerland each from 1,000 to 2,000 pairs. Small shipments were sent to 13 other markets.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

SOUTH AFRICAN TRADE IN FRESH FRUITS

D. J. Moriarty, Foodstuffs Division

The South African fresh-fruit industry is becoming an increasingly important factor in world trade. Cultivation of citrus fruits has assumed commercial proportions within the past 10 years, and there has been a decided increase in the production of deciduous and nondeciduous fruit for export. The various fruits grown commercially include oranges, tangerines, grapefruit, lemons, pears, peaches, plums, nectarines, apricots, apples, pineapples, grapes, melons, and mangoes. Accurate statistics of fruit acreage are not available, but each year finds new areas opened for cultivation and further plantings in established districts.

Citrus Fruit Offers Great Possibilities.

While great strides have been made in the production of citrus fruit, South Africa may yet be termed undeveloped in this respect when one considers that there is a potential citrus-fruit acreage probably greater than that of our Pacific slope, most of which is still in the virgin state. Oranges are the big citrus crop. The commercial production of grapefruit is small and the quantity of lemons grown is negligible. There has been a rapid extension of orange acreage, particularly during the past year, which should result in a great increase of the oranges available for commerce when such plantings come into bearing. It is predicted that within 10 years South Africa will be producing sufficient oranges to permit the export of 7,000,000 or 8,000,000 boxes each year—almost ten times the estimate of 800,000 boxes for 1925.

South African Fruit Readily Marketed in Europe.

South African fruit finds a ready market in Europe, as it arrives at a time when fruit from the Mediterranean countries and North America is not plentiful. This is explained by the fact that South Africa is located in the Southern Hemisphere, with seasons the opposite of those in countries of the Northern Hemisphere. This noncompetitive market for South African fruits has a twofold significance, in that while encouraging greater production and exports from that section it will also enable the average European to avail himself of fruit all the year round.

It is estimated that 80 per cent of the fruit grown in South Africa is exported. The United Kingdom is the principal market, but by transshipment from English ports an increasing proportion of such exports find their way to continental Europe, where they are rapidly meeting favor.

Exports of Fruit to the United Kingdom, 1920-1924.

The following table indicates the principal fruit exports from the Union of South Africa to the United Kingdom for the five-year period 1920-1924.

Exports of fruit from Union of South Africa to the United Kingdom, 1920 to 1924

Years	Oranges		Tangerines		Lemons		Other citrus

1920	1,276	2,470			72,684	76,424	10	183

¹ Figures for 1924 are preliminary and cover the period, November, 1923, to November, 1924, inclusive. The deciduous-fruit season is December to May and citrus-fruit season June to October. The 1920-1923 figures are for calendar years and are taken from the official statistics of South African trade.

Southern Rhodesia, statistics for which are given separately, also exports a considerable quantity of citrus fruits—mostly oranges—to the United Kingdom. In 1923, 42,759 boxes of citrus fruit, valued at \$125,199, were shipped, as against 6,729 boxes, valued at \$14,914, in 1920.

Export Movement in 1924.

A review of the year 1924 affords a good indication of the average trend of the South African export movement. The fruit season began just before the Christmas holidays (1923) with small consignments of peaches, plums, apricots, granadillas, and cherries. These were followed by nectarines and pears in early January. From then on there was a steady flow of fruit in increasing quantities until the middle of March, when there arrived smaller shipments of pears, grapes, and plums; also some peaches and nectarines. Later ship-

ments were chiefly pears and grapes, as the season for peaches, nectarines, and plums had practically ended. The last large consignment, which reached England in late April, consisted chiefly of grapes, but these were in poor condition because of the lateness of their season. Fruit shipments had practically ceased by the 1st of May.

The citrus-fruit season began with the shipment to England of several cases of lemons during the latter part of April. It was not until the week of July 13, however, that the first South African oranges reached English ports. Orange shipments increased during the following weeks, as there was a good demand for navel oranges. During early July a surplus of soft fruit on the English market temporarily interfered with the sale of citrus fruit, but the demand became active again about July 15. South African shipments held firm until early October, when there was a gradual falling off. Navel oranges were arriving in smaller quantities, while late Valencias were taking their place. By October 10 the citrus season had about ended.

Shipments Handled Largely by Fruit-Growers' Exchange.

The greater portion of South African fresh-fruit exports are handled through the Fruit-Growers' Cooperative Exchange of South Africa (Ltd.) The exchange has recently selected a London representative to further the marketing of South African fruit. The brand name "Goldland" has been selected as suitable for fancy and choice fruits and will be placed on the tissue wrappers used for packing fruit to be marketed. This brand name is to be advertised extensively in England.

In view of the constantly increasing production of fruit, more attention is being given to the handling of exports. Improved facilities for cooling and handling the 1924-25 crop at Cape Town have been definitely assured by the railways and harbors administrations, and increased shipments of deciduous fruits are expected from the Provinces of Transvaal and the Orange Free State, which heretofore have contributed little or nothing to fruit exports. The South African Government is urging the growers to precool their fruit, and the railway administration has undertaken to supply iced trucks. The present facilities in the cold-storage building at the Cape Town docks are to be improved in order to handle 900 tons of fruit, as against the present capacity of 450 tons.

For many years there was a marked shortage of cold-storage space on steamers plying between South Africa and England, and exports of fruit had to be limited to refrigerator space available. Negotiations have been under way for the securing of further refrigerator space to care for increasing fruit exports, and it is stated that some Australian steamship lines have agreed to provide for approximately 8,000 tons of such space for the coming citrus-export season. This should take care of 768,000 boxes of citrus fruit, active again about July 15. South African shipments and should be sufficient for the 1925 shipments.

Regulations Covering Export Shipments.

South African Government regulations controlling the export of fruits are of a stringent nature and cover grading, packing, and marking in all their details. It is due chiefly to such governmental action and to the protection which it affords to the maintenance of quality that South African fruit exports have reached their present dimensions. All fruit exported from South Africa must be submitted to a Govern-

ment inspector in order that fruit which is immature, overripe, blemished, or in unsound condition may be rejected. Boxes of fruit passing inspection are stamped with a brand bearing the coat of arms of the Union of South Africa.

On March 6, 1925, the regulations governing the export of South African citrus and pine fruit were amended. Every person intending to export citrus and pine fruit out of the Union shall, with certain exceptions, give notice to the Government fruit inspector at the port of shipment. In filing such intention with the inspector the exporter must state the distinctive mark which his boxes of fruit will bear; and his name, address, and such distinctive mark shall be registered by the inspector. A small fee is charged for each consignment of fruit examined by the inspector. The exporter pays the cold-storage charge and makes his own arrangements for disposal of the fruit overseas. The amended regulations specify grades for citrus fruit and pineapples and provide that fruit intended for export shall be packed in boxes of certain inside and outside measurements.

Cotton Manufacturing and Trade in Belgium

The cotton-textile industry of the Ghent district is of interest to the United States chiefly from the standpoint of the importation of raw cotton, which amounted to 300,109 bales for the 12 months ended January 31, 1925. Of this total, East Indian constituted 157,609 bales and American, 129,301. Purchases of American cotton during the last quarter of 1924, however, far exceeded those of East Indian. Owing to its superior quality, spinners were inclined to give it preference, and its price was only slightly higher than the Indian. Cotton textiles exported from this district to the United States during 1924 showed an increase of approximately \$101,000 over 1923 and amounted to \$434,124, representing shipments of yarns, tapestry, cloth, and waste. A considerable portion of its output in yarns and woven goods is sold to South American and European countries, and large quantities are consumed in the domestic market. Business with England has been especially good in yarns of high count. During 1924, approximately 1,764,489 spindles and between 35,000 and 40,000 looms were in operation in this district. (Consul C. E. MacEachran, Ghent, April 14.)

TOBACCO

Tobacco Section, Foodstuffs Division

MARKET FOR AMERICAN TOBACCO IN HAITI

Consul Winthrop R. Scott, Cape Haitien

The extensive use of tobacco by the native population accounts for the relatively large market in Haiti. The United States and the adjacent Dominican Republic are the chief sources of supply, although tobacco is grown locally on a small scale. Recently a company owning a large plantation in the vicinity of Cape Haitien has been experimenting with tobacco as a secondary crop, and by the use of advanced and scientific methods has succeeded in producing a very fair grade. About 100 acres of this company's land have been planted to tobacco and the entire crop has been sold in Port au Prince.

Tobacco Import Trade, 1921-1924.

The following tables show the total imports of leaf tobacco, cigarettes, and cigars into Haiti from 1921 to 1924 and the countries supplying imports into Haiti for 1923. Detailed information for 1924 is not available from the import statistics of Haiti, but export statistics of the United States show that this country exported 1,549,423 pounds of leaf, 15,483,000 cigarettes, 4,000 cigars, 1,342 pounds of plug tobacco, and 3,277 pounds of smoking tobacco to Haiti in 1924.

Demand Chiefly for Leaf Tobacco.

The present tendency seems toward the importation of leaf tobacco, on which merchants make a greater profit than on cigars or cigarettes. The limited means of the masses have given rise to the demand for tobacco in a cheap form, consequently the natives purchase the compressed leaves in small quantities from street vendors and grind them into pipe tobacco and snuff. Tobacco is never chewed in Haiti. Fully 80 per cent is consumed in the form of snuff or pipe tobacco.

Leaf tobacco, other than that which is compressed into small packages and sold by street vendors, is made by individuals and small dealers into cheroots slightly larger than a cigarette. These cheroots are retailed at 1 cent each.

Leaf tobacco is shipped to Haitian importers by New York commission houses in drums weighing from 750 to 1,000 pounds and in half drums averaging about 550 pounds.

In the northern portion of the district (the territory having its outlet at Port de Paix and Cape Haitien) all the leaf tobacco is of the "yellow" type. In the remainder of the district (that portion receiving its imports through the port of Gonaives) only the so-called "black" tobacco is purchased. By far the largest amount of tobacco is sold at Gonaives, which is a distributing point for a large territory, even Port au Prince purchasing an appreciable amount.

Methods of Payment—Prices and Customs Charges.

No fixed rule exists regarding methods of payment, but as most tobacco is imported by large firms of good credit standing they are usually offered credits of 30 to 60 days. As a matter of fact, however, since the bank rate for commercial loans is 9 per cent, leading importers usually prefer to pay cash and benefit from the cash discounts of 2 to 5 per cent.

During the first week in April tobacco was selling in Haiti for the following prices: Cigars (retail price), 1 to 6 cents each; cigarettes of standard United States brand, \$1.40 per carton; leaf, importers' price to retailer or jobber, \$0.80 per pound.

The comparatively high price obtained for tobacco is due to various factors which progressively increase its cost before it is offered for sale to the consumer. The chief factors are freight, customs charges, and depreciation due to loss of weight through drying and other causes.

Customs charges are very difficult to ascertain, being augmented by numerous surtaxes, stamp taxes, vise charges, and other fees. Precise customs information may be obtained from the Division of Foreign Tariffs of the Department of Commerce. On an ordinary shipment the total of all customs charges will average \$0.28 per pound.

Suggestions to American Dealers and Exporters.

The following suggestions may be of use to American firms contemplating entering the Haitian market:

1. Firms having representatives traveling in Latin America would find it advantageous to have a personal canvas made of the trade in Haiti. It is believed that this is by far the most efficacious manner for a company to introduce its product in this country. The size of the market does not, however, warrant the expense of sending a representative to this district alone.
2. If the above is not practical, a good sample accompanied by a carefully worded letter, is the next best method of approach.
3. The firms which now sell the Haitian trade are well established. To obtain a share of the business it will be necessary to offer a good quality of tobacco at an attractive price.
4. It is important that tobacco sold on the basis of samples be of as high a quality as the original sample sent.
5. In writing to prospective purchasers it is desirable to offer fairly liberal terms, either in the form of a 30 or 60 day credit

or on the basis of cash discount. The latter method is believed preferable.

6. As a general guide it may be stated that tobacco is being sold here on f. o. b. quotations of 24 to 30 cents a pound. One merchant recently stated that the last tobacco he purchased was at 29 cents a pound, and another merchant had placed his latest order at a price of 26 cents.

[A list of importers of tobacco in the Cape Haitien consular district is on file in the tobacco section, also in the Division of Commercial Intelligence, and will be supplied, upon request, to members of the Exporters Index.]

See also "Foreign trade opportunities."

IRON=STEEL=HARDWARE

Luther Becker, Chief, Iron and Steel Division

TREND OF FRENCH FOREIGN TRADE IN IRON AND STEEL

Trade Commissioner Daniel J. Reagan, Paris, April 30

Aside from the general increase in French exports of iron and steel and the decrease in imports during the first quarter of 1925 compared with the corresponding period of 1924, the most notable trends were the sharp declines in the exports of pig iron and rails and the marked increase in the exports of blooms, billets, and bars and of scrap iron and steel. A detailed comparison of the foreign trade of France in iron and steel products during the first quarters of 1925 and the two preceding years is afforded by the following table:

French foreign trade in iron and steel during the first quarter of 1923, 1924, and 1925

Imports of Iron Ore Doubled—Pig-Iron Exports.

Of the total exports of iron ore for the first quarter, 2,733,000 tons—which were 10 per cent above the similar period in 1924—the Economic Union of Belgium-

Luxemburg received a little over 90 per cent. Total imports of iron ore were twice as great as in the corresponding period of last year.

Of the 165,000 tons of pig iron exported from France during the first quarter of 1925 the Economic Union of Belgium-Luxemburg took 54,000 tons; Great Britain, 40,000 tons; Italy, 26,000 tons; and Germany, 22,000 tons. Exports to Belgium-Luxemburg were but 60 per cent of last year's figure, while those to Italy were up 90 per cent.

Exports of Blooms, Billets, and Bars Increase.

The outstanding feature of France's export trade during the first three months of 1925 was the heavy tonnage of blooms, billets, and bars, compared with the first quarters of 1924 and 1923, while the imports were only 10,000 tons, compared with 79,000 tons and 215,000 tons, respectively. The Economic Union of Belgium-Luxemburg continued to be the largest receiver of these products with 154,000 tons, which, however, was 32,000 tons less than in the first quarter of last year. Shipments to all other important countries registered increases, particularly to Germany, 94,000 tons compared with 52,000 tons. It should be noted, however, that in the case of Germany 72,000 tons went forward in January, and most of this, it is believed, before January 10, when the general German tariff became applicable to these products. Great Britain received 87,000 tons of blooms, billets, and bars and Switzerland 29,000 tons, compared with 87,000 tons and 14,000 tons, respectively, during the first quarter of 1924.

Scrap Mainly Shipped to Italy—Direct Shipment to United States Almost Negligible.

Great Britain, Germany, and Switzerland were the largest consumers of French rails in 1925. Italy continued to absorb the largest quantity of scrap iron and steel; shipments to that country amounted to 152,000 tons out of a total exportation of 175,000 tons. In the first quarters of 1923 and 1924 the total tonnages exported were 157,000 tons and 132,000 tons, respectively.

It is possible that the United States is receiving a larger tonnage of French iron and steel products than is given in the official trade figures, particularly through transshipment via Belgium. Only in the case of iron or steel wire, however, does the United States figure as one of the most important countries of destination, the tonnage which it received for the first quarter of 1925 being 1,772 tons out of a total of 11,754 tons.

March Trade Sustained at High Level.

Despite the competition in foreign markets, higher production costs, and the failure in February to establish a foreign sales comptoir, exports of iron and steel products from France in March maintained the level established in the first two months of the year and contributed their part in establishing higher levels for the quarter compared with the corresponding period in 1924. It is interesting to note that exports of pig iron, the primary product around which the entente for domestic price control was built, and rails, the principal product outside of this agreement, are the only two major items registering a decline from the first quarter of last year.

Imports of the principal iron and steel products during March showed a general decline, the most marked occurring in the case of hot-rolled sheets, in which there was a decrease of 60 per cent in tonnage.

British Steel Exports Drop in April

Cable from Acting Commercial Attaché Mitchell, London, May 13

Exports of iron and steel from Great Britain during April amounted to 297,458 long tons, which is a loss of 5 per cent from the trade of the preceding month. Tin plate was the commodity in which the decline was most noticeable. On the other hand, ingots, blooms, billets, and slabs jumped from less than 1,000 tons to more than 6,000 tons.

Upward Trend in Import Trade.

Imports of iron and steel continued their upward trend, reaching 274,424 tons in April, as against 244,921 tons in March. Ingots, blooms, billets, and slabs registered the heaviest increase. A comparison of the British foreign trade in the different classifications of iron and steel is afforded by the following table:

British foreign trade in iron and steel

Production Slackens in April.

There were 569,800 tons of pig iron and 597,600 tons of steel ingots and castings produced in the United Kingdom during April, as compared with an output of 607,900 tons of pig iron and 684,700 tons of steel ingots and castings during March. At the end of

April 158 blast furnaces and 278 open-hearth furnaces were in operation, which represents a reduction from the 169 blast furnaces and 284 open-hearth furnaces that were active at the close of March.

United States Iron and Steel Trade with Japan

Exports of iron and steel from the United States to Japan during the first quarter of 1925 amounted to 31,398 long tons, which is scarcely 8 per cent of the total shipments abroad in that period. The decline in the American trade with Japan was not manifest during the first month of the year, for 22,317 tons of iron and steel left American ports for Japan in January. But for February exports dropped to only 2,625 tons. Losses were especially noticeable in wire rods, galvanized sheets, black steel sheets, tin plate, rails and accessories, and welded black pipe. Shipments to Japan in March rose to 6,456 tons.

Sheets and Plates Constitute Chief Class.

The most important class of goods exported to Japan during the first quarter of 1925 was sheets and plates. Altogether 9,361 tons of tin plate, 889 tons of galvanized sheets, 7,669 tons of black steel sheets, 839 tons of black iron sheets, and 39 tons of plates were consigned to that country. Wire rods led among the semifinished products (2,278 tons). Other important shipments included 2,350 tons of structural steel, 922 tons of light rails and rail accessories, and 3,757 tons of pipes and fittings.

Increased Foreign Business for Belgian Industry

Cable from Commercial Attaché F. W. Allport, Brussels, May 16

Recently there has been a slight improvement in the Belgian metallurgical markets as a result of important foreign orders, though sales prices are too low to yield a profit. It is believed that the bottom has now been reached in this industry. English buyers are said to be withholding large orders awaiting the adjustment of the market to wage reductions in the metallurgical and coal industries and lower coke prices.

Orders Sufficient to Maintain Present Production.

Orders for pig iron are sufficient to maintain the present reduced output. Semifinished materials are more favorable as a result of English buying; the finished steel situation is improved by the heavier foreign buying which assures maintenance of the present production in this branch. The market for sheets is weak with prices disorganized. Exports of steel products from Belgium to the United States ranked second in importance during April, the declared exports having been valued at \$500,000, according to Consul Messersmith at Antwerp.

Additional information regarding iron-steel-hardware appears in this issue under the following sections:

Cable review, Europe:

Swedish exports in April slightly higher.

Belgian industry improves slightly with foreign orders.

Far East: Dutch East Indian import situation.

Salvador—Revision of tariff contemplated.

Latin America: British influence in the Argentine trade.

Foreign trade opportunities.

CHEMICALS

Charles C. Concanon, Chief, Chemical Division

AUSTRIA AS A CHEMICAL MARKET

A. H. Swift, Chemical Division

The imports of chemicals and allied products into Austria in 1923 amounted to 150,400 tons, valued at 43,543,000 crowns, and exports to 73,700 tons, valued at 27,490,000 crowns. No attempt has been made to convert the valuation from crowns into dollars since an incorrect impression would be conveyed by so doing. Most of the trade has been with countries where the currency depreciation has been universal, thereby making foreign trade possible.

Figures for the entire year of 1924 covering the imports and exports are not available at this time, but in all probability the trade was slightly in excess of that for 1923. During the first six months of 1924 the total imports amounted to 84,000 tons and the total exports to 31,000 tons.

Trade Largely with Neighboring Countries.

As is logical from the geographic and economic viewpoints, the foreign trade of Austria in chemicals and allied products during 1923 was mainly with the neighboring countries, some of which were formerly part of the Austro-Hungarian Empire. The five countries, Germany with approximately 50 per cent, Czechoslovakia with 15 per cent, Italy with 7 per cent, and Switzerland and Hungary with 4 per cent each, furnished 80 per cent of the total chemical imports.

Although first as a seller, Germany ranked third as a customer for Austrian chemicals, having taken but 15 per cent of the total and having been surpassed by the Kingdom of the Serbs, Croats, and Slovenes, which country took 18 per cent, and by Czechoslovakia, 16 per cent; while Hungary received 11 per cent; Italy, 10 per cent; Rumania, 8 per cent; and Poland, 6 per cent. Neither the United States nor the United Kingdom entered into the trade to any large extent, according to the official statistics, but in all probability some American chemicals were received but credited to Germany.

Industries Consuming Chemicals—Chemical Manufacture.

In line with the general movement of other industrial countries since the war, Austria has been trying to increase its manufactures and decrease its imports, but increase its exports of manufactured goods, especially of the specialized finer goods. The textile industry in all its several phases; the iron and steel, including machinery; and the paper, leather, furniture, and electrical industries are all important consumers of chemicals.

After the territorial reallocation of Europe, Austria found itself without many of the chemical factories formerly included in the Austro-Hungarian Empire. During the past few years, however, having converted into chemical factories many of the powder mills established during the war, Austria again possesses a chemical industry within its own borders.

Official statistics on the production of chemicals in Austria are not available, but the following statement from unofficial sources has been submitted by Assistant Trade Commissioner Elbert Baldwin, Vienne:

New plants have begun the manufacture of such products as chrome alum, permanganate, sodium sulphide, and superphosphates, and have increased their production of sulphuric acid. In the case of carbon bisulphide and some of the other chemicals the contemplated new production has not materialized, owing to the lack of adequate customs protection.

Production of Acid Factories—Glauber Salts.

The total annual production of muriatic acid, estimated at 6,000 metric tons, was manufactured by two concerns. Although the production is sufficient for domestic needs, 250 tons were imported in 1923 and 1,915 tons were exported.

The present capacity of the sulphuric-acid factories, including the production of one glue factory, is estimated at 20,000 tons. This figure represents a larger part of the consumption, as, in 1923, 6,000 tons were imported and 300 tons exported.

An inferior quality of nitric acid is derived from air at a plant in Tyrol, while a stronger acid used chiefly for explosives is manufactured at Bluman. The present capacity is estimated at 7,000 tons, which allows for an export surplus.

Formerly Austria-Hungary was one of the important producers of tartaric acid. Although the centers of production have remained the same, Austrian sales have declined in recent years, due probably to the absence of interstate agreements and to a material restriction of the domestic market. The exports in 1923 amounted to 600 tons.

The Austrian factory at Liesing has a capacity of 4,500 tons of Glauber salts annually and the factory at Blumau 6,000 tons. Sales of Glauber salts have been affected by the unfavorable situation in the glass industry. Imports totaled 1,180 tons and exports 800 tons.

Other Industrial Chemicals Produced.

The production of sodium sulphide was not resumed until 1923. The present capacity is estimated at 1,800 tons. Sales of this commodity were affected by the unfavorable conditions in the leather industry. The present production of prussiate of potash and derivatives has declined to 300 metric tons as a result of diminished domestic sales.

Chrome alum is produced by a new factory with an estimated capacity of 1,800 tons. During 1923 the imports amounted to 285 tons and the exports to 100 tons. The present production of aluminum sulphate, which is in extensive demand from the rather large Austrian paper industry, is estimated at 2,400 metric tons. It has been stated that the local production could be readily extended to cover the domestic requirements and thus eliminate the importation of approximately 3,000 tons.

The output of the Austrian factories manufacturing copper sulphate exceeds domestic needs and in 1923 over one-half of the total production of 6,000 tons was exported, chiefly to the Kingdom of the Serbs, Croats and Slovenes, Rumania, and Hungary. Imports amounted to 160 tons.

Industrial Chemicals Imported and Exported.

Some of the leading industrial chemicals purchased from abroad in 1923, which contributed to the total industrial chemical imports of 48,000 tons, were: Potassium chloride, 965 tons; potassium nitrate, 203 tons; potassium and sodium chromate, 258 tons; potassium and sodium sulphide, 630 tons; sodium phosphate, 810 tons; magnesium chloride, 917 tons; calcium chloride, 465 tons; bleaching powder, 2,526 tons; magnesium sulphate, 777 tons; glycerin, 283 tons; and barium chloride, 300 tons.

Of the 30,000 tons of industrial chemicals exported, the more important were: Caustic soda, 135 tons; magnesium oxide, 5,300 tons; hydrogen peroxide, 600 tons; hydrochloric acid, 215 tons; nitric acid, 1,915 tons; sulphuric acid, 800 tons; tartaric acid, 569 tons; borax,

800 tons; sodium sulphate, 800 tons; sodium carbonate, 2,960 tons; sodium silicate, 1,800 tons; potassium and sodium bicarbonate, 1,081 tons; calcium chloride, 581 tons; bleaching powder, 1,053 tons; calcium carbide, 2,943 tons; chrome alum, 100 tons; copper sulphate, 8,400 tons; and formaldehyde, 218 tons.

Consumption of Insecticides and Fungicides.

There is a relatively large consumption of insecticides and fungicides in Austria in connection with extensive fruit growing, and the production of vegetables, wine, and cereals. The bulk of the material used is of domestic manufacture, with a limited importation from Germany, Italy, and one or two other countries. Copper preparations are widely used as insecticides and fungicides, not only in Austria but in the neighboring countries, which probably furnishes an explanation for the size of the copper-sulphate production and trade. Other preparations used for this purpose are formaldehyde, sulphur preparations in powdered and liquid form, coal-tar preparations, Paris green, barium chloride, pulverized sulphur, and tobacco extract.

Fertilizers and Materials in Limited Demand—Production.

The Austrian consumption of artificial fertilizers is out of proportion to its consumption of insecticides, fungicides, and disinfectants, as the Austrian has not been able to purchase these owing to their high cost during the past few years. Not being primarily an agricultural country, and with a comparatively small acreage suitable for the raising of crops, the consumption of fertilizers is small. The Austrians, moreover, are accustomed to using natural fertilizers rather than the artificial.

Ammonium sulphate is the most important artificial fertilizer produced and exported. According to a report by Trade Commissioner Albert Baldwin, the Vienna gas works is the principal source of supply for nitrogen required in the manufacture of ammonium sulphate, producing approximately 4,000 metric tons of nitrogen annually. A small factory for the production of superphosphates was established in Blumau several years ago, and a larger one is nearing completion at Moosbierbaum. Both factories combined are expected to have a total annual capacity of 50,000 metric tons.

Fertilizers Imported and Exported.

The total importation of fertilizers into Austria during 1923 amounted to 78,000 tons and the exports to 19,000 tons. The imports during 1923 were considerably in excess of those during the preceding years, but with the general improvement in economic conditions the Austrians were able to purchase larger amounts of fertilizers. Thomas slag, 33,000 tons; potash salts, 19,000; superphosphates, 16,000; phosphate rock, 5,000; and cyanamide, 2,000 were the leading fertilizers purchased from foreign countries.

"All other fertilizers" to the amount of 18,000 tons accounted for the largest share of the total exports of 19,000 tons. Other fertilizers sold to foreign countries were 3,400 tons of bone meal, 1,800 of potash salts, 670 of ammonium sulphate, and small amounts of sodium nitrate, natural fertilizers, Thomas slag, blood, and tankage. Czechoslovakia and Poland were the leading purchasers of fertilizers.

Explosives Imported—Matches Exported.

The Austrian Ammunition and Explosive Monopoly was covered by an article published in *COMMERCE RE-*

PORTS, January 7, 1924, page 81: During the calendar year 1923, the total imports of explosives amounted to 4,000 quintals and were double the exports. Germany supplied three-fourths of the imports, while over one-half of the exportation was destined for the Kingdom of the Serbs, Croats, and Slovenes.

The Austrian production of matches is more than sufficient for the domestic demand and considerable amounts are exported annually, while imports are practically negligible. During 1923 the exports of 89,000 quintals of matches were shipped to Rumania, Poland, Hungary, Italy, Turkey, Egypt, and Germany, in the order named.

Coal-Tar Chemicals—Pigments, Paints, and Varnishes.

The coal-tar chemical industry in Austria is of slight importance, and probably will remain so inasmuch as there is a deficiency of coal. Imports of coal chemicals amounted to less than 5,000 tons in 1923. Most of the coal-tar dyes required by the textile enterprises come from Germany. In 1923, out of a total importation of 8,950 quintals of dyes received, 7,200 came from Germany and 1,500 from Switzerland.

Austria does not offer a large market for foreign paints and varnishes. Although production figures are not available, the exportation of 83,400 quintals, which figure is 35,000 quintals in excess of the importation, would indicate a domestic manufacture of some size. The Austrian varnish industry, comprising a few large, medium, and smaller firms, can satisfy most of the domestic demand, and have a surplus for exportation. The imports of oil varnishes in 1923 amounted to 300 quintals, as compared with 400 exported. Spirit varnishes entered the country to the amount of 900 quintals while 6,400 quintals were exported.

The principal paints imported were zinc white, 11,000 quintals; lithopone, 9,000 quintals; and prepared paints, with the exception of oils, 2,000 quintals. The leading exports were 16,000 quintals of red lead, 11,000 of white lead, and 5,000 of litharge.

Medicinal, Pharmaceutical, and Toilet Preparations.

With a population of 6,400,000, whose characteristics are very similar to the American, the demand for drugs, medicines, and toilet preparations of all kinds is about that for the corresponding population in the United States. The following abstracts were taken from reports submitted by Assistant Trade Commissioner E. M. Zwickel, Vienna:

Medicinal and pharmaceutical preparations.—Vienna still maintains its reputation as an important center for medical and scientific research, and, for this reason, manufacturers of pharmaceutical specialties are particularly desirous of introducing their products in the Austrian market. The sale of prepared medicines, however, is very strictly regulated.

A number of pharmaceutical specialties are produced in Austria, either by pharmacies or by factories. The annual production in 1923 was estimated at 80,000,000,000 Austrian crowns. (This figure is based on prices charged to dispensing chemists.) The imports for the same year were valued at 2,600,000 gold crowns, sales of which were made only upon issue of a selling permit.

Compulsory registration is required on imported medicinal preparations to prevent the introduction of specialties other than those which are innovations or improvements over compounded medicines dispensed in a pharmacy. The United States has not participated in the trade to any large extent, only 7 quintals out of a total importation of 1,300 quintals of prepared medicines having been credited as originating from the United States. The bulk, or 1,100 quintals, came from Germany.

In contrast to the import trade, which remained approximately the same during the past three years, the exports in 1923 showed a marked reduction from the previous years,

having fallen from 7,900 quintals in 1921, and 4,800 in 1922, to 1,500 in 1923. Yugoslavia, Czechoslovakia, Rumania, and Poland were the purchasers of Austrian medicines. The decline in exports is attributed to the severe competition encountered in foreign markets.

The uses of medicine are based on practical reasons and not on superstition. Many of the well-known remedies popular in the United States are also found in the Austrian pharmacy. During the past year there has been a tendency to import more American medicinal preparations.

Toilet preparations.—The toilet preparations customarily to be had in western European countries are both manufactured and consumed in Austria. It has been estimated that approximately one-half of the consumption is supplied by domestic manufacturers, although the quality does not compare with the well-known French, German, English, and American brands. There are 60 manufacturers of toilet preparations in Austria. Most of them conduct a small business, 90 per cent of their products being sold to the poorer classes in Austria and the neighboring countries. The balance, 10 per cent, is of the better quality known as luxury articles, which are consumed in the country.

The sale of foreign toilet preparations in Austria is greatly hampered by import restrictions, the high customs duty, and the luxury taxes prevailing. Only the best qualities are imported, and in these lines competition is keen. In perfumes, the French practically control the trade, but the most popular shaving soap is an American brand. As is rather general, in Austria, too, American tooth pastes are preferred, but their price has not been within the reach of the average Viennese.

Out of a total importation of 400 quintals of perfumery and toilet preparations, France supplied 60 per cent; Ger-

many, 32 per cent; and the United States, only 5 per cent. The Kingdom of the Serbs, Croats and Slovenes bought 20 per cent; the United Kingdom, 12 per cent; and Italy, 12 per cent of the total exports of 800 quintals, while the balance of the shipments was distributed to many countries, chiefly, however, to those near at hand.

The Austrian Market and American Trade.

Although the United States has not been shown to share to any great extent in the Austrian trade in chemicals, there seems to be no particular reason why it could not procure more of the trade as the country returns to more normal conditions, or why American manufacturers should not establish direct contacts with Austrian merchants.

Additional information regarding chemicals appears in this issue under the following sections:

LUMBER

Axel H. Oxholm, Chief, Lumber Division

CALIFORNIA REDWOOD IN THE EXPORT FIELD

California redwood is of lesser importance than other softwoods in the export markets. Exports from the United States in 1924, amounting to 34,000 M feet, represent a material decline from shipments totaling 64,000 M feet in 1923 and 52,000 M feet in 1913. Redwood is a species possessing unusual qualities, being resistant to attack of fire, rot, insects, etc., which makes it a specialty wood. Since redwood came into its own in the domestic market, there have been substantial increases in prices which may account for the fact that its foreign distribution was limited in 1924.

Trade with Australia, the Principal Market, Declines.

The predominant position which Australia holds as a market for redwood is clearly shown by the map on the second page of cover. Australia in 1924 took less than half the volume imported in 1923, largely on account of the inroads of cheaper competing woods. Nevertheless, the 1924 shipments to that market, amounting to 27,000 M feet, constitute 80 per cent of the total exports for that year. Mexico, the next most important purchaser, and one which has manifested an increased interest in redwood within the last few years, took 3,000 M feet in 1924.

Well Adapted to Shipbuilding.

An important market has also been developed in New Zealand, the trade with which was very small before the war but which amounted to a little more than 1,000 M feet in 1924. The Republic of Salvador is also a new market for redwood, taking about the same quantity as New Zealand. Owing to its admirable qualities in shipbuilding, especially that of "staying put," England and Scotland imported nearly a million feet in 1924.

Japanese and Philippine Markets Decrease.

Peru, Canada, and French Oceania, in the order of their importance, were other markets in 1924, each taking more than 100 M feet. Of the smaller markets that have been developed since the war may be mentioned Japan, which took only negligible quantities in 1924, but which received 900 M feet in 1923. The trade with the Philippine market, comparatively important before the war and amounting to approximately 500 M feet, has dwindled to practically nothing in postwar years.

Industrial Uses Chief Appeal in New Markets.

Redwood is a lumber which does not sell readily when first introduced into a market. The mere statement that a wood is fire and rot resistant meets with considerable skepticism, and one European railway approached on the subject insisted on having redwood ties placed in the track for 25 years before they would pronounce on its rot-resistant qualities. It is to the credit of the redwood exporters that they have been able to distribute their lumber so widely abroad. The future of redwood in new markets largely lies in its industrial uses because for interior finish it has encountered keen competition from plywood since the war.

Germany is a promising field and redwood is already well known, particularly by the chemical industry, in that country.

Confusion in Terminology—Very Little Consignment Business.

Redwood in the international lumber trade usually refers to north European pine, which is called redwood or simply "red." For this season, the European markets prefer the name "Sequoia" as applied

to California redwood. There is no reason why this preference should not be sustained.

Unlike so many other American softwoods, redwood is not sold on a quantity basis. It is strictly a quality wood, and fortunately the producers have realized that it takes several thousand years to grow it and have not made a practice of sending it to foreign markets on consignment.

American Lumber Meets Strong Competition in Italian Markets

Commercial Attaché H. C. MacLean, Rome, April 16

There has been little change in the situation of the Italian market for American lumber since the beginning of 1925. From authorities in the trade it is learned that no noticeable increase in the demand for southern pine has taken place. Although building construction continues to be extremely active throughout the country and a certain amount of it is being used for doors, windows, blinds, etc., its price is still at a level which encourages the use of cheaper substitutes.

European Species not Comparable with Southern Pine.

Where cost is the first consideration, softwood of local production or imported from Austria or Yugoslavia, etc., is being extensively employed, while where a better quality is desired, pine from Sweden, which costs at least 25 per cent less than American southern pine, is finding favor with builders. Swedish pine is by no means comparable with southern pine in quality, and if the difference in price were limited to 10 per cent it would be unable to compete, but under present conditions its cost is sufficiently lower to make it attractive.

Disappointing Demand for Shipbuilding—Unequaled in Railway-Car Construction.

While the outlook is favorable in the shipbuilding industry and it is to be hoped that it will eventually occupy its former position as a large buyer of southern pine, the demand from it has been disappointing and there is no prospect of an immediate change.

Only in the case of railway-car construction has any real improvement taken place and car manufacturers have been for the past few months, and in the near future will probably continue to be, the best customers for southern pine. Not only have the contracts for new rolling stock awarded by the State railways resulted in a larger consumption of this species, but also additional orders are in sight. For this purpose no other wood known in Italy is as well adapted, and in spite of its high cost experiments with other kinds of lumber have demonstrated that the use of southern pine is justified by the results obtained.

Strong Opposition to Shipments on Consignment.

Stocks of southern pine at the end of 1924 were very considerable, being accounted for in part by speculative buying, but have since been reduced, and at present would be slightly below normal if it were not for several shipments sent on consignment that are still unsold. The best lumber agents are strongly opposed to the policy of making consignments which certain exporters are following, and state that this practice has an unfavorable effect on the market and results in the exporter eventually accepting a price noticeably lower than what he would have obtained

if he had shipped only against actual orders. Consignment stocks are at the mercy of the buyers who are shrewd enough to appreciate that if they hold off they can usually dictate their own terms.

No Improvement in Competitive Position from Price Standpoint.

Lira exchange has been and still is decidedly weak, and southern pine is now quoted at Milan at a slightly higher level than prevailed in January. This is in accordance with the general movement of lumber prices in Italy, which show a moderate increase. Consequently the relation between the price of the different qualities of wood remains to all intents and purposes unchanged, and from the standpoint of the ability of southern pine to meet competition there has been no improvement.

Demand for Sitka Spruce in Airplane Construction.

Italian airplane factories are all busy, and there is still a demand for Sitka spruce, although it is less pronounced than formerly, and there seems to be a general belief that it will decline rather than increase, owing to the tendency to substitute metal alloys for wood. Owing to the extremely severe specifications required by the Government it is a difficult matter to obtain wood whose quality is acceptable.

Reclassification of Red Gum by Customs.

Next to southern pine, red gum is the most important wood imported by Italy from the United States. It is used extensively for the manufacture of cheap furniture, and there is usually a steady demand. However, effective February 15 the former customs classification of red gum as a "common" wood was modified and it has since been classified as a "fine" wood with the result that the duty has been increased from 3 lire gold per metric ton to 3 lire gold per quintal, or by ten times.

Large Increase in Imports of Common Lumber and Plywood.

A very large increase in imports of "common" lumber into Italy is evident for the last quarter of 1924 as compared with the corresponding period in the previous year, according to official statistics. However, the quantity supplied by the United States shows very little change and practically all of the increase relates to shipments from Austria and Yugoslavia, especially the former. Imports of "fine" lumber show practically no change, while imports of plywood show a notable expansion increasing from 4,500 tons in 1923 to 13,500 tons in 1924. Unfortunately, no data by countries of origin are available except in the case of "common" lumber. The total imports of "common" lumber during the last quarter of 1924 were 175,000 M feet, Austria furnishing 77,000 M feet; Yugoslavia, 63,000 M feet, and the United States, 10,000 M feet. These figures represent a rough computation from the official import data shown by weight.

Balsa Exports from Ecuador

Exports of balsa wood from Ecuador during April amounted to 11,000 kilos (equivalent to 24,250 pounds), according to a dispatch dated May 5, from Consul R. P. Butrick, Guayaquil.

INDUSTRIAL MACHINERY

W. H. KASTAN, Chief, Industrial Machinery Division

GERMAN MACHINERY TRADE WITH GREAT BRITAIN DECLINES

Consul Erik W. Magnuson, Stuttgart

German exports of machinery to Great Britain are surprisingly small as compared with such exports to other industrial nations. The Netherlands, for example, although not classed with the leading industrial countries, absorbed 18,251 metric tons of German machinery in 1924, as compared with 7,369 metric tons shipped to the United Kingdom. Moreover, a heavy decline in sales of German machinery to Great Britain has taken place in recent years, the amount shipped to the United Kingdom in 1924 being approximately 60 per cent under the 1913 figure. The principal kinds of machinery shipped by Germany to the United Kingdom in 1924 were metal-working machinery, bakers' machinery, pumps, mining equipment, woodworking, paper-making, and shoe and leather machinery.

German Metal-Working Machinery Trade—Bakers' Machinery.

Metal-working machinery has been the chief item of German machine exports to Great Britain both before and after the war. This trade has declined considerably, however—from 5,516 metric tons in 1913 to 1,544 tons in 1924. The second item in importance is bakers' machinery, of which 1,592 metric tons were exported from Germany to the United Kingdom in 1924, or about 1,000 tons less than the amount in 1913.

German Exports of Gas Engines to England Decrease.

Despite the fact that Great Britain was one of Germany's leading markets for internal-combustion engines in 1913, absorbing 1,067 metric tons, this trade has decreased to practically nothing during the past three years. The same is true of steam and gas turbines, exports of which amounted to 493 tons in 1913, and have dropped off to nothing in recent years. Shipments of spare parts for engines and heavy machinery fell off from 949 tons in 1913 to 80 tons in 1924.

Exports of machinery from Germany to the United Kingdom follow:

German machinery exports to Great Britain

Textile Machinery Trade Increasing.

Exports of German textile machinery to the United Kingdom showed a substantial increase in 1924. The British market, however, is limited, as German manufacturers are unable to compete with the domestic industry to any great extent. Germany, on the other hand, has been a particularly favorable market for British textile machinery.

German exports of textile machinery to Great Britain in 1924 consisted of knitting machines, 174 metric tons; hosiery frames, 131 tons; textile finishing equipment, 124 tons; textile cleaning and washing machinery, 88 tons; and looms, 77 tons. Looms and finished machinery were exported by Germany to Great Britain for the first time in 1924, according to statistics.

The British Machine-Tool Market

Acting Commercial Attaché Hugh D. Butler, London

An important feature of the machine tool situation in Great Britain at the end of the first quarter of 1925 was the extent to which the sales of American machine tools continued, even when the sale of other makes declined. Sales of British and foreign machine tools were between 10 and 20 per cent less than in the last quarter of 1924, while American sales were about equal in volume. This is a return to the situation in pre-war years, when American tools held a more important place in the British market than they have since the war.

Demand for American Equipment in Automotive Industry.

The main cause for the relative improvement in the American position is the increased activity of the automotive industry and the resultant demand for American metal-working machinery. About 50 per cent of the machine tools used in the automotive industry are of American manufacture. On the other hand, the depressed condition of the shipbuilding industry has caused a decreased demand for the heavy engineering apparatus usually supplied by the domestic tool-building industry.

Competition Severe—Bankruptcies.

There are about 40 or 50 British makers of machine tools with an aggregate output valued between £5,000,000 and £6,000,000 per annum. Competition is severe among these concerns and margins of profit are cut to a fine point. Makers continue to turn out a wide range of models. Although there have been several announcements of failures among machine tool manufacturers, business mortality has been cut down materially with the improved conditions of the past winter. Several merchants have failed but American interests have not been involved to any great extent.

[American exports of metal-working machinery to Great Britain increased nearly \$700,000 in 1924 as compared with 1923. Further information on the machine tool market of the United Kingdom may be had by requesting Special Circulars IM-538 and IM-541.]

COAL

Charles P. White, Chief, Coal Division

DECIDED IMPROVEMENT IN SOUTH WALES COAL SITUATION

Radiogram from Trade Commissioner Charles E. Lyon, London, May 14

There has been a decided improvement in the South Wales coal position during the past fortnight. Foreign inquiry is better, both prompt and forward, while prices are firm and even upward. There has been an increased volume of outward chartering; 119 vessels, loading 350,000 tons, destined to 72 foreign ports during the past week made it one of the best weeks of the year. The trade interprets the improvement as being due to a real expansion in demand rather than to an anticipated strike after the expiration of the present wage agreement. The Northeast coast and Scotch mines, on the other hand, report no improvement but continued depression, although prices are no weaker. Newcastle is complaining of German competition through decreased rail rates from the mines to the ports.

Foreign Orders Obtained—Little Prospect for Agreement on Disputed Points.

South Wales has closed a contract for 25,000 tons of large admiralities to the Palestine railways; also 20,000 tons to the Spanish Nortee railways. Italian orders from Russia are apparently exaggerated. Exports of coal from the United Kingdom during April amounted to 4,359,817 long tons, about 32,000 tons below March and 705,000 tons below April, 1924, largely owing to reduced shipments to Sweden, Germany, France, and the Netherlands. Exports to the following destinations show an increase over those of a year ago; Russia, Norway, Belgium, Spain, Egypt, Brazil, Gibraltar, and Canada. Exports during the first four months of 1925 amounted to 17,462,134 tons, compared with 20,768,891 tons in the corresponding period of 1924 and 25,535,825 tons in 1923.

The owners and workers conference was resumed May 13. There is little prospect of settlement of the disputed points in a new agreement for July 1, but the industry does not anticipate a strike, though prospects will be more clearly defined after the federation's executive meeting on May 20.

Production during the week ended May 2 amounted to 4,948,100 long tons.

French Briquet Binder Requirements

Vice Consul Alfred D. Cameron, Paris, April 29

France offers a market for considerable quantities of coal-tar suitable for use as a binder in the manufacture of briquets. The production of residual coal tar in 1913 was 180,377 metric tons, of which 62,000 tons came from coke furnaces and the remainder from gas plants. This production, however, was insufficient to meet the demand and 302,427 tons of coal tar were imported in that year. The proportion of the production and the imports devoted to the manufacture of briquets, however, can not be determined.

Production and Import Trade.

The postwar production of tar is a by-product of the coke industry and has exceeded not more than 200,000

tons a year while the output of briquets has been carried on at the rate of about 3,000,000 tons annually. Imports of coal tar into France during 1924 amounted to 327,039 metric tons, compared with 358,222 tons in 1923 and 257,378 tons in 1922.

United Kingdom Chief Supplier—American Participation Light.

The extent of British participation in this trade during the first quarter of 1925 when 84,141 tons of the total imports of 98,246 tons, came from the United Kingdom is characteristic of conditions that have obtained since 1922. American participation in this market has not been particularly active since the crisis of 1920-21.

By reason of proximity and low freight costs, the British enjoy a practical monopoly of supplying tar to northern France. In addition they have also a substantial advantage in freights to Bordeaux. However, the Mediterranean ports of Cete and Marseille are open to competition on the basis of cost and freight, as is evidenced by the fact that at least two large cargoes of tar from Canada have been brought to the former port in the past two years.

American Competition Possible in Certain Areas.

Competition of American tar with the British product is practically impossible in the channel ports serving northern France. There is, however, a chance to compete occasionally in Atlantic ports and frequently in the Mediterranean region. The coal basins of southern and central France account for about 40 per cent of the French briquet production, and as the same regions are deficient in coke furnaces and gas plants it is noted that they must obtain the greater proportion of their briquet binder from other parts of France or from foreign sources.

Cooperative Buying Agency.

About three-fourths of the briquet manufacturers of southern France, accounting for a still larger proportion of the output, buy only through a cooperative buying agency. This organization, known as the "Societe d'Achats en Commun des Brais," was formed in 1918 as the only possible means of buying abroad at that time. It has since become a stock company, the stock of which is held entirely by collieries, buying and selling only for the account of its stockholders. Buying is done in cargo lots on a British standard coal contract.

Decline in Prices.

Prices of residual coal tar have ranged downward from 250 francs (\$13.58) per metric ton f.o.b. French factory on January 1, 1925, to 240 francs (\$12.19) on March 1, and it is said that the next published quotation will be as low as 230-235 francs. The cost of transportation, however, from the north of France to the Marseille-Cete region is prohibitive.

British tar is said to be hovering around 40 shillings (about \$9.70) per long ton, free on board ship at British port, with freight insurance and unloading costs averaging 10 shillings. This would indicate a cost of about 230 francs per metric ton delivered at either Cete or Marseille.

MINERALS

Guy C. Riddell, Chief, Minerals Division

GERMAN NONFERROUS METALS INDUSTRY

Consul General F. T. F. Dumont, Frankfort on the Main, April 17

There is a pronounced reaction in the German market for nonferrous metals, all the more marked because of the activity which followed the adoption of the Dawes report by the London conference, and notwithstanding that the import of such metals for the first two months of 1925 was on a very large scale as compared with that period of 1924. The condition of the market is shown in the prices quoted for raw metals. On April 8, 1925, copper had fallen 9 per cent below its price on January 1, and was offered at a price equal to the lowest of the year 1924; this in spite of the fact that a decrease in the stocks held in the United States, the principal source of supply for German needs, was reported. Between the same two dates zinc fell off 10 per cent in price, tin 13 per cent, and lead 26 per cent.

Manufacturers Pursue Hand-to-Mouth Policy.

Under such conditions, manufacturers requiring these metals have pursued a hand-to-mouth policy in filling their needs. Manufacturers of brass and brass wares report a decline in both domestic and foreign orders. Manufacturers of lead products are busy on old orders but have received few new ones. Business in zinc and zinc wares is very quiet; stocks of zinc are accumulating and offers from Belgium have been going to England instead of to Germany. Tin consumption is reported normal. Purchases of 2,500 tons of copper and 9,000 tons of lead by the post-office authorities, to be delivered for the manufacture of wire and cable, are stated to have helped the market slightly.

Sources of German Imports of Nonferrous Metals.

Most of the aluminum imported so far in 1925 came from Switzerland and Norway, although Great Britain furnished a small tonnage. More than half of the antimony has come from China. About 80 per cent of the crude copper and 40 per cent of the copper scrap were furnished by the United States, compared with 72 per cent and 8 per cent, respectively, in 1924. The balance of the crude copper in both years was furnished largely by Belgium and the Belgian Congo. Of the lead imported in the 1924 period the United States furnished 15 per cent, most of the balance coming from Poland, while during the first months of 1925 the United States contributed 35 per cent and Poland, Spain, and Mexico 10 per cent each. Nickel naturally comes largely from Great Britain and the United States, but is really of Canadian origin. The United States furnished 20 per cent of the zinc imported in 1925, but Belgium and Poland lead in this metal, Poland supplying two-thirds of the 1924 imports. In the main, the imports of tin in both years came from the Netherlands East Indies, although Great Britain and the Malay Peninsula furnished a part.

Country a Manufacturer Rather than Producer.

German exports of crude nonferrous metals are, on the whole, unimportant, as the country is a manufacturer instead of a producer of most of them, zinc being the only metal, practically speaking, which is produced

in quantity. Occasionally such large stocks of nonferrous metals, accumulated at cheap prices, are on hand that the country can afford to act as a broker, but these occasions have been rare since the war.

Attempts to Found Porcelain Industry in Austria

Assistant Trade Commissioner Elbert Baldwin, Vienna, April 18

The present Republic of Austria has retained none of the extensive porcelain and chinaware industries of the former Austro-Hungarian empire, which have fallen almost exclusively to Czechoslovakia. Various efforts to found a porcelain industry in Austria have been made since the war. The first porcelain factory to be established was erected in 1919 at Frauenthal, Province of Styria. It employs about 150 workmen and manufactures principally electric insulators, with which it supplies two-thirds of the requirements of the Austrian postal administration. Insulators for the Federal Railways and for the Vienna street railways and, in general, for Austrian high-tension lines, however, are still exclusively imported.

A second porcelain factory was established at Wels in 1922 by the Braun-Stammfest-Concern, employing 120 workmen and producing chinaware, but this factory was unable to meet foreign competition and has closed.

Manufacture of Luxury Porcelains Considered Most Favorable.

Recently an attempt has been made to revive the former imperial porcelain factory in the Augarten, Vienna, and to resume the manufacture of luxury porcelains and tableware. It is felt that only the manufacture of quality porcelains can be developed successfully in Austria under prevailing operating conditions. For the present at least the Austrian industry is obliged to import china clay and a large part of its fuel requirements and can obtain only quartz and feldspar locally. Raw materials and fuel represent 81 per cent of total production costs, and properly skilled labor is not yet available.

Dependency upon Imports Probably Will Continue.

It is probable, therefore, that Austria will continue to remain largely dependent upon imports, which have risen progressively from 1,030 metric tons in 1922 to 1,500 in 1923 and 3,700 in 1924. Czechoslovakia has furnished the bulk of the increase. The 1924 figures, however, were probably inflated not so much by increased demand as by imports made in anticipation of the new Austrian customs tariff, effective January 1, 1925, by which duties on colored and plain chinaware were advanced. (More specific information regarding rates and duties may be obtained from the Division of Foreign Tariffs.) Present prices, in general, are 100 per cent higher for table porcelain and 20 per cent higher for technical ware than they were before the war.

Porcelain-Painting Industry Centered in Vienna.

In contrast to the still insignificant manufacturing industry an extensive porcelain-painting industry is

centered in Vienna and has played no small part in popularizing Czechoslovak and Bohemian products in world markets. The leading porcelain dealers in Vienna carry large stocks of Bavarian and Bohemian porcelains, as well as of French, English, and German bric-a-brac, which are at the disposal of this industry. The porcelain painters do not confine themselves to painting only, but also design models for the Bavarian and Czechoslovak factories.

Jade Discovered in South Africa

Assistant Trade Commissioner F. E. Sullivan, Johannesburg

An important jade discovery is reported from a farm on the west side of the Crocodile River, not far from the town of Brits, in the Transvaal, South Africa. The jade is said to exist in sufficient volume to warrant commercial exploitation, and a company named Jades (Ltd.), with headquarters in Johannesburg, has been formed for this purpose. The discovery of the deposits was made while prospecting operations for chrome iron ore were being conducted, the stone being

found in blue, white, pink, green, and in various shades of those colors.

The company has obtained the permission of the Minister of the Interior of the Union to bring Chinese jade experts into the country as cutters and polishers, in order that the jade may be cut and marketed in the shape of beads and Chinese art ornaments, in which form it is expected to obtain better values.

CONSTRUCTION NEWS

Compiled in Industrial Machinery Division

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by mentioning the country and reference number given. Where no reference number is given further information is not available.]

Business Block to be Built in Shanghai.

A Shanghai bank intends to erect a six-story reinforced-concrete building. It is expected that the construction contract will be let in June of this year. Reference No. 27362. (Assistant Trade Commissioner, J. H. Smiley, Shanghai, China.)

German Harbor to be Improved.

In order to adapt the coal reloading facilities to increased production, extensive building work is contemplated for the ports of Duisburg-Ruhrort. The existing dumping plants, which can no longer meet the present requirements, will be replaced by new plants of a capacity of 400 tons of coal per hour. The Duisburg ports will be made wider and deeper, and a new lock will be erected, at a cost of 4,500,000 gold marks. It is estimated that the building will require two years. (Consul Alfred W. Kliefoth, Berlin.)

New Buildings Contemplated for Prague Sample Fair.

A considerable amount of new construction is projected by the management of the spring sample fair at Prague, reports Commercial Attaché James F. Hodgson, Prague, Czechoslovakia. The program calls for the erection of four new exhibition buildings, the first and largest one to be completed in time for the spring fair to be held in March, 1927; the other three to be completed consecutively thereafter. The proposals call for stone and steel construction, the cost of the first structure not to exceed 34,000,000 Czechoslovak crowns. Further information on these plans is expected and will appear when received in Construction News.

New Road Construction Considered in Mexico.

The principal road projected in the State of Guadalajara is the one which will go around Lake Chapala. This will involve the building of about 160 kilometers of new roadway through Ocotlan, La Barca, and Jocotopoc. Reference No. 169052. (Consul Dudley G. Dwyre, Guadalajara.)

Sawmill to be Rebuilt in Canada.

Reconstruction of building and replacement of machinery, principally sawmill equipment, recently destroyed by fire at the plant of a lumber company in Quebec, represent a possible outlet for American equipment. The project will start in the near future and is expected to involve an expenditure of approximately \$175,000. Reference No. 35X. (Assistant Trade Commissioner Walter J. Donnelly, Ottawa.)

Shanghai to Have Combined Theater and Office Building.

A modern theater and office building is to be erected on the site formerly occupied by the Shanghai Times. The structure is to be of reinforced concrete; the ground floor to house the theater will be 40 feet high with one balcony and will have a seating capacity of 1,500. Above the theater will be five floors of offices. The total cost is estimated at 400,000 Shanghai taels (about \$300,000). Reference No. 27364. (Assistant Trade Commissioner James H. Smiley, Shanghai, China.)

English City Adopts Municipal Housing Program.

The housing committee of the district council of the city of Oldbury has announced its decision to construct a first installment of 92 houses at Warley, on the Bristnall Hall farm estate, which had previously been acquired by the municipality for housing purposes. The total cost is to be £40,714, or £442 10s. per house. (Vice Consul Oscar F. Brown, Birmingham.)

SPECIALTIES

Warren L. Hoagland, Chief, Specialties Division

BRITISH IMPORTS OF CLOCKS AND WATCHES

Alfred Nutting, at the consulate general's office, London

The aggregate number of clocks imported into Great Britain during the first three months of 1925 rose to the high figure of 1,274,638, compared with 751,806 in the corresponding period of 1924, an increase of over 523,000, or about 70 per cent. Germany sent 1,042,444, against 678,700, an increase of nearly 54 per cent, while the value advanced approximately 80 per cent.

Increased Imports of American Clocks—French Gains.

In the same period imports of American clocks increased in number to 103,569, contrasted with 26,497 in 1924, the value advancing 192 per cent. The average import price, which was just under 5s. 2d. in 1924, fell to 3s. 10d. in the current period, or only 2d. more than the German price.

Imports of French clocks, which comprise a different class, increased by 200 per cent, the number advancing from 15,750 in 1924 to 46,247 in 1925, while the value rose 206 per cent, showing little variation in average price per clock; but clocks from unenumerated sources (chiefly Swiss) increased from 30,359 last year to 82,378 this year, or 171 per cent, whereas the value rose only by 50½ per cent, the average price per clock falling from 7s. in 1924 to just under 3s. 11d. in the current period. The products imported from all countries were this year all within a few pence of each other in price.

American Sales Could be Increased—Watches.

It is thought that a greater share of this market would be secured by American exporters if they would increase their advertising. The leading retailers in London should always be identified and a suggestion made that names of local retailers in other parts of the country could be obtained on application to the wholesalers. It is true at present that only the cheapest goods can be purchased, even though repair or replacement is much sooner required.

In imports of watches there was a similar increase this year over last, the aggregate number rising to 1,472,169 from 897,383 in 1924, an advance of 64 per cent. While the aggregate value of gold-cased watches rose by around the same percentage as the quantity, the silver-cased class advanced in value by nearly 180 per cent, or 43 per cent more than the increase in quantity, and those with cases of other metals rose in value 89 per cent, or 39 per cent more than by quantity.

Of watch cases, 106,635 were imported during the current three months, against 218,375 last year, a decline of about 50 per cent, the value decreasing by 39 per cent.

Jewelry Industry in Birmingham Dull

Copsul John F. Jewell, Birmingham, England

The jewelry trades, which have long been one of Birmingham's chief industries, employing more than 60,000 people, were again slack in 1924. The past year was the third to record a slump, the main reasons given being the change in women's fashions and in public

taste. While there was some improvement during the year, it was scarcely sufficient to preserve the vitality of the industry. During the last months of the year there was an unusual number unemployed among the gem setters. Jewelers say that since the war people have spent money on motor cars, wireless, and phonographs instead of on jewelry.

Silversmiths have not had a good year, but silver wares are always in demand, and the call for them has widened somewhat of late. Good orders for electroplate came irregularly to the Birmingham district.

British Foreign Trade in Musical Instruments

Alfred Nutting, at consulate general's office, London

There was a large increase in British imports of musical instruments during the first three months of the current year compared with the same period in 1924.

Imports of organs totaled 248, valued at £9,569, contrasted with 39, valued at £1,693, a year ago; piano imports increased to 4,570 from 1,532, the value advancing to £236,910, compared with £71,909; while other musical instruments rose to 84,911 from 44,740, and in value from £55,368 from £29,759. Parts and accessories of musical instruments advanced in value to £156,542 from £80,464. The average import prices do not show any great change, except those of pianos, which advanced from £47 per instrument in 1924 to £51 in 1925, while the number has increased by 200 per cent. The available trade returns do not show countries of origin.

Exports Increased.

In British exports each classification shows an increase this year, but not to the same extent as imports. Organs exported totaled 52, valued at £13,519, compared with 48, valued at £1,272, in 1924, a very striking increase in the average export prices occurring this year. Pianos increased in number to 1,604, valued at £79,045, from 1,362, valued at £68,922, and other musical instruments increased to 46,147 from 36,032, the respective values being £129,657 and £89,941. Parts and accessories of musical instruments rose in value to £267,665 from £178,086.

There were reexports of 6 organs worth £333, compared with 7 worth £679 in 1924; 90 pianos worth £10,819, compared with 30 worth £2,983; 3,061 other musical instruments worth £4,717, against 3,430 worth £3,394; and parts valued at £17,503 contrasted with £5,397.

Additional information regarding specialties appears in this issue under the following sections:

Cable review, Europe: Belgian glass industry stronger.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

EXPORT MARKETS OF AUSTRIAN LEATHER GOODS

Assistant Trade Commissioner Elbert Baldwin, Vienna

The Austrian fancy-leather industry is occupied with changes in the export markets and the development of new outlets to replace those which have lost their purchasing power or erected tariff barriers. Among the new outlets, exports to the United States are steadily increasing, owing largely to the activity of resident buyers for American importers and department stores and to the growing popularity of Vienna leather goods in the United States. The industry comprises 10 larger factories and many smaller shops, employing a total of 3,600 workmen, of which 2,500 are engaged on fancy goods and 1,300 in the leather-baggage branch. At present only some 100 hands are unemployed.

Great Increase in Exports to United States.

About 80 per cent of the fancy goods manufactured in Austria is exported, or 2,242 metric tons, valued at \$1,000,000, in 1923, and 1,985 tons, valued at \$900,000, in 1924, and about 40 per cent of the production of leather bags and baggage, or 2,392 metric tons, valued at \$220,000, in 1923, and 2,937 metric tons, valued at \$270,000, in 1924. Exports to the United States, according to declarations at the American consulate in Vienna, rose in value from \$126,000 in 1923 to \$245,000 in 1924, and including bags, cardcases, pocketbooks, portfolios, and the like. To this must be added exports of manicure sets and furnished bags, which rose from \$1,000 to \$15,000, and of other leather manufactures, excluding footwear and saddlery articles, which totaled \$23,000 in 1923 and \$73,000 in 1924.

European Markets not Consistent.

The trend of exports of fancy goods to other markets has not been uniform. Exports to Germany and Poland show some increase, but exports to Hungary, which encounter a new tariff representing from 50 to 200 per cent ad valorem, to Yugoslavia and to Italy, all formerly important markets, have declined. Sales to England have been very satisfactory, although still subject to special taxes, and Austrian goods, especially enamel-decorated hand bags and necessities, have even found their way into France. The new trade treaty with Spain will probably open up the market in that country to the Austrian industry.

German Competition in Leather-Baggage Trade.

The boom experienced by the leather-baggage branch early in 1924 has since been cut short by German competition. Except for heavy cattle hides and calfskins, this industry is dependent on foreign sources of supply for raw materials, while its products, being of lower value per unit of weight than in the case of fancy leather goods, can not as readily meet export freight charges or foreign import tariffs. Austrian

wages, to be sure, are said to be only 50 per cent of the German, and at present range from \$6.40 to \$8.60 per 48-hour week, but this advantage is modified by the far higher degree of German labor return. In 1924, 16 per cent of the exports of leather baggage, valued at \$270,000, went to the United States, the balance chiefly to surrounding, and particularly to the Balkan, markets. In general present prices of Austrian leather goods are 40 to 60 per cent higher than before the war.

Increase in Production of Footwear in United States

The upward trend of shoe production in the United States, which continued through the first quarter of 1925, resulted in a total output of 83,404,011 pairs, compared with 82,193,527 pairs during the corresponding period of 1924 and 96,880,565 pairs and 79,021,470 pairs in the respective quarters of 1923 and 1922. Women's shoes numbering 26,762,565 pairs constituted 32 per cent of the total in 1925, while 22,849,564 pairs of men's shoes represented 27 per cent, and misses' and children's shoes ranked third with 10,043,784 pairs, or 12 per cent. The production of these three types of footwear during the first quarter of 1923 and 1924, respectively, were as follows: Women's shoes, 30,860,642 and 26,921,838 pairs; men's shoes 27,849,731 and 22,764,608 pairs; and misses' and children's shoes 11,388,714 and 9,881,818 pairs.

Output of Women's Shoes Leads.

The March production, representing an increase of 10 per cent over February, amounted to 29,926,513 pairs. The total included women's shoes to the number of 9,891,289 pairs; men's 7,709,251 pairs; misses' and children's, 3,888,929 pairs; infants', 2,201,188 pairs; boys', 1,770,862 pairs; and athletic and sporting, 601,236 pairs; all of which were made of leather. The remainder consisted of 895,928 pairs of shoes with canvas, satin, and other fabric uppers, 2,027,543 pairs of slippers for housewear, and 940,287 pairs of miscellaneous footwear.

Output of Canadian Boot and Shoe Factories

The annual manufacturing capacity of all the shoe factories in Canada is approximately 45,000,000 pairs, including every kind of footwear, according to a survey made by the Canadian Shoe and Leather Journal. The total consumption of all kinds of footwear in Canada is about 17,000,000 pairs per annum. Assuming that the total exports about balance the total imports, indications are that the factories are working at only 38 per cent of capacity.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

NEW FRENCH LAW ALLOWS LIMITED-LIABILITY COMPANIES

This Form of Company Much Used by Foreign Concerns Doing Business in Other European Countries

Mitchell B. Carroll, Division of Commercial Laws

The desirable combination of continuing life after the death of a partner and limited liability of members, which is offered by the limited-liability company, has found legislative recognition in Great Britain, Germany, and Austria for a number of years. This form of company is popular among small enterprises conducted by families or men with little capital but who wish to perpetuate their business. Foreign concerns find this form advantageous for the incorporation of a small branch when they desire to do business in one of these countries on a permanent basis, avoid the difficulties that may arise from double taxation and national prejudice, and retain control over the personnel and capital of the subsidiary concern.

Companies Organized in Great Britain and Germany.

According to reports submitted by Consul Charles D. Westcott, and Leonard J. Bradford, consular clerk, Paris, the popularity of this form of company is evinced by the fact that in 1919, out of 75,000 companies recorded in Great Britain, more than 58,000 were private limited-liability companies. The private company was made the subject of special legislation in the companies act, 1908. In Germany on June 30, 1921, there were 44,000 *Gesellschaften mit beschränkter Haftung* (limited-liability companies). This form of association was provided for in Germany by the law of April 29, 1892. It was later authorized in Austria by the law of March 6, 1906. In Alsace-Lorraine on December 31, 1921, there were 782 limited-liability companies which had been established under the German régime.

The need for such a company has long been felt in France where several forms of association were authorized by the Commercial Code but none filled exactly this purpose. The "*société anonyme*" (corporation) is intended primarily for large enterprises, financed by the issue of securities. The liability of partners in a "*société en nom collectif*" is unlimited, the same being true of the active partners in a "*société en commandite*," whether "simple" or "par actions." Consequently, on March 7, 1925, a law was passed authorizing the formation of limited-liability companies in France, its colonies, and Algeria.

Provisions of New French Law.

The French limited-liability company may be formed for any purpose other than the establishing of insurance, banking, and savings companies. While two partners are sufficient, the number of partners may be unlimited. The company will not be dissolved by the death, withdrawal, bankruptcy, or insolvency of one of the partners, but will continue to exist as between its other members when one drops out.

The partners may name their company either according to the object of the enterprise, or after one or several of its members. In all proceedings, bills, an-

nouncements, publications, and other documents issued by the company, the name of the company must be preceded or immediately followed by the words "*société à responsabilité limitée*," conspicuously written and without abbreviation, together with a statement of the amount of capital.

Articles of association must be drawn up, either privately or before a notary, deposited within one month after the organization of the company in the files of the justice of the peace and the tribunal of commerce of the place where the establishment is located, and an extract of the articles must be published in one of the newspapers which contain legal announcements.

Moreover, within the same month the agents or directors of the company must submit a declaration containing the names of the members of the company, its purpose, location, capital, and other related facts to the clerk of the tribunal of commerce, to be inserted in the commercial register. All modifications in the original articles and changes in membership must also be deposited, published, and registered. One of the principal reasons for requiring the deposit and registration of company documents is to enable any person to consult them and to obtain copies or extracts thereof at his own expense from the person in charge of the files.

Shares Not Negotiable.

No transferable securities can be issued by the company for public subscription on its own account, but the capital, nevertheless, is divided into shares of 100 francs or multiples of 100 francs. The amount of capital must be at least 25,000 francs and must not fall below that sum. Before the company can be definitely formed the shares must be divided among the members subscribing to the articles of association and paid up in full, and the same rule applies to shares issued in payment of property. The shares of a limited-liability company may be transferred only to third persons having no connection with the company and upon consent of the majority of the members of the company, representing at least three-fourths of the capital.

Managers May or May Not Be Members.

The management of a limited-liability company is intrusted to one or several representatives, whether partners or not, and it is immaterial whether they receive salaries. The managers may be named in the articles of agreement or subsequently; their term of office may be unlimited, and they can not be discharged without a good reason. They have general powers to act for the company, unless restrictions are imposed in the articles of association. In accordance with the provisions of the Civil Code, the managers are individually or collectively responsible, as the case may be, toward the company and third parties, for infractions of the present law and the company agreement, and errors in management.

Rules for Company Meetings and Resolutions.

Every partner may participate in voting resolutions, notwithstanding any stipulation in the articles to the contrary, and he possesses a number of votes equal to the number of his shares. If a company has more than 20 members, it must hold a general meeting at least once a year, at a time fixed by the articles. If other meetings are necessary, they may be called by the managers, or in their default by the supervisory council, or, if that body also fails, by members owning more than half the shares.

If the number of partners is more than 20, resolutions will be voted on at meetings; if less than 20, the resolution will be expressly formulated and voted on by each member in writing. No resolution is valid unless it is adopted by a number of partners representing more than half of the capital.

The members may not change the nationality of the company except by unanimous consent. All other modification in the articles, unless there is a stipulation to the contrary, requires the vote of the majority of the members representing three-fourths of the capital.

Company May Have Supervisory Council.

If a company has more than 20 members, a supervisory council, composed of at least three members, is appointed. Its members are named in the articles of association and are subject to reelection at times stated therein. The duties of the council consist in verifying the books and accounts of the company, and reporting

irregularities to the annual general meeting. At the same time it may state its reasons for opposing the distribution of dividends proposed by the managers. The only liability incurred by the members of the council is for personal negligence in the execution of their duties.

Financial Provisions and Penalties.

The company must maintain a reserve fund and at least 5 per cent of the annual profits must be set aside for that purpose. This levy, however, becomes unnecessary when the reserve fund reaches 10 per cent of the original capital of the company.

A stipulation may be inserted in the articles of the company that the original capital may be increased by successive payments by the members, or by the admission of new members, or that it may be decreased by returning the paid-in share capital totally or in part. If this stipulation is inserted, the original capital fixed in the articles may not exceed 200,000 francs, nor may an increment, which may be voted at the annual meeting, exceed that figure.

Rather severe penalties are provided for violations of the French limited-liability company law, and certain offenses are also subject to indicated provisions of the Penal Code. The penalty for failing to deposit and publish the articles is their nullity as between the parties.

[A translation of this law is on file in the Division of Commercial Laws and may be borrowed upon request.]

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

SLIGHT IMPROVEMENT IN CZECHOSLOVAK LEATHER MARKET

Ernest E. Power, office of commercial attaché, Prague, April 21

The condition of the leather market in Czechoslovakia, though showing some improvement, is still unsatisfactory. The number of insolvencies increases the conservatism of the wholesale trade in granting credits. Business is chiefly confined to the sale of such goods as are immediately required for producing seasonal articles. The only exception is sole leather, the sale of which is somewhat more extensive.

More Orders Being Received.

In spite of the fact that the prices of raw hides and skins show a slightly upward tendency, those of finished leather, especially where large quantities are concerned, show a downward trend. This is attributable to the need for ready cash on the part of the sellers rather than to a decrease in the value of the leather sold. With the arrival of spring the prospects of the leather markets are improving and many orders which did not materialize while the weather conditions were unfavorable are now being received. Collections, however, continue to be slow. Butts are selling well, as no stocks of this commodity are on hand. There is only a small demand for necks at the present time.

Permission to Export Goatskins Granted.

After much deliberation on the advisability of permitting the exportation of goatskins, the ministry of commerce has finally decided to allow the export of three-fifths of the available stocks, estimated at 1,600,000 skins. The condition upon which export licenses are to be granted, however, is that the remaining two-fifths are to be turned over to the Czechoslovak glove industry at a price not to exceed 32 Czech crowns (96 cents) per skin. The final solution of this matter, which covers various phases of industrial agitation and pressure on the ministry of commerce from many angles, relieves a serious congestion in the export trade and mobilizes a capital investment of some 20,000,000 Czech crowns. This investment has been lying idle without any returns whatever and has been accumulating for over 18 months past, as no goatskins could be exported in spite of the fact that there has been great demand for this commodity, especially from the United States.

TRANSPORTATION

P. E. D. Nagle, Acting Chief, Transportation Division

SHIPPING

Important Colombian Forwarding Agents Consolidated

Consul Lester L. Schnare, Cartagena, April 5

The consolidation of two of the most important forwarding agencies in Colombia was effected on April 10, when the Compania Anglo-Colombiana de Comisiones was combined with Eduardo L. Gerlein & Co., under the name of Eduardo L. Gerlein & Co., S. A.

Future Activities of the Consolidated Company.

The consolidated company will devote its attention almost exclusively to action as forwarding and steamship agents, carrying on the business heretofore undertaken by the two companies of which it is composed, together with other new business which it has arranged. The Compania Antioquena de Transportes, of Medellin, has transferred its forwarding business to the new firm and will henceforth devote its attention exclusively to the operation of its fleet of steamships, for which Eduardo L. Gerlein & Co. are the Cartagena agents. The new company will thus have at its command a fleet of steamboats (reported to total 37 steamboats and 69 barges, together capable of transporting 13,313 tons of cargo), which will enable it to dominate the transportation situation on the Magdalena River.

Effect on Coffee Shipment and Port Trade.

The importance of the consolidation of the two companies lies in the fact that the new concern will undoubtedly be able to control a large part (it claims about 67 per cent) of coffee shipments from the interior of Colombia, from the time they leave the hands of the grower until they are placed aboard ocean vessels at Cartagena or Puerto Colombia, and will be in position, therefore, to select the ocean carrier on which coffee will be shipped to the United States. The importance of this control is apparent when it is recalled that the greatest article of export from Colombia to the United States is coffee.

The importance to Cartagena of this consolidation rests in the possibility that it will bring about the diversion of a larger portion of the import and export trade of the interior through this port, and away from Barranquilla and Puerto Colombia.

The new company will continue to act as agents for the following steamship companies, for which the two companies that it supersedes were agents in Cartagena: The Colombian Steamship Co. (Inc.) (American), maintaining a weekly freight service, with limited passenger accommodations, between New York, Cartagena, Puerto Colombia, and Jamaican and Haitian ports, and the Royal Mail Steam Navigation Co. (British), maintaining infrequent services to and from Cartagena.

Future of Australian Commonwealth Line in Doubt

Vice Consul Haskell E. Coates, Melbourne

The Federal ministry of Australia has decided to invite tenders for the purchase of the Australian Commonwealth Line, "together with the good will and anything pertaining to the line—dockyard excepted—as a going concern." Tenders are being received from May 1 to June 1, and will be placed before Parliament, with the following alternatives for decision by that body:

1. To retain the fleet, but to transfer it to British register, and to man it under British conditions.
2. To sell the line unconditionally.
3. To sell the line under conditions which will insure its retention in the Australian trade and safeguard Australia against exploitation by any shipping ring or combine.

The Government, according to a statement by the Prime Minister, favors the sale of the line if a satisfactory tender is received; otherwise its continuance on a basis that will insure efficient service without a heavy burden on taxpayers.

RAILWAYS AND ROADS

Good Roads in India Promote Automobile Touring

Road construction in India has progressed to such an extent that many of the towns and cities are connected by excellent paved highways. The American assistant trade commissioner, who recently made a trip of some 650 miles by automobile in Bengal, Bihar, and Orissa, passing through the towns of Asansol, Hazaribagh, Ranchi, and Purulia, reports that the entire journey was made over paved roads, most of them equal to any in the United States.

List of Railways in Haiti is Available

The Commercial Intelligence Division of the bureau, in cooperation with the Transportation Division, has compiled for distribution a comprehensive list of the railways of Haiti. In addition to the names and purchasing agents for the railways, some information is

given as to the rolling stock owned and the length of the railways. Copies may be obtained from the Commercial Intelligence Division.

Chinese Railway Income Increased

Assistant Commercial Attaché A. H. Evans, Peking, April 6

Official figures regarding the gross income of the Chinese Government railways for the period from January 1 to October 10, 1924, have just been issued by the ministry of communications. While they show an increase of \$9,585,000 (silver) over the same period in 1923, for the first 10 days of October, 1924, they show a decrease of \$776,000 (silver) from corresponding revenues of 1923. This decrease occurred at the time the military authorities assumed operation of the railways.

(Continued on p. 502)

Danish Roadways

Ellis A. Johnson, consular clerk, Copenhagen, April 24

The roads of Denmark on April 1 extended an aggregate distance of 7,596 kilometers, of which 7,583 kilometers represent county roads and 13 the county roads passing through cities or towns, according to statistics just made available by the chief road inspector of the Danish Government. Macadamized roads are the most common, comprising 5,235 kilometers of the total. "English paving," consisting of small stones laid in curved lines instead of at right angles, is being used more and more, there being at present 190 kilometers of this type in Denmark. Roads of screened and unscreened gravel extend for 1,651 kilometers, and those with surfaces treated with macadam

for 470 kilometers. Other materials used in finishing the roads are concrete, tar, and asphalt.

[Details as to the extent of roads in each county, as well as the length of each type of road, may be obtained from the Transportation Division by referring to Report No. 170062.]

Additional information regarding transportation appears in this issue under the following sections:

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

AUSTRALIAN LOAN REQUIREMENTS HEAVY

Based on reports from Vice Consul Haskell B. Coates, Melbourne, and Vice Consul Walter T. Costello, Sydney

According to the Australian press, the combined loan requirements of the Commonwealth and State governments for new and conversion issues during the fiscal year commencing June 30, 1925, will amount to over £130,000,000. Loans falling due during 1925-26 total over £91,000,000, of which over £82,000,000 are payable in Australia and the balance in London. New loans will probably equal the amount of last year, namely, £38,000,000, of which £28,000,000 will probably be sought in London. The following table shows the loans maturing during 1925 and 1926:

Australian loans maturing during 1925 and 1926

Issues	Repayable in—	
	London	Australia
Commonwealth.....		£68,805,700
New South Wales.....		8,083,331
Victoria.....	£7,206,318	3,438,180
Queensland.....	416,700	58,300
South Australia.....	1,651,340	3,932,078
West Australia.....		1,922,305
Tasmania.....		1,185,286
Total.....	9,274,353	82,420,178

State Conversion Loans Considered.

By an agreement entered into by the Commonwealth and States in July, 1924, it was provided that the Commonwealth should become the sole borrowing authority on the local market for the fiscal year 1924-25, leaving the States free, however, to seek abroad such funds as they might need for conversion purposes. In October, 1924, therefore, the Commonwealth raised £10,300,000 for the States, the amounts apportioned to the various States for the development of public works and undertakings being as follows:

Victoria.....	£2,325,000
New South Wales.....	2,906,000
Queensland.....	1,340,000
South Australia.....	2,034,000
Western Australia.....	1,200,000
Tasmania.....	83,000

The Federal ministry, through its treasury and banking officials, has given consideration recently to the loan to be raised on behalf of the States for conversion purposes. The loan is expected to amount to about £7,000,000, and it is understood that the Federal loan council intends to offer it at 6 per cent. While the obligations to be refunded do not mature until the end of the present fiscal year (June 30, 1925), the loan will probably be floated on the local market at an early date by the Commonwealth treasury, the Commonwealth Bank, and the associated banks.

Neither Queensland nor New South Wales, however, will participate in this loan. Queensland has already funded £11,728,000 of 4½ per cent short-term obligations in a new issue in London at 5 per cent, selling at £99 and maturing in 1940 or 1960. The treasurer of New South Wales likewise has placed all the stock and debentures necessary for the redemption of loans falling due before the end of the present fiscal year (June 30). The successful placing by the State treasury of the large amount of £3,600,000 is regarded as a distinct achievement.

Terms of Loan.

Although it has not been confirmed officially, the £7,000,000 conversion loan for the State is expected to be issued at £99, with interest at 6 per cent and term of 5 or 10 years. The £10,300,000 loan raised in September and October, 1924, was sold at £98 10s.; interest, 6 per cent; term, 5 or 10 years. Even with the higher return from the former loan the subscriptions were slow, and considering the fact that the present issue is subject to Federal tax it is felt that the price might have been made more favorable to investors.

It was decided at a conference of State treasurers and premiers acting as treasurers, held in Melbourne early in February, that the Federal loan council should meet in April to consider a loan to be issued by the Commonwealth on behalf of the States to meet obligations maturing during the fiscal year 1925-26, which they are not in a position to retire with additional borrowing. The question will also be considered at this

meeting as to whether the Commonwealth shall continue as borrower for the States.

Commonwealth Conversion of £68,000,000 in December, 1925.

Consideration is being given the problem of conversion of £68,000,000 of Commonwealth securities which mature December 15, 1925. The total represents the first four war loans. They carry $4\frac{1}{2}$ per cent interest, and are tax free. In accordance with the taxation and loans act, interest on all loans raised after January, 1924, is taxable by the Commonwealth. Although there is some opinion to the effect that it would be wise to renew a portion of the loan on a tax-free basis to people who would agree to subscribe to a stipulated quantity of bonds in the non-tax-free portion of the issue and to make the tax-free portion short term, it is generally held that the exceptional income derived from the marketing of wheat and wool this year will materially assist in the success of the loan.

Recent Government Requirements Met.

An event of importance in the Melbourne money market in January was the flotation by the Victorian State Savings Bank of a loan of £2,000,000, carrying interest at $6\frac{1}{4}$ per cent and offered at £99, to mature in 12 years. Although open only seven days, the loan was largely oversubscribed, £3,100,000 being offered. The unusually attractive terms, the freedom from State tax, and the fact that no Government loans had been floated for several months, all contributed to the success of the offering.

The £600,000 loan of the Melbourne and Metropolitan Board of Works, opened on February 16, 1925, at noon, was oversubscribed by mid afternoon to the amount of £1,804,000. The stock was issued at par, bears interest at $6\frac{1}{2}$ per cent, and matures in 7 or 12 years.

See also Cable reviews for Far East and Europe.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS

GERMANY-GUATEMALA

Reichsgesetzblatt, II, April 17

Commercial Agreement Ratified.

By law of April 11, 1925, the German Reichstag ratified the agreement with Guatemala, exchanging reciprocal most-favored-nation treatment signed on October 4, 1924.

[See COMMERCE REPORTS for February 2, 1925, p. 277.]

GERMANY

Reichsgesetzblatt II, March 31

Adherence to Madrid Convention for the Suppression of False Indications of Origin.

The German Reichstag has approved, by a law of March 21, 1925, the adherence by that country to the International Convention for the Suppression of False Indications of Origin, signed at Madrid on April 14, 1891, as revised at Washington, June 2, 1911.

[The other countries which adhere to this convention include Brazil, Cuba, Spain, France, Great Britain, Portugal, Switzerland, and Tunis.]

GREECE-YUGOSLAVIA

Commercial Attaché R. O. Hall, Athens, March 21

Transfer of Land for Yugoslav Free Zone at Saloniki.

On March 5, 1925, the land of the Yugoslav free zone at Saloniki was formally transferred by the Greek Government to the Yugoslav representatives. This event marks the culmination of the long effort by the Yugoslav nation to gain an outlet to the sea at Saloniki.

On the same date that Greece ratified the convention to establish a Yugoslav free zone, it enacted a law to establish a Greek free zone at Saloniki. A protocol to the convention, however, guarantees national treatment to Yugoslav merchants and goods in the Greek zone as regards transit traffic, and vice versa. The Greek zone does not differ in any important regard from the free ports of other countries.

The convention sets the life of the Yugoslav zone at 50 years, and it is to be administered by Yugoslavia as

a customs district of that nation. Copies of the manifests of ships loading or discharging in the zone must be delivered to the Greek customs authorities. All goods shipped in transit from the frontier station for the Yugoslav zone, and inversely, shall be considered from the Greek point of view as goods in transit, and no Greek taxes or restrictions may be placed on such goods or on goods manipulated in the zone. Food products intended for the personnel of the Yugoslav zone, as well as raw materials destined for the operation of the port and for the manipulation of merchandise, are to be exempt from customs duties. Forage for animals in transit will likewise be free of duty. The usual forms of manipulation of goods are to be permitted.

[Notices of the signature and ratification of this convention appeared in COMMERCE REPORTS for March 3 and August 25, 1924.]

GENERAL TARIFF CHANGES

SALVADOR

Diario Oficial, April 8

Revision of Tariff Contemplated.

A tariff commission has been created in Salvador by a decree of March 4, 1925, for the purpose of revising the tariff.

TURKEY

Consul Charles E. Allen, Constantinople

American Goods Granted Most-Favored-Nation Treatment.

The Turkish Government announced under date of March 31, 1925, that, pending ratification by the United States of the treaty of amity and commerce signed at Lausanne on August 6, 1923, and on condition of suspension if this ratification is too long delayed, American goods will be allowed to profit by the customs tariff at present applied to goods imported into Turkey from the Entente countries signatory to the commercial convention at Lausanne on July 24, 1923. The coefficient 9 applied to dressed leather, footwear, gloves, silk textiles, and other articles is accord-

ingly extended to imports of these products into Turkey from the United States.

[For summaries of the treaties between Turkey and the United States and Turkey and the Allied powers see *Commerce Reports* for September 24, 1923, and November 5, 1923.]

YUGOSLAVIA

Consul K. S. Patton, Belgrade, April 13

Authorization of Promulgation of New Tariff.

The new Yugoslav budget law was enacted on March 31, 1925, to become effective April 1, authorizing the Minister of Finance to promulgate, either partially or wholly, the project of the new general customs tariff of export and import duties, provided that it be submitted to Parliament as soon as it convenes. It is stipulated that in the event that Parliament refuses to approve the project and substitutes reduced duties in the place of those proposed, or entirely abolishes them, refund will be made of all duties collected in excess of those approved by Parliament. If, on the other hand, higher rates are substituted by Parliament, no difference will be collected from the importers or exporters. It is understood that the new tariff will be promulgated in the near future.

[As soon as this new tariff is put into effect and the rates received, due notice will be given in *Commerce Reports*.]

IMPORT AND EXPORT RESTRICTIONS

EGYPT

Journal Officiel, March 21

Importation and Exportation of Narcotics Regulated.

A law was put into operation in Egypt on April 20, 1925, which regulates the importation, sale, and exportation of narcotics. The importation and exportation of narcotics can be made only under special license, granted by the department of hygiene, and in the case of imports such license will be issued only to pharmacists, proprietors of chemical laboratories, doctors, and other authorized persons.

The importation or exportation of narcotics in parcels containing other substances is prohibited, and all postal parcels containing narcotics must be registered and bear an indication of the nature, quantity, and strength of such substance.

The importation of medicinal opium containing less than 10 per cent of morphine is strictly prohibited, and all imports of medicinal opium must be accompanied by a manufacturer's certificate showing the amount of morphine contained therein.

NORWAY

Secretary to Commercial Attaché A. E. Fenselau, Copenhagen, April 29

Permission Required for Importation of Radio Equipment.

Radio receivers or parts thereof for listening to radio broadcasting may be imported into Norway only after receipt of permission from the director of telegraphs, according to a royal resolution of April 3, 1925, effective May 1, 1925. Firms or persons wishing to import taxable radio equipment must make application to and receive import permission from the Avgiftsinspektøren, Bygdø Alle 34, Oslo, accompanied by—

(1) Invoice, or if such is not at hand, by a description and list of the material; (2) requisition of the necessary stamps to affix to the material; (3) payment of the stamps so requisitioned; (4) broadcasting certificate (except for authorized radio dealers).

POLAND

L. J. Cochrane, office of commercial attaché, Warsaw, April 15

Permission for Importation of Tobacco by Private Persons.

On the basis of provisions contained in the Polish Tobacco Monopoly of 1922 the Minister of Finance has issued an order, effective from April 7, 1925, permitting the importation of tobacco and tobacco products into Poland by private concerns or individuals.

Written requests, specifying the kind, quantity, and quality of tobacco to be imported, as well as the source of the purchase, purpose of importation, and customs office through which it is to be imported into Poland, must be submitted to the financial authorities. These will be passed upon by the Minister of Finance and forwarded to the Polish Tobacco Monopoly. It is required that imported tobacco be in the original packings of the manufacturers, except in the case of quantities of 1 kilo or less brought in by travelers for personal use.

In addition to the import duties applying to tobacco and tobacco products, monopoly taxes will be collected as follows: Leaf tobacco, 10 zloty; snuff, 5 zloty; pipe tobacco, 18 zloty; cigars and cheroots, 250 zloty; cigarette tobacco and cigarettes, 75 zloty, all per kilo, net weight.

[The present import duties on tobacco in Poland are as follows: Leaf tobacco, 2.10 zloty; snuff, 3.30 zloty; pipe tobacco, 4.50 zloty; cigars and cheroots, 10 zloty; cigarette tobacco and cigarettes, 12.50 zloty, all per kilo, net weight.]

RUMANIA

Consul E. E. Palmer, Bucharest, April 10

Partial Reimposition of Prohibition on Imported Carpets.

Handwoven oriental rugs and carpets from Turkey, Persia, India, or other parts of the Orient, "Kelim" (a kind of handwoven carpet), hand-made wall carpets, and carpets made in oriental style of whatever origin (items 106 and 107) are again prohibited from importation into Rumania, following the publication of new regulations in the Monitorul Oficial April 5, 1925. Machine-made carpets having a warp of cotton, jute, cocoa, or other textiles, as well as carpets of this kind used for covers of furniture, carriages, and automobiles (item 108) are not subject to restriction and may be imported upon payment of the ordinary customs duties and luxury taxes, which are double the amount of the customs duties.

All loom-made carpets which are not included in items 106 and 107, as well as "Kelim" carpets, and woolen wall carpets which arrived at the custom-house before March 1, 1925, will be admitted upon payment of duties and luxury taxes.

RUSSIA

Commercial Attaché C. J. Mayer, Riga, April 25

Import Prohibition on Superphosphate.

The importation of superphosphate into Russia has recently been prohibited by the Commissariat of Labor and Defense.

TARIFF CHANGES ON SPECIFIC ARTICLES

BRITISH INDIA

The Gazette of India, March 28

Tariff Changes Effective.

The finance act, 1925, made the following changes in the Indian customs tariff, effective April 1, 1925.

(1) The imposition of a duty of 1 rupee 4 annas per maund of 82 2/7 pounds, on salt manufactured in, or imported by land into, any part of British India other than Burma and Aden, until March 31, 1926.

(2) The addition of grain and pulse, all sorts, excluding flour, to the duty-free list.

(3) The imposition of a duty of 2½ per cent ad valorem on beads, bead cords, bead knitting needles, reeds, and shuttles.

(4) The imposition of a duty of 4 annas per imperial gallon on motor spirit.

The Tariff (Amendment) Act, 1925, also makes various amendments to the customs tariff. Several of these amendments which merely embody various customs rulings and interpretations have already been enforced by Government notifications.

Effective March 20, 1925, the following articles are added to the duty-free list:

(50) Carbo lime, urea; (53-A) rubber, raw; (65) sulphur; (69) corn crushers, potato diggers, latex spouts, spraying machines; (100-A) postage stamps whether used or unused; (105) used gunny cloth made of jute.

Effective March 30, 1925, the import duties applicable to the following articles are:

Tariff No.	Article	Unit	Duty
26-A	Cigarettes, of value: (a) Not exceeding Rs. 10-8 per thousand and. (b) Exceeding Rs. 10-8 per thousand.	Per thousand	Rupees Annas 7 0
52	Iron or steel designed for the reinforcing of concrete not otherwise specified (see tariff items 90 and 91).	Ad valorem	10 8 Per cent
101	Railway materials, viz., shunting skids, rail removers, scooters.	do.	10
108	Rubber tires and tubes used exclusively for airplanes.	do.	2½
118-A	Fireworks specially prepared as danger or distress lights for use of ships.	do.	15

The following duties are to become effective June 1, 1925:

Tariff No.	Article	Unit	Duty
19	Sugar, excluding confectionery: (1) Sugar, crystallized or soft 23 Dutch Standard and above. (2) Sugar, crystallized or soft inferior to 23 Dutch Standard but not inferior to 8 Dutch Standard.	Hundred-weight.	Rupees Annas 4 8
	(3) Sugar, below 8 Dutch Standard, molasses and sugar candy.	Ad valorem	25 Per cent
106-A	Silk mixtures, that is to say: (a) Fabrics composed in part of some other textile than silk and in which any portion either of the warp or the weft, but not if both are silk. (b) Fabrics not being silk on which silk is superimposed, such as embroidered fabrics. (c) Articles made of silk mixtures and not otherwise specified.	do.	20
92	Iron or steel disks and circles cut from plates or sheets of the kind specified in tariff No. 92: Galvanized Not galvanized.	Per ton	Rupees Annas 45 0 30 0
106-A	Silk goods used or required for medical purposes, viz, silk ligatures, elastic silk hosiery, elbow pieces, thigh pieces, kneecaps, leggings, socks, anklets, stockings, suspensory bandages, silk abdominal belts, silk web catheter tubes, and oiled silk.	Ad valorem	15 Per cent

[Many of the above duties have already been put into effect by Government notifications, and such changes have been published in Commerce Reports from time to time as they have occurred.]

LATVIA

Commercial Attaché C. J. Mayer, Riga, April 27

Proposed Reduction in Import Duties on Certain "Luxuries."

The Latvian Minister of Finance is considering a proposal to reduce the import duties on silk fabrics, laces, tulles, raisins, spices, peppers, and other goods now subject to high duties. It is understood that these reductions will be enacted shortly.

It is reported that the duty on petrol (gasoline), however, will not be reduced at this time.

Cable from Commercial Attaché C. J. Mayer, Riga, May 11

Increased Import Duty on Flour.

The Latvian import duty on flour has been increased from 0.09 lat to 0.21 lat per kilo (lat=\$0.193), effective from May 9, 1925.

UNITED KINGDOM

Acting Commercial Attaché Hugh D. Butler, London, and British Board of Trade Journal

Protective Tariff Investigations.

A number of industries in the United Kingdom have made application for protective tariff duties to be applied in accordance with the scheme recently announced by the British Board of Trade, whereby individual industries (except foodstuffs) especially meriting and needing such protection would be given favorable consideration, if found upon investigation to be suffering from exceptional competition from imports from abroad.

Each industry applying for protection must establish its own case under conditions laid down by the Board of Trade. If upon preliminary examination of a claim the Board of Trade decides that a sufficiently meritorious case has been made out by the applicant, a special committee will be appointed by the president of the board for the purpose of making a full and careful inquiry into the status of the industry, and submitting a report to the board with a recommendation as to its findings.

The industries whose applications thus far have received consideration by the board of trade to the extent of the appointment of investigating committees are lace and embroidery, superphosphates, leather and fabric gloves, and gas mantles.

The committee appointed to investigate the lace and embroidery industry has already made its report to the Board of Trade and recommended a duty of 33½ per cent ad valorem on machine-made lace and embroidery. The ministry has, however, not yet announced its decision as to the action it intends to recommend to Parliament with regard to the committee's recommendation. (See COMMERCE REPORTS of May 18, 1925.)

The conditions to be established before protection will be recommended for an industry, as outlined by the Board of Trade, are, briefly, as follows:

- (1) That the applicant industry is of substantial importance.
- (2) That foreign goods of the class or kind produced by the industry are being imported into the United Kingdom in abnormally large quantities.
- (3) That the foreign goods so imported are sold at prices below which similar goods can be profitably produced in the United Kingdom.
- (4) That by reason of such competition employment in the industry in the United Kingdom is seriously affected.
- (5) That such competition comes largely from countries wherein exceptional circumstances exist, such as (a) depreciated currency, (b) the granting of subsidies, bounties, or other artificial advantages, (c) inferior conditions of labor em-

ployment, (d) or other special circumstances producing exceptional or "unfair" competition.

(6) That an applicant industry in the United Kingdom is conducted with reasonable efficiency and economy.

(7) That the imposition of a duty on the class of goods in question would not exert a serious adverse effect on employment in any other United Kingdom industry, namely, an industry using such goods.

If the committee is satisfied that the applicant industry has established a claim for protection in accordance with the above conditions, it becomes the duty of the committee to recommend the amount of the import duty considered necessary to countervail the exceptional or "unfair" competition.

It is the announced intention of the Government that any duties proposed for the safeguarding of industries shall be imposed for a limited period and in a finance bill in which the period will be prescribed. Any duties so imposed will apply to imports from all foreign countries, irrespective of the country or countries in which the exceptional conditions of competition may exist.

Protective duties will only be proposed in a finance bill if the Board of Trade is satisfied that a prima facie case for inquiry has been established, that the committee appointed by the Board of Trade has reported that a duty ought to be imposed, and that the Board of Trade and the Treasury concur in the proposal. It has been definitely announced that no applications for import duties on articles of food and drink would be considered.

[Any further developments with regard to the establishment of new import duties in the United Kingdom will be promptly reported in COMMERCE REPORTS.]

URUGUAY

Consul O. Gaylord Marsh, Montevideo, March 21

Motor Cycles, With or Without Side Car, Dutiable as Automobiles.

According to a decree published in the *Diario Oficial* of March 20, motor cycles, with or without side cars, are now dutiable at the same rate as automobiles, at 24 per cent, instead of 31 per cent, of the fixed valuation.

INTERNAL REGULATIONS AFFECTING TRADE

CANADA

Assistant Trade Commissioner W. J. Donnelly, Ottawa, April 20

Proposed Restrictions on Sale of Extracts and Patent Medicines in Alberta.

A bill recently introduced in the Alberta Legislature provides that no person shall sell or keep for sale any proprietary or patent medicine, or any extract, essence, tincture, toilet water, or preparations which contain more than 2½ per cent of proof spirit, in the northern part of the Province of Alberta included within certain boundary lines described in the bill.

ITALY

Gazzetta Ufficiale, Rome, April 18

Manufacturing Tax on Matches Modified.

The manufacturing tax on matches has been increased by about one-fourth to one-third of the former tax, with effect from April 20, 1925, according to a royal Italian decree of April 9.

[The abolition of the match sales monopoly, and the imposition of a manufacturing tax in its stead, were announced in COMMERCE REPORTS for May 7, 1923. The text of the new decree is on file in the Division of Foreign Tariffs and specific information may be had upon request.]

PORTO RICO

Proposed Internal-Revenue Tax on Gasoline.

A bill introduced in the Porto Rican House of Representatives on March 5, 1925, provides for the levying of a tax of 3 cents per gallon on gasoline sold or consumed in Porto Rico, to be collected by the treasurer of Porto Rico by the affixing and cancellation of in-

ternal-revenue stamps on documents provided for that purpose. Upon the approval of this bill, no municipal district or other administrative division of Porto Rico may collect any consumption or local tax on consumption or use of gasoline subject to taxation under the provisions of this act.

Provision is made for the repeal of paragraph 37 of section 20 of the excise tax law of Porto Rico, which provides for a tax of one-half cent per gallon on gasoline manufactured, produced, sold, or consumed in Porto Rico. The proceeds collected under the act will be applied to the asphaltting of insular roads. The bill provides that the tax shall take effect on July 1, 1925.

DICTIONARY OF TARIFF INFORMATION

Prepared by Dr. Clarence D. Blachley and others of the staff of the United States Tariff Commission. Contains 1,036 pages, bound in cloth. Obtainable from the Superintendent of Documents, Government Printing Office, Washington, D. C. Price, \$2.25.

This volume presents a comprehensive summary of the findings of the principal investigations and studies carried on by the United States Tariff Commission since its establishment, exclusive of those under the flexible provisions, and makes available a most useful handbook on the manifold commercial and economic phases of the tariff and related problems of international trade. The range of its information makes it of interest, at least in part, to merchants engaged in a broad variety of lines and to students of economics and international trade.

It consists of three parts:

(1) A descriptive and economic discussion of all commodities mentioned in the tariff act of 1922, including a technical description of the nature and uses of the commodities, sources of supply, and recent data as to production, importation, and exportation. This part of the dictionary represents a condensation of the long series of tariff information surveys issued by the Tariff Commission during recent years, with the advantage over the volume known as "Summary of Tariff Information," prepared in 1921 for the use of Congress, in that the studies are brought up to date by inclusion of the production figures of the census of 1921 and the foreign trade figures through 1923. The commodities covered range from abrasive materials to violins.

(2) An indexed tabular listing of the rates of import duty under the present tariff act as compared with the duties under the previous acts of 1913 and 1909. This is supplemented in the body of the volume by expositions and discussions of customs organization, regulations, and procedure under the American tariff laws.

(3) A series of articles presenting surveys or discussions of tariff policies, practices, and problems, including the related broad financial and shipping aspects of international trade, covering the policies and attitudes of the principal foreign countries as well as of the United States. In some cases what is embodied is a digest or abstract of earlier general publications by the Tariff Commission, principally Reciprocity and Commercial Treaties, Colonial Tariff Policies, and Handbook of Commercial Treaties. To a very large extent, however, this part of the volume consists of new, hitherto unpublished material, and to students of tariff problems and international trade may be found to be the most valuable contribution of the Dictionary of Tariff Information.

The scope of general articles of this type included in the volume, which are arranged in one consecutive alphabetical series, is illustrated by the following selection of titles: Agricultural tariffs; Balance of trade; Bargaining tariffs, Canadian reciprocity; Commercial treaties; Convict labor; Crises; Currents of World Commerce; Drawbacks; Dumping; Dutiable Value; Flexible tariff; Foreign exchange; Foreign trade of the United States; Free ports; League of Nations; Merchant Marine; Most-favored-nation clause; National wealth and income; Open door; Preferential transportation rates; Raw materials and the tariff; Shipping discrimination and Government aid to shipping; Commercial statistics; Tariff history (United States and foreign); Trade routes; Wages and the tariff.

EUROPE

Samuel H. Cross, Chief, European Division

GREATER STABILITY IN THE IRISH FREE STATE

Based on reports from Consul Harold M. Collins, Dublin, April 20, and Vice Consul John S. Richardson, Cobh, April 15

The state of uncertainty and caution that has existed in financial and business circles in the Irish Free State during the first three months of 1925 is gradually giving way to a feeling of confidence. This is predicated mainly on the favorable crop prospects, the reduction in income tax from 5s. to 4s. in the pound, and the indications of a large tourist traffic during the coming summer. In general, the basic conditions which depressed trade throughout 1924 have remained unchanged, but more optimism and enterprise have been noticeable.

Seasonal Trade More Encouraging.

The opening of the spring season has been attended with greater activity in most lines. Dublin merchants have reported spring buying to be at a satisfactory level. The automotive trade, although improved, is still below the level of last year. Agricultural implement dealers complain of dullness. The building supply trade showed still further improvement as spring construction work got under way. The livestock trade at the end of March was still dull, particularly in the case of fat cattle and sheep.

Imports of Dutiable Articles Increase.

In January the foreign trade of the Free State showed a decline to £7,935,604, as compared with the £8,463,489 for January, 1924, and the £9,050,478 for December, 1924. Imports were less by approximately £105,000 than for January of last year, and exports decreased by £438,000. The outstanding feature of the trade returns for January is the increase over corresponding 1924 figures shown in imports of articles which became dutiable under the protective tariff imposed last year.

For instance, imports of sugar and confectionery amounted to £53,502, as compared with £21,259 in January, 1924. The value of imports of cocoa preparations was £11,000 greater than last year. Notwithstanding the ad valorem duty of 15 per cent on boots and shoes, imports rose from £127,869 to £132,711. Sharp declines, however, occurred in imports of soap and candles. The expansion of confectionery and boot and shoe imports is difficult to explain, but apparently may be attributed to the increasing ability of British manufacturers to adjust their prices to the protective duties.

Banks Profits Increase—Government Expenditures Cut.

Bank clearings for the quarter ended March 31, 1925, amounted to £69,000,000, as compared with £74,000,000 for the corresponding period of 1924, and reflect the downward trend in domestic trade. Bank reports show increased earnings. With the exception of the Munster and Leinster bank, which paid 20 per cent of its previous rate, all banks made slight increases in their dividends.

The slowing up in business has been attended by decreased returns to the Government from customs, excise, corporation-profits taxes, excess-profits taxes, and the post office. This has been met in part by economies in army expenditures, in compensation of awards, in public works and building issues, in old-age pensions, and in the post office.

Railways Merger Completed.

Railway traffic receipts for the first quarter fell off to £1,002,063, as compared with £1,188,124 during the corresponding period of 1924—a decrease that is attributable largely to the reductions in passenger and freight rates which became effective on January 1, 1925. The consolidation of the Free State railways, comprising 2,077 miles formerly operated by 26 companies, into one operating company, known as the Great Southern Railway, has now been completed in its details.

Cost of Living Increased—Labor Conditions Improved.

The Government's cost-of-living index figure for mid-January was 195, as compared with 193 in mid-October. The per cent of increase between January, 1924, and January, 1925, was 3.7.

Labor conditions generally showed some improvement. Although the number of unemployed continued to fluctuate around 41,000, and although efforts of employers to reduce wages were opposed, labor adopted a more conciliatory attitude.

Construction Work Active.

Improved spring weather brought about an increase in construction work both in Dublin and in the provincial districts. The Government's efforts to stimulate building by the granting of subsidies and the remission of taxes on new dwellings appear to have started the country on a period of activity that will relieve the acute housing shortage which resulted from cessation of building during the World War and from destruction of property during the unsettled period following.

Tariff-Protected Industries Expand Output.

Industrial conditions in the Free State experienced no marked change. Confectionery and candle and soap manufacturers continued to expand their output, as the result of the protection afforded by the tariff. Boot and shoe production slowed up slightly early in March when one of the plants, which has expanded rapidly since the protective duties became effective, curtailed its staff and decreased its production. Breweries and tobacco factories continued the heavy output which characterized the last half of 1924. There was no improvement in the textile trade, and production of woolen cloth continued at a low level.

Under the budget for 1925-26 the protective system was extended to include household furniture, textiles, and ready-made clothing, and these trades are reported to have made preparations for increased production.

Government Finances of the Irish Free State

Based on reports from Consul General Charles M. Hathaway, Jr., and Consul Harold M. Collins, Dublin

The 1924-25 exchequer returns of the Irish Free State not only show the effects of the Government's efforts to retrench but reflect the economic condition of the country during the fiscal year just closed. Decreased receipts from customs, excise, corporations-profits tax, excess-profits tax, and the post office show a slowing up in business; at the same time, the much smaller proportion of supply-service expenditure attributable to the Army, indicates a more settled state of affairs throughout the country.

Deficit Incurred for Fiscal Year 1924-25.

Although revenues from nearly all classifications were less than in the fiscal year ended March 31, 1924, expenditures also showed a marked decline, but not sufficient to prevent a deficit of £523,020. Total revenues for the fiscal year just closed amounted to £26,948,114, or £4,466,114 less than in 1923-24; total expenditures dropped to £27,480,134, or £11,159,221 below those of the previous year.

"Other receipts," including moneys raised by the creation of debt and the repayment of temporary advances, brought the total receipts of the Government up to £31,473,626, or £17,502,141 less than in 1923-24. "Other issues," including temporary advances under the unemployment insurance acts, capital issues, Free State bills, ways and means advances repaid, and savings certificates paid off, brought the total issues by the Government up to £29,792,434, or £12,591,421 below those of the previous year. The balance in the exchequer on March 31, 1925, was £1,681,192, as compared with £3,394,512 on the corresponding date in 1924.

Excise Receipts Show Greatest Decline.

Revenue sources were less productive than in 1923-24. Customs declined from £8,243,000 to £7,738,000; excise, from £9,300,000 to £7,532,000; the post-office receipts, from £1,970,000 to £1,720,000; and miscellaneous receipts, from £2,357,294 to £1,241,610. The outstanding exceptions were income tax, which increased from £5,388,000 to £5,910,000, and motor-vehicle duties, which rose from £395,500 to £458,500.

The contraction in expenditures was less uniform. Central-fund services dropped from £3,226,199 to £2,997,587, the principal decline being in payments to Great Britain in respect of revenue adjustments (from £1,400,000 to £858,211) and in payments to road fund (from £523,220 to £761,298). Under supply services, army expenditures fell from £10,581,214 to £2,994,036; and property-losses compensation from £4,106,308 to £2,131,983. Old-age pensions, the post office, and personal-injuries compensation also took less.

Budget Estimates for 1925-26.

The budget of the Irish Free State for the financial year ending March 31, 1926, as presented to the Dail by the Minister of Finance, provides for revenues of £25,980,110 and expenditures of £30,128,980, of which £6,116,492 is classed as nonrecurrent and is to be provided for by borrowing. A sum amounting to approxi-

mately £2,465,000 has been allowed for reduction of taxes.

Tax Reduction in the Proposed Budget.

In the 1925-26 budget, as submitted, income tax is reduced from 5 shillings in the pound to 4 shillings. The grant to farmers, in relief of local taxes, is doubled; the exemption under the corporations profits tax is raised from £500 to £1,000; and the duties on tea, coffee, and raw cocoa are entirely abolished. The duty on sugar is reduced to a flat rate of 1 penny per pound, its imperial preference is abolished, and announcement is made that the Free State Government has come to an agreement with Belgian sugar interests to establish a beet-sugar factory to begin operations in the fall of 1926. Postal rates and telephone charges are reduced.

Protection System to be Extended.

The budget proposals call for new protective duties to be imposed on personal clothing and wearing apparel, including umbrellas and pocket handkerchiefs, blanketing, blankets and rugs; but not on rugs, bedsteads and furniture, empty glass bottles and jars, toilet soaps, soap powders and soap substitutes, including shaving soaps. The Minister of Finance estimates the revenue from the new tariff at £615,000. This sum is to be used for tax reduction.

Public Debt Increased.

On April 1, 1925, the Free State debt amounted to £13,918,000, as compared with £13,360,353 on April 1, 1924. A part of this debt represents advances to the unemployment fund, on which offsetting repayments are estimated at £877,700. The exchequer balance on April 1, 1924, was £3,395,000. Deducting the exchequer balance on April 1, 1925, would leave an outstanding debt of £11,679,161, as against £10,523,000 last year.

Consignment Contracts Between Sweden and Russia

"Foreign Trade," Moscow, March 31

Several contracts, covering consignment stocks to be carried in Russia by Swedish firms, were arranged by comrade Lazurkin, the director of the Sevzaptorg (Northwest Trading Co.), during a recent visit to Stockholm.

The firm "Person" is to supply knitting machines and parts. Payment for goods delivered will be by 12-month notes, without interest. Goods remaining unsold will be taken back at the firm's expense. The Svea Co. will supply machines, tools, apparatus, etc., on the same terms. The mechanical factory of Ahrens also will send a consignment stock of equipment for the matchmaking and tobacco industries, on the same terms, with a possible extension of an additional 12 months for notes.

All disagreements are to be submitted to the court of arbitration at Leningrad. These contracts have been approved by the commissariat of foreign trade.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

DUTCH EAST INDIAN IMPORT SITUATION

Trade Commissioner J. F. Van Wickel, Batavia, Java

A gradual and orderly improvement is taking place in the import trade of the Netherlands East Indies. From preliminary figures for 1924 it is apparent that the steady decline since 1920 in the value of goods imported into the islands was arrested last year. The increase over 1923 in value of imports for private account is conservatively placed at 20,000,000 florins. (Par value of Java florin is \$0.402; average for 1924, \$0.37.) This estimate is supported by the official statement of custom duties collected, the assertions of importers, and the fact that purchases of cotton piece goods, the most important single item in the import trade of the islands, increased nearly 12,000,000 florins over the 1923 value.

Customs Collections Advanced in 1924.

Custom receipts of import duties at the ports of Java and Madura during the year 1924 amounted to 40,946,267 florins, a gain of 2,214,068 over the 1923 figure. Collections at ports of the Outer districts for the first 11 months of the year totaled 16,398,734 florins, a gain of 2,091,098 over collections for the corresponding period of 1923. Assuming that December collections at the Outer possessions were not less favorable than those of December, 1923, the total increase in import duties for the islands in 1924 amounted to 4,305,200 florins, exceeding the Government's estimate by about 2,250,000 florins.

Provisional Returns of Trade—Petroleum Imports Advance.

Details of the import trade of the Outer possessions are not yet available, but the following comparisons are based on the provisional returns of Java and Madura for 1924. The foreign trade of Java constitutes about 85 per cent of the total trade of the Netherlands East Indies.

In the group of petroleum products kerosene imports, which come entirely from the United States, amounted to more than 29,000,000 liters in 1924, a gain of 1,000,000 over the previous year. Lubricating oil, the bulk of which comes from the United States, increased from 6,391 to 7,629 metric tons. Imports of vaseline, grease, paraffin, and asphalt also advanced, the latter from 2,535 to 6,323 metric tons, of which 4,814 tons came from the United States.

Automotive and Tire Imports—Chemicals.

In the automotive group, imports of trucks and tractors increased from 16 to 157, of which 35 were credited to the United States, against 4 in 1923, and 108 to Canada, against 1 in 1923. The number of passenger cars imported declined from 2,676 to 2,345. The United States continued to supply by far the bulk of these cars, but the number dropped from 1,656 to 1,333. Imports of automobile tires increased from 230,563 in 1923 to 289,922 in 1924. The largest number in both years came from France, which supplied 92,300 tires in 1924, followed by 85,500 from the United States. The value of automobile parts and accessories

imported advanced from 1,302,464 to 1,504,005 florins, the United States furnishing over 50 per cent of the total.

Chemical imports showed increases in most items, caustic soda rising from 2,650 to 3,172 metric tons, of which 1,200 tons came from the United States, against 1,882 from Great Britain. Sulphate of ammonia imports, totaling 111,947 metric tons, registered an increase of over 30,000 metric tons, most of which was the result of enlarged shipments from the United States.

Increase for Cotton Piece Goods and Silk Manufactures.

Imports of cotton piece goods in 1924 showed increases in all classes. Great Britain, Japan, and the Netherlands continued as the leading countries supplying the Netherlands East Indies with this important product. The value of silk manufactures imported advanced from 2,050,724 florins in 1923 to 2,604,013 in 1924, more than half the increase being attributable to enlarged imports from Japan, the chief country of origin. Woolen and half-woolen piece goods both registered decreases. Imports of the latter from the United States, however, increased by 2,770 florins. Jute and cotton yarns imported showed heavy increases.

Iron and Steel Imported.

In the iron and steel group imports of sheets, bars, and plates in 1924 almost doubled the previous year's quantity. Imports of these products from the United States, however, declined. Belgium led in supplying the market. A heavy increase in imports of wire nails in kegs brought the total from 145,241 to 325,077 kegs. This advance was almost entirely due to receipts of wire nails from Germany, which country has steadily increased its share from 27,152 kegs in 1922 to 246,389 in 1924. Imports of this item from the United States have fallen heavily since 1922 and were practically nil in 1924. Imports of galvanized roofing dropped from 7,202 to 5,668 metric tons. Tin plate, most of which comes from Great Britain, rose from 15,045 to 17,462 metric tons. The importation of copper sheets increased, but that of copper wire declined. Cement imports advanced from 1,028 metric tons in 1923 to 1,181 in 1924, Japan supplying more than 45 per cent of the total each year.

Foodstuffs—Other Imports.

Receipts of wheat flour, an important imported foodstuff, increased from 28,397 to 33,801 metric tons, the bulk, as previously, coming from Australia. Tinned milk imports registered a slight decline, while imports of canned and dried fish and meat products advanced. Considerably more rice was imported, but other food products showed little change.

Imports of wearing apparel remained, on the whole, about the same. Small wares, such as buttons, beads, and novelty jewelry, showed an increase of about 30 per cent over a total value of 9,000,000 florins in 1923. Dyestuffs, paints, and varnishes imported into the islands showed substantial increases in 1924 in practically every classification. Imports of laundry soaps

advanced 500,000 florins and of toilet soaps 45,000 florins.

Among imported products which registered declines in 1924 were electric and other lamps, matches, sewing machines—which dropped nearly 50 per cent—writing paper, cigars, tar, and coal. In view of the many conspicuous advances in Netherlands East Indian imports in 1924, however, these decreases did not detract from

the general tone of improvement which marked the islands' import trade for the year.

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

AMERICAN AND BRITISH TRADE WITH ARGENTINA

M. A. Phoebus, Latin American Division

From the American standpoint, Argentina represents one of the most contested markets in the entire Latin American field. In recent years, Argentine trade has expanded greatly, and competition—especially British—is at present keener for all lines of business than ever before. Trade just about tripled in value during the first decade of the present century, and since then it has again doubled, the total for 1900 having been valued at 268,085,481 gold pesos, for 1910 at 724,396,711 pesos, for 1921 at 1,420,663,000 pesos, while in 1924 it reached 1,840,104,000 gold pesos.

Trend of Argentine Trade.

Throughout these two and a half decades the relation of exports and imports remained practically the same, the value of the exports having always been slightly in advance of that of the imports until 1921, when, as a result of restricted foreign markets for native products and the overstocking with import commodities at inflated values, the Argentine balance of trade became unfavorable for the first time in the century. This unfavorable balance continued until 1924, when Argentina regained a sufficient favorable balance to wipe out the combined deficits of the three prior years. Imports for 1924 totaled 828,709,000 gold pesos, as compared with 868,430,000 gold pesos in 1923; while exports aggregated 1,011,394,000 gold pesos, as compared with 771,361,000 gold pesos for 1923; leaving a favorable trade balance last year of 182,685,000 gold pesos.

Britain's Share in the Trade of Argentina.

Great Britain holds first place in this Argentine trade. Even through the war and postwar years the United Kingdom retained its position, for although the United States exceeded it in the amount of goods shipped to Argentina during the war period, still Great Britain remained the most formidable competitor to American trade in that field, and by 1922 first place had been regained by British shipments to Argentina. Since that date, however, the balances have been by no means so sweeping as in the ante-bellum days.

The yearly exports of Argentine products to Great Britain, as pointed out by the American Weekly, of Buenos Aires, are greater than the British purchases from any other country except the United States. Latest official figures show an increase in the Argentine-British trade of more than £14,000,000 for 1924 as compared with official figures for the previous year. In fact, Argentina's exports to Great Britain are worth more than the British purchases from all other Latin

American republics combined, and also they exceed the value of imports from any dominion of the British Empire.

Products in Demand in Great Britain.

Chiefly, Argentina sends Great Britain grain and meat—wheat, corn, oats, and chilled and frozen beef, mutton, and pork—and receives in return manufactured articles and coal, 3,115,880 tons of which were shipped to Argentina by Great Britain in 1924 and which cost nearly £700,000 more than the Argentine coal imports from Great Britain in 1923. Argentina paid Great Britain £4,097,578 for coal in 1924, which was approximately two-thirds what the Republic paid for English manufactured cotton fabrics.

Argentina ranks third in the British wheat import trade, Canada and the United States exceeding it. For wheat alone Great Britain pays Argentina nearly half as much as Argentina pays for all imports from the United Kingdom, and for beef, mutton, and butter it pays more than Argentina's total expenditure for British goods. It is natural, therefore, that Great Britain looks for a reciprocation of these vast purchases proportionate with the requirements of the country.

The total trade between the two countries during 1924 amounted to £106,293,805, of which £79,099,778 was paid for Argentine products. In 1923 the trade totaled nearly £100,000,000, of which £64,947,920 was paid for Argentine products, as against £56,620,803 in the previous year. Great Britain sent £27,194,027 worth of merchandise to Argentina in 1924, as against £28,188,063 in 1923 and £22,668,618 in 1922.

British Lines Popular in Argentina.

Argentine imports from Great Britain include coal, china and earthenware, cement, iron bars and rods, galvanized sheets, tinned plates, cast-iron tubes and pipes, wrought-iron tubes and pipes, steel rails and other railway equipment, wire, wire manufactures, cutlery, machinery, yarns, piece goods, goods not in the piece, wool manufactured goods, worsted tissues, all-silk piece goods, linen piece goods, sacks and bags, boots and shoes, and other manufactured goods.

Although Argentina has made strenuous efforts to find some substitute for British coal, The American Weekly notes that purchases of coal continue to increase each year. In 1922, 2,021,092 tons were imported at a cost of £2,490,260; in 1923 the imports amounted to 2,461,074 tons at a value of £3,415,158;

and in 1924 imports reached 3,115,880 tons valued at \$4,097,578, from Great Britain alone.

Argentina's next heavy importation from the United Kingdom, following textiles and coal, is steel and iron products. Last year 80,930 tons of galvanized sheets were imported from Britain at a cost of £1,570,827. In 1923, 84,418 tons were brought in at a cost of £1,673,546. Imports of British tinned plates and sheets in 1924 reached £742,146, as against £604,916 in 1923 and £373,968 in 1922. Receipts of British steel rails amounted to £365,878 in 1924 compared with £62,772 in 1923, and £179,655 in 1922. The outlay for British locomotives last year was £256,904 as against £61,283 in 1923, and £386,707 in 1922.

Besides manufactured articles, Great Britain also sends some livestock to Argentina. In 1924, Argentine stock raisers paid £47,040 for British animals for breeding purposes, in 1923, £40,185, and in 1922, £127,305.

Competition of American Goods.

During the last three years the continued flow of American products to Argentina has been a cause of concern to British firms established there. The development in United States exports to Argentina has been due in large part to the elimination of undesirable American firms in export trade, to the superior quality of American manufactured products now being shipped, and to more direct relations between manufacturer and importer than was the case prior to the war.

More recently, British production costs, and consequently the prices of manufactured products, have been higher, so that they are making no apparent progress in displacing American competitive products, some of which are now very firmly established in the market. Great Britain does retain, however, the large trade in railroad equipment and materials since these Argentine utilities are largely British owned, and about 65 per cent of the mileage of the Argentine railways is under British management. The investment in the British lines approximates \$1,000,000,000, and that of French lines, next in importance, approximates \$125,000,000.

Comparative Export Figures.

The total of all British goods shipped to Argentina in 1924, amounted to £27,194,027, which, converted at the average rate of exchange for the year, \$4.42, gives \$120,197,600, as against \$116,997,569, the American figure for 1924. Comparative figures for the export movement of the two countries since 1922 when Great Britain recovered first place in the trade follow:

Exports to Argentina

Year	American	British	British	Conversion rate (average exchange)
1922.....	\$95,542,385	£22,668,618	\$100,421,978	4.43
1923.....	112,781,892	28,138,063	128,590,948	4.57
1924.....	116,997,569	27,194,027	120,197,600	4.42

Canada Also a Factor in Argentine Trade.

The growing trade of Canada, which now occupies fourth place among the exporting nations of the world, its oversea trade being exceeded only by that of Great Britain, the United States, and France, should be considered in connection with British competition. Trade between Canada and Argentina is larger than is generally supposed.

Nearly two years ago the Canadian trade commissioner to Argentina asserted that a very considerable percentage of certain American makes of automobiles then in Buenos Aires were the product of Canadian factories, as was also much rubber belting, canvas, and rubber shoes, and tire casings.

Other Imports from Canada.

Other imports from Canada were binder twine, spruce, and pine lumber, newsprint, paperboard, galvanized pipes and tubes, wire of various kinds, malt, many types of agricultural machinery, sewing machines, cement, drugs, dyes and chemicals, and calcium carbide—all important American export lines.

The list now includes other types of machinery, textiles, electric lighting sets, codfish, salmon, seed potatoes, apples, and domestic appliances. Increases have been especially noted in exports of cotton textiles and machinery other than agricultural.

Exports for the past three years have increased from \$3,233,423 (Canadian) in 1922 to \$4,445,041 in 1923, and to \$7,305,866 in 1924—the years in this case being those corresponding to the Canadian fiscal period, which ends in March.

Carload Movement Through Nuevo Laredo

Consul Harry L. Walsh, Nuevo Laredo, Mexico, April 27

A heavy falling off in the carload commodity movement through Nuevo Laredo occurred during January and February, though there was an offsetting increased movement during March which had the effect of maintaining the carload commodity movement for the quarter almost on a par with the average movement for this period during 1924 and 1923. Carloads moved in January numbered 442, in February 492, and in March 755, making a total of 1,689. The net loss for the quarter was about 4 per cent as compared with a like period for the two prior years.

Not included in this carload movement is an aggregate of 247 new box cars brought in during the quarter—48 in January, 70 in February, and 129 in March.

Imports from United States.

Building material formed a considerable portion of the quarter's imports from the United States, totaling 253 carloads, the leading items of which were lumber, roofing, and cement. Lumber imports alone aggregated 201 carloads and brick 14 carloads, as against 85 carloads of lumber and 9 of brick for the first quarter of 1924.

1924 Census of Cuba Shows Gain in Population

Consul General C. B. Hurst, Habana

The population of the Republic of Cuba has increased from 3,143,210 inhabitants at the close of 1923 to 3,368,923 at the close of 1924, according to statistics recently published by the national census bureau. The total is comprised of a white population of 2,294,115, a colored population of 830,791, and unclassified amounting to 244,017. The percentage of whites is 68.10, of colored 24.66, and unclassified 7.24.

GREAT VARIETY OF CIRCULARS ISSUED BY BUREAU

Many circulars in mimeographed form are issued by the bureau in addition to its various regular and special publications. These circulars are distributed to those interested, including persons and firms whose names are on the Exporters' Index, and copies may be obtained from the bureau or its district offices. The 60 circulars listed below were issued by 20 different divisions during the week ended May 19.

AGRICULTURAL IMPLEMENTS DIVISION

No. T-56. Market for Tractors in Germany.

AUTOMOTIVE DIVISION

No. 41. Automotive Foreign Market News Bulletin.

CHEMICAL DIVISION

No. 61-A. World Notes on Industrial Chemicals.

No. 61-C. World Notes on Drugs, Medicinals, and Toilet Preparations.

No. 61-B. Foreign Coal Tar Products Market News.

No. 61-D. World Notes on Paints, Varnishes, and Pigments.

No. 61-E. World Notes on Fertilizers.

COAL DIVISION

General Survey of Conditions in the Coal Industry as of May 1, 1925.

COMMERCIAL LAWS DIVISION

No. 82. Trading Under the Laws of Cuba.

No. 83—Comparative Law Series—May, 1925.

ELECTRICAL DIVISION

No. 367. Italy's Imports and Exports of Electrical Equipment from 1922 to 1924, inclusive.

EUROPEAN DIVISION

No. 41. Economic and Trade Developments.

FAR EASTERN DIVISION

No. 37. Far Eastern Trade News.

FINANCE AND INVESTMENT DIVISION

No. 3. European Financial Notes.

No. 7. Far Eastern Financial Notes.

FOODSTUFFS DIVISION

Foodstuffs 'Round The World—Foreign Notes on Meats, Fats, Oils, and Livestock.

Foodstuffs 'Round The World—Fresh Fruits.

Foodstuffs 'Round The World—Fishery News.

Foodstuffs 'Round The World—Grain and Grain Products.

Foodstuffs 'Round The World—Tropical Products.

Foodstuffs 'Round The World—Canned and Dried Fruits.

LATIN-AMERICAN DIVISION

No. 52. "Latin America at a Glance."

LUMBER DIVISION

No. 34. United States Tariff Drawback Provision on Box Shooks.

No. 82D. Estonian Government Encourages Rubber and Tea Chest Manufacturing.

No. 437. Wooden Houses for the United Kingdom.

No. 446. Plasterers' Lath Requirements in the West of England.

No. 448. Wooden Houses—United Kingdom and Greece.

No. 451. Lumber Press Releases, two weeks ending April 25, 1925.

MINERALS DIVISION

No. 36. Foreign Trade Notes.

No. 37. Foreign Trade Notes.

PAPER DIVISION

No. 35. "Side Runs" of the Paper Trade.

No. 36. "Side Runs" of the Paper Trade.

No. 70. The Polish Chemical Pulp Industry.

No. 72. Foreign Paper Trade of the United States during 1924.

RUBBER DIVISION

No. 873. Canadian Tire Exports Heavy during first quarter of 1925.

No. 874. Canadian Exports of Rubber Footwear during the first quarter of 1925.

No. 875. Tire Exporters' Weekly News Letter.

No. 877. Retail Tire Prices Increases in France, Italy, and Belgium.

No. 878. French Tire Exports during first quarter of 1925.

No. 879. French Rubber Footwear Exports during first quarter of 1925.

No. 880. Retail Tire Prices Increase in Switzerland.

SPECIALIES DIVISION

No. 124. Physical Training in Uruguay, and Market for Athletic Equipment.

STATISTICAL DIVISION

Statement No. 61. Month of April, 1925—Gold and silver imported into and exported from the United States, by countries.

STATISTICAL PRESS NOTICES

Quantity and value of specified kinds of cotton cloth imported at New York, Boston, Philadelphia, Chicago, and San Francisco during April, 1925.

Imports of raw wool at Boston, New York, and Philadelphia during the week ending May 9, 1925.

Imports of wheat from Canada into the principal northern border ports during the week ending May 9, 1925.

Exports of grains and flour from the principal ports of the United States to foreign countries during the week ending May 16, 1925.

Exports of pork products from principal ports of the United States during the week ending May 2, 1925.

Statement of kinds of wool fabrics imported at New York, Chicago, Philadelphia, Rochester, and Boston during April, 1925.

Exports of pork products from principal ports of the United States during the week ending May 9, 1925.

Total values of imports and exports of the United States.

Exports of grains and flour from the principal ports of the United States to foreign countries during the week ending May 9, 1925.

TEXTILE DIVISION

No. 23-G. Comparisons of International Cotton Grey Cloth Prices.

No. 105-B. What the World's Cotton Goods Markets Are Doing.

No. 128-D. Weekly Cotton Service Bulletin.

No. 129-D. Weekly Cotton Service Bulletin.

No. 382. United States Imports for Consumption of Countable Cotton Cloths during the month of February, 1925.

TRANSPORTATION DIVISION

No. 11. 110 Meter Gauge Bogie Steel High-Sided Wagons.

No. 24. Foreign Shipping News.

No. 24. Foreign Railway News.

Frigorifico Slaughter in Uruguay

There were 69,400 cattle slaughtered in the frigorificos of Uruguay during April, making a total of 1,858,954 for the season beginning October 1, 1924, according to a cable dated May 4 from Acting Commercial Attaché Law B. Clark, Montevideo. Exports during April included 59,000 dried hides and 48,000 salted hides, all of which were sent to Europe.

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The Department of Commerce announces the following further figures covering basic industrial and commercial movements in April:

Iron and Steel—Textiles—Automobiles.

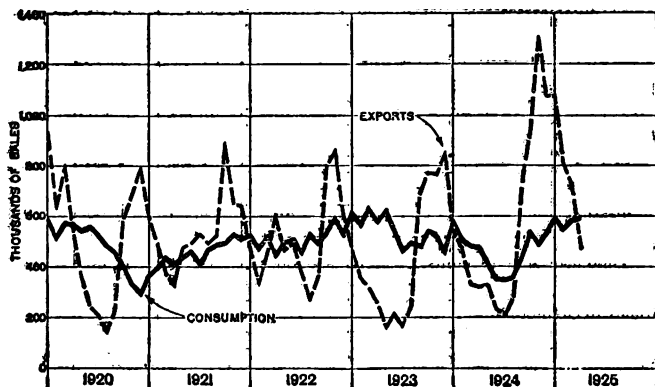

Though higher than a year ago, industrial activity in April, as seen from reports made to the Department of Commerce by the iron, steel, zinc, tin consuming, and silk textile industries was lower than in March. Consumption of cotton by textile mills, on the other hand, was greater in April than in either the previous month or a year ago. Exports of raw cotton, though seasonally smaller than in March, were about half again as large as a year ago, making a total of 7,444,575 bales exported during the nine months ended April 30. Domestic consumption of cotton during the same period totaled 4,669,215 bales. Automobile production, as reflected by factory shipments was larger than in either the previous month or a year ago, while the April shipments of completed railroad locomotives, though larger than a year ago, were smaller than in March. Wholesale prices of iron and steel and cotton and wool and their products declined from the March levels.

Trade and Finance.

Sales by mail-order houses and 10-cent chain stores were larger than in either the previous month or a year ago, while bank clearings, both in New York City and for the rest of the country, were smaller than in March, but larger than in April, 1924. Loans, discounts, investments, and net demand deposits of Federal reserve member banks continued to mount, while the earning assets of Federal reserve banks were smaller than at the end of March. Interest rates for both commercial and speculative funds showed practically no change from those which prevailed in March. Stock prices averaged lower than in March, while defaulted liabilities of failing business firms, though smaller than a year ago, were larger than in March.

RAW COTTON CONSUMPTION AND EXPORTS

(April, 1925, latest month plotted)

Data from Survey of Current Business.

The following table gives such data from the May issue (No. 45) of the Survey of Current Business as have been received up to May 14, 1925.

All items given in the following table correspond with similar information in the issue of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the Survey, where specific descriptions of the data and their sources are given. In addition to figures given from Government sources, there are also incorporated for completeness of service the figures from other sources generally accepted by the trades, the authority and responsibility

for which are noted in the monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for \$1.50 per year.

TRANSPORTATION

(Continued from p. 487)

Exhibits Available

Persons interested in the following reports may obtain them from the Transportation Division or through the district and cooperative offices of the Bureau of Foreign and Domestic Commerce, by requesting the specific exhibit number.

27009—The Hague.—Inland waterways of the Netherlands; a comprehensive report, with traffic statistics and outline map attached. (Transmitted by P. J. Van Hees, secretary to commercial attaché, The Hague, April 16.)

231—Ottawa.—Proceedings of the Canadian preliminary committee on ocean freight rates. (Transmitted by Assistant Trade Commissioner W. J. Donnelly, Ottawa, May 5.)

168554—Budapest.—Report on Hungarian State railways for the calendar year 1924. (Transmitted by Consul Walter S. Reineck, Budapest, April 10.)

27273—Brussels.—Detailed report on Belgian railway-car construction plants, covering equipment, labor, output, etc. (Transmitted by Lucien Putman, clerk to trade commissioner, Brussels, April 23.)

168728—Coblenz.—Survey of railway communication in freight rates; a comprehensive comparison of the German freight rate situation under the Dawes plan with that in 1914. (Transmitted by Vice Consul C. E. Macy, Coblenz, April 7.)

27382—Riga.—Summary of Latvian railway statistics for 1924. (Transmitted by Commercial Attaché C. J. Mayer, Riga, April 25.)

169027—Saloniki.—Survey of railway communication in Greece. (Transmitted by Consul Robert F. Fernald, Saloniki, March 2.)

169432—Hongkong.—The Port of Hongkong; official report of the port engineer to the Hongkong Government. (Transmitted by Consul A. E. Carleton, Hongkong, March 24.)

169198—Durban.—Natal's electrified railways; report on services, capacity, equipment, projects, etc. (Transmitted by Consul Harry M. Lakin, Durban, March 17.)

Freight Cars Wanted by South Indian Railway

The directors of the South Indian Railway Co. (Ltd.) have announced that they are prepared to receive tenders for 110 steel, high-sided, bogie freight cars of meter gauge. Specifications and forms of tender are available at the company's offices, 91 Petty France, Westminster, S. W. 1, London.

A charge of £1, which will not be returned, will be made for each copy of the specification. Tenders addressed to the "Chairman and Directors of the South Indian Railway Co. (Ltd.)," marked "Tender for

wagons," must be left with the managing director not later than noon on Friday, June 19, 1925.

Commercial Services Rendered by Bureau and District Offices¹

Correspondence Division, R. H. Brasel, Chief

The following table shows the number of commercial services rendered by the Bureau of Foreign and Domestic Commerce in Washington and its 10 district offices in the United States during the period July 1, 1924, to May 2, 1925, and the week ended May 9, 1925:

Class	Period July 1, 1924, to May 2, 1925	Week ended May 9, 1925
Total services rendered.....	1,695,048	144,463
(The above total includes the following classified services in addition to many others which could not be identified under a specified group.)		
Commodity:		
Agricultural implements.....	40,092	571

¹ Does not include services rendered by foreign service of the bureau (32 posts, 80 representatives) and by the cooperative offices maintained by the bureau in 32 chambers of commerce and boards of trade in the United States.

² Including petroleum.

³ Information reserved from "Foreign trade opportunity" announcements printed in each issue of the COMMERCE REPORTS. (Name and address of foreign inquiries interested in the purchase of American goods, including references, cable addresses, and other details.)

FOREIGN TRADE OPPORTUNITIES

Reserved information may be obtained from the Bureau and its district and cooperative offices by firms and individuals on the Exporters' Index upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: *Reported by American consular officers; †Reported by commercial attachés and trade commissioners; ‡Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

INVESTIGATION BY THE UNITED STATES TARIFF COMMISSION

PUBLIC NOTICE OF INVESTIGATIONS BY THE UNITED STATES TARIFF COMMISSION UNDER THE PROVISIONS OF SECTION 315 OF TITLE III OF THE TARIFF ACT OF 1922

Investigation No. 44 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

BOBWHITE QUAIL

The United States Tariff Commission, on this 19th day of May, 1925, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922, and under the powers granted by law, and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the following articles included within the class or kind of articles provided for in paragraph 711 of Title I of said tariff act, namely: Live bobwhite quail, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, That all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the

office of the commission in Washington, D. C., or at such other place or places as the commission may designate on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, That public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 19th day of May, 1925.

JOHN F. BETHUNE, Secretary.

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

JULIUS KLEIN; Director Bureau of Foreign and Domestic Commerce

Editorial Board: Griffith Evans, Grosvenor M. Jones, E. Dana Durand, Eugene S. Gregg, and Archibald J. Wolfe

Review of American Foreign Trade in 1924

Exports of merchandise by the United States in 1924 totaled \$4,591,000,000, an increase of 10 per cent over 1923. Imports amounted to \$3,611,000,000, a decrease of 4.8 per cent from the exceptionally high figure of the preceding year. The excess of merchandise exports over imports increased more than two and one-half fold, notwithstanding which there was some decline in the net excess of imports of gold, and toward the end of the year there was an excess of exports of that metal, attributable to a loan to Germany. The large excess of exports of merchandise was in considerable part financed by American loans to foreign countries.

The increase in exports was largely attributable to greater shipments of wheat and rye at higher prices and greater shipments of cotton. However, finished manufactures increased by 7.5 per cent, principally in automobiles, machinery, and petroleum products—shipments of cotton manufactures, paper, boots and shoes, and heavy iron and steel products falling off somewhat in value. The decrease in iron and steel was in great part due to reduced demand in Canada on account of the poor harvest there. The growth in exports was chiefly in trade with Europe and South America, shipments to North America and Asia being virtually stationary in value.

The increase over 1923 in the value of exports took place in the face of some decrease in average export prices. On the other hand the decline in imports was partly attributable to lower average prices of imported goods, notably of rubber, silk, and sugar. The principal quantitative decreases of imports were in hides and skins and wool, though there were also declines in numerous articles of less importance.

The trade of the United States continues to show a large excess over pre-war figures, even after eliminating the effect of the difference in prices. In this respect our situation contrasts sharply with that of leading European countries, which, despite considerable recovery in the last few years, are still exporting much less quantitatively than before the war. The value of our domestic exports was, in 1924, 111 per

cent greater than the pre-war average (1910-1914 fiscal years). Had prices been the same (calculating both periods on the basis of 1923 prices), the increase in 1924 over pre-war would have been 26 per cent. The value of imports in 1924 was 113.8 per cent greater than before the war, about the same increase as for exports. Import prices, however, show less advance over pre-war levels than export prices, principally because the price of rubber, one of our most important imports, has fallen greatly. On the basis of constant prices 1924 imports would show an increase of 50.2 per cent over pre-war. This increase represents the advancing standards of living in the United States, demanding constantly greater quantities of tropical and other exotic foodstuffs and raw materials.

Notwithstanding the marked increase in our exports as compared with pre-war years, and especially in those of manufactured goods, exports as a whole and exports of manufactured goods do not constitute a larger proportion of our total production of all articles or of manufactured articles than before the war. This fact is attributable to the great expansion of our domestic market. The prosperity of the United States has enabled its people to produce and consume increasing quantities especially of highly elaborated goods, while the depressed economic situation of many foreign countries holds down their consumption.

These facts are presented in Trade Information Bulletin No. 332, "Foreign Trade of the United States in the Calendar Year 1924," just published by the Bureau of Foreign and Domestic Commerce. This is the third of a series of annual bulletins summarizing in compact form the foreign trade of the United States. These bulletins form the basis of the chapter on foreign trade in the annual Commerce Yearbook. The present bulletin presents comparative statistics for 1924 and preceding postwar years, as well as averages for pre-war years, covering the total exports and imports and the trade by continents and countries, by great economic classes, and in the principal individual commodities. There is also a discussion of the changes in the physical volume of trade and the relation between the value of exports and the value of domestic production.

[JULIUS KLEIN.

Speed Up Shipments

A number of instances have recently come to the attention of the Bureau of Foreign and Domestic Commerce which demonstrate forcibly the necessity for prompt shipment of goods by American exporters. This is particularly applicable to shipments destined to Canada.

Trade Commissioner Lynn W. Meekins, Ottawa, points out that one of the most serious handicaps to trade between the United States and Canada is the uncertainty of the delivery of shipments. He cites an instance where, on orders for glassware placed simultaneously in Czechoslovakia and in the United States, the shipment from Czechoslovakia arrived 10 days in advance of the consignment from the United States.

Improper routing of shipments, due in some cases to the failure to consider geographical location, and in others to the failure of shippers to comply with shipping instructions, partially explain the delay. In a recent report, Consul Elton M. Hoyt, Yarmouth, Nova Scotia, states that merchandise ordered from central Canadian cities arrives in Yarmouth at least one week in advance of goods ordered at the same time from American firms a like distance away, and cites an instance where the distance between the city of the American shipper and Yarmouth was 360 miles by sea, yet the shipper routed the consignment of goods to Yarmouth via Montreal, a six-day rail journey, instead of following instructions and routing the goods via the sea route, a three-day journey.

If American exporters will give careful attention to the routing of their shipments and endeavor to speed up delivery, foreign consignees will have less cause for complaint, and competitors will be less likely to capture orders requiring prompt shipment.

[FRED A. CHRISTOPH.]

Australia Using More American Goods

Australian-American trade continues to grow at a rapid pace. Our exporters were able during 1924 to supply more than 23 per cent of the Commonwealth's total overseas needs as against less than 22 per cent during the preceding year, and in return the United States took larger amounts of Australian commodities, according to figures just supplied to the bureau's Melbourne office by the Commonwealth department of trade and customs. About two-thirds of the Commonwealth's total increase in imports was accounted for by the increase in receipts from the United States, placing us in the position of supplying more than half as much as Great Britain.

Total imports into Australia during the year 1924 reached £145,235,648, against £136,224,500 for 1923.

Of the 1924 imports, Great Britain supplied £66,621,154, or 45 per cent of the total, as compared with 49 per cent during the preceding year; the United States, £34,378,610, or over 23 per cent of the total, against less than 22 per cent for 1923; Japan, £4,000,644, or about £565,000 less than during the preceding year; and Canada, £3,972,027, a gain of £406,000. Imports from the Netherlands East Indies were considerable during the latter part of 1924, amounting, it is estimated, to about 3 per cent of the total.

From the above figures two facts are deducible. First, Australia's importers are looking to areas outside the Empire for an increasing proportion of their needs, and, second, the United States is gaining ground in the market while Great Britain would appear to be losing somewhat.

[EMMETT A. CHAPMAN.]

Follow Up Your Trade Opportunities

Exporters responding to "trade opportunities" from foreign countries enter into correspondence with the firm for which the "opportunity" is published, but if for any reason negotiations fall through the whole project of selling is often abandoned. In many cases, however, although it proves impossible to sell through the person or firm that made the original inquiry, a very favorable opening might be found through some dealer better equipped to handle the goods. The question is, therefore, how to get in touch with the man who will be able to provide suitable disposition. The consul or the Department of Commerce representative who transmitted the trade opportunity is frequently able to provide the answer to this question.

If a copy of the letter is sent, with catalogues, to the official who submitted the trade opportunity he will be able to follow up the matter personally and, in case the original negotiations fail, may find an agent capable and desirous of handling the line. The American consul at Tenerife, Canary Islands, affords an illustration of this situation in the case of a certain specialty. This product is at present sold in the islands on a price rather than a quality basis, and the merchant on whose behalf the trade opportunity was published considers American prices too high. It is very likely, however, that some other dealer could be found by the consul who would develop the market for the American product on a quantity basis if he were provided with the necessary catalogues and other information.

The submission of a trade opportunity is a fairly clear indication that there is a good potential market for the product in question. There is no reason for discouragement if the first attempt to place goods is unsuccessful. With proper pushing, which the American trade representative is able and willing to give if suitably documented, a satisfactory distributor and a profitable market can probably be found.

[P. M. COFF.]

World's Commercial News in Brief

The following are brief items compiled from data cabled by Government representatives stationed abroad, from official foreign publications, and from other sources. Countries included in the "Monthly Cable Reviews" are omitted from this section.

European Economic and Trade Developments

For reasons of Bureau administration, this heading includes also Canada

CANADA

Manufacturing operations are expanding in the pulp and paper and the automotive industries. Steel mills will be engaged for another month on present rail orders. Some large cotton manufacturers report increased earnings. Construction activity appears to have increased in all Provinces. May wheat in the Winnipeg market reached a high level of \$1.94 per bushel on May 18. Spring-wheat flour at Montreal was quoted on May 15 at \$10 per barrel. Fair orders have been received from the British West Indies, and large shipments have been made from Vancouver to Japan. The visible supply of wheat in Canada for the week ended May 16 was 43,087,000 bushels. Germany is now the third largest market for Canadian exports, with purchases of nearly \$10,000,000 during the last fiscal year. The largest single item was flour.

CZECHOSLOVAKIA

The bill creating a national bank of issue and providing for a loan of \$50,000,000 is reported to have been passed and signed. It is expected that the bank will be organized to begin business during the autumn. The foreign trade of Czechoslovakia for the first quarter of 1925 showed a favorable balance of \$16,000,000, which is over twice the favorable balance of the first quarter of 1924. There was an increase in imports, chiefly of food and raw materials, but a greater increase of exports, mainly of textiles and sugar.

FINLAND

The money market has been somewhat easier during the last month, due in part to a recent \$10,000,000 loan and in part to increasing receipts from Finnish exports. In view of this improvement, it is locally believed that the official discount rate may be slightly lowered from its present position at 9 per cent. Note circulation is being gradually reduced, and loans of the Bank of Finland are being contracted; at the same time, foreign exchange reserves of the bank are maintained well above a billion marks. During the first quarter of 1925 exports were more than 200,000,000 marks higher than during the same period in 1924. Imports increased by about 80,000,000 marks, thus reducing the import surplus considerably. This situation will assist in the projected currency revaluation.

FRANCE

Revenues from normal and permanent sources during April renewed the favorable showing made in January, after a temporary decline in receipts during February and March. Tax receipts in the first four months of the year have increased somewhat more than a billion francs over the corresponding period of

1924. Uncertainty over impending tax measures has been instrumental in checking trading activity on the Paris Bourse. Trade for the first four months showed an export surplus of about 1,600,000,000 francs. The area sown to winter and spring wheat and rye is somewhat larger than last year, and the condition of the crop is reported better than at this season in 1924.

GERMANY

The tariff bill now before the Reichsrath provides for a variety of heavy duties, which may seriously affect American exports of food staples and highly manufactured goods. Among those articles principally affected are flour, grains, frozen meat, canned meat, fruits, vegetables, condensed milk, typewriters, calculating machines, cash registers, tractors, and automobiles. Several of these products have previously entered duty free. This projected tariff is designed in large measure to stimulate German agriculture, in order to reduce the present serious import surplus and to protect present domestic production of pig iron, raw steel, and finishing industries not at present capable of meeting foreign competition.

GREAT BRITAIN

The Miners' Federation has withdrawn its demand for improved wages and hours, pending a complete survey of the coal industry by a joint miner-and-owner committee. It is generally agreed that the industry must be improved, but it is possible that owners will be asked to effect economies in their organization and distribution. The industrial atmosphere is considerably cleared by this prospect of an amicable settlement of a major economic issue.

GREECE

A considerable rise in the drachma since the slump in February and March has seriously affected tobacco buying. Refugee sowings of cereals in Macedonia may bring the largest wheat crop that region has ever had. It is reported that tobacco planting will be larger than ever this season. Sericulture in Macedonia is in excellent condition. Some 2,000 looms are said to be operating in the rug industry.

NETHERLANDS

An excellent season for sheep raising and for the growing of flower bulbs seems to be assured, together with a generally favorable crop outlook. Both prices and production costs for agricultural products have decreased. The turnover is consequently larger, and the purchasing power of Dutch farming districts has been stimulated. Unemployment is steadily declining,

and industrial progress is maintained except in the coal industry, where large stocks are depressing prices. Both retail and wholesale prices are declining.

ITALY

Italian security markets have apparently recovered from the depressing effects of the regulatory decrees issued during the spring. Trading is now active on a rising market. The port of Trieste is to have a new freight service between the Mediterranean and the Pacific.

LATVIA

The money market continues depressed. Foreign trade is still producing an excess of imports, with the result that holdings of foreign exchange within the country are being depleted. Sales of flax by the Government monopoly are not considerable, and prices are low. The lumber market still suffers from the lack of water for any extensive floating of timber.

POLAND

Arrangements have been concluded to fund the debt to the United States of \$179,000,000. The Polish Government has called for the redemption on July 1 of \$700,000 of the 8 per cent loan recently pledged here. A commercial treaty has been signed with Czechoslovakia, containing annexes covering tariff and railway conventions. The issue of 5-zloty silver coins has begun. After May 31 the privilege of exchanging Polish marks into zloty is to be withdrawn. Industry in general has begun to recover, although the wool industry is still depressed by inadequate working capital and high credit rates. In order to facilitate exports railroad rates on export commodities were reduced on May 1, particularly on coal, metals, chemicals, and sugar.

RUMANIA

An announcement of the State debt places the foreign portion at 1,750,000,000 gold lei and the internal portion at 31,000,000,000 lei. The latter is being steadily reduced, and no new borrowings from the State bank have been made since 1922. Exports of lumber and imports of wheat and cotton grey goods have recently become more active.

SOUTH AFRICA

The gold standard was reestablished on May 18. The immediate effects were not important, inasmuch as the action had been anticipated. Business shows a little improvement, and changes in the Union's tariff policy are causing some local uneasiness. Trade in motor cars is brisk, stimulated by displays at recent agricultural shows. The demand for agricultural implements has been heightened by the excellent crop outlook. Building activity is brisk in all centers, and the demand for lumber is good.

SWEDEN

The volume of business has fallen off with the recent decline in prices. Various export industries, particularly paper, wood pulp, and iron ore, have advanced orders sufficient to insure full operation during the entire year. Lumber sales are somewhat higher than at this time last year, but there has been an appreciable decline in the sales during May. Finnish and Russian competition are depressing prices. The foreign exchange reserves in Sweden have been reduced, in order to offset the unfavorable balance of trade and to maintain the position of the crown. Loans and discounts are being contracted.

Far Eastern Trade News

JAPAN

Preliminary returns of Japan's foreign trade for the second 10 days of May show exports of 55,000,000 yen and imports of 66,000,000, a decline of 1,000,000 in exports and an increase of 3,000,000 in imports compared with the previous 10-day period according to the weekly cable from Acting Commercial Attaché Frank Rhea, Tokyo. These figures bring the totals for the first 20 days of May to 110,000,000 yen for exports and 129,000,000 for imports—a very favorable showing in comparison with the corresponding period of April when the totals were 112,000,000 and 176,000,000 yen for exports and imports, respectively.

The continued heavy excess of imports is reflected in Japan's gold reserve which totaled 1,458,000,000 yen at the close of April—a decline of 9,000,000 in comparison with March and of 31,000,000 since the end of January, the last previous period for which returns are available. The entire decline during April was in gold held abroad, domestic reserves having remained unchanged at 1,175,000,000 yen while foreign holdings fell to 283,000,000 against 292,000,000 at the close of March. Holdings of the Bank of Japan declined from 1,079,000,000 yen to 1,073,000,000 while Government reserves dropped to 385,000,000 against 388,000,000 the previous month.

CHINA

Inactivity continues to be the predominant feature of China markets, according to the weekly cable from Assistant Commercial Attaché A. H. Evans, Peking. Practically all import and export markets in Shanghai are dull, with the exception of egg products and paper. The cotton piece-goods market continues quiet, with lower prices prevailing. The political situation remains unchanged in south China, and little activity is noted in the principal markets. The consumption tax on kerosene is still being imposed, and in consequence sales by foreign companies are being restricted. The illegal collection of a tax on flour by unauthorized soldiers has seriously affected this market in Canton. Conditions in Peking are unchanged. Trade is still hampered by the disorganized condition of the north China railways.

PHILIPPINE ISLANDS

The Philippine hemp market for United States grades continued dull during the week ended May 23, according to cabled advice from Assistant Trade Commissioner E. B. George, Manila, May 22. Grade R was priced at 45 pesos per picul of 139 pounds, and grade JUS at 24.5 pesos. The price of JUK recovered to 22 pesos, but has again declined to 21 pesos, with

the market quiet. Copra prices eased off during the week, due to still further restricted buying. Resecado was quoted at 14 pesos per picul on the basis of delivery at Manila. Copra production continues low. Sugar mills in Luzon are approaching the end of the grinding season, and the majority of the mills are expected to complete operations within a month.

INDIA

Indian business continued quiet during the week ended May 23, according to a weekly cable received from Trade Commissioner Donald Renshaw, Bombay. The action of the Imperial Bank in reducing the discount rate from 7 to 6 per cent during the week is expected to relieve the present money stringency and to facilitate the movement of oversea shipments. Lower rates have been expected for some time owing to the Imperial Bank's improved condition. At the middle of May a substantial decrease had been made in note circulation, one-fourth the amount borrowed from the currency department against inland bills had been repaid, and the percentage of cash to liabilities had been increased to 18.6. The Indian coal committee, which has been looking into the coal situation, has indicated that it will recommend some form of relief for the coal interests.

NETHERLANDS EAST INDIES

Tentative figures of the Netherlands East Indian budget has been increased to 40,000,000 florins (\$16, services, according to a cable from Trade Commissioner J. F. Van Wickel, Batavia, Java, May 24. This is the first time since 1912 that a deficit has not appeared in this service. The entire deficit of the 1926 budget, amounting to 49,000,000 florins (\$19,698,000 at par exchange of \$0.402) is chargeable to extraordinary services and naval extension. Two proposed bills, however, would increase this deficit—the renewal of the ocean mail contract, by 870,000 florins (\$349,740), and establishment of a new West Java government and Lampongs (southern Sumatra) colonization, by 1,750,000 florins (\$703,500). The deficit of the 1925 budget has been increased to 4,000,000 florins (\$16,080,000). Both of these budgets, however, represent real achievement on the part of government financiers, owing to the absence of large amounts of back taxes.

AUSTRALIA

It is being proposed in Australia that the 6,500,000 bales of wool which remain from the last clip be turned over to the British-Australian Wool Realization Association for disposal, in an effort to stabilize prices and prevent losses to producers, according to a cable from Trade Commissioner E. G. Babbitt, Melbourne. It will be recalled that BAWRA did excellent work in disposing of the surplus wool following the war, when large quantities were fed into the market without seriously affecting current quotations or reduction of flocks. The wheat situation, which has been upset for some time, shows improvement. Seaboard prices were running at about 6s. per bushel during the week ended May 23.

NEW ZEALAND

Business conditions in New Zealand have continued to improve during the past month, and the trade out-

look is bright, according to cable advices from Consul General W. L. Lowrie, Wellington. The epidemic of infantile paralysis which has been troubling certain sections of the country for several months has ended, and labor conditions are satisfactory. The wool clip is finished, and prices, although considerably lower, are still remunerative to the producer. Wheat is being held for higher prices.

Trade with oversea markets during April was somewhat under that of the preceding month. Imports reached £4,000,000, as compared with £4,270,000 during March, while exports declined from £7,800,000 in March to £6,900,000 in April. Of the imports £2,000,000 originated in the United Kingdom and £670,000 in the United States, as compared with £2,400,000 and £600,000, respectively, during March. Of exports during April £5,700,000 went to the United Kingdom and £615,000 to the United States. Automotive imports from the United States are somewhat improved.

Improvement in Tunis

General business conditions in the Tunis Protectorate are fair, with a rather brisk seasonal retail activity. The trade is confining its purchases strictly to immediate needs, as the country has not fully recovered from the setback of last year's unfavorable cereal-crop and three successive years of mediocre yields of olive oil.

The mineral wealth of Tunis is being steadily exploited, but progress is hampered by the lack of fuel for refining minerals where mined. Experimental drillings for oil have thus far been unproductive.

Agricultural conditions were favorable to the end of March, with good rains between March 15 and April 1, which helped both cereal crops and pasturage. It is too early, however, to make any estimate of the probable crop yield this year.

Statistics for 1924, recently issued by the local Direction General of Agriculture, Commerce and Colonization, show an encouraging advance over 1923 in all the main export commodities except olive oil. The important items that registered an increase are phosphate, iron, lead and zinc ore, wine, dates, alfa, and sea salt. The increase in export trade despite unfavorable local conditions indicates a fundamentally sound economic basis, which will enlarge shipments still further if present agricultural prospects are realized.

The total import trade in 1924 was valued at 928,000,000 francs, an increase of 110,000,000 francs over 1923; exports reached 582,000,000 francs, or an advance of 28,000,000 francs. (Consul Chas. B. Byland, Tunis, April 22.)

Artificial Flower Factory in Porto Rico

A New York manufacturer of artificial flowers is opening a similar factory in Porto Rico. Rooms have been secured and workers are being engaged. It is his intention to employ eventually about 500 experienced hands. The product will be shipped to the United States. (Trade Commissioner L. W. James, San Juan, May 12.)

MONTHLY CABLE REVIEWS

EUROPE

Samuel H. Cross, Chief, European Division

Austrian Adverse Trade Balance Cut in Half

Based on cable from Commercial Attaché H. Lawrence Groves, Vienna, May 21

Industrial and commercial activity in Austria increased in May, following the reduction in the official rate of discount and easier money conditions. The Austrian National Bank further increased its per cent of cover, the sound-money reserve on May 15 being 44 per cent of the amount of circulation and deposits. This compares with 42 per cent on April 15 and with 40 per cent on March 15. Savings deposits increased during April by about \$3,000,000, as usual.

Trade Balance Improves—Exports to United States Less.

Imports into Austria for January and February combined were valued at \$51,600,000 and exports at \$36,200,000, leaving an unfavorable trade balance of only \$15,400,000. This compares with an unfavorable balance of \$37,800,000 for the corresponding months of 1924 and about the same amount for November and December and for the monthly average of 1924.

Exports to the United States, as declared through the American consulate and reported by Consul Heingartner in Vienna, decreased sharply from \$590,000 in March to \$374,000 in April.

Large Unfilled Orders in Key Industries.

The cotton spinners had unfilled orders at the end of March amounting to 14,500,000 pounds, the highest record made since the war. Unfilled orders of iron and steel at the end of April amounted to 40,000 tons, a reduction from 48,000 tons at the end of March but higher than any month in 1924, except January.

Production figures of other important commodities are satisfactory; that for lignite in March was 260,000 tons, or about the same as for the corresponding month last year and considerably more than the monthly average of 231,412 for last year. The March production of paper reached 16,000 tons, and of chemical wood pulp 14,500 tons—each more than in any month of the year 1924.

Prices Lower—Unemployment Decreases.

Prices continue to decline, as appears by the weighted official index of wholesale prices, which stood at 138 on May 15 (1914 prices as 100). This represents a steady decline from a peak of 147 in January.

The index of stock quotations on May 13 stood at 683, as compared with 710 at the middle of April.

Unemployment further decreased to 141,000, as against a peak of 190,000 in February.

Norwegian Financial Conditions Show Improvement

Based on cable from A. E. Fenselau, secretary to commercial attaché, Copenhagen, Denmark, May 21

Norwegian financial conditions showed further improvement during the past month, as indicated by the reduction of the discount rate, the rise of Norwegian exchange, and contraction in the note circulation and loans. A high degree of industrial operations is maintained, but some uneasiness is being felt in connection with the gradual decline in prices and the existing high wages. Foreign trade is very brisk, and the trade balance shows much improvement.

Financial Readjustments to be Effected.

An announcement has been made by the Bank of Norway that active support will hereafter not be rendered to banks which are not in a position to continue independent operations. Greater clarity is now being attained in the banking situation, and some progress is being made in the creation of new institutions to replace those under liquidation. This work will be facilitated by the reduction that was made in the discount rate, from 6½ to 6 per cent.

Money Market Active and Easier.

Symptoms of greater ease in the money market are not lacking. The note circulation of the Bank of Norway was reduced during the past month from 381,500,000 to 372,000,000 crowns. Loans and discounts of the bank of issue, responding to the policy of deflation which is being observed similarly declined from 351,800,000 to 338,000,000 crowns, as of May 8. Foreign exchange reserves of the bank of issue reported a further increase to 59,200,000 crowns, from 56,200,000 crowns in April, calculated at par rates of exchange. The rate of the crown continued its upward movement and is now fluctuating at about 16.8 cents as compared with 16.3 cents a month ago. Clearings of the Oslo (Christiania) banks show a continued large volume of business, the April total reaching 505,800,000 crowns as compared with 519,000,000 crowns for March. The slight decline registered was due to the Easter holidays.

Stock Exchange Firm—Wholesale Prices Lower.

With the lowering of the discount rate, a stronger tendency is now noticed in the quotations of bonds. Stock quotations are somewhat uneven, but the general trend remains firm. The total turnover during April was 2,200,000 crowns, compared with 3,600,000 crowns in March. The improved banking situation is reflected in the rise of the bank-shares index from 110 on April 14 to 113 on May 14. The index of representative industrial shares has remained static at 253. A slight decline occurred in shipping shares, the index dropping one point to 119.

Capital issues were very slight during April, aggregating 1,500,000 crowns as against 5,300,000 crowns for March. Commercial failures numbered 72 in April, as compared with 84 during March.

A further drop was registered in price levels during April; the wholesale index declined $8\frac{1}{2}$ points to 267.1, or practically the same average as during April, 1924.

Industrial and Crop Conditions Favorable.

Both domestic and export industries are maintaining full-time operations. As a result of the appreciation of the crown, exporters are complaining of the lower prices; at the same time, competition in foreign markets is increasing. Unemployment is diminishing and now totals 18,600, as compared with 19,000 a month ago. The Norwegian transport and harbor workers have declared a blockade on all shipments to and from Denmark beginning May 26, in sympathy with the strike being waged by Danish transport workers.

Unofficial reports state that the crop outlook is decidedly satisfactory as a result of the favorable weather conditions. Hopes for a general improvement in the freight market have not been realized, and shipowners are therefore considering the laying up of older tonnage.

Foreign Trade Shows Expansion and Improvement.

A slight gain in imports was noticed during March, as compared with February, the total value increasing from 133,500,000 crowns to 138,000,000 crowns. The chief commodity groups imported during March were as follows (in metric tons, with February figures in parenthesis): Coal and coke, 207,000 (193,000); mineral oils, 18,600 (6,000); and iron bars, 6,000 (5,000). Automobile imports rose from 151 in February to 172 in March.

Exports and reexports rose from 96,000,000 crowns in February to 108,500,000 crowns in March, thus reducing the unfavorable balance of trade from 37,500,000 crowns to 29,400,000 crowns. Principal export items during March show the following values in crowns (February figures in parentheses): Paper and pulp, 33,400,000 crowns (26,600,000); lumber, 8,400,000 (6,700,000); minerals, 15,600,000 (12,500,000); fish products, 11,900,000 (18,700,000). Cement shipments fell to 12,000 metric tons from 16,000 metric tons in February.

Declared Exports to the United States.

Exports to the United States during April, as declared through the American consulates, were valued at \$1,669,000; this compares with \$1,721,000 for March. The chief items (with February figures in parentheses) were, as follows: Wood pulp, \$623,000 (\$511,000); fish, \$183,000 (\$388,000); cement, \$125,000 (\$62,000); aluminum, \$170,000 (\$158,000).

Danish Labor Conflicts Create Critical Situation

Based on cable from A. E. Fenslau, secretary to commercial attaché, Copenhagen, May 21

Conditions in Denmark during the past month have been entirely influenced by the continuance of nationwide industrial labor disputes, which are exerting a very adverse effect on the economic situation. The situation has been aggravated by the strike of harbor and transport workers. Efforts are being made to effect settlement, but results so far have been negative. The note circulation has been reduced, and prices have taken a further drop.

State Treasury Notes Issued.

The first issue of Danish treasury notes was completed during the month. The issue amounted to 25,000,000 crowns, and the interest rate of the tenders accepted averaged about 5.7 per cent. Aside from this issue the money market has been quiet.

A further slight reduction was recorded during March in the loans and discounts of Danish commercial banks, from 2,520,000,000 crowns to 2,492,000,000 crowns. The decline in deposits was checked, with their increase by 4,000,000 crowns during March to a total of 2,393,000,000 crowns. The note circulation was lowered from 432,500,000 crowns to 423,000,000 crowns, as of May 15, with a slight rise in the percentage of metallic cover. Reserves of foreign exchange held by the bank of issue rose from 34,800,000 crowns on March 31 to 38,100,000 crowns, as of April 30.

Danish Exchange Firm.

Despite the unfavorable domestic situation and the threatened reduction in export shipments, the Danish crown showed considerable strength throughout the past month. The rate now hovers in the vicinity of 18.8 cents, as compared with 18.5 cents a month ago. The present level of the Danish crown represents the maximum appreciation that is to be achieved by the end of 1926, in accordance with the exchange stabilization plan.

Stock Exchange Steady—Price Levels Drop.

The stock exchange has not reacted to the effects of the labor conflicts. A firm undertone is prevailing, and the quotations for stocks are resistant. Bank shares and shipping shares showed fractional gains, as registered by the indexes, both of which advanced one point to 78 and 81, respectively, as of May 16. Industrial shares, on the other hand, have yielded somewhat, the index having fallen off one-half point to 128.

Price levels have undergone a further precipitate decline. As a result, the wholesale index during April was reduced by 10 points to 220. This figure is 5 points lower than the index for the corresponding date of 1924.

Strike Situation Grave.

Following the break in negotiations for adjustment of the labor conflicts that are now entering their third month, the situation is assuming a rather serious aspect. Hopes that a conflict would be avoided in transportation have not been realized. On May 15 a strike was declared, involving all harbor and transport workers and causing an almost complete suspension of trade activities. Shipments of farm produce also will be stopped until the relief work by the cooperative societies is organized.

The gravity of developments is generally recognized, and energetic negotiations are in progress with but little prospect of tangible results. Judging from the course of events it would seem that these disputes which originally involved the question of wages have now developed into a conflict between the trade-unions and the employers. Moves made by the labor government have so far been of a cautious nature.

Economic losses to the country as a result of these conflicts up to the present time are estimated at about 90,000,000 crowns. With domestic industries unable to deliver, orders are to a considerable extent being deflected to foreign countries, principally Germany.

Crop Outlook Promising.

Statements issued by agricultural experts indicate that winter grains are promising excellent results. Spring seedings, on the other hand, have suffered a little from frost; root crops have been attacked by vermin, necessitating their resowing. It is unofficially reported that the area of winter crops is slightly greater than last year. The hoof-and-mouth disease is steadily receding.

March Foreign Trade Shows Improvement.

A rise took place in both imports and exports during March, as compared with the previous month. With greatly increased exports, however, the unfavorable balance was reduced from 22,000,000 crowns to 15,000,000 crowns. The unfavorable balance of 60,000,000 crowns for the first quarter of 1925 is slightly higher than for the corresponding period of 1924, when it amounted to 42,000,000 crowns.

Imports for March increased to 201,000,000 crowns from a value of 188,500,000 crowns for February. The values of principal imports during March, expressed in crowns, were as follows (February figures in parenthesis): Grains, 22,000,000 (20,700,000); feedstuffs, 20,600,000 (27,800,000); groceries, 10,400,000 (9,300,000); and textiles, 20,700,000 (19,200,000). Automobiles imported during March numbered 176, as compared with 142 in February.

Exports and reexports for March rose to 171,000,000 and 14,000,000 crowns, respectively, from 152,000,000 and 13,800,000 for February. The values in crowns of the chief export groups for March, with February figures in parenthesis, were as follows: Packing-house products, 61,400,000 (48,300,000); dairy products, 58,300,000 (55,500,000); eggs, 11,800,000 (8,900,000); and livestock, 4,700,000 (3,900,000).

Freight Market Dull.

There has been no change in the freight market, and there is little prospect of improvement. No additional laying-up of tonnage has resulted so far from the labor conflicts. A new wage agreement, according a 5 per cent increase in pay to the seamen, has been made between the shipowners and the seamen's union, to remain in force for two years.

Gold Discount Bank Rate in Germany Reduced

Based on cable from Assistant Commercial Attaché Douglas Miller, Berlin, May 21

German revenue and expenditure figures for April remained high above budget estimates, as during the past fiscal year, and showed an actual surplus of

18,000,000 marks instead of the 58,000,000-mark deficit estimated in the budget. Revenues for April amounted to 668,000,000 marks, with expenditures at 609,000,000 marks. Both revenue and expenditure exceeded the monthly average of the past fiscal year, a period of heavy taxation and revenues.

The heavy burden of industrial taxation noticeable during the past year will be in part alleviated by the proposed measures of the new taxation program, which cut industrial taxation and shift this burden to consumption taxes, such as those on beer and tobacco. Particularly favorable treatment will be accorded to export industries under the new program. A large part of the surplus of the past year, in excess of one billion marks, is available for industrial and export financing under the control of the Reichsbank; in this manner the credit stringency in certain export industries will be alleviated, at the cost of general industrial taxation.

A further aid to export industries is the reduction to 7 per cent in the discount rate of the newly revived gold discount bank, conditioned on a corresponding reduction of private bank and commission charges from 3 to 2 per cent, plus the current interest rate. Progress in the reduction of banking charges is favorably reflected in the reductions made from 4 to 2 per cent during the past 3 months. Progress is being made in the revival of the private discount market, although as a result of unsatisfactory dividend declarations the stock index has again declined to approximately 85 per cent of the January average.

French Exports Continue to Exceed Imports

Based on cable from Commercial Attaché Chester Lloyd Jones, Paris, May 24

French exports during the first four months of 1925 totaled 10,180,000 metric tons, with a value of 14,477,000,000 francs, and imports aggregated 15,098,000 metric tons (of which coal constituted 8,027,000 tons) with a value of 10,876,000,000 francs. The principal classes of exports were foodstuffs, valued at 1,161,000,000 francs; raw materials at 4,000,000,000 francs; manufactured articles, 8,664,000,000; and parcel-post packages, 652,000,000 francs. Leading imports were foodstuffs, valued at 2,391,000 francs; raw materials, 8,737,000,000; and manufactured goods, 1,748,000,000 francs.

The ministry of agriculture reports an increase in the area of sown wheat and rye, as of May 1, 1925, and an improvement in the crop conditions over the corresponding date of last year.

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

Argentine Crops and Trade Movement

Based on cable from Commercial Attaché Edward F. Feely, Buenos Aires, May 26

Agricultural conditions in Argentina are generally favorable. The latest official estimate places the current corn crop at 4,716,000 tons, and the exportable surplus of wheat is estimated at 1,690,000 tons. Exports, with the exception of meat, are moving slowly. Customs revenues are 20 per cent above those of a year ago, and this indication of greater import movement is

confirmed by increasing bank collections. Retail and wholesale business is showing an improvement, and a large number of American salesmen are in the country.

Exchange Favors Import Trade.

Peso exchange is favoring import trade. The Government is apparently disposed to reopen the conversion office once the floating debt is entirely consolidated. Treasury bills rediscounted by the Banco de la Nación amount to 350,000,000 paper pesos. The Government has contracted a loan of \$45,000,000 in New York at

92 with 6 per cent interest, amortization 1 per cent, no commission, to be issued June 1 to meet the American loan of \$20,000,000 due in August. The balance is to be used for the consolidation of other short-term indebtedness.

Employees and workmen are again protesting against the pension law and asking for its repeal.

Exports Generally Decreased Compared with Last Year.

Exports of Argentine products from January 1 to May 21, as compared with the same period last year, are as follows: Wheat, 1,918,000 and 2,693,000 tons; corn, 543,000 and 689,000 tons; linseed, 324,000 and 794,000 tons; oats, 270,000 and 303,000 tons; birdseed, 1,000 and 3,000 tons; sheepskins, 7,000 and 12,000 bales; butter, 473,000 and 690,000 cases; beef, 3,829,000 and 3,376,000 quarters; mutton and lamb, 1,721,000 and 1,544,000 carcasses; dried and salted hides, 3,220,000 and 3,526,000. Wool exports from October 1 to May 21 were 172,000 bales, as against 225,000 for last year.

Chilean Confidence Affected by Failures

Based on cable from Commercial Attaché Ralph H. Ackerman, Santiago, May 25

The slowly reawakened confidence which has pervaded Chilean commerce in recent months has been somewhat slackened and checked by the increasing number of commercial failures during May, some involving over a million pesos.

Tendency to Tighten Credits.

Partly on this account and because the season for taking mid-annual balances is approaching, there is a tendency to tighten credits. As high as 12 per cent is being exacted for commercial credits and overdrafts involving periods of over 60 days, and 9½ to 10 per cent asked for loans to brokers on first-class security, callable in two weeks. Demand, however, is slight. Stock exchange rates are low, around 30 per cent, with money plentiful, but correspondingly high rates on short periods. Trading is dull and spotty in stocks and bonds, and tendency of prices is downward. Bank collections are good, and fixed commitments in drafts or notes to sellers fair. Several large importers have shown inclination to reduce their open accounts.

Exchange—Note Circulation.

There has been a downward tendency to exchange since the first of the month. Average sale for the first 20 days was 8.63 pesos to the dollar. Notes in circulation on May 22 amounted to 315,046,545 paper pesos.

Industrial Situation—Labor Unrest.

Labor unrest continues, being particularly felt in the north. The strikes which interfered with commerce in the early part of the month have now been satisfactorily settled. Nitrate production during the month will probably show a slight increase, although sales have been small, totaling in all some 40,000 metric tons. Exports for the first 15 days were 38,000 metric tons. Copper production may show a slight decrease owing to a strike in the early part of the month. The coal market remains unchanged, with little demand for foreign product with the exception of some small transactions from stock. Prices are unchanged.

Competition in Chilean Market.

The outstanding feature of the Chilean market is the strong competition for trade. The demand for

foreign products in general has been rather good in some lines but poor in others. For Chilean agricultural products the foreign demand has been slightly less than in April. Retail sales continued fair, having been better than in the early months of the year, although below May of 1923. Sales of merchandise to arrive have been generally less than in April.

Automobiles and Accessories.

The demand for low-priced automobiles has been very good, for medium-priced fair, and for high-priced machines slow; for trucks, motor busses, and light trucks for commercial purposes good, and for tractors greater than ever before. Accessories continue to move well, but the feeling persists that many dealers are inclined to overstock. Sales of tires have been fairly good, and of agricultural implements exceeding those of last month, notwithstanding a slow-down of the past 10 days. Plows and cultivating machinery have been moving particularly well, and orders have been placed for threshers and harvesting machinery for future delivery. Mining machinery has moved well, especially smaller equipment. The Bolivian demand for the line continues to be good.

Electrical Equipment—Iron and Steel.

Replacements of electrical equipment have been under that of April in both heavy and small items. Trade in iron and steel indicates an optimism, although demand continues slow. Warehouse stocks are heavy, and there is an apparent tendency to stimulate movement by price reductions. A better demand is seen in all textile lines, particularly gray goods, with some houses placing early orders for summer goods.

Steamship arrivals at Valparaíso in the first 20 days of May have been the largest of this year. The number of visiting traveling salesmen is increasing, particularly from the United States.

Business Quiet in Uruguay

Based on cable from Acting Commercial Attaché L. B. Clark, Montevideo

General business is quiet in Uruguay, and the political situation has improved. An issue of 20,000,000 pesos in Uruguayan mortgage cedulas was approved by Congress on May 8. The money market is hard, with loans at 8½ per cent, overdrafts 8 per cent, and fixed deposits at 6½ to 7 per cent. Exchange is strong at 102, due to the plentiful offering of meat bills.

Exports of Meat Continue Active.

Meat shipments continue active with prices sustained, the best steers bringing 10, cows 9, oxen 9, and calves 8 centesimos per kilo on the hoof. The wool market is dull.

The situation in the country is satisfactory, with cattle and sheep going into winter in good condition. Heavy rains are causing inundations and some property damage in the north and west, but generally benefiting pasture and farm lands.

Representative Imports.

Representative imports from April 22 to May 21 were: Agricultural implements, 1,496 cases American and 87 European; cotton yarn, 200 cases American and 56 European; sewing machines, 568 American and 55 European; typewriters, 95 American and 25 European (from Germany); adding machines, 9 American; and cement, 355 barrels of American and 2,398 European.

Buying in Brazil Restricted

Based on cable from Commercial Attaché W. L. Schurz, Rio de Janeiro, May 23

After a violent slump the Brazilian milreis is fairly firm, but the course of exchange is very uncertain, and money is tight. The Government recently limited Santos coffee entries to 20,000 bags daily. The market is holding better after the panicky slump. Crop indications are excellent. The United States took only 27½ per cent of the Brazilian coffee exports for April.

Stocks on Hand.

Cotton stocks on hand May 20 were: Pernambuco, 256,000 kilos; Rio, 4,627,350 kilos; and Sao Paulo, 5,126,906 kilos. Sugar stocks for the same day were: Pernambuco, 237,200 bags; Rio, 150,550 bags; Sao Paulo, 65,868 bags. The Campos crop beginning in June is estimated at 900,000 bags. High rubber prices are improving business conditions in the Amazon Valley. Sao Paulo industries are still crippled, but normal power service is expected within two or three months. There is no improvement in the Santos port situation.

Exchange Fluctuating.

Buying has been seriously restricted by violent fluctuations in exchange and by the tightness of money. The iron and steel market is dull. Germans are taking small rail orders. There is no demand for tin plate. The automobile market shows little change, although sales of some makes are decreasing on account of higher prices. The tire demand is much improved over April, but still considerably below March. Machinery business is fairly normal, and agricultural machinery markets continue good. The demand for radio parts is also satisfactory.

Peruvian Trade Improves

Based on cable from Commercial Attaché H. B. MacKenzie, Lima, May 23

The acute depression in Peruvian business of recent months is now believed to have passed, although trade is still below normal. During the period of dullness a few bankruptcies of small importance occurred, but the business structure has suffered but little, agricultural interests being chiefly affected. A part of the present improvement may be due to a reopened transportation on the Central Railway, with the interior and the Cerro de Pasco region, permitting copper shipments to Callao and general trading with the interior to be resumed.

Services has not yet been resumed with railways in the north but purchases in Lima by northern coastal cities has increased.

Collections are better and a general feeling of optimism is evidenced, since the cessation of rains by the placing of orders for building materials, especially lumber, prepared roofing, and corrugated iron sheets.

Import and Export Trade—Finance.

No increase in import orders of general merchandise is expected in the near future because of the necessity for disposing of existing stocks, accumulated in recent months. Trading in cotton and sugar is still inactive. Present indications are that much of the cotton crop in the north will be of better quality than ever before. In the south, however, insect pests are causing greater damage than usual.

The gold reserve on April 30 was 5,408,927 Peruvian pounds; notes in circulation totaled 5,915,569 pounds;

and bank clearings 5,187,451 pounds. Exchange fluctuated slightly between \$4.08 and \$4.12 to the Peruvian pound.

Colombia Plans New Transportation

C. Reed Hill, secretary to commercial attaché, Bogota, April 27

Exchange in Colombia is slightly above par in terms of the American dollar. (The peso at par=\$0.973.) Coffee continues to move from the various interior points to the coast for shipment. Commercial conditions in several of the districts are improving. Business houses are well stocked in anticipation of the commercial demand that results from coffee sales, as Colombian prosperity depends primarily on the coffee crop.

Plans Made to Facilitate Transportation.

The Assembly of the Department of Caldas is discussing the securing of a loan of 3,000,000 pesos for the financing of the railroad extension over the Quindio (mountain pass) and construction of cableways to Aguadas and Manzanares.

Contracts have been signed between the Minister of Industries and the Compania Colombo-Alemana de Transportes Aereos for Government aid to the extent of \$65,000 for the establishment of a service twice a week between Barranquilla and Girardot sufficient to transport eight passengers each trip. (The present hydroplanes carry two passengers.)

A number of American salesmen arriving in Bogota from trips through the various departments report that business has been satisfactory.

Conditions Good in Panama

Based on cable from Vice Consul H. D. Myers, Panama, May 22

Retail sales in Panama are reported as satisfactory during the month of May with general conditions good. Importations for April were valued at \$1,500,000, and those for May will probably exceed this amount. Imports were stimulated as buyers were laying in stocks before the tariff increase of May 25 became effective. Unusually large importations of soap, rice, and liquors were noted.

The output of the Panama sugar mills for the year will probably reach 85,000 bags of 100 pounds each by June 1, which is the end of the grinding season. The acreage planted to sugar cane this year is in excess of that of former years.

Grading work on the national highways is being continued during the rainy season.

Trade Dull in Costa Rica

Based on cable report from Vice Consul R. W. Unckles, San Jose, May 21

The wholesale and retail merchants in Costa Rica complain of poor business during May, though the banks report that collections continue to be quite satisfactory. Domestic foodstuff prices continue generally very high. Coffee shipments to May 16 were to London 156,000 bags, to continental Europe 26,000, to San Francisco 26,000, and to New York 1,000 bags. Total shipments were 219,000 bags. There is every indication of a large 1925-26 crop. Because of the high prices paid the growers by the buyers, the latter are anticipating a loss this year.

The Costa Rican Congress has approved the arrangement for settlement of the French loan on a basis of \$0.10 United States gold for each franc.

Business Shows Improvement in Nicaragua

Based on cable report from Consul Harold Playter, Corinto, May 22

Business in general in Nicaragua during May has shown a favorable increase as compared with the preceding month. Imports have been active and the circulation of money has shown a substantial increase. Coffee shipments during the present year have amounted to 8,000 tons and the prevailing prices have been very favorable, making the value of the crop this year equal to that of last although the volume is not so great. It is estimated that there still remain for shipment 1,500 tons of coffee. The outlook for the next crop is favorable. Sugar shipments to date have been 6,600 tons with 9,500 as the estimated amount yet to be shipped.

Business Good in Salvador

Based on cable report from Consul W. J. McCafferty, San Salvador, May 21

Business has continued to be very good in Salvador during May. Customs receipts for every month of the present year have been considerably greater than those for the same months last year, and are indicative of the general prosperity of the country. The coffee market has been very dull, due to sudden decline in prices, and all buying has practically ceased.

Trade Slow in Guatemala

Based on cable report from Consul General Phillip Holland, Guatemala, May 21

The slight dullness noted during April in Guatemala has continued throughout May as the result of the decline in coffee prices, though there is abundant money in the country from the past coffee crop. It is reported that many of the plantation owners will be able to finance themselves for the next crop and will not have to borrow from the local banks at the customary high rates of interest. About 95 per cent of the coffee crop has been exported, and it is to be expected that this market will remain somewhat inactive until the 1925-26 crop begins to be sold. The export price of sugar is now below the cost of production. Considerable activity was noted in the import market for automobiles, motor trucks, and paraffin during May.

Business Dull in Mexico

Based on cable from Trade Commissioner George Wythe, Mexico City, May 22

Business in Mexico during May was dull and showed a decline as compared with the preceding month. Collections were slow and credits restricted. The withdrawal of the demands of the bank employees on May 16 relieved the tension in banking circles to a certain extent, but there has been as yet no revival of business. A heavy buying of French and Spanish exchange is reported by the banks.

Automobile Market—Foodstuffs.

The automobile market has not improved, but the demand for auto accessories and parts is good. Also a fair movement of foodstuffs is reported.

Labor troubles, both actual and threatened, continue to be a serious problem. Most factories are cutting down their output, and the general strike called by the radical labor group during the month only facilitated the readjustment of output to demand.

Federal Government Pays Accounts.

A favorable feature of the month was the payment by the Federal Government of its commercial debts to the extent of 3,000,000 pesos (\$1,500,000). These payments discharged all obligations of less than 20,000 pesos and included an installment of 15 per cent on larger accounts. The payments were made in silver, which caused a slight increase in the discount of this metal.

It is expected that as a result of the general economy of the Federal Government it will be able within a short time to make reductions in the freight and passenger rates on the national railroads.

Mercantile Situation in Porto Rico Shows Improvement

Trade Commissioner L. W. James, San Juan, May 23

The general mercantile situation in Porto Rico shows increasing optimism, largely induced by the marketing of the tobacco, citrus fruit, and pineapple crops. Banks report collections and liquidations improving, but salesmen tell of lessened demands on the part of retail merchants. The low price being received for sugar affects all transactions, and higher prices of many imported commodities restrict individual purchasing. Statistics based on prevailing wages and average prices of utility commodities indicate that the cost of living has increased approximately 40 per cent over last year. A casual survey of the reports of the steamship companies shows decreases in importations from the United States.

Lines Overstocked.

Overstocks of textile piece goods, shoes, rice, ready-made men's clothing, haberdashery, building material, and foodstuffs are reported. Stock inventories in many lines show goods on hand at normal or above. The advice to practice credit precautions to small or unknown local firms is reiterated.

Commercial Activity in Cuba Dull

Trade Commissioner C. A. Livengood, Habana

The outstanding event in Cuba during the month was the installation of President Machado on May 20 and the celebrations incident thereto. Mercantile activities, in keeping with low sugar prices and the approach of the summer, which usually constitutes the season of lessened commercial activity, have been dull. Rains have been heavy, and a considerable number of sugar mills have now terminated their activities. Shipments of pineapples to the United States, which began the first of the month, have continued in steady volume, but it is not expected that the crop will equal that of last year.

Business Continues Dull in the Dominican Republic

Consuls C. B. Hosmer and W. A. Bickers, Santo Domingo, May 21

There was no change in the general business situation of the Dominican Republic during the month and retail and wholesale business continues dull, not realizing the usual stimulation from the sugar and cotton movement on account of the very slight market. Cacao exportations are exceptionally heavy on a declining market. The grinding of the sugar crop continues beyond the usual date at nearly all mills, as most of

them were delayed by heavy rains throughout the grinding season. The new crop of tobacco is beginning to reach the market, and is yielding the producer only 4½ cents per pound.

Importations probably exceed the turnover with no improvement in collections. Customs duties amounted to \$379,000 in April, compared with 326,000 for the corresponding month of 1924. Internal-revenue collections amounted to 234,000 in April, 1925, compared with 163,000 for the same month a year ago. The rehabilitation of the Government-owned munition plant at Puerto Plata has commenced.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

Increased Activity in China's Trade

Based on cable from Assistant Commercial Attaché A. H. Evans, Peking

With supplies of silver plentiful, and increased activity in some of the principal markets, general business conditions in China show improvement.

Although the Chinese maritime customs collections during the first quarter of 1925 amounted to 17,809,000 haikwan taels (1 tael=approximately \$0.75) as compared with 18,067,000 during the first three months of 1924, declared exports to the United States showed an increase of \$12,557,000, compared with the corresponding period of the previous year. Goods valued at \$46,576,000 were exported to the United States during the first three months of the year while in 1924 exports for the same period amounted to \$34,019,000.

Stocks of Silver Plentiful.

Shanghai bank stocks of silver were estimated at 129,000,000 silver dollars (1 silver dollar=\$0.5413 at current exchange) on May 1, 1925—an increase of 30,000,000 over the same date last year. The share of foreign banks was placed at 77,000,000 silver dollars or about 22,000,000 above 1924. The money condition is out of line with the amount of business being transacted, and the heavy supplies of silver probably will not be diminished very much until the May and June financing of the cocoon crop is completed. Business, on the whole, however, shows improvement.

Automotive Sales Fair—Textiles—Other Markets.

Although automobile sales have been fair, they are slightly below the corresponding 1924 period. Automobile imports into Shanghai for the first quarter of 1925 totaled 295 passenger cars, compared with 309 last year. Imports of American cars dropped from 208 in 1924 to 100 in 1925. This decline is partially due, however, to the increase in shipments of American cars from Canadian ports.

Auction sales of piece goods were well maintained, amounting to 132,000 pieces for the period from April 2 to May 1. The cotton-yarn market is weaker, with Canton and Szechuan the best buyers. Raw-cotton prices show a downward tendency. Stocks of hides and skins are fair, but are of a poor quality. Prices are about 20 per cent above offers.

Paper prices are somewhat higher, and the arriving cargo is going into consumption readily. The iron and steel market is more active, and, owing to the rise of the pound sterling, American prices are more competitive with British. Activity in machinery is con-

finied almost entirely to necessary replacement orders. The lumber market is slow, although some stocks were satisfactorily moved by auctions.

Crop Prospects Favorable—Conditions in South China.

Owing to good and timely rains in many of the principal producing districts of North China crop prospects are very bright at this time.

South China political and military conditions show no sign of improvement, and any business that is being transacted is being done cautiously. While the flour tax has been withdrawn by the government, it is being collected by military leaders. Owing to the imposed tax on kerosene not being lifted sales have been discontinued, and consequently prices on other illuminating oils have increased.

Railway Situation Badly Demoralized.

The general railway situation of the trunk lines north of the Yangtze River continues to be serious, due almost entirely to military operations. According to a report of the ministry of communications, as of May 10, troops occupied 244 passenger cars, 2,760 freight cars, and 84 locomotives. It is estimated that shipments of 1,125,000 tons of coal, 125,000 tons of grain, and 570,000 tons of miscellaneous freight are being held up by this situation.

Hawaiian Crop Conditions and Construction Projects

Hawaii has been very busy during the past month entertaining the fleet and the large number of tourists brought there by the occasion, according to a cable of May 23, received from Mr. Ernest B. Clarke, secretary of the Honolulu Chamber of Commerce. Coming at a time when the hotels are normally taxed with regular visitors to the islands, it was necessary to press all available accommodations into service. The occasion demonstrated very conclusively that it will be necessary to provide greater facilities to accommodate the ever-increasing flow of tourists to the islands. That Hawaii is not slow to realize its needs in this respect is shown by the increasing number of building permits. During April permits were issued in Honolulu for the construction of buildings which will cost \$506,059. Among contemplated projects is a bank building to cost approximately \$500,000, and a large hotel at Waikiki to cost \$2,000,000. Building on the latter is to be commenced immediately. It is also planned to enlarge one of Honolulu's wharves, making it the largest in the Pacific.

Record Sugar Crop Estimated—Other Crops—Budget.

About two-thirds of the sugar crop is now harvested. New estimates place this season's yield at 715,000 tons, breaking all previous records by a wide margin. Sugar interests are complaining at present of the low price being received for sugar.

The pineapple harvest will commence shortly, but due to unfavorable weather conditions the yield is not

expected to be as great as earlier reports indicated. The weather has been favorable during the past month, and pastures and growing crops are in good condition.

During the session of the Territorial legislature, which has just closed, the biennial budget was passed, carrying the largest appropriation in the history of the islands.

INTERNATIONAL TRADE IN 1924.

J. J. Kral, Statistical Research Division

The aggregate value for 1924 of the foreign trade of the 46 countries listed in Table 1 below, converted into dollars at the annual average rates of exchange, was \$49,666,000,000, as against \$44,871,000,000 in 1923, showing an increase of 10.7 per cent over the preceding year. Imports had increased 10 per cent and exports 11.1 per cent in value.

The 1913 data are given for 38 of these countries, the pre-war figures for the other countries being either incomparable because of changes in boundaries or non-existent because these countries were not then in existence. In the case of the Netherlands the difference between the old and the new method of valuation makes impossible a comparison of postwar with pre-war data.

TABLE 1.—Imports and exports of 46 countries for the calendar years 1913, 1923, and 1924

Different Methods of Trade Valuation.

Theoretically, aggregate world exports should equal aggregate world imports if both were given values as of the country of origin. That they are not equal in the statistics of Table 1 is to be attributed chiefly to the fact that most countries value imports as of the point of arrival, including transportation and other charges. There are also other differences among the countries in the method of valuation. As might be expected, the combined imports for a large number of countries as reported normally exceed their combined exports, owing to both the higher valuation and the stricter control of imports.

The 46 countries listed include all for which 1924 data are available at this time. Their total trade in 1923 was nearly 95 per cent of the aggregate trade of the 56 countries for which 1923 data are available, and undoubtedly they account for over nine-tenths of the entire world trade.

Advance in Trade of United States.

In the trade of the United States imports in 1924 declined 4.8 per cent from the high total of 1923, while

the exports increased 10.2 per cent. In the trade of the other 45 countries covered imports advanced 12.8 per cent and the exports 11.8 per cent. These advances were largely due to the greater purchases by Europe in oversea agricultural countries. When 1924 is compared with 1913 it will be seen that United States trade has advanced much more rapidly—101.4 per cent in imports and 84.8 per cent in exports, as against corresponding increases of only 33 and 37.5 per cent, respectively, for the other 37 countries compared in the table.

European Trade Reflect Improved Conditions.

The recent improvement in European conditions is reflected in the larger share of Europe in the total trade as compared with 1923. The aggregate imports of the 25 non-European countries listed in the table were about the same in 1924 as in the year before, the increase being less than 0.3 per cent. This stationary position was due chiefly to the reduced purchases by the United States, Canada, and Argentina, offsetting increases in most other non-European countries. The aggregate imports of the 21 European countries, on the other hand, increased 16.8 per cent in 1924 over 1923. The largest increases were shown in the imports of Germany, the United Kingdom, Czechoslovakia, Belgium, Netherlands, and France. Credits granted by the United States were a considerable factor in enabling Europe to increase its imports. The increase in exports for the same period was 11 per cent for the non-European and 11.9 per cent for the European countries. The share of Europe in the total trade (exports and imports combined) of the 46 countries rose from 55 per cent in 1923 to 57 per cent in 1924.

Physical Volume of Trade.

Data for 1913 are given for 38 countries. A comparison by value shows that the aggregate trade of these 38 countries was 42.7 per cent larger in 1924 than in the last year before the war. As the trade prices prevailing in 1924 averaged nearly 50 per cent above

the level of 1913, it is evident that, by volume, international trade is still somewhat below the turnover of the pre-war years. A comparison of the quantitative volume of trade can not be made for all countries, but the data available seem to warrant the conclusion that, by volume, the trade of 1924 amounted to about 96 per cent of the trade of 1913.

TABLE 2.—Percentage changes in the foreign trade of principal countries

[Increase (+) or decrease (–) for the period specified]

France.....	+22.3	+39.4	+29.3	+63.5	+5.7	+17.3
Germany.....	–42.9	–39.6	–15.2	–35.3	+48.7	+7.1
Italy.....	+12.4	+5.2	+20.1	+28.7	+6.8	+22.3
United Kingdom.....	+34.1	+31.2	+51.1	+33.8	+12.7	+2.0
British India.....	+20.8	+53.2	+32.7	+52.6	+9.9	+14.6
Japan.....	+164.9	+123.1	+177.9	+136.1	+4.9	+5.8
Australia.....	+60.4	+39.3	+65.2	+67.3	+3.0	+20.2

The share of the United States in the aggregate trade of the 38 countries was 13.4 per cent in 1913, 19.2 per cent in 1923, and 18 in 1924. Between 1913 and 1924 United States imports rose from less than one-ninth to more than one-seventh, and exports from less than one-sixth to more than one-fifth of the total.

American Consular Officers on Leave

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name	Post	Expiration of leave	Address
Albrecht, Charles H.....	Bangkok, Siam.....	June 23	217 South Forty-sixth Street, Philadelphia, Pa.
Burri, Alfred T.....	Puerto Cortes, Honduras.....	June 23	Department of State, Washington, D. C.

Fullerton, Hugh S.....	Antwerp, Belgium.....	June 13	Department of State, Washington, D. C.
Lee, Frank O.....	Bradford, England.....	June 28	1825 Phelps Place, Washington, D. C.
Orr, George.....	Panama City.....	July 1	115 South New Hampshire Avenue, Atlantic City, N. J.
Waterman, Henry S.....	San Jose, Costa Rica.....	June 26	2914 Clay Street, San Francisco, Calif.
Wolcott, Henry M.....	Bilbao, Spain.....	June 20	Care Mr. C. M. Lord, 95 West One hundred and eighty-third Street, New York, N. Y.

Italian Wool-Manufacturing Situation Reported

The Italian wool-manufacturing industry at present gives employment to between 60,000 and 65,000 workmen, and energy of 50,000 to 70,000 horsepower is used. Combing spindles number about 500,000; carding spindles, 550,000; twisting or winding spindles, 150,000; and mechanical looms, 18,000. The present annual production of manufactured articles amounts to about 88,000,000 pounds, whereas before the war it scarcely reached 66,000,000. The output is valued at 1,000,000,000 to 1,500,000,000 lire (lire=approximately \$0.04 at current exchange). This industry supplies over nine-tenths of the domestic demand and foreign markets are continually being extended, according to a report from Consul Ilo C. Funk, Genoa. Further information regarding the wool production and manufacturing industry of Italy may be had upon application to the district and cooperative offices of the Bureau of Foreign and Domestic Commerce, or to the Textile Division, Washington. Refer to Special Bulletin No. Tex-384.

RECENT TREND OF UNITED STATES FAR EASTERN TRADE

American Industrial Activity Stimulated Demand for Oriental Raw Materials—Import Trade Continues Heavy

J. H. Nunn, Far Eastern Division

The first quarter of 1925 closed with trade between the United States and the Far East again upon the upward trend, after a sharp decline in February due to seasonal conditions and overstocked markets in some sections of the Orient. Substantial increases in both imports and exports were noted during March in all of the important countries and most of the minor countries. Trade with Australia and New Zealand also showed a 6 per cent advance. These increases reflect the generally improved financial, economic, and political conditions of eastern and southeastern Asia.

Trade Analyzed.

A review of the quarter's exports, however, is disappointing. Notwithstanding the heavier January and March trade, shipments of American goods to the Orient during the first quarter of the current year, compared with the 1924 period, dropped from \$199,331,000 to \$160,701,000, or 19 per cent. In comparing the trade of the first three months of 1925 with that of the corresponding period last year, however, due consideration must be given to the abnormally heavy exports from the United States and elsewhere to Japan during the 1924 quarter in the producers' efforts to escape the high tariff effective in Japan July 31, 1924. It is obvious that the demand for all construction materials, lumber, steel, and machinery in Japan must obviously continue to be more restricted than during 1924.

On the other hand, increased industrial activity in the United States stimulated a demand for raw materials procurable only in the Orient, and imports from that region mounted to \$313,747,000, an increase of \$77,142,000 over the corresponding period of last year and advancing the trade balance unfavorable to America from \$35,474,000 to \$153,046,000. During the three months the Far East supplied 30 per cent of the entire imports of the United States and furnished a market for 12.6 per cent of American exports, as against 20 per cent and 15 per cent, respectively, for the 1924 period.

Trade Distributed by Countries.

The following table shows the distribution of the trade by principal countries:

Trade between the United States and the Far East by countries
(000 omitted)

Countries	Imports, first quarter of—		Exports, first quarter of—	
	1924	1925	1924	1925
Australia.....	\$15,748	\$20,425	\$30,333	\$31,715
Ceylon.....	5,800	8,241	374	573
China.....	29,970	37,284	33,015	19,629
Hongkong.....	5,409	5,196	5,356	4,163
India.....	20,232	38,784	8,603	8,625
Japan.....	77,052	84,756	90,103	65,086
Kwantung Leased Territory.....	658	1,397	3,937	650
Netherlands East Indies.....	14,031	21,967	3,343	3,815
New Zealand.....	3,274	6,017	6,547	7,434
Philippine Islands.....	21,189	27,763	14,209	15,298
Straits Settlements.....	35,726	60,830	1,462	1,930
Other countries.....	650	1,087	2,049	1,903
Total.....	235,805	313,747	199,331	160,701

In addition to the countries specified, trade with Indo-China amounted to \$520,000; with Siam, \$530,000; and Chosen, \$486,000. The surrounding small islands purchased but small quantities of American goods, in return for which they sold to the United States their native products to the value of \$700,000.

Trade by Classes of Commodities.

Imports from the Far East center around a small number of basic commodities, either raw or partly manufactured, while exports cover a wider field. The following table indicates the gains and losses by classes according to the schedule adopted in the United States customs returns:

Trade with the Far East by classes of commodities¹
(000 omitted)

Classes	First quarter of—		Classes	First quarter of—

¹ China includes Hongkong and Kwantung Leased Territory. The table was compiled from the monthly returns of the United States customs.

Commodities Marketed.

In the 1925 period imports of raw materials and manufactured textiles constituted more than 47 per cent of America's purchases from the Orient, with raw silk from Japan and China in the lead. Imports of rubber from the British and Netherlands East Indies

accounted for 17 per cent; raw and manufactured jute from India, 9 per cent; wool from Australia, New Zealand, and China, 7 per cent; tin from the Straits Settlements, 6.4 per cent; sugar and coconut products from the Philippines, 6.4 per cent; tea and coffee from the British and Netherlands East Indies, China, and Japan, 3 per cent; and all other, less than 5 per cent.

The loss of practically \$11,000,000 in exports of vegetable food products is directly chargeable to the capture of the Far Eastern wheat and flour market by Canada and Australia and to a marked decline in Japan's consumption of American rice as the result of the prevailing high prices. Retrenchment in Japan's

reconstruction work and trade timidity in China, due to internal disturbances there, cost the United States an additional loss of \$26,000,000 in machinery and construction materials during the 1925 period reviewed. In contrast, however, sales of raw cotton to Japan and China advanced \$14,500, while sales of cotton cloth to the Philippines, India, Australia, and New Zealand increased by \$2,000,000. Petroleum more than held its own. China ranks third in the value of American refined mineral oils consumed. United States exports of 19,122 motor vehicles, valued at \$13,738,000, showed a slight decline in value for the period, but Australia continued to hold its position as America's best customer.

TRANSPORTATION

P. E. D. Nagle, Acting Chief, Transportation Division

RAILWAYS

Combined Railway and Motor-Car Service in Germany

Consul A. W. Killefoth, Berlin, April 24

The report of operations of the associated organizations of the Deutsche Reichsbahn Gesellschaft (German State Railways) and the Kraftverkehr Deutschland G. m. b. H. (German Motor-Car Service) indicate a progressive development in transportation in Germany. In March, 1924, these associations pooled their interests in order to eliminate unnecessary competition and to provide better and more profitable service.

In the contract signed by both companies the activities of the motor-car service are fixed, as follows: Transportation of piece goods in the intensified local areas, short-distance hauls, general delivery service, and special tasks.

Local Service.

Inasmuch as the railways were anxious to free themselves of the carriage of goods which could be more profitably hauled by motor cars, and as the most important field of activity of the motor-car service is to be found in the centers of traffic in large towns, the association devoted its attention to the development of such services in Berlin.

Similar moves were undertaken in Hamburg, Hildesheim, Braunschweig, Mannheim, Stuttgart, Leipzig, Breslau, Stettin, and Hanover. Preparatory work of this kind is likewise under way in Magdeburg and Bremen.

The report of traffic handled by the combined associations during the nine months ended December 31, 1924, shows that in the Berlin express goods service 57,856 metric tons were handled, producing a revenue of 732,184.16 marks. Of this amount the motor-car company received 90 per cent and the remainder was retained by the railway association.

Short-Distance Service.

A further important task of the motor-car service is the establishment of short-distance lines in districts where no railway facilities exist. The following lines have already been opened: (1) Gleiwitz-Kieferstaedl, for passenger, post, and piece-goods service; (2) Neu-

stadt-Steinau-Ziegenhals; for passenger and piece-goods service.

These two lines during the period from June to December carried 19,722 passengers and 65 tons of freight, with total receipts of 15,236.80 marks, of which 10 per cent went to the railroad company. A large number of similar lines is planned.

Other Services.

The loss of time in the transportation of goods by railroad between large towns has of late been the subject of much adverse comment and has resulted in an increased use of automotive transportation. In order to regain business of this character the association plans to introduce a combined railway and motor-car service which would make possible the transportation of goods from Berlin to Hamburg (a distance of about 350 kilometers) within 24 hours, including calling and delivery.

The administration of the combined railway and motor-car service has also entered into negotiation with the association of narrow-gauge and private railways and with the association of German street railways, in order to eliminate unnecessary competition and effect profitable combinations.

Branch of Great Northern Transferred to Canadian Pacific

Consul Norton F. Brand, Fernie, British Columbia

Arrangements have been consummated for the transfer to the Canadian Pacific Railway Co. of that division of the Great Northern Railway between Grand Forks and Princeton, British Columbia. A considerable portion of the link runs through the State of Washington, connecting Curlew, Republic, Molson, and Oroville. The rail distance between Grand Forks and Princeton is 57 miles shorter than via the Canadian Pacific's Kettle Valley route, and the grades are said to be much easier. Up to date, the Kettle Valley route has proved a slow means of transportation, on account of heavy grades, many curves, and winter snows and avalanches. Travelers from Fernie to Vancouver commonly have traveled via the Great Northern

& Spokane, saving several hours over the all-Canadian route. This transfer will in a measure reduce the handicap of the Canadian Pacific.

Abyssinian Freight Rates Advanced

Vice Consul J. Loder Park, Aden, Arabia

The owners of the French-Ethiopian (Abyssinian) Railway recently made a sweeping increase of 30 per cent in freight rates for the 500 miles from Adis Abeba to Jibuti, the French Somaliland port serving as the principal outlet for Abyssinia. At the same time rates were declared payable on a gold basis, which is calculated to increase still further the cost of shipment.

This advance is expected to work a serious hardship on Abyssinian producers of goat and sheep skins, upon whom the burden falls. However, it is thought that the increase will defeat the end it was intended to

effect, namely, larger revenue for the railway. It is claimed that high rates will merely force the skin producers to resort to camel caravans, the only other means of shipment at their disposal. Since the cost of camel transport, slow as it is, amounts to less than the former freight charges, it is probable that much of the French-Ethiopian carrying trade will be diverted.

New Locomotives for Czech Railways

Vice Consul J. K. Angell, Prague, April 23

The ministry of railways of Czechoslovakia has ordered six locomotives to be used for express trains, in order to create greater efficiency in the service. The type of locomotive ordered is of three cylinders, weighs 88 tons, and has a speed of about 35 miles an hour and a pulling capacity of 1,750 horsepower on the upgrade. On level stretches the speed increases to 65 miles an hour and the pulling capacity to 1,970 horsepower.

SHIPPING

Port of London Docks to be Improved

The Port of London Authority has sanctioned a proposal for the improvement of the India and Millwall Dock systems, at an estimated cost of £1,030,000. The project, as published in the Shipbuilding and Shipping Record (London), includes the addition of the following facilities:

1. A new entrance to the West India Dock system that shall be 550 feet long by 80 feet wide by 30 feet deep at Trinity high water. This lock will be on the site of the present South Dock entrance to the West India system.
2. A passage between the South Dock and the export dock of the West India system.
3. A passage between the export dock and the import dock of the West India system.
4. A passageway for vessels connecting the Millwall Dock system with the South Dock of the West India system.
5. Additional sheds for hardwood storage, to take the place of those displaced by the improvement scheme.

The three passages (2, 3, and 4) will enable vessels entering by the new South Dock Lock to reach any part of the India system on the one hand and of the Millwall system on the other hand.

The India and Millwall Docks are favorably situated, being near the center of London and with good road access; but the entrance is not large enough to admit large vessels. The improvements will remove this handicap. (Transmitted by Harold Burch, office of commercial attaché, London.)

the State's subvention is not sufficient. This subvention is fixed at 28.66 pesetas a mile, and may not exceed 28,000,000 pesetas (\$3,640,000). The annual sum for interest on and amortization of the loans shall not exceed the subvention.

Port Development Proposed for Sao Sebastiao

Trade Commissioner W. E. Embry, Sao Paulo, Brazil, April 23

The Companhia Melhoramentos Littoral of Brazil has proposed to the Government the construction of a railway between Campinas and Sao Sebastiao and the development of that port as a means of relieving the congestion at the port of Santos. Another railway and another port are considered indispensable, and in the opinion of certain Brazilian officials Sao Sebastiao is by nature an ideal location for Sao Paulo's next port.

[Details as to the proposal of the Companhia Melhoramentos Littoral may be obtained from the Transportation Division.]

Inland Waterways of the United Kingdom

The Transportation Division is in position to furnish to interested persons comprehensive information with regard to the canals and other inland waterways of the United Kingdom. The data include traffic statistics, tolls and charges, services, maps, etc., and may be obtained on application to the Transportation Division or through the district and cooperative offices of the Bureau of Foreign and Domestic Commerce.

Shipbuilding Program of Cia. Trasatlantica

Consul Julian C. Greenup, Las Palmas, Canary Islands, April 17

According to the new contract with the Spanish Government, the Compania Trasatlantica agrees to build the following vessels: Two for the service between the north of Spain and Argentina, before 1928; three, similar to the *Manuel Arnus*, for the line to New York, Cuba, and Mexico, before 1929; three others for the same line, before 1932; two of 5,000 tons for the line to Fernando Poo, before 1934; three of 8,000 tons and two of the same class as the *Infanta Isabel* and *Reina Victoria*, before 1936; nine other vessels.

The Government guarantees the interest on and amortization of the invested capital and loans in case

Shanghai Shipping in 1924

Consul General E. S. Cunningham, Shanghai

The tonnage entered and cleared at the port of Shanghai during 1924 aggregated 32,305,419, or 7 per cent more than the 30,018,240 tons entered and cleared during 1923. Ships of British registry stood first in both years, with 36 per cent of the 1924 total; Japanese stood second, with 24 per cent; Chinese third, with 17 per cent; and America fourth, with 11 per cent.

AVIATION

New Copenhagen-Rotterdam Direct Air Service

Consul General Marion Letcher, Copenhagen, Denmark, April 20

Direct air service between Copenhagen and Rotterdam, via Hamburg, was put into operation April 20, when planes left the termini simultaneously at 10.15 a. m. The schedule provides for arrival at 4.30 p. m. The service provides speedy connection between the night express trains from Oslo (Christiania) and Stockholm and the night express lines from Rotterdam to London. A passenger may leave Oslo in the evening and be in London at 6 o'clock in the morning a day and a half later.

Four Fokker planes are employed in the service. The passenger rate from Copenhagen to Hamburg is 80 crowns (approximately \$14.75), and for the entire trip 165 crowns (about \$30.50).

The new service is operated by a Dutch company and is entirely independent of Det Danske Luftfartsselskab line between Copenhagen and Hamburg.

promised an annual subsidy of 25,000 francs, and the Federal Government will contribute 20,000 francs. No announcement has been made as to the amount to be contributed by Geneva, but it will probably equal that subscribed by Basel.

Exhibits Available

Persons interested in the following reports may obtain them from the Transportation Division or through the district and cooperative offices of the Bureau of Foreign and Domestic Commerce, by referring to the proper exhibit number:

169648—*Brussels*.—Annual report of the Compagnie du Chemin de Fer du Congo (Congo Railroad Co.), for the fiscal year 1923-24. (Transmitted by Consul Herbert O. Williams, Brussels, April 15.)

27583—*Paris*.—French shipping in service; a detailed report on the growth of the merchant marine, idle shipping, entrances and clearances, traffic through French ports, and activities of French shipyards. (Transmitted by Assistant Trade Commissioner D. S. Green, Paris, April 29.)

Basel May Have Extensive Air-Line Connections

Consul Calvin M. Hitch, Basel, Switzerland, April 10

Basel will be placed in direct air connection with many of the principal cities of Europe by four air lines, if the contemplated service between Basel and Lyons, France, via Geneva, is established. Basel has

COMMERCIAL LAW

H. D. Courcy, Acting Chief, Division of Commercial Laws

Tax Reductions in Austria

Commercial Attaché H. Lawrence Groves, Vienna

By parliamentary act of April 3, the Austrian personal income, corporation, and general trade taxes were substantially reduced. The reduction will be effective for the year 1925, with certain modifications provided for the payment of the corporation and general trade taxes.

Reduction Applies to Lower Incomes—Rate Graduated.

The reduction in the personal income tax benefits almost exclusively the lower classes of income. A person with an income below 1,400 schillings (1 schilling=\$0.14072) per annum is exempt; heretofore, the amount was 1,200 schillings. The amounts included in the first two categories subject to tax are increased. A person receiving a yearly income of more than 1,400 schillings is taxed on the entire income with no exemption.

The rate of the tax is graduated from 1.1 per cent on 1,401 schillings to 4.4 per cent on 14,400 schillings. Over that amount the rates increase in greater amounts to 45 per cent on income over 60,000 schillings.

Corporation Tax Reduced.

The corporation tax, levied on net earnings, is reduced from 36 per cent to 25 per cent, except for certain organizations such as cooperative associations, mutual insurance societies, and certain classes of building

associations, which pay lower rates. Water-power concerns are also favored under this tax with much reduced rates or total exemption. In general, all share companies, limited-liability companies, limited partnerships, insurance companies, savings institutions, and various types of concerns required to maintain books open to inspection for tax purposes are subject to this tax. Foreign firms operating in the country through branch offices are taxed on the business done in Austria.

Concerns Subject to the General Trade Tax.

The general trade tax is also a tax on the net earnings of companies or individuals doing business for profit but applies only to concerns not subject to the corporation tax. Those subject to tax are divided in two general groups, as follows:

1. Those engaged in free professions, such as doctors, lawyers, and artists; those rendering personal services; and concerns or occupations where the employment of capital in proportion to the proprietor's time and energy is relatively small. In this group are classed individuals and concerns with annual net profits not exceeding 72,000,000 paper crowns (7,200 schillings).

2. All persons and concerns other than noted in the first group, except concerns subject to the corporation tax.

The modification of this tax now effects a reduction varying from 50 to 75 per cent in the rate per cent for the first category and from 25 to about 44 per cent for the second category.

[A detailed report on Austrian taxation is being prepared, which will be published by the Division of Commercial Laws in the form of a special circular.]

Limitations of Actions Effective After Lifting of Greek Moratorium

Acting Commercial Attaché R. O. Hall, Athens

As a result of the lifting of the Greek moratorium on April 30, 1925, the ordinary periods of limitation are again applicable. If actions were suspended by the moratorium the balance of the period began to run from April 30, and if they accrued during the moratorium, the ordinary limitation began to run as of the date of its termination. Some of the shorter periods of limitation are given in the following paragraphs:

Bills of exchange and promissory notes.—According to Greek commercial law, a protest for failure to pay must be entered before a notary public the day after a note falls due; and within 15 days after the filing of such protest suit must be commenced against the drawer or an indorser. If suit is not brought within this limit the right of claim against the indorsers is forfeited. However, suit against the drawer may be brought within five years, after which all rights are forfeited unless suit has been brought. After the suit has been begun another five years are allowed for pressing it. Under the clauses of abandonment or neglect are included instances in which a claim has not been acted upon at all. There are, of course, other specific cases in which the law provides for extensions of time limits.

Checks and money orders.—Protests for the nonpayment of checks must necessarily be made on the day of presentation. Such protest must be entered either before a notary public or on the check itself, where mention of the date must be noted. After this protest, the holder of the check must notify the indorsers within 2 days and must bring suit within 15 days after the date of the protest. Failure to comply with these regulations results in forfeiture of claim against the indorsers. The only recourse left is against the drawer. As regards claims of indorsers against each other, they fall under a six-month time limit dating from the day of the payment of the check by the claiming indorser, or from the date of the suit instituted against him.

Wages.—Any right to claim for wages due employees or for expenses or other remuneration as well as any right to claim of employers in connection with advances made to employees is forfeited after two years in case of failure to bring action.

Interest.—Any right to claim for interest due, including all sinking funds, is forfeited after five years in case of failure to bring action.

Accidents and workmen.—Any right to such claim is lost after three years in case of failure to bring action.

Agents.—The right to sue for loss or damage to merchandise is forfeited after six months in case of failure to bring action, if the claim relates to transactions conducted within the limits of the Greek State; and after one year, if to transactions conducted abroad.

Ocean transport.—Banks must bear in mind under this heading that claims for loss or damage to merchandise of which delivery has been made must be filed with the captain of the vessel within 48 hours after delivery has been taken of the goods, and proceedings started within one month after such protest. Damage (sea) suits and also chartering and collision claims are forfeited after one year for failure to press them after proceedings have been commenced.

The general law is that all rights are forfeited after 30 years for failure to bring action. The above, and also many others not mentioned, are exceptions.

Second Issue of Comparative Law Series

The second number of the Comparative Law Series (May, 1925) contains an article on the scope of the Madrid trade-mark registration arrangement by Bernard A. Kosicki, Division of Commercial Laws, discussing the advantages and prerequisite requirements of international registration, and the persons entitled to the benefits thereof. Assistant Trade Commissioner A. Viola Smith, Shanghai, has contributed an article on Shanghai's court system, including the international

mixed court and extraterritorial jurisdiction. An important English House of Lords decision which may result in authorizing a dual residence for a company for English income-tax purposes is briefed by Acting Commercial Attaché Mowatt W. Mitchell, London, and the new Chilean women's enabling act is described by Ambassador William Miller Collier, Santiago.

Single copies of this number will be sent without cost upon application to the Division of Commercial Laws. Refer to C. L. No. 83.

Commercial Law Briefs

Regulations of Mexican Income Tax Law Available.

A copy in Spanish of the regulations governing the application of the Mexican income tax law, which became effective April 1, 1925, will be loaned by the Division of Commercial Laws upon request.

Stamp Tax on Checks Modified in Canada.

The amendments to the customs tariff act include an exemption from stamp tax on checks not exceeding \$5 in value, effective July 1, according to a report from Trade Commissioner Lynn E. Meekins, Ottawa.

Progress of Codification in Italy.

The original proposals made with regard to the reform of the Italian Code of Commerce have been abandoned and a new commission is now at work on the draft of the new code. (Commercial Attaché H. C. MacLean, Rome.)

Mexican Tax Commission Appointed.

A tax commission has been appointed in Mexico which is composed of representatives of the treasury, agriculture department, department of communications, and a representative of the confederation of chambers of commerce and industry, according to Commercial Attaché Alexander V. Dye, Mexico City.

New Austrian Patent and Trade-Mark Fees.

An increase in official fees applying to patents, trade-marks, samples, etc., in Austria, is made in the decree of March 11, 1925, which came into effect April 1, 1925. The new fees are quoted in Austrian schillings. A full schedule of the fees may be examined in the Division of Commercial Laws, and excerpts will be furnished on request. (Commercial Attaché H. Lawrence Groves, Vienna.)

Porto Rican Foreign Corporation Law Proposed.

A bill has been presented in the Porto Rican Legislature defining what constitutes doing business in Porto Rico by foreign corporations, making them liable to registration and payment of taxes. It is possible that this bill will not be reached at the present session of the legislature, but if it is passed its terms will be published by the Division of Commercial Laws. In transmitting a copy of the bill, Trade Commissioner L. W. James, San Juan, also incloses a copy of the municipal license tax on San Juan business establishments.

Amendment to Canadian Copyright Act Proposed.

At a meeting of the copyright committee in the House of Commons on May 6 an amendment was proposed favoring the cancellation of the present licensing clauses as they affect the publishing of books. The existing law permits a publisher in Canada to obtain, upon application to the Minister of Trade and Com-

merce, the exclusive right to publish and circulate in Canada a book which has already been published in a foreign country, but not in Canada. In view of the importance attached to this subject, discussion of the amendment was indefinitely postponed. (Assistant Trade Commissioner W. J. Donnelly, Ottawa.)

Rate of Compensation for War-time Seized Goods.

The British House of Lords, in the case of *Swift & Co. v. The Board of Trade*, has decided that in awarding compensation for food requisitioned by the food controller under the "defense of the realm" regula-

tions, the arbitrator can not award an amount calculated at a higher price than that at which the goods could have been sold under a "maximum prices order" in force at the date of requisition and that the arbitrator can not award interest from any date anterior to the date on which he makes his final award. A copy of the decision, transmitted to the Division of Commercial Laws by Trade Commissioner Mowatt W. Mitchell, London, which is of interest to firms that still have claims pending against the Board of Trade or other British governmental departments, will be loaned on request. Refer to No. 27639.

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

HONGKONG CURRENCY AND EXCHANGE

Based on reports from Consul A. R. Carlton, Hongkong, and Consul General Douglas Jenkins, Canton.

Hongkong is the entrepôt for 65 per cent of the South China trade and about 25 per cent of the whole trade of China. Since the financing of practically all of this trade is done through Hongkong or for account of the Hongkong banks, the Hongkong dollar has become the principal currency of the Canton district. The branches of foreign banks in Canton, Swatow, and Amoy, with but one exception, are controlled by their head offices in Hongkong, and no independent exchange market exists in these ports.

Exchange in connection with imports to or exports from Canton is always expressed in Hongkong dollars. Foreign houses in Canton pay for their purchases of raw materials by check on Hongkong and these checks for years have been accepted in Canton at a discount, as a rule, of not more than one-sixteenth per cent.

Currency of Hongkong—Legal Tender.

Hongkong currency consists of the Hongkong dollar, containing 374.4 grains of silver, and bank notes issued by the Hongkong and Shanghai Corporation; the Chartered Bank of India, Australia, and China; and the Mercantile Bank of India (Ltd.).

The Hongkong and Shanghai Banking Corporation is authorized to issue bills and notes payable to bearer on demand, not secured by a metallic equivalent, in an amount not to exceed 20,000,000 silver dollars, and, in addition, an unlimited amount secured by 100 per cent metallic reserve. The circulation outstanding on February 28, 1925, amounted to \$44,019,035, against which there was deposited a specie reserve of 29,900,000 silver dollars with the Hongkong government and the British consulate at Shanghai and securities amounting to \$3,091,000 with the Crown agents and the Straits government.

The circulation of notes of the Chartered Bank of India, Australia, and China on the same date amounted to \$12,045,971, against which there was a metallic reserve of \$5,000,000 and sterling securities deposited with Crown agents amounting to £1,061,900.

The Mercantile Bank of India (Ltd.) is authorized to issue notes not to exceed the amount of the paid-up capital of the company, against which there must be a reserve of securities or coin at the option of the com-

pany. On February 28, 1925, its note circulation amounted to \$1,313,667, against which there was a reserve of 550,000 silver dollars and £130,000 in securities deposited with the Crown agents.

The legal-tender currency of Hongkong consists only of current silver dollars (Hongkong silver dollar, the Mexican dollar, or the British dollar), subsidiary silver coins up to two silver dollars and copper cents up to one dollar.

Kwantung Province Seeks to Restrict Use of Hongkong Currency.

In view of the importance which Hongkong currency has attained in South China, it is interesting to note that an order has been issued recently by the government of Kwantung Province forbidding the circulation of foreign notes and the importation of silver subsidiary coins, on the ground that the paper currency of Hongkong and elsewhere is at a premium to the disadvantage of local currencies.

The Central Bank, an institution created about a year ago by the Canton government, is planning to establish branches and agencies in various districts and business centers outside of Canton with a view to increasing the activity of the bank and the circulation of its own notes—the first branch, according to the newspaper reports, to be opened shortly at Kongsan in the Kwantung Province.

Decline in Japanese Specie Holdings

Consul C. R. Cameron, Tokyo

Specie held by the Japanese Government and the Bank of Japan at the end of March totaled 1,467,000,000 yen, a decrease of 22,000,000 since January 31. The specie holdings of Japan have consistently declined from the high point of December 31, 1920, when gold to the extent of 2,178,625,959 yen was under Japanese control. At that time 1,062,326,991 yen were held abroad. Gold holdings at home have increased slightly since 1920, and it is the large decrease in foreign holdings that accounts for the reduction in specie holdings. Total gold holdings have declined 32 per cent since 1920, while the amount held abroad has declined 72 per cent. The decrease since January 31, 1925, is attributed particularly to the payment of interest on foreign loans.

For the purpose of converting its specie holdings, the Government, it is reported, is investigating the

extent to which its purchases abroad, which amount to 100,000,000 yen annually, can be reduced through the substitution of articles of local production. It is estimated that 10 per cent can be saved by purchasing articles of Japanese manufacture.

Specie Holdings Summarized.

The following table shows the specie holdings of Japan on December 31, 1920, and 1923, and January and March 31, 1925:

Specie holdings of Japan

Items	December 31, 1920	December 31, 1923	1925	
			January 31	March 31
	Yen	Yen	Yen	Yen
Held by treasury.....	866,989,339	525,462,186	411,000,000	388,000,000
Held by Bank of Japan.....	1,291,036,620	1,127,327,910	1,078,000,000	1,079,000,000
Total.....	2,178,025,959	1,652,810,096	1,489,000,000	1,467,000,000
Held at home.....	1,116,238,968	1,208,311,044	1,175,000,000	1,175,000,000
Held abroad.....	1,062,326,991	444,499,052	314,000,000	292,000,000
Total.....	2,178,025,959	1,652,810,096	1,489,000,000	1,467,000,000

Foreign Capital for Australian Factories

Trade Commissioner E. G. Eabbitt, Melbourne

High tariff duties result in the establishment by foreign manufacturers of local branch factories for the extension of their business, Australian advocates of a high tariff assert. In support of the wisdom of their tariff policy, they cite numerous instances of oversea manufacturers who have recently established or are about to establish factories in Australia.

British Engineering Firms in Australia—Woolen Mills.

Among prominent British engineering firms that have opened establishments in Australia are Armstrong Whitworth (Ltd.), Metropolitan Vickers, and Hadfields (Ltd.). Rylands (Ltd.) has a large wire factory in Newcastle, New South Wales. Babcock & Wilcox have erected large boiler-making works near Sydney, while Chubb & Co. are supplying their Australian trade with safes and strong rooms from a branch in the same city. Keen, Guest & Nettlefold, manufacturers of wood screws, are setting up a branch in Sunshine, Victoria.

The British firms of Paton and Baldwin have amalgamated in a branch mill at Launceston, Tasmania, and at the same city another British firm, Kensall & Kemp, have erected a woolen mill at a cost of £125,000. The Valley Woolen Mill at Geelong, Victoria, has also been assisted with British capital.

Chocolate Factories Established—New Projects.

The amalgamated firm of three British confectionery makers, Fry, Cadbury & Pascall, for some years has been established at Claremont, Tasmania, and now Murray, another chocolate maker from England, has commenced manufacturing in Melbourne.

Among the new factories projected or planned is a subsidiary of Distillers Co. (Ltd.), which is to erect plants near the sugar mills to treat molasses and cassava for the production of motor spirit.

A company capitalized at £200,000, and said to be in association with a large British paper manufacturer, has been organized for the production of newsprint

from Tasmanian timber, while the manufacture of sheet glass is to be undertaken by the Australian Glass Manufacturers Co. (Ltd.), now producing lamp glasses and flintware in Sydney.

Practically all developments so far are in the hands of British capital, but the recent announcement of a branch factory of an American motor company in Sydney indicates that capital may hereafter be brought in from other sources.

Japanese Banking in Russia

Consul C. R. Cameron, Tokyo, Japan

The resumption of trade relations between Russia and Japan has attracted the attention of Japanese to the question of banks and currency in Russian territory. Dispatches from Harbin advise that the circulation of all coins and notes issued by the former Imperial Russian Government, and of all foreign currencies, was to be prohibited in Siberia after March 1, 1925, the only exception being in favor of Bank of Chosen notes.

The unit of currency now employed in Vladivostok is the chervonets (plural chervontsy), equivalent to 10 of the former Russian gold rubles, \$5.15 in American money, and 10.32 yen at the par of yen. The chervonets is now being quoted in Vladivostok at 13.4 to 13.5 yen. The depreciation of the yen (at present quoted at \$0.38875) would normally make the chervonets worth about 13.25 yen, but because of the local demand for Russian currency in making payments of taxes, fishing dues, etc., it is at a premium of about 0.25 yen.

Foreign Banks Operating in Vladivostok.

The only foreign bank at present in operation in Vladivostok is the Bank of Chosen, branches of the Yokohama Specie Bank, and the Hongkong and Shanghai Banking Corporation, formerly maintained in that city, having been closed during 1924. The Bank of Chosen has also an office at Alexandrovsk.

The Bank of Chosen was established in 1909 by special charter of the imperial Japanese Government. It has a paid-in capital of 50,000,000 yen and is privileged to issue bank notes against gold coins, gold and silver bullion, and notes of the Bank of Japan; and notes up to a maximum of 50,000,000 yen against national bonds and other bonds and commercial bills of a reliable nature. The fiduciary portion of the note issue may be increased beyond 50,000,000 yen by payment of 5 per cent tax on the excess. The Bank of Chosen notes circulate, together with Japanese currency, in Chosen (Korea), and since December 1, 1917, they have been the sole legal tender throughout Kwantung and the South Manchurian Railway zone in Manchuria. They also have a wide circulation throughout Manchuria and even in the coastal regions of far eastern Russia.

At the present time no shipments of merchandise to Vladivostok are financed by Japanese banks; that is to say, no drafts are discounted against documents, and no bank will buy export bills on Russia. Japanese exporters deliver their goods in Vladivostok, receiving payment from the Russian Government in chervontsy, which are then exchanged at the Bank of Chosen for notes or drafts of the latter bank.

Russian Banks in Vladivostok.

At present two Russian banks are located in Vladivostok, both governmental institutions. One is a branch of the Russian State Bank, which is a bank of issue. The other is the Russian Far Eastern Bank, a semigovernmental institution supported by both the Central and Far Eastern Soviet Governments. Its head office is in Chita, and it has been organized principally for the purpose of foreign trade.

The Russian Far Eastern Bank has made application through the prefectural government of Hyogo for the establishment of a branch in Kobe, and it is stated that further branches are planned for Tokyo and Hakodate.

American Remittances to Lithuania During 1924

John Campbell White, first secretary of American Legation, Riga, Latvia

It is estimated that immigrant remittances from the United States to Lithuania, which were effected through the banks, banking offices and post offices under official supervision, amounted to 31,000,000 lits (1 lit=\$0.10) during 1924. The period preceding Easter and Christmas shows unusually large totals, amounting to

about 3,000,000 lits monthly. The 30,000,000 lits estimated for the entire year includes remittances from other countries besides the United States, but it is estimated that in addition, at least 30,000,000 lits were remitted through German and Latvian banks, making a total of approximately 60,000,000 lits. It is believed that at least half of this amount came from the United States.

Philippine Public Debt

Assistant Trade Commissioner Edwin B. George, Manila

The total bonded debt of the Philippine Islands at the end of 1924 amounted to 152,920,000 pesos (\$76,460,000), of which 139,000,000 (\$69,500,000) represented direct obligations of the insular government and 13,920,000 (\$6,960,000) bonds issued by the City of Manila and provincial and municipal governments.

Actual revenues of the Philippine budget for 1924 totaled 74,070,203.545 pesos, against expenditures of 65,898,538.75, leaving a surplus of 8,171,664.795.

TEXTILES

Edward T. Pickard, Chief, Textile Division

NEW TRENDS IN EGYPTIAN COTTON PIECE-GOODS DEMAND**Japanese Gray Sheetings Rapidly Displacing British Goods—Continental Countries Securing An Increasing Share of the Trade in Dyed Goods**

Trade Commissioner Richard A. May, Alexandria, April 28

Cotton piece goods with a total valuation of ££9,086,872 in 1923 and ££8,798,665 in 1924 comprise the largest single item of import into Egypt, accounting for approximately 20 per cent of the imports of all classes of merchandise in 1923 and almost 18 per cent in 1924. (The average exchange value of the Egyptian pound was \$4.69 in 1923 and \$4.53 in 1924.) Although Egypt's takings of cotton piece goods, both in quantity and value, were smaller in 1924 than in 1923, and some merchants failed, the general trend of the import, wholesale, and retail trade during 1924 was by no means backward. It is true that unusually low prices prevailed throughout the year and both importers' and dealers' profits were small, as a result of increasing competition, mostly from continental mills.

British Cotton Goods Losing Ground.

Until recently Lancashire enjoyed practically a monopoly of Egypt's trade in all classes of cotton piece goods, but in 1924 several important British lines lost ground to Japanese, Italian, and Belgian cotton cloth. The United Kingdom's share in the total imports of cotton cloth, 67 per cent in 1924, was substantially lower than that of 1923 (74 per cent) and the smallest percentage ever recorded for Manchester shippers. Much of the business lost to the British went to Italy, which increased its portion of the total value from 19 per cent in 1923 to 23 in 1924. Italy's gains were mostly in fancy heavy dyed goods, while Japan made

similar large inroads in the trade in heavy gray goods, principally sheetings.

Stocks Adequate for Consumption.

Stocks of cotton goods in the Egyptian bonded warehouses at Alexandria during 1924 were more than adequate for the usual market consumption but were not sufficiently large at any time to depress prices, although they generally exceeded those reported for 1923, mainly on account of the market slowness. Lowest stocks were recorded on January 31, with a total of 6,720 bales and cases, and the maximum of 9,735 on September 30. Throughout the year Manchester goods were somewhat less prominent in the stock figures than in previous years. The quantity of Japanese grey sheetings in bond at Port Said fluctuated but slightly during 1924, and were barely equal to domestic and export demand in the last few months, causing sharp price advances.

Japanese Grey Sheetings Dominate the Market.

Egypt's total imports of grey goods weighing up to 110 grams per square meter (over 4.5 yards per pound) during 1924 amounted to 25,971,400 square meters (square meter=1.196 square yards), valued at ££427,950, and of heavy goods, weighing over 110 grams per square meter (less than 4.5 yards per pound), 15,683,200 square meters, valued at ££496,900. In 1923 the United Kingdom supplied approximately 75 per cent

of Egypt's imports of heavy grey goods, this classification comprising principally sheetings, longcloths, and T-cloths, but in 1924 it was displaced by Japan, which furnished more than one-half the volume of these imports, and the value of the Japanese goods exceeded that of the British by more than £E45,000. Only small quantities of American heavy grey sheetings entered Egypt during 1923 and none in 1924, although a substantial business was done in this line in the immediate post-war years. Throughout 1924 the Japanese product controlled the market with prices ranging from 10 to 20 per cent below those quoted by New York exporters. Similarly, American grey duck lost its pre-war and postwar prominence in the Egyptian market, on account of lower prices quoted on admittedly inferior cloth from France and England.

Trade in Bleached Goods and Prints Largely British.

In bleached goods and prints, both heavy and light, the United Kingdom still dominates the market, meeting only slight competition from Italy in white sheetings, and from Italy and France in prints, in heavy lines of which both countries registered substantial gains over 1923. The United States also did a small but significant amount of business with Egypt in 1924 in light-weight printed goods, especially voiles. Out of a total importation of 58,586,300 square meters of bleached goods, with a value of £E1,814,500, in 1924 the United Kingdom supplied 57,087,000 square meters, valued at £E1,752,000, while Italy is credited with 1,273,500 square meters, worth £E54,300. Egypt's imports of prints aggregated 39,233,900 square meters, valued at £E1,940,100, of which the United Kingdom's share amounted to 32,102,300 square meters, valued at £E1,566,800, while Italy sent 5,240,000 square meters, with a value of £E263,500, and France furnished 1,379,500 square meters, worth £E78,300.

Italian Dyed Goods Increasing in Popularity.

Egyptian imports of piece-dyed cotton cloth, both light and heavy, were almost as large in 1924 as those of printed goods, and amounted to 33,654,900 square meters, valued at £E1,825,450, of which 24,143,600 square meters came from the United Kingdom and 8,472,400 from Italy. Compared with 1923, the importation of yarn-dyed cotton declined over 10,000,000 square meters and £E556,600—to 24,842,200 square meters valued at £E1,291,800 in 1924. Italy predominates in the trade in yarn-dyed goods, having supplied 14,351,000 square meters in 1924, while Great Britain furnished only 6,109,500, or less than half as much as in 1923. Other important sources of heavy yarn-dyed goods are Belgium and British India.

The remarkable progress which Italy is making in both heavy and light piece-dyed goods is largely explained by an increasing demand on the market for fine goods of fancy design containing rayon in varying degrees. The Italians have shown a remarkable aptitude for catering to the Egyptian market requirements in this particular, especially in the finer goods, while Belgium and Italy have been close competitors in the field of heavy novelty cloths. More or less contrary to precept, cheap novelties are in demand.

The increasing popularity of Italian and Belgian finished piece goods has been promoted by the larger import and wholesale houses of Italian nationality and other long-established firms who have always done busi-

ness with Manchester, but who are now handling Italian and Belgian goods as well.

Japanese Gray Goods Sold on a Commission Basis.

Japanese gray goods are brought into Egypt mostly by importers who specialize in sheetings, operate on a commission basis, and generally sell to the wholesale trade not only in Egypt but also in other Near Eastern markets from Port Said stocks. Most of these houses maintain their own offices in Kobe, Japan, with which they are in daily telegraphic communication. This arrangement is in accordance with the long-established practice of the older cotton-goods import firms who have had branches in Manchester and who are now opening offices in Milan and other continental textile centers as well.

Causes of Gains by Continental Manufacturers.

The greater participation of Italian, Belgian, and French manufacturers in the import trade is the outstanding feature in all lines except gray cloths, while Japan's rapid advance in the gray-sheeting business is almost equally impressive. Continental suppliers have made their phenomenal gains in the Egyptian market principally through the depreciation of their exchange, which, added to proximity, adaptability of their fabrics, and generous credit terms, has given them a decided advantage. Italian and Belgian mills are granting credits of 90 to 120 days, and even longer, after acceptance. Italian mills are also sending their technical experts to study the market requirements with their local agents.

Factors Retarding American Sales in Egypt.

The principal obstacles to the development of a large market in Egypt for American cotton piece goods are distance, refusal of American manufacturers to adapt their cloths to the country's requirements, and high prices on account of gold exchange, but no doubt the retarding influence of all these factors is very much magnified, and these objections could be very easily overcome by a careful study of the market and more systematic methods of supplying local merchants and importers with information as to the goods, prices, and terms of deliveries which American manufacturers have to offer. An important American exporter of cotton piece goods who recently visited Egypt for the first time was astounded to find that despite deep-rooted opinion to the contrary in the trade, prices on many lines of United States goods were as low as those quoted by Italian, Belgian, and French mills. He reported that under existing conditions Egypt offers unusual opportunities at present for American voiles, sateens, zephyrs, broadcloths, bleached sheetings, ducks, marquises, silk and rayon striped shirtings and mixtures, longcloths, denims, khaki drills and trouserings, not to mention many other types of cotton cloths for which this market provides a more limited demand. Modern Western ideas are beginning to exert a greater influence than Eastern customs on the piece-goods demand, and a very large share of the Egyptian consumption may be presumed to be staple goods or novelties in vogue in the United States, and it is not believed that American manufacturers must necessarily make up special cloths for the Egyptian market.

Credit Terms—Advantage of Carrying Local Stocks.

With regard to long-time credits, it is believed that a clientele to whom such terms can be granted with

perfect safety can be found in Egypt, but many important firms will always be willing to pay cash upon delivery of documents at Alexandria or Port Said if slightly better prices are accorded. The large business in Japanese gray sheetings during the last two years has been built upon this basis. American exporters in attempting to meet the terms usually granted the Egyptian trade should carefully investigate before establishing new accounts.

Deliveries from the United States can be effected within three weeks provided stocks are on hand and can be promptly prepared for shipment from New York. The comparative nearness of Italy and France, and even England, makes the time element a real disadvantage to American exporters.

To overcome this obstacle it may be possible to arrange to carry spot stocks of many standard American lines at Alexandria for supplying current orders. There is no reason why American shippers could not secure full protection through the local banks.

In summary, it may be stated that Egyptian cotton piece-goods importers and merchants who have witnessed the growing importance of Italian, Belgian, and Japanese goods in the local market are more than willing to give American goods an equal opportunity, and their attitude at the present time seems to be favorable for the establishment of contacts with excellent possibilities for future development of a profitable business.

WORLD TEXTILE NEWS IN BRIEF

German Hosiery Industry Steady.

The hosiery industry in Chemnitz is reported to be improving. Domestic orders are increasing and coming in regularly. Very cheap goods are less in demand. Exports of hosiery have increased slightly. South America, England, Denmark, Sweden, and the neighboring States, including Poland and Austria, have given excellent orders, for the most part, at very low prices. These are principally for cotton hosiery. Credit terms are becoming a little easier. (Assistant Commercial Attaché Douglas Miller, Berlin, May 7.)

South African Ostrich Feather Market Dull.

The ostrich-feather market in South Africa was, on the whole, very dull during 1924 and the first part of 1925. An expected demand from America did not materialize; the demand from Europe was smaller than had been anticipated; and prices, though at times fair, at no time approximated those ruling in former years. Exports of feathers from Port Elizabeth to the United States during the first quarter of 1925 amounted to 18,020 pounds, worth \$114,523, compared with 19,225 pounds, valued at \$103,964, for the like period of 1924. (Consul General D. C. Poole, Cape Town, and Consul Reed Paige Clark, Port Elizabeth.)

Wool and Mohair Exports from Port Elizabeth.

Exports of wool from Port Elizabeth to the United States during the first quarter of 1925 amounted to 1,053,342 pounds, valued at \$487,158, compared with 1,633,732 pounds, worth \$819,528, during the corresponding period of 1924. The large decreases were registered in both scoured and grease wool shipments. Mohair exports during the first three months of 1925 totaled 357,294 pounds, valued at \$197,263, compared with 131,303 pounds, worth \$53,069, for the like period of 1924. Stocks, however, are practically depleted and the market at present appears to be very unsettled, with an outlook by no means satisfactory. (Consul Reed Paige Clark, Port Elizabeth.)

Constantinople Carpet Market Inactive.

The delay in arrivals in the Constantinople carpet market caused stocks to be depleted and rendered business difficult during March. Sales of Persian carpets, between the latter part of February and the latter part of March, to London, Amsterdam, Antwerp, and Vienna markets, amounted to a total of about 150,000 Turkish pounds (Turkish pound=approximately \$0.52). American buyers during the same period transacted purchases in various Persian goods amounting to between 30,000 and 40,000 Turkish pounds. The resumption of regular arrivals is expected for the near future. This should result in increased activity on

the market. (Trade Commissioner Julian E. Gillespie, Constantinople, April 11.)

Silk Exports from Shanghai to the United States.

Silk shipments from Shanghai to the United States during 1924 were 10 per cent larger than in 1923 in point of quantity, but the value was less than one-half that shown in 1923. This decline was considerably more marked than that registered in the total exports of silk from this port. The falling off in shipments to America was due principally to unfavorable exchange rates for the purchase of this commodity in Shanghai. The following figures show quantity in pounds and value in gold dollars of Shanghai shipments to the United States during 1924: Raw silk, 1,841,316, \$10,346,698; waste, 881,813, \$622,162; wild silk, 691,192, \$2,317,240; piece goods, 9,699, \$81,725; pierced cocoons, 19,799, \$10,896; pongees, 116,773, \$351,455; miscellaneous manufactures, \$41,938. (Commercial Attaché Julian Arnold, Peking.)

Condition of Belgian Textile Industry.

The opinion is expressed in Ghent textile circles that the end of the crisis which has been depressing the industry since the beginning of the year is approaching. This note of optimism, however, seems to have little foundation, as at the moment there is no indication of any radical change either as regards cost of production or sales price. The demand for flax from French and English spinners is increasing slightly, and prices are continuing to fall. The linen market continues to suffer from serious depression both in the spinning and weaving sections. Transactions are nil and prices, although weaker, remain nominal and uncertain. The situation in the cotton-spinning section remains relatively favorable. Stocks are low and, although domestic orders are few, export demand is good. No change is noted in cotton weaving. The jute industry continues very prosperous with export requirements good. (Assistant Trade Commissioner Leigh W. Hunt, Brussels, April 29.)

Additional information regarding textiles appears in this issue under the following sections:

- Cable review, Europe: Austrian cotton spinners' unfilled orders large.
- Cable review, Far East: Increased activity in China's trade.
- Cable review, Latin America:
 - Buying in Brazil restricted.
 - Chilean confidence affected by failures.
- Tariffs and trade regulations:
 - Costa Rica—Prohibition on importation of used clothing.
 - Salvador—Import prohibition on used bags and oversacks.
- Bureau's special circulars available.
- Foreign trade opportunities.

AUTOMOTIVE PRODUCTS

Percy Owen, Chief, Automotive Division

Foreign Automobile Market Groupings

Market studies based on country groupings, rather than on individual countries, are planned by the Automotive Division. The first story takes in those north-central European markets which may logically be considered together. Where American automotive exporters do not follow the policy of developing every foreign market, a grouping of contiguous markets having closely allied economic characteristics provides a point of logical concentration for market efforts.

FIVE YEARS' EXPORTS TO NORTH-CENTRAL EUROPEAN MARKETS

The six north-central European countries—Sweden, Norway, Denmark, Netherlands, Belgium, and Germany—have been selected as a representative economic group of foreign automobile markets. With the view of looking into the development of these markets, both individually and collectively, as regards their absorption of automobiles from the United States, figures have been compiled covering United States automobile exports, including parts for assembly, for the five-year period since 1920.

The automobile registration in the six countries, based on the latest figures, accounts for a total of 491,937 cars and trucks. The population of these countries roughly approximates 86,000,000, which makes each automobile account for about 175 persons.

Size and Trend of Automobile Markets.

For the five-year period, 1920 to 1924 inclusive, the north-central economic group accounted for 11.1 per cent of the declared passenger-car and truck exports from the United States, or 70,487 units, out of the 635,464 that represented the total world trade in this line. This does not measure the full receipts of United States automobiles in these markets, since the figures do not include the assemblies in certain of these countries by American manufacturers of low-priced cars; nor do they include the indeterminable volume of indirect trade through points outside the territory under review.

It is true that those assembly plants located within this area have not been established there for the sole purpose of confining their markets to the six countries. However, for purposes of comparison it is permissible to regard this unknown portion of assembled cars which go to markets other than those under consideration as being balanced by that equally unknown volume of United States automobiles which enter the six markets via the indirect route. A combination of passenger-car and truck exports, along with those of parts for assembly, would seem therefore to portray fairly the shipments of cars and trucks to the six markets.

The relative importance of each country in these north-central European markets for the five-year period is expressed, in the order named, as Sweden, Bel-

gium, Norway, Netherlands, Denmark, and Germany. This ranking takes into account only United States exports of automobiles (complete and chassis). No doubt it would have to undergo a different listing were detailed figures fully known regarding the distribution of those assembly plants that are located in several of the countries under consideration. The reason for the unfavorable position of Germany is too well known to require discussion. However, as the United States exports of automobiles to that country in 1924 accounted for almost 91 per cent of the total similar exports for the entire five-year period, it is evident that the German market will soon approach that of the other five leaders.

Details of the United States automobile export trade to the six markets in question are shown in the following table:

Five years' exports of cars and trucks from the United States to six north-central European countries

Market Potentiality.

One arbitrary measure of the automobile market possibilities of any country consists of a review of its population-registration ratio. Although the final result may not completely classify a market as to its absorptive powers, it is a worthwhile yardstick of comparative classification, especially where there exists no great disparity in economic development between the countries and the standard taken. With the United States taken as this standard, where there is one automobile to every six people, it is interesting to note the comparative status of the six European countries appearing below:

Population-registration ratios in six leading north-central European automobile markets

Country	Population	Registration (cars and trucks)	Ratio
Sweden.....	5,904,000	62,589	94
Norway.....	2,632,000	21,000	125
Denmark.....	3,268,000	47,783	68
Netherlands.....	6,865,000	47,875	143
Belgium.....	7,463,000	52,700	81
Germany.....	59,853,000	219,990	272
Total:			
Six countries.....	85,985,000	491,937	175
United States.....	105,711,000	17,591,981	6

Foreign Assemblies and Exports of Assembly Parts.

Foreign assemblies within the north-central European markets were not a considerable factor until 1922, and not until 1923 were there any reported statistics covering the activities of these plants. During that year about 25,000 units were reported assembled; in 1924, when additional plants came into operation, about 49,288 assemblies were reported. To make this possible parts were shipped from the United States.

Because of a change in export classifications from 1923 to 1924, the figures covering these exports have necessarily been grouped under "Automobile unit assemblies" and "Automobile parts for assembly."

Value of assembly parts exported from the United States to four north-central automobile markets, during 1923 and 1924

Country	1923	1924
Denmark:		
Automobile unit assemblies.....	\$879,179	\$444,735
Automobile parts for assembly.....	(1)	6,511,305
Belgium:		
Automobile unit assemblies.....	431,957	88,052
Automobile parts for assembly.....	(1)	6,159,674
Netherlands:		
Automobile unit assemblies.....	212,564	5,238
Automobile parts for assembly.....	(1)	52,974
Sweden:		
Automobile unit assemblies.....	3,725	5,642
Automobile parts for assembly.....	(1)	24,570
Total.....	1,527,425	13,292,268

¹ Classification, "Automobile parts for assembly," not used for exports prior to 1924.

It will be observed that Sweden and the Netherlands have taken some assembly parts, but these are negligible in comparison with those for Denmark and Belgium, where the major assembly operations are carried on.

Additional information regarding automotive products appears in this issue under the following sections:

Cable review, Europe: Norwegian and Danish imports of automobiles increased in March.

Cable review, Far East: Increased activity in China's trade.

Cable review, Latin America:

 Buying in Brazil restricted.

 Chilean confidence affected by failures.

Transportation: Combined railway and motor-car service in Germany.

Tariffs and trade regulations:

 Germany—Revised tariff schedule introduced.

 Guatemala—Reduction of import duty on motor trucks.

Bureau's special circulars available.

Foreign trade opportunities.

Belgian Rabbit-Skin and Hatters' Fur Exports

The rabbit-skin and hatters' fur industry in the Provinces of East and West Flanders has shown a steady growth since the war, with the increasing popularity of fur garments and trimmings, as well as the demand for the manufacture of hats. The United States is the best customer of the Ghent district in these articles, taking \$3,020,592 worth of raw and dyed rabbit skins as well as waste during 1924. In addition, the district sold to the United States \$16,436 worth of moleskins. The entire industry was exceedingly prosperous during the entire year and high prices were maintained. (Consul C. E. MacEachran, Ghent.)

American Firm to Equip Prague Broadcasting Station

The Czechoslovak Government has awarded to an American firm the contract for supplying equipment for the broadcasting station which is to be erected at Prague. Delivery is to be made within six months. (Dispatch from Commercial Attaché J. F. Hodgson, Prague, May 9.)

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

THE MOLASSES INDUSTRY IN THE PHILIPPINE ISLANDS

Edwin B. George, assistant trade commissioner, Manila

Practically all of the molasses produced in the Philippine Islands is consumed locally, except for the output of those mills whose remote location makes the handling charges prohibitive. There is practically no exportable surplus. At least two-thirds of the local production is absorbed by the distilleries of one large operator for the manufacture of alcohol or motor fuel. That portion of the remaining third which is accessible is bid for competitively by seven or eight small Chinese distilleries or is consumed by the growing number of plants attached directly to centrals. This growing tendency among the centrals to erect their own plants will eventually make them independent of both the exclusive distiller and the exporter.

Inadequate Transportation and Storage Facilities.

Neither transportation nor storage facilities exist on a scale comprehensive enough to permit the diversion of this business to export hands, even though the local distillers should be outbid for the available supply—which is by no means probable. The present arrangements for handling export shipments of sugar are for the most part faulty. A program of improvements has been approved in certain areas and work has been begun, but developments of this kind will have no bearing on immediate marketing possibilities. The extension of these improvements to include the handling of molasses for export would have to come still later and would necessitate an amount of capital expenditure which, on account of the difference between American and local prices, would probably not be justified.

Production on the Islands.

Calculations based on the returns of the 17 most important centrals show that production of molasses during 1921-22 was 49,471 tons; during 1922-23, 36,401 tons; and during 1923-24, 68,894 tons. The drop in 1922-23 was the result of lower purity, while the increase in 1923-24 is attributable to the larger output of sugar. This form of increase has been progressive over several years, and the expectations are that it will continue. The increase of each year's sugar output over that of the preceding year is illustrated by the following scale of percentages: 1921-22, 128 per cent; 1922-23, 25.3 per cent; 1923-24, 33 per cent; 1924-25, 38 per cent; and the estimated percentage of increase for 1925-26 is 21 per cent. With a few exceptions due to special circumstances, the rate of increase in the molasses output has been on the same order.

Complete production figures for the islands are not available, but an approximation may be reached as follows: Each ton of cane yields about 6 gallons of molasses, and in the Philippine Islands it requires an average of 9 tons of cane to produce 1 ton of sugar. According to the following table for each ton of sugar there would be produced roughly an average of 41 gallons of molasses, although the variation in indi-

vidual cases is extreme. As this year's sugar crop is now estimated at 421,000 metric tons, there would be a theoretical total production of molasses of over 17,000,000 gallons. The quality, according to figures taken from the records of the 17 mills already mentioned, would be about as follows:

Final comparative run reports, 1923-24 crop

Mills	Brix	Apparent purity	Gravity purity	Gallons per ton of sugar	Tons of sugar manufactured

Market for Philippine Molasses.

The price paid for molasses depends on the condition of the market, the distance it must be transported and the quantity bought. The f. o. b. cost for molasses for export is rather high, owing to the lack in so many parts of the producing areas of any suitable storage or transportation facilities. At present, however, molasses is worth more as a raw material for the alcohol plants than it is as an export commodity. There is a good market in China for such of the output as is not consumed by the large local brewing industry. The growth of this business is well illustrated by the exports. Before 1920 the exports were very small. Since that date exports of distilled alcohol to China and the total exportation have been as follows: In 1920, 1,617 gallons to China out of a total of 1,724 gallons; in 1922, 127,032 gallons to China out of 129,365; in 1923, 270,962 gallons out of 275,554. (No separate figures were given for 1921.) Exports of alcohol to Hong-kong in 1922 were 2,328 gallons and in 1923, 3,435 gallons.

Market not Attractive to American Buyers.

It is a question whether or not American bidders would care to enter a competitive market of this kind. It is asserted that overtures in this direction have been made from American sources a number of times, but that the planters were satisfied with existing arrangements and were not interested in exporting except at a price which it would not pay the buyers to consider.

Additional information regarding foodstuffs appears in this issue under the following sections:

Cable review, Europe: Danish crop outlook promising, but farm-produce exports stopped by strikes.

Cable review, Far East: Hawaiian construction projects.

Cable review, Latin America:

Argentine import movement continues.

Business quiet in Uruguay.

Tariffs and trade regulations:

France—Removal of export prohibition on condensed milk.

Germany—Revised tariff schedule introduced.

Greece—Relaxation of import restrictions on olive oil and botargo.

Iraq—Temporary exemption from import duty on flaxseed, wheat, and barley.

Italy—Lower customs classification of rolled oats.

Tariffs and trade regulations—Continued.

Benz—Restrictions on exports of rice.

Salvador—Import prohibition on coffee seeds and small coffee plants.

Spain—

Limitation of imports of oilseed.

National trade-mark required on exports of olive oil.

Sweden—Reduction of import duty on raisins.

Zanzibar Protectorate—Regulations governing exports of agricultural produce.

Foreign trade opportunities.

Bureau's special circulars available.

AGRICULTURAL IMPLEMENTS

George B. Hall, Chief, Agricultural Implements Division

DEMAND FOR FARM IMPLEMENTS IN LATVIA

Acting Commercial Attaché C. J. Mayer, Riga

Modern implements are used to a considerable degree in Latvia, and normally the country presents a good market for agricultural machinery. Imports of agricultural machinery in 1924, however, were about 40 per cent less than in 1923 and amounted to 4,918,484 lats (1 lat equals \$0.193). This decrease was due to the poor harvest, and to the restriction of credits, which were formerly granted by the Government to agricultural societies.

Farm Implements Commonly Found in Latvia.

Mowers and reapers are extensively used in Latvia and the number employed is increasing from year to year. The number of hayrakes is also growing rapidly, while more seeders are used than formerly, but the gain in sales is less rapid. Cream separators are operated by more than half the farmers in Latvia, and the present development in cattle breeding indicates that there will be opportunity for further distribution in the future. In 1923, there were 124 cream separators in Latvia to each 1,000 milk cows. The agricultural census of 1923 showed that there were 2,054 portable steam engines, 1,701 threshing machines, and 121 clover threshers in use in that year. Other important items included in this census were cultivators, tractors, and potato harvesters.

Latvian Imports of Agricultural Machinery.

Imports of agricultural machinery into Latvia in 1923 amounted to 7,385,368 lats. Imports from Germany made up more than half of this total and amounted to 4,094,468 lats, which is equal to more than four-fifths of the total imports from all countries in 1924. Sweden ranks second in importance as a source of imports and furnished 902,194 lats worth. England was next in importance, followed by Denmark and the United States. Statistics of imports by countries for 1924 are not available, but the statistics for the first eight months of 1924 show that Germany furnished 1,268,157 lats worth; Sweden, 916,624 lats, which was greater than the imports from Sweden during the whole of 1923; and the United States was third, furnishing 697,078 lats. This is greater than the imports from the United States in 1923 and does not correspond with the United States export statistics, which show that implements exported from the United States to Latvia in 1923 were valued at \$173,912, and in 1924 decreased to \$56,635. The following table

shows the imports of agricultural implements by countries into Latvia in 1923 and in the first eight months of 1924:

Latvian imports of agricultural machinery, by countries of origin

Countries of origin	1923		First 8 months of 1924	
	Kilos	Lats	Kilos	Lats
Germany.....	4,408,053	4,094,468	1,282,545	1,268,157
Sweden.....	528,763	902,194	662,968	916,624
England.....	485,096	724,093	159,737	229,488
Netherlands.....	378,990	271,230		
Denmark.....	248,831	516,851	129,370	163,365
United States.....	217,797	285,697	579,995	697,078

Total.....	6,760,255	7,385,368	2,997,200	3,543,279

Chief Imports—Sources of Supply.

The largest item included in the imports during the first eight months of 1924 was unclassified agricultural machinery. The second largest item was cream separators, which amounted to 380,880 lats. Practically all of them came from Sweden and Germany. Mowing machines were the next largest item, and these were imported chiefly from Sweden. Tractors were next in importance and came principally from the United States, while others were imported from Denmark, England, Finland, and Germany. Scythes comprised an important item in the imports and were purchased principally from Germany and Austria. About one-half of the threshing machines imported came from England, and most of the remainder from Germany and Denmark. Imports of plows amounted to only 33,205 lats. Imports from the United States consisted chiefly of tractors and unclassified agricultural machinery. American implements are well liked in Latvia, but they have to compete with low-priced German goods and with the efforts being made by the Swedish Government to promote sales of agricultural machinery in Latvia by means of long credits.

MINERALS

Guy C. Riddell, Chief, Minerals Division

ARGENTINE PETROLEUM IMPORTS IN 1924

Compiled from statistics forwarded by Commercial Attaché Edward F. Fealy and Assistant Trade Commissioner Sherwood H. Avery, and data from other sources

The 1924 importation of petroleum products into Argentina showed an increase for most items compared with 1923, and a conspicuous advance in gasoline imports. At the same time there was a concentration of the sources of both gasoline and kerosene. In 1923, 177,188,783 liters of gasoline were received from 10 sources, while in the following year 5 countries supplied 240,703,182 liters. The 1923 imports of kerosene, 61,836,514 liters, came from 7 sources, and the succeeding year's 64,746,058 liters from 4. The United States' contribution to the gasoline total increased in 1924, although not so greatly as the receipts from Mexico, Peru, and England. America's share of the kerosene importation fell off slightly.

Sources of Gasoline and Kerosene Imports—Ports of Entry.

The following table shows the gasoline and kerosene imports of the two years and their sources:

Argentine gasoline and kerosene imports

Sources	Gasoline		Kerosene	
	1923	1924	1923	1924
	Liters	Liters	Liters	Liters
Germany.....	3,149			
Chile.....	36,056	4,390	19,561	2,380
China.....	159,290			
Japan.....	1,896,223		668,143	
Mexico.....	37,631,720	61,516,936	12,401,776	14,876,971
Peru.....	41,227,026	75,931,883	125,000	2,370,497
England.....	41,429	358,800	6,928	
France.....	696			
Uruguay.....	37,113		85,624	
United States.....	96,106,181	102,691,768	48,338,192	47,495,710
Total.....	177,188,783	240,703,182	61,836,514	64,746,058

Campana received the largest amount of the imported gasoline in both years—59,550,733 liters in 1923 and 88,584,024 in 1924. In the latter year Bahia Blanca, Buenos Aires, and Rosario followed, in the order named. Altogether, 14 ports shared in the 1924 importation and 16 in 1923. Kerosene was received at 15 ports in 1923 and 13 in 1924. La Plata took the largest amount, 17,711,386 liters, in 1923, but was surpassed by the 15,191,036 liters entered at Rosario in 1924. Campana and Bahia Blanca occupied third and fourth places in 1923 and reversed these positions in 1924.

Leading Items of Importation.

Crude imports in 1923 consisted of 686,115 metric tons brought in for use as fuel and 45,257 tons for refining—a total of 731,372 tons. In addition, 14,435 tons of residues were imported for use as fuel, making the importation of oil for fuel 700,550 tons. In 1924 there were imported 201,947 tons of crude, of which the United States contributed 160,000 tons and Peru

the remainder, and 551,838 tons of fuel oil—203,000 from America and the remainder from Mexico. Almost all of the crude was brought in through Campana, while approximately 500,000 tons of the fuel oil entered through Buenos Aires.

Imported lubricants, oil and grease, amounted to 25,995 tons in 1923 and 18,866 tons in 1924. The United States supplied approximately 18,000 tons of the 1924 total, and most of the remainder came from Great Britain.

An item of 9,191 tons of gas oil was reported among the 1922 imports. In 1923 imports of this product amounted to only 4,000 tons and in 1924 none was reported, and it appears likely that none, or only a negligible amount, was received.

Storage of Mineral Fuels in France

Commercial Attaché Chester Lloyd Jones, Paris

Under the laws of July 9, 1921, and January 10, 1925, importers of mineral fuels were required to maintain certain reserve stocks of petroleum and petroleum products for the supply of the French public, and prefects of the various departments were directed to assure the safe location of storage facilities. In the actual working of these regulations the storage tanks have been located primarily with reference to the safety of the population and secondarily with reference to the protection of the stocks themselves. The result is that storage facilities have been created in exposed positions which, in the opinion of the Government, do not assure the reserve supply of petroleum products which it was intended to guarantee.

Organization to Regulate the Location of Storage Facilities.

The Ministry of Commerce, therefore, by a decree of April 10, 1925, has created a centralizing organization, which shall regulate the location of storage facilities with reference to national interests. The prefects are to report on separate lists present storage facilities with a capacity of 400 cubic meters or more, and those of smaller size. New tanks can not be opened without previous authorization, and the lists of existing facilities must always be kept up to date. Under the new regulations it is hoped that the French Government may have currently complete information concerning the existing storage facilities, and an assurance that the large ones, particularly, shall be so located as to secure both the safety of the local population and the maintenance of the national supplies.

Greek Magnesite Situation

Assistant Trade Commissioner Charles E. Dickerson, Jr., Athens

The importance of magnesite as one of the principal products of the Greek mining industry, and the high quality of Greek magnesite in comparison with other deposits, are well known. This industry remains, however, with relatively little development. The official

figures for production during the past five years show 71,870 metric tons in 1920, 58,249 in 1921, 56,642 in 1922, 57,783 in 1923, and 58,200 in 1924. It is apparent that production has decreased noticeably since 1920, and a still greater decline has occurred since the war period—1916 production, for example, amounted to 223,484 tons.

Reasons for Lack of Development—Prices.

Among the reasons advanced for the reduced output are the poor organization in Greece, both for extracting and marketing magnesite, and the increased Austrian competition. Additional causes are the limited foreign as well as domestic demand, the instability of the drachma, and the acute labor situation in the mining industry. Foreign demand, however, lately has improved, although production costs and high freight rates have advanced the price of Greek magnesite to a figure which makes competition in foreign markets difficult.

Some months ago, owing to keen competition between the larger and smaller magnesite producers in Greece, the price of the ore fell off sharply. At present, prices for the raw product range about 32 to 35s. per ton f. o. b. kilns. Calcined magnesite is quoted at 110s. per ton f. o. b. kilns. During the war the price of the calcined product reached £10 per ton.

Destinations for Greek Exports of Magnesite.

The following table shows Greek exports of magnesite by countries during 1922, 1923, and 1924. A considerable increase is noted over this period, especially to Germany and the Netherlands, the principal buyers. It is also apparent that the United States, fourth on the list in 1923, disappeared almost entirely during 1924, for the reasons above mentioned.

Greek exports of magnesite

Countries of destination	1922	1923	1924
	<i>Kilos</i>	<i>Kilos</i>	<i>Kilos</i>
France.....	2,312,627	1,206,116	1,104,256
Germany.....	7,610,284	6,324,066	20,974,405
United States.....	1,999,846	4,918,426	7,080
Italy.....	58	699,776	2,205,262
The Netherlands.....	8,411,744	10,347,139	13,992,682
Great Britain.....	7,901,789	10,188,841	5,930,272
Belgium.....			512,000
Other countries.....	49,984	244,497	
Total.....	28,286,332	33,928,861	53,726,557

The preceding figures include both crude and calcined magnesite, which are not separated in Greek records.

Foreign Demand Strengthened by Formation of Trust.

The development which has probably done most to strengthen and consolidate the foreign demand during the past year is the formation of a trust, known as the Grecian Magnesite Marketing Co., of London, by the Anglo-Greek Magnesite Co., the largest producers; the Van Mannekus Co. (Ltd.), large Dutch buyers; and the Huyzers Magnesite Co., which is understood to own the only magnesite calciner in Greece. This trust resulted from the competition between the Greek producers which forced the price down, as mentioned previously. The trust endeavors to produce one grade of calcined magnesite and to fix a standard price for the product. It is possible to buy in Greece outside

this trust only if small quantities of magnesite are ordered, as the small unorganized Greek producers do not account for more than one-third of the total Greek output. This difficulty in buying, and the endeavor to establish a monopoly under British control, have caused some concern to American firms in need of the special high-grade Greek calcined magnesite. This grade at present has no equivalent except in India, whose production is also controlled by an English company. The large quantity exported from Greece in 1924 was taken in great part by the new trust, which bought chiefly the crude product. It is stated that much of the 1924 exportation consisted of old stocks.

Canadian Mining Notes

Vice Consul Abbott C. Martin, Vancouver

Demand for British Columbian Gypsum from the Far East.

An early development of the rich gypsum deposits in British Columbia seems likely to follow the present demand in the Orient and Oceania, especially conspicuous in Australia and New Zealand. It is reported that orders are already booked from that vicinity for 1,000,000 feet of wall board, which is manufactured with gypsum and asbestos. The manufacturers anticipate a much larger call, running perhaps to 2,000,000 or 3,000,000 feet.

Amsterdam Firm Reported Negotiating for Canadian Metals.

Press reports state that the N. V. Erts Mineral Co., of Amsterdam, is negotiating for the purchase of Canadian lead, zinc, and copper in large quantities for exportation to smelting concerns in the Netherlands.

Development of British Columbian Zinc Properties.

The Vieille Montagne Zinc Co. of Belgium has announced its readiness "to take an unlimited quantity of zinc concentrates from British Columbia and to finance or operate zinc properties." The loss of a great source of supply of zinc in Australia, due to the construction of a smelter in Tasmania; the diverting of contracts to Swansea, Wales; and the natural decline in production resulting from the working out of veins have drawn attention to the Canadian sources. It does not appear likely, however, that a European company will establish a smelter in Canada; it has been suggested only that a plant be erected to reduce the ore to a shipping concentrate for smelting in Europe. Canadian interests, of course, are desirous of developing the smelting locally, in addition to producing and exporting the ore.

Geologists Expected to Visit Dease Lake District.

It is announced that a party of geologists, working under the Geological Survey of Canada, will visit the Dease Lake district this summer. The personnel has not yet been announced.

Additional information regarding minerals appears in this issue under the following sections:

Cable review, Europe: Norwegian trade in minerals.
Tariffs and trade regulations: Canada—Specified metal products now dutiable.
Bureau's special circulars available.
Foreign trade opportunities.

INDUSTRIAL MACHINERY

W. H. Rastall, Chief, Industrial Machinery Division

FRENCH FOREIGN TRADE IN PUMPING MACHINERY

Assistant Trade Commissioner Wilson K. Ray, Paris

France is showing considerable development as a machinery manufacturing country and is beginning to make its influence felt in various foreign markets. In recent years French exports of pumping machinery and possibly other types of industrial equipment have been in excess of imports, the greatest favorable balance in this trade in postwar years occurring in 1924. One reason for this was the continuing depreciation of the franc, which tended to restrict imports of pumping machinery and was of material assistance to French manufacturers in competing abroad.

Increased Production by French Manufacturers.

In addition to the exchange factor, another leading cause for increased machinery exports is the fact that French manufacturers have speeded up production and at the same time made improvements in the quality of their output. They are also in a much better position to supply the needs of the domestic market as well as to compete abroad than was the case in pre-war years because of certain provisions of the Versailles treaty. For the reasons given it is possible that France will continue to grow in importance as an exporter of industrial machinery.

The following table gives French imports and exports of various items classed as pumping machinery for 1922, 1923, and 1924:

French imports and exports of pumps and pumping machinery

Class of machinery	1922	1923	1924
IMPORTS			
Steam pumps.....	Metric tons 567	Metric tons 496	Metric tons 361
Other pumps.....	835	559	590
Air and gas compressors.....	1,215	1,082	1,176
Total.....	2,617	2,137	2,127
EXPORTS			
Engines, steam pumps, and compressors.....	1,539	2,607	3,310
Hydraulic engines, other pumps, and ventilators.....	1,530	2,323	3,412
Total.....	3,069	4,930	6,722

United States and Great Britain Chief Suppliers of Steam Pumps.

The United States has been the leading supplier of steam pumps for the French market for the last three years, with the United Kingdom second in 1922 and 1924. In 1922 Germany was an important source of French steam pump imports but this trade dropped to less than 1 per cent in 1923 and 1924. Switzerland occupied second place as a supplier of steam pumps to France in 1923. French imports of this equipment from Switzerland amounting to 135 metric tons in comparison with 46 metric tons imported from the United Kingdom during that year.

The following table gives French imports of pumps by the principal countries of origin:

French imports of pumps

Country of origin	1922	1923	1924
Steam pumps:			
Great Britain.....	Metric tons 176	Metric tons 46	Metric tons 103
Germany.....	115	4	9
Belgium-Luxemburg.....	27	17	15
Switzerland.....	13	135	16
United States.....	224	217	204
Other countries.....	12	77	14
Total.....	567	496	361
Pumps, other than steam:			
Great Britain.....	67	76	69
Germany.....	320	128	63
Belgium-Luxemburg.....	112	149	208
Switzerland.....	106	86	85
Czechoslovakia.....	86	—	1
Italy.....	43	23	56
United States.....	70	61	76
Netherlands.....	—	7	3
Sweden.....	—	9	12
Other countries.....	41	30	17
Total.....	835	559	590

¹ The above figures taken from official French import statistics can not be made to agree with United States customs figures, giving American exports of the equipment concerned, owing to differences in classification.

Belgium the Leading Market of France for Certain Lines.

Belgium was the best foreign market of France for hydraulic engines, pumps (other than steam), and ventilators in 1924, absorbing 807 metric tons of this equipment in comparison with 619 tons in 1923 and 429 tons in 1922. The other important export markets, such as Algeria, Great Britain, Switzerland, Morocco, Tunis, Spain, and Egypt bought larger quantities of this equipment in 1923 than in 1922, with the exception of Spain, and also in 1924 in comparison with 1923—showing that France is developing its export trade in pumping machinery.

British Demand Growing.

Great Britain, followed closely by Algeria, was the best French market for engines, steam pumps, and compressors (air and gas) during 1924. French exports of this equipment to Great Britain amounted to 788 metric tons last year, compared with 419 tons in 1923 and 339 tons in 1922. Shipments of these items of pumping machinery to Algeria amounted to 560 metric tons in 1924 as compared with 352 tons in 1923 and 187 tons in 1922. French exports of this equipment to the United States fell off in 1924 to 25 tons from 175 tons in the preceding year.

Domestic Demand Supplied Locally.

Another indication of increased production on the part of French pump manufacturers and of increased sales of their output in the domestic market is the decline in American exports of pumps and allied equipment to France last year, according to United States customs' returns. Although exports of all types of industrial machinery from the United States to France increased by about \$400,000 in 1924 over the preceding year, shipments of pumps and pumping machinery,

declined in value from \$646,742 in 1923 to \$325,792 in 1924.

[Detailed figures giving French exports of pumping machinery are available to interested American manufacturers on application to the Industrial Machinery Division.]

LUMBER

Axel H. Oxholm, Chief, Lumber Division

IRISH FREE STATE LUMBER IMPORTS

Official statistics of imports into the Irish Free State indicate a lumber and timber import for 1924 of nearly 70,000,000 board feet. Included in this figure are 45,000,000 feet of rough softwood lumber, 1,500,000 feet of hewn softwood timber, 1,600,000 feet of rough hardwood lumber, and 200,000 feet of hewn hardwood timber. Dressed lumber included amounted to 12,000,000 board feet.

Imports from Great Britain and North Ireland.

Free State statistics do not indicate the country of origin of imports, record being made of countries whence goods are consigned. Imports from Great Britain thus comprise nearly 5,500,000 feet out of the total, and imports from North Ireland amounted to over 10,000,000 feet. Imports from Great Britain included 2,150,000 feet of rough softwood lumber and over 1,000,000 feet of rough hardwood. Imports of rough softwood lumber from North Ireland were 4,150,000 feet, dressed lumber and flooring being the next largest item from this source, there being 900,000 feet of all classes of planed and dressed.

Receipts from Sweden, Norway, and Germany.

Sweden was the largest single supplier to the Free State market, imports of Swedish rough softwood exceeding 12,000,000 feet, while dressed lumber from the same source was nearly 7,500,000 feet, including 6,000,000 feet of flooring. Imports from Norway included over 2,500,000 feet of dressed out of a total of 3,225,000 feet. Imports from Germany were mainly of rough lumber, this item being over 4,250,000 feet, while imports of dressed lumber were 250,000 feet.

Other European suppliers of rough softwood lumber were Czechoslovakia, nearly 4,000,000 feet; Rumania, over 1,500,000 feet; and Latvia, about 6,000,000 feet.

Canada and United States as Source of Imports.

Imports from Canada exceeded those from the United States. Rough softwood lumber from Canada came in excess of 6,000,000 feet. Imports of the same item from the United States were 3,000,000 feet. From the United States there were also received 325,000 feet of softwood timber and 150,000 of dressed lumber.

Imports of boxes and shooks are stated by weight, the total being somewhat over 700 tons, coming in about equal amounts from Great Britain and North Ireland.

CUT-OFFS

The Box Shook Trade in Uruguay.

Imports of box shooks into Uruguay during 1924 amounted to 1,620,000 board feet, valued at \$65,500, according to preliminary official reports.

Australian Lumber Imports.

The imports of rough lumber into Australia during March were valued at \$540,000, and dressed stock at \$1,320,000, according to a cable, dated May 15, from Trade Commissioner E. G. Babbitt, Melbourne.

The Spanish Lumber Market.

The Spanish lumber situation shows little change, with a good demand for American lumber. Recent importations of Douglas fir have been favorably received. Cadiz and Seville report heavy exports of cork to the United States. Extension of a treaty with United States is regarded as assuring uninterrupted importation of American lumber for another year. (Commercial Attaché Charles H. Cunningham, Madrid, May 14.)

Swedish Advance Lumber Sales and April Exports.

April exports from Sweden of rough lumber exceeded 43,000,000 board feet, inclusive of 5,600,000 feet of rough box shooks. Planed lumber exports for the month were 12,000,000 feet, including 1,600,000 feet of shooks. These are preliminary official figures. Advance sales to May 15 for delivery during the coming season are estimated at 990,000,000 feet, including 119,000,000 feet planed. Prices continue on the decline, with the outlook for improvement discouraging. (Trade Commissioner T. O. Klach, Stockholm, May 15.)

British Lumber Trade Studying Budget.

The British lumber market is endeavoring to estimate the changes which the new budget proposals will have on industry in general and on those enterprises consuming wood in particular. The market generally continues quiet. The apparent stabilizing of exchange at approximately par now enables importers to compute their future commitments with the assurance that the factor of exchange fluctuations, at least, has ceased to operate. Lumber imports for the past 10 days have been heavy but consumption has been sufficient to prevent any large increase of stocks. Southern pine and Douglas fir prices are easier but consumption is steady. (Acting Commercial Attaché Mowatt M. Mitchell, London, May 5.)

List of "Bureau's special circulars available."

RUBBER

Everett G. Holt, Acting Chief, Rubber Division

EXPORTS OF RUBBER GOODS CONTINUE AT HIGH LEVEL

The foreign demand for American rubber manufactures continued good in April, exports being valued at \$4,298,595. The chief factors contributing to this heavy total were continued large shipments of tires and tubes, increased trade in mechanical rubber goods, exceptionally good trade in rubber toys and rubber thread, and a record month for shipments of miscellaneous rubber goods.

Increased Exports of Tires.

The increased tire exports are the result of foreign requirements, the balloon tire situation, and improved economic conditions. Tire exports in recent months have not been so heavy as in the corresponding period of 1923—although much heavier than in 1924—but in the latter half of 1923 our tire export trade was in an unsatisfactory state owing to price cutting by European competitors. Similar price cutting is unlikely this year; crude rubber prices are higher and European manufacturers are more heavily taxed. Pneumatic-tire prices have recently advanced in France, Italy, Belgium, and Switzerland, and further increases are expected; there have also been some advances in solid-tire prices.

Principal Markets for Tires.

During April, 142,950 automobile casings, 125,204 inner tubes, and 10,715 solid tires were exported from the United States. The average unit value per casing was \$11.72, per inner tube \$1.06, and per solid tire \$27.50.

The solid-tire exports were much larger in April than in any recent month, going mostly to the United Kingdom, 3,250; Cuba, 1,632; and Australia, 1,394; while Russia took 613. Argentina received over 18,000 casings and the United Kingdom over 13,000; Mexico, Cuba, Brazil, Japan, Australia, New Zealand, and British South Africa each took from 6,000 to 10,000; and there were 10 other countries taking from 2,000 to 5,000 casings each—one of these markets being Russia. The Spanish market is better than for some years past; about 10,300 tires were shipped to Spain in the first four months of 1925, as compared with 10,200 in all of 1924. A few tires and tubes and some tire-repair materials are going to Germany.

April exports of repair materials amounted to 256,740 pounds, valued at \$105,058, the leading markets being Canada, 80,055 pounds; Argentina, 31,876; Australia, 31,268; Mexico, 17,644; and the United Kingdom, 15,537 pounds.

Record Month for Rubber Hose and Belting Exports.

April exports of belting were larger than for any month in the last three years except May, 1923, when 385,175 pounds were exported. During April 378,729 pounds of belting, 539,875 pounds of rubber hose, and 137,210 pounds of packing were exported; the hose shipments were the heaviest for any month since January, 1922.

Some of the leading markets for hose were the United Kingdom, 114,900 pounds; Mexico, 68,200

Cuba, 52,000; Japan, Canada, and South Africa, each, from 30,000 to 35,000 pounds; Chile and Australia, from 25,000 to 30,000; and six other markets, from 10,000 to 15,000 pounds, each.

Exports of belting were also widely distributed, the United Kingdom, Mexico, Chile, Australia, Canada, and Brazil each taking over 20,000 pounds, and seven other markets from 10,000 to 18,000 pounds, each.

Rubber Footwear Trade About Normal.

Shipments of waterproof rubber footwear were low, as is usual for April, with only 30,000 pairs of rubber boots and 50,000 pairs of rubber shoes for the month. The value per pair was exceptionally high, being \$3.18 for boots and \$0.902 for shoes. There were 405,354 pairs of canvas rubber-soled shoes, valued at \$289,003, exported, the principal destinations being Cuba, 110,000 pairs; the United Kingdom, 62,000; Mexico, 50,000; Argentina, 29,000; Denmark, 26,000; and the Philippines, 22,000 pairs. Exports of rubber heels and soles totaled 239,392 pounds, valued at \$76,868, the leading markets outside of Latin American countries and the West Indies being Sweden, Denmark, Finland, Norway, and South Africa.

Excellent Trade in Rubber Specialties.

The trade in rubber sundries and specialties was very good. Over 21,000 water bottles and fountain syringes, 66,000 pounds of other druggists' rubber sundries, and 32,194 dozen bathing caps, valued at \$54,111, were exported. England, Canada, Sweden, Netherlands, Japan, Denmark, Belgium, France, and British South Africa were the chief customers. Shipments of rubber toys and balloons reached 131,602 pounds, valued at \$144,050, the heaviest monthly total since this class was first separately reported in January, 1924. Exports of rubber thread were exceptionally high—132,709 pounds, valued at \$147,276. Germany is now taking large quantities of rubber thread for use in the elastic-webbing industry, and is also a good customer for rubber toys. Miscellaneous rubber manufactures, not separately specified, were also exported in good volume—545,488 pounds, valued at \$271,409.

Exports of Reclaimed and Scrap Rubber.

Exports of reclaimed rubber to Canada and the United Kingdom amounted to 363 tons during April, while 1,303 tons of scrap and old rubber went principally to Germany, Spain, France, United Kingdom, Canada, Japan, and Italy. Higher crude rubber prices have not affected the export prices of scrap or reclaimed rubber, the former averaging \$0.04 per pound and the latter \$0.097 per pound during April.

New Classification for Exports of Rubberized Piece Goods.

Over 262,000 square yards of waterproofed auto cloth and rubberized fabrics valued at \$136,900 were exported in April. Exporters of these products will be glad to know that beginning January 1, 1926, rubberized piece goods and hospital sheeting will be reported in a separate class and no longer included with waterproofed auto cloth in United States export

statistics. Some 52,000 waterproofed outer garments were exported in April, the value being \$140,564. The leading markets were the Philippines, 16,376 garments, valued at \$36,008; Mexico, 10,735, valued at \$38,154; Cuba, 6,283 valued at \$26,766; Newfoundland, 7,213, valued at \$8,416; and the Dominican Republic, 1,572 valued at \$8,559. A comparison of the value per gar-

ment to the different markets show wide variations and gives some idea of the relative demand for low-priced garments, as compared to those of high quality.

ELECTRICAL EQUIPMENT

R. A. Landquist, Chief, Electrical Equipment Division

WIRING PRACTICE IN ITALY

Assistant Commercial Attaché A. A. Osborne, Rome

Wiring practice in Italy does not, to any marked extent, conform to that of any other European country, installations being usually made in accordance with the regulations established by the Associazione Elettrotecnica Italiana. There is no organization similar to the American Underwriters' Laboratories for testing and approving wiring materials and devices, but it is believed that Italian regulations are not adverse to devices approved by this American organization.

The L'Associazione fra gli Industriali d'Italia per Prevenire gli Infortuni sul Lavoro (Manufacturers' Association) makes inspections of completed wiring installations from time to time in order to minimize the chances for industrial accidents.

The metric wire gauge is used in Italy and wire having a diameter of one millimeter is installed in most dwellings. It is also customary to use rubber-covered wire.

Rotary Switches, Screw and Bayonet Sockets Predominate.

Although the rotary switch is generally used in Italy, the push-button type is also installed quite frequently. Switches of the snap and tumbler type are practically unknown, however.

Sockets of both the screw and bayonet type are in use. Special receptacles, most frequently of the bayonet type, for the attachment of electric toasters, heaters, vacuum cleaners, and other household appliances are generally installed in the wall.

American Safety Switches Favored—Meters.

The fuses most commonly used in Italy are the open link and the German Z type. The Edison screw-plug fuse is also employed to a considerable extent, but American cartridge and British thumb-grip types are seldom installed. American safety switches are favored by some Italian electricians, and it is believed that their use could be increased by means of active sales efforts.

Each dwelling or individual user of electricity in Italy is supplied with an electric meter, those in use varying from 5 to 10 amperes in size.

There are no special regulations pertaining to the wiring of old dwellings, and neither is it especially difficult to wire buildings subsequent to their construction.

American Wiring Devices Well Liked.

American wiring materials and devices are well liked by the Italian electrical trade. Their use has of late been restricted, due entirely to difficulties arising from postwar exchange conditions. Comparative price

is, however, a factor in this market, but it is believed that as prosperity becomes more general the demand for high-grade electrical fittings will increase. Sales possibilities for American manufacturers of these devices should therefore tend to increase.

[A copy of the Italian wiring regulations as established by the Associazione Elettrotecnica Italiana is available for loan by the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., and may be obtained by referring to Report No. 23299.]

Electrical Trade Notes

German Electrical Industry Improving.

The status of the German electrical industry has recently shown improvement. (Dispatch from Assistant Commercial Attaché Douglas P. Miller, Berlin, May 16.)

Japanese Electrical Equipment Market Outlook Hopeful.

Present tendencies in the Japanese market for electrical equipment point toward improvement, even though sales are below average. (Dispatch from Acting Commercial Attaché Frank Rhea, Tokyo, May 15.)

Proposed New Power Plant for Buenos Aires.

The Spanish-Argentine Electricity Co. (Cia. Hispano-Argentina de Electricidad) is planning to build a power station of 500,000 kilowatts capacity in the new port of Buenos Aires. Probably seven steam turbo-generator sets will be installed. Coal-burning boilers are to be used. The station will supply current to Buenos Aires for power and lighting purposes. (Trade Commissioner George S. Brady, Buenos Aires, April 21.)

Proposed Radio Station in Bolivia.

The Director General of Telegraphs, Bolivia, has sent to the President for approval a plan for the installation of a radio station at Puerto Suarez, in the Department of Beni near the Brazilian border. The receiving station will be at Viacha, near La Paz. Power will be generated by a dynamo coupled to a gasoline engine. The estimated cost of this installation is 45,000 Argentine pesos (approximately \$17,000). (Vice Consul Augustus Ostertag, La Paz, April 6.)

Ontario Regulations Governing Sale of Electrical Products.

Regulations governing the sale of electrical equipment in Ontario are to be strictly enforced. A number assigned by the Hydroelectric Power Commission should appear on all approved products offered for sale in the Province. Failure to do this may result in prosecution of the dealer and the exclusion of the manufacturer from that market. (Trade Commissioner Lynn W. Meekins, Ottawa, May 14.)

Progress Made in Switzerland's Electrification.

The utilization of Switzerland's water-power resources was energetically promoted during 1924. The stations at Waeggital, Lungern, and Amsteg added 75,600 horsepower, so that at the end of 1924 Switzerland had a total of approximately 2,000,000 horsepower of hydroelectric energy. An additional 295,000 horsepower will be furnished by the Chancy-Pougny, Davos Klosters, Illsee Turtmann, Vernayaz, and Waeggital (addition) stations, which are now under construction. (Vice Consul William H. Mathee, Zurich.)

Bids Wanted on Power Plant Equipment.

An engineering firm in South India, which has been granted a license to supply electrical energy under the Indian electricity act of 1910, desires bids on Diesel engines, generators, switchboards, and overhead line material for three small plants, to carry a total load not to exceed 450 kilowatts. (Consul Alfred R. Thomson, Madras, April 18.) Specifications and blue prints are available for examination at the New York and Chicago district offices of the bureau. An additional copy is available for loan by the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., and may be obtained by referring to No. 167871.

Status of Mandi Hydroelectric project.

It is believed that preliminary construction on the Mandi hydroelectric scheme will be started some time this year, writes Trade Commissioner C. B. Spofford, jr., Bombay. (See COMMERCE REPORTS, March 17, 1924, page 714.) The whole project when completed should supply electric energy to a vast area of the Punjab, including some 62 towns extending from Delhi as far as Sialket and Lyallpur. This scheme is often referred to as the Sutlej River or Uhl River project. Further

information is available for loan by the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., and may be obtained by referring to No. 170535.

Extension of Municipal Electrical Plant at Wolverhampton.

A continued increase in the demand for electrical current has encouraged the Wolverhampton Town Council to decide upon extensions to the city's electrical plant which will involve a total expenditure of £68,832. The most important item is the replacement of two old turbine sets by a new unit, which, when completely installed, will cost £44,000. The contract for supplying the generator has been awarded to the British Thomson Houston Co. In addition, £15,306 will be expended to supply electricity to an artificial-silk factory which is being erected at Wolverhampton and £8,812 in extending the lines to Featherstone and Hilton. (Vice Consul Oscar F. Brown, Birmingham, April 30.)

Indian Electrical Machinery Market Dull.

With the exception of Bombay and Mysore, where large power developments exist, the Indian market for electrical machinery is very dull, because most central stations have but little power to spare and consequently are not interested in increasing their load. There is very keen competition in this trade, practically every English firm and a number of continental firms being represented. Price cutting is said to be very evident, especially in connection with tenders to the Indian stores department. (Consul William L. Jenkins, Calcutta.)

CHEMICALS

Charles C. Concannon, Chief, Chemical Division

THE CZECHOSLOVAK CHEMICAL INDUSTRY

Ernest Erle Power, commercial attaché's office, Prague

During 1924 the chemical industry of Czechoslovakia was at least 20 per cent more fully occupied than during the preceding year, and, in some branches, production actually reached pre-war, according to the annual report of the Association of the Chemical Industry.

Notwithstanding this favorable situation, the financial returns were not particularly large, as in several cases the cost of production has become much greater than formerly, without a corresponding increase in the market prices for the finished products. This was largely the result of the high taxes levied, which, in a number of instances, were paid for more than one year simultaneously. In view of foreign competition, furthermore, prices had to be very carefully calculated, leaving but a narrow margin of profit. The industry was particularly affected by the high bank rate for credits which, including the various charges, averages 10 per cent. The increased cost of coal also to some extent affected the cost of production.

Production of Industrial Chemicals.

During 1924 the sale of superphosphates was satisfactory in respect to quantity, although prices were

said to be too low, not only on account of sharp competition between the various factories themselves, but also because of the price rivalry of other European countries. Sulphuric acid was produced in limited quantities only, the factories being employed very much below full capacity during the year. The soda industry was well occupied, and demand was unusually active. Calcium nitrate was imported in considerable quantities from Yugoslavia and Poland, and, in order to permit the domestic development of this branch of the chemical industry, the Government allowed the Falkenau factory a partial reduction in railway freight charges and an added quota of coal from the Falkenau coal mines.

Dry-Wood Distillation—Explosives and Matches.

In the organic chemical field the dry-wood distillation industry passed through a crisis caused by a fierce struggle with foreign competition. The domestic industry since the war has endeavored to establish in Czechoslovakia various branches of the chemical pharmaceutical sections of production. This favorable development, however, depends upon the commercial policy of the Government.

The condition of the explosives and match factories also improved materially during 1924. Domestic sales

were satisfactory and more labor was employed. Explosives, however, are not yet exported extensively, owing to the commercial policy of other countries. Matches, on the other hand, found a fair market abroad during 1924.

Philippine Denatured Alcohol Offered

Philippine interests are seeking a market in the United States for 30,000 gauge gallons of 94 per cent denatured alcohol per month, according to Trade Commissioner Edwin B. George, Manila. Further infor-

mation is available to American firms upon request to the Chemical Division, Bureau of Foreign and Domestic Commerce, Washington, D. C.

Additional information regarding chemicals appears in this issue under the following sections:

Tariffs and trade regulations:

Germany—Revised tariff schedule introduced.

Peru—Reduction of import duty on dextrin for industrial use.

Bureau's special circulars available.

Foreign trade opportunities.

CONSTRUCTION NEWS

Compiled in the Industrial Machinery Division

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by mentioning the country and reference number given. Where no reference number is given further information is not available.]

Toronto Viaduct Progressing.

The plans and specifications are practically complete for a viaduct which is to carry overhead through the center of Toronto the tracks of the Canadian National and Canadian Pacific railways, and tenders are expected to be called for shortly. The estimated cost of the project is \$28,000,000. (Consul Harold Shantz, Toronto, Ontario, Canada.)

Sao Paulo to Have New Office Building.

Plans are now being drawn up for a new office building in Sao Paulo, Brazil. The building is to be built of reinforced concrete, stone, and brick, with a reinforced concrete roof covered with tile, and is to have 200,000 square feet of floor space. The total cost is estimated at about \$1,000,000. Reference No. 170423. (Consul General A. Gaulin, Rio de Janeiro, Brazil.)

Construction of Grain Elevator in British Columbia.

The Government of Canada has authorized the New Westminster Harbor Commission to issue bonds to finance the construction of a reinforced concrete grain elevator at Port Mann, the capacity of which is to be 400,000 bushels. Reference No. 169078. (Consul Harold S. Tewell, Vancouver.)

Czechoslovakia to Assist Irrigation.

One of the most important works projected in Czechoslovakia is the construction of a dam on the river Dyji at Vranov, to prevent floods that have previously caused serious losses to farmers. The dam will be 55 meters high and 40½ meters wide and the reservoirs will hold a content of water estimated at 161,000,000 meters. (Consul S. E. O'Donoghue, Prague.)

Good Roads Promoted in New Brunswick, Canada.

Although a complete outline of proposed highway improvement in New Brunswick is not available, the total amount of expenditure for the year 1925, for which authority of the Government has been given, is \$1,500,000. One important project is to rebuild the road from Woodstock to Houlton on the Maine boundary. (Vice Consul Frederick C. Johnson, Fredericton.)

Construction Projects in Canada.

Recent construction projects announced in Canada, as reported by Assistant Trade Commissioner Walter J. Donnelly, Ottawa, include an 850-foot railway bridge, a \$200,000 theater project, a \$100,000 fish reduction plant, a \$900,000 subway, and a store building to cost approximately \$2,500,000. News of other projects and construction contracts awarded is available at the bureau or its district offices to accredited American concerns under reference Canada 35x.

Railway Planned in French Equatorial Africa.

Contractors have been named for a project involving the construction of a railroad from Brazzaville to the seaboard at Pointe-Noire and building a jetty 2,400 meters long. The railroad, which is to be 250 kilometers long, will probably be of 1.067 meter gauge. Reference No. 170265. (Vice Consul Alfred D. Cameron, Paris.)

Resolutions in Madrid Favor Increased Building.

A meeting was held in Madrid in April, under the auspices of the local federation of building trades, at which resolutions designed to promote building construction by state, provincial, and city authorities were adopted. Among the resolutions for the state was one that a progressive and direct tax be imposed on all vacant building lots. Reference No. 170471. (Consul Augustin W. Farn, Madrid.)

See also Cable review, Far East: Hawaiian construction projects.

TOBACCO

Tobacco Section, Foodstuffs Division

TOBACCO PRODUCTION IN ALSACE

Vice Consul Leslie E. Woods, Strasbourg

Although the production of tobacco in Alsace is of importance only as it affects the amount that the French monopoly must purchase abroad, it is interesting to note that Alsace has increased its production of tobacco beyond that of any other crop in very recent years. It has been the policy of France for some time to substitute tobacco grown in the colonies, Algeria particularly, for foreign tobaccos. The protection afforded the Alsatian planters by the French monopoly is conducive to even further growth of the industry.

No tobacco is produced in Lorraine, but the cultivation of this crop in Alsace antedates the French Revolution, having been introduced by an Alsatian returning from England in the year 1620. About 5,500 acres, or 94 per cent of the tobacco produced in Alsace, is grown in the Department of Bas-Rhin. The average annual production in Haut-Rhin, the other Department, is only about 359 acres.

Acreage and Crop of 1925.

Compared with the size of the crop and the acreage cultivated, the number of planters is large. In 1924 there were 10,090 planters cultivating 6,571 acres, and the crop amounted to 18,518,640 pounds, while in 1923 the crop of 13,256,260 pounds was produced by 10,160 planters. It is expected that over 6,700 acres will be planted to tobacco in 1925 and that the crop will be well over 17,000,000 pounds. The planters are members of syndicates and with the help of these associations are making a special effort to improve the burning quality of their tobacco.

The average crop per acre, its value, and the price per pound in the principal producing centers of Alsace are shown in the following table:

Average production and value of Alsatian tobacco crop

Region	Quantity per acre	Value per acre	Price per pound
	Pounds	Francs ¹	Francs ¹
Erstein	2,734	3,341	1.57
Strasbourg	2,064	3,284	1.59
Selstat	1,806	2,845	1.57
Wissembourg	1,890	2,777	1.47
Colmar	1,984	3,001	1.52

¹ The average value of the franc for 1924 was \$0.052.

Increased Cultivation in Recent Years.

The extent of cultivation of tobacco over a long period of years and the rapid increase in the crop since the close of the war may be readily seen from the following figures:

Alsatian tobacco cultivation, 1872-1924

Years	Acres	Planters	Years	Acres	Planters
1872	8,596	13,430	1920	3,089	3,980
1881	8,052	21,480	1921	3,631	4,960
1893	2,781	11,630	1922	6,162	7,280
1913	2,865	6,430	1923	6,496	10,160
1919	3,048	4,597	1924	6,685	10,090

Spanish Consumption of Tobacco

Based on report by Commercial Attaché Charles H. Cunningham, Madrid

The average annual income to the national treasury from the sale of tobacco in Spain amounts to 227,133,-252 pesetas. This revenue arises from the sale of 870,-051,369 pounds of tobacco. The annual consumption per inhabitant is estimated to be worth 20.23 pesetas.

Madrid shows the largest consumption, the inhabitants of that city spending 36,968,000 pesetas for tobacco every year, or 46.21 pesetas per inhabitant. Data for Barcelona show an annual expenditure of only 36,088,000 pesetas for tobacco purchased from the tobacco monopoly, or 45.11 pesetas per inhabitant. This does not necessarily mean that less tobacco is used in Barcelona, for the question of contraband interferes with the accurate collection of data in seaports.

The income from tobacco sales, according to statistics of the tobacco monopoly in Spain, is increasing. This is due partly to the elimination of contraband and partly to price increases which have been recently put into effect.

Bureau Officials Available for Consultation in Seattle

The National Foreign Trade Council will hold its Twelfth National Foreign Trade Convention in Seattle, Wash., on June 24, 25, and 26. The general theme of the Convention, it is announced, will be "Foreign Trade Essential to Prosperity." One of the most valuable features of the Convention will be the trade adviser service rendered by foreign trade executives and others expert in foreign trade problems.

A number of members of the Bureau of Foreign and Domestic Commerce, who will be on the Pacific coast at the time of the Convention, will be available for consultation at the Bureau's District Office at 515 Lowman Building, Seattle, and delegates to the Convention and other officials of American companies are invited to arrange conferences with these men, who include Julian Arnold, commercial attaché, China; Charles B. Spofford, trade commissioner, Bombay, India; Lynn Dye, commercial attaché, Mexico City, Mexico; F. R. Eldridge, chief, Far Eastern Division, who is returning from the Far East; Grosvenor Jones, chief, Finance Division; Arthur S. Hillyer, chief, Commercial Intelligence Division; Edward T. Rickard, chief, Textile Division; Luther Becker, chief, Iron and Steel Division; and E. G. Montgomery, chief, Foodstuffs Division.

IRON=STEEL=HARDWARE

Luther Becker, Chief, Iron and Steel Division

EXPORTS OF IRON AND STEEL FROM THE U. S. MAINTAIN LEVEL

Iron and steel shipped abroad from the United States for the first four months of this year amounted to 554,828 tons. Continuing at this rate, the annual total would amount to approximately 1,660,000 tons—about 8 per cent below last year's figure. However, the return to par of sterling and the hope that certain European exchange rates will advance should help to raise our sales abroad to a figure equal to if not greater than that shown for last year.

Exports for April remained at practically the same level as for March, the difference being only 40 tons in favor of the former month.

A comparison of the various commodities for March and April and totals for the first four months of this year follow:

Exports of iron and steel from United States

[Gross tons]

Articles	March	April	First four months

Ferromanganese and spiegeleisen.....	1,028	3	3,056
Total.....	155,386	155,426	554,828

A brief analysis of the above figures shows that fairly large gains made in April in shipments of boiler tubes and welded pipe and scrap were offset by losses registered in steel bars, galvanized sheets, rails, plain and barbed wire, and ferromanganese. Other commodities show more or less the same tonnages for both months.

Comparison With Last Year.

During April, 1924, iron and steel exports amounted to 132,739 tons, 14 per cent below the figure for April, 1925. For the first four months of 1924, however, the exports were 117,711 tons in excess of the figure for the corresponding period this year, as 672,539 tons were consigned abroad.

The main items showing losses this year are wire nails, 10,000 tons; scrap, 25,000; black steel sheets, 44,000; rails, 32,000; welded pipe, 9,000; and plain wire, 7,000.

Two items stand out as showing gains this year, galvanized sheets and tin plate, with 38,000 and 10,000 tons, respectively, above figures for last year.

The losses shown above represent the differences in figures for the periods mentioned and are due in large part to shipments made to Japan in the early months of last year for reconstruction purposes. During the year 1924 approximately 277,000 tons of iron and steel found its way into Japan from this country, of which about 146,000 tons were consigned during the first quarter, whereas only about 31,000 tons have been exported to that country from the United States during the year's first quarter.

The gain in galvanized-sheet tonnage is accountable in part to shipments made to Argentina for use in exterminating locusts.

Exports of Iron Ore—Wood Screws.

Canada received the entire month's export shipments of iron ore, 2,936 tons, bringing the total for this year so far up to 8,990 tons—considerably below the figure for last year's period.

Wood screws continue in fairly large volumes, 713,710 gross, valued at \$87,802, going overseas in April, of which quantity about half went to Japan, other markets receiving fair quantities being England, Mexico, Cuba, Argentina, Brazil, and Hongkong. The average value per gross was about 4.7 per cent above that for March. So far this year 2,845,078 gross have been exported, which if placed end to end—assuming an average length of one-half inch per screw—would stretch from New York to San Francisco.

Imports Fall 23 Per Cent Below March Figure

Out of a total of 71,249 tons of iron and steel imported into the United States during April, 43,868, or 61½ per cent, constituted pig iron, ferromanganese, ferrosilicon, and scrap. Steel ingots, blooms, bars, shapes, and tubes formed most of the remainder.

Imports of iron and steel into the United States, 1925

[Gross tons]

Commodity	March	April	First 4 months
Pig iron	50,803	33,299	173,249
Ferromanganese, manganese metal, and alloy	5,021	7,228	23,231
Ferrosilicon	670	471	2,273
Scrap	4,755	2,870	36,240
Steel ingots, blooms, billets, and slabs	3,490	4,138	13,519
Steel bars	4,016	4,808	14,223
Iron bars	1,178	790	3,463
Structural shapes	7,003	8,313	27,636
Rails and splice bars	0,434	2,671	14,390
Boiler and other plates	16		99
Sheets, skelp, and saw plates	647	283	1,434
Tin plate	27	34	107
Round iron and steel wire (all kinds)	266	229	911
Wire rope and insulated wire	152	462	977
Flat wire and strip steel	224	224	689
Wire rods	314	732	2,296
Tubular products	6,719	4,424	14,970
Nails and screws	111	8	186
Bolts, nuts, rivets, and washers	16		42
Castings and forgings	238	235	816
Total	92,110	71,240	336,804

The differences in items are about in proportion to the totals for March and April, excepting steel bars and shapes. The total for the first four months of 1925, of 336,804 tons, is practically double that for the corresponding period of last year, when 159,208 tons were imported. In April, 1924, 50,925 tons were received, mostly pig iron, scrap, and steel bars. But the pig-iron receipts alone thus far this year have amounted to 173,249 tons, as against 60,159 tons last year, for the first four months. Receipts of ferromanganese and ingots, etc., have almost doubled this year, while receipts of structural shapes have quadrupled. The monthly average for 1924 was 46,400 tons, whereas this year so far shows an average monthly rate of 84,200 tons.

Iron-ore Receipts Increase—Manganese Ore Decreases.

April shows receipt of 166,190 tons of iron ore, mostly from Cuba and Chile, compared with 162,695 tons in March. The total this year so far is 729,755 tons imported, considerably above last year's corresponding period. Manganese ore of a content of 14,941 tons of manganese entered during April, compared with 23,315 tons for March, bringing the total this year up to 60,382 tons. Receipts for April were pretty evenly divided between Russia, Spain, Brazil, and British West Africa.

Imports of Card Clothing.

Card clothing was imported to the amount of 19,596 square feet, 60 per cent below the March figure of 50,327. The year's total so far is 110,630 square feet. The value, however, per square foot for material received in April was \$1.90, as compared with \$1.51, the average for last year. In April, 1924, about the same amount of square feet was imported, 18,394. But the first four months of 1924 saw only 88,485 square feet brought in, considerably below the figure of 110,630 given above. The bulk of this material comes from the United Kingdom.

Origin of Iron and Steel Imports.

Below is shown a table giving distribution, by countries of origin, of the imports of iron and steel into the United States during April, 1925. Belgium leads the list, mainly due to steel bars, shapes, and rails.

India's portion is almost entirely pig iron; United Kingdom, pig iron and ferromanganese; Germany's, mostly pig iron; France's, tubes and slabs; Netherlands, pig iron and steel bars; and about one-half of Canada's is scrap.

	Gross tons
Austria	9
Belgium	16,269
Czechoslovakia	88
France	6,780
Germany	8,195
Italy	46
Netherlands	4,339
Norway	1,591
Spain	15
Sweden	2,276
United Kingdom	12,411
Canada	3,323
Mexico	1,135
Jamaica	1
Trinidad	2
Cuba	4
India and Ceylon	14,562
China	6
Java	3
Hongkong	1
Japan	11
Kwantung	20
Belgian Congo	158
British West Africa	4
Total	71,249

Iron and Steel Notes**Swedish Production Increases—Exports Decline.**

During the first quarter of 1925 there were 42,356 metric tons of iron and steel imported into Sweden, against 31,171 tons the corresponding period of 1924. Exports amounted to 49,183 tons for the first quarter of 1925 as compared with 56,820 tons for the first quarter of the preceding year. (Consul C. G. Dawson, Stockholm.)

Belgian Competition in Japanese Market.

The offering of the Belgian steel producers in the Japanese market is resulting in severe competition among the suppliers of that market. The proposed Tokyo subways construction will be deferred until financial arrangements have been completed. (Cable dated May 15 from Acting Commercial Attaché Frank Rhea, Tokyo.)

British Indian Market Active.

The steel market in British India since the middle of April has been strong, owing to an active upcountry demand. There is a brisk demand for corrugated sheets. The domestic production of pig iron has satisfied the demand at prices below those of the imported product. (Cable from Assistant Trade Commissioner E. J. Sabine, Calcutta, May 16.)

Steel Needed for Proposed Chinese Railway.

The Manchurian Government proposes constructing the Mukden Hai Lung Railway to extend about 150 miles in a direction northeast from Mukden toward Kirin. Estimated requirements include 18,000 tons of steel rails and accessories, 16 locomotives, and approximately 110 freight cars of different types. (Assistant Commercial Attaché A. H. Evans, Peking, April 6.)

New Rolling Mill for Scotland.

Despite the depressed condition in the Scottish iron and steel industry, a Scottish firm has erected at the works in Glasgow one of the largest rolling mills yet constructed, costing about \$4,770,000 and capable of producing 5,000 tons of steel per week. The material for rolling is supplied by 11 open-hearth basic steel furnaces. The processes adopted are expected to result in a considerable saving in labor and economies owing to the rolling of very long plates and consequent reduction in the number of scrap ends, etc. The mill will roll plates exactly to width, which will eliminate cutting to sizes. Furthermore, it is capable of rolling plates from three-sixteenths to 1½ inches in thickness, and has already produced a plate 114 feet in length. (Consul G. E. Chamberlain, Glasgow.)

Important Indian Iron and Steel Interests Merge.

The Indian Iron & Steel Co. and the Bengal Iron Co. in British India have merged their interests, according to reports in the local press. At a meeting of the Bengal Iron Co. held in London it was stated that, owing to the modern plant possessed by the Indian Iron & Steel Co., it can produce pig iron more cheaply than the Bengal Iron Co. But it was maintained that the latter has a profitable business in its foundries where iron is converted into finished articles, such as cast-iron pipes, railway sleepers, etc. Furthermore, it was claimed that, although there was a dearth of orders for the sleeper department at that time, there were signs of improving business in that respect, and

that the general and pipe foundries were fully occupied. The demand for pipes in India is very heavy and instructions have been given by the Bengal Iron Co. for the erection of an additional pipe foundry.

Iron Resources of Rumania.

In partnership with the metallurgical enterprise of "Reshitza" and the English firm of Vickers, the Rumanian Government recently launched a new commercial enterprise for the purpose of producing, from native ores and by domestic labor, a certain proportion of its home needs in the way of iron and steel machines, parts, and implements, including munitions of war. As part of its contribution to the new enterprise, the Rumanian State has pledged the output of its iron mines at Huniedoara and Cujir.

[The extent of these deposits, capacity and output of the various local iron and steel works, estimated iron and steel consumption of Rumania, and other information are embodied in a report received from Commercial Attaché Louis E. Van Norman, Bucharest. A copy of this report will be made available to American concerns upon application to the Iron and Steel Division, Bureau of Foreign and Domestic Commerce, Washington. Mention should be made of report No. 27399-Rumania-12.]

Additional information regarding iron-steel-hardware appears in this issue under the following sections:

COAL

Charles P. White, Chief, Coal Division

INCREASE IN OVERSEAS BITUMINOUS COAL EXPORTS

Total exports of bituminous coal from the United States during April amounted to 886,484 long tons as compared with 918,746 tons in March this year and 962,323 tons in April, 1924. The lower figure is chiefly due to smaller exports to Canada, 585,359 tons going to that destination as compared with 662,445 tons in March.

Overseas Shipments Increase—Exports to Italy Heavier.

Overseas exports during April increased, however, totaling 282,132 tons against 249,838 tons in March. Our best overseas customer during April was Italy, 73,155 tons going to that country—an increase over the 65,084 tons in March and 51,726 tons in February. Exports to Panama fell off considerably, only 19,305 tons being consigned to that destination during April as compared with 31,388 tons in the preceding month. The 56,700 tons exported to Cuba were well above the March exports of 47,020 tons and were the largest monthly exports during the current year.

Large Increase in Exports to South America.

Exports of bituminous coal to South American destinations during April amounted to 78,974 tons—a

greater increase over the 25,794 tons in March and the 16,020 tons in February. There were 54,656 tons shipped to Brazil as compared with 17,332 tons in March and 5,913 tons in February. Exports to Argentina also show an appreciable increase, from 6,740 tons in March to 11,276 tons in April.

Of particular interest are exports of 7,076 tons during April to Chile, compared with none in March and only 87 tons in February. Exports to Peru totaled 4,445 tons; previous shipments to that country in 1925 consisted of only 693 tons in February.

Exports to Algeria and Tunis in April amounted to 7,249 tons as compared with 8,000 tons in March, these two being the only shipments to Algeria and Tunis in 1925. The only other exports to Africa consisted of 6,010 tons against 6,947 tons in March to French Africa, other than the possession stated above.

Increase in Anthracite Exports—Coke Shipments Drop.

Total exports of anthracite from the United States during April amounted to 229,588 tons, an increase of 200,953 tons over March. Greater shipments to Canada were largely responsible for the gain, 225,800 tons going to that destination in April as compared with 200,219 tons in the preceding month. To Cuba were consigned 3,786 tons, against none in March and 10,028 in February.

Coke exports during April decreased to 52,819 tons from 63,980 tons in March—the largest monthly shipment for 1925. A considerable decrease in shipments to Canada during April, which totaled only 43,295 tons as compared with 61,389 tons in March, is largely responsible for the lower total. Exports to the Netherlands, however, increased from 661 tons in March to 2,006 in April. Exports of coke to Chile in April were 4,914 tons as compared with 21 tons in March, these being the only two months in 1925 in which coke was shipped from the United States to Chile.

French Coal and Coke Industry, First Quarter, 1925

Trade Commissioner Daniel J. Reagan, Paris, May 5

The first quarter of 1925 was satisfactory to the French coal industry. During this period the average monthly production of coal and lignite (excluding the output of the Saar, figures for which are not yet available) reached a new high level—over 4,000,000 metric tons, the total for January to March, inclusive, amounting to 12,124,000 tons.

The production of coal, coke, and patent fuel and the trade in these commodities follow:

French fuel production, trade, and consumption¹

Products	First quarter, 1925	First quarter, 1924	Fourth quarter, 1924

¹ Exports from the Saar are included in the French foreign-trade figures.

² Not including the production of metallurgical coke plants.

³ Not including the production by plants independent of the mines.

South Wales Coal Conditions Further Improved

Radioletter dated May 21 from Trade Commissioner Charles E. Lyon, London

South Wales coal conditions are improved still further and several threatened closings have been averted. Prices are firm, at a slight increase. The average price of coal exported during April was just below 24s. per ton and was the highest for the year. Outward chartering during the past week was 424,000 tons as against 359,000 tons in the week before, requiring 125 vessels to 59 destinations, with the heaviest increase to South

America. The bottom of the depression in Tyne prices has apparently been reached, as there are more inquiries and some future business. The Swedish State railways ask tenders on May 25 for 200,000 tons of steam coal, June-September shipment, and the Finnish railways want 15,000 tons of best steam coal for June shipment. The Scotch market still shows a downward trend in orders and prices.

Quotations—Freight Rates—Production.

Best Admiralties are quoted at 26s. 3d. (\$6.88) to 26s. 9d. (\$6.50), best Blyths screened at 17s. 6d. (\$4.25), and Tyne primes at 16s. 9d. (\$4.07). Freight rates from Wales to the River Plate are 14s. 9d. (\$3.58) and to West Italy 8s. 9d. (\$2.18). Production during the week ended May 9 amounted to 5,074,100 long tons.

The miners' federation on May 20 heard the results of a joint conference with owners and seems agreed that no wage program can be started or present agreement terminated until trade improves, but it is quite likely that owners will be asked to arrange economies in organization and distribution.

Conditions in the Dutch Coal Industry

Consul Edward A. Dow, Rotterdam, April 20

Coal production in the Netherlands during 1924 totaled 5,862,000 metric tons against 5,595,000 tons in 1923 and 1,873,000 tons in 1913. The 1924 production, chiefly from the Limburg mines, was not sufficient for the country's needs, however, as local consumption that year totaled about 9,500,000 tons. Both private and Government mines are being extended with the end in view that production may reach consumption within the next decade.

There were about 30,000 persons, including underground and surface employees, engaged in the mining industry on January 1, 1925, against only 24,944 in 1920. The annual output per miner was 199 tons in 1924, as against 138 tons in 1920.

Czechoslovak Industries Demanding Lower Coal Prices

Commercial Attaché James L. Hodgson, Prague, May 2

There has recently been considerable agitation among the industrial interests of Czechoslovakia for lower coal prices and the industries concerned are now negotiating with the coal operators for a reduction.

Representatives of the porcelain and glass industries have stated that the increased competition being encountered from German manufacturers in the international market makes it mandatory that they should reduce the prices for their products and as a step toward this end they desire a lower price for coal. The Government is taking no part in the negotiations and any reduction obtained will be through agreement between the industries concerned and the coal operators.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

INCREASE IN THE UNITED STATES FOOTWEAR EXPORT TRADE

United States shoe manufacturers exported 2,450,741 pairs of footwear valued at \$5,618,764 during the first four months of 1925, an increase of 17.3 per cent over the quantity exported the corresponding period of 1924. About 40 per cent of these exports were boots and shoes for men and boys, 35 per cent for women, and 22 per cent for children. The peak of the foreign trade in men's and boys' shoes was reached in March with 289,941 pairs exported and was nearly equaled in April with 284,670 pairs; women's shoes attained the trade summit in April with exportation of 269,914 pairs valued at \$536,255.

April, 1925, Exports.

The April exports of footwear to foreign countries amounted to 719,391 pairs valued at \$1,679,704 and comprised boots and shoes for men and boys, 284,670 pairs valued at \$951,544; for women, 269,914 pairs valued at \$535,255; and for children, 141,295 pairs valued at \$161,852; leather slippers, 18,987 pairs valued at \$22,965; and athletic, etc., footwear, 4,525 pairs valued at \$7,088. These exports show an encouraging increase as compared with the April, 1924, exportation of 596,855 pairs valued at \$1,507,619.

Men's and Boys' Shoes.

Of the 284,670 pairs of men's and boys' leather boots and shoes exported to foreign markets during April, Cuba took 170,685 pairs valued at \$562,180, Mexico 25,184 pairs, Philippine Islands 20,309 pairs, Panama 14,104 pairs, Newfoundland and Labrador 6,262 pairs, Canada 5,827 pairs, and Dominican Republic 7,372 pairs.

Women's Shoes.

The most important markets for the 269,914 pairs of women's leather shoes exported during April were Cuba (133,487 pairs), Canada (22,545 pairs), United Kingdom (19,980 pairs), Mexico (16,876 pairs), Dominican Republic (14,666 pairs), Germany (11,558 pairs), and Newfoundland and Labrador (8,937 pairs).

Children's Shoes.

Out of 141,295 pairs of children's shoes valued at \$161,852 exported from the United States, Cuba purchased 107,680 pairs. The other leading markets were Mexico, Newfoundland and Labrador, Dominican Republic, Panama, and Canada.

Slippers and Miscellaneous Footwear.

Cuba was the largest purchaser of leather slippers (9,385 pairs valued at \$10,947), and Trinidad and Tobago, Canada, and Mexico were markets of approximately the same quantity rank, with respective purchases of 2,630, 2,479, and 2,379 pairs. The leading market for athletic and miscellaneous footwear was Cuba, 1,648 pairs; the second, Jamaica, 628 pairs; and the third, Canada, 544 pairs.

UNITED STATES IMPORTS OF LEATHER FOOTWEAR

The United States imported 589,131 pairs of free and dutiable footwear during the first four months of 1925, a decrease of 9.6 per cent as compared with the quantity (651,784 pairs) imported the corresponding period of 1924. This slight decrease was due to falling off in the demand for footwear subject to duty. The free footwear, consisting of 320,647 pairs of leather boots and shoes and slippers, was only 800 pairs less than the number of pairs imported in the first four months of 1924.

April Imports.

The April, 1925, imports of leather footwear, free and dutiable, amounted to 162,578 pairs, valued at \$252,105, and followed the upward trend from the March imports of 151,932 pairs.

The imports of dutiable footwear, 80,847 pairs, and the free, 81,731 pairs (leather boots and shoes, 72,748 pairs, valued at \$222,196, and leather slippers, 8,983 pairs, valued at \$7,960) were about equal in quantity.

Leather boots and shoes for men and boys constituted the major portion of this class of goods imported. Of the 39,066 pairs, valued at \$104,121, Germany and the United Kingdom supplied, respectively, 23,764 and 11,448 pairs.

Women's shoes (31,660 pairs, valued at \$115,819) were imported principally from Switzerland (13,473 pairs, valued at \$56,671), Czechoslovakia (8,927 pairs, valued at \$20,538), and the United Kingdom (2,700 pairs, valued at \$18,481).

Germany furnished 1,627 pairs of the 2,022 pairs of children's shoes imported during April, 1925.

Canadian Imports of Footwear

Canadian imports of boots and shoes with leather uppers amounted to 192,590 pairs in the first quarter of 1925, of which 46.8 per cent were for men, 27.7 per cent for women, and 25.5 per cent for children. Receipts of this class of goods in the corresponding period of 1923 and 1924 were, respectively, 137,218 and 169,516 pairs.

Men's Shoes.

The United Kingdom was the favored market for men's shoes, supplying, out of the total purchases of 90,215 pairs, 61.9 per cent, or 55,856 pairs. The United States furnished 37.6 per cent, or 33,926 pairs. The quantity of this line of goods demanded in the 1925 quarter shows an increase of 51.9 per cent over the 1923 period and 5.7 per cent over that of 1924.

Women's Shoes.

Women's shoes of American manufacture are popular with Canadians, and during the first three months 34,611 pairs, or 64.9 per cent of the total quantity of women's shoes (53,299 pairs) imported into Canada, were purchased in the United States and 31.5 per cent, or 16,781 pairs, in the United Kingdom.

Children's Shoes.

The 49,076 pairs of children's shoes of foreign manufacture consumed in Canada during the first quarter of 1925 were supplied principally by the United Kingdom (29,645 pairs) and the United States (11,508 pairs). Germany furnished 7,898 pairs, valued at \$7,110. Canada imported 14,174 pairs of children's shoes in the first quarter of 1923 and 36,730 pairs during the corresponding period of 1924.

United States Exports of Leather Belting Increase in Volume

The 1925 foreign demand for American manufactured leather belting has steadily increased, from 81,446 pounds purchased in February to 151,284 pounds, valued at \$197,689, in April. The exports during the first four months of 1925 amounted to 430,037 pounds, valued at \$624,710, and represented an increase of 36.3 per cent over the quantity exported in the corresponding period of 1924.

April Exports.

April, 1925, exports of leather belting from the United States (151,284 pounds, valued at \$197,689) exceeded in quantity the belting exported during April, 1924 and 1923, respectively, by 80.6 and 53.6 per cent. Canada was the predominating market, with purchases amounting to 23,584 pounds, valued at \$12,258. Other excellent quantity markets were British India (19,838

pounds, valued at \$32,583), Chile (16,733 pounds, valued at \$9,293), China (16,247 pounds, valued at \$23,431), United Kingdom (12,863 pounds, valued at \$18,679), and Mexico (10,344 pounds, valued at \$17,636).

Progress in Egyptian Leather-Working Industries

Leather-working industries in Egypt have made substantial strides in recent years, according to a report from the Egyptian Government's bureau of commerce and industry. The progress in these industries has been mainly brought about through the training of school children in leather working in the numerous trade schools now scattered throughout Egypt. Leather trunks, suit cases, brief cases, valises, pocket-books, saddlery, etc., of a very wide range of quality and price are now produced in Egypt on such a basis as to meet local competition from European manufactured goods. Large quantities of women's handbags are manufactured in the small shops in the bazaars of Cairo and Alexandria. These are sold at very moderate prices and are in good demand, especially from tourists in the winter season. The fittings, such as locks, fastenings, etc., are generally imported from England.

SPECIALTIES

Warren L. Hoagland, Chief, Specialties Division

EXPORTS OF MOTION PICTURES SHOW STRIKING GAIN

C. J. North, Specialties Division

Exports of motion picture films from the United States for 1924 showed a gain in quantity of nearly 32,000,000 linear feet over 1923. All told, 170,347,341 linear feet of positives and 8,100,264 linear feet of negatives, valued at \$6,081,917 and \$1,319,859, respectively, were sent abroad in 1924 as against 1923 figures of 138,656,880 linear feet of positives valued at \$5,417,745 and 8,268,590 linear feet of negatives valued at \$996,336.

Largest Gains in Shipments to Europe.

Each grand division of the world showed a gain in its imports of positives from the United States. The outstanding feature here is that American exports of positives to Europe rose from about 29,000,000 feet in 1923 to over 53,000,000 feet in 1924—a rise of nearly 100 per cent. Eleven out of 26 European countries, among them England, France, Germany, Austria, Belgium, and Sweden, more than doubled their imports of positives from the United States. The United Kingdom alone, as our largest market for them, took over 22,500,000 feet in 1924 as against 11,066,000 feet the year before, this 1924 figure representing over 80 per cent of the amount which was bought by the whole of Europe in 1923. France as

our second largest European market took a little over 8,000,000 feet of positives as against about 4,000,000 feet in 1923, and Sweden crowded out Germany for third place with 4,100,000 feet in 1924 as against a little over 2,000,000 feet in 1923. Germany incidentally just about doubled its imports of positives with 3,693,000 feet in 1924 as against a 1923 total of 1,354,000 feet.

Sales to Latin America Increased.

Exports of positives to Latin America climbed from about 45,000,000 linear feet in 1923 to somewhat over 47,000,000 linear feet in 1924. The gains here were fairly well distributed. Argentina continued as our largest Latin American market for them, a total of nearly 14,000,000 feet for 1924 as compared with 1923 figures of just over 11,000,000 feet giving it fourth position among the markets of the world. Of other Latin American countries Brazil came second with 8,380,000 feet, a slight decline from 1923, while Mexico and Cuba stood third and fourth. These with about 5,500,000 feet and 4,500,000 feet showed consistent gains over last year.

Exports to the Far East Show Gains.

Considerable gains were recorded in exports of positives to the Far East, the 1924 figures showing slightly over 45,000,000 linear feet as against 40,734,000 linear

feet in 1923. Over 60 per cent of this rise was due to greatly increased imports by Japan—about 9,500,000 feet for 1924 in comparison with 6,300,000 feet for the previous year. This incidentally gives Japan the position of fifth in the export markets for positives from the United States. Australia, of course, remains as our largest Far Eastern market and third of all our export markets for films with over 18,500,000 feet in 1924, this figure however, being a decline of about 200,000 feet from 1923. Other Far Eastern markets which showed up well were New Zealand, China, and British India in the order named. They all had totals of over 3,000,000 feet—slight gains over 1923.

Canada Our Second Largest Market for Positive Films.

Of the other markets of the world Canada remains second, next to the United Kingdom with 19,620,000 linear feet of positives as against 19,071,914 linear feet in 1923. British South Africa for the first time passed the 4,000,000 footage mark in 1924, a gain of nearly 1,000,000 feet over the previous year.

Gains in Exports of Negatives Also Recorded.

Out of slightly over 8,000,000 feet of negatives exported in 1924, Europe took nearly 7,000,000 feet. About 5,000,000 feet of them were divided between the United Kingdom and France—about 3,500,000 to the former and nearly 1,500,000 to the latter, as against about the same figure for 1923 in the case of the United Kingdom and a gain of about 500,000 feet for France. Germany came third, Italy fourth and Sweden fifth with totals of 783,000 feet, 657,000 feet and 385,000 feet, these being gains of about 75 per cent, 110 per cent, and 600 per cent, respectively, over 1923. For Latin America a decline from over 2,000,000 feet to 540,000 feet in purchases of negatives from the United States took place, due almost entirely to a large decline in imports into Mexico and Argentina, this decline being 1,400,000 feet to 25,000 feet for the former and 628,000 feet to 150,000 feet for the latter. In the Far East a gain of from 388,000 feet to 558,000 feet was shown. Here Japan boosted its imports of negatives from the United States from 62,000 feet to 386,000 feet, this being sufficient to account for the entire gain.

The Saxon Photographic Industry Dull

Consul Louis G. Dreyfus, Jr., Dresden, Saxony, Germany

Exports of photographic apparatus and accessories from Saxony have been very unsatisfactory for some time. It is claimed that the large purchases effected by foreign markets during the inflation period, when the articles in question could be bought at very low prices in Germany, account for the present stagnation in export trade.

Small Industries Hampered—Firms Amalgamated.

It is believed that the numerous small enterprises which have sprung up since the war will not be able to survive, since in view of the greatly increased prices of raw materials they will not be able to meet competition.

One of the oldest Dresden photographic paper factories, the Vereinigte Fabriken Photographischer Papiere, has been amalgamated with the Chemische Fabrik auf Aktien, vorm. E. Schering. This union

was considered useful for the purpose of concentrating production in order to operate more profitably, thus facilitating competition both at home and abroad.

Situation in the Saxon Musical-Instrument Industry

Consul Louis G. Dreyfus, Jr., Dresden, Saxony, Germany

Economic and labor conditions in the stringed instrument branch of the musical-instrument industry of southwestern Saxony have been rather slow, with only partial employment. In general, the domestic demand has been larger than the foreign requirement, but limited to cheap and medium qualities.

There has been no particular change in the price of musical instruments, except for gut strings, which have advanced.

Only a limited number of firms manufacturing mouth organs have been fully occupied, while at present only few and small orders are received for these goods. Accordion manufacturers have been fairly well occupied, but orders are also slowing down in this branch. Concertinas, concert zithers, and musical toys are having a very slow sale. There have been complaints of unfair underselling, especially to foreign markets.

Argentine Piano Market Normal

Trade Commissioner George S. Brady, Buenos Aires, April 18

There was a considerable decrease in the Argentine importations of pianos during 1924, as compared with the previous year, but dealers report regular and normal sales. It is stated that during 1923 large numbers of pianos were received from Germany on consignment, and the market was slightly overstocked. The 1923 imports were in excess of normal, owing to these consignment shipments.

The total number of pianos imported into Argentina during 1924 amounted to 5,961, as compared with 7,653 in 1923 and 5,494 in 1922. Of the 1924 importations, 4,921 came from Germany, 883 from the United States, 53 from France, 25 from Great Britain, and 79 from various other countries. Over 80 per cent of all piano sales in Argentina are German makes.

Prospect for Sales of Hospital Equipment

The construction of two hospitals in Canada costing \$700,000 and \$140,000, respectively, has just been announced. Manufacturers of hospital equipment can secure the names of the architects by applying to the Specialties Division, Bureau of Foreign and Domestic Commerce, Washington, D. C.

Reports Available

There are a number of reports on file in the Specialties Division dealing with the glass-bottle manufacturing industry in various European countries. These reports will be loaned to interested firms on request.

PAPER

O. M. Butler, Acting Chief, Paper Division

THE BRAZILIAN PAPER MARKET

Consul General A. Gaulin, Rio de Janeiro

The principal kinds of paper imported into Brazil are, in the order of their importance, newsprint, "assetinado," lithographic paper, and sulphite bond. Brazilian paper dealers do not as a rule carry stocks of many varieties of paper, but prefer to keep on hand only a few grades that may serve for as many purposes as possible. An illustration of this tendency is the "assetinado," a hard-sized, machine-finish or supercalendared book paper, which can be used for either printing or writing. Imports of cardboard, writing paper, and printing paper into Brazil during 1922 and 1923 appear in the following table:

Brazilian paper imports

Country of origin	1922		1923	
	Metric tons	Value	Metric tons	Value

Total.....	37,078	3,865,244	39,516	5,109,599

Varieties in Demand.

The imports shown under the caption "cardboard and millboard" consist chiefly of box board and bristol board, and notwithstanding the increase registered in 1923 it is generally believed that the growing importance of the domestic industry tends to cut down importations of foreign boards. The box board manufactured locally is usually a cheap gray or brown board made of old newspapers and rags.

Most of the paper sold locally for writing purposes is the "assetinado," the next in demand being a white

sulphite bond. In most cases price is the determining factor in this market, but there is a small demand for high-grade writing paper which is imported from the United States and England.

New Interest Manifest in American Paper.

Among the wrapping-paper importations, the chief item is a high quality, light-weight kraft paper, imported principally from Sweden. Small amounts of glassine and grease-proof paper are also purchased largely from the same source. The newsprint trade at present is almost entirely in the hands of German and Scandinavian exporters, but there is a fairly good market for American paper of other grades. The price advantage enjoyed by European exporters over American firms has apparently narrowed within the past few months and several local paper importers have manifested interest in paper of American manufacture.

Distribution Methods—Credits.

All varieties of paper except newsprint are handled on the local market by importing wholesalers. Under the existing customs regulations newspapers are permitted to import newsprint at rates of duty considerably under those paid by other importers. Ninety days' sight or 120 days' date are the credit terms usually granted to local paper importers. Quotations should be made c. i. f. Rio de Janeiro, as such quotations enable the importer more easily to compare American and European prices.

Labor Conditions in the German Paper Industry

Assistant Trade Commissioner M. L. Goldsmith, Berlin

Unemployment in the German paper industry has been decreasing during the past few months. The Federal Employment Office reports a growing demand for skilled workers in various parts of the country, particularly in the Free State of Saxony and in Silesia and Wurttemberg. Agitation for higher wages is currently reported from various sections, and it is expected that the general wage level will be raised by 5 to 10 per cent during the next two or three months.

Wages Comparatively Low in the Paper Industry.

Wages in the paper industry are reported lower than those paid in other trades. Maximum weekly earnings of skilled machine workers are around 30 marks (\$7.14) per week of 48 hours, including the bonus for a wife and two children, compared with an average weekly wage of between 33 and 38 marks (\$7.85 and \$9.04) throughout industries as a whole. Wages in

the Rhineland are higher than in other parts of the country, workers in paper industry in Cologne and other cities of this district receiving around 30 marks (\$7.14) per week, compared with 21 marks (\$5) in the eastern part of the country.

Side Runs of the Paper Trade

Philippine Paper Imports.

Imports of paper and paper manufactures into the Philippine Islands during March reached a value of \$227,000, according to a cablegram from Assistant Trade Commissioner E. B. George, Manila.

Norwegian Pulp and Paper Exports.

Exports of pulp and paper from Norway during February were valued at 26,600,000 crowns (\$4,056,500), according to a cablegram received from A. Fenselau, office of the commercial attaché, Copenhagen. Exports of wood pulp to the United States were reported as valued at \$511,000.

Imports of Wood Pulp Into Argentina.

A total of 16,167 metric tons (metric ton=2,204.6 pounds) of wood pulp were imported into Argentina during 1923, according to a report from Trade Commissioner G. S. Brady, Buenos Aires. Over one-half of the receipts came from Germany, which furnished 9,951 tons, the balance being received from Finland, Sweden, and Austria, which supplied from 2,000 tons to 2,400 tons apiece. Small amounts were also received from Lithuania, Italy, and France.

Japanese Mill to Resume Operations.

As a measure of relief to both the pulp and sawmill industries, the Governor General of Chosen (Korea) has decided to cut timber in certain forest reserves on the shore of the Upper Yalu River and to sell it to these industries at a low price. As a result of this step on the part of the Government, the pulp mill at Shingishu will resume operations in May. The capacity of this mill is reported at 15,000 tons of pulp annually. (Consul W. R. Langdon, Antung, China.)

Imports of Paper Into Uruguay—1924.

Imports of paper and paper products into Uruguay during 1924 reached a total value of \$700,984, according to a report from Consul O. G. Marsh, Montevideo. The largest item was newsprint paper (in rolls), which amounted to 12,073,578 pounds, valued at \$280,202, followed by printing and lithographic paper, amounting to 5,970,965 pounds, valued at \$311,948. The remainder consisted of 540,786 pounds of chrome paper, 210,749 pounds of wrapping paper, 57,946 pounds of white envelope paper, and 43,902 pounds of cigarette paper. Imports of paper board reached a total of 1,361,361 pounds.

Current Paper Imports Into Cuba.

Imports of paper into the port of Santiago during the first two months of the current year consisted of 29,570 pounds of printing and writing papers, 70,938 pounds of wrapping paper, and 380,884 pounds of other classes of paper, the total importations reaching a value of \$21,835. The United States furnished 83 per cent of the printing and writing paper; Germany 96 per cent of the wrapping paper; and Germany and the United States 50 per cent and 29 per cent, respectively, of the other classes of paper.

Demand for Sulphite Pulp by Artificial-Silk Industry.

The use of strong sulphite pulp for the manufacture of artificial silk has attracted special attention during the past few months, according to a report from Consul W. H. Sholes, of the Goteborg consular district. Certain of the sulphite mills in that district are reported to have received large orders from Italy and France, and the demand has increased to such an extent that one of the mills has been reserved for this production.

Paper Imports Into Guatemala for 1924.

Imports of paper and paper products into Guatemala declined from \$377,000 during 1923 to \$348,000 during the past calendar year. Importations from the United States show the heaviest decline, from \$200,000 to \$135,000, a loss of 32 per cent. Losses were also sustained by Spanish and French exporters, imports from the former source having decreased from \$19,800 to \$13,800, and from the latter from \$13,300 to \$5,600. The most substantial gain was made by Great Britain, which increased its sales from \$67,000 to \$100,000, or by 49 per cent. Imports from Germany show a gain from \$62,000 to \$72,000, while Sweden, which entered the market in 1923, increased its trade from \$7,400 during that year to \$13,300 during 1924. (Consul General Philip Holland, Guatemala City.)

Cable review, Europe: Norwegian exports for March greater. List of "Bureau's special circulars available." "Foreign trade opportunities."

China Storage Battery Manufacturing Company.

For several years a Chinese concern has been making storage batteries and selling them in the local market. The factory is very small, having an output of only two batteries per day, most of the work being done by hand. An effort is being made to increase the sales through advertising and a 14-day free trial is offered for testing the quality of the product. The manager has expressed his intention of later making dry cells in addition to storage batteries. A price list of the various types of storage batteries made by this concern may be secured for loan from the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., by referring to No. E. E. 1000.

EUROPE

Samuel H. Cross, Chief, European Division

UPWARD ECONOMIC TREND IN GREECE

Based on reports from Consul General Arthur Garrels and Commercial Attaché R. O. Hall; Consul Robert F. Fernald, Saloniki; and other sources

Business in Greece during the first quarter of the current year was considerably handicapped by the decline and fluctuation in drachma exchange that characterized the first two months. The swing back, however, has brought drachma value above that of early January, with corresponding improvement in industrial activity and trade.

The basic nature of this upward trend is evidenced by the decline in Greek idle tonnage during 1924 to 2 per cent, and the considerable enlargement of the merchant fleet. Banks, during the past quarter, have moved up their rates on commercial paper to the legal maximum of 9 per cent, plus a commission of one-half of 1 per cent per month, and long-term paper draws yet higher rates. The free zone at the port of Saloniki, so long desired by the Yugoslav Government, was formally transferred to Yugoslav representatives on March 5 by the Greek Government.

Considerable Fluctuation in Drachma Exchange.

The exchange value of the drachma fluctuated markedly during the first quarter of 1925, causing serious disturbances on the bourse and placing business at a disadvantage. Several causes have been assigned for this decline in exchange value: Speculation, the poor cereal crops, and the general building boom which resulted in heavy imports and a resultant larger demand for foreign currencies; at the same time the national bank did not have sufficient foreign-exchange balances to permit any operations toward supporting the drachma.

Consequently, the exchange rate of \$0.0181 on January 3 began to fall about the middle of the month and dropped to \$0.0170 by January 31. This downward movement continued throughout February and the first half of March, reaching its lowest level of \$0.01483 on March 16. From that date, however, an upward movement set in, which attained \$0.01589 by March 31 and \$0.01887 by April 30—higher than at the beginning of the year. Despite considerable fluctuation, the average for the first week in May was \$0.01838, as compared with a monthly average for January of \$0.0175; for February, of \$0.0161; for March, of \$0.0163; and for April, of \$0.0178.

Cost of Living Continues to Rise.

The rise in cost of living which characterized the last half of the year 1924—the index figure averaging

1374 during the first quarter, 1226 for the second quarter, advancing to 1253 for the third quarter and to 1347 for the fourth quarter—has continued into the first quarter of 1925, where the average has stood at 1405 for January and at 1456 for February.

Customs Collections Improve—Corporations and Capital Increase.

The customs returns at Piraeus for the fiscal year ended March 31, 1925, amounted to 726,106,376 paper drachmas and 115,607 gold drachmas. Compared with the returns for the previous fiscal year, there is a surplus of 286,563,496 paper drachmas and a deficit of 1,637,211 gold drachmas.

During the month of February six new corporations were granted charters in Greece, with a combined capital of 30,500,000 drachmas and £100,000, and 11 corporations increased their capital stock to an aggregate of 64,000,000 drachmas, £119,999, and 10,000,000 francs.

Industrial Activity Attends Building Boom.

The activity of 1924, which resulted in the establishment of 66 new industrial plants, has carried over into 1925. Spinning mills in Macedonia have been very busy throughout the quarter, in response to the heavy demands for their products occasioned by the requirements of the refugees. A new company, under the name of the United Oriental Carpet Manufacturers, was organized with a capital of £10,000. It will undertake to manufacture oriental handmade carpets. The production of the rug industry is estimated at an annual value of \$3,500,000.

The building boom that characterized the latter part of 1924 continues, and the Refugee Settlement Commission reports that it alone has 25,000 buildings actually under construction. The distribution of this greatly increased material for building and textile uses is proving of much assistance to the railways. The refugees in the Saloniki district are rapidly reconstructing the burned area, and it is believed that before 1928 all of this area will be restored. It is reported that the gas plant at Saloniki, destroyed in the conflagration of 1917, is to be rebuilt.

Trade with United States Shows Heavy Increase.

Exports declared to the United States through the American consulates in Greece during 1924 amounted to \$32,553,000 as against \$11,720,000 in 1923, showing

an increase of almost 200 per cent. Nearly one-third of the total value for 1924 is represented by shipments of leaf tobacco, which alone made a gain of \$23,377,000 over 1923. American exports to Greece during the calendar year 1924, according to United States statistics, amounted to \$16,722,000, as compared with \$11,900,000 for 1923, an increase of more than 40 per cent.

During the first quarter of 1925, according to United States statistics, imports into the United States from Greece were valued at \$5,710,000, as against \$2,045,000 for the corresponding period of 1924; exports from the United States to Greece were valued at \$7,260,000 as against \$2,086,000, an improvement of over 300 per cent.

Business Recovery in Northern Portugal

Consul S. H. Wiley, Oporto, April 20

The stagnation that had characterized business in northern Portugal during the latter part of 1924 was broken in the first quarter of the current year by a revival in practically all lines. Adjusting prices to the increased exchange value of the escudo enabled merchants to dispose of existing stocks or to order for depleted stocks, and this has stimulated manufacturing industries.

Stability of Exchange Favorable to Business.

The fact that Portuguese exchange has remained relatively stable for a considerable period is helping to establish business on a sounder footing than it held even during the period when the continually declining value of the escudo was stimulating exports. Manufacturers and merchants believe that the worst of the crisis has been passed, are hopeful of a steady improvement in conditions, and are not discouraged by

the normal seasonal dullness that set in during the last half of March.

Various Industries Stimulated.

A considerable seasonal demand for woolen goods, (though still somewhat below normal), coupled with an increase in import duties, has improved the situation for woolen mills. These were working six days a week on March 31, though at reduced capacity.

By curtailment of production and extensive price reductions, the cotton mills in the Oporto district succeeded in disposing of the greater part of their existing stocks by the middle of January. As jobbers' stocks also became depleted at about the same time, the mills were able to resume work on full time.

Better demand for port wine, especially from France, has improved the wine-making industry. Trade in other agricultural products also was satisfactory.

Unemployment Greatly Reduced.

The improved industrial situation has decreased unemployment about 45 per cent during the quarter ended March 31. No strikes or other labor disturbances have taken place in recent months.

EGYPT FOSTERS INTERNAL IMPROVEMENTS

Trade Commissioner Richard A. May, Alexandria

General business during the quarter ended March 31, 1925, enjoyed more than normal activity. Wholesale and retail stocks showed a rapid movement. Exports of cotton during the quarter totaled 2,166,000 cantars (214,542,000 pounds) as against 1,941,000 cantars (192,256,000 pounds) for the corresponding period of 1924. Shipping at Alexandria and other ports of Egypt also progressed favorably during the quarter, with the usual heavy seasonal outward movement of cotton. Onion exports reached the peak of activity in March, a large part being taken by tourist steamships to the United States.

Government Turns its Attention to Internal Affairs.

For the first time since the establishment of its independence, the Egyptian Government turned its attention more directly to internal affairs. On February 15 the council of ministers reestablished the economic

council, a semiofficial body whose function is to foster Egyptian industries and develop projects for the exploitation of the country's natural resources. During the latter part of March, the consulting council for agriculture was reorganized, in order to obtain a more representative body of agriculturists and Government officials for the discussion of questions affecting agricultural policy. Another step taken by the Government was the annulment in the middle of February of the long-standing ad valorem tax on locally manufactured cotton piece goods.

Egypt's foreign trade during the first two months of 1925 showed considerable gains in both exports and imports over the corresponding period of 1924. Exports for the two months, according to the official statistics, had a total value of £E4,562,000, and imports a value of £E9,196,000.

Budget Indicates Surplus—Cost of Living Lower.

Since there is no Parliament in session to approve a budget for the fiscal year beginning April 1, 1925,

the Government has decided to adopt the 1924-25 budget for the 1925-26 fiscal year without modification. A very substantial budget surplus for the year 1924-25 was indicated by the fact that the first nine months of the fiscal year showed an excess of income amounting to approximately 32 per cent of the total Government expenditures.

The cost-of-living index figure for January stood at 165, as against 167 for December, 1924.

Crop Prospects Good.

According to official agricultural reports, all crops progressed normally under favorable weather conditions during the past quarter. Cotton was planted slightly earlier than last year and is estimated to cover slightly increased acreage. Lower Egypt was planted almost exclusively to sakellaridis. Sugar cane and onion crops were slightly above normal. Wheat and barley crops are expected to be about normal.

Greater South African Foreign Trade in 1924

Assistant Trade Commissioner Floyd E. Sullivan, Johannesburg

The foreign trade of the Union of South Africa during 1924 recorded a very satisfactory increase over 1923, in spite of serious droughts, locusts, and unsettled conditions that prevailed. Imports reached a value of £67,705,100, or £8,959,400 more than in the previous year, and exports a value of £82,107,900, or £1,900,200 more than in 1923.

The value of the total foreign trade of the Union, amounting to £149,813,000, represents a year's increase of nearly £11,000,000; but the excess of exports over imports has been reduced to £14,402,800 from the £21,462,000 in 1923, by reason of an increase of nearly £3,000,000 in imports of Government stores and of nearly £6,000,000 in imports of merchandise.

Import Increases Widely Diversified.

The increase of £9,000,000 which occurred in import values during 1924 was spread over a wide variety of articles and reflects the improved economic and trade conditions prevailing in the Union. Motor-car imports increased from £181,700 in 1923 to £186,200 in 1924; gasoline, from £55,500 to £156,800; agricultural implements, from £47,300 to £73,600; wearing apparel, from £405,800 to £465,000; manufactures of silk, from £73,600 to £104,500; wool manufactures, from £92,700 to £99,100; wheat, from £101,400 to £143,400; coffee, from £23,300 to £197,100; and tea, from £52,400 to £112,500. Cotton piece-goods imports fell from £333,700 to £307,600, and imports of boots and shoes from £103,400 to £101,400.

Wool the Chief Item in Enlarging Exports.

Exports of South African products in 1924 were valued at £81,236,400, as compared with £78,524,300 in 1923, an increase of 3.4 per cent. Exports of gold increased by £991,599; wool, by £3,375,700; hides and skins, by £711,100; copper, by £235,000; mohair, by £194,100; cotton, by £47,100; coal, by £20,900; and feathers, by £13,300. The exports of articles of food and drink, however, declined nearly £3,000,000 in value, almost all of the decline being attributed to the small surplus of maize available for export.

Durban Leads as Port of Entry.

The leading port of the Union in value of merchandise imports is Durban, with Port Elizabeth second,

and Cape Town third. East London, however, showed the largest percentage increase, amounting to 22.78 per cent.

Value of imports through British South African ports 1293 and 1294

Port	1923	1924
Cape Town.....	£11,086,200	£12,743,300
Port Elizabeth.....	12,381,400	13,435,600
East London.....	4,572,800	5,614,600
Durban.....	17,893,600	18,889,600
Delagoa Bay (Portuguese East Africa).....	4,460,100	4,688,500
Other ports and stations.....	4,868,400	5,922,200
Total.....	55,332,500	61,293,800

Expanding Trade in Tanganyika

The foreign trade of Tanganyika Territory continued its improvement during 1924 to an even greater degree than in 1923, imports increasing 14.7 per cent and domestic exports 57.5 per cent. As the natives' purchasing power is based entirely on the sale of their specialized crops, the expansion of exports will undoubtedly result in greater purchases of manufactured products from abroad in 1925.

The total value of imports in 1924 was £2,062,646, and of domestic exports £2,611,303, leaving a favorable balance of £548,657. In addition, there was a transit trade valued at £700,000, comprising goods shipped to the Congo through the Belgian leased site.

Cotton Goods Predominate in Import Trade.

Principal imports consisted of cotton piece goods, valued at £811,679; foodstuffs, at £175,467; building materials, at £61,316; iron and steel manufactures, at £108,318; machinery, at £94,514; kerosene and gasoline, at £46,223; cigarettes, at £28,183; spirits, at £28,016; and wines and beer, at £20,350. Imports of cotton piece goods were approximately £100,000 greater than in 1923, and were purchased mainly from the United Kingdom, Japan, British India, Germany, and the Netherlands. Imports of building material increased slightly, as also did kerosene, gasoline, spirits, tobacco, and machinery. Imports of iron and steel manufactures decreased slightly, owing largely to the fact that planters had already restocked their equipment that had run down during the war.

Sisal the Largest Item of Export.

Principal exports consisted of sisal valued at £644,835; cotton, at £373,753; groundnuts, £359,918; coffee, £352,529; hides and skins, £185,843; copra, £178,194; grain, £130,295; simsim, £80,324; beeswax, £44,666; ghee, £25,589; and chillies, at £18,596. Exports of each commodity show considerable increase over 1923. Cotton showed the greatest gain, increasing more than 110 per cent, and sisal was next with a gain of 75 per cent, then coffee with a gain of 72 per cent, and groundnuts, 36 per cent.

Ship Registries at Leading Ports.

The trade of Tanganyika Territory in 1924 involved the following ship registries at principal ports: Dar-es-Salaam, 271 ships; Tanga, 151; Lindi, 49; Bukoba, 55; and Mwanza, 62. The import duties for the year totaled £403,006.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

HONGKONG'S FOREIGN TRADE IN 1924

Based on report from Trade Commissioner Osborne S. Watson, Canton

Hongkong's foreign trade for 1924 was in excess of that of 1923, notwithstanding unusually severe hindrances to trade resulting from political disturbances in South China. Imports for 1924 totaled £72,155,478, while the 1923 receipts amounted to £61,954,498, and exports aggregated £63,606,315, against £61,325,837 in the preceding year. Both imports and exports increased, but the largest advance occurred in imports, which exceeded exports by nearly £10,000,000. Since Hongkong's chief importance is as a transshipment point, the preponderance of imports indicates a large accumulation of goods in local warehouses, owing to the unsettled conditions prevailing in South China and the unwillingness of buyers to place orders. This situation implies the incurring of costly charges on the warehoused goods, which will eventually mean sales at a loss.

Trade by Countries Summarized.

The following table shows the direction of Hongkong's foreign trade for 1924 in comparison with 1923:

Foreign trade of Hongkong

Countries	Imports		Exports	
	1923	1924	1923	1924
United Kingdom.....	£6,967,219	£9,450,413	£1,027,462	£805,238
India.....	2,221,834	1,998,663	3,035,777	2,983,881
Straits Settlements.....	1,737,981	1,692,646	39,035,940	39,751,317
China.....	7,973,067	9,151,284	3,592,627	3,523,798
Japan, Korea, Formosa.....	6,674,896	9,127,732	1,158,927	1,054,003
Netherlands East Indies.....	7,757,494	9,457,968	4,155,842	5,135,709
French Indo-China.....	9,484,578	10,994,318	2,229,843	2,530,540

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

TRADE COMPETITION IN COLOMBIA

Consul Lester L. Schnare, Cartagena

The United States is at present supplying nearly 60 per cent of all the imports that enter Colombia through the port of Cartagena. This favorable situation has existed, however, only since the outbreak of the war, and the competition from European countries, which has become stronger with the gradual return to normal conditions during the past three years, has steadily lowered the percentage of imports from the United States.

Imports Increased by Half.

The imports into Cartagena increased about 50 per cent, from a total of \$6,444,959 in 1914 to \$9,092,549 in 1923; and the percentage of imports from the United States increased from 38 per cent to 58 per cent, reaching 69 per cent as its highest point in 1919 and maintaining an average of 58.7 per cent for the entire period. This increase of 20 per cent in imports from the United States has been gained at the expense of all other countries, the share of the United Kingdom having decreased slightly from 29 per cent in 1914 to 26 per cent in 1923; that of Germany from 16 per cent in 1914 to 8 per cent in 1923; that of France from 5 per cent in 1914 to 2 per cent in 1923; and that of all other countries combined from 12 per cent in 1914 to 6 per cent in 1923. The average percentage of the imports from all of these countries during the entire period is very nearly identical with the percentages of imports from each during the year 1923, the

greatest variation being found in the figures for Germany because there were no imports from that country during five of the years listed.

There has been a steady decline, however, in the percentage of imports from the United States and a corresponding increase in that of goods imported from both the United Kingdom and Germany.

Principal Sources of Imports.

During the fiscal year 1914 the United States, the United Kingdom, Germany, and France, in the order named, were the most important sources of imports, these four countries furnishing 88 per cent of the goods imported through Cartagena during that year. A comparison of the values of imports through Cartagena from these four leading countries from the fiscal year 1914 to the calendar year 1923 follows:

Value of imports of the port of Cartagena, by principal countries of origin, 1914-1923

Year	France	Germany	United Kingdom	United States	All others	Totals
	Pesos	Pesos	Pesos	Pesos	Pesos	Pesos
1914 (fiscal).....	295,125	1,048,718	1,863,002	2,458,833	779,281	6,444,959
1914 (calendar).....	178,470	600,622	1,424,178	2,067,745	484,885	4,750,910
1915.....	61,470		1,285,353	2,161,499	201,339	3,709,661
1916.....	146,970		1,633,833	3,476,519	217,674	5,304,996
1917.....	103,731		1,329,058	3,496,370	268,865	5,198,024
1918.....	11,615		1,366,819	2,661,212	196,988	4,236,614
1919.....	82,223		1,708,907	5,799,709	860,807	8,449,646

Total.....	5,209,926	2,346,693	1,525,930	9,082,549

Imports from the United States exceeded in value those from the United Kingdom in every important group except textiles, in which the United Kingdom has always led and the only important classes of goods of interest to American exporters, in which other countries appear to have an advantage over the United States, are glassware, porcelain and crockery, and electrical appliances.

Brazil's Foreign Trade Movement

Assistant Trade Commissioner A. Ogden Pierrot, Rio de Janeiro

Contrary to the opinion of many who class Latin American countries as exporters of bulk products and importers of valuable products, Brazil's imports are of greater volume than its exports, even considering the enormous and bulky exports of coffee. The volume of exports from Brazil during the first 11 months of 1924 amounted to 1,696,811 metric tons, representing a shrinkage of about 16 per cent from that of the corresponding period of 1923, whereas imports increased during the latter period by 22 per cent, amounting to 3,899,833 tons for the 11 months' period. The balance against exports increased from 1,252,365 tons in 1923 to 2,203,022 tons in 1924.

Value of Exports Larger Than That of Imports.

Values of the trade, however, give a different result. Due to the high price that has ruled for coffee, which constitutes over 75 per cent of the total exports of Brazil, the trade balance is largely in favor of exports. Compared with 1923, the f. o. b. value of exports during the 11 months under review shows an increase of 33.3 per cent, while the c. i. f. value of imports rose

by 33.5 per cent. The favorable trade balance of Brazil increased from £19,364,000 for the 1923 period to £25,736,000 for the 1924 period. This is the largest favorable trade balance that Brazil has enjoyed since 1919. Foreign trade figures of Brazil, stated in pounds sterling, show exports of 95,103,000 and imports of 68,949,000 for the full 12 months of 1924, as compared with 73,184,000 and 50,543,000, respectively, for the entire year 1923.

Amazon Exports to the United States

Consul Jack D. Hickerson, Para, Brazil

The value of exports invoiced at the Para consulate for shipment to the United States during the quarter ended March 31, was \$868,785 (conversions to dollars made at the rates prevailing when the invoices were certified), in comparison with \$794,090, during the corresponding quarter of 1924. The increase in volume of shipments was not commensurate with the gain in value due primarily to the fact that crude rubber prices this year have been approximately 40 per cent higher than last year. Rubber shipments during the quarter under review were 3,074,026 pounds, valued at \$711,387, in comparison with 2,991,928 pounds, valued at \$536,875 for the March, 1924, quarter.

Brazil Nut Shipments Decrease 50 Per Cent.

The shipments of Brazil nuts during the first quarter of 1925 were 1,220,399 pounds, valued at \$88,905, as compared with 2,805,618 pounds, valued at \$163,433 during the March, 1924, quarter. Exporters in this city are agreed that the 1925 Brazil nut crop will be at least 30 per cent smaller than the record-breaking 1924 harvest. Very few nuts are shipped to the United States until the American winter season ends; shipments made during the first three months of the year are generally erratic.

Other Commodities.

There were no shipments of cacao or tonka beans during the first quarter of 1925, whereas shipments valued at \$40,197 and \$8,816 were made during the March, 1924, quarter. Exports of balsam and deer-skins made substantial gains during the present year. Of particular interest is a shipment of 75,311 pounds of Babassu nut kernels, valued at \$3,386, which was made in March of this year. Babassu kernels are exported on a large scale from the States of Maranhão and Piauí, but the shipment alluded to is the first to be made from Para to the United States.

Trade of United States with Chilean Nitrate District

Consul Harry Campbell, Iquique

Trade and commerce in general in the Iquique district of Chile showed a marked depression during the first three months of 1925, in spite of the fact that nitrate shipments were very heavy. Business has been cautious and purchases of the hand-to-mouth variety. Toward the close of the period a feeling of greater confidence was created by a more stable political situation, although no important reaction in business occurred.

Declared exports from Iquique to the United States, the Hawaiian Islands, and Porto Rico during the March quarter of the year were valued at \$11,265,981, as against \$10,923,025 in the like period of 1924. All

but \$948 of the 1924 shipments and \$2,477 of the 1925 shipments represented nitrate of soda.

American Locomotives and Motor Busses in Use.

The most interesting sale of American products in the district is that of six locomotives for the Nitrate Railways (Ltd.), a British owned and operated company. The setting up of these locomotives has been completed and only praise for their efficiency and economy has been heard from the railway officials and employees. The locomotives are equipped with a feed water heater of American make, which, according to tests made, is effecting a fuel and water saving of 10 to 15 per cent. For six months there has been a very rapid increase

in the use of American-made motor busses on the streets of Iquique. The busses are giving excellent service in spite of unpaved streets, which are in a very bad state of repair, and, at the low rate of 20 centavos (equivalent to about 2 cents) per passenger, are attracting a great number of patrons, who ride for pleasure rather than necessity. The use of motor cars and busses is now being rapidly supplemented by motor trucks, and it is reported that several of the nitrate plants are beginning to use trucks to supplant the inefficient and uneconomical mule cart.

See also list of "Bureau's special circular available."

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS

AUSTRIA-GREECE

Commercial Attaché H. L. Groves, Vienna, April 28

Conclusion of Commercial Treaty.

A commercial treaty has been concluded between Austria and Greece based on the extension of mutual most-favored-nation treatment. Pending the introduction of the new Greek customs tariff, with its new maximum and minimum rates of duty, Austria will be granted the benefit of the conventional rates of the present tariff. In return, Greece will receive the benefit of straight most-favored-nation treatment.

It is also agreed that the Austrian Tobacco Monopoly will purchase 300,000 kilos of Greek tobacco, part of which will be purchased direct in Greece and the balance through whatever channels the monopoly may select.

The only important change in the Austrian duties on Greek goods is a reduction in the duty on currants from 90 gold crowns per 100 kilos to 15 gold crowns per 100 kilos.

While it is possible that this treaty may be put into force provisionally prior to parliamentary ratification, it appears unlikely that this will be done before mid-summer.

[The United States is on a most-favored-nation status with both of these countries.]

SPAIN-SWEDEN

Cable from Commercial Attaché Charles H. Cunningham, Madrid, May 20, and from Commercial Attaché T. O. Klath, Stockholm, May 22

Commercial Treaty Signed.

A commercial treaty was signed between Spain and Sweden on May 4, 1925, effective for one year after ratification by both countries, which practically continues the present status of commercial relations, Spain not conceding more than 20 per cent below the second column. The treaty may be terminated by three months' notice on either side.

IMPORT AND EXPORT RESTRICTIONS

COSTA RICA

La Gaceta, San Jose, March 10

Import Prohibition on Used Clothing.

The importation of used clothing into Costa Rica is prohibited by a decree effective March 19, 1925. For a period of three months after March 19 all secondhand clothing entering Costa Rica will be reexported by customs officials and post-office officials. At the end of the three-month period all such imports will be burned.

[This regulation does not apply to personal baggage, since that is otherwise inspected.]

FRANCE

Eugene A. Masuret, office of trade commissioner, Paris, April 30 and May 7

Removal of Export Restrictions on Walnut Wood.

Walnut wood of all kinds may now be exported from France without special authorization, according to a notice to exporters published in the Journal Officiel of April 26, 1925.

[Notices regarding the establishment and relaxation of the export restrictions on walnut wood appeared in COMMERCE REPORTS for June 25, 1923, and March 30, 1925.]

Removal of Export Prohibition on Condensed Milk.

Condensed milk (Tariff Nos. 35 bis and 35 ter) may now be exported from France without special authorization, according to a notice to exporters published in the Journal Officiel of May 5, 1925.

[Notices regarding the establishment and extension of the export prohibition on milk appeared in COMMERCE REPORTS for March 10 and May 5, 1924. Condensed milk is subject to the export duty of 10 per cent ad valorem established by the decree of April 7, 1924.]

GREECE

Assistant Trade Commissioner C. E. Dickerson, Jr., Athens, April 14

Relaxation of Export Restrictions on Olive Oil and Botargo.

The following changes were made in Greek export restrictions on olive oil and botargo by two acts of the Cabinet of Ministers, published in the Official Greek Gazette for April 8, 1925:

(a) It is permitted that 5,000,000 okes of olive oil be exported from the island of Mitylene on and after April 8 free of any retention.

(b) On and after April 8 botargo (salted fish roe, used as a relish) may be exported from Greece free of any retention.

[Exportation of olive oil from other parts of Greece is still subject to a retention of 30 per cent for oil of first quality, and 20 per cent for oil of second quality, as noted in COMMERCE REPORTS for September 15, 1924.]

PERU

Commercial Attaché H. Bentley Mackenzie, Lima, April 30

Exportation of Rice Prohibited.

The exportation of rice from Peru is prohibited by a decree of April 7, 1925.

[This is probably a temporary measure, although not specifically so stated in the decree.]

SALVADOR

Consul W. J. McCafferty, San Salvador, April 15

Import Prohibition on Used Bags, Coffee Seeds, Small Coffee Plants, and Oversacks.

The importation into Salvador of empty used bags, coffee for seed, and small coffee plants is prohibited by a decree of February 7, 1925. The use of oversacks (covering of flour sacks) in the importation of flour is also prohibited.

[This regulation is intended to prevent the introduction of germs, which are at present causing serious injury in coffee-producing countries.]

SPAIN

Cable from Commercial Attaché C. H. Cunningham, Madrid, May 20

Limitation of Importation of Oilseed.

Effective June 1, 1925, the importation of oilseed into Spain will be limited to 40,000 tons, with import permits hereafter granted by the director of customs, and allowing further importation this year of 23,400 tons.

ZANZIBAR PROTECTORATE

Consul Avra M. Warren, Nairobi

Regulations Governing the Exportation of Agricultural Produce.

The Agricultural Produce Export Decree, 1925, which becomes effective on July 1, 1925, prohibits the exportation from or sale in Zanzibar of any agricultural produce unless it has been officially inspected and branded, and complies generally with the provision of the decree. The first rules issued under the decree provide for the inspection and branding and prescribes the standard of cloves intended for export from the protectorate.

GENERAL TARIFF CHANGES

GERMANY

Cable from Assistant Commercial Attaché D. P. Miller, Berlin, May 21

Revised German Tariff Schedule Introduced.

A preliminary tariff schedule embodying new maximum rates of import duty was laid before the Reichsrat by the German Government on May 19 as part of a provisional tariff revision which it is proposed to enact, pending further treaty negotiations. The complete schedule is to be published within the week.

The German Government emphasizes the possibility of obtaining reductions from these rates on some items by the process of tariff bargaining; at the same time the new rates are claimed to provide a remedy for the unfavorable German trade balance by affording tariff protection for agriculture and industry. It is expected that the bill will be passed by the Reichsrat and then by the Reichstag, with possible minor concessions.

Included in the increased rates proposed are new duties on automotive vehicles, textiles, foodstuffs, chemical colors, and prepared medicines. In connection with these, as detailed below, it should be remembered that the German Government has previously announced that upon putting this provisional tariff revision into effect, it would at the same time abolish the remaining import license restrictions, some of which, notably those on automotive vehicles, have virtually been import prohibitions.

Automotive duties to increase by six-month periods.—The proposed rates on automotive vehicles are to begin at levels considerably higher than the pre-war rates and higher than the existing rates, but not quite so high as the duties proposed by the German automobile manufacturers. They are, moreover, to be decreased at successive six-month intervals, beginning with July 1, 1926. The pre-war, present, and proposed rates are as follows:

Pre-war and present rates (gold marks per 100 kilos)

	General	Pre-war (conventional)	Present
Automotive vehicles weighing each:			
500-1,000 kilos.....	40	25	160
Over 1,000 kilos.....	20	15	80

Proposed rates (gold marks per 100 kilos)

	Automobiles weighing each		
	Less than 2,200 kilos	2,200 to 3,200 kilos	Over 3,200 kilos
At first.....	250	175	150
Beginning—			
July 1, 1926.....	215	160	135
Jan. 1, 1927.....	200	130	120
July 1, 1927.....	150	100	90
Jan. 1, 1928.....	100	75	70
July 1, 1928.....	75	40	30

The rates on motor cycles and tractors are also diminished by the same semiannual changes, the beginning and the final rates proposed being as follows:

	Beginning rate	Rate after July 1, 1928
	Gold marks per 100 kilos	Gold marks per 100 kilos
Motor cycles.....	350	100
Tractors weighing each—		
Below 2,500 kilos.....	80	25
Over 2,500 kilos.....	60	30

Increases on raw silk and unmanufactured artificial silk.—The following significant increases on raw silk and on unmanufactured silk are also included in the proposals:

Tariff item		Present rate	Proposed rate
393	Raw silk combined with other textile material:	Gold marks per 100 kilos	Gold marks per 100 kilos
	Not dyed.....	36	36
	Dyed.....	36	136
394	Rayon (artificial silk):		
	Not twisted, or only single twisted—		
	Not dyed.....	30	100
	Dyed.....	60	140
395	Double twisted—		
	Not dyed.....	90	160
	Dyed.....	90	220

Duty on raw wool proposed.—An import duty of 3.50 marks per 100 kilos is proposed for raw wool, hitherto imported free of duty.

Certain chemical colors to be made dutiable.—New rates of duty are proposed for various mineral colors, exclusive of coal-tar dyestuffs.

Increased duty on prepared medicaments proposed.—The duty on prepared medicaments (exclusive of patent medicines), now 80 gold marks per 100 kilos, is proposed to be increased to 300 gold marks per 100 kilos.

Reimposition of certain agricultural duties proposed.—The proposal for protection of German agriculture by the reimposition of import duties upon a number of foodstuffs on which the duty has been remitted since 1914, has been incorporated in this bill. On frozen or tinned meat, bacon, potatoes, and certain grains one set of duties is proposed to become effective next August, and higher rates a year later, as follows:

	Proposed rates for—	
	August, 1925	August, 1926
	Gold marks per 100 kilos	Gold marks per 100 kilos
Frozen meat.....	20.00	45.00
Tinned meat.....	20.00	75.00
Bacon.....	24.00	36.00
Potatoes.....	0.25	0.50
Rye.....	3.00	5.00
Wheat and spelt.....	3.50	5.50
Barley.....	2.00	2.30
Oats.....	3.00	5.00

NOTE.—With the exception of potatoes, the above rates proposed for August, 1926, equal the pre-war conventional rates.

A rate of 15 gold marks per 100 kilos is proposed for fresh apples and pears, now entering free of duty, and of 12 marks for oranges and lemons. Lemons are now free of duty and oranges subject to a rate of 3.25 gold marks per 100 kilos, but so long as the present modus vivendi between Germany and Spain remains in effect, or if the permanent agreement is ratified, most-favored-nation countries, including the United States, will continue to enjoy the exemption from import duty for lemons and the reduced rate of 2.50 marks for oranges conventionalized in that agreement.

Reimposition of the rate of 30 gold marks per 100 kilos on margarine, which is at present waived, is also proposed.

LITHUANIA

Commercial Attaché C. J. Mayer, Riga, April 20

Revised Customs Tariff.

The revised customs tariff became effective in Lithuania on April 3, 1925. Certain of the rates remain

unchanged, while there are many instances where the item has been considerably subdivided with varying rates of duty on different products, formerly classed under one main heading.

[So far, this tariff has only been published in the Lithuanian language, which, for want of dictionaries in the language, makes the determination of the classification of many products very difficult. It is expected that this tariff will soon be published in English or German, and the Division of Foreign Tariffs will then be in position to give complete information in regard to the present duties on all products imported into Lithuania. In the meantime, information can be obtained upon request for such items as are specified in the same nomenclature as that appearing in the tariff of 1924.]

TARIFF CHANGES ON SPECIFIC ARTICLES

ARABIA

Vice Consul J. Loder Park, Aden, April 21

Reduction of Customs Duties at Hodeidah.

The Imam of Yemen has decreed a reduction in the rates of customs duties levied at Hodeidah, Arabia. Import duties are reduced from 25 per cent to 2.5 per cent ad valorem and export duties from 20 per cent to 2 per cent ad valorem.

CANADA

Appraisers' Bulletin No. 3050, Department of Customs and Excise, Ottawa, May 9

Specified Metal Products Now Dutiable.

The following brass and copper products are now manufactured in Canada and are not, therefore, admitted duty free under the provision granting free entry to goods not manufactured in Canada:

Copper rods up to and including 2½ inches in diameter.

Copper in sheets up to 60 inches wide and from 0.0135 inch to 1 inch thick.

Copper in rolls three thirty-seconds inch to 20 inches wide and 0.005 inch to 0.125 inch thick.

Copper wire.

Brass, bronze, gilding, and nickel silver in sheets, strips, plates, rolls, and circle, three thirty-seconds inch to 48 inches wide and 0.005 inch to 0.625 inch thick.

Rods—brass and bronze alloys in round, hexagonal, square, rectangular, and special shapes—0.09 inch diameter to 3½ inches diameter.

Seamless brass and copper tubing (not including condenser tubes) up to and including 1 inch outside diameter.

Tobin bronze rods, known as stud and bolt stock, sizes up to 1½ inches to 16 feet long; sizes over 1½ inches to 2½ inches, inclusive, up to 10 feet long; plain extruded rods over 2½ inches to 3½ inches, inclusive, up to 6 feet long.

Tobin bronze welding rods (usual sizes one-eighth inch up to three-eighths inch diameter).

Under the same ruling condenser tubes and tobin bronze rods in what is known as the piston-rod finish (such rods are turned in a lathe true to size and used for piston rods and shafting such as to drive a yacht propeller, etc.), are not at present manufactured in Canada and are therefore declared free of duty.

The deputy minister of customs is authorized by the law for the protection of Canadian manufacturers to declare as dutiable, articles previously admitted free as goods not manufactured in Canada, when Canadian industries can supply similar products.

[Information in regard to the duties now applicable to the above products may be obtained from the Division of Foreign Tariffs upon specific request.]

GUATEMALA

Consul General Phillip Holland, Guatemala City, April 30

Reduction of Import Duty on Motor Trucks.

The import duty on motor trucks of one and two tons' capacity has been reduced from 10 centavos to 5 centavos per gross kilo by a Guatemalan decree of April 3, published in El Guatemalteco for April 24, 1925.

[The duty on motor trucks is payable one-half in American currency and one-half in Guatemalan currency.]

IRAQ (MESOPOTAMIA)

The Board of Trade Journal, April 23 and April 30

Flaxseed and Flax Machinery, Wheat, and Barley Temporarily Exempted from Import Duty.

Imports into Iraq of flaxseed and flax machinery are exempted from the payment of import duty for a period of five years under a law of February 2, 1925, and all wheat and barley and its flour are exempted from the payment of import duty until July 15, 1925, under a law of February 5, 1925.

ITALY

Commercial Attaché H. C. MacLean, Rome, April 25

Lower Customs Classification of Rolled Oats.

The Italian customs authorities have decided that rolled oats prepared by a certain American firm shall be classed under item 70-D of the Italian customs tariff, with a duty of 1.35 gold lire per 100 kilos when shipped in bulk, instead of under item 49, with a duty of 104 gold lire per 100 kilos. Heretofore this product shipped in bulk has been classed under item 49, with the higher duty along with package goods of the same product.

It is probable that the same classification will be given to other oat products similar to those manufactured by the particular company when shipped in bulk,

but no definite statement has so far been made in this regard. This will be determined by the classification given such shipments when next cleared through the customs. It should be understood distinctly that the lower rate of duty applies when goods are shipped in bulk, and not on those in package form.

PERU

Commercial Attaché H. Bentley MacKenzie, Lima, April 30

Reduction of Import Duty on Dextrin for Industrial Use.

By a decree of April 8, 1925, dextrin mixed with starch of fecula, potato starch, or starch of other cereals, for industrial use is made subject to rule 42a of the Peruvian tariff, which provides a rate of 10 per cent ad valorem for such goods when imported in quantities greater than 500 kilos. The rate for lesser quantities continues at 0.15 Peruvian sol per net kilo.

SWEDEN

Cable from Commercial Attaché T. O. Klath, Stockholm, May 22

Reduction of Import Duty on Raisins.

The Swedish import duty on (ex 110) raisins has been reduced from 0.50 to 0.15 crown per kilo.

CUSTOMS REGULATIONS

SPAIN

Cable from Commercial Attaché Charles H. Cunningham, Madrid, May 20

National Trade-Mark Required on Exportations of Olive Oil.

A Spanish royal decree signed May 18, 1925, provides for the exportation of olive oil without payment of export duty only when the containers carry a registered national trade-mark, thus avoiding the sale of Spanish oil as though of other origin.

[See COMMERCE REPORTS of February 2, 1925, in regard to the removal of the export duty on olive oil from Spain.]

COMMERCIAL INTELLIGENCE

A. S. Hillyer, Chief, Commercial Intelligence Division

TRADE LISTS AVAILABLE

The Commercial Intelligence Division has recently compiled the following trade lists, of which mimeographed copies may be obtained from the Bureau of Foreign and Domestic Commerce or its district or co-operative offices by referring to titles and file numbers:

ELECTRICAL AND RADIO SUPPLIES

Importers and dealers:	
Canary Islands	EUR-19000.
Costa Rica (revision)	LA-23005-B.
Czechoslovakia	EUR-18022.
England (revision)	BE-2026-A.
Paraguay (revision)	LA-19005-B.
Philippine Islands (revision)	FE-25016-A.
Portugal	EUR-10060.

Importers and dealers—Continued

Spain (revision)	EUR-11027-B.
Yugoslavia	NE-3021.

AUTOMOTIVE PRODUCTS

Importers and dealers:	
Belgium (revision)	EUR-1014-C.
Bulgaria	NE-2018.
Haiti (revision)	LA-33002-C.
Honduras (revision)	LA-25002-D.
Netherlands East Indies (revision)	FE-19001-E.
Panama (revision)	LA-28008-E.
Uruguay (revision)	LA-21002-D.

RADIO SUPPLIES

Importers and dealers:	
England	BE-2060.
Spain	EUR-11067.

BUREAU'S SPECIAL CIRCULARS AVAILABLE

Numerous mimeographed circulars are issued by the bureau in addition to its various regular and special publications. These circulars are distributed to those interested, including persons and firms whose names are on the Exporters' Index, and copies may be obtained from the bureau or its district offices. The 75 circulars listed below were issued by 20 different divisions during the week ended May 25.

AGRICULTURAL IMPLEMENTS DIVISION

- No. E-42. Market for Internal-Combustion Engines in the Society Islands.
No. E-46. Market for Internal-Combustion Engines in Malta.

AUTOMOTIVE DIVISION

- No. 42. Automotive Foreign Market News Bulletin.
No. 554. Change in the Czechoslovak Luxury Tax on Automobiles.

CHEMICAL DIVISION

- No. 62-B. Foreign Coal Tar Products Market News.
No. 62-C. World Notes on Drugs, Medicinals, and Toilet Preparations.
No. 62-D. World Notes on Paints, Varnishes, and Pigments.

COAL DIVISION

- No. 326. Coal Specifications for the Egyptian State Railways.
No. 339. Prices Reduced on Ruhr Coal.
No. 342. British Coal Situation (Weekly Radiogram).
No. 346. British Coal Situation (Weekly Radiogram).

EUROPEAN DIVISION

- No. 41. Economic and Trade Developments.

FINANCE AND INVESTMENT DIVISION

- No. 5. "Latin American Financial Notes."
No. 121. Dollar Exchange Movement in Latin America in February, 1925.

FOODSTUFFS DIVISION

- No. 72. Vegetable Oil Industry in Shanghai District.
Foodstuffs 'Round the World:
Canned and Dried Fruits.
Grain and Grain Products.
Confectionery Foreign Trade News.
World Dairy and Poultry News.
Foreign Notes on Meats, Fats, Oils, and Livestock.
Fishery News.

HIDE AND LEATHER DIVISION

- No. 463. Method of Tanning Goatskins with Hair in the Kalgan Consular District, China.

IRON AND STEEL DIVISION

- No. 366. German Competition in Locks and Padlocks.

LATIN AMERICAN DIVISION

- No. 53. "Latin America at a Glance."
No. 166. Canvassing the West Indian Market.

LUMBER DIVISION

- Reports on Wood-Using Industries of United States.
Official Lumber Publications.
No. 377. United States Exports of Railroad Ties, 1924.
No. 383. Cooperage Trade of Foreign Countries, 1923.
No. 440. British Labor Unions and Steel Houses.
No. 444. Siberian Lumber Shipments to the United Kingdom.
No. 450. The Netherlands Stave Market.
No. 476. Sample copies of the weekly bulletins published by the geographical divisions of the Bureau of Foreign and Domestic Commerce.

MINERALS DIVISION

- No. 38. Foreign Trade Notes.
No. 191C. Czechoslovak Market for Paraffin Wax and Candles.

- No. 199. Unpublished Statistics of Greek Petroleum Imports, January, 1925.

- No. 202. Canadian Market for Brick and Tiles.

PAPER DIVISION

- No. 37. "Side Runs" of the Paper Trade—Weekly News Letter.
No. 71. Paper Production in Japan during February, 1925.

RUBBER DIVISION

- No. 881. Retail Tire Prices Increase—United Kingdom.
No. 882. House Bill No. 304—Porto Rico.
No. 888. Tire Exporters' Weekly News Letter.
No. 885. German Tire Exports first quarter, 1925.
No. 887. Retail Tire Prices in Sweden.
No. 888. Export Trade Notes on Rubber Cloth and Clothing.
No. 889. Comparative Tire Exports from United States, Canada, United Kingdom, France, and Germany during the first quarter of 1925.
No. 890. April Imports of Golf Balls.
No. 891. April Imports of Rubber Tires.

SHOE AND LEATHER DIVISION

- No. 485. Canadian Market for Harness and Saddlery.
No. 486. United States Imports of Leather Gloves.
No. 487. Increased Shipments of Boots and Shoes from the United States to Noncontiguous Territories.
No. 488. United Kingdom Increases Export Trade in Leather Boots and Shoes.
No. 490. Italy's Imports of Leather Footwear in 1924.
No. 492. Leather Working Industries in Egypt.

SPECIALTIES DIVISION

- No. 122. Planos in Glasgow and Edinburgh.

STATISTICAL RESEARCH DIVISION

- Foreign Exchange Rates—1924-25.

STATISTICAL PRESS NOTICES

- Domestic Exports of Cotton, Cotton Cloths, Yarn, Thread, and Hosiery.
Imports of Wheat from Canada into the Principal Northern Border Ports during the week ending May 16, 1925.
Domestic Exports of Meats and Fats.
Imports of Jute, Flax, Hemp, Manila, Sisal, and Kapok.
Increases in April Overseas Bituminous Coal Exports.
Exports of Grains, Grain Products, Feeds, and Hops.
Imports of Cotton and Manufactures.
Domestic Exports of Wool, Silk, and Artificial Silk (Rayon).
Imports of Wool and Manufactures.
Imports of Silk and Artificial Silk (Rayon).
Increase in March Bituminous Coal Exports.
Imports of Raw Wool at Boston, New York, and Philadelphia during the week ending May 16, 1925.
Exports of Pork Products from Principal Ports of the United States during the week ending May 16, 1925.

TEXTILE DIVISION

- No. 56-C. Weekly Brittle Report.
No. 81-A. World's Wool Digest.

TRANSPORTATION DIVISION

- No. 25. Foreign Shipping News.
No. 25. Foreign Railway News.

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The Department of Commerce announces the following further figures covering business movements in April:

Industrial Data.

Further business statistics for April show increases over March in the consumption of cotton, the activity of cotton spindles, the production of anthracite coal, silver, and western pine lumber, shipments of cement and the award of building contracts. Production of bituminous coal, beehive, and by-product coke and maple flooring, and bookings of steel castings declined.

Financial and Distribution Data.

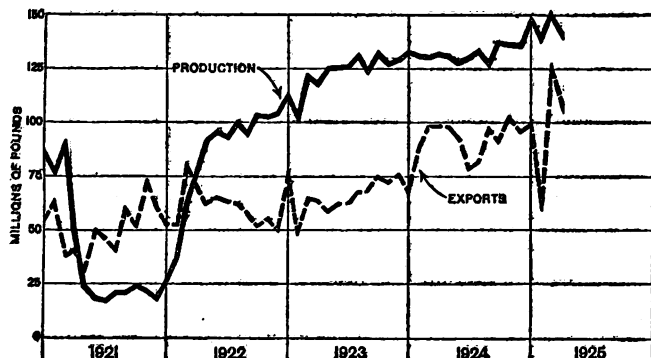

Postal savings remained unchanged from March, retail food prices showed a slight increase over the previous month, while farm prices and wholesale food prices showed decreases. Life insurance sales increased slightly, while check payments declined from the previous month.

Comparison with Last Year.

Practically all these business indicators showed improvement over a year ago, the smaller imports of gold and production of beehive coke being the principal exceptions.

COPPER PRODUCTION AND EXPORTS

(April, 1925, last month shown)

Data from Survey of Current Business.

The following table gives such data from the June issue (No. 46) of the Survey of Current Business as have been received up to May 21, 1925.

All items given in the following table correspond with similar information in the issue of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the Survey, where specific descriptions of the data and their sources are given. In addition to figures given from Government sources, there are also incorporated for completeness of service the figures from other sources generally accepted by the trades, the authority and responsibility for which are noted in the monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for \$1.50 per year.

FOREIGN TRADE OPPORTUNITIES

Reserved information may be obtained from the Bureau and its district and cooperative offices by firms and individuals on the Exporters' Index upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: *Reported by American consular officers; †Reported by commercial attachés and trade commissioners; ‡Direct inquiries received by the Bureau. American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

Commodities	No.	City and country	Purchase and agency	Commodities	No.	City and country	Purchase and agency
Agricultural implements:				Foodstuffs—Continued.			
Agricultural machinery, particularly milking machines.	*15288	Hamburg, Germany	Purchase and agency.	Meats, canned; tripes, and casings.	†15224f	Madrid, Spain	Agency.

PUBLICATIONS OF THE DEPARTMENT OF COMMERCE

Publications issued by the Department of Commerce during the last month that have the most direct interest to readers of **COMMERCE REPORTS** are listed by bureaus below. Where prices are given copies should be purchased from the Superintendent of Documents, Government Printing Office; in other cases copies may be obtained from the issuing bureau. A complete list of all publications available for distribution will be mailed on request made to the Division of Publications, Department of Commerce, Washington.

BUREAU OF FOREIGN AND DOMESTIC COMMERCE

Monthly Summary of Foreign Commerce of the United States, March, 1925. Parts I and II. Part I contains statistics of exports of domestic merchandise and imports by articles for March, 1924 and 1925, and for the nine months ended March, 1924 and 1925. Part II contains summaries of export and import trade; monthly average import and export prices; statistics of trade in cotton and wool; tonnage of vessels entered and cleared; commerce with Alaska, Porto Rico, and Hawaii. Price for single number, Part I, 10 cents; Part II, 5 cents. Annual subscription, including Parts I and II, \$1.25.

Index to Commerce Reports, for Nos. 1 to 13, Volume 1 (January to March), 1925.

Trade in Philippine Copra and Coconut Oil, by E. D. Gotha-waite. Trade Promotion Series No. 11; 120 pages. The report covers the growth of the copra and coconut-oil industry since 1898. Grading of copra, primary movement of the output, its direction and volume, methods employed in exporting, and coconut-oil milling and exportation are discussed. Illustrated. Price, 20 cents.

The Merchandise Warehouse in Distribution, by A. Lane Clicher. Trade Promotion Series No. 15; 33 pages. In this pamphlet is presented a study of the services and best practices in present-day merchant-warehouse distribution. The report emphasizes the advantages offered through saving in transportation charges by shipping goods in carload shipments to central distributing points for less-than-carload reshipment. Price, 10 cents.

Balance of International Payments of the United States in 1924, by Rufus S. Tucker, with foreword by Secretary Hoover. Trade Information Bulletin No. 340; 28 pages. This is the third annual study of the balance of international payments of the United States. In this, as in the preceding studies, an analysis is made of those items which make up the "invisible items" of trade, as distinguished from the movement of actual commodities. Price, 10 cents.

Paints, Pigments, and Varnishes in the West Indies, prepared by J. W. Wizeman. Trade Information Bulletin No. 341; 43 pages. The West Indies offer an excellent market for imported paints and varnishes, inasmuch as there is no manufacture of these goods in the islands. The extent to which such materials are used and the preferences of the various markets furnish the basis of this bulletin. Price, 10 cents.

Caribbean Markets for American Goods: II. Colombia, by W. Duval Brown. Trade Information Bulletin No. 342; 20 pages. This bulletin, the second of a series covering Caribbean markets, deals with our exports to Colombia, foreign competition in that market, the basis of the market, routing of commercial travelers, and information of a general character that should be of interest to one exporting to Colombia. Price, 10 cents.

Same. III. Cuba, by M. J. Meehan. Trade Information Bulletin No. 343; 19 pages. The third part of the study of Caribbean markets presents conditions in Cuba, which represents a well-developed field of endeavor for the American exporter. Matters given special attention in the report are kinds and amounts of goods we sell in Cuba, purchasing seasons, foreign competition, advertising, and methods of canvassing the market. Price, 10 cents.

Trading Under the Laws of Cuba, by Guerra Everett. Trade Information Bulletin No. 343; 69 pages. The legal aspects of trade with Cuba are of particular significance to the American exporter, owing to the fact that Cuba holds first place in our trade with Latin-American countries. A section of the report deals with the law relating to patents, trade-marks, and other modes of protecting industrial property. Price, 10 cents.

World Trade in Toilet Preparations: I. Western Europe. Trade Information Bulletin No. 344; 70 pages. The growth of the domestic industry in the manufacture of toilet preparations has put the United States on the basis of an exporting nation in these lines. This bulletin is the first of a series prepared to assist the industry to find a wider market for these preparations. Price, 10 cents.

United States Trade with Latin America in 1924, by J. R. McKey and H. S. Glusta. Trade Information Bulletin No. 345; 48 pages. This is the sixth annual report on United States trade with Latin America prepared by the Bureau of Foreign and Domestic Commerce. Detailed statistics are given showing trade in specific commodities and the leading countries which participate in this trade. Price, 10 cents.

New Polish Law of Negotiable Instruments, by Mitchell B. Carroll. Trade Information Bulletin No. 347; 26 pages. This study has been prepared in response to requests for information concerning the new Polish laws on bills of exchange, promissory notes, and checks. This law became effective January 1, 1925. The bulletin should be of practical use to business men and to lawyers. Price, 10 cents.

India as a Market for American Goods, prepared by Emmett A. Chapman. Trade Information Bulletin No. 348; 49 pages. Although the bulk of its trade is with Great Britain, India is becoming each year more important as a market for United States goods. Some of the outstanding factors which affect marketing goods in India are discussed in this report. Price, 10 cents.

Seasonal Aspects of Wheat Exporting, by Theo. D. Hammatt. Trade Information Bulletin No. 350; 10 pages. Earlier bulletins on the exporting of wheat have considered the problem from the standpoint of transportation, merchandising methods, finance, and competitive factors. This report considers the movement of the wheat crop from the various wheat-producing countries at different periods of the year, and the effect of such movement upon the world market. Price, 10 cents.

BUREAU OF STANDARDS

Minimum Live Loads Allowable for Use in Design of Buildings, report of the building code committee, November, 1924. Elimination of Waste Series; 38 pages. Price, 10 cents.

Fire Resistance of Concrete Columns, by W. A. Hull and S. H. Ingberg. Technologic Paper No. 272; 74 pages. The report is the result of practical tests which form part of a general program of investigation to provide information of use in the elimination of economic waste. Illustrated. Price, 25 cents.

Malleability and Metallography of Nickel, by P. D. Merien and R. G. Waltenberg. Technologic Paper No. 281; 28 pages. Illustrated. Price, 10 cents.

Technology of Cotton Machinery: Part I. Calculations on Pickers, by A. A. Mercier. Technologic Paper No. 282; 30 pages. Illustrated. Price, 10 cents.

Effect of Tire Resistance on Fuel Consumption, by W. J. Holt and P. L. Wormeley. Technologic paper No. 283; 11 pages. Illustrated. Price, 5 cents.

A Study of the Seasonal Variation of Radio-Frequency Phase Difference of Laminated Phenolic Insulating Materials, by J. J. Preston and E. L. Hall. Technologic Paper No. 284; 10 pages. Price, 5 cents.

An Improved Type of Wave Meter Resonance Indicator, by Morris S. Strock. Scientific Paper No. 502; 7 pages. Illustrated. Price, 5 cents.

(Continued on p. 568)

PUBLICATIONS OF THE DEPARTMENT OF COMMERCE

(Continued from p. 567)

A Flow Calorimeter for Specific Heats of Gases, by Nathan S. Osborne, H. F. Stimson, and T. S. Sligh. Scientific Paper No. 503; 33 pages. Illustrated. Price, 20 cents.

A Method of Studying Electrode Potentials and Polarization, by H. D. Holler. Scientific Paper No. 504; 14 pages. Illustrated. Price, 15 cents.

Critical Potentials Associated with Excitation of Alkali Spark Spectra, by F. L. Mohler. Scientific Paper No. 505; 25 pages. Illustrated. Price, 10 cents.

Inks, Typewriter Ribbons, and Carbon Paper. Second edition. This circular contains a discussion of the composition and methods of testing inks, typewriter ribbons, and carbon paper. Circular No. 95; 31 pages. Bibliography. Price, 10 cents.

United States Government Specifications:

Rubber-lined fire hose (couplings and gaskets). Circular No. 114. Second edition, April 17, 1925.

Pneumatic tires, solid tires, and inner tubes. Circular No. 115. Second edition, March 30, 1925.

Vitrified chinaware. Circular No. 202.

Hydrated lime for structural purposes. Circular No. 204.

Calcined gypsum. Circular No. 206.

Wire rope. Circular No. 208.

Oil suction and discharge hose. Circular No. 209.

Lace leather. Circular No. 213.

Medium and light rust-preventive compound. Circular No. 214.

Outside white titanium-zinc paint, semipaste and ready-mixed. Circular No. 215.

Putty. Circular No. 216.

The above are promulgated by the Federal Specifications Board for use in the purchase of materials for the various Government departments and agencies. Price, 5 cents each, except Circular No. 208 (wire rope), which is 15 cents.

BUREAU OF THE CENSUS

Marriage and Divorce, 1923. The report contains 58 pages of statistics and explanatory text relating to divorce in 1923 and certain other years given for comparison. There are 25 detailed tables. Price, 10 cents.

Paupers in Almshouses, 1923. The report contains 76 pages of statistics with explanatory text. The statistical material is given in 82 tables showing various phases of the study. Price, 10 cents.

Crossties and Poles Purchased and Preserved. This 11-page report, which is a part of the census of forest products for 1923, presents statistics of purchases of crossties by steam and electric railroads, and of poles by steam and electric railroads, electric light and power companies, and commercial telephone and telegraph companies. Price, 5 cents.

Pulp-wood Consumption and Wood-pulp Production. This bulletin also comprises a part of the census of forest products for 1923. Statistics cover pulp-wood consumption, wood-pulp production, and domestic production and foreign trade in paper. The report contains 16 pages, with 15 tables. Price, 5 cents.

Central Electric Light and Power Stations, 1922. The statistics are part of the quinquennial census of the electrical industries. The report covers 174 pages, with 93 tables. Price, 25 cents.

Mortality Statistics, 1922. This is the twenty-third compilation of mortality statistics prepared by the Bureau of the Census. The report contains 656 quarto pages, with 23 tables, 1 map, 6 diagrams, and index. Price, \$1.30.

LIGHTHOUSE SERVICE

Buoy List: Great Lakes, United States, 1925. (Corrected to March 15.) The list describes aids to navigation in the tenth, eleventh, and twelfth lighthouse districts, and Canadian lights. Price, 30 cents.

Same: Fifth District, United States. (Corrected to April 1.) The district embraces Cape Henlopen, to Cape Lookout, including Chesapeake Bay and North Carolina Sounds. Price, 20 cents.

Light List: Great Lakes, United States and Canada. (Corrected to March 1.) Price, 30 cents.

COAST AND GEODETIC SURVEY

The United States Coast and Geodetic Survey: Description of Its Work, Methods, and Organization. Special Publication No. 23. This pamphlet of 126 pages describes very adequately the work of the Coast and Geodetic Survey. Various phases of its activities are illustrated by means of maps, diagrams, and half tones.

Triangulation in Massachusetts, by O. P. Sutherland. Special Publication No. 76; 283 pages of text and 22 charts. Price, 80 cents.

Catalogue of U. S. Coast and Geodetic Survey Charts, Coast Pilots, Tide Tables, and Current Tables, May 1, 1925. Serial No. 307.

BUREAU OF NAVIGATION

American Documented Seagoing Merchant Vessels of 500 Gross Tons and Over, May 1, 1925. Serial No. 90. Price, 10 cents a copy; yearly subscription, 75 cents.

Radio Service Bulletin, May 1, 1925. Serial No. 97. Contains list of new stations, changes in preceding lists, and information concerning radio regulations, current publications, and other matters. Single copy, 5 cents; annual subscription, 25 cents.

NOTE.—All orders for radio publication listed by the Bureau of Navigation and all inquiries concerning these publications should be addressed to the Superintendent of Documents, Government Printing Office, Washington, D. C. Do not make remittances to the Bureau of Navigation or to radio inspectors.

BUREAU OF FISHERIES

Alaska Fishery and Fur-Seal Industries in 1923, by Ward T. Bower. Document No. 973; 94 pages. Illustrated. Price, 20 cents.

Propagation and Distribution of Food Fishes, by Glen O. Leach. Document No. 978; 80 pages. Price, 15 cents.

Survey of Current Business is a monthly supplement to Commerce Reports and is published in cooperation with the Bureau of the Census and the Bureau of Standards. The subscription price of the Survey of Current Business is \$1.50 a year; foreign subscriptions, \$2.25.

Survey of current business.....**INVESTIGATION BY THE UNITED STATES TARIFF COMMISSION****PUBLIC NOTICE OF INVESTIGATIONS BY THE UNITED STATES TARIFF COMMISSION UNDER THE PROVISIONS OF SECTION 315 OF TITLE III OF THE TARIFF ACT OF 1922**

Investigation No. 44 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

BOBWHITE QUAIL

The United States Tariff Commission, on this 19th day of May, 1925, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922, and under the powers granted by law, and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the following articles included within the class or kind of articles provided for in paragraph 711 of Title I of said tariff act, namely: Live bobwhite quail, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, That all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the

office of the commission in Washington, D. C., or at such other place or places as the commission may designate on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in COMMERCE REPORTS, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, That public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said COMMERCE REPORTS.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 19th day of May, 1925.

JOHN F. BETHUNE, Secretary.

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

JULIUS KLEIN, Director Bureau of Foreign and Domestic Commerce

Editorial Board: Griffith Evans, Grosvenor M. Jones, E. Dana Durand, Eugene S. Gregg, and Archibald J. Wolfe

The Crude-Rubber Situation

[Summary of foreword by Secretary Herbert Hoover to the report recently issued by the Department of Commerce on the Plantation Rubber Industry in the Middle East]

Our rubber imports in 1923 were valued at \$185,000,000, or about 72 per cent of the world's production. Crude rubber ranked fourth among our imports, only raw silk, sugar, and coffee exceeding it in value. Three great industries are dependent upon the raw material—rubber manufacturing, automotive, and oil (through its dependence upon the automotive industry). The aggregate capital invested in these industries exceeds \$13,000,000,000.

In March, 1923, the Department of Commerce was instructed by Congress "to investigate and report on the possibilities of developing the rubber-plantation industry in the Philippines and Latin America"; under the same appropriation it was instructed to "investigate the conditions of production and marketing of other essential raw materials for American industries."

These investigations had become peculiarly necessary because of the very general tendency abroad to form combinations for the control of production and prices of many materials which we do not ourselves produce and for which we are dependent upon imports. The investigations so far conducted have disclosed such combinations in sisal (for binder twine), potash, nitrates, coffee, tannins, and other materials.

These foreign combinations require careful consideration, to the end that we may find means to stimulate competitive production as well as to provide measures by which our consumers may set up such counteraction as will protect them.

Since 1905 a constantly diminishing share of the world's demand has been met by wild rubber, until in 1923 more than 93 per cent of the total supplies came from planted areas in the Middle East. Of the total acreage of plantation rubber Great Britain controls 69 per cent through domicile in British colonies, and a total of 75 per cent through domicile in British territory and British ownership of plantations in the Netherlands Indies. Opposite this centralized production in the hands of one nation is centralized consumption, because the United States, on account of the enormous number of motor cars in use, regularly consumes more than 70 per cent of all the rubber produced.

A restrictive law upon exports was applied in the British possessions, effective November 1, 1922, known

as the Stevenson restriction act. It was one of the actions which called the attention of the American public to their dependence upon one distinct region, mainly under control of one government, for a commodity so essential to our national welfare. We should consider the possible effect upon ourselves.

The possible result of such action in restraint of production and distribution is of twofold order: First, its effect upon price; second, its effect upon present and future exports and therefore upon our future supplies.

It requires from four to six years for rubber trees to come into bearing. The preparation and planting of new rubber plantations in the Middle East has been greatly retarded by the unfavorable market conditions. Although there is some planting antedating the restrictions which is yet to come into bearing, the stifling of planting by unprofitable years bids fair to result in a world shortage after a few years. A careful investigation into the future world demand for rubber, undertaken by the Rubber Association of America with the cooperation of the Department of Commerce, indicates that this shortage is likely to be felt by 1928 or 1930, and may lay a heavy burden on the American consumer.

The producing industries of the world would be much better off in the long run if combinations in restraint of international trade were abandoned on all sides. In general, their effect is to hoist both the producing and the consuming industries upon artificial bases, ultimately resulting in economic difficulty to producers as well as consumers. The stifling of consumption, stimulation of rival production, the use of substitutes, and the paralyzing of industry generally are their ultimate results.

[The above report (Trade Promotion Series No. 2) is the second of a series of publications to be issued on crude rubber; the first, entitled "Marketing of Plantation Rubber," was issued as Trade Information Bulletin No. 180 on January 24, 1924. Publications dealing with the possibilities of plantation rubber production in other tropical regions are in process of compilation and will be forthcoming at an early date.]

The geographical region dealt with in the present reports includes Ceylon, India, Burma, Malaya, the Netherlands Indies, Indo-China, British North Borneo, Sarawak, Brunel, Siam, and the Pacific Islands. The economic factors surrounding the industry in this territory are discussed, with special emphasis on cost of production and the extent to which the future potential output from the present planted area can be depended upon to meet the world's increasing demand.]

World's Commercial News in Brief

The following are brief items compiled from data cabled by Government representatives stationed abroad, from official foreign publications, and from other sources. Countries included in the "Monthly Cable Reviews" are omitted from this section.

European Economic and Trade Developments

For reasons of Bureau administration, this heading includes also Canada

AUSTRIA

Removal of restrictions on dealings in foreign exchange and reduction of the official discount rate appear to have had a favorable effect on the position of the national bank and on foreign trade. Commercial discounts are being negotiated below the official bank rate, and the discount portfolio of the national bank is at its lowest point in nearly two years. In the textile mills of lower Austria and Styria, following a demand for an increase of 25 per cent in wages, employers have locked out some 15,000 workers. A compromise is expected, with a moderate increase of wages. Commissioner General Zimmerman, in his twenty-eighth report, states that considerable progress has been made in general reconstruction, the budget has been voted within the limit set by the agreement, free dealing in foreign exchange has been allowed, a reduction has been made in commercial profits, and the law providing for further dismissals of Government employees has been passed.

BELGIUM

The metallurgical and coal industries have received a stimulus through the appreciation of pound sterling, which gives Belgian products an increased price advantage in competitive markets. These industries have been for some time depressed. The recurrence of labor disputes at Charleroi is causing some uncertainty in the construction plants there.

CANADA

The purchase of the Union Bank of Canada by the Royal Bank of Canada was announced during the week. The merger, which will probably be completed in August, is the fourth to occur in the last year and a half and will reduce the number of chartered banks in the Dominion from 12 to 11. The total resources of the Royal Bank will be increased to about \$720,000,000, and 327 branches will be acquired with the Union Bank. The Prairie Provinces report that all the wheat seeding and 75 per cent of the general seeding have been completed. The season is two weeks ahead of 1924, and the outlook is generally good. Despite large Russian orders, it is estimated that Canada's flour exports this year will be some 10 per cent smaller than in 1924. Parliament has been asked to authorize a Dominion loan of \$164,000,000 for refunding and general purposes. Most indexes show a trade recession, compared with a year ago; but business conditions are generally steady. Continued improvement is evident in the industrial situation, although many factories are working on part time. Textile mills and steel and metal working industries are busy. Boots and shoes are quiet, and manufacturers are taking precautions against overstocking of raw materials. The automobile industry is active. Newsprint production in April was

128,911 tons (116,283 a year earlier); exports reached 93,882 tons and a value of \$6,654,303 (80,872 tons and \$6,084,093 a year earlier).

ESTHONIA

The United States occupied second place as a supplier of Esthonian imports during March. Germany is the chief exporter to and importer from Esthonia. Dairy production is progressing, shipments of butter during the first quarter of 1925 being almost three times as great in quantity as during the corresponding period of 1924. Germany and England are the principal markets. Bacon production also is becoming an important item. There has been some expansion in note circulation, but the money market shows very slight improvement. Total loans and discounts of the Bank of Esthonia on April 30 show increases, but deposits declined. The Esthonian mark has improved somewhat and is now quoted at 372 to 375 to the dollar, as against an average rate during 1924 of 392.

FRANCE

The cabinet has approved the finance ministry's plan to raise an additional revenue of 1,500,000,000 francs during the remainder of the current year. The measures undertaken to produce this result include increases in post and telegraph rates, in tobacco and cigarette taxes, and a registration tax for capital subscriptions to corporations. The finance ministry has announced a plan to bring into a single category all money in circulation (some 45,000,000,000 francs), together with the short-term bonds maturing annually (80,000,000,000 francs), making a total of 125,000,000,000 francs. Should bonds be renewed upon maturity no change in the present situation will occur; but if they are not renewed paper money will be issued to pay for the unrenewed obligations, according to the plan. The combined total will thus remain unchanged, although the actual note circulation may be increased. The market continues to absorb practically the entire output of the French coal mines. The production of primary iron and steel has recently contracted, following the failure to receive sufficient orders to maintain the high production level of the first quarter. The situation in the cotton-manufacturing industry is good, with satisfactory forward buying. Wool manufacturing is not active, although raw-wool buying continues strong at firm prices. Purchases of silk are not absorbing current output at its present rate of production.

GERMANY

The problem of the heavy import surplus, which for the past six months equaled 95 per cent of the record 1924 surplus of 2.77 billion marks, continues to be the outstanding feature of German foreign trade. Returns for April show imports valued at 1,081,000,000 marks,

which is considerably above both the 1924 monthly average of 776,000,000 and the 1913 monthly average of 933,000,000 marks. The most favorable aspect of German foreign trade is the permanent character of the increase in exports as an offset to the abnormal imports. The latter are attributable largely to low foodstuffs production and the successful competition of foreign goods on the high-price domestic market. April exports totaled 672,000,000 marks and registered a slight decline from the previous month in all classes, but compared favorably with the 1924 monthly average of 547,000,000. Monthly export figures are now at 80 per cent of pre-war gold values, whereas at the beginning of the year they stood at 65 per cent. Important financial problems are awaiting solution, pending the passage of the revalorization bill and the provisional tariff. The revalorization percentage for industrial mortgages has been increased from 15 per cent to 25 per cent, and proportional increases in revalorization of public debts are expected. Some opposition has developed in local business circles to the impending high rates on American typewriters, calculating machines, and cash registers. Deposits in German savings banks have increased by 461,000,000 marks since November, 1924.

GREECE

As a final step toward the stabilization of the drachma, there has been a recent decree to regulate exchange transactions, according to information from Commercial Attaché R. O. Hall, Athens. Building operations continue heavy. Prohibitive chemical restrictions on flour may occasion a bread shortage. All fiscal monopoly prices have been increased. The new tariff is effective on June 1.

HUNGARY

The national bank on May 28 reduced the official discount rate from 11 per cent to 9 per cent. The bank's reserve on May 7 was 2,772 billion crowns, its circulation 4,438 billions, and its deposits 2,565 billions, with cover at 40 per cent, or somewhat above its usual proportion.

portion. The discounts amounted to 1,470 billion crowns, and the Government debt to the bank to 1,968 billion.

NORWAY

It is expected that the budget for the fiscal year ended June 30, 1925, will show a considerable improvement over 1923-24. Preliminary returns place the deficit at about 15,000,000 crowns, as compared with 63,000,000 crowns for last year. The unfavorable balance for the first four months of 1925 shows a considerable improvement over the corresponding period of 1924, as a result of considerably expanded exports. Production and demand in paper and wood pulp continue excellent. The lumber industry is also in a better position than a year ago. Exports of fish products are much greater than during 1924, but shipments of canned fish goods are somewhat lower. A 30,000,000-crown domestic loan has just been floated by the Government at 6 per cent, selling for 98. A loan recently negotiated in New York was secured at 5½ per cent.

POLAND

Funding of the Polish debt to the United States was reported completed on May 21, amounting to \$178,560,000. The Polish tobacco monopoly has purchased 3,500,000 crowns' worth of Virginia tobacco in America. An attempt is to be made to improve the serious adverse trade balance by further drastic increases in import duties on articles not listed as prime necessities. Russian buyers have recently placed orders for \$700,000 worth of agricultural implements and tools.

RUMANIA

A measure for the consolidation of internal finances is announced, contemplating the liquidation of the treasury's debt to the national bank by the creation of an annual budgetary sinking-fund charge. Allied war debts, the debt to the United States, and various other items have not been considered in the finance ministry's program.

Far Eastern Trade News

CHINA

American firms in North China and Manchuria are considerably interested in the amended China trade act, according to the weekly cable from Acting Commercial Attaché A. H. Evans, Peking. Latest reports from north Manchuria indicate that the crop outlook is good. In both Harbin and Dairen districts bean mills are closing down, owing to the high prices for the old bean crop and slight demand for bean products. The import business in Manchuria is brighter. Shanghai import and export markets were less active during the past week, due to the exorbitant taxes, military activities, and continued transportation difficulties. The piece-goods market has been poor, with large stocks awaiting clearances. Sales of piece goods at auction were small. The money market in Shanghai is easy.

JAPAN

The Japanese Government has decided to establish a national centralized censorship of motion-picture films,

effective July 1, according to the weekly cable from Acting Commercial Attaché Frank Rhea, Tokyo. The new regulations provide censorship fees of 5 sen (\$0.025) per 3 meters of original film and 2 sen (\$0.01) for duplicate film. Japan's imports of pine, fir, and cedar lumber during April totaled 70,264,000 feet, of which 88 per cent came from the United States, 2 per cent from Canada, and 9 per cent from Siberia. In comparison with March, imports dropped 31,000,000 feet.

INDIA

The quietness of the piece-goods market is causing considerable anxiety among Bombay business men, according to cable advices from Trade Commissioner Donald Renshaw, Bombay, India. In spite of the recent reduction from 7 to 6 per cent in the discount rate, money continues tight. Exchange remains firm. Assistant Trade Commissioner E. G. Sabine cabled from Calcutta under date of May 28 that recent excessive rains have damaged the jute crop to such an extent that the estimated yield has been reduced from 5 to 10 per

cent, but that favorable weather during the next few weeks would tend to offset much of the damage. So far, Mr. Sabine states, the jute market has been little affected by the adverse reports, but he believes that a confirmation of the reported damage and the continuation of unfavorable weather would tend to strengthen the market, particularly orders placed for early delivery. India's favorable merchandise balance for April reached 107,600,000 rupees, as compared with 255,000,000 for the preceding month.

PHILIPPINE ISLANDS

Copra prices again are stiffening, because of renewed purchasing during the week by both local oil mills and copra exporters, states the weekly cable from Assistant Trade Commissioner E. B. George, Manila, May 30. Copra production, however, is still low. The islands' abaca (manila) market, on the other hand, is extremely quiet, with apparently no interest either from New York or London. Prices continue to fall, one buyer

offering for grade F 39.50 pesos per picul of 139 pounds (1 peso=\$0.50); grade I, 33 pesos; JUS, 21 pesos; and JUK, 19 pesos. Dealers, however, are not yet reconciled to such low quotations, and no transactions are reported.

AUSTRALIA

The Australian wool situation on May 29 was somewhat improved, according to cable advices from Trade Commissioner E. G. Babbitt, Melbourne. Brokers are more confident of the future trend and expect that the market will be so improved by July that sales will be resumed. While the bulk of the clip has already been marketed, there still remain, it is estimated, approximately 6,500,000 bales to be disposed of, and the matter is being given serious attention. The wheat market continues to show some improvement. During the week ended May 29 the seaboard price averaged 6s. 3d. per bushel, as compared with 6s. per bushel during the preceding week.

Latin America at a Glance

ARGENTINA

The export market in Argentina is weak and many ships are leaving in ballast. Imports are increasing, being favored by the improved exchange. American manufacturers should again be warned to register their trade-marks here. (Commercial Attaché Edward F. Feely, Buenos Aires, May 30.)

CHILE

A commission appointed by the Chilean Government to study the problems affecting the nitrate industry and the policy of the Government toward that industry has recommended that taxation be changed from a unitary to a profit basis. No action is contemplated by the Government until after the national elections (Commercial Attaché R. H. Ackerman, Santiago.)

PERU

Trade in Peru is slowly improving, although the market in general remains quiet. (Commercial Attaché H. B. MacKenzie, Lima, May 30.)

PARAGUAY

The economic situation in Paraguay is improving, there being an animated export of cotton and oranges. The tobacco crop is above the estimates. The European demand is good, but prices are 25 per cent below 1924. Exporters are withholding shipments, due to insufficient transportation. Money is easy and commerce is moving well in all lines, with a tendency toward American cotton goods and oils. (Consul D. A. Willson, Asuncion, Paraguay, May 27, and Commercial Attaché Edward F. Feely, Buenos Aires, Argentina, May 28.)

CUBA

Trade continues dull and collections slow in Cuba. Heavy rains have forced a large number of sugar mills to suspend operations, and the list is being added to daily. It is expected that the total output will slightly exceed 5,000,000 tons. Prices show no change, con-

tinuing around 2½ cents per pound. Some mills have been partially benefited by the large molasses output, which has been disposed of at high prices.

MEXICO

Business and industry in Mexico continued rather dull during the week ended May 27, with automotive sales slack. (Trade Commissioner George Wythe, Mexico City, May 29.)

HAITI

The proposed new import tariff now made public in Haiti is intended to yield the same revenue as before, but the items have been adjusted to increase the duty on certain luxuries and decrease it on necessities such as cotton goods, foodstuffs, and machinery. The production of sugar will approximate 8,500 tons, as compared with 5,500 tons last year. It is expected that a further increase in production of 50 per cent will be made next year. Cotton prospects continue good. May business has been slow, and large stocks are still evident. Building construction still continues, but on a smaller scale. Government income for April equaled estimates. Plans are proceeding for irrigating 90,000 acres in the Artibonite Valley. (Vice Consul Arthur F. Tower, Port au Prince.)

Ontario Market for Electrical Appliances

Many makes of electrical household labor-saving devices of American manufacture, such as vacuum sweepers, clothes washing and ironing machines, curling irons, heaters, and others are sold in Ontario. The active sale of these electrical appliances is a result of the low rates for electricity in Ontario and the effective advertising which has been carried on by the manufacturers and dealers. The dealers handling electrical appliances include department stores, the local office of the Ontario Hydro Commission, electrical supply stores, and furniture stores. Sales are usually made on the installment plan. (Consul Richard F. Boyce, Hamilton, Ontario, Canada, May 2.)

MONTHLY CABLE REVIEWS

EUROPE

Samuel H. Cross, Chief, European Division

British Business Slightly Improved.

Acting Commercial Attaché Mowatt M. Mitchell, London, May 29.

After a month of controversy on the elementary principles the budget remains almost unchanged and will no doubt pass as stated, with modifications of silk duties and probably minor modifications in the pensions scheme. The latter are concerned principally with the date when employers' contributions begin; the Government employees' contributions and benefits will be effective January, 1926.

Budget Proposals Generally Well Received.

Generally, the budget is well received by the country after thorough study, and is believed to be sound. It moves toward encouragement for capital, relief for taxpayers with small moderate incomes, cooperation with Dominions, and security for the old-age position of the labor classes.

The silk industries appear satisfied with the compromise, but the cotton industries are still opposing on the grounds that these new silk duties are a burden to trade and on the principle that the tax is on a raw material of a key industry.

With solidification of the budget position, trade in general shows an improving tone and is more hopeful. The steel, coal, and textile trades are slightly better, but shipbuilding is still unable to compete with continental yards, although showing slight activity as the result of placing orders within the country for patriotic reasons.

With the disappearance of the danger of reimposition of the McKenna duties prior to July 1, American motor importers are accepting the duties and making adjustments for new prices and, where possible, for Canadian sources of import. Price increases on British cars are not probable; in fact, some are reducing, following the improved production methods.

Labor Attitude More Optimistic.

The decision of the Miners' Federation to withdraw their demands for improved wages and hours, pending a full joint survey of the industry, gives an optimistic tone to the general labor position. It is hoped that other trades will follow suit.

The coal industry during the first half of May maintained the improvement that started at the end of April with good demand, price increases, and general optimism; this was still further emphasized when the workmen's conference decided not to urge at present the

new wage agreement on a higher scale. Toward the end of May it was evident that the improvement was not being maintained, and this resulted in renewed uncertainty, declining prices, little forward contracting, and concessions on prompt business. Sellers are trying to hold firm, but new orders are few. Conditions in South Wales are weakening, and the northeast coast, Yorkshire, and Scotland conditions show but little improvement. Some encouragement was felt over the successful bidding on 150,000 tons for the Swedish railways, against keen German competition.

Seasonal Unemployment in Coal Industry.

About 5,000 miners are involved in the expected early pit closings. Holdings early in June mean a short working month, but there is no buying pressure to cover needs in advance of holidays. In withholding higher wage demands, the workers suggest needed improvement in management as to excessive staffs, salaries, antiquated methods, duplication, bad selling methods, uneconomic power production, and wide margin between producer and consumer; but correction of these faults is too slow to meet the present emergency.

Steel Trade Picks Up Slightly.

The end of the month showed slight improvement over the recent heavy depression in the steel trade, though the whole price position is unsettled by much bargaining. Belgian pig iron is now being offered in Great Britain at competitive prices. There is fair business in semifinished continental products, especially wire rods. Cleveland No. 3 pig iron is now 26 per cent lower than in August, 1923, although freight rates remain unchanged at about 60 per cent above pre-war, while pig iron is only 15 per cent above.

The "safeguarding of industries" act may be invoked against cheap imports where the competition is becoming keener. There is a general effort to reduce overhead costs, one company reporting a recent cut of 10 per cent in salaries of managers and staffs. Only 38 of 108 furnaces on the northeast coast are operating, and 8 large Teeside works closed this year.

Shipbuilding Depressed.

The shipbuilding industry is depressed through its inability to meet continental tenders on new ships, declaring that combinations, subsidies, low taxes, preferred freight rates, and low wages permit foreign quotations at prices below the British costs represented by material and wages that can not be reduced. Appeal

has been made for lower transport and intermediate costs, which are inflated by higher wages and local rates.

Cotton Goods Improved.

The cotton-goods market tends to improve; yarn and cloth prices are firm, but reflect the decline in raw cotton. A number of firms are working full time lately, forcing the short-time committee to recommend the return to 39¼ hours, the ballots returnable June 27. Some opinion prevails that production is exceeding demand for yarn. The Hosiery Manufacturers' Federation announced their approval of the modified silk taxes. There is a fair movement of raw wool, the Bradford top market is quiet, and prices are firm. The German tariff proposals are detrimental to the wool trade, especially the worsted spinners.

Financial Markets Firm.

The whole month was devoted to the finance bill embodying the new budget, which is now through the second reading with immaterial changes. The adoption of the gold standard is generally indorsed. There was a flood of new issues, with varied success, underwriters taking 75 per cent of the London County Council £6,000,000 loan and 55 per cent of the Niger £4,000,000 debentures. The desirability of a further expansion of the trade-facilities guaranties is much debated. Gilt-edge securities are firm, in spite of new offers. The inflow of money for the open market from America and the Continent has strengthened sterling, with the prospect of a higher rate before the autumn buying causes decline. There is much debate as to the source of some of the recent gold increase beyond the amount imported.

Lumber, Petroleum, and Motor-Car Industries Active.

The softwood lumber market is very active, consumption and import being good, particularly of housing specifications. The authorities here announced the determination to encourage wooden houses. Hardwoods are less active.

Petroleum imports and consumption are at the average, and American participation is normal. Nonferrous metals are quiet but steady, pending reduced summer-season consumption. Tin continues to rise, and lead is steady at the April closing point. Figures now available show the following percentage of increases in 1924 British consumption over 1923: Copper, 45; tin and lead, 15; and spelter, 15.

The motor-car production is large, Morris and Austin factories working double time. Motor cycles exported for the first four months of the year were valued at £250,000 more than last year.

Leather Industries Good.

Business is improving in hides and leather. The industry halts for the Whitsun holidays, but substantial orders are on hand for the reopening. Demand is best in medium-class, colored kids are most active, patent black kid and calf follow. Boot and shoe export orders are good, but hampered by necessity of long credits. Improved leather trade is expected with South Africa and Australia, due to tariff changes in boots and shoes. Advances in rubber prices are alarming the shoe trade, and crêpe and other rubber-soled footwear are expected to advance 10 per cent shortly. The heavy trade is quiet, but lightweight and better-class footwear showed decided improvement.

Cost of Living Declines.

The cost-of-living index of the board of trade shows a further decline of 2 points to 173. The total registered unemployed still remains at about the 1,200,000 mark.

Activity Maintained in Italian Industry

Based on cable from Commercial Attaché Henry C. MacLean, Rome, May 20, with the cooperation of American consular officers at Genoa, Turin, Milan, Naples, and Palermo

Healthy activity continues in practically all branches of Italian industry. The employment situation especially illustrates this condition, with work for practically all classes sufficient to reduce the number of unemployed to the lowest point since 1920.

Government Revenues Slightly Lower.

The financial showing of the Government during April was slightly less favorable than in the same month last year. Revenues were less by 65,000,000 lire, making the total 1,560,000,000 lire; expenditures showed the slighter decline of 13,000,000 lire and a total of 1,592,000,000 lire. The deficit for the 10-month period ended April 30 amounted to 226,000,000 lire, as compared with 190,000,000 lire during the same period last year; nevertheless, this represents an improvement over the budget, in which a deficit of 1,355,000,000 lire was anticipated for the year.

The gradual reduction of the internal debt continues to be the leading feature of the financial situation, the month of April effecting a liquidation of 526,000,000 lire and bringing the total down to 91,173,000,000 lire. New issues of nine-year bonds, amounting to 697,000,000 lire, were floated during the month; outstanding three-year and five-year bonds were reduced by 631,000,000 lire and short-term bills by 504,000,000 lire. The note circulation of the Treasury was 200,000,000 lire lower on April 30 than a month earlier. Owing to the small demand for the issues of 4¾ per cent 25-year bonds, which were authorized in order to reduce the floating debt, recourse is being had to 5 per cent nine-year bonds which are more favorably received.

Further Reduction in Bank-Note Circulation.

The statement of the Italian banks of issue for April 30 shows a total circulation of 17,645,000,000 lire, with a reduction in the circulation on account of trade amounting to 49,000,000 lire. Ordinary discounts have shown an addition of 331,000,000 lire during the month, bringing the total up to 5,541,000,000 lire; discounts of the autonomous section of the Consortium for the Subvention of Industrial Values declined by 92,000,000 francs, to 3,654,000,000 francs.

The combined statement of the leading private banks of Italy for March 31 shows the relatively slight decline of 4,000,000 lire in deposits, to a total of 2,507,000,000 lire. Discounts, on the other hand, reached 7,809,000,000 lire, an increase of 312,000,000 lire since February 28. Italian bank clearings during March totaled 76,109,000,000 lire, a considerable advance over the 70,729,000,000 lire recorded during March, 1924, and a still greater advance over the 54,659,000,000 lire recorded in March, 1923.

Failures Less—Lira Decline Without Local Significance.

Business failures in Italy, though still at a high level, have shown a steady downward tendency during

the past few months. Failures in March totaled 591, as against 629 in February and 669 in January.

The recent sharp decline in the exchange value of the lira, from an average of 4.10 cents to approximately 3.97 cents, is evidently attributable to international rather than to local causes, inasmuch as the relation of the lira to the French franc has remained practically unchanged.

Security markets throughout the country have manifested a strong reaction to higher prices, and there has been considerable activity in transactions. The present tendency is uncertain, owing to the renewed unsettlement of exchange. The monthly stock carry-over was easily effected, at interest rates varying between $7\frac{1}{2}$ and 8 per cent.

Industries in Strong Position.

The demand for iron and steel products continues, and imports of scrap and pig iron are showing large advances over last year. The engineering trades are active, and exports of automobiles have shown a considerable advance. The demand for a new light-model Italian car has been particularly satisfactory.

The situation in the cotton industry is excellent, and heavy export shipments continue. In a referendum to workers in Italian cotton industries a large majority opposed acceptance of the manufacturers' proposals for a wage agreement; negotiations, however, are continuing. Wool combers are less active, in spite of foreign orders; new domestic orders for worsted yarns are scarce, in spite of price reductions; but the export demand is maintained. Weavers are busy, and manufacturers of knit goods are active.

Unemployment Gradually Reduced.

The general employment situation is highly satisfactory as compared with all previous years since 1920. The number of unemployed throughout Italy on April 30 was 126,000, as compared with 177,000 on April 30, 1924. In most industries unemployment is negligible. The wage index, based on 100 for average pre-war wages, is given as 530 for the first quarter of 1925; this compares with 506 for the same period of 1924. The advance, which tends to offset the increase in living costs during the past year, appears to have been checked, as the April index numbers were slightly lower than those for March, and food prices have been lowered somewhat since the end of April.

Principal Imports and Exports During March.

The leading articles imported during March were wheat, valued at 553,000,000 lire; cotton, at 412,000,000 lire; coal, 182,000,000; wool, 63,000,000; mineral oils, 55,000,000; lumber, 51,000,000; scrap and pig iron, 50,000,000; and copper, 41,000,000 lire. The principal exports during the same month included raw silk, valued at 253,000,000 lire; cotton textiles, at 152,000,000 lire; hemp, 55,000,000; citrus fruits, 53,000,000; silk textiles, 47,000,000; automobiles, 46,000,000; cheese, 36,000,000; olive oil, 35,000,000; woolen textiles, 31,000,000; cotton yarns, 30,000,000; and rice, 23,000,000 lire.

Unseasonable Weather Retards Crops.

Recent cold and rainy weather has hindered the development of Italian crops, but their general condition is reported as average. An increase in cereal production over last year is predicted.

The wheat market has become more active, and a revival in demand is indicated. The financial difficulties of importers are gradually being liquidated. Local prices are slightly below world level, but this differential is disappearing.

Independent Bank of Issue for Czechoslovakia

Based on cable from Commercial Attaché James F. Hodgson, Prague, May 29

According to legislation recently enacted, an independent bank of issue is to be organized in Czechoslovakia on the same lines as the National Banks in Austria and Hungary, and the Czechoslovak Government is authorized to borrow \$50,000,000 for the purpose of protecting the currency of the bank. The stabilization of the currency is to be continued with reference to New York exchange, a variation being permitted between \$2.90 and \$3.03 per 100 crowns. The question of a change to a new unit is left for future determination, with a view to a possible agreement with neighboring countries on a uniform system.

Business Situation Unchanged.

The general business situation has experienced little change in the past month. The basic conditions of the principal industries are considered sound, and it is believed that the recession has introduced a healthier and more conservative tone. Money is easy, and stock quotations are firm, but there is little trading on the exchange. The weather is favorable to the crops. Unemployment declined in April to 72,000, owing to increased agricultural activity. The labor situation is generally satisfactory, although there is some agitation for higher wages.

Position of the Government Banking Office.

On May 23 the circulation was 6,922,000,000 crowns (\$208,000,000), as against 6,954,000,000 on April 23 and 8,211,000,000 on December 23. The amount of deposits was 787,000,000 crowns, making with the circulation a total of 7,709,000,000 covered to the extent of 38 per cent by assets amounting to 2,947,000,000, and including 1,030,000,000 gold and silver and 554,000,000 foreign credits. Clearings in the month of April amounted to 5,888,000,000, showing an increase from 5,694,000,000 in March.

Coke Production Higher—Decrease in Car Loadings.

The production of coal in April, 2,495,000 metric tons, showed a slight decrease from the 2,642,000 tons in March, probably because the month was shorter, but the production of coke in April, 165,000 tons, showed a great increase over the 126,000 tons in March, the 142,000 tons in February, and the 114,000 tons in January.

The average daily car loadings in April were 12,991, as compared with 13,125 in March and 13,634 in February. The car loadings of coal showed a similar decrease, from 4,255 in February and 4,042 in March to 3,776 in April.

Exports Lower—Import Restrictions Abating.

The total exports in April were valued at 1,477,000,000 crowns (\$44,000,000), as against 1,705,000,000 crowns (\$51,000,000) in March and 1,518,000,000 (\$45,000,000) in February.

The Government, in accordance with its announced policy, is gradually removing restrictions on imports and the requirement of licenses for import. The demands of the agriculturists for additional tariff protection have gained recognition from the Government, and the question of a sliding tariff on imported bread grains is under consideration.

Prices Continue to Fall.

The index of retail prices on the new basis of computation was 901 for April, as against 904 for March; the wholesale index on May 1 stood at 1,006, as against 1,019 on April 1 and 1,034 on March 1.

Danish Labor Troubles Increased

Based on cable from A. E. Fensclau, secretary to commercial attaché, Copenhagen, June 2

Despite an agreement made a short time ago between the shipowners and the Seamen's Union, providing for increased wages, a strike has now been declared, effective immediately, by Danish seamen and stokers. This measure is undoubtedly taken as a sympathy action with the conflict now being waged between the labor unions as a whole on the one side and the employers on the other.

English dock workers have now declared a blockade on all shipments from Denmark, but have nevertheless agreed to handle agricultural produce under certain conditions. This proviso is of little significance, as exports from Denmark of farm produce are now practically nil.

Failing to raise additional funds in the amount of 20,000,000 crowns, the Danish Cooperative Bank (Danske Andelsbank) has been obliged to suspend payments. This institution was reorganized in the early part of the year by the subscription of a preferred-share capital of 8,000,000 crowns, but it now appears that the losses were too great and the liquidity of the bank had been impaired. It is estimated that the entire share capital and a part of the deposits of the bank have been lost.

Better Business in South Africa

Based on cable from Trade Commissioner Perry J. Stevenson, Johannesburg, with cooperation of Consul R. P. Clark, Port Elizabeth, May 31

Retail trade during May was stimulated by the visit of the Prince of Wales. General imports and exports have been well sustained, and it is estimated that maize exports during the season will amount to 1,200,000 tons.

Gold Standard Reestablished.

The Union Government's fiscal policy in recent months has resulted in a marked reduction in bank exchange rates. The net profits of the National Bank of South Africa for the year ended March 31, 1925, amounted to £244,411. Of this amount, £150,000 was allotted to the reserve fund and £50,000 to the pensions fund. The Standard Bank of South Africa has declared a dividend rate of 14 per cent.

Official announcement was made of the return of South Africa to the gold standard on May 18, instead

of waiting until July 1 as originally announced. Specie payments were resumed and the convertibility of the reserve bank's gold certificates was restored.

Transvaal Gold Output in April Favorable.

The effect of the immediate return to the gold standard had been discounted and no inconvenience was felt. The price of gold per fine ounce was already at standard, the premium having gone off. Owing to the loss of the premium, the gold-mining industry, especially the low-grade mines, are confronted with the necessity of lowering production costs, and several mines are having difficulty in avoiding losses. As a result, mine buying is slightly restricted.

The Transvaal gold mines maintained a high production rate during April, although the month's output of 785,919 ounces was slightly below the 825,475 ounces of March. Valued at 85s. an ounce, the standard rate, production declined by £161,330.

New Platinum and Diamond Discoveries.

The prospecting in the Lydenburg platinum area has been slowed down by abnormally heavy rains, bad roads, and fever. New discoveries are constantly being made, but some months must elapse before mining operations on a considerable scale will be under way. New diamond discoveries in the Pretoria district of the Transvaal Province have caused a revival of diamond prospecting. The new fields, known as the Rayton area, adjoin the Pretoria diamond mines. A recent discovery of diamonds is reported to have been made in the Orange Free State, near Winburg.

Imports during April were valued at approximately £5,900,000 and exports at £4,326,000; of the latter, £2,476,000 consisted of native gold.

Wool Market Stronger—Automobile Trade Improving.

Since May 15 the demand for wool has been more general and stronger, but transactions have been unimportant. The demand for mohair is increasing and the market is firm. Demand prices for most kinds of skins are improving; the ostrich-feather market is dull and weak.

Trade in automotive products is strong and stocks are below normal. The excellent crop outlook has stimulated the demand for agricultural implements.

Local Industries Somewhat More Active.

Local industries are slightly more active and unemployment is decreasing. The marked activity of building and construction work has resulted in a strong demand for lumber and hardware. Loans are still on a restricted basis except for speculative investments.

The Government has completed arrangements for the purchase of the only privately-operated railway in the Union, the Cape Central Railway, for £1,100,000.

Gold Mines Face Labor Difficulties.

Natives employed in the gold mines at the end of April numbered 176,188, as compared with 179,061 at the end of March. The white miners have decided to take a strike ballot in connection with the refusal of the gold producers to adopt the De Villiers award favorably recommending the miners' application for a 20 per cent wage increase.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

Philippine Foreign Trade Figures Lower in April

Based on cable from Assistant Trade Commissioner E. B. George, Manila, May 30, 1925

Philippine trade in April registered decreases from the previous month in the values of both exports and imports. The decline in each case, however, amounted to approximately 4,000,000 pesos (1 peso = \$0.50), so that the favorable balance of trade of over 11,000,000 pesos, which characterized the month of March, was only slightly altered, amounting in April to 11,252,000 pesos.

Import of Principal Commodities Continues Large—Exports.

The leading imports into the islands showed little change, cotton cloths and cotton manufactures maintaining the high figures which they have reached each month of the current year. Iron and steel imports, while lower in both March and April, were unusually high for the first two months of the year.

Sugar exports continued heavy in April. The conspicuous export declines occurred in copra and coconut oil. The figures reflect the slackened demand and lowered prices for copra which characterized the month.

The following tabulation of leading Philippine exports and imports shows that the month in review compared very favorably with April of last year:

Leading commodities in Philippine trade

Commodities	April, 1924	1925	
		April	First four months
EXPORTS			
	Pesos	Pesos	Pesos
Abaca (manila hemp).....	4,733,000	5,808,000	24,677,000
Sugar.....	11,688,000	14,000,000	47,462,000
Coconut oil.....	2,271,000	1,020,000	11,416,000
Copra.....	1,797,000	1,698,000	7,746,000
Copra cake.....	146,000	98,000	1,047,000
Cigars and cigarettes.....	634,000	930,000	3,405,000
Leaf tobacco.....	668,000	285,000	2,601,000
All other.....	3,194,000	3,349,000	12,728,000
Total.....	25,671,000	27,198,000	111,080,000
IMPORTS			
Iron and steel manufactures.....	1,288,000	1,423,000	10,157,000
Cotton and manufactures, except cloth.....	975,000	1,224,000	4,807,000
Cotton cloth.....	1,986,000	3,825,000	14,916,000
Meat and dairy products.....	691,600	836,000	3,539,000
Automobiles, tires and parts.....	269,000	261,000	2,039,000
Wheat flour.....	656,000	307,000	3,298,000
Paper and manufactures.....	506,000	345,000	1,890,000
Leather and manufactures.....	109,000	252,000	863,000
All other.....	6,607,000	7,473,000	38,883,000
Total.....	13,077,000	15,946,000	80,902,000

CHANGES IN STYLE AS FACTORS IN TEXTILE MANUFACTURING

Assistant Trade Commissioner C. Grant Isaacs, London

Fashions play an important part in determining the sales of textiles and materially increase the risks involved in carrying stocks. An intelligent study of style requirements, therefore, should aid manufacturers to avoid much waste in distribution. Retailers generally complain of their inability to secure goods when they want them. The time required to prepare a textile for the counter often causes sales to be lost with a resulting depression to the industry.

Paris has held its position as the leading creator of fashions in women's clothing largely as a result of the close cooperation between the producer of fabrics and the dressmaking establishments. The designer with a new idea goes to the cloth manufacturer who attempts to construct the imaginary fabric from the designer's usually rather vague description—probably a conglomeration of ideas gathered at various fashionable resorts, among them St. Moritz, Longchamps, Venice, and San Sebastian. It may be a success or failure, but the manufacturer takes the risk. Cloth for several models is woven, and if they are accepted by women of fashion, the manufacturer's output is not only quickly sold out, but other firms begin producing similar fabrics. Sometimes the process is reversed, the manufacturer designing the material and offering it to the couturier for trial. This close friendly collaboration for exploiting new fabrics is one of the factors which has made Paris the world's style center.

How England Follows Paris.

One of the largest British firms specializing in cottons has for many years recognized the importance of Paris as a source of new textile designs. This concern pays a French silk manufacturer 10,000 francs annually for small clippings of new materials. It also employs about 20 designers who are located in Paris and afforded every facility for studying new

style tendencies and designs with a view to adapting them to goods for the British home and export trade.

In preparing the motifs for foreign markets, the designers are aided by ideas and sketches submitted by scouting parties who at present operate in the Levant, the United States, the Far East, Egypt, and other African countries. One of the oldest libraries of designs, including some dating back to 1815, is also maintained for ready reference. It is claimed that the atmosphere of Paris and its environment is particularly conducive to the production of new motifs, and that the same designers have met with little success when they attempted to work in Manchester.

Influences Determining the Vogue of Colors and Designs.

Colors do not rotate in a cycle. In the field of color, modern art exerts a considerable influence. The vogue of pastel shades this spring and summer is largely a reflection of the dominant tones used in the paintings of several popular Parisian artists. During the preceding two years, somber shades, more particularly black, were favored. This was attributed by a French designer largely to the fact that many women were in mourning as a result of the war. Recently, a Paris milliner produced a few hats in a fuchsia shade. Women accepted the color which was soon seen everywhere in Paris, on the boulevards and race courses, in both hats and gowns.

Adaptations of classical and natural designs—varying from large checks, squares, or other rather symmetrical figures to large floral motifs, sometimes woven into the fabric in the better materials but more often printed—were most commonly observed in Paris during the spring openings. The effect of the international mental diversion, cross-word puzzles, seems to be reflected in the large squares. Futuristic designs continue to be popular, some of them being rather grotesque; others imitate a new style of French painting, described as “abstracting the essence of a subject,” which often produces rather wierd effects.

Rayon Used in Many Fabrics.

Rayon is being offered in a fine rep and in many combination fabrics, and designers agree that the use of this fiber is still in the initial stages of development. One manufacturer has produced a soft light-weight cotton-back velvet with a rayon pile which falls at an angle and gives the fabric an unusual sheen or luster. This is offered in plain colors and printed designs. One

maison de couture is very optimistic as regards the acceptance of this fabric for fall use, and has secured an option of the manufacturer's entire output. Another fall fabric, the major portion of which is rayon, is a heavy crêpe de Chine. In woollens, jersey Kasha, Scotch patterns toned down to pastel shades, and English weaves for sports are popular. Another light-weight wool fabric which is gaining in favor is “frisca,” woven of tightly twisted yarns in a rather loose and open construction. In sport suits, it appears that the tailored costume of woven materials has, to a considerable extent, supplanted the knitted garment.

Both hand and machine made lace is being used more freely for afternoon and evening gowns, indicating that in these some of the former simplicity is being abandoned for more elaborate effects.

[The above article is a résumé of a report prepared by Trade Commissioner C. Grant Isaacs after attending the spring openings in Paris. Copies of the complete version have been sent to the New York, Boston, Philadelphia, Chicago, St. Louis, and San Francisco district offices where they will be made available to interested American firms.]

HOARDING HANDICAPS INDIA'S FOREIGN TRADE

Banking, Farming, and Industry Adversely Affected—Advantage of Favorable Trade Balance Offset by Gold and Silver Imports—Custom Being Discarded Very Slowly

Emmett A. Chapman, Far Eastern Division

Almost every phase of India's economic life is adversely affected by the century-old habit of hoarding. Banking, agriculture, manufacturing, public finance, and especially foreign trade, are all handicapped by the lack of sufficient capital, while millions of rupees' worth of gold and silver are literally stored in hiding places by the people.

Hard to Overcome Old Customs.

Most customs have their origin in economic necessity, and this habit of the Indian is no exception. In years gone by India faced annually the possibility of widespread famine. If the monsoon, or rainy season, failed, either partially or wholly, disaster was sure to follow. Owing to the lack of transportation, and the almost constant conflicts between the different native chiefs, one area would be in a state of famine while another would have a surplus of foodstuffs. Under such conditions it was but natural that hoarding should develop. The band of silver or gold placed around the ankle or arm, the string of coins hung about the neck or buried in the ground after a season of plenty, meant food for an entire family during the year of famine which might follow. While the reasons for such safeguards have long since been removed by modern transportation facilities, relief associations, and effective control over foodstuff exports, the custom remains; and it may be decades before it will be overcome to any great extent.

Lack of Bank Credits Handicaps Trade.

The lack of sufficient banking credits is a severe handicap to importers and exporters in their operations. Besides the Imperial Bank of India there are only 18 exchange banks, 69 joint-stock companies, and 79 cooperative banks—a total of 167, or one bank to 2,000,000 persons—throughout the Indian Peninsula. Some of these institutions maintain several branches,

but the total number is altogether too small to take care of the credit demands of a country with 319,000,000 persons and ranking among the first seven countries of the world in the aggregate value of its foreign trade.

Exporters are especially pressed for funds during seasons of moving crops. These months are always accompanied by stringency in the money market, and shippers experience great difficulty in securing sufficient bank credits to carry on their operations. The heavy demand also runs interest rates up to a high figure. As a result shippers are unable to take advantage of market conditions by holding off for better prices, and the bulk of even the margin must be disposed of as quickly as possible regardless of current prices. Such a situation, of course, is unsound, and very costly to the country as a whole, especially to the farmer, who by hoarding his money instead of depositing it with the banks is largely responsible for the situation.

Standard of Living Low.

This traditional habit of hoarding keeps the standard of living almost static in India and at a very low level as compared with the western world and certain other areas of the Far East. Among the lower classes, individuals who might be classed as relatively wealthy, judged by their personal stock of gold and silver, will be found living in circumstances quite similar to those of their less fortunate neighbors. This is particularly true among agriculturists, which make up about two-thirds of the population. It is but natural, therefore, that imports into the country should consist largely of bare necessities. Low-grade cotton manufactures needed to clothe the large population of the country comprise about 30 per cent of the total imports and constitute the largest single item received from overseas markets.

Foreign Capital Demanded for Industrial Development.

After cotton piece goods the largest items are construction iron and steel and machinery and railway equipment, which are needed in the steady but not rapid industrial development of the country. The demand for this class of imports would be much greater if the capital tied up in hoarded treasure throughout the country could be marshaled into the banks and made available for development purposes. At present foreign capital must be depended upon very largely for financing industrial extension and progress is necessarily slow. As a result raw materials and articles wholly or mainly unmanufactured comprise almost 50 per cent of India's exports, while between 75 and 80 per cent of its imports consist of a wide variety of the cheaper-grade articles, either mainly or wholly manufactured.

Large Gold and Silver Imports Necessary.

The merchandise balance in oversea trade is normally in India's favor by a very comfortable margin, and if handled economically would give to the country ample oversea credits with which to purchase the industrial machinery, railway and hydroelectric equip-

ment, and various other needs of the country. The large imports of gold and silver necessary for paying the farmer for his products and the industrial worker for his labor, together with the amount necessary to cover invisible imports, such as interest on oversea loans and shipping tolls, tend, however, to completely wipe away this balance which otherwise might be utilized in raising the country's economic status to a higher plane.

Effort to Encourage Use of Banks.

A great effort is being made to discourage hoarding and encourage the habit of banking and investment among the people. Judging from the number of co-operative societies now in the country, some progress is apparent. Perhaps the ever-present money lender with his high rates of interest, together with government propaganda, may in time discourage wholesale hoarding, but it will take years to shake off a practice of such long standing. Industrial workers, however, are beginning to see the advantages of placing their surplus earnings in banks, and there is promise that banking facilities in the larger cities will be considerably extended during the next few years.

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

TRADE IMPROVEMENT IN MEXICAN GULF PORTS

Outlook Favorable in Vera Cruz for Agricultural Development—Oil Industry Active in Tampico

Consul John Q. Wood, Vera Cruz, and Vice Consul Peter H. A. Flood, Tampico

The center of American trade with Vera Cruz is shifting from Atlantic to Gulf ports, it being distributed in volume as follows during the quarter ended March, 1925: Mexican imports from Gulf ports, 34 per cent; from Atlantic ports, 66 per cent; Mexican exports to Gulf ports, 77 per cent; to Atlantic ports, 23 per cent; total trade with the Gulf ports, 54 per cent; with the Atlantic, 46 per cent. In values the percentage would be largely in favor of the Atlantic ports, as the articles imported from them are mostly manufactured products, while those from the Gulf ports are mostly foodstuffs and lumber.

Exports to United States Over \$2,500,000.

Exports to the United States, as declared through the Vera Cruz consulate, amounted to \$2,509,880 for the quarter ended March, 1925, as compared with \$2,520,357 for the corresponding period of 1924, and were made up chiefly of bananas, vanilla beans, broom-root, and chicle.

Customs receipts at the port during the quarter were the largest in three years for a similar period and were \$5,133,198, as compared with \$2,166,487 for the same period of 1924.

Agricultural Outlook Improved—Harvesting Advanced.

Activities of the Agrarian Party have interfered with the resumption of agricultural plans on the part of the landowners. However, it is believed that conditions on the whole are now more promising for a return to the orderly development of the agricultural resources of the State of Vera Cruz.

The harvesting of the principal crops, sugar, coffee, and vanilla beans, is far advanced. Bananas are cut the year round, but usually the largest shipments are from May to October.

Coffee Crop Shipments Resumed.

The coffee crop will reach 325,000 quintals in the State of Vera Cruz, as compared with 300,000 quintals (one quintal equals 100 pounds) during the preceding year. The quality has been exceptionally good and prices have held up but are lower than at the beginning of the shipping season. Exports have been about the same as in 1924. A tax approximately 2.75 centavos per kilo was imposed by the State for the purpose of raising funds for the construction of highways. In view of the fact that operators had made contracts for the entire crop, it was claimed that the tax was illegal and for a time shipments were retarded. An arrangement was made for the deposit of the tax pending the decision of the courts as to its validity. If the tax is upheld, it is believed that the law will be repealed as to the next crop. It is estimated that the total Mexican coffee crop will yield 575,000 quintals. Germany is taking a large amount of coffee from Mexico this year.

Sugar, Vanilla Beans, and Other Crops.

The Vera Cruz sugar crop is estimated at 60,000 tons for the present year as compared with 65,000 during last year, the decrease being due to the effect of the locust plague and to labor troubles on the plantations. Export prices for sugar have been low and shipments have been chiefly to Europe.

Vanilla beans were gathered earlier, on account of the high prices prevailing. The present estimate for the crop is 225,000 pounds of "cuts" and whole beans. The tax on these beans has been raised from 20 to 40 cents a kilo.

Other crops have been below the average. Fruits have been of inferior quality and 50 per cent less in quantity. The last crop of beans and corn was very short, but the coming crops should be much better.

Favorable Conditions for Fighting Locust.

The most hopeful thing in the agricultural situation of Vera Cruz is the efforts of the Federal authorities to combat the locust pest. A commission of experts is now in charge of the campaign and the State has been exceptionally free from the pest during the year. In some localities a disease has attacked the locusts and in sections blackbirds have been feeding on locust eggs. This Federal commission has the advantage over the State and municipal commissions that endeavored to organize last year in that it has funds available from the Federal tax of one centavo on all letters mailed to a Mexican address.

Industrial Activities.

The cotton mills in the State of Orizaba, where most of them are located, are only working one 8-hour shift, largely due to labor conditions. The demand for cotton goods is greater than the supply. Should labor conditions improve there should be a demand for more factory equipment.

The tobacco factories have been running on a normal schedule. The flour mill has been working only half time during recent months. Other small industries have been operating only part time.

Business Active in Tampico District.

Trade conditions in the Tampico district have improved steadily since the beginning of the year. The volume of the turnover for the first months of 1925 has shown a favorable increase as compared with the same period of last year, and the present local trade situation is generally considered more satisfactory than at any time during the past three years. Business in practically all lines is reported active. Dealers in oil-well supplies and hardware have been particularly benefited. Heavy stocks in these and other lines which remained on hand, as a result of last year's depression in the oil industry, are being gradually disposed of, and buying has been resumed.

The Oil Industry.

The present favorable trade situation is primarily attributed to the fact that many of the local oil companies have renewed activities on an extensive scale since the first of the year in an endeavor to increase production. This policy has had the effect of greatly stimulating investment in independent drilling enterprises. The number of these undertakings already under way is unprecedented in the history of the Tampico oil industry, and as these are being outfitted by local capital the result has been a marked increase in business activity which is expected to continue late into the rainy season.

European Competition Increasing.

The outstanding feature of the present trade situation is an intensive canvassing campaign by experienced representatives of European manufacturers in an endeavor to regain a foothold in this market.

Lathes, wood-working machinery, nail wire, agricultural implements, and shelf hardware are being offered at wholesale prices considerably below those demanded for corresponding American commodities. The same applies to galvanized iron roofing, mixed paints, dynamite, and certain chemicals manufactured in England. It is reported that, in addition to low prices, advantageous credit terms are being offered to reliable firms as a further inducement to secure business.

Credit Situation Improved.

Bank collections have been good and increasingly large, because merchants, having obligations in the United States, are taking advantage of the present premium on Mexican pesos in exchange for United States' dollars. Credit is still restricted, although it is possible to obtain loans on good security. Banks report growing receipts and correspondingly large transfers of money to the United States.

Value of Petroleum Exports Increase.

Crude petroleum and its products are the principal exports from the Tampico district and next in importance are ixtle, sisal, hides, chicle, and sarsaparilla root. During the first quarter of 1925 the volume of petroleum exported to the United States showed a substantial decrease in comparison with the same period of last year, especially in the crude variety. There was, however, a substantial increase in the volume of the refined grades exported. As a result of higher market prices the total valuation of petroleum exports to the United States during the first quarter of the current year (\$29,450,954) exceeded that of last year. (\$22,806,263), although the volume of exports was less than in 1924.

Other Exports to the United States Vary.

Shipments of ixtle to the United States during the first quarter of 1925 increased approximately 50 per cent, both in volume and value, as compared with the corresponding period of last year. Sisal exports were about the same for the two periods, approximately 500,000 pounds, valued at \$31,000.

Exports of hides to the United States decreased from 319,095 pounds during the first quarter of 1924 to 101,758 pounds in 1925, with a corresponding decrease in value.

Exports of chicle and sarsaparilla root decreased very sharply in volume.

As agrarian conditions are unsettled, the agricultural outlook in the Tampico district is not good.

American Goods Leading in Peruvian Market

Rollo Smith, Latin American Division

An analysis of the foreign commerce of Peru for 1924 shows that the United States has been able to maintain the supremacy gained since pre-war days, in the face of unprecedented rivalry. This should be a source of satisfaction to American exporters inasmuch as Peru has always been a price and not a quality market.

Share of Various Countries in Trade.

The more favorable rates of exchange enjoyed by many of our competitors have enabled them in many instances to make heavy gains. Despite these difficulties, however, the United States was able to supply, according to the official *Estadística del Comercio Ex-*

terior, 40 per cent, or goods worth 6,705,093 Peruvian pounds of the total Peruvian importation valued at 16,743,112 pounds. (Average value of the Peruvian pound in 1924 was \$4.05.) The participation of the United States in this trade in 1923 amounted to 5,403,614 pounds.

The United Kingdom increased its exports to Peru in 1924 to the value of 3,121,275 Peruvian pounds from 2,675,690 in 1923; Germany, to 1,718,974 from 1,405,871 pounds; Chile, to 966,936 from 380,486 pounds; Australia, to 120,799 from 38,477 pounds; Italy, to 797,748 from 542,175 pounds; and France, to \$896,481 from 324,551 pounds.

Items Chiefly in Demand.

The chief items for which demand was exceptionally active during 1924 are, in order of importance: Foodstuffs, machinery, tools, and vehicles, textiles, metals and manufactures of metals, stone glass and glassware, drugs, chemicals, and pharmaceutical goods, rough and manufactured lumber, and electrical goods. In foodstuffs, of which imports increased to 3,620,235

in 1924 from 2,399,028 pounds in 1923, wheat accounted for the larger part. The chief competitors of the United States in this commodity were Argentina, Chile, Canada, and Australia. Next in order of importance was rice, which was almost entirely brought from Hongkong. In such important commodities as flour, canned goods, sweetmeats, prepared milk, lard, salmon, and sardines, the United States was almost without a competitor.

Activity in Building Trade.

A considerable expansion in the building trade and sanitation work throughout the Republic during 1924 has given an impetus to the sale of building materials, roofing, cement, and allied products in which the Americans have had a large participation.

EUROPE

Samuel H. Cross, Chief, European Division

AMERICAN GOODS POPULAR IN GERMANY.

Assistant Commercial Attaché Douglas Miller, Berlin, April 28

Owing to the well-known excellence of certain articles that have been sold in Germany for a long time, there is a general inclination on the part of the buying public to believe that any article coming from the United States is superior. Possibly the best reason for this is the large amount of free advertising for the United States that has been going on in the German press for a long time.

Favorable Effects of Recent Press Stories.

Practically all the large Berlin dailies have lately been running articles or books in serial form, describing the United States as a country of great resources, of remarkable mechanical efficiency, and the home of modern ideas. The writers of such articles are not necessarily friendly to the United States, but the net effect of these public statements is to give the impression that all Americans are wealthy if not millionaires and, ipso facto, are accustomed to use only high-quality products.

Motion Pictures and Stage Creating "Good Will."

No one has yet been able to estimate the large amount of advertising for American goods that has come through the motion pictures and the stage. The amusement world of Germany now gets its tone from across the Atlantic. American styles as seen on the film, American tunes brought over by traveling jazz bands, jokes quoted from the columns of month-old New York weeklies and circulated again in translation, all can not fail to have a marked influence on the German habit of mind. A stranger taking an evening stroll down the chief promenade of Berlin's "new rich" can not fail to notice the American touch in the clothing of many persons, in the advertising in shop windows, and in the type of entertainment offered to the public.

This does not mean that a great many American goods are being actually sold in this district at the present time, but it does show that there is a wealth of advertising and "good will" which can be capitalized by firms who are clever enough to take advantage of it. For example, German automobile manufacturers are anxious to install American machinery in the hope that they can thereby achieve equal efficiency and correspondingly low production costs per unit of output.

American Prestige Greatest in Cosmopolitan Centers.

This prestige attaching to American products is not uniform throughout Germany. Naturally it centers in the large cities, particularly those having the greatest touch with the outside world, and therefore more frequent contact with American goods. This includes Berlin and, above all, the ports of Hamburg and Bremen, as well as the centers of population in the occupied territory.

During the period when a customs wall was erected between the Rhineland and the rest of Germany, many foreign goods, including American products, found their way into Cologne, Coblenz, Duesseldorf, and other west-German cities. These goods have given the public a taste for foreign articles which will not easily be lost.

It is not uncommon, in down-town sections of these cities, to see grocery stores whose windows are piled full of American canned salmon and condensed milk. Probably the continued market for American evaporated and condensed milk owes a great deal to the child-feeding work carried on by charitable organizations that gave away large quantities of such milk four or five years ago.

American Army of Occupation a Slight Factor.

The American troops in Coblenz have left very few permanent traces of their stay in Germany. Perhaps the most striking is the continued demand for chewing gum, which is now being imported from the United States in considerable quantities, apparently not seriously handicapped by its increased tariff. The success of the American brand has encouraged a German firm to enter the market with "Audax" chewing gum, one of the first foreign-made brands ever to appear.

Inland Sections as Yet Untouched.

If the occupied territory, the large cities, and the ports are the best market for American articles, the reverse is true of the inland country, especially Bavaria. A study of the shop windows in Munich and other Bavarian cities reveals the fact that American goods are not well known in that part of Germany, and the same is true of rural districts all over the country, especially in east Prussia.

In general, it may be said that those parts of Germany which are out of touch with the west are, very naturally, less accustomed to American products. American firms who desire to enter the German market will, therefore, have the best chances of success in those parts of Germany where similar American products are already established; but firms who have been doing a satisfactory business in Germany for some years might well investigate the chances of increasing their sales by an effort to secure new customers in some out-of-the-way places.

Emigration of Skilled Workmen From Germany

K. Hildesheimer, commercial attaché's office, Berlin, May 2

Although the total German emigration in the calendar year 1924 was considerably below that of 1923, industrial leaders are nevertheless somewhat disturbed over the high percentage of skilled workmen leaving the country and have drawn the attention of the Ministry of Labor to this movement and its injurious effects.

Causes of Emigration and Trades Affected.

The reasons for such large emigration of skilled workmen from Germany are apparent. The considerably lower wages than are paid in most other industrialized countries, together with continued crises, inflation, slumps, and unpromising outlook for the future, induce many workmen to migrate from Germany to the United States, Latin America, and Asia.

The highest percentages of emigrants in 1924 were found in the iron and metal industry, the electrical, and the fine mechanical trades. The next most important groups, in the order named, were textile, mining, building, toy-making, and foodstuffs industries. The emigration of skilled labor from the chemical, paper, leather, and musical-instrument-manufacturing enterprises was considerably lower.

Of the "white-collar class" Germany lost only 2,000 doctors and engineers in 1924, which is a relatively small percentage of the total.

Increasing Flow Checked Somewhat in 1924.

Undoubtedly the difficulties of obtaining the comparatively large capital required for emigration, obstacles placed in the way of emigrants by German authorities, and especially immigration-restriction measures in Great Britain and the United States have

kept the flow of emigrants from Germany on a lower level than would have otherwise been the case.

The total emigration of Germans from the homeland in 1912 and 1913 and in the last six years, 1919-1924, is shown in the following figures:

	Number.		Number.
1912-----	18,500	1921-----	24,000
1913-----	25,800	1922-----	37,000
1919-----	3,100	1923-----	115,000
1920-----	8,500	1924-----	60,000

It is estimated that from this total the percentage of emigrating skilled workmen in 1923 was as high as 40 per cent.

Movement Unlikely to Result in Wage Advances.

Of course, lower wages in German industry (\$1.50 to \$2 a day) can be maintained by the employers for a considerable length of time only provided there is a large number of unemployed always waiting at the factory gates for work. It is stated by a prominent manufacturing enterprise in Berlin that the number of skilled workmen, especially in the machine and electrical industries, is now reduced to the barest minimum necessary for turning out current orders.

In spite of this condition it seems highly improbable that emigration of skilled workmen will in the near future drive up the wages paid in German machinery and other technical manufacturing enterprises. The treasury of most unions is too weak to withstand any long-continued strikes.

Additional information regarding Europe appears in this issue under the following sections:

Transportation:

Foreign orders for German shipyards.

Early completion of Lika railway.

Leipzig obtains regular airplane service.

Tariffs and trade regulations:

Czechoslovakia-Denmark extend provisional commercial agreement.

Czechoslovakia-Sweden negotiate most-favored-nation treaty.

Denmark-Latvia ratify commercial treaty.

France-Siam sign treaty of amity and commerce.

Germany-Spain ratify commercial treaty.

American Consular Officers on Leave

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name	Post	Expiration of venue	Address
Albrecht, Charles H.	Bangkok, Siam	June 23	217 South Forty-sixth Street, Philadelphia, Pa.
Burri, Alfred T.	Puerto Cortes, Honduras.	June 23	Department of State, Washington, D. C.
Davis, Raymond	Paris, France	June 21	Care of Marshall Davis, Esq., Casco Mercantile Trust Co., Portland, Me.
Fullerton, Hugh S.	Antwerp, Belgium	June 13	Department of State, Washington, D. C.
Lee, Frank C.	Bradford, England	June 28	1825 Phelps Place, Washington, D. C.
Orr, George	Panama City	July 1	115 South New Hampshire Avenue, Atlantic City, N. J.
Waterman, Henry S.	San Jose, Costa Rica	June 26	2914 Clay Street, San Francisco, Calif.
Wolcott, Henry M.	Bilbao, Spain	June 20	Care Mr. C. M. Lord, 96 West One hundred and eighty-third Street, New York, N. Y.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

JAVA IMPORTS COMING FROM EUROPE AND JAPAN

Based on reports of Consul Rollin R. Winslow, Soerabaya

The import trade of Java, which amounts to about 75 per cent of the total import trade of the Netherlands East Indies, is becoming the center of a three-cornered contest. The Netherlands naturally continues as the chief supplier of its colony's demand for manufactured goods but the following three places are increasingly contested by Great Britain, Germany, and Japan.

Principal Imports and Countries of Origin.

Germany has attained a remarkable advance in the import trade of Java. England, although occasionally losing a little ground, holds a prominent position, and Japan is slowly gaining a strong foothold in many important import lines. The United States follows this group in the list of countries exporting to Java, but, together with the remaining countries of Europe and the Far East, plays a comparatively minor part in the import trade as a whole.

The participation of the countries specified in certain important imports of Java, for the last three years, is shown in the following table:

Imports into Java from principal countries

1 Include cooking utensils, spikes, and wire nails in kags.

American Participation Largely in Noncompetitive Lines.

Only in the case of automobiles, tires, automobile accessories, and petroleum products does the United States occupy an important position. In competitive lines, with the possible exception of automobile tires, American manufacturers have not been able to gain a fair share of the trade. In the case of tires Japan offers keen competition. Automobiles, kerosene, moving pictures, rosin, and old newspapers, however, come almost entirely from the United States. In chemical lines, the trade is going to England. Although American chemical price quotations compare favorably with those of that country, lower freight rates from England constitute the deciding factor. The very lucrative trade in cotton goods in this market is contested by England and Japan, the latter supplying the cheaper grades. The annual imports of cotton goods from the city of Manchester exceed the total of all products imported from the United States.

German Trade in Dyes and Iron and Steel Large.

Germany controls the dye trade and is gaining control of the iron and steel and machinery markets. Australia is the predominating source of wheat flour, meats, butter, and other dairy products. The cement trade is monopolized by Japan, as well as that in cheap notions and silks. France and Japan are contesting the market for bicycle tires. England monopolizes the trade in cigarettes, paints, and galvanized-iron roofing.

Factors Favorable to Europe and Japan.

Low production costs in Germany and Japan, and lower freight rates from those countries, are the chief factors responsible for the decline in imports from the United States since the war. The depreciation of the Japanese yen has also been very advantageous to Japanese trade with Java.

German and English manufacturers are sending increasing quantities of goods to this market on the consignment basis. Their representatives, moreover, frequently spend years in the islands studying their special requirements. It is impossible for a traveling salesman, on a more or less hurried trip through the Far East, to acquire a detailed and accurate knowledge of the peculiarities of Java business and trade.

Native Demand Largest Element in Import Trade.

Aside from kerosene, practically no American product sent to Java is destined for the native trade. Out of a total population of 35,000,000, about 135,000 inhabitants are Europeans. It follows, therefore, that expansion of the import trade of this island can only be accomplished by catering to the needs of the vast numbers of natives and other orientals who make Java the most densely populated land area in the world. Germany, realizing this, has made it possible for the people of Java to purchase bicycles on the installment plan.

Cigarettes, notions, cheap jewelry, bicycle tires, underclothing, and dyes are other items of importance in the native trade, in which the American exporter should have a share more commensurate with the annual purchases of Netherlands East Indian raw materials by the American manufacturer. The standard of living among the natives is steadily rising and the potential opportunities of the market are inestimable.

As represented on the map, this island does not appear impressive, compared with China, but, in many lines, it is a more important market. There is a greater number of automobiles in Java than in either China or Japan and a larger number in all the Netherlands East Indies than in those two countries combined. Such a fact demonstrates the development of the island of Java, which is only slightly larger in area than the State of New York. Lower freight rates, lower production costs, and a greater and more concentrated interest are the essentials to a larger participation in this market by the United States.

Far Eastern Trade and Economic Notes

Gain in Declared Exports from Japan to United States.

Declared exports from Japan to the United States during the month of April were valued at \$29,400,000, an increase of \$4,100,000 over March and of \$6,900,000

compared with April, 1923, according to Consul General Nathaniel B. Stewart, Tokyo. The principal items contributing to the April total were: Raw silk, \$25,200,000; waste silk and textiles, \$175,000; chemicals and drugs, \$173,000; tea, \$31,000; cotton piece goods, \$163,000; and pottery, \$301,000. In comparison with March there were increases in raw silk, tea, and pottery, and declines in waste silk and textiles, chemicals and drugs, and cotton piece goods.

Exports from Shanghai to United States Show Increase.

Declared exports from Shanghai to the United States for the first quarter of 1925 amounted to \$13,459,750, compared with \$9,840,099 for the corresponding period in 1924, or increasing approximately 45 per cent, according to Consul General Edwin S. Cunningham, Shanghai. The largest single increase occurred in textiles, which totaled \$8,951,696 for the first three months in 1925 and \$4,879,714 in 1924. Important decreases took place in ores, metals and manufactures thereof, which, excluding machinery and vehicles, dropped from \$799,272 to \$162,558. Exports of Mah Jongg sets decreased from \$403,998 for the first quarter of 1924 to only \$457 for the corresponding period in 1925.

MINERALS

Guy C. Riddell, Chief, Minerals Division

BRITISH PETROLEUM TRADE IN FIRST QUARTER OF 1925

Considerable Increase Evident in Comparison with Corresponding Months of 1924—Advance of Approximately 560% in Imports of Spirits Other Than Gasoline—Conspicuous Gasoline Export Gain

Consul General H. L. Washington, London, April 28

The official figures of British trade in petroleum during the first three months of 1925 show a considerable increase over those for the corresponding months of 1924. Imports of refined products amounted to 312,791,717 American gallons, while imports of crude totaled 158,296,412 gallons. Exports of refined products amounted to 44,492,244 gallons and reexports to 20,326,704 gallons. Reexports of crude, which during the first three months of 1923 amounted to 2,041,846 gallons, have practically ceased, as only 269 gallons were reexported in the first three months of 1925.

Import Gains Recorded—Decreases.

During the first quarter of 1925 imports of gasoline showed an increase of 22,247,601 gallons (about 21 per cent) over those for the same months of 1924. Imports of spirits other than gasoline advanced approximately 560 per cent—from 432,451 gallons during the first quarter of 1924 to 2,857,927 in the corresponding 1925 period. An increase of more than 30 per cent is noted in receipts of kerosene and a slight increase in those of gas oil. As would be expected, importations of crude are continually on the increase, amounting to 55,228,112 gallons more in the first quarter of 1925 than in the first quarter of 1924—an advance of about 53 per cent.

Decreases between the two periods are observed in importations of lubricating oil (15 per cent), fuel oil (7 per cent), and other sorts (about 47 per cent).

British Petroleum Imports Summarized.

Import figures for the first quarter of 1923, 1924, and 1925, in American gallons, are as follows:

Petroleum imports of Great Britain

Products	First-quarter—		
	1923	1924	1925
	Gallons	Gallons	Gallons
Crude.....	70,488,286	103,068,300	158,296,412
Gasoline.....	83,815,498	104,193,715	126,441,816
Other spirit.....	212,618	432,451	2,857,927
Kerosene.....	53,696,368	31,053,748	40,574,362
Fuel oil.....	86,437,342	106,868,981	98,787,313
Gas oil.....	22,953,605	19,324,195	19,600,973
Lubricating oil.....	21,856,329	29,145,248	24,611,014
Other.....	12,614	72,677	38,813
Total.....	339,472,671	394,159,315	471,088,129

Gasoline Shows Most Conspicuous Export Increase.

Increases are noted in exports of refined products during the first quarter of 1925 over those for the first quarter of 1924, the most conspicuous being an advance

of 191 per cent in the exportation of gasoline. An increase of approximately 60 per cent is recorded for exports of fuel oil, 16 per cent for kerosene, 23 per cent for lubricating oil, and 37 per cent for other refined products.

Decreases occurred in the exportation of spirit other than gasoline (16 per cent) and of gas oil (20 per cent).

The following table shows export statistics for the first quarter of 1923, 1924, and 1925, in American gallons:

Petroleum exports from Great Britain

Products	First quarter—		
	1923	1924	1925
	Gallons	Gallons	Gallons
Gasoline.....	2,964,913	5,887,483	17,133,038
Other spirit.....	17,880	14,077	11,780
Kerosene.....	2,731,213	3,247,178	3,806,194
Fuel oil.....	17,752,711	13,847,486	21,133,608
Gas oil.....	4,270	124,902	99,730
Lubricating oil.....	1,710,912	1,840,075	2,276,611
Other.....	7,584	22,796	31,254
Total.....	25,189,492	24,983,907	44,492,244

Petroleum Products Reexported—Paraffin—Fuel Oil Prices.

Reexports of gas oil during the first three months of 1925 increased by 154 per cent over the corresponding period of 1924, while the increase in reexports of gasoline amounted to 39 per cent and of kerosene 20 per cent. During the same period reexports of fuel oil decreased by 2,708,842 gallons, or 87 per cent, and reexports of lubricating oil by about 10 per cent.

Reexports during the first quarter of 1923, 1924, and 1925, in American gallons, were as follows:

Reexports of petroleum products from Great Britain

Products	First quarter—		
	1923	1924	1925
	Gallons	Gallons	Gallons
Crude.....	2,041,846	1,488	269
Gasoline.....	7,740,065	9,218,295	12,891,991
Other spirit.....	10,303	9,742	2,724
Kerosene.....	665,773	1,698,020	5,108,472
Fuel oil.....	162,091	3,079,218	370,842
Gas oil.....	361,005	529,748	1,440,317
Lubricating oil.....	745,644	548,736	501,354
Other.....	48	---	5,004
Total.....	11,726,675	15,081,256	20,326,973

NOTE.—Figures given in American gallons.

Paraffin wax to the amount of 337,430 hundredweight was imported in the first quarter of 1924, and 298,690 in the first quarter of 1925. Exports amounted to 52,027 hundredweight in 1924 and 72,381 in 1925, and reexports to 15,741 and 18,163, respectively.

Fuel oil for bunkers totaled 69,895,097 gallons in the first quarter of 1924 and 64,557,181 gallons in the corresponding period of 1925. There have been no changes in current prices of fuel oil for bunkering at British ports, the prices per ton ex-wharf being £3 17s. 6d. for standard bunker and £4 17s. 6d. for Diesel, except at Leith, where the price per ton by barge for standard bunker is £4 and for Diesel £5.

Situation in German Metals Market

Translated by Vice Consul C. E. Macy, Coblenz, from German press, May 1

The copper market was the first to show the depressing effects of uncertain business conditions in world markets. The New York electrolytic price is much below the pre-war quotation, and offers from Katanga and elsewhere have been priced, especially in large lots, considerably below those from New York. German purchases, however, have been small. Germany is not in the market at present, owing to bad economic conditions in general and to large stocks on hand. The present demand for electrocopper is not so great as that for the standard metal. Since the war copper scrap from the rolling mills and other sources has been used for electrical work. There is no longer, accordingly, so great a contrast between the prices of electrolytic copper and of the standard metal, and the German postal administration does not intend, apparently, to place its orders for 6,000 kilometers of telephone cable immediately.

Lead Imported—Zinc Demand Quiet—Precious Metals.

Many shipments of lead have recently been received from Mexico, Spain, and Burma.

Zinc has recently become more expensive than lead, although the cable and electrical industries are flourishing. Demand for zinc, however, is quiet, due to decreased activities in the brass foundries. The Belgian zinc-plate industry has made no great effort to regain its western German market, and there seems no immediate likelihood that it will undertake anything new there, since its output has been considerably decreased. No revival of business is noted in scrap-metal trade, although future prospects are said to be good.

In the precious-metal trade, the only demand for silver is for that having a fineness of 999 or 996 at the least, while Hanau and Pforzheim are asking for gold in bars of 1 kilo instead of 3.

Tin-Plate Prices Dependent Upon London—Competition.

The price of tin plate in Germany is dependent on the London market. Before the war Germany covered 40 per cent of its needs in England, but the British industry now has serious competition from both Germany and America. The latter produced practically no tin plate in pre-war times; at present, although England's production is 10 times that of Germany, the United States output is 2½ times that of England.

The present German production not only covers domestic needs, but allows 50 per cent of the total output to be exported. Strong competition exists between the English and German works. English production costs are lower than those in Germany, due to cheaper coal and transportation costs. In Germany business is quiet at present. A greater demand is anticipated for the middle of the year, when the fruit-canning industry enters the market.

Additional information regarding minerals appears in this issue under the following sections:

Cable review, Europe:

- Transvaal gold output in April favorable.
- New platinum and diamond discoveries in South Africa.
- British nonferrous industries steady.

Transportation: Liverpool extends oil-storage facilities.

Tariffs and trade regulations:

- Portugal—New import duty on asphalt slabs.
- Trinidad—Proposed export duties on asphalt.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

RECENT CHANGES IN UNITED STATES EXPORTS OF FOODSTUFFS

Leslie A. Wheeler, Foodstuffs Division

There have been a number of interesting developments in the export trade in foodstuffs, in addition to the increase in volume, which may be brought out by comparing the postwar exports with those of the five years immediately preceding the war.

Foodstuffs Exports by Classes.

The following table shows the foodstuffs exports of the United States divided into 11 homogeneous classes and 1 miscellaneous group, and indicates the trend in the trade in each during the past three years as compared with the pre-war period, 1910-1914. The proportionate part of the total trade made up by each class is also given.

Exports of foodstuffs by classes from the United States

Classes	1910-1914 average		1922		1923		1924	
	Thou- sands of dol- lars	Per cent of total	Thou- sands of dol- lars	Per cent of total	Thou- sands of dol- lars	Per cent of total	Thou- sands of dol- lars	Per cent of total

¹ Includes some inedible fats and oils.

Cereals Exported in Larger Quantities.

Cereals and cereal products, canned foods, and fresh fruit each made up a larger percentage of the total trade during 1922-1924 than prior to the war, but meats, animal and vegetable fats and oils, and feedstuffs have been of decreased relative importance in the foodstuffs trade. The remaining classes—dairy products, dried fruit, vegetables, and the miscellaneous items, such as coffee, sugar, and glucose—have held about the same relative position.

Cereals and cereal products, under which class are included all grains and grain preparations, such as flour, meal, and biscuits, make up between 40 and 50 per cent of the total foodstuffs exports. Wheat grain and flour are the outstanding items, followed by rye, barley, and corn. With the exception of corn and oats, all cereals have been exported in larger quantities during recent years than before the war. The decrease in the shipments of corn and oats has been partly offset, however, by the increased exports of corn meal and of oatmeal and rolled oats.

Animal Fats and Oils Hold Second Place.

Animal fats and oils make up the second largest class in the foodstuffs export trade. Lard is the only item in this class to show appreciably larger postwar exports. During pre-war years lard made up 62 per cent of the total value of the exports of animal fats and oils, while during the past three years this product has accounted for almost 80 per cent of the total. Exports of tallow have been somewhat larger, but the shipments of neutral lard and oleo oil have been much smaller.

Meats made up almost 15 per cent of the total foodstuffs exports of the United States during 1910-1914, but comprised only 12 per cent of the total in 1924. Bacon, hams, and shoulders are the outstanding meat exports, making up almost 80 per cent of this class in recent years and over 85 per cent of the total before the war. Shipments of bacon and ham, as well as uncanned sausage and fresh pork, have been much larger in recent years than prior to 1914, but the exports of fresh, pickled, and cured beef and veal have been smaller.

Canned Goods Make Largest Percentage Increase.

Canned goods show perhaps the most interesting developments in the foodstuffs trade of this country. During 1910-1914 canned foods made up 3.8 per cent of the total value of the foodstuffs exports, while in 1924 this class constituted 7.3 per cent of the total. This is by far the largest relative increase made by any class of foodstuffs. Canned fruit, fish, and milk have made particularly noteworthy increases. Pears, peaches, pineapples, and apricots are the leading items in the canned-fruit trade. Exports of canned milk have been increasing steadily. Exports of evaporated milk, which is preferred in Europe, exceed those of the sweetened condensed milk, which goes largely to Latin America, particularly Cuba, and to the Orient.

Although canned salmon still is the leading item in the trade in canned fish, the remarkable increase in the exports of sardines is the feature of this trade. Exports of canned salmon amounted to 67,000,000 pounds in 1924, as compared with 51,000,000 pounds of canned sardines. Canned asparagus and vegetable soups are the leading canned vegetable exports. Canned sausage is the only canned meat which shows a tendency to increase.

Apples Lead in Fresh-Fruit Trade—Prunes and Raisins Make Records.

Fresh fruits made up 4.4 per cent of the total value of the foodstuffs exports in 1924, as compared with 2.4 per cent of the total during the pre-war period. Apples are the most important item of the fresh-fruit exports and show the largest increase. The exports of apples in 1924 amounted to 1,881,000 barrels and 6,719,000 boxes, with a total value of \$24,000,000. The boxed apples originated principally in the Pacific Northwest and the barreled apples are shipped from the eastern apple-growing States. Oranges,

pears, and berries, which are the other important fresh-fruit items, have been exported in increasing quantities during recent years. Canada takes the bulk of these shipments.

The unusually large shipments of prunes and the increasing exports of raisins in 1924 are the outstanding features of the dried fruit trade. Exports of prunes from the United States in 1924 reached the record figure of 221,000,000 pounds. Of the various dried fruits raisins have shown the largest increase in exports in recent years as compared with pre-war years. The record exports of 93,891,000 were made in 1922. In 1924 the exports amounted to 92,140,000 pounds. Increased attention to new markets and to the export trade in general accounts for the increasing exports of raisins. The remaining dried-fruit items—apricots, peaches, and apples—show, upon the whole, smaller exports in postwar years than during 1910-1914.

Feedstuffs Show Relative Decrease—Vegetables Comprise Small Item.

The exports of feeds and fodders, of which cottonseed and linseed cake and meal are the leading items, show a decreasing relative importance in the foodstuffs trade. Most of these feeds go to western Europe, where a peculiar feature of the trade is the preference shown by the importing countries for either the cottonseed or linseed products. The Netherlands, for example, takes large quantities of linseed cake and meal but practically no cottonseed cake and meal, but the opposite is true in the case of Denmark, which greatly prefers the cottonseed products.

Vegetables, as a whole, excluding canned vegetables, make up about 1.5 per cent of the total foodstuffs exports. Potatoes, onions, and dried beans are the principal items in this trade. These products go chiefly to Cuba, Canada, and Mexico.

Oriental Oils Reduce European Demand for Cottonseed Oil.

Excluding canned milk, which is included in canned food, butter and cheese are the principal dairy products exported from this country. Eggs are also included in this class. Exports of butter and eggs have been considerably larger in postwar years than before the war. With the exception of 1924, cheese has also been shipped in larger quantities than during 1910-1914, although the imports of cheese into the United States are much larger than the exports.

Vegetable oils and fats, particularly cottonseed oil, have been exported in much smaller quantities since the war than before. Exports of cottonseed oil declined from a pre-war yearly average of 271,000,000 pounds to 43,000,000 pounds in 1924. One of the principal reasons for this decline has been the increasing competition in the European markets of such oriental oils as soya bean, peanut, rapeseed, and sesame.

Sugar Exports Decline—Miscellaneous Items.

The exports of fish, other than canned, from the United States are small. Such dried and cured fish as haddock, hake, pollock, and herring are exported in small quantities. Pickled salmon in barrels make up the leading item.

Under the miscellaneous classification are included such commodities as do not logically belong to any one of the other 11 classes. With the exception of green coffee, all of the important items in this class show

increased exports since the war. There have been particularly large shipments of refined sugar during recent years. Exports of sugar are declining, however, with the increasing production of beet sugar in Europe.

The inclusion of Porto Rico and Hawaii as customs districts of the United States accounts for the domestic exports of coffee. Most of the domestic exports of coffee are shipped directly from Porto Rico.

Glucose, cornstarch, confectionery, and hops, the only other important items in the miscellaneous class, have been exported in larger quantities during recent years than before the war.

Additional information regarding foodstuffs appears in this issue under the following sections:

Cable review, Europe: Italian crops retarded.

Tariffs and trade regulations:

Argentina—Restriction on imports of fresh fruits.

Canada—Removal of import restrictions on live fowl from New Jersey.

Germany—Proposed increase in import duties on certain foodstuffs and leaf tobacco.

Hungary—Reduced internal tax on sugar.

Iraq—Revised import duties on cigarettes, manufactured tobacco, and saccharine.

Italy—Postponement of special marking of canned fruits and vegetables.

Foreign trade opportunities.

Supply of Rags for German Paper Industry

The present available supply of rags in Germany for the paper and board industries, including 22,000 tons of linen, cotton, and jute rags imported in 1924, is estimated at approximately 289,000 tons by the Central Verband des Deutschen Rohproduktionsgewerbes. Accurate statistics as to the domestic supply of rags is not obtainable, but is estimated at 400,000 tons per annum. (Consul F. F. F. Dumont, Frankfurt on the Main.)

German Paper and Allied Industries

On the whole conditions are considered satisfactory in German paper-making centers according to reports from consular officers. Prices of base stocks continue to show an upward trend, however, and are forcing prices of finished paper and paper products to follow. A shortage of rags and waste is reported by the pulp mills, and the fine paper industry in particular is reported to have been seriously handicapped for the past six months by the scarcity and high cost of this material. Conditions in various branches of the German pulp and paper industries have been made the subject of Special Series No. 80 of the Paper Division, Bureau of Foreign & Domestic Commerce.

Quebec Mineral Production

The Minerals Division is issuing Special Circular No. 209, Mineral Production of Quebec in 1924, in mimeographed form. Copies may be obtained from this division or from the district or cooperative offices upon request, mentioning number of the circular.

CHEMICALS

Charles C. Concannon, Chief, Chemical Division

THE CHEMICAL EXPORT TRADE OF THE UNITED KINGDOM

Colonial Possessions Largest Consumers of British Chemicals—Japan Ranks Second—America an Important British Export Market

Lloyd A. Nolan, Chemical Division

The United Kingdom is one of the leading countries exporting chemical and allied products to all parts of the world. Exports of British-produced chemicals amounted to £25,497,000 in 1924 against £25,686,000 in 1923 and £20,261,197 during 1922, according to the Board of Trade returns. This diminution in British chemical exports during 1924 was probably due to the dock workers' strike, which had a disturbing effect on British trade.

Since detailed British statistics for 1924 are not available, the export trade for 1923 and 1922 has been analyzed in this review of the foreign chemical trade of the United Kingdom.

Importance of Colonial Possessions.

The British Empire's possessions are very large consumers of chemicals manufactured in the United Kingdom. In some groups, such as prepared medicines, paints and paint materials, and fertilizers, almost half of the British exports are destined for the colonies. In the case of heavy chemicals, Japan is the best market, followed by British possessions, including British India, South Africa, and Australia. The United States is an important export market for British creosote oil, linseed oil, and shellac.

Leading Heavy Chemicals Exported—Sodium Compounds.

The leading chemical commodities comprising the British export trade in heavy chemicals are soda ash, soda crystals, and sodium bicarbonate; caustic soda; copper sulphate; sodium cyanide; sodium sulphate; glycerin; magnesium chloride and sulphate; cream of tartar; and bleaching powder.

Export markets for British soda ash, soda crystals, and sodium bicarbonate, in the order of their importance as consumers, are Japan, British India, China, Australia, Argentina, the Netherlands, Norway and Sweden. Exports during 1923 reached 5,960,433 hundredweight, of which Japan took about 32 per cent. British India imported slightly more than 744,000 hundredweight, and China about 500,000. Australia, Argentina, and the Netherlands received greater amounts of soda ash and carbonate of soda during 1923, in comparison with 1922. Norway has been taking more of British alkali, probably due to the development of the nitrogen fixation industry. Increased industrial activity in Sweden during 1923 seems to account for the greater consumption of British alkali.

British export trade in caustic soda parallels to some extent the trade in soda ash, soda crystals, and sodium bicarbonate. For 1923, the total shipments were 1,559,442 hundredweight, a very slight advance over the previous year. Exports to foreign countries accounted for 1,249,176 hundredweight, while British possessions received 310,266. The six countries, Japan, Brazil,

Germany, Argentina, Mexico, and China, took almost 60 per cent—Japan, 18 per cent; Brazil, 13 per cent; Germany, 9 per cent; Argentina, 8 per cent; and Mexico and China, about 1 per cent each.

Sodium cyanide, used chiefly in the metallurgical industries for the extraction of the precious metals, is exported from the United Kingdom, especially to colonial possessions. The Transvaal received 55,956 hundredweight, or approximately 37 per cent of the total British shipments in 1923. Canada took 25,478 hundredweight; Australia, 9,466; Japan, 10,399; and Mexico, 7,396.

British sodium sulphate, which enters into the manufacture of sodium carbonate, and is used by the glass, paint, and dye industries, finds its chief outlet in the Scandinavian countries—Norway, Sweden, and Finland. Belgium also consumes large amounts of this product manufactured in the United Kingdom.

Copper Sulphate Trade Large—Glycerin.

Considerable quantities of British copper sulphate are exported annually. France, a wine-producing country, is the United Kingdom's best market for this chemical, requiring large amounts of insecticides and fungicides. Out of a total export of 42,091 tons, France took 18,890. Shipments to Greece amounted to 4,036 tons, while Italy received 3,744, and Portugal 2,693. The United States' receipts of British copper sulphate during 1923 amounted to 2,327 tons.

The demand in foreign markets for glycerin of British manufacture is for the refined form, although smaller amounts of crude glycerin are exported, chiefly to the United States, the Netherlands, and Germany. Refined glycerin produced in the United Kingdom goes largely to Japan, China, and the colonial possessions, especially the Transvaal, British India, and the Cape of Good Hope.

Fertilizers Produced—Exports of Sulphate of Ammonia.

The chief fertilizers manufactured in the United Kingdom are sulphate of ammonia, superphosphate, basic slag, and by-products of other industries, such as fish meal, meat meal, and dried blood.

British exports of sulphate of ammonia sold abroad during 1923 aggregated 253,286 tons—an advance of more than 50 per cent over the previous year's figure. Japan was the best market for this important fertilizing material, having taken about 28 per cent of the total during 1923. In 1922 American sulphate of ammonia reached Japan in large quantities, the United States having supplied about 89 per cent of the Japanese imports. Germany at that time was out of the market and Great Britain furnished the remaining requirements. During 1923, however, British exporters of sulphate of ammonia cut rather heavily into the

American trade. The percentage of Japanese imports from the United States declined to 36 per cent of the total, while Great Britain gained at the expense of the United States. Spain ranks next as a consumer, taking approximately 25 per cent of the total British shipments during 1923. The remaining important markets are Java, France, the Netherlands, and Italy.

Guano—Basic Slag—Superphosphates.

Guano, including manures and bone meal, is the second largest item among fertilizer materials entering the British export trade. This material is imported chiefly from colonial possessions, Belgium, and Norway. Exports of guano during 1923 totaled 53,431 tons, valued at £433,515. The United States is the largest consumer of this product, having received almost half of the shipments during 1923. Japan and France are the best customers for the remaining exports of guano.

Basic slag produced in the United Kingdom finds its chief outlet in the Empire's colonies, New Zealand accounting for half of the exports, or 10,050 tons; the Irish Free State, 2,392; Canada, 1,802; and other colonial possessions, 2,159.

Colonial possessions are also the chief consumers for superphosphates, having taken 9,486 tons in 1923, or approximately 75 per cent of the total. Other countries of destination for 1923 were the Irish Free State and British South Africa.

Exports of British Paints, Pigments, and Varnishes.

British exports of painters' colors and materials, including paints and colors ground in oil or water, prepared paints and enamels, zinc white and lead sulphate, white lead, ochre and other colors, amounted to 1,542,626 hundredweight, valued at £3,544,455, in 1923, in comparison with 1,224,861 hundredweight, £2,918,009 for 1922. The figures of the export trade in paints of the United Kingdom showed an improvement during 1923 over 1922. As in the case of other British chemical commodities the colonial possessions consume large amounts of these products, and seem to offer a constantly expanding market for chemicals of British manufacture. British possessions accounted for over half of the exports of prepared paints and enamels in 1923, or 187,260 hundredweight, and about two-thirds of the exports of paints and colors ground in oil or water. These two groups are the largest items in the British export trade in paints and paint materials. The countries of destination for British paints are too numerous to mention in this brief review of the export trade in chemicals of the United Kingdom.

Varnish exports from Great Britain, which are not included in the total, showed an expansion from 1,088,326 gallons in 1922 to 1,292,684 in 1923. The best markets for varnish exported from the United Kingdom, in the order of their importance as consumers, are British India, France, Argentina, Italy, Australia, and Sweden.

Coal-Tar Industry and Trade Continues to Develop.

The center of the coal-tar products industry in the United Kingdom is located in the coal-bearing areas. England has established a healthy self-contained coal-tar chemical industry. Production statistics furnished the Board of Trade by the British producers are confidential and, therefore, not available; however, it is stated that in 1922 and 1923 Great Britain produced 80 per cent of the dyes used in its

industries. Larger amounts of British coal-tar products were exported during 1923 in comparison with 1922. Shipments of creosote oil almost doubled in quantity. The United States is practically an insatiable market for British creosote oil, used chiefly for timber preservation. In 1923 it took 42,266,246 gallons, an amount nearly double that of the previous year.

Exports of benzol during 1923 amounted to 2,291,865 gallons, while during 1922 they were insignificant—about 57,000 gallons. Intermediate coal-tar chemicals—naphtha, carbolic acid, and naphthalene—showed greater export gains in 1923. Export statistics during the past few years indicate that with the development of the domestic industry the United Kingdom has been constantly obtaining a more extensive foreign trade in coal-tar chemicals.

Whereas the United Kingdom is a large seller of creosote oil to the United States, it is the leading purchaser of American benzol, which is required in vast quantities for British consumption. The exports from the United States in 1923 were more than 100 per cent greater than during 1922. This product is almost entirely consumed as a motor-fuel constituent with petrol, although small quantities are employed as a solvent.

British Export of Prepared Medicines Large.

The United Kingdom carries on an extensive foreign trade in proprietary medicines and drugs. In 1923 this trade aggregated about £2,800,000. British possessions account for approximately 70 per cent, while the remainder goes chiefly to countries in Europe, the Far East, and South America. According to the British official statistics, the outstanding items are classified as proprietary medicines, other prepared medicines, quinine and quinine salts, ointments and liniments, and medicinal oils. Exports of these items rose in value from £2,389,788 in 1922 to £2,716,984 during 1923, an advance of 12 per cent. Shipments of quinine and salts, however, showed a falling off in 1923 compared with the preceding year—from £253,012 to £208,317. The largest gains occurred in the prepared medicine group. Exports of prepared medicines, classified as foreign and colonial merchandise, or reexports of merchandise which originated in the British colonies or foreign countries, declined in value from £300,172 in 1922 to £288,489 during 1923. These commodities go chiefly to China, Japan, the Union of South Africa, British India, Australia, New Zealand, and other British possessions. The United Kingdom enjoys a worldwide market for proprietary medicines, supplying large quantities to the Empire's possessions, as well as furnishing countries in Europe, Asia, Africa, and Mexico with very considerable amounts.

Perfumery Trade Comparatively Small—Essential Oils.

In comparison with the large British export trade in medicinal preparations, the trade in perfumery, which includes cosmetics, toilet requisites and products used in the manufacture thereof, according to the statistical classification of British exports, is relatively small, about one-fourth that of prepared medicines and drugs, or £616,313 in 1923 and £502,179 in 1922. Approximately 80 per cent of the exports of perfumery from the United Kingdom went to British possessions. The outstanding colonies which consume considerable amounts of British perfumery are Australia, British West Africa, New Zealand, Bombay,

Canada, and British South Africa. The remaining exports go chiefly to Japan, the United States, Netherlands, Argentina, Spain, and China.

Essential oils are imported into the United Kingdom from France, Italy, British India, United States, and Ceylon. The value attained in 1923, £960,449, represented an increase from £839,767 in 1922. Exports of this foreign and colonial commodity find their chief outlet in France, the United States, Germany, the Netherlands, Japan, and Australia. Their value reached £371,789 during 1923 and £349,028 in 1922.

Leading Items of 1924 Chemical Export Enumerated.

The quantities and values of the leading items among British exports of chemical products in 1924 are enumerated in the following table, taken from British official statistics:

British exports of chemicals during 1924

Products	Quantity	Value
Acids:		
Sulphuric..... hundredweight.....	31, 219	£37, 492
Tartaric and tartrates..... do.....	13, 866	80, 727

American Receipts of British Chemical Products.

Creosote oil represented approximately one-third of the value of the total receipts of chemical products from England to the United States during 1923, in comparison with one-eighth for 1922, or \$6,874,943 and \$2,228,508, respectively. The next largest item imported was linseed oil, which fell off about 50 per cent in value during 1923, compared with the preceding year. Receipts of shellac from England advanced during 1923, having reached \$1,886,418 (1923) and \$1,584,393 (1922). The products already mentioned—creosote oil, linseed oil, and shellac—accounted for about 57 per cent of the total American receipts of chemical and allied products from England for 1922 and 1923.

The following table shows the quantity and value of the leading group of chemicals imported by the

United States from England, and the conspicuous items in each group, during 1922 and 1923:

Principal United States imports of chemicals from England

Products	1922		1923	
	Quantity	Value	Quantity	Value

Corporate Rights of Silent Partnerships Taxed in Germany

According to a Federal decree of April 27, 1925, printed in the Reichsanzeiger of April 30, 1925, the tax on corporate rights (Gesellschaftssteuer) will be reassessed upon silent partnerships as of June 1, 1925. The tax on corporate rights forms part of the tax on the transfer of capital (Kapitalverkehrssteuer) of April 9, 1922. It is collected upon the founding of commercial companies, the normal rate being 5½ per cent for stock companies and 1 to 3 per cent for other commercial companies, fusions, etc. The tax on the establishment of silent partnerships is one-half per cent of the capital invested. It was suspended under the second emergency decree on taxation of December 19, 1923, because of its unprofitableness. (Consul General William Coffin, Berlin.)

LUMBER

Axel H. Oxholm, Chief, Lumber Division

DESTINATION OF UNITED STATES COOPERAGE EXPORTS

American cooperage stock, as will be seen by referring to the map on the second page of the cover, is shipped all over the world. Wherever barrels are used American staves are in demand.

The total exports from the United States of all classes of cooperage in 1924 were valued at \$9,797,000. Although not yet equaling in value 1913 exports, which were \$11,093,000, they represent an improvement of over \$500,000 as compared with 1923 and \$2,500,000 over 1922.

The principal increase was in tight staves, shipped largely to the wine-producing countries of Europe and Northern Africa and to the United Kingdom for use in the brewing industry—which indicates that the large stocks accumulated in those countries shortly after the end of the war have largely been disposed of.

Many Classes of Cooperage Exported.

The diagram on page three of the cover shows the various classes of cooperage exported to the leading foreign markets. Many countries which do not have workmen skilled in the manufacture of barrels from the rough staves import the semimanufactured article in the form of shooks, while other countries purchase the empty barrel already made up.

Argentina the Principal Foreign Market.

Exports of cooperage to Argentina during 1924 were valued at over \$2,740,000, or about 28 per cent of our total shipments. This figure shows little variation from the preceding year, when they were worth \$2,778,000, but the exports are about 10 per cent less than 1922. In 1913, the total was \$2,328,000. Our business has, therefore, remained practically stationary.

The wine industry is the largest consumer of American cooperage in Argentina, taking almost entirely tight shooks owing to the lack of skilled coopers to manufacture the rough staves into barrels.

American oak staves have a firm hold on the Argentina market and will probably continue to be the principal source of supply.

The meat-packing industry also uses a small amount of cooperage for the export of tallow, fats, etc.

Canada and France Other Important Markets.

Although Canada and France each took slightly over \$1,000,000 worth of cooperage during 1924, they used entirely different stock. France uses tight staves almost exclusively, but Canada takes considerable slack staves and heading.

The wine industry is the principal consumer of staves in France, which are practically all imported.

The United States is the principal source of supply for France, and during 1924 approximately 50 per cent of the total staves imported were from this country. Before the war Russia shipped considerable staves to France, principally to Bordeaux and Marseille. These

are now reappearing, and several large shipments have arrived in Bordeaux since the beginning of this year.

Other European Markets.

England taking \$800,000, Spain \$500,000, Portugal \$450,000, the Netherlands \$125,000, and Scotland \$80,000, were other important European markets for American cooperage.

Although having no wine industry, the United Kingdom consumes large quantities of cooperage for the manufacture of beer and whisky barrels, vinegar, etc. The herring industry of Scotland is also an important consumer. Spain and Portugal use tight staves almost exclusively in the manufacture of wine casks and to a small extent for containers for olive oil. While some chestnut, both domestic and Italian, has been used for these purposes, it has not been found entirely satisfactory and is considered a cheap substitute for American oak.

In addition to the wine industry, Spain uses quantities of staves for grape containers in the Malaga and Almeria districts.

North and South Africa.

Algeria and Tunis are other important markets for American staves, taking a total value of \$325,000 during 1924. Practically all the staves used in these countries are imported and are used largely by the wine industry.

Cape Province, British South Africa, has also an important wine and vinegar industry, and received over \$55,000 worth of tight staves last year.

Mexico and West Indies.

Other important markets are Cuba, taking \$470,000; Mexico, \$420,000; French West Indies, \$400,000; Trinidad and Tobago, \$160,000; and Barbados, \$100,000.

April Wood Exports and Imports

Exports of wood and manufactures thereof from the United States during the 10 months ended April, 1925, were valued at \$115,131,840 as compared with \$129,418,641 in the corresponding period ended April 30, 1924, a decrease of approximately 11 per cent. Exports which showed a decrease for the period were chiefly softwood lumber and sawn timber items, most of the hardwoods exported showing slight gains. Exports of cooperage and of veneers and plywoods gained, while box shook exports for the period fell off.

Sustained Activity in the Export Lumber Trade.

April exports of wood and manufactures were valued at \$14,696,087 as compared with \$13,447,141 for April, 1924—a gain of 9 per cent. This is less than the 15 per cent increase shown in March, 1925, over March, 1924, but indicates a sustaining of activity in the export lumber trade to a greater extent than the customs has shown for some time. During the past 12 months,

a decrease in the trade value in each monthly period compared with the same month in the year previous had occurred in each month prior to March, 1925, excepting the month of October, 1924. Increased exports of softwoods—particularly of southern pine lumber—were mainly accountable for the increase shown in the April trade this year over April, 1924.

Exports of Logs, Timber, and Ties.

Exports of logs and hewn timber amounted to about 23,000 M feet less than the April, 1924, export. Half of this was cedar. Exports of sawn timber during April of this year were 56,138 M feet, of which Douglas fir, 29,755 M feet of "untreated" and 3,177 M feet of "treated" timber, formed the largest item. "Treated" Southern pine exports were 2,110 M feet and "untreated" 15,613 M feet. Exports of hardwood ties numbered 54,672, "treated" softwood ties 87,696, and "untreated" softwood ties 82,689—a total export of 225,057 ties, which is 22 per cent less than the April, 1924, export. Canada took over 65,000, and Guatemala, Mexico, and Cuba about 35,000, each, of the April export this year.

Shipments of Softwood Lumber—Principal Markets.

Softwood lumber exports in April, 1925, were 150,235 M feet as compared with 114,390 M feet during April last year—an increase of nearly one-third. Douglas fir rough lumber exports were 51,419 M feet, and dressed lumber 1,153 M feet. Southern pine rough-lumber exports were 69,321 M feet, an increase of nearly 60 per cent, while the value increased from \$1,836,000 to \$3,176,000, or 73 per cent over April, 1924. Exports of dressed Southern pine lumber were 8,510 M feet, also an increase over the corresponding export for last year.

The principal markets taking Douglas-fir lumber were Japan, 13,485 M feet; Australia, 9,839 M feet; China, 7,353 M feet; and Peru, 5,228 M feet. Southern pine went chiefly to the River Plate, 26,450 M feet, and to Cuba, 12,958 M feet, while amounts of slightly over 6,000 M feet went to Germany, the United Kingdom, and Mexico.

Other softwood exports were hemlock, 9,811 M feet; western pine, 2,737 M feet; spruce, 1,749 M feet; redwood, 1,399 M feet; white pine, 1,257 M feet; cypress, 699 M feet; and other miscellaneous softwoods, 2,180 M feet.

Exports of Hardwood Lumber—Destination.

Hardwood lumber exports totaled 35,912 M feet, of which oak comprised 18,485 M feet; and gum, 4,390 M feet represented the next largest item. Exports of ash were 2,843 M feet, poplar 2,742 M feet, mahogany 2,214 M feet, and walnut 1,647 M feet. Hardwood flooring exports, not included in the total figure for hardwood lumber, were 667 M feet.

Exports of oak went to the United Kingdom, 10,357 M feet; Canada, 3,009 M feet; Belgium, 1,342 M feet; River Plate, 1,216 M feet; British South Africa, 759 M feet; Netherlands, 618 M feet; Spain, 221 M feet; and all other countries, 963 M feet.

Cooperage and Miscellaneous.

Exports of tight staves numbered 2,727,361, a decrease of 18 per cent compared with April, 1924. The value of this larger quantity exported in April, 1924, was, however, about 13 per cent less than that of the smaller export for April of this year.

Exports of slack staves numbered 4,562,007. Total stave exports went principally to Portugal, \$123,000; France, \$109,000; United Kingdom, \$95,000; Spain, \$64,000; and Canada, \$60,000.

Other cooperage items were tight cooperage shooks, 58,522 sets; slack cooperage shooks, 114,210 sets; heading, 408,162 sets; and 22,777 empty barrels, casks, and hogsheads.

Box shook exports included 1,165 M feet of Southern pine, 3,162 M feet of Hemlock, 133 M feet of spruce, and 6,801 M feet of other sorts.

Other export items were veneers, 4,089,680 square feet; ply wood, 2,579,208 square feet; 86,837 doors; handles and handle dimensions for tools, 2,325,062 pounds; and 527,135 pounds for agricultural implements.

Imports of Lumber.

Imports for the month of April of the entire group of wood and manufactures thereof were valued at \$8,498,040, as against \$8,874,737 for April, 1924; while imports for the 10 months ending April, 1925, were \$94,156,148, or 2 per cent less than the \$96,595,623 value of exports for the corresponding 10 months ended April 30, 1924.

Imports for April, 1925, included 8,392 M feet of cabinet woods in the log, of which mahogany comprised 5,878 M feet and Philippine mahogany 1,076 M feet. There were also 13,829 M feet of logs and timber imported, aside from cabinet woods.

Imports of lumber included softwood to the amount of 113,374 M feet; hardwood, 6,152 M feet; sawn Philippine mahogany, 594 M feet, and other sawed cabinet woods, 576 M feet. Lath imports were 148,551 M feet, and shingle imports 230,269 M feet. Receipts of ties, numbering 87,519, were also less than for the corresponding period last year.

Cut-Offs

Timber Floating in Latvia.

Timber floating in Latvian rivers has become difficult because of shallow water, and it has been necessary to stop the floating on some smaller rivers, shortly after it had begun. (Commercial Attaché Carl J. Mayer, Riga, April 28.)

Finland Exports Wood Flour to America.

Exports of wood flour from Finland to the United States during 1923 amounted to 927,006 pounds, valued at \$4,908, while during 1924 they amounted to 3,706,111 pounds, valued at \$19,654, according to a report from Consul J. F. McGurk, Helsingfors.

Finnish Lumber Market in April.

The Finnish export lumber market continues without material change. Advance sales to the middle of May for shipment this season totaled 970,000,000 board feet. Exports during April amounted to 20,000,000 feet. Plywood exports for April came to 5,000 metric tons, or approximately equivalent to 165,000,000 square feet of quarter-inch stock. (Trade Commissioner Emil A. Kekich, Helsingfors.)

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF

Peru Grants Concession to Hosiery Manufacturer.

An exclusive concession for a term of 10 years has been granted by the Peruvian Minister of Public Works for the establishment of a hosiery industry. The manufacturer agrees to use a minimum capital of 25,000 Peruvian libras (\$103,500), and, if so ordered by the Government, to sell his product on a basis of 10 per cent above the cost of production. (Vice Consul Nelson R. Park, Callao-Lima, May 6.)

Felt-Hat Market in Spain.

Potential felt-hat buyers in the Seville district number about 500,000. The greater part of the hats sold are of domestic manufacture, although there is a large sale of imported hats of the better grades. English, Italian, French, and American made hats rank in the order named. The development of sales in American hats may be said to depend not only on quality and price considerations, but also on the aggressive work of the agent. Correspondence or advertising must be in Spanish. (Consul William C. Burdett, Seville, April 20.)

German 1924 Textile Stock Dividends Approach Pre-War Rates.

A list of dividends declared by 42 textile companies in Germany during the past business year, with comparative figures for pre-war years, has been received from Consul Christian T. Steger, Dresden. The average dividend paid by these companies during the four years preceding the war was only slightly higher than that paid in 1924, the first post-war year on a gold basis. The report will be made available to interested American firms upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington, D. C. Refer to No. 170955.

Market for Cotton Yarn in Chile.

Cotton cloth has been manufactured in Chile to a limited extent for several years, but the domestic production, valued at approximately \$1,000,000 annually for the entire cotton industry, does not nearly meet the country's consumption requirements. Chile produces no raw cotton, neither are there facilities for spinning. This means that all yarn used in the industry must be imported. During 1923, yarn imports amounted to 1,349,914 kilos, of which 494,328 came from the United States. It is presumed that at least half of the yarn is used in the various knitting mills, as the annual consumption of the two cotton-weaving mills is said to average only 500,000 kilos. (Consul George A. Makinson, Valparaiso.)

Cloth Shipments to Noncontiguous Territories Decline.

Shipments of cotton cloth from continental United States to its noncontiguous territories during April, 1925, totaled 3,052,484 square yards, valued at \$646,571, against 4,575,051 square yards, with a value of \$870,667 during the previous month, and 4,899,705 square yards, \$169,550; to Porto Rico, 2,334,642 square yards, shipments were as follows: To Alaska, 73,488 square

yards, valued at \$20,038; to Hawaii, 644,354 square yards, \$169,550; to Porto Rico, 2,334,642 square yards, \$456,983. Alaska's purchases in April were almost double those of March, but the quantity of cotton cloth shipped to Hawaii in April declined 20 per cent and to Porto Rico, 37 per cent, compared with the preceding month.

German Spinning Statistics Show Slight Improvement.

During the six months, August 1, 1924, to January 31, 1925, out of a total of 283 establishments with about 10,000,000 cotton spindles in Germany, 267 mills operating 9,030,236 spindles reported 8,575,145 active. Spindles operated by 245 firms replying in the previous six months numbered 8,300,381, of which 7,185,843 were active, according to the report of the German Cotton Spinners' Association. The number of idle spinning hours during the six months ended January 31, 1925, averaged 1,202,103,352, as compared with 1,123,641,974 for the previous half year. Consumption of cotton in running bales amounted to 539,446 and 512,826 for the respective periods. (Assistant Commercial Attaché Douglas Miller, Berlin, May 1.)

Uruguay Cotton-Manufacturing Industry.

There are 12 cotton factories in Uruguay, all of which are situated in Montevideo, the smallest using about 6,000 kilos of cotton and cotton thread annually and the largest using about 200,000 kilos (kilo=2.2046 pounds). It is estimated that there are approximately 350 knitting machines in use. Looms number about 500 and are used principally for weaving wool goods and only irregularly in cotton weaving. Approximately 775 persons are engaged in the weaving of cotton goods. About 90 per cent, or approximately 730 tons a year, of all cotton used in the Uruguayan industry is in the form of thread and yarn, imported from the United States, England, and Italy. The bulk of the lower grades comes from the United States, while England supplies the higher grades, such as mercerized thread. (Consul O. Gaylord Marsh, Montevideo.)

Polish Textile Mills Move to Rumania.

Various units of the Polish textile industry are moving to other countries, especially to Rumania, according to local press reports. It is claimed that by transferring their machinery and staff to Rumania, manufacturers can have the benefit of Government assistance in that country and can, thereby, transform a difficult export market into an easy domestic one. Rumania is one of Poland's best export outlets for textiles, having taken about 30 per cent of the total exports in 1924. One Polish mill which transferred its equipment to Rumania is at present reported to be working on three shifts with its entire production contracted for four months in advance. The smaller plants, which have been hardest hit by the recent depression, will undoubtedly consider such a move rather than go out of business. (Acting Commercial Attaché Leighton W. Rogers, Warsaw, April 27.)

Cotton-Spinning Activity in the United States

The United States cotton-spinning industry operated at 99 per cent of its single-shift capacity during the first four months of 1925, compared with 86.3 per cent and 108.7 per cent for the corresponding periods of 1924 and 1923, respectively. During January to April, inclusive, the monthly average of active spindle hours for the entire United States was 8,369,000,000 in 1925 compared with 7,323,000,000 for 1924 and 9,010,000,000 in 1923. For the same period, the monthly consumption by the mills in the United States averaged 580,000 bales in 1925, compared with 513,000 in 1924 and 594,000 in 1923.

Despite the fact that the 1925 activity for the entire country compares very favorably with 1923, a good year, the improvement has been largely confined to the South while New England operations have been considerably below those of 1923. For the four months

under consideration, the monthly average of active spindle hours reported by the mills in the cotton-growing States was 5,078,000,000 in 1925 as against 4,425,000,000 in 1924 and 4,875,000,000 in 1923. Comparative figures for New England mills showed 2,939,000,000 in 1923. While the 1925 average exceeded that of 1923 by 4.2 per cent in the case of the cotton-growing States, the New England average was 20 per cent below that of 1923.

Additional information regarding textiles appears in this issue under the following sections:

Cable review, Europe:

Italian industry in strong position.

South African wool market stronger.

British cotton goods market improved.

Foreign trade opportunities.

COAL

Charles P. White, Chief, Coal Division

THE POLISH COAL EXPORT PROBLEM

Consul General T. Jaeckel, Warsaw

The problem of finding an outlet for Poland's large surplus production of coal is one that is causing much anxiety to the industry.

The trade negotiations with Czechoslovakia—to which the export of Polish coal had hitherto been somewhat difficult—have now been concluded successfully for the Polish coal exporters. These exports, however, are not of great volume, amounting to only 554,953 metric tons in 1924. The negotiations for a commercial treaty with Germany, on the other hand, are still pending.

Upper Silesia's Share in Production and Exports.

All but a very small proportion of the coal exported from Poland is produced in Upper Silesia, and close to 70 per cent of this Silesian coal, under normal conditions, is absorbed by the German markets. In 1913, the total Polish coal production was 40,727,474 tons, of which Upper Silesia produced 31,937,475 tons; in 1924, the total production was 32,224,680 tons, of which Upper Silesia furnished 23,815,610 and exported 11,144,026 tons (including coke and manufactured fuel), while the rest of Poland exported only 388,199 tons.

Of upper Silesia's exports, 6,776,304 tons went to Germany and 2,586,351 to Austria in 1924. In 1923, when the total coal production was 36,097,997 tons, of which Upper Silesia furnished 26,630,153, the total exports (including coke and manufactured fuel) were 12,560,295 tons, Upper Silesia supplying 11,985,445 tons. Of Upper Silesia's coal exports in 1923, 8,035,397 tons went to Germany and 2,302,430 to Austria.

Germany the Best Customer for Polish Coal.

The figures show that Germany is by far Poland's best customer for coal, followed by Austria. The agreement by virtue of which Germany admitted Upper Silesian coal free of duty for a period of three

years terminated on April 14, 1925. While exports of Silesian coal to Germany were about 1,260,000 tons less in 1924 than in 1923, no figures are available to show what they were during the first four months of the current year. It is believed, however, that they showed a steady decrease, as the country's total coal exports decreased from 901,458 tons in January to 739,675 tons in February (the last figure is provisional), in addition to the fact that the total Polish coal exports to Germany in January amounted to only 481,431 tons, all of which with the exception of a few tons were undoubtedly produced in Upper Silesia. This is at the rate of less than 6,000,000 tons per annum.

Unsuccessful Efforts to Meet Competition.

The fact that the Polish exports generally—especially those to Germany—decreased so appreciably during the past year in spite of the fact that the price per ton at the time declined from 44.20 złote (1 zloty equals \$0.193) to 29 złote between January 1 and December 1, 1924, shows plainly that the efforts of the Upper Silesian mines to lower the cost of production and thus meet German and British competition met with no success. The average daily production per Upper Silesian miner in 1924 was 0.724 metric ton as against 0.591 ton in 1923, according to the figures of the association of coal owners. The number of workmen engaged in the coal mines of Upper Silesia, which in January, 1924, was 150,000, had decreased to 98,000 by the end of December of the same year—a decrease of about 35 per cent—whereas the production of coal had declined only about 11 per cent.

Outlook Not Promising.

The outlook for the Polish coal industry is not bright, not only because of the diminishing foreign demand for coal, but also because there are as yet no

signs of any improvement in domestic demand. At present the collieries frequently are forced to sell their coal at figures below the cost of production.

Small Decrease in Bunker Fuel Trade

Fuel or bunker coal supplied to vessels engaged in foreign trade during the first quarter of 1925 amounted to 933,567 long tons, showing a slight decrease from the 961,474 tons supplied during the first quarter of the previous year, and were more than 60,000 tons under

the amount during the first quarter of 1923 when 997,226 tons were supplied through the various United States customs districts.

Additional information regarding coal appears in this issue under the following sections:

Cable review, Europe:

British situation better as to labor, but production declining.

Czechoslovak coke production higher in April; coal lower.

List of special circulars issued by the bureau.

Foreign trade opportunities.

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

IMPLEMENT EXPORTS IN APRIL AMOUNTED TO NEARLY \$8,000,000

Exports of agricultural implements from the United States in April amounted to \$7,960,824. This was an increase of more than \$400,000 over the preceding month, which was the highest month in the year up to that time, and also the highest of any month within the past four years. April exports exceeded those in April, 1924, by more than \$1,200,000.

The largest item of exports during the month was wheel tractors, which amounted to more than \$2,250,000. Shipments of these tractors, however, were approximately \$500,000 less than in March, 1925, but were \$750,000 more than in April, 1924. Exports of tracklaying tractors showed a slight increase over both March, 1925, and April, 1924.

The second largest item of export was harvesters and binders, which amounted to \$944,560—an increase of \$300,000 over March, 1925, but less than in April, 1924, when exports amounted to \$1,201,379. This decrease, as compared with April, 1924, is due to the large decrease in exports of harvesters and binders to France, which started at the beginning of the current year. The value of the harvesters and binders shipped to France in April, 1925, was \$260,786, as compared with \$628,578 in April, 1924.

United Kingdom and Belgium Among Leading Buyers.

The United Kingdom and Belgium were large purchasers of harvesting machinery and the shipments to the United Kingdom exceeded those to France by about \$90,000. The exports of this item to both of these countries in April, 1925, were greater than in the same month of 1924. Horse and power plows gained by more than \$300,000 in April of this year over April, 1924, and amounted to \$724,711.

Detailed statistics of these exports are shown in the following table:

United States exports of agricultural implements

Items	April, 1924		April, 1925	
	Number	Value	Number	Value
Cream separators.....	1, 107	\$44, 322	1, 795	\$84, 977

Trade in Implements Steadily Increasing.

The total value of agricultural machinery shipped from the United States during the 10 months ended April, 1925, amounted to \$51,342,062, as compared with \$49,217,371 in the corresponding period of 1924. Exports of wheel tractors during the 1925 period amounted to 25,021 valued at \$13,954,028, which was \$3,500,000 greater than exports during the same period of 1924. Shipments of track-laying tractors decreased during this period and amounted to 729 valued at \$1,525,605 during the 10 months ended April, 1924; and to 690 valued at \$1,391,208 in the same period of 1925. There was also a decrease in exports of harvesters and binders during this period; they amounted to \$5,387,381 in the 1924 period, and to \$4,415,125 in the 1925 period. The principal increases during the 10 months prior to April, 1925, were in tillage implements, such as plows, harrows, cultivators, and in hay-rakes and tedders.

AUTOMOTIVE PRODUCTS

Percy Owen, Chief, Automotive Division

APRIL PRODUCTION AND EXPORTS SHOW NO SLACKENING

The value of April export trade in automotive products from the United States reached \$33,858,742, continuing the unbroken expansion since the beginning of the year represented by January shipments valued at \$19,776,349, February at \$19,289,224, and March at \$32,645,817. The resulting four-months' aggregate of \$105,570,132 is almost one-half the total value of automotive exports from the United States for the entire year 1924. If corresponding Canadian exports are included, the total American automotive export trade for April is found to reach \$36,622,576, and that for March \$36,501,176.

Production Reaches Record Number.

April production of 391,301 passenger cars and 47,664 trucks topped the previous high monthly figure reached in May, 1923, by 32,646 passenger cars and 1,860 trucks. Incidentally, it was the second time in the history of the American (United States and Canadian) automobile industry that a production figure of 400,000 has been exceeded. This unparalleled output, moreover, was almost matched by the volume of corresponding exports, which was just short of the record total for the previous month.

The failure to exceed March exports can be traced to lower passenger-car shipments from Canada, which fell off from the previous month's high number by almost 27 per cent and which were only half redeemed from this decline by the increased shipments of passenger cars and trucks from the United States and of trucks from Canada.

In consequence of this greater production and somewhat lessened export, the April ratio of exports to production (passenger cars and trucks combined) stood at 7.9 per cent for the month, or 1.5 points below that for March. This figure of decline was not materially changed by including foreign assemblies in the calculation, since the drop in the latter case was by only 1.9 points.

Canadian Trucks Finding Increased Foreign Demand.

The month of April found practically three-fourths of Canadian truck production, which attained high levels, going to foreign markets. This was the sole instance of a rising ratio, for in every other case there was a decrease that was brought about by the expansion in production.

Danish Passenger-Car Market Increases Fivefold.

In the distribution of the 23,806 passenger cars, which went into the April export trade of the United States, Australia absorbed almost 22 per cent. As compared with the previous month, Australia, Brazil, New Zealand, Spain, and Denmark registered gains. The advance in the Danish market was particularly notable in that it represents takings that were nearly six times those of the previous month, and the latter in turn were slightly more than two and one-half times the monthly average for 1924; that is, Denmark took more cars during the single month of April than during the entire year 1924.

Spain showed the next best gain by 116 per cent. Decreases among the leading markets are noted for the United Kingdom, Argentina, Canada, Mexico, British South Africa, and Italy; but this falling off was sizable only in the case of Mexico, approximating 25 per cent.

The only appreciable change in the relative movements of the five passenger-car export price classifications is to be found in the \$800-\$1,200 class, which increased by almost 15 per cent. The remaining classes either increased or decreased by minor amounts.

Canada distributed its 4,760 passenger-car exports among such leading markets as Australia, New Zealand, Brazil, British South Africa, and Argentina, in the order named. As with the United States, Australia stood out as the major market of Canada during the month, taking no less than 24.5 per cent of all the latter country's exports in this line.

Truck Shipments Break All Previous Monthly Records.

In the weight classification for trucks "Up to 1-ton," and particularly in the delivery-wagon class "Valued up to \$800," is to be found the greatest increase in truck shipments which enabled the monthly truck ex-

ports for all previous time to be bettered. By reaching the record figure of 5,027 for April, truck exports from the United States accounted for more than 17 per cent of the month's total export trade in automobiles. This increasing world-wide demand for trucks manufactured in the United States should be an encouraging sign for those manufacturers who are giving attention to foreign-market outlets. Canadian truck exports also picked up in volume, but still were unable to reach the high figure attained in January, May, and November of the previous year.

Australia became the first truck market of the United States, displacing Italy and Mexico, which had been the leaders during March. Australia became the leader in both passenger-car and truck takings. From the standpoint of percentage gain, however, Spain made the most remarkable exhibit, its market jumping a full 197 per cent over those of the preceding month, while Australia's advanced 144 per cent. Mexico, Italy, and the British East Indies were the outstanding cases of lower shipments. Mexico had even a greater percentage loss (45.7 per cent) than in the case of passenger cars (25 per cent).

¹ Reclassified and listed separately after Jan. 1, 1925.

² Not listed separately prior to Jan. 1, 1925.

Other Automotive Exports Favorable.

The most outstanding improvement in the April export trade of automotive products, other than passenger cars and trucks, was made by engines for passenger cars and trucks, which showed increases of 49.6 per cent and 40.6 per cent, respectively, over the previous month. In volume, these shipments totaled 23,083 units, of which almost four-fifths were engines for passenger cars.

There was a slight decrease throughout the entire range of automotive parts and accessories, with the single exception of the classification "Automobile accessories," in which there was a slight increase amounting to 1.5 per cent. Automobile service appliances, however, picked up to the extent of a \$139,861 increase, or more than 40 per cent.

Motor-cycle exports declined, but were still well above the 1923 monthly average, the previous best period of exports in this line since the peak year 1920 when 37,622 units were exported.

There was favorable export trade for marine engines, as compared with March, particularly in detachable motors.

Exports of airplanes, seaplanes, and other aircraft slumped badly, when compared with figures for the previous month, but were still well above the volume for the corresponding month of 1924.

RUBBER

Everett G. Holt, Acting Chief, Rubber Division

THE RUBBER-FOOTWEAR MARKET IN JAPAN

Acting Commercial Attaché A. Bland Calder, Tokyo, April 15

Japan is one of the principal American markets for waterproof rubber footwear, but takes only small quantities of canvas rubber-soled shoes, the very high customs tariff on the latter item and the popularity of the locally made cheap rubber-soled shoes making American competition in the canvas-shoe trade very difficult.

United States Exports to Japan.

The United States export statistics shown below indicate somewhat of a reduction in American shipments to Japan of these lines.

United States rubber footwear exports to Japan

Item	1922		1923		1924	
	Pairs	Value	Pairs	Value	Pairs	Value
Boots.....	74,784	\$181,584	81,185	\$145,733	56,856	\$116,317
Shoes.....	142,678	123,014	161,903	142,422	111,175	101,332
Canvas.....	17,516	12,858	2,238	2,529	2,786	2,325

American-made rubber footwear has been generally regarded by the Japanese as being of superior quality, but price is such a large consideration that the cheap, locally produced article has had an advantage. Due to the low exchange rate of the yen during the past few months—which has caused imported goods to cost upward of 20 per cent more than at normal exchange—the Japanese manufacturer has been given an additional advantage, the price difference being so much lower than that of imported goods that he has been able to improve the quality of his product somewhat and still sell at prices a third less than imported goods. For example, an American-made rubber boot, costing 9 yen (yen equals \$0.4188 at current exchange) per pair retail in Tokyo must compete at present with a Japanese-made boot selling at 6 to 6.50 yen, and of sufficiently good quality to give reasonable satisfaction.

High Tariff Duties on Footwear.

The import tariff on rubber boots is 50 yen per 100 kin (132 pounds) and on rubber overshoes 51.6 yen per 100 kin (132 pounds). These items are not affected by the luxury tariff. Canvas rubber-soled footwear, however, comes under the provisions of the luxury tariff which imposes an import duty of 100 per cent ad valorem and has practically shut the imports of this item out of the country.

Imports of Rubber Footwear.

The United States has in the past supplied almost all of Japan's rubber footwear imports. Receipts of rubber boots and rubbers in the years 1922 to 1924, from figures supplied by the department of finance, Tokyo, were as follows:

Japanese imports of rubber footwear

Article and source	1922		1923		1924	
	Quantity	Value	Quantity	Value	Quantity	Value
RUBBER BOOTS						
United States.....	16,782	36,917	83,461	154,491	(1)	(1)

Total.....	34,231	73,631	135,268	191,102	160,282	342,333

¹ Not yet classified by countries.

NOTE.—The above figures do not include imports to the port of Yokohama during 1922 and during first eight months of 1923, records for the period having been destroyed in the earthquake and fire, September 1, 1923. This accounts for smaller figures in 1922 and 1923.

During 1924, Canada exported 27,994 pairs of rubber boots and shoes valued at \$39,340 and 129 pairs of canvas rubber-soled shoes valued at \$141, while the United Kingdom exported only 300 pairs of rubber and rubber-soled shoes, and no exports from France to Japan were recorded.

Landing and Forwarding Charges—Distribution.

In the Tokyo and Yokohama market—and to a lesser extent in the Kobe-Osaka district—imported footwear suffers an additional handicap because of the heavy landing and forwarding charges which, on small shipments, together with the tariff charges, sometimes amount to as much as the original cost of the goods c. i. f. Yokohama.

The distribution or marketing is such that the imported goods pass through too many hands and the profit taken by the importer, wholesaler, and retail merchant make to cost to the consumer too high. This is due, in part, to the fact that outside one or two department stores there are no large wholesale or retail merchants dealing in this kind of goods, and the necessity of extending credit to the dealers makes the risk and consequently the cost greater. While these conditions hold true to a certain extent for locally manufactured goods as well, the Japanese manufacturer naturally enjoys many advantages in this trade and in the manner of distribution.

Although no figures of local production or sale are obtainable, the sales of domestically produced rubber boots and rubbers are believed to be gaining considerably over the imported article.

Opportunity for Sale of Lighter-Weight Boot.

In view of the fact that the import duty is imposed on the basis of weight, it might be well for American manufacturers to produce a lighter weight boot of good quality which could offer closer price competition with the Japanese product.

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

THE TELEPHONE SYSTEM OF PERSIA

Vice Consul George G. Fuller, Teheran

A telephone concession covering all Persia, except the Province of Gilan on the Caspian, was granted to a group of Persians in 1903 for a term of 60 years. This concession gives the right to construct and operate telephone exchanges in every city or town in Persia and includes permission to erect lines along all roads and streets, on roofs, and in the yards of all houses.

By its terms, telephone buildings are exempted from all Government taxes, and all telephone equipment consigned to the company is free from customs duties. After deducting expenses and interest from the income, 10 per cent of the remainder is to be paid to the Government, but no such payment is to be made for the first five years after the installation of the Teheran exchange nor for the first 10 after the installation of any other exchanges.

The General Telephone Co. of Persia.

The General Telephone Co., or Societe Generale Des Telephones de Perse, with headquarters at Teheran, is the present holder of this concession. The owners of two-thirds of the shares of stock must be Persian subjects.

After the payment of all expenses, and 10 per cent of the remainder of the receipts to the Government, 5 per cent of the profits is set aside as a reserve and 10 per cent is divided among the members of the administrative council. The rest is divided among the shareholders. It was recently decided that 10 per cent of the annual income should be set aside for improvements, repairs, and maintenance.

Extent of Telephone Development.

Under this concession, 24 telephone exchanges, all of which use the magneto system, have been established in Persian cities and serve a total of 2,639 subscribers.

The rates charged are about \$2.50 to \$3.75 per month, but the subscriber must furnish his own instrument, which may be purchased in the bazaars at a price ranging from \$15 to \$60 each. Most of the instruments now used are of Swedish manufacture, but there are also many Russian and a considerable number of German makes in service. A few American and English instruments are on sale, but they are not in general demand.

Besides the exchanges belonging to or licensed by the telephone monopoly, there are exchanges in Gilan Province, Resht, Isfahan, and a number of private exchanges bordering the Persian Gulf. The latter are, as a rule, operated by the British military authorities.

The Teheran Exchange.

The central office equipment in Teheran consists of a local battery magneto system of Russian manufacture which has been in service about 20 years. There are five branch exchanges besides the central office. The total capacity of the system is 1,600 lines, and there are at present 1,350 subscribers.

The main central operates 24 hours a day, but the branches are closed four hours after sunset. The operators are both Mohammedan and Zoroastrian. They

are required to speak only Persian, and their average wage is \$18 per month. The average number of calls is 414 per day.

New Equipment Being Installed—Other Exchanges.

A general reconstruction of the Teheran plant is now under way, and all of the equipment for this purpose has been purchased in Germany. The magneto equipment will be discarded and a common battery system installed. The outside plant has hitherto consisted of bare iron wire run on buildings and poles, but this is now being replaced in part by an underground cable system. The company is itself purchasing the new instruments; hereafter subscribers will not be required to furnish their own.

The new system is laid out for 3,000 subscribers, and it is estimated that the improvements will cost somewhat over \$200,000. As there is at present a greater demand for service than can be supplied, it is expected that the extension being made will bring in sufficient income to warrant the additional investment.

Eleven exchanges, other than Teheran, average 66 subscribers each.

America Can Participate in the Trade.

A period of slow telephone development is beginning in Persia. It is believed that American manufacturers can share in the purchases which the monopoly and subsidiary companies will make in the future. Local sentiment is favorable toward placing orders in America and prices have already been requested from leading American manufacturers.

United States Electrical Exports During April

Preliminary figures, just available, show that electrical machinery, equipment, and supplies exported from the United States during April were valued at \$7,817,184. This is nearly \$400,000 more than for the corresponding month of 1924, nearly \$100,000 more than in March of this year, and larger than any month since June, 1921. Further, it is the first time in several years that April exports have exceeded those of March. However, mainly due to the great decrease in exports of these classes of goods during February, as compared with February, 1924, the total for the first four months of this year is \$1,401,944 less than for the same period of last year.

Declines Recorded in Some Lines.

Comparing April, 1925, with April, 1924, the shipments of generators, steam turbo units, and parts, declined by about 35 per cent to \$237,419; transformers of both classes decreased—total exports being slightly over \$400,000; fuses and switches decreased about 54 per cent, to \$137,706. Motors under one horsepower gained about \$25,000 to \$193,531 but large motors decreased to \$240,730, or by slightly over \$50,000; railway motors similarly decreased by 50 per cent; electric locomotives fell off to \$24,478, or less than 11 per cent, while the number decreased from 37 to 6, or 16 per cent. Exports of electric fans declined to approximately \$65,000; telephone apparatus as a whole declined by about \$80,000 to \$342,308; ignition apparatus

decreased by almost \$100,000; and carbon products declined by approximately \$50,000 to \$254,258.

Increases Shown in Many Lines.

Among the increases were self-contained lighting outfits by 62 per cent to over \$95,000; batteries to \$544,835, or by 34 per cent; converters by 29 per cent to nearly \$160,000; switchboards other than telephone to \$326,733, or by over one-fourth; meters by 81 per cent to \$237,356; motor starting and controlling equipment to over \$131,000; lamps, flashlights, and searchlights from \$193,788 to \$323,906; motor-driven household devices and domestic heating and cooking devices increased to \$131,691 and to slightly over \$150,000, respectively; radio apparatus went from less than \$300,000 to over \$850,000; wiring supplies increased from \$310,575 to \$488,894; porcelain from \$160,837 to \$244,254; and insulated copper wire from \$271,588 to \$443,388.

Durban to Have New Electric Power Plant

Vice Consul J. L. Pinkerton, Durban, Natal, South Africa

The corporation of the municipality of Durban has concluded an agreement with the electricity supply commission of the Union of South Africa whereby the latter is to construct a power plant in Durban and supply electric current to the city and to the South African Railways and Harbors Administration. The plant is to be completed by October 31, 1927.

Terms of the Agreement.

The period of the agreement is 30 years. The commission undertakes to construct at Congella (on Durban Bay) a generating station with an initial installation of two 12,000 kilowatt turbo alternators. The municipality agrees to take from the commission 48,000,000 kilowatt-hours per annum, with a maximum demand of 9,000 kilowatts, and to pay £33,500 annually as a service charge, plus 0.29d. (twenty-nine one hundredths pence) for each kilowatt-hour delivered at the commission's station. The municipality has the right to distribute current within 16 miles of the boundary of the borough.

It is believed that the agreement, when put into effect, will prove a stimulus to the industrialization of Durban and vicinity.

[Parties desiring to furnish material and equipment for the new plant should address: The Secretary, Electricity Supply Commission, P. O. box 1091, Johannesburg, South Africa.]

Additional information regarding electrical equipment appears in this issue under the following sections:

Tariffs and trade regulations:

Germany—Proposed increase of import duty on electrical machinery.

TOBACCO

Tobacco Section, Foodstuffs Division

GERMAN TOBACCO SITUATION

Based on reports of Consul Louis C. Dreyfus, jr.

Plants engaged in the manufacture of tobacco products in Germany numbered 13,133, according to the census of 1923, compared with 15,619 in 1921 and 14,074 in 1913. In 53 per cent of the factories operating in 1923 no help outside of the immediate family of the owner was employed, and in 83 per cent of the total number hand labor alone was used, compared with 87 per cent in 1921.

Factories Operating in 1913, 1921, and 1923.

The following table shows the number of factories, classified according to the number of employees and according to the method of operating, for the years 1913, 1921, and 1923:

Classification of German tobacco factories

Items	June 30, 1913	Mar. 31, 1921	Mar. 31, 1923
Total number of factories.....	14,074	15,619	13,133
Classified according to number of employees:			
Number employing only owner's family.....	8,260	6,904	6,924
Number employing from 1 to 10 persons.....	4,175	6,141	4,172
Number employing from 11 to 50 persons.....	933	1,695	1,413
Number employing from 51 to 100 persons.....	298	432	327
Number employing from 101 to 500 persons.....	347	334	259
Number employing over 500 persons.....	61	53	38
Classified according to operation:			
Number operating by machine.....	76	593	727
Number operating by machine and hand.....	762	1,417	1,479
Number operating by hand only.....	13,236	13,609	10,927

Consumption of Raw Tobacco.

The quantity of raw tobacco consumed by 13,133 factories operating in 1923 amounted to 250,189,866 pounds, as compared with 293,268,238 pounds consumed by 15,619 factories operating in 1921. Of the tobacco consumed in 1923, 51 per cent was consumed by large factories, 36 per cent by medium-sized factories, and 13 per cent by small factories. There were 167 large factories, 1,180 medium-sized factories, and 11,786 small factories in operation.

Many of the small factories were established during the inflation period. Some have become bankrupt since the stabilization of the currency, and others have grown to medium size. From the foregoing table it will be noted that factories using improved machinery have increased from 76 in 1913 to 727 in 1923. Coincident with improved methods, cigarette production has increased. Taxes were paid on an output of 12,400,000,000 in 1913 and on 20,400,000,000 in 1924. The total German cigarette production in 1924, however, is estimated to be 30,000,000,000, including about 9,600,000,000 sold under evasion of the tobacco taxes.

Tobacco Producing Areas in Germany—Foreign Sources.

The principal tobacco areas in Germany are Baden, producing 44 per cent of the crop; Palatinate, 17 per cent; Hessen, 7 per cent; Uckermark-Brandenburg, 13 per cent; and all other districts, 18 per cent. The total yield amounted to 4,888,458 pounds in 1922, 4,269,009 pounds in 1923, and about 5,000,000 pounds (estimated) in 1924.

German tobacco growers supplied to their domestic market about 46,000,000 pounds of raw tobacco from July 1, 1922, to June 30, 1923, compared with 52,000,000 during the preceding period. Since these quantities represent only about 20 per cent of the German demand, 80 per cent must be imported. The chief foreign sources of supply are the Dutch East Indies, the United States, the Balkan countries, and Brazil. More than 58 per cent of the so-called Turkish tobacco, which is used principally by the German cigarette industry, originates in Bulgaria and is imported through Greece and the Netherlands.

Lively Demand for Leaf for Cigarettes.

Imports of leaf tobacco for the manufacture of cigarettes increased during the year 1924, and the demand is still lively for bright and semibright Virginia, Kentucky, and other American tobaccos. Total imports of leaf amounted to 215,774,343 pounds in 1924, compared with 136,003,316 pounds in 1923.

On account of the scarcity of capital there is an opportunity at this time for American tobacco growers, brokers, or wholesalers to make selling agreements

with established cigarette manufacturers. Many of the well-known firms have found it difficult under present monetary conditions and tax regulations to continue business on a normal basis. It has been a struggle to keep their machines busy and to meet all their obligations. The high taxes, wages, and cost of advertising, in connection with the slow payments by customers, have drained the liquid capital to such an extent that funds for the purchase of raw materials are lacking.

Notwithstanding the prevailing taste in Germany for Turkish tobacco, the opinion prevails among dealers and consumers that American leaf tobacco can be substituted to some extent for Turkish tobacco, or at least mixed with pure Turkish tobacco in order to make a marketable cigarette. It is said that a marked antipathy exists against Algerian leaf tobacco, which has been used to some extent in cigarettes manufactured by small factories.

Latvia—Change in excise taxes on tobacco.
Persia—Excise taxes on tobacco.

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

STAGNATION IN THE GERMAN LEATHER INDUSTRY CONTINUES

Consul Christian M. Ravndal, Frankfort on the Main

Commercial stagnation in the German leather industry was not alleviated to any considerable extent in April. A continued scarcity of money and expensive credit act as a check to all expansion of trade and enterprise. Costs of production are too high. The desire of manufacturers to keep going even when the market has been incapable of absorbing the quantities produced has led to overproduction. For some time sales have been more and more retarded on the way from the seller of raw material to the retail buyer of finished goods.

Delay in Spring Orders.

From the leather manufacturer on down the line, the situation was exceedingly unfavorable at the beginning of April. The spring orders which tanners usually receive were delayed, as shoe dealers and retailers had left-over stocks on hand from quiet business in a mild winter. Purchasers also waited to see what direction fashion would take before stocking so as to avoid risks they were unable to carry. Leather manufacturers' articles—light sole and welt leathers, colored upper leathers, etc.—which were intended for the spring trade, were still on hand. Slight relief came only toward the middle of the month when sales among retailers increased and money became consequently somewhat easier.

Favorable Results of Frankfort Spring Fair—Exporting—Wages.

The results of the Frankfort Spring Fair in the latter part of April were most favorable, and this served to further augment the liquidity of cash. The leather industry was one of the two successful branches exhibiting at this fair.

Exporting was handicapped not only by conditions prevailing in Germany but also by severe competition from French and even Italian commodities. Due to the depreciation of the French franc and Italian lire, foreign buyers have recently been finding it more advantageous to purchase in France and Italy than in Germany.

The strike in the fine leather tanneries has been settled. The average hourly wage has been increased from 68 pfennigs to 75 pfennigs.

The tendency at the raw hides and skins auctions has been steady. The chief demand in sole leather has been for good stout leather for repair shops. While supplies have not been great, they have been sufficient to cover requirements. Shoe manufacturers have been interested in light halves and bends.

Morocco Firm Desires to Export Goatskins

A firm in Larache, Morocco, wishes to get in touch with American firms importing goatskins. Further information concerning this firm may be obtained from the Hide and Leather Division by referring to import trade request No. 31.

See also List of special circulars issued by the bureau.

Exposition at Geneva

The date of the International Exposition of Wireless Telegraphy at Geneva has been advanced to September 9 to 20, 1925, in order to bring it within the period of the Assembly of the League of Nations. The address of the management has been changed to 12 Boulevard du Theater. (Consul R. D. Longyear, Geneva, April 25.)

SPECIALTIES

Edward J. Breysere, Acting Chief, Specialties Division

EXPORTS OF OFFICE APPLIANCES INCREASE

A comparison of United States export returns in the office appliance group for April with the corresponding month of last year indicates marked gains in each major group comprising this general classification.

Gains in Adding and Calculating Machine Exports.

Exports of adding and calculating machines amounted to 3,695 units, valued at \$766,808, a gain of 97.9 per cent and 69.0 per cent, respectively, over the corresponding month of 1924. During the month of April, 2,044 cash registers, valued at \$428,637, were exported, indicating a gain of 31.5 per cent in number and 55.9 per cent in value over April, 1924. Addressing and duplicating machines numbering 591 and valued at \$73,836 were exported in April this year, a gain of 40.5 per cent in number and 36.1 per cent in value over the corresponding month last year.

Gains in Typewriters Shipped.

During April, 1925, 29,094 typewriters, valued at \$1,689,928, were exported from the United States. A comparison of these respective totals with those of April, 1924, indicates a gain of 11.8 per cent in number and 18.0 per cent in value.

The segregation of typewriters into specific types of machines shows the following trends during the month of April:

April typewriter exports

Item	Number	Per cent of total	Value	Per cent of total
Standard new machines.....	20,582	70.7	\$1,390,293	82.2
Portable new machines.....	5,619	19.3	203,730	12.0
Used and rebuilt machines.....	2,893	10.0	95,905	5.8
Total.....	29,094	100.0	1,689,928	100.0

Export returns of specified classes of typewriters for April compared with those of March show the following changes: Standard new machines increased in number 15.2 per cent and in value 12.6 per cent; portable new machines decreased in number 24.5 per cent and in value 21.6 per cent; while used and rebuilt machines increased in number 8.6 per cent and in value 14.6 per cent.

Exports of Office Supplies.

An increase of 4.7 per cent occurred in the April, 1925, total exports of office supplies over the corresponding month of last year.

German Glass Industry in Favorable Position

Trade Commissioner Theodore Pilger, Berlin, May 2

The new gold mark balance sheets show that the German glass industry has not lost much, if anything, through the inflation. Most of the companies have increased their capital above the pre-war figures. Where losses have been sustained, they have been covered out of the liberal pre-war reserves. Heavy mortgage and bond issue debts were wiped out by the inflation to the manufacturers advantage, and the re-

valuation question has not attained such a definite stage yet as to disturb the peace of mind of the manufacturers.

Amalgamations Have Not Increased Production.

The last five years show a considerable number of amalgamations within this industry. The largest companies have grown still further by absorbing smaller producing units. The total production, however, has not increased to any marked extent—despite the fact that control is being centered in a smaller number of plants than before the war.

Most of the companies do not show large open reserves in their balance sheets—probably to avoid the likelihood of heavy taxation later on. The average reserve fund of 12 of the largest producers is approximately 9 per cent of total capitalization.

Companies Profited Through the Inflation.

The extent to which the companies have profited through the inflation may be judged by the fact that before the war the average mortgage and bond issue debt of the stock companies amounted to 50 per cent of the stock capital. In the new gold mark balance sheets the average is about 4 per cent. With the exception of one company, all other large producers' gold mark balance sheets show decreased figures of "bills payable."

A general study of the balance sheets indicates a very liquid state of the various enterprises. "Bills receivable" accounts are also considerably lower than before the war, which is an effect of the strict cash and short-term sales policy now in use, on account of the credit shortage in Germany.

[Detailed figures showing financial conditions of individual German glass firms may be obtained from the Specialties Division upon request.]

The Black Forest Clock and Watch Industry

Vice Consul Erik W. Magnuson, Stuttgart, Germany

The improved condition in the Black Forest clock and watch industry has on the whole been maintained. Inland orders have been received in fairly good quantities, and Easter orders especially were received in good numbers. The export trade is far from satisfactory, attributable to the keen competition created in the world's markets by the cheaper French and Italian labor.

Exports to the United States Increased.

Declared exports of clocks and watches from Württemberg and Baden to the United States during the first three months of 1925 were valued at \$77,641, as compared with \$68,220 in the preceding quarter, and \$87,906 during the third quarter of 1924.

Specialty Briefs

Exports of Domestic Sewing Machines Gain.

April exports of domestic sewing machines continued to show marked improvement. They rose to 24,008 machines valued at \$621,583, compared with

18,563 machines valued at \$470,038 in March, and 11,917 machines valued at \$209,190 in April a year ago.

Shipments of Domestic Washing Machines Increase.

Gains in exports of domestic washing machines for the first quarter of 1925 over the corresponding period of 1924 continued during April. Although there was a slight decline in April shipments compared with those of March of this year, a marked increase is shown over April shipments of last year; 867 machines valued at \$43,988 was the record in April, 1925, and 799 machines, valued at \$35,672, in April, 1924.

Pforzheim Jewelry Business Brisk

The expected recession in the Pforzheim, Baden, jewelry trade after the Christmas holidays has not been confirmed. On the contrary, business has remained brisk, and between 3,000 and 4,000 employees are working overtime.

Demand Brisk in Certain Branches of the Trade.

Gold chains found a large domestic demand during the first three months of 1925. The Easter trade in

jewelry was brisk. Business in precious and semi-precious stones was quiet, and only a very few factories recorded increased business. The sale of silver-plated goods, conversely, continues good which accounts for a large part of the overwork.

Export Trade Dull.

While the domestic market for Pforzheim jewelry and plated ware is satisfactory, export trade is decidedly dull. This condition is reflected in the exports to the United States, as declared at the Stuttgart consulate, decreasing from \$105,626 in the third quarter of 1924, to \$42,513 in the last quarter of 1924, and to only \$18,755 in the first quarter of 1925. (Vice Consul Erik W. Magnuson, Stuttgart, Germany.)

Additional information regarding specialties appears in this issue under the following sections:

Tariffs and trade regulations:

Germany—Proposed increase of import duty on raw film, certain office equipment, and razor blades.

Iraq—Revised import duties on films and playing cards.

Foreign trade opportunities.

INDUSTRIAL MACHINERY

W. H. Rastall, Chief, Industrial Machinery Division

GERMAN MACHINERY SALES IN FRANCE

Vice Consul Erik W. Magnuson, Stuttgart, Germany

France, which in 1913 was the leading field for many classes of German machinery, now ranks with the moderate buyers of such equipment. German exports of machinery to France have decreased by about 50 per cent each year since 1922 and shipments in 1924 approximated only one-tenth of 1913 volume. Prospects for improvement in 1925 do not appear favorable as shipments for the first two months of 1925 show a decline of 2 per cent under 1924, on a basis of monthly averages. German exports of machinery to France, according to official statistics, diminished from 54,952 metric tons in 1913 to 25,594 tons in 1922, to 10,297 tons in 1923, and to 5,992 tons in 1924. Shipments amounting to 948 tons were made during the first two months of 1925.

Decline in Exports of Engines and Other Heavy Machinery.

Certain German classes of equipment, especially engines and heavy machinery, disappeared from the French market entirely. In 1913, France was the leading market for German blowing and ventilating machinery, absorbing 1,192 tons of this equipment, the second best market for internal combustion engines (2,660 tons), followed by excavating machinery (1,292 tons), and cranes (1,138 tons). None of these classes of machinery are listed in the 1924 statistics, except excavators, of which only 197 metric tons were shipped in 1924.

Other kinds of heavy machine equipment shipped by Germany to France in large quantities during 1913 which do not appear in the official statistics for 1924, are locomotives, locomobiles, steam and gas turbines, lifting equipment, and brewing machinery. France was Germany's leading market for spare parts for engines and heavy machinery in 1913, absorbing 2,419 tons in that year. This figure dropped to 425 tons in

1923, and to 15 tons in 1924. A heavy decline also occurred in shipments of German pumps and pumping machinery. Sales of this equipment to the French market declined from 1,149 metric tons in 1913 to 211 tons in 1923 and 69 tons in 1924.

Textile Machinery Exports Decline.

German exports of textile machinery to France, which amounted to 10,772 tons in 1913, declined to 1,541 tons in 1924, a decrease of 86 per cent. The classes of textile machinery affected were sewing machines, looms, spinning equipment, and textile finishing equipment. No embroidery machines have been exported to France during the past three years, in contrast to 561 tons shipped in 1913. Shipments of German looms to France amounted to 2,560 tons in 1913, the French market being the leading buyer of this equipment in that year with Russia second absorbing 1,229 tons. In 1924, France dropped to twelfth place as a buyer of German looms, taking only 114 metric tons, while Italy occupied first place, with 1,277 tons, the Netherlands second place, with 569 tons, and Hungary third place, with 395 tons. Somewhat similar declines occurred with regard to spinning machinery, hosiery frames, and other textile machinery items.

[Detailed figures giving exports of various machinery items from Germany to France for 1913, 1922, 1923, and 1924 are available to accredited American firms on application to the Industrial Machinery Division.]

Effect of Czech Tariff Reduction on Imports

Commercial Attaché James F. Hodgson, Prague

Czechoslovakia is a promising field for the development of the sale of American machine tools, especially in view of the recent enactment of a reduced import duty on various machinery items. This country contains over 85 per cent of the manufacturing industry

of the former Austro-Hungarian Empire, a large share of which is engaged in metal working. To meet the demand for metal-working machinery, many types of machine tools must be imported—a fact taken into consideration during the proposal of the new tariff schedule.

Demand for American Quality Machinery.

The principal imports of machinery have been from Germany, German prices having been so low during the period of currency inflation that machinery purchases from other sources have been difficult. With the inauguration of the new German currency (the Rentenmark), the prices of German machine tools have risen appreciably. While there is still a considerable difference between American and German quotations, the admitted superiority of certain American products

often offsets the price consideration and sales of American machinery are possible. There is a real demand especially for American precision tools which have proven to be of a high standard of efficiency not found in those produced in any other country.

[A complete account of the new tariff schedule on imports of certain machinery items into Czechoslovakia may be found in the foreign tariffs section of this issue of COMMERCE REPORTS.]

Additional information regarding industrial machinery appears in this issue under the following sections:

Tariffs and trade regulations:

Germany—Proposed increase of import duty on certain machine tools.

Czechoslovakia—Reduced import duties on machine tools and noncompetitive machinery.

Foreign trade opportunities.

CONSTRUCTION NEWS

Compiled in the Industrial Machinery Division

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce, or its district and cooperative offices, by referring to the reference numbers given. If no reference number is given, further information is not available.]

Theater Construction and other Building in Canada.

Among important construction projects reported by Assistant Trade Commissioner Walter J. Donnelly, Montreal, to be undertaken in Canada is a plan for the erection of six new theater buildings as a total cost of \$300,000, a packing house to cost approximately \$500,000 in British Columbia, and a bridge to cost \$300,000 in a city in Ontario. Details regarding these projects and information on other construction to be undertaken in Canada, with a list of awards and contracts already let are available to accredited American concerns. Reference 35X.

Soap Factory Proposed for Amoy, China.

A company has been recently formed in the city of Amoy, China, for the manufacture of toilet and laundry soap, the plant to have a capacity of 1,000 pounds per day. The new concern will have an initial capitalization of 50,000 Mexican dollars. Reference No. 170932. (American Consul Leroy Webber, Amoy.)

Irrigation Projects under Consideration in the Dominican Republic.

The budget of the Dominican Republic for the year 1925, includes an appropriation of \$250,000 for irrigation projects and \$50,000 for the colonization of the irrigated areas, both sums to be expended under the administration of the Department of Agriculture and Immigration of the National Government. (Consul Charles Bridgham Hosmer, Santo Domingo.)

Street Paving in Ontario.

It is announced that city paving for this year in a city in Ontario, Canada, which is either approved or planned, totals approximately 150,000 square yards of permanent pavement, involving an expenditure of \$500,000. Work actually approved and to be started within a few weeks totals \$360,868. Reference No. 170071. (Consul Richard F. Boyce, Hamilton, Ontario, Canada.)

Concrete Retaining Wall to be Constructed in Panama.

A retaining wall required in the construction of a highway between Panama City and the new Santo Tomas Hospital will be built at an estimated cost of about \$400,000. Reference No. 168839. (Consul George Orr, Panama City.)

Canal Project Proposed in Nagoya, Japan.

The construction of a canal has been proposed pending the sanction of the central Government for floating a loan to provide funds at an estimated expenditure of 16,000,000 yen. The canal will have a width of 300 feet from the Port of Nagoya to a near-by anchorage. Other canals in Japan proposed will bring the total estimated expenditures to approximately 45,000,000 yen. (Consul H. F. Hawley, Nagoya.)

Large Apartment House to be Built in Quebec.

A large modern apartment house will be built in Quebec to cost approximately \$750,000. The building will be of 11 stories and contain 88 apartments. Tenders are invited for the construction, plans and specifications for which may be had by applying to the promoters. Reference No. 171149. (Consul E. Halldeman Dennison, Quebec, Canada.)

Appropriation Made for Hydroelectric Project in India.

An appropriation of \$1,161,000 has been made by the Punjab Legislative Council for expenditures for the fiscal year 1925-26 on the development of a hydroelectric scheme at a site chosen in Mandi State, a native State of the Punjab, where the Uhl River joins the Beas river. The hydraulic railway and financial aspects of the project have been fully approved by the Government after the recommendation of two British firms of consulting engineers. (Vice Consul William B. Douglass, jr., Karachi.)

Cheap House Construction in Spain.

Interest in the building of inexpensive dwellings is being maintained in Spain, and construction is proceeding under the direction of the department of public works. The Government is aiding such construction.

tion by substantial loans to the home owners, for which purpose 182,000,000 pesetas has been allotted. Reference No. 170470. (Consul Augustin W. Ferrin, Madrid.)

Names of Antofagasta Port Works Contractors Available.

The names and addresses of those firms or individuals in charge of the port construction program to be undertaken at Antofagasta, Chile, have been furnished by Vice Consul B. C. Matthews, and are available to accredited American concerns interested in sup-

plying necessary materials and equipment. Reference 35X.

Successful Bidder for Building Project in Ottawa.

The name of the successful bidder for the erection of a large office building in Ottawa has been announced. It is proposed to build the new building within about 400 working days, permitting occupancy during the summer of 1926. Reference 35X. (Assistant Trade Commissioner Walter J. Donnelly, Montreal, Canada.)

IRON=STEEL=HARDWARE

Luther Becker, Chief, Iron and Steel Division

CONTINUED DECREASE IN SWEDISH IRON AND STEEL PRODUCTION

Commercial Attaché T. O. Klath, Stockholm

Sweden produced 101,200 metric tons of pig iron, 122,300 tons of ingots and Lancashire blooms, and 85,600 tons of hot-rolled steel bars during the first quarter of 1925, according to statistics released by the Swedish Association of Iron and Steel Manufacturers. This compares with an output of 132,500 tons of pig iron, 143,000 tons of ingots and Lancashire blooms, and 92,700 tons of hot-rolled steel bars for the corresponding period of 1924.

Exports of Pig Iron.

Exports of pig iron during the first three months of 1925 amounted to 12,200 tons against 20,600 tons for the first quarter of 1924, and the exports of other kinds of iron, except scrap iron, were reduced from 41,300 tons to 39,600 tons. Imports of pig iron increased from 5,900 tons, to 8,900 tons, while receipts of foreign rolled iron and steel, excepting rails, were 35,100 tons in the 1925 period as compared with 25,100 tons for the 1924 period.

Iron ore exports continued to increase, reaching 1,502,000 tons during the first quarter of 1925, against only 585,000 tons in the corresponding period of 1924.

Increase in Imports.

The condition of the iron and steel industry at the close of the past quarter was not promising, according to the Swedish association. Imports are increasing, due to lower production costs in other European producing countries, and the present quotations on Swedish iron and steel are reported to be somewhat below actual production costs.

Welsh Tinplate Stabilization Scheme Ends

Vice Consul C. Clarence Friel, Swansea, May 4

The stabilization scheme which aimed to assist the Welsh tin plate industry, to control prices, and to restrict output during the difficult periods, has been unable to stand the depression of the past nine months, according to the South Wales Journal of Commerce. Due to the recent underselling of the official minimum price of 22s. 1½d. per standard box, the chairman of the stabilization committee has informed proprietors of works in the district that the stabilization scheme

would be brought to an end. The effect of this statement has already produced a drop of a few pence per box in the price of tin plates in the district.

In some quarters of the Welsh tin plate industry it is felt that the collapse of the scheme will benefit the trade generally, now that makers can compete in the open market. It is likely that the pooling arrangement in respect of orders may be retained, though this is condemned by some makers on the ground that it means that specialized works are forced to hand over much of their business to other works. This point is one of considerable interest to the district, since the retention of the arrangement will be the means of saving several small works from closing down.

Position of British Siderurgical Industry

Cable from Acting Commercial Attaché Mowatt M. Mitchell, London, May 28

The end of May saw a slight improvement over the recent heavy depression in the British steel trade, although the whole price position remained unsettled, with much bargaining. Small quantities of Belgian pig iron are now being offered in Great Britain at competitive prices. There is a fair business in Continental semifinished products, especially wire rods.

Cleveland No. 3 pig iron is now 26 per cent lower than in August, 1923, since which date freight rates have continued unchanged at about 60 per cent above the pre-war level. Since pig iron is now only 15 per cent above the pre-war level, lower freight costs are essential. The principle of safeguarding industries may be invoked against cheap imports, competition from which is becoming keener. There has been a general effort to reduce overhead costs, one company reporting recent cuts of 10 per cent in the salaries of its managers and staffs.

Average Monthly Production of Iron and Steel.

The average monthly production of iron and steel during the first four months of 1925 is below that for the corresponding period of 1924. The figures for the 1925 period are 569,800 gross tons for pig iron and 634,900 tons for steel ingots and castings, as compared with 573,000 tons of pig iron and 635,000 tons of steel ingots and castings for the 1924 period. Only 38 of 108 furnaces are operating along the northeast coast, and 8 large works along the Tees are closed this year.

Iron, Steel, and Hardware Notes

Belgian Steel Production Declines.

Production of iron and steel in Belgium during April included 268,000 metric tons of pig iron, 245,000 tons of raw steel, 6,000 tons of rough castings, 208,000 tons of finished steel, and 13,000 tons of finished iron, as compared with the March production of 282,000, 262,000, 6,600, 220,000, and 13,500 tons, respectively. (Cable from Commercial Attaché Allport, Brussels.)

Canadian Iron and Steel Production Declines.

The production of pig iron in Canada for the month of April amounted to 60,065 long tons—a slight decrease from the March output, according to the Dominion Bureau of Statistics. Ferro-alloys increased by 15 per cent, to 2,262 tons, consisting mainly of the grade composed of 80 per cent manganese. The production of steel ingots and castings was 88,355 tons or about 18 per cent below the March figure. (Trade Commissioner Lynn W. Meekins, Ottawa.)

Algeria Imports More Iron and Steel.

Imports into Algeria during 1924 included 65,565 metric tons of iron and steel bars, wire, sheets, etc., as compared with 54,695 tons during 1923. Exports of iron and steel scrap rose from 9,191 tons in 1923 to 12,922 tons in 1924. Foreign shipments of iron ore—

one of the major items of Algerian exportation—amounted to 1,785,719 tons in 1924 as compared with 1,490,113 tons in 1923. (Consul Lewis W. Haskell, Algiers.)

Austrian Hardware Producers Feel German Competition.

The Solingen works have been offering cutlery, razors, scissors, etc., at prices lower than domestic quotations, nevertheless Austrian quality manufacturers still have satisfactory sales with the exception of scissors and razors. Austrian exports in cutlery have slightly improved, and are directed chiefly to Poland, Yugoslavia, Rumania, and Hungary. Quality steelware for agricultural purposes (springs, scythes, straw cutters, etc.) permits of a hopeful outlook. Exports of agricultural knives, shears, and sickles are increasing but are still far behind pre-war quantities. (Consul Robert W. Heingartner, Vienna.)

Additional information regarding iron-steel-hardware appears in this issue under the following sections:

Cable review, Europe: British industry picks up slightly. Tariffs and trade regulations: Germany—Proposed increase of import duty on builders' hardware. List of special circulars issued by the bureau. Foreign trade opportunities.

PAPER

John Matthews, jr., Chief, Paper Division

FINNISH PULP AND PAPER INDUSTRIES ACTIVE

Consul J. P. McGurk, Helsingfors

The favorable conditions which prevailed in the Finnish pulp and paper industries during January and February continued up to the end of March. Sales of pulp during the first quarter of 1925 reached a total of 90,620 metric tons (metric ton=2,204.6 pounds) and of paper a total of 62,199 tons, increases of 40 per cent and 55 per cent, respectively, compared with the same period in 1924.

The Paper Market.

Paper prices have remained firm and it is predicted that a possible diminution of production may improve the present level, which is regarded as being too low. Official statistics report an export of 49,892 metric tons of paper and 12,307 tons of board during the first three months of the current year, increases of 14,725 tons and 7,505 tons, respectively, over 1924. Over 70 per cent of the paper exports consisted of newsprint paper, which amounted to 35,602 tons, the balance of the shipments being made up of wrapping paper (6,306 tons) and writing paper (1,048 tons). Nearly 60 per cent of the paper shipped was the product of the mills of the association and 30 per cent of the Kymmene Aktiebolag.

The Pulp Market.

The Finnish mills are reported to have already placed a large part of their 1925 production. Buyers have evinced a steady interest since the first of the year and prices have been firm. Exports of sulphite pulp during the first three months of the year have amounted to 53,881 tons, an increase of 55 per cent

compared with the same period in 1924, and exports of sulphate to 19,938 tons, an increase of 97 per cent.

Sales of mechanical ground wood have also progressed satisfactorily. Predictions of an increase in the price of wet ground wood are still considered probable in view of the light snowfall during the past winter, which is expected to cause a shortage of water and consequent reduction in output in Finland and the Scandinavian countries. The ready market for cardboard will also tend to diminish the stock of ground wood for export. Shipments of ground wood during the first quarter showed a decrease of 17 per cent compared with the first quarter in 1924.

Side Runs of the Paper Trade

Imports of Rags and Other Waste from France.

The United States imported a total of 1,869,991 pounds of rags and other waste, valued at \$90,444, from the Lille consular district during 1924, according to a report from Consul Paul C. Squire.

Sales of Esthonian Paper to Soviet Russia.

An increasing amount of Esthonian paper is being taken by Soviet Russia, according to Commercial Attaché Carl Mayer, Riga, who reports shipments of 40 carloads of printing paper to that country during the month of March.

Austrian Production During First Quarter of 1925.

The production of paper in Austria during the first quarter of 1925 was approximately 42,800 metric tons, according to reports from the office of the commercial attaché at Vienna. Chemical pulp production during the same period reached 42,400 metric tons.

March Exports from Norway.

Exports of paper from Norway during March amounted to 26,500 metric tons, of which 15,300 tons represented newsprint. Pulp exports during the same month consisted of 53,600 tons of mechanical ground wood and 24,400 tons of chemical pulp (A. Fenselau, trade commissioner's office, Copenhagen, Denmark.)

Finnish Paper Market at End of April.

The paper market in Finland is active and steady, according to a report from Assistant Trade Commissioner Emil Kekich, Helsingfors. Pulp prices are somewhat slack. Exports of paper during April amounted to 18,000 metric tons and pulp exports to 31,000 metric tons.

Exports of Printing Machinery and Supplies.

Printing machinery to the value of \$763,228 was exported from the United States during April, representing an increase of nearly \$10,000 compared with the same month in 1924. The largest item was printing presses, valued at \$335,851, followed by typesetting machines at \$293,586, and other printing machinery at \$113,791. In addition to printing machinery, \$34,136

worth of type, \$39,749 worth of plates and cuts, and \$121,548 worth of printing and lithographing inks were exported.

Exports of Vulcanized Fiber from the United States.

Shipments of vulcanized fiber from the United States during April reached a total value of \$190,077, an increase of 40 per cent compared with similar shipments in April, 1924. Ninety per cent of the exports consisted of strips, rods, tubes, etc., and the remainder of vulcanized fiber manufactures.

Exposition to be Held in England.

The Birmingham and Midland Building and Allied Trades Exhibition will be held in Birmingham from September 7 to 19, 1925, according to a report from Consul John F. Jewell. The exposition is expected to offer an exceptionally good opportunity for manufacturers of material for the building and allied trades to display samples of their products. A special booth will be set aside for exhibits of wall paper.

See List of special circulars issued by the bureau, in this issue. See also Foreign trade opportunities.

SHOES AND LEATHER MANUFACTURES

A. B. Batman, Chief, Boot and Shoe Division

IMPORTS OF LEATHER GLOVES INCREASE IN VOLUME

The United States imported 2,233,276 pairs of leather gloves during the first four months of 1925—an increase of 7.8 per cent over the corresponding period of 1924. Seasonal fluctuations prevailed, with an upward trend during February to 681,827 pairs, followed by a slight decline in March, and an abrupt drop in April to 459,381 pairs—virtually the January level.

France supplied 49 per cent of the imports, Germany 33, Italy 5, United Kingdom 1, and other countries 12. Of the predominating markets, France alone showed a decrease.

The April, 1925, importations comprised 456,982 pairs for women and children, and 2,399 pairs for men. The total valuation was \$394,871. These goods were received from the following countries: France, 214,802 pairs valued at \$191,328; Germany, 156,384 pairs valued at \$126,488; Italy, 27,761 pairs valued at \$17,360; United Kingdom, 7,239 pairs valued at \$10,460; and other countries, 53,195 pairs valued at \$49,235.

April Shipments of Leather Footwear to Noncontiguous Territories

The United States exports of 147,543 pairs of leather footwear to the noncontiguous territories during April, 1925, comprised 75,564 pairs for women and children and 71,979 pairs for men and boys, and represented a valuation of \$311,183. Porto Rico consumed 64,317 pairs of the footwear for women and children and 52,468 of that for men and boys. Seasonal trade fluctuation similar to 1924 prevailed, with slight decline for Hawaii and Porto Rico, from the March peak, and a sharp upward trend for Alaska from 3,951 pairs

purchased in March to 6,789 pairs in April. The shipments to Alaska during April exceeded the quantity purchased during the first three months by 430 pairs.

See Cable review, Europe: British industry improving.

List of special circulars issued by bureau.
Foreign trade opportunities.

Rayon Trade of the Netherlands

Rayon exports from the Netherlands during 1924 amounted to 2,555 metric tons, as compared with 1,754 in 1923 and 794 in 1922. The increase in exports resulted largely from Great Britain's larger purchases in 1924, which totaled 828 tons. Shipments to the United States only reached 289 tons. Netherlands imports of rayon, about two-thirds of which are of German origin, are comparatively small, amounting to 153 tons in 1924. The annual domestic production is estimated at 3,000 metric tons. (Consul Edward A. Dow, Rotterdam.)

Colombian Government Contract Requirements Changed

The regulation that the suppliers of materials in the United States for the Colombian Government must send two copies of the order to the Colombian consul at New York has been changed. The Colombian Government at the time of the letting of the order makes out these two bills, sending one immediately to the Colombian consul at New York and the other to the customhouse at the point of importation into the country. (C. Reed Hill, secretary to commercial attaché, Bogota.)

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

PROPOSED CURTAILMENT OF BRANCH BANKING IN SWEDEN

Commercial Attaché T. O. Klath, Stockholm

Perhaps the greatest immediate concern of Swedish industrial and commercial interests is the present high operating cost. The operating expenses of the banks also have risen out of all proportion to the increase in business turnover during the postwar period. This development is only partly due to the higher wage level. A more important factor has been the expansion in the number of branches during the inflation period, the maintenance of many not being justified under present business conditions. The remedy for the situation is being sought largely in the reduction of the number of branches. A committee composed of representatives of the more important banks is now engaged in drafting a plan for such retrenchment.

Number of Branches Doubled Since 1913.

An increase of almost 100 per cent in the number of branches since 1913 has been accompanied by a considerable reduction in the number of parent organizations as a result of mergers. In 1913 there were 73 private banks represented in 370 cities, towns, and villages. At the end of 1924 the number of banks was reduced to 33, but the number of localities with banking facilities had increased to about 790. The number of branch banks in the country increased from 674 to about 1,372 during this period.

Cost of Maintaining Extra Branches High.

Branch expansion apparently has more than offset in additional operating expenses the savings effected by the reduction in the number of parent organizations. The supply of available savings funds in Sweden is somewhat inelastic, and for years they have been held by the existing banks with their branches. Ignoring this fact and because of competition, many large institutions have increased their branches far in excess of the banking demands of the communities involved. The expense of their establishment and upkeep has far exceeded profits arising from increased deposits and loans. In Stockholm alone there exist at present nearly 100 branch offices, or one office to about 4,300 inhabitants.

Increase in Operating Costs v. Assets and Liabilities.

Operating costs of these banks during the period 1913 to 1924, inclusive, have increased about 175 per cent, a result, no doubt, of the twofold increase in the number of branch offices which took place during that period. They are far out of proportion to any possible benefits derived from branch expansion. The increase is compared with percentage increases in various banking operations during 1924—using 1913 as a base year—as follows:

	Per cent of increase.
Turnover	99
Capital and reserves	28
Deposits	128
Loans	95
Gross profit	93
Net profit	0
Operating costs	175

Joint Committee Expected to Recommend Closing 400 Branches.

It is reported that the joint committee referred to is about to recommend the closing of almost 400 branch offices in all parts of the country. If this is done, it is estimated that expenses will be reduced by at least 20,000,000 crowns. The saving may be considerably larger if the banks make a determined effort to carry out this policy to the extent justified by business conditions. Such a saving would be greatly to the advantage of industry and business. It would make possible a reduction in charges for banking services, while the Riksbank, by a sound rediscount policy, could bring about a decrease in the margin between interest paid to depositors and that charged borrowers.

Japanese Note Issues

Consul C. R. Cameron, Tokyo

The note issues of Japan on March 31, 1925, totaled 1,430,677,158 yen, as reported by the Department of Finance. The amounts outstanding on March 31, 1924 and 1925, are compared in the following table:

Note Issue of Japan

Issues	March 31—	
	1924	1925
	Yen	Yen
Bank of Japan	1,324,771,565	1,261,852,364
Bank of Chosen	61,121,224	100,497,320
Bank of Taiwan	33,685,002	45,348,555
Government small notes	55,500,000	22,987,000
Total	1,505,077,791	1,430,677,158

Note Issues Authorized for Bank of Japan.

The Bank of Japan notes outstanding at the end of March, 1925, held as security for Bank of Chosen notes, amounted to 27,153,591 yen, which compares with 21,555,158 for March 31, 1924. These are not included in the preceding totals. The notes of the bank, originally authorized when Japan was partially on a silver basis, became convertible into gold upon the adoption of the gold standard in 1897. The bank is required to hold as conversion reserve against the issue of notes gold and silver coins and bullion to the same amount as that of the notes issued, the total value of silver coins and bullion not to exceed one-fourth of the entire conversion reserve. The bank may also issue bank notes to an amount not exceeding 120,000,000 yen on the security of Government bonds, treasury bills, and other reliable securities or commercial bills. In case of necessity it may even issue notes beyond the 120,000,000 yen maximum mentioned. This excess issue, however, is subject to a tax limited by law to not less than 5 per cent per annum but which, until April, 1925, was fixed by the Minister of Finance at 7 per cent. On April 15 the tax was lowered to 6 per cent simultaneously with the reduction of the Bank of Japan discount rate from 2.2 sen per diem to 2 sen (7.35 per cent).

Bank of Chosen—Bank of Taiwan.

The Bank of Chosen issues bank notes under somewhat the same general provisions as the Bank of Japan, such notes being in circulation in Chosen (Korea), Kwantung Province, and along the zone of the South Manchurian Railway. Somewhat analogous conditions also apply to issues of the Bank of Taiwan (Formosa).

New Coinage System in Afghanistan

The government of Afghanistan has introduced a new system of coinage which has for its unit the amania, a silver coin worth approximately the same as the Kabuli rupee (about \$0.16). The name of the new coin is derived from Amanulla, the name of the present Amir of Afghanistan. In addition to the amania there will be coined half-amanias and nickel coins of smaller denominations.

According to press reports the required silver has been purchased in India through a German firm and the nickel through an Italian firm. The manufacturing stamps have been imported from Europe.

Record Activity in Austrian Cotton Spinning

Austrian cotton-spinning mills closed the first quarter of 1925 with by far the largest volume of forward

business for any time since the war, unfilled orders for cotton yarn totaling 14,570,000 pounds, equivalent to about 10 weeks' capacity production, and nearly three times the figure for March 31, 1924. Similarly, production aggregating 13,691,000 pounds and deliveries of 14,311,000 pounds of yarn during the first three months of 1925 exceeded those of any quarter since the war. Of the total deliveries, 51 per cent went to their own twisting and weaving mills, and 30 per cent was exported to Germany, it is said, for reexport to Soviet Russia. The balance was marketed at home. Yarn stocks at the end of this period, 3,063,000 pounds, were normal. Cotton consumption during the first quarter of 1925 totaled 16,610,000 pounds of which 15,901,000 were American and East Indian, the probable ratio on the basis of 1924 trade figures being 2 pounds of American to 1 pound of East Indian. (Assistant Trade Commissioner Elbert Baldwin, Vienna, May 9.)

Japanese Regulations for Examination of Radio Apparatus

An unofficial translation of the regulation that must be complied with in applying for approval of radio apparatus for use in Japan is available for loan by the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., and may be obtained by referring to No. EE 1001.

TRANSPORTATION

P. E. D. Nagle, Acting Chief, Transportation Division

SHIPPING**Argentina Requires Documentation of Foreign Seamen**

Consul General Henry H. Morgan, Buenos Aires, April 18

Under date of March 17, the Argentine Government issued a decree requiring the documentation of foreign seamen entering Argentina, a translation of which is given below. It is to be observed from article 12 that the decree becomes effective on July 17, 1925, in the case of seamen on vessels of steamship lines proceeding from Asia, Africa, and Oceania, and on June 17, 1925, in the case of seamen on vessels proceeding from Europe and America.

ARTICLE 1. No seaman can remain on Argentine territory after the departure of the vessel on which he arrived except upon compliance with all the requirements of existing laws and regulations with respect to immigrants.

ART. 2. Every mariner or seaman who figures on the crew list of a vessel entering Argentine ports should be provided with a navigation book and an individual identification card, in duplicate, each with his photograph, which will be issued, signed, and sealed by the captain of the vessel.

ART. 3. The individual identification card of every person who performs a function aboard the vessel, as mariner, employee, seaman, technician, etc., will be noted on the official form by the captain of the vessel, who within 48 hours of his arrival in an Argentine port shall present the same to be viséed by the direccion general de inmigracion (bureau of immigration) or, in its place, to the authorities charged with enforcing compliance with Law No. 817 and its regulative decrees.

ART. 4. When, at ports of sailing or transit, captains are obliged to sign on at the last moment mariners or seamen who do not possess the navigation book prescribed by article 2 of this decree, they will make it known to the Argentine consul of the port in which it happens, or at the first port of call, so that said officer can note the same on his visé of the crew list. The captain, on his arrival at Argentine ports, will present also

the individual identification cards of said mariners or seamen in accordance with article 3.

ART. 5. No mariner or seaman shall be able to land from vessels arriving at Argentine ports until the captain has presented to the direccion general de inmigracion (bureau of immigration) the individual identification card that belongs to him.

ART. 6. The captain, or whoever replaces him, will give account to the maritime authority within 24 hours of the landing of any of his seamen without the knowledge of his superiors, or of his absence on board at the moment of sailing of the vessel, at the same time delivering up the documentation of the seaman.

It shall always be incumbent on the captain to bring back the deserting seaman, depositing the security in cash prescribed by the direccion general de inmigracion within a maximum of 1,000 pesos, national money, which will be canceled when the deserter leaves the country or has complied with the requisites that will legally authorize his remaining in the Republic. Otherwise, the security will be definitely lost if after the expiration of two years the deserting seaman has not been apprehended.

ART. 7. When a vessel has to land a seaman, whether for illness or whatever other normal cause, the captain, or whoever replaces him, shall immediately give account to the maritime authority, who in turn will advise the direccion general de inmigracion, to the end that the latter shall make the necessary intervention and authorize action pertinent to the case.

ART. 8. The maritime authority charged with the revision of the crew lists on the departure of the vessels, when it notes the absence of any mariner or seaman, shall make known immediately this absence to the prefect general of marine, which in turn shall communicate the same immediately to the direccion general de inmigracion, to the end that it may determine the appropriate action.

ART. 9. When a mariner or seaman desires to land in the Republic to establish himself therein, he shall present himself to the direccion general de inmigracion through the intermediary of the captain or the agent of his vessel, to the end that this authorization may be given him if, under Argentine law and regulations, he is found to be eligible as an immigrant,

ART. 10. The captains of vessels that disembark seamen in form not established by this decree, or that do not give account of the desertions occurring, shall incur the penalties imposed by article 35 of the immigration law and articles 9 and 20 of the regulative decree of December 31, 1923.

ART. 11. The decision of the direccion general de immigration in case of the application of fines prescribed by this decree, may be appealed to the department of agriculture in the form established by article 28 of the regulative decree of December 31, 1923.

ART. 12. The direccion general de immigration will communicate to the navigation companies the present decree, which will become effective within 120 days of its notification to the agents of steamship lines proceeding from Asia, Africa, and Oceania, and within 90 days to those proceeding from Europe and America.

ART. 13. The prefecture general of ports will lodge in its quarters every seaman, mariner, or stowaway delivered to it by the direccion general de immigration, or whose detention it orders in accordance with article 27 of the regulative decree of December 31, 1923. In the case of an individual whose transporting vessel has been ascertained, the expenditures incurred in his detention shall be repaid to the prefecture by the navigation company.

ART. 14. The decree of July 24, 1923, is repealed.

ART. 15. The decree herein set forth is ordered to be communicated, published, and recorded.

Rhine-Main Shipping During 1924

Vice Consul C. E. Macy, Coblenz, Germany, April 21

Nearly 90 per cent of the traffic handled on the Rhine-Main Rivers in the calendar year 1924 moved in and out of nine principal ports. The relative rank of these ports and the total tonnage handled by each in 1913, 1923, and 1924 is, as follows:

Cargo handled at nine principal Rhine-Main ports

[In metric tons]

Port	1913	1923	1924
Duisburg-Ruhrort.....	26,824,616	5,853,475	28,170,912
Mannheim-Ludwigshafen.....	10,243,665	1,172,328	7,184,654
Strasbourg-Kehl.....	2,498,359	2,012,254	4,004,535
Cologne-Wesseling.....	1,495,488	3,415,816	3,040,798
Dortmund.....		399,890	2,025,665
Wanne.....		159,167	1,808,319
Frankfort-on-the-Main.....	2,268,246	705,006	1,310,000
Karlsruhe.....	1,482,645	89,847	1,148,588
Mainz.....	1,808,124	832,306	1,037,989

¹ Including Rheinhausen and the following docks: Rheinpreussen, Phoenix, Hamborn, Orsoy, and Walsum.

² Rhine traffic only.

[Similar figures for all Rhine-Main ports may be obtained by applying to the Transportation Division, referring to Report No. 171367.]

Foreign Orders for German Shipyards

Assistant Trade Commissioner M. L. Goldsmith, Berlin, May 8

In connection with the recent contract for five 10,000-ton motor ships, placed by Furness, Withy & Co. with the Deutsche Werft of Hamburg, there has been considerable interest in foreign orders received by German shipbuilders.

Before the war foreign orders were a relatively unimportant item in the German shipbuilding industry; the yards were sufficiently occupied with contracts from private companies, as well as from the German Navy. The number of ships built in 1913 for foreign order amounted to 205 ocean vessels and 33 river craft, totaling 49,100 and 4,500 gross tons, respectively.

During the war the capacity of the German shipbuilding industry was considerably expanded, and since 1919 a great effort has been made by German shipbuilders to obtain foreign orders. Such efforts were considerably promoted by the inflation period when German production costs were relatively low; so that in 1920, there were 141,600 gross registered tons of seagoing vessels constructed by German shipyards for foreign purchasers. Last year this record was surpassed, 231,600 gross registered tons having been built in Germany on foreign orders.

Ships built in German shipyards, for foreign order

[From official German statistics]

Year	Ocean vessels		River craft		Total	
	Number	Gross registered tons	Number	Gross registered tons	Number	Gross registered tons
1913.....	205	49,100	33	4,500	238	53,600
1920.....	59	141,600			59	141,600
1921.....	62	59,372	4	272	66	59,644
1922.....	28	86,450	72	16,020	100	102,470
1923.....	38	119,187	57	11,073	95	130,260
1924.....	81	231,600				

Liverpool Extends Oil-Storage Facilities

Consul Robert R. Patterson, Liverpool, England, May 4

The increased demand in the northwest part of England for benzole (coal-distilled gasoline) has made it necessary to extend the oil-storage facilities at Liverpool. At Dingle, the oil port of Liverpool, there have been installed three new tanks, 66 feet in diameter by 40 feet high, capable of holding 3,000 tons each, and two tanks of 1,500-tons capacity.

The benzole will be brought to Liverpool in tankers and pumped from the Dingle oil jetty, through a solid drawn-steel pipe three-quarters of a mile long, to the new tanks. This latest addition to the oil-storage facilities increases the capacity to 100,000 tons for all companies.

Hamburg Dockyard Wages Increased

The daily wage of skilled dockyard workers at Hamburg was raised from 6.30 to 6.70 marks, effective from May 1 to August 31, 1925, as a result of a recent wage movement instituted by the Hamburg Dockyard Workers' Union. (Consul Thomas H. Bevan, Hamburg, Germany, May 7.)

Exhibits Available

Persons interested in the following reports may obtain them from the Transportation Division or through the district and cooperative offices of the Bureau of Foreign and Domestic Commerce, by referring to the proper exhibit number:

171258—Athens.—Pilotage charges at the port of Piræus. (Transmitted by Consul General Arthur Garrels, Athens, April 24.)

171398—Newcastle, New South Wales.—Comprehensive report of steamers' port expenses. (Transmitted by Consul R. L. Rankin, Newcastle, New South Wales, March 23.)

RAILWAYS AND ROADS

Early Completion of Lika Railway

Consul Leslie A. Davis, Zagreb, April 22

The completion of the Yugoslav Lika railway, between Ogulin, Croatia, and Split (Spalato), Dalmatia, is expected in July. The tracklaying was greatly delayed by bad weather in March, and there are still 32 kilometers to be laid on the 64-kilometer stretch between Gracac and Knin.

This railway will be of considerable importance in the development of Croatia and Dalmatia, and will greatly increase travel to the Dalmatian coast from Austria, Czechoslovakia, Hungary, and the other countries of eastern Europe. The journey from Zagreb to Split via Sisak (Sissek, or Sziszek) now takes 22 hours and costs 680 dinars (second class by rail and first class by steamer), whereas the journey on the Lika railway will take only 14 hours and cost 456 dinars for the same accommodations, a saving of 8 hours and 224 dinars. [The present value of the dinar is about 1 $\frac{2}{3}$ cents.]

Railroad Rates Affect Rhine-Main Shipping

Consul Christian M. Ravndal, Frankfort on the Main, April 8

The Rhine-Main shipping interests are reported to be seriously affected by the sliding-scale freight rates of the Federal Railway, under which transportation costs become relatively lower the farther goods are carried. For instance, it is alleged that the freight on a shipment from Aschaffenburg to Frankfort on the Main—a distance of about 23 miles—is almost as high

as on the identical shipment from Aschaffenburg to Bremen—a distance of 270 miles.

At a recent meeting of representatives of the Hessian chambers of commerce and Rhenish manufacturers at Mainz, it was unanimously decided to request the administration of the Federal Railways to inaugurate a compensatory system of freight rates that would place the handling of river freight on a competitive basis with that of railway freight. It was shown that it costs more, especially over short distances, to ship partly by water and partly by rail than wholly by rail, owing to transshipping charges and the railway's sliding scale of rates. In support of this allegation, it is stated that a shipment of merchandise from Rotterdam, via the Rhine to Mainz and thence by rail to Nuremberg, is just about as expensive as if forwarded entirely by rail.

Yugoslav Roads to be Improved

Consul K. S. Patton, Belgrade, April 3

The Government of Yugoslavia has made a budget allowance of 14,000,000 dinars (about \$182,000) for the repair and construction of roads in different parts of the Kingdom. The greater part will be expended on the important road now being constructed from Belgrade to Kraguyevatz, thence to Rashka, Pec (Ipek), and continuing across Montenegro to Cattaro (Kotor) on the southern end of the Dalmatian coast. This highway will be completed by the end of the present year, as a result of the increase credits in the budget.

COMMUNICATIONS

Leipzig Obtains Regular Airplane Service

Vice Consul F. van den Arend, Leipzig, Germany, April 18

For more than a year Leipzig has been one of the few large cities in Germany that lacked regular airplane service. The municipal authorities now, however, have made arrangements with the two largest airplane companies in Germany—the Deutsche Aero-Lloyd and the Junkers-Luftverkehrs-Gesellschaft of Dessau, which is founding the Trans-Europa Union—whereby the following air lines will pass through Leipzig: (1) Berlin-Leipzig-Munich-Innsbruck (Aero-Lloyd); (2) Chemnitz-Leipzig-Hanover-Bremen (Aero-Lloyd); and (3) Breslau-Gorlitz-Dresden-Leipzig-Erfurt-Essen (Junkers).

All these lines are to be flown daily, starting not later than May 1. They offer good air connections with all the principal cities of Germany and with Amsterdam, Copenhagen, Danzig, Moscow, London, Paris, Stockholm, Zurich, and Vienna, thus placing Leipzig at the center of European airplane traffic.

Municipal Financial Support Assured.

The municipal government has invested 260,000 gold marks (\$62,650) in the company which maintains the local aviation field, thereby becoming owner of 80 per cent of the company's shares. The municipality has also invested 350,000 gold marks (\$84,337) in the Trans-Europa Union, representing 3 per cent of the company's stock. The Aero-Lloyd, on the other hand, has been granted a subsidy for the current year

amounting to 70,000 gold marks (\$16,867). It will be remembered in this connection that both the Aero-Lloyd and the Trans-Europa Union are subsidized by the German Federal Government, which desires to push the development of aviation in Germany. The municipal authorities are therefore supporting this national policy, as well as securing to the city the advantages of a regular airplane service.

Sections of Pacific Cable to be Duplicated

Alfred Nutting, clerk in consulate general, London, April 28

The duplication of the northern sections of the Pacific cable will be undertaken by two contractors. The Telegraph Construction & Maintenance Co., who are to build the Bamfield-Fanning section (3,450 miles of loaded cable), are to use a new alloy called "numetal." Siemens Bros., contractors for the Fanning-Suva section (2,043 miles of loaded cable), are using permalloy, a material similar to that used in the new Western Union New York-Azores cable. The cost of the two sections will be £2,379,000, and completion is due in September, 1926.

It is estimated that the speed of permalloy is 600 letters per minute and of numetal 720 letters, both simplex, as compared with the present rate of 135 letters duplex. It is anticipated that these speeds will be greatly exceeded, and also that duplex operation will be found possible. The speeds of these cables, however, are only a fraction of those of the new Atlantic

cables of the same type, owing to the fact that the Bamfield-Fanning section is the longest uninterrupted stretch of submarine cable in the world—and the length of a cable is the most important factor affecting its operating speed.

France-Morocco Air-Mail Traffic Still Heavy

Consul J. Lee Murphy, Tangier, Morocco, April 20

The number of letters carried by the Latécoère Air Service between France and Morocco during February, 1925, was 368,180, weighing 8,035 kilos, compared with 232,709 letters in February, 1924, with 5,717 in the same month of 1920, and with 435,783 in January, 1925. The popularity of this service is said to be due to the appreciable saving in time (from four to seven days in winter) on the passage of a letter from Paris to Casablanca. The air service was carried on without interruption during very bad weather in February, when it was frequently impossible for the small ships that carry mail and, in fact, for large vessels, to enter the more or less exposed ports of Morocco.

Subsidy for Barranquilla-Girardot Air Service

Office of commercial attaché, Bogota, Colombia, April 27

The Compania Colombo-Alemana de Transportes Aereos has been granted a subsidy of \$65,000 for the establishment of a twice-a-week service between Bar-

ranquilla and Girardot, accommodating eight passengers each trip. The Government has also contracted to pay a bonus of \$5,000 for the establishment of air-mail service between Puerto Wilches, on the Magdalena River, and Bucaramanga, and \$10,000 for air-mail service between Magangué, or some other point on the Magdalena, to Cali, on the Cauca River.

Direct Mail Service to Cuban Interior

Trade Commissioner C. A. Livengood, Habana, May 19

Arrangements have been made whereby the plan for expediting mail to Cuba, as described in *COMMERCE REPORTS* of March 9, will become operative on July 1. Beginning on that date mail from the United States to Cuba will be cleared at Jacksonville, Fla., and made up for forwarding to some 13 customs districts in Cuba without being delayed in Habana. Heretofore mail from the United States to the interior of Cuba has been delayed by the practice of passing it through the Habana post office before forwarding it to the various distributing zones.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

TRADE-MARK REGISTRATIONS APPLIED FOR IN JAPAN

Acting Commercial Attaché Frank Rhea, Tokyo

In recent numbers of the Japanese Trade Mark Gazette, a number of applications have appeared for the registration of trade-marks which may conflict with American trade-marks used in trade in Japan. Details as to the application of the trade-marks noted are given, for the interest of those parties who are using identical or similar trade-marks in Japan.

Published April 14, 1925

Standard.—Written in heavy vertical type; for emery, artificial or natural grinding stones; No. 12225; application presented September 10, 1924, by T. Kitao.

Sunkiss.—With Japanese characters; for perfumes and toilet articles; No. 12120; application presented March 23, 1923, by U. Tamura.

Sunmaid.—In the picture which is the exact reproduction of the trade-mark of the Sun Maid Raisin; for hosiery; No. 12249; application presented November 26, 1924, by Japan Hosiery Co. (Ltd.)

Whistle.—In stenciled character in black square and Japanese phonetic character written vertically underneath; No. 12134; application presented December 27, 1924, by I. Koyama.

Published April 28, 1925

Anthrachrome.—In heavy type with Japanese phonetic characters underneath; for dyes, paints, mordants, etc.; No. 12366; application presented June 2, 1924, by Kyodo Senryo Kaisha.

Aflam.—In heavy type and Japanese phonetic character underneath; for perfumes and other toilet articles; No. 12579; application December 1, 1924, by I. Sakamoto.

Webster.—In English and Japanese phonetic character underneath; for fountain pens, inks, ink powder, stamp inks and other stationery; No. 12561; application presented November 13, 1924, by S. Tsuboshima.

Opposition Must be Made Within 60 Days.

Opposition against the registration of a trade-mark may be taken in Japan within 60 days following the publication of the mark. When the mark is once registered, the title of the registrant can be disputed in a trial for cancellation or annulment. These proceedings, however, can be brought only if the trade-mark has been registered in contravention of the provisions of the Japanese law.

Commercial Law Briefs

Decision on Mexican Taxation of American Business Available.

Commercial Attaché Alexander V. Dye, Mexico City, has received word from the Secretary of the Treasury of Mexico that agents of American firms selling C. O. D. in Mexico would not be held responsible for income tax assessed against such operations, as had been previously ruled by the stamp office. This is the first decision of importance to American exporters under the new Mexico income tax law, effective April 1, 1925, copies of which are on file in the Division of Commercial Laws. Likewise, profits on merchandise sold f. o. b. port of origin, or f. o. b. any foreign point, being the result of a transaction entirely consummated abroad, according to the ruling, are not subject to income tax.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS

CZECHOSLOVAKIA-DENMARK

A. E. Fenselau, office of commercial attaché, Copenhagen, April 29

Extension of Provisional Commercial Agreement.

Pending the negotiation of a permanent commercial treaty between Czechoslovakia and Denmark, the present provisional most-favored-nation trade agreement between the two countries has been indefinitely renewed. This treaty was due to expire April 30, 1925.

[A summary of this treaty was published in *COMMERCE REPORTS* for March 10, 1924, with a notice of its extension to April 30, 1925, in the issue of February 2, 1925.]

CZECHOSLOVAKIA-SWEDEN

L. A. France, office of trade commissioner, Stockholm, April 15

Negotiation of Most-Favored-Nation Treaty.

A new commercial treaty granting reciprocal most-favored-nation treatment to commerce and shipping of the two countries was signed at Stockholm, April 18, 1925, by representatives of the Czechoslovak and Swedish Governments. The treaty will be submitted to the two Parliaments for ratification.

DENMARK-LATVIA

A. E. Fenselau, office of commercial attaché, Copenhagen, April 29

Ratification of Commercial Treaty.

Ratifications of the most-favored-nation commercial treaty signed between Denmark and Latvia on November 3, 1924, were exchanged in Riga on April 25, 1925. This treaty went into effect on May 10.

[Notice of this treaty appeared in *COMMERCE REPORTS* for December 22, 1924.]

FRANCE-SIAM

Minister Edward E. Brodie, Bangkok

Treaty of Amity and Commerce Signed.

In accordance with the provisions of the Franco-Siamese treaty of friendship, trade, and navigation signed at Paris on February 14, 1925, France agrees to the abolition of extraterritorial rights in Siam under the usual conditions appearing in previous treaties with other powers, and concedes the right of fiscal autonomy to Siam in respect to French trade as soon as other nations retaining this privilege forego the same in like manner. French nationals are accorded the right to acquire and possess real estate throughout Siam, subject to the arbitration of differences which can not be settled diplomatically.

An additional protocol proposes the negotiation of a special agreement for settling the relations existing between Siam and Indo-China on a new basis.

GERMANY-SPAIN

Cable from Assistant Commercial Attaché D. P. Miller, May 29

Commercial Treaty Ratified.

The commercial treaty between Germany and Spain, signed at Madrid on July 29, 1924, has been ratified by the German Reichstag. The terms of the treaty have been provisionally in effect since August, 1924.

(For the details of this treaty, see *COMMERCE REPORTS* for August 25, 1924.)

GENERAL TARIFF CHANGES

NETHERLANDS

Cablegram from office of commercial attaché, The Hague, May 29

New Customs Tariff Effective July 1.

The new Netherlands customs law has been made effective from July 1, 1925, by a proclamation of May 26.

The new tariff was enacted into law in December, 1924, and has been awaiting the Queen's proclamation putting it into effect. The duty on most goods has been increased from the former general rate of 5 per cent to 8 per cent, with a few classes of goods subject to higher duties, such as motor vehicles (12 per cent) and package foods (20 per cent).

IMPORT AND EXPORT RESTRICTIONS

ARGENTINA

Trade Commissioner Brice M. Mace, Jr., Buenos Aires, April 21

Restriction of the Importation of Fresh Fruits.

By a decree of April 14, 1925, the importation of fruits into Argentina from Europe, North America, New Zealand, and Brazil is permitted only through the ports of Buenos Aires, Rosario, and La Plata.

The same decree prohibits the importation of fresh fruits from Peru, Brazil, Australia, New Zealand, South Africa, Cuba, Spain, and Italy, with the exception of lemons, coconuts, bananas, and pineapples.

AUSTRIA

Assistant Trade Commissioner Elbert Baldwin, Vienna, May 2

Removal of Export Restrictions and Duty on Lumber.

The restriction on the exportation of lumber from Austria has been removed, effective May 1, 1925. At the same time the export duty of 1 gold crown per cubic meter was withdrawn. Timber and pulp wood, however, remain subject to license and duty.

BULGARIA

Consul Stuart Lupton, Sofia, April 27

Probable Removal of Restriction on Luxury Imports.

The semiofficial press carries an announcement that the Bulgarian Government intends to abrogate, from October 15, 1925, the law which became effective on January 17, 1924, restricting the importation of luxury goods. Luxury surtaxes on such goods will continue to be assessed.

CANADA

Cable from Trade Commissioner Lynn W. Meekins, Ottawa, May 25

Import Restrictions on Live Fowl from New Jersey Removed.

Live chickens, turkeys, and geese from the State of New Jersey may now be imported into Canada without restriction, under a ministerial order of May 20.

[Such importations are still prohibited from the States of New York, Pennsylvania, and Indiana, unless accompanied by a certificate of an official of the Bureau of Animal Industry, certifying that they are free from poultry disease. Previous notices on these restrictions appeared in *COMMERCE REPORTS* for January 19, February 23, April 13, and May 11, 1925.]

TARIFF CHANGES ON SPECIFIC ARTICLES

COSTA RICA

Consul Roderick W. Unckles, San Jose, April 28

Reduction of Import Duty on Materials for Umbrellas.

The import duty on metal frames, wooden handles, and rods used in the manufacture of umbrellas has been reduced from 1.20 colones per gross kilo (tariff items 20 and 80) to 0.40 colon per gross kilo (tariff item 18) by a decree of April 21, 1925.

CZECHOSLOVAKIA

Commercial Attaché J. F. Hodgson, Prague, April 8

Reduced Import Duties on Machine Tools and Other Non-competitive Machinery.

The Czechoslovak Parliament passed a law which was signed by the President April 7, 1925, reducing the import duty on machine tools and other mechanical equipment which is noncompetitive with those of Czechoslovak manufacture.

The reductions, as provided for in this legislation, which can be granted by the Ministry of Finance on application from the importer of such machinery, range from 84 to 86.6 per cent on electrical machinery and from 75 to 84 per cent on other machinery, of the present tariff rate, which is now 360 crowns per 100 kilograms. The bill reduces the tariff coefficient for the preferred classes of machinery to 4 as compared with coefficients varying from 16 to 30 in effect at present. While the new tariff rates have not been computed in accordance with the reduced coefficient, in general the new schedule will be approximately one-sixth of the old rate on machine tools.

Textile equipment, including spinning, weaving, knitting, and sewing machinery driven by power; also automobile starting, igniting, and lighting machinery are not granted any tariff reduction under the new law.

A reduction in the import duty may be granted through 1926 on the importation (while this law is in force) of the machinery and apparatus enumerated below, in so far as it is not manufactured locally and the importation is necessary to introduce or improve certain industrial or agricultural production:

Steam boilers; distilling, cooling, and brewing machinery; locomotives and tenders; steam engines and other motors (with the exception of electric motors and automobile and airplane motors); machinery connected to steam engines, such as steam dredgers, excavators, cranes, hammers, pumps, etc.; machine tools; agricultural machinery and implements; sewing and knitting machines (with the exception of power-driven machinery of this class); machinery not specially provided for (excepting textile machinery).

Electrodynamical machinery and electric motors, also connected to other apparatus; transformers; other electrical apparatus not specially provided for (excepting telegraph and telephone apparatus, electrical measuring and calculating apparatus, electric lamps, switches, and conductors, automobile starting, igniting, and lighting apparatus).

The same reduction in the import duty may be granted on the most important and specified spare parts of such machinery not manufactured domestically, provided they are imported while this law is in force and upon proof that they are actually parts of the above-mentioned machinery.

If such reduction is granted, the new import duty will be computed on the basis of the basic customs tariff as of January 1, 1922, multiplied by the coefficient 4.

Before making a decision regarding the reduction in the import duty applied for in accordance with the provisions of this law, the Ministry of Finance may con-

sult a special board of councillors (consisting of representatives of the industry) and obtain its advice.

This law became effective eight days after its proclamation, and will expire at the end of the year 1926.

In cases worthy of special consideration, the Ministry of Finance may retroactively grant a similar reduction in the import duty paid on apparatus and equipment which was imported on and after July 1, 1924, up to the day when this law became effective.

GERMANY

Margaret L. Goldsmith, assistant trade commissioner, Berlin, May 1

Reichsrat Approves Proposed Increase in Duties on Leaf Tobacco.

The Commonwealth Council (Reichsrat) has passed the bill presented by the Federal Ministry of Agriculture, according to which import duties on leaf tobacco are to be increased from 30 to 80 marks per 100 kilograms. The bill will now be passed on to the Reichstag for final decision. Just when the Reichstag will vote on this measure is not yet known, but it is expected that tobacco duties will be decided upon with other import duties during the next few weeks.

German manufacturers of tobacco products and inland tobacco growers have continued their controversy over the bill during the last few weeks. Though the duties finally adopted may not be as high as the present bill prescribes, it is probable that such a bill will eventually be passed by the Reichstag, and that the German tobacco industry will be granted higher protection.

[See COMMERCE REPORTS for April 20, 1925, for earlier notice of this proposed increase.]

Cable from Assistant Commercial Attaché D. P. Miller, Berlin, May 23

Further Details of Proposed Tariff Revision.

Further details of the proposed German tariff schedules introduced into the Reichsrat last week have been made public, and include the following rates:

Further Increases in Foodstuff Duties Proposed.—In addition to the details previously announced, the following changes are proposed on certain foodstuffs:

Tariff item	Article	Present rate	Proposed rate
		Gold marks per 100 kilos	Gold marks per 100 kilos
162	Flour.....	Free.	8.50
	Beginning August, 1926.....		12.50
Ex 176	Refined sugar.....	Free.	10.00
	Molasses.....	Free.	4.00
Ex 48	Dried apricots.....	10.00	10.00
	Prunes:		
	In bags weighing at least 50 kilos each.....	4.00	10.00
	In other containers.....	15.00	20.00
23	Potatoes:		
	Feb. 15-July 31.....	Free.	4.00
	Aug. 1-Feb. 14.....	Free.	.50
219	Tinned milk.....	Free.	40.00

[NOTE.—The pre-war rate on flour was 18.78 marks per 100 kilos, with a conventional rate of 10.20 marks. Accordingly, the proposed rates are somewhat lower than the pre-war conventional rate—the effective rate—until August, 1926, after which the rate is to be higher.]

In place of the rate on horses varying from 90 to 360 gold marks each, according to their value, a rate of 500 gold marks each on mares and 30 gold marks each on other horses is proposed.

Proposed increases on mineral colors and other chemical products.—While all coal-tar dyes are to remain free of import duty, the following increases are proposed on mineral colors:

Tariff item	Article	Present rate	Proposed rate
		<i>Gold marks per 100 kilos</i>	<i>Gold marks per 100 kilo</i>
322	Prussian blue.....	10	25
323	Ultramarine.....	15	30
324	Red and white lead.....	1	5
326	Zinc oxide.....	2	5
	Lithopone.....	2	3
327	Red mercuric oxide.....	10	20

On rock phosphate and on sulphur, now free, rates of 3 gold marks per 100 kilos are proposed, and of 5 gold marks on borax and 10 gold marks on white arsenic, which are also at present free of duty. Carborundum is to remain dutiable at 4 gold marks per 100 kilos, while the rate on refined wood alcohol and acetone, now 20 gold marks per 100 kilos, is to be reduced to 5 gold marks. A rate of 33 gold marks per 100 kilos is proposed for lacquers and lac varnishes in place of the existing rate of 25 gold marks.

Duty on raw film to be increased.—The rate of 400 gold marks per 100 kilos on raw photographic film is proposed to be increased by 50 per cent, to 600 gold marks.

Increases proposed for calculators, tools, etc.—The following changes are proposed on various metal manufactures:

Tariff item		Present rate	Proposed rate
		<i>Gold marks per 100 kilos</i>	<i>Gold marks per 100 kilos</i>
801	Typewriters.....	240	240
	Adding machines.....	240	360
	Calculating typewriters.....	240	300
812	Files and rasps:		
	Not over 16 centimeters in length.....	40	52
	16-35 centimeters in length.....	25	32
	Over 35 centimeters in length.....	10	13
813	Drills, not otherwise mentioned, tongs, or pinchers; cutters for vines and roses, hedge shears, pruning shears, sheet-metal shears, sheep shears; chisels, planes, pipe cutters, ratchet drills, "Rohrdichters," machine knives, screw cutters, cutting compasses.....	20	26
814	Broaches, gimlets, machine tools, measuring tools (rules, angles, compasses, except cutting compasses, gauges, or the like).....	40	50
Ex 832	Builders' hardware, manufactured.....	12	17
Ex 836	Razor blades.....	48	800
Ex 905	Mowing machinery.....	4	8
Ex 904	Compressed-air tools.....	20	140

High duty proposed for parts of typewriters and calculators.—A special rate of 700 gold marks per 100 kilos has been proposed for parts of typewriters and calculators.

Proposed increases on electrical machinery.—Increased rates are proposed for electrical machinery of light and moderate weight, such as motors, dynamos, and transformers, as follows:

Tariff item		Present rate	Proposed rate
		<i>Gold marks per 100 kilos</i>	<i>Gold marks per 100 kilos</i>
907	Electric motors, dynamos, transformers, etc.:		
	Weighing below 10 kilos each.....	9	80
	Weighing 10-25 kilos each.....	9	40
	Weighing 25-150 kilos each.....	9	23

A special rate of 150 gold marks per 100 kilos is proposed for automatic starting ignition equipment.

[The text of the complete schedule has been mailed from Berlin, and further details will be available upon request when that dispatch is received.]

IRAQ (MESOPOTAMIA)

The Board of Trade Journal, April 30

Revised Import Duties on Tobacco, Films, Saccharin, Playing Cards, and Manures.

Effective from March 19, 1925, the following revised import duties are imposed on the undermentioned articles imported into Iraq.

Articles	Old rate	New rate
	<i>Rupees per kilo</i>	<i>Rupees per kilo</i>
Cigarettes.....	5	6
Tobacco, manufactured.....	5	6
	<i>Per cent ad valorem</i>	
Cinematograph films, whether new or previously exposed.....	20	5
Saccharin and other concentrated sweetening substances or extracts usable as a substitute for sugar.....	25	2
		<i>Annas per gram</i>
		<i>Per cent ad valorem</i>
Playing cards.....	15	50
Manures, artificial.....	11	Free.
(Provided that a certificate from the Director of Agriculture or an officer authorized by him is furnished by the importer stating that the material as imported is in a condition that renders it unfit for any purpose other than manure.)		

ITALY

Cablegram from Commercial Attaché H. C. MacLean, Rome, May 20

Restoration of Former Low Duty on Red Gum Lumber.

A decision just issued by the Italian customs service reverses the recent ruling with regard to the classification of red gum lumber and recognizes it as a common wood. The duty on red gum thus reverts to the rate of 3 gold lire per metric ton, instead of 3 gold lire per 100 kilos, the rate applicable to fine lumber, to which red gum had been temporarily assigned by the new Repertorio to the Italian tariff, published on February 15, 1925.

PORTUGAL

Diário do Governo, Lisbon, April 28

New Import Duty on Asphalt Slabs.

Asphalt slabs are now dutiable at 1 gold escudo per metric ton, minimum rate, and 2 gold escudos per metric ton, maximum rate, under a new item established in the Portuguese tariff by a royal decree of April 28, 1925.

[Minimum rates apply to imports from the United States.]

SOUTHWEST AFRICA MANDATED TERRITORY

Consul General D. C. Poole, Cape Town, April 7

Export Duties Imposed on Whale Oil and "Snoek" Fish.

Export duties of one-fourth penny per gallon on whale oil and one-eighth penny per fish on "snoek" have been imposed, with effect from April 1, on shipments of these products from the Mandated Territory of Southwest Africa by a proclamation dated February 27, published in the Official Gazette of Southwest Africa for April 1, 1925.

TRINIDAD

Consul Henry D. Baker, Trinidad, May 1

Proposed Export Duties on Asphalt.

An ordinance introduced into the Trinidad Legislative Council by the Government provides for export duties on asphalt as follows: Crude pitch or asphaltum, 5s. per ton; crude liquid pitch or asphaltum, 5s. per

240 gallons; boiled pitch or asphaltum, 7s. 6d. per ton; dried pitch or asphaltum, 6s. 11d. per ton.

[Upon notification of the action taken on the measure by the legislative council an announcement will be made in **COMMERCE REPORTS**.]

URUGUAY

Acting Commercial Attaché L. B. Clark, Montevideo, April 20

Electrical Water Pumps Dutiable as Industrial Machinery.

According to a decree of March 20, 1925, electrically driven water pumps with belts or with transmission mechanism directly attached, when imported into Uruguay, will be classified as industrial machinery, with a duty of 5 per cent of the official valuation, plus surtaxes, instead of 31 per cent, plus surtaxes, as formerly.

CUSTOMS REGULATIONS

ITALY

Cable from Commercial Attaché H. C. MacLean, Rome, May 20

Special Marking of Canned Fruits and Vegetables Postponed.

The Italian requirement that all canned fruits and vegetables be indelibly marked according to the provision of the decree of February 19, 1923, has been further postponed and will not be enforced until August 1, 1925. American canners should take the necessary precaution to see that no shipment reaches Italy for clearance after July 31 that is not marked in accordance with the Italian requirements which were outlined in the issue of **COMMERCE REPORTS** for April 23, 1923, and again in **COMMERCE REPORTS** for March 9, 1925.

INTERNAL REGULATIONS AFFECTING TRADE

CHILE

Assistant Trade Commissioner Clarence C. Brooks, Santiago, April 21

Sales Tax on Toilet Preparations and Pharmaceuticals.

By a decree of March 19, effective July 1, 1925, a sales tax has been established in Chile on all toilet preparations, hygienic preparations, and pharmaceuticals known as "specifics," whether for medicinal or for veterinary use, of national and of foreign manufacture.

Imported preparations will be subject to the taxes prescribed for those of national manufacture, plus a surcharge of 40 per cent of the tax.

Exports of these preparations from Chile will be exempt from payment of the sales tax, and on such exportations a premium will be paid in amount not to exceed 20 per cent of the tax which would be imposed if the merchandise were sold in Chile.

[The full text of these regulations is on file in the Division of Foreign Tariffs, and information in regard to the sales tax on specific articles will be furnished upon request.]

HUNGARY

Consul W. S. Reineck, Budapest, April 17

Reduced Internal Tax on Sugar.

A decree of the royal Hungarian Ministry of Finance, April 15, 1925, reduced the internal tax (known as "the treasury participation tax") on imported and domestic sugar from 0.42 to 0.38 gold crown per kilo. The tax as paid in paper crowns is multiplied by 14.700, the present exchange factor.

LATVIA

Commercial Attaché C. J. Mayer, Riga, April 23

Change in Excise Taxes on Tobacco and Matches.

A new excise law, published in the Latvian *Valdības Vestnesis* of April 1, 1925, provides for the following excise taxes and regulations on tobaccos, tobacco products, and matches:

Taxes on imports.—Smoking tobacco of the first quality, 12.50 lats per kilo; of the second quality, 8 lats per kilo, and of the third quality, 2 lats per kilo; on snuff and chewing tobacco, 9 lats; ready-made smoking and chewing tobacco (selling price unlimited), 20 lats per kilo; Russian cigarettes, ordinary cigarettes, and cigarillos, 24 lats per thousand when the weight of the tobacco does not exceed 650 grams; for each additional 650 grams or fraction thereof, 24 lats. The selling price for imported cigarettes and cigarillos is unlimited. Cigars weighing per thousand not over 6 kilos, 0.10 lat each; cigarette tubes, 0.40 lat per 100; cigarette paper, 0.12 lat per 50 leaves of a size not exceeding 40 square centimeters; when the paper is of larger size, 0.03 lat per each 50 leaves of each additional 40 square centimeters, or fraction thereof; matches in boxes up to 75, 0.02 lat per box, with an additional 0.02 lat per each additional 75 matches per box.

Domestic Products.—Latvian home-grown smoking tobacco of the second quality will be subject to an excise tax of 2 lats per kilo; smoking tobacco of the third quality, 1.20 lats per kilo; tobacco ribs, 0.60 lat per kilo; and snuff, 1.60 lat per kilo. Cigarettes of the first quality tobacco weighing 650 grams per 1,000 cigarettes, 11 lats per thousand; of the second quality, weighing up to 600 grams per thousand, 9 lats per thousand; and of the third quality, weighing up to 550 grams per thousand, 6.40 lats per 100 kilos; cigarettes made of Latvian tobacco, weighing per thousand not over 550 grams, 3 lats per thousand; cigars of the first quality, weighing per 1,000 not over 6 kilograms, 40 lats per thousand; and of the second quality, weighing not over 6 kilos per thousand, 30 lats per thousand; and on matches, 0.008 per box containing up to 75 matches, and an additional 0.008 lat per each additional 75 matches per box.

Smoking and chewing tobacco will be admitted for sale in packages of 500, 400, 200, 100, and 50 grams, and snuff in packages of 25 grams. First and second quality cigarettes and cigarillos are admitted in packages containing 10, 20, 25, and 100 pieces, but the third quality cigarettes of home-grown tobacco may contain only 20 or 100 pieces. Second-quality cigars must be packed by 2, 5, 10, 25, 50, or 100 pieces per package, while first-quality cigars, both home-grown and imported, may be packed one cigar per package.

This law became effective April 1, 1925.

PERSIA

Wallace Murray, Secretary to the legation, Teheran, March 25

Excise Taxes on Tobacco.

A new tobacco excise law passed by the Persian Parliament on March 18, 1925, provides for the collection of taxes on all kinds of tobacco produced for consumption in Persia. The various kinds of tobacco are divided into three classes and are subject to the following taxes: Tobacco, from 2 krans to 5 krans per man; pipe tobacco, from 5 krans to 12 krans per man; cigar and cigarette tobacco, from 8 krans to 18 krans per man. The Government is empowered to exempt from taxes all tobacco exported from the country and to subject imported tobacco to a tax equivalent to the difference between the customs duties leviable thereon and the internal taxes, or to raise the customs duties to the extent of the internal taxes.

[Kran equals \$0.095; man equals 6.49 pounds. The Ministry of Finance is to appoint a committee to classify the various kinds of tobacco and to publish rules for the enforcement of the law.]

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The Department of Commerce announces the following further figures covering business movements in April:

Manufacturing Production.

Manufacturing production in April was the same as in March, at 129 per cent of the 1919 average, according to the index number of the Department of Commerce, and was 9 per cent higher than in April, 1924. The principal increases over March occurred in the output of automobiles, with a gain of more than 17 per cent, and in stone and clay products with 13 per cent; while slight increases were shown, when reduced to an average daily basis, in the output of paper and lumber. Increases over a year ago were made in all groups except foodstuffs, with textiles showing the greatest increase.

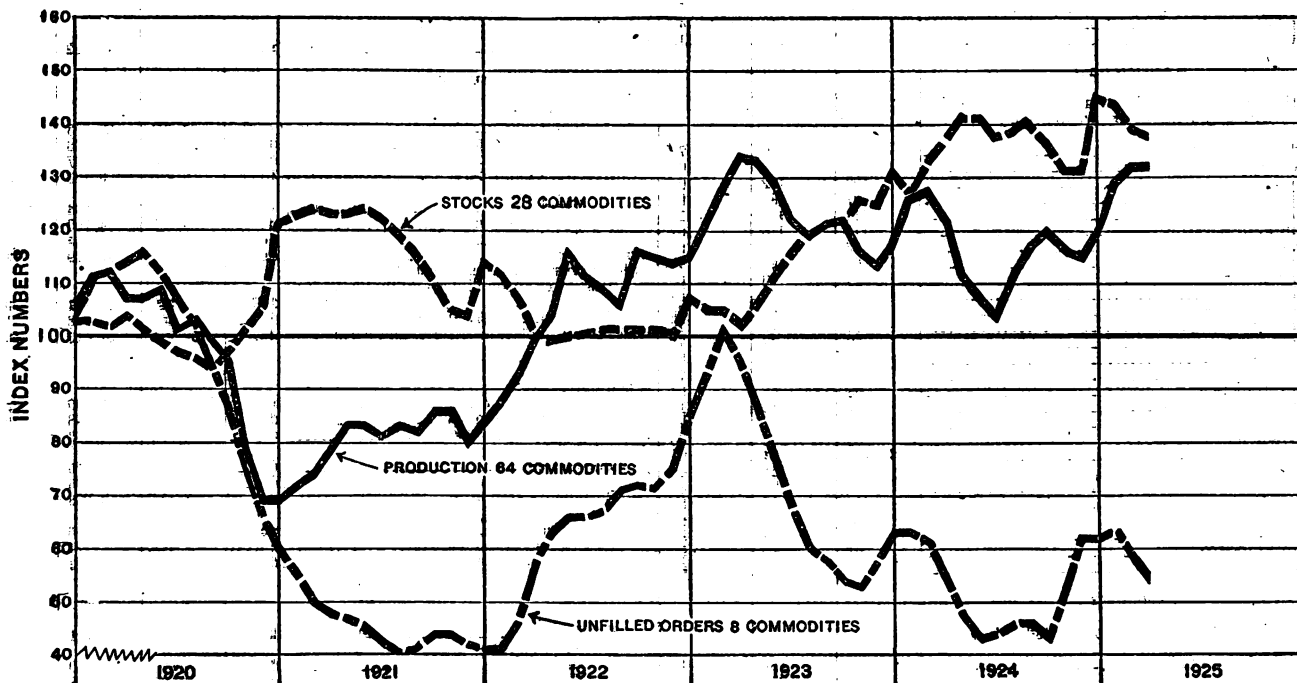

Data from Survey of Current Business.

The following table gives such data from the June issue (No. 46) of the Survey of Current Business as have been received up to May 28, 1925.

All items given in the following table correspond with similar information in the issue of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the survey, where specific descriptions of the data and their sources are given. In addition to figures given from Government sources, there are also incorporated for completeness of service the figures from other sources generally accepted by the trades, the authority and responsibility for which are noted in the monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for \$1.50 per year.

RELATIVE PRODUCTION, STOCKS, AND UNFILLED ORDERS FOR MANUFACTURED COMMODITIES

(1920 monthly average=100. This chart shows stocks of manufactured commodities only, while adjustment has been made for both stocks and production for their respective seasonal movements. Unfilled orders are principally those for iron, steel, and building materials. April, 1925, is latest month plotted.)

Output of Raw Materials.

The output of raw materials was 1 per cent less in April than a year ago, the marketings of animal products decreasing 1 per cent, as computed by the Department of Commerce index numbers, while crop marketings decreased 9 per cent, forestry products increased 2 per cent, and mineral production 7 per cent.

The index of unfilled orders declined during April, but was the same as a year ago, iron and steel unfilled orders being higher on April 30 than a year ago, while orders for building materials declined.

Stocks of Commodities.

Stocks of commodities held at the end of April decreased 5 per cent during the month, when allowance is made for seasonal tendencies, but increased 4 per cent over a year ago. Stocks in each group, however, except manufactured commodities, declined during April, when seasonal factors are eliminated, while compared with a year ago, all groups except manufactured foodstuffs showed increased stocks on hand.

¹ Revised.

² Current data not comparable with data prior to July, 1924, due to change in the law.

MANY SPECIAL CIRCULARS ISSUED BY THE BUREAU

Supplementing its various regular and special publications, the bureau issues numerous mimeographed circulars which are distributed to those interested, including persons and firms whose names are on the Exporters' Index, and copies may be obtained from the bureau or its district offices. Circulars numbering 76, as listed below, were issued by 19 different divisions during the week ended June 1.

AGRICULTURAL IMPLEMENTS DIVISION

- No. E-40. Market for Internal-Combustion Engines in Panama.
- No. E-41. Market for Internal-Combustion Engines in Madagascar.
- No. E-43. Market for Internal-Combustion Engines in Egypt.
- No. E-44. Market for Internal Combustion Engines in Persia.
- No. E-45. Market for Internal-Combustion Engines in Australia.
- No. E-47. Market for Internal-Combustion Engines in British Malaya.
- No. E-48. Market for Internal-Combustion Engines in Bulgaria.
- No. E-49. Market for Internal-Combustion Engines in Colombia.

AUTOMOTIVE DIVISION

- No. 43. Automotive Foreign Market News Bulletin.
- No. 557. Commercial Agreement with Spain Prolonged.

CHEMICAL DIVISION

- No. 62-A. World Notes on Industrial Chemicals.
- No. 62-E. World Notes on Fertilizers.

COAL DIVISION

- No. 315. Coke Industry in New South Wales, Australia.
- No. 331. Scotch Coal Situation Acute.
- No. 332. Coal, Coke, and Patent Fuel Production in Northern France During February, 1925.
- No. 333. Plan for Distributing Alberta Coal in Ontario.

COMMERCIAL LAWS DIVISION

- No. 81. Taxation of Securities in Europe.

ELECTRICAL DIVISION

- No. 374. Tariffs Correction to Special Circulars No. 358.

EUROPEAN DIVISION

- No. 43. European Economic and Trade Developments.

FOODSTUFFS DIVISION

- No. 73. Exports of Soy Beans and Products from Dairen, Manchuria.

Foodstuffs 'Round the World:

- Foreign Notes on Meats, Fats, Oils, and Livestock.
- Tropical Products.
- Fishery News.
- Grain and Grain Products.
- Canned and Dried Fruits.
- Fresh Fruits.

FAR EASTERN DIVISION

- No. 39. Far Eastern Trade News.

HIDE AND LEATHER DIVISION

- No. 466. German Method of Marketing Raw Hides and Skins.
- No. 468. Situation in the German Tanning Industry.
- No. 469. Germany's Imports and Consumption of Hides and Skins.

IRON AND STEEL DIVISION

- No. H-10. Foreign Hardware Bulletin.
- No. 360. Statistical Record of the British Iron and Steel Industry for the first quarter of 1925.
- No. 361. British Indian Import Statistics for December, 1924.
- No. 362. Summary of Average Value per Ton of Items entering into British Foreign Steel Trade during December, 1924, January and February, 1925.
- No. 363. British Steel Statistics for February, 1925.
- No. 365. German Quick Action Visas.
- No. 367. Construction Activity in Guadalajara, Mexico.

LATIN AMERICAN DIVISION

- No. 54. "Latin America at a Glance."
- No. 160. Per Capita Trade of Latin America.
- No. 168. Paraguayan Business Good for Summer Season.
- No. 175. Living and Office Operating Expenses in Brazil.

MINERALS DIVISION

- No. 39. Foreign Trade Notes.
- No. 200. South African Diamond Production in 1924.
- No. 203. Bolivian Mineral Exports in 1924.
- No. 204. Peruvian Market for Asbestos Products.

(Continued on p. 624)

FOREIGN TRADE OPPORTUNITIES

Reserved information may be obtained from the Bureau and its district and cooperative offices by firms and individuals on the Exporters' Index upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquiries; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: *Reported by American consular officers; †Reported by commercial attachés and trade commissioners; ‡Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

Expert Advice on Transportation Problems

The Transportation Division of the bureau acts as a foreign traffic manager for exporters. Shippers may obtain from it information on freight rates, services, and facilities, both rail and ocean, which will enable them to route shipments economically and to quote c. i. f. prices. It can inform shippers desiring a change in ocean freight rates or classification of the rate procedure of steamship conferences. The division is prepared to give expert advice on how to pack shipments for foreign markets. Lists of reliable freight forwarders in the leading ports of the United States have been prepared for distribution. It has available for distribution data on facilities, regulations, and charges in the ports of the world. It makes studies of the volume of overseas trade, analyzing the character and direction of the flow of commerce between this country and foreign countries.

The division handles trade opportunities for the sale of American railway motive power, rolling stock, and equipment in foreign countries and is prepared to make a study of any foreign railway as a market for American equipment.

This division also deals with telephone, telegraph, cable, radio, and postal communication and is interested in all matters tending to protect and increase American facilities for world communication. It is prepared to advise on telegraphic codes, on air mails, and commercial aviation.

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

JULIUS KLEIN, Director Bureau of Foreign and Domestic Commerce

Editorial Board: Griffith Evans, Grosvenor M. Jones, H. Dana Durand, Eugene S. Gregg, and Archibald J. Wolfe

World Trade in Canned Salmon

Canned salmon is one of the most highly esteemed of all American tinned foods marketed abroad. England is the best market at present. The war did not materially alter the normal trade in this commodity, except during the period of hostilities and a short time afterward.

The canned-salmon industry in the United States has shown a steady growth and has maintained its position as the most important branch of our fish industries. On a list of 100 most important commodities exported by the United States in 1923, exports of fish stood fiftieth in quantity and thirty-fifth in value, of which canned salmon accounted for 43.8 per cent of all fish exports as to quantity and 53.8 per cent as to value.

The United States' exports of canned salmon averaged 57,785,000 pounds, valued at \$5,615,000, for the pre-war period 1910 to 1914. Exports for 1923 rose to 59,594,422 pounds, valued at \$9,154,711. In 1924 a further increase to 67,013,369 pounds, valued at \$9,667,126, was recorded. Comparison of the 1924 figures with the average for 1910 to 1914 discloses a net increase in exports of about 16 per cent in quantity and 72 per cent in value.

Canned salmon is also an increasingly important item in the American diet, the per capita consumption for the United States having risen from 1.42 pounds in 1919 to 2.24 pounds in 1923, an increase of 58 per cent.

An important characteristic of our export trade in canned salmon is that we sell to many and far-distant countries, our 1923 exports reaching no less than 82 different foreign markets. Hence, canned salmon is one of our most useful mediums for opening new foreign markets to American goods and is performing "missionary work" in this respect which can not fail to benefit all branches of American foreign trade.

The world's salmon sources are definitely limited to comparatively small areas, the Alaskan, Columbia River, Puget Sound, and British Columbian waters being the most important, with the Japanese-controlled industry in the Siberian Okhotsk Sea and Kamchatka showing a rapid and sturdy development. The United States, including Alaska, produces more than three times the total output of Canada and Siberia combined.

All these phases of the salmon business are discussed in "World Trade in Canned Salmon," Trade Promotion Series No. 14, which has just been published by the Bureau of Foreign and Domestic Commerce.

The development of the Siberian canned-salmon industry, which is reported to be concentrated to the extent of more than 90 per cent in the hands of Japanese capital, is of such interest that it is treated in a separate section of the new publication.

[JULIUS KLEIN.]

Hawaii To Make Industrial Survey

Hawaii is planning a survey to determine what new industries might be developed in the islands. Up to the present the country's industrial efforts have been largely concentrated on the production of sugar and pineapples. Sugar alone normally makes up from 60 to 70 per cent of the total exports, while sugar and pineapples taken together account for 90 to 95 per cent of shipments from the islands. The welfare of the community therefore depends almost entirely upon these two crops. Either a crop failure or a slump in the world market price of sugar or pineapples affects adversely the entire community. Establishment of additional industries such as are suitable for the islands, and the diversification of agriculture, should do much to add to the stability of the islands' prosperity.

[EMMETT A. CHAPMAN.]

World's Commercial News in Brief

The following are brief items compiled from data cabled by Government representatives stationed abroad, from official foreign publications, and from other sources. Countries included in the "Monthly Cable Reviews" are omitted from this section.

European Economic and Trade Developments

For reasons of Bureau administration, this heading includes also Canada

BELGIUM

The persistent industrial depression in Belgium continues unrelieved. There has been a considerable decline in shipping at Antwerp, a general reduction in bank clearings throughout the country, and Government receipts from indirect taxation have increased. The strike in the metallurgical mills at Charleroi has been postponed to June 15. The decline of the Belgian franc and recent wage reductions have not yet resulted in any appreciable improvement in Belgian metallurgical markets. British buyers appear to be deferring orders pending the results of Belgian exchange developments.

BULGARIA

The condition of fall sowings in Bulgaria is reported to be excellent. Rains have materially helped the crops throughout the country. As a wood-conservation measure the Government is urging the use of coal.

DENMARK

The week brought a favorable development in the Danish labor situation, a settlement having been reached providing for a slight increase in wages. This solution is important inasmuch as it may mark the termination of labor conflicts which have seriously disturbed the country for three months. The Bank of Denmark has succeeded in maintaining the stability of the Danish crown throughout this critical period. Danish cooperative societies shipped fairly large quantities of farm produce during the week, after a temporary suspension. The Danish Cooperative Bank has been definitely declared insolvent and unable to continue operations. Losses incurred by the bank will exhaust the capital and a portion of the deposits.

GREAT BRITAIN

The Economist wholesale commodity price index for Great Britain dropped during May and is lower than at any time during the past year. The principal decrease was in textiles. Cereals and meats showed a very slight increase, other food products were lower, and minerals were but slightly changed. The coal industry has shown no change, according to Trade Commissioner Charles E. Lyon, London, and there have been no new developments in the wage controversy. During the past week representatives of the eight largest trade-unions met to discuss the formation of an alliance for mutual support in the event of disputes.

CANADA

Canadian retail business and wholesale trade have improved with the advent of warmer weather. British manufacturers are exhibiting a keen interest in the Canadian market, particularly for boots and shoes, wool and cotton piece goods and yarns, hardware, wire,

and motor cars. Employment during April made a seasonal gain of about 5 per cent. Industrial activity has shown a slight increase. Iron and steel works are enjoying a good demand; the automotive industry is active, with good export prospects; and building is generally brisk. Newsprint continues in good demand, and exports show a steady gain. The flour industry, however, is very slow. The Winnipeg wheat market was bearish during the week. Spring wheat flour quotations in Montreal were unchanged. There is no present prospect of a settlement of the Nova Scotia coal strike.

GREECE

The index of the cost of living at Athens has recently shown the first decline in several months. The cereal crops prospects are excellent, the culture of roses is being tried out with satisfactory results, and 100,000 mulberry trees have been planted in Macedonia, according to a report from Consul R. F. Fernald. The cheese production for 1924-25 is estimated at 988 short tons, more than three times the production for 1923-24, according to information received from Consul General Arthur Garrels.

ITALY

The principal feature of the Italian situation during the week was the establishment of a credit of \$50,000,000 by an American bank for the Italian banks of issue, for the purpose of supporting Italian exchange. When the credit was announced on June 2 the lira immediately rallied from a low point of \$0.0396 to \$0.0408. This advance, however, was not maintained, as the lira later showed a further decline with the fall of the French and Belgian francs. The general advance in the value of Italian foreign trade, particularly of imports, continued during April, according to recently published trade figures. Each month of the current year has shown an advance in import values. Exports this year have also reached an unusually high level, and have advanced during each of the first three months. The April value, however, was somewhat lower than that for March. Exports of automobiles during the first quarter of 1925 advanced nearly 45 per cent over the same period of 1924.

NORWAY

The Norwegian money market has benefited materially from the recent reduction in the discount rate to 6 per cent, and industrial earnings are expected to be increased. The Bank of Norway has now an adequate supply of foreign exchange to obviate extreme fluctuation of the crown, which has remained steady for some time at 16.8 cents. The Government has approved a concession for the purchase of a Norwegian power plant by a German concern, which is preparing to manufacture phosphates.

LATVIA

The 1925-26 budget passed by the Latvian Parliament is balanced at 160,000,000 lats. The Government has published final data regarding the realization of the 1923-24 budget, showing actual revenues of 208,900,000 lats, as against 188,400,000 lats provided by the budget—a surplus of 36,700,000 lats. The State debt of Latvia is 30,000,000 lats. Winter-sown crops promise well, with a yield of 86 per cent for rye and 80 per cent for wheat.

NETHERLANDS

Statistics of Netherlands foreign trade during April, just available, show a slight decline from the unusually high March totals. The unfavorable balance was somewhat reduced. The note circulation of the Netherlands Bank has for some time shown a progressive reduction. Activity in practically all lines of business has been well sustained and both wholesale and retail prices are tending downward, with some indication of a further favorable movement. Demand for Dutch coal increased during May, as a result of falling coal prices and the generally higher level of industrial activity. Most of the imported coal continues to come from Germany. Belgium is the principal coal export market.

POLAND AND DANZIG

The Polish coal situation remains dull. Unemployment is serious and many workmen are reported to be emigrating to France. Rents have again increased. The cost of living rose in March, but dropped slightly in April to 149.3.

General economic depression continues in Danzig. The recent establishment of a mortgage bank is expected to relieve the credit situation and the high inter-

est rate is thought to be sufficient to attract English and American capital. A loan was recently secured in England for use in the development of hydroelectric plants, waterworks, and port facilities.

SPAIN

A marked decline in Spanish Government revenues in March, 1925, as compared with March, 1924, proved to be temporary and without special significance, as revenues in April, 1925, reached a total of 38,000,000 pesetas over those of April, 1924. Plentiful rainfall has materially improved crop prospects.

SWEDEN

A considerable increase in Swedish imports during April resulted in an import surplus for that month of 4,000,000 crowns greater than that for March. Exports also increased by 14,350,000 crowns during April. Sweden is importing increased quantities of grain and foodstuffs. Exports of wood pulp and paper are moving well, but shipments of lumber and iron and steel are lagging. Domestic industries are suffering from foreign competition, decreased price levels and a diminished domestic demand. Money continues tight and bank deposits are declining.

YUGOSLAVIA

In order to stimulate the entry of foreign capital into Yugoslavia, both governmental and industrial bonds have been released from all emission taxes and dues by the terms of the 1925-26 budget law. There have been recent heavy exports of maize, but exports of lumber and animal products have declined. The weather continues favorable for crops.

Far Eastern Trade News

AUSTRALIA

No decision has been reached relative to the Australian wool situation, according to a cable received on June 6 from Trade Commissioner E. G. Babbitt, Melbourne. Ways and means of disposing of the remainder of the clip, which, according to late estimates, amounts to 615,000 bales, are being discussed, and some brokers favor turning all unsold wool over to BAWRA (British Australian Wool Realization Association). Others believe that the market will be so improved by July that sales can be resumed. Severe floods occurred during the week in the Murrumbidgee district of New South Wales, causing heavy loss of livestock. The wheat situation remains unchanged, with only small offerings. Federal revenue collected from July, 1924, to May, 1925, inclusive, amounted to £34,300,000, or about £3,165,000 greater than had been estimated.

JAPAN

Preliminary returns of Japan's foreign trade for May indicate a marked improvement in comparison with preceding months, according to the weekly cable from Acting Commercial Attaché A. B. Calder, Tokyo. Exports during the month totaled 170,400,000 yen and imports amounted to 204,700,000 yen. In comparison with April there was an increase of 1,900,000 yen in exports and a decline of 54,700,000 in imports. The excess of imports, totaling 34,300,000 yen, is less than

for any corresponding month of the past three years. The present decline in yen exchange is attributed to the political disturbances in China. The construction of the Tokyo subways has been officially approved and it is probable that the municipality will undertake to negotiate a foreign loan for this purpose in the near future.

PHILIPPINE ISLANDS

Copra buying is again general and production has slightly improved, although it is still insufficient for the demand, according to the weekly cable from Assistant Trade Commissioner E. B. George, Manila, June 6. Prices continue to rise, resecado (dried copra) now selling at 14.5 pesos (1 peso equal \$0.50) per picul of 139 pounds. Slackened conditions, however, continue in the abaca market and prices are slightly weaker. Dealers are willing to sell grade F at 38 pesos per picul, I at 32, JUS at 20, and JUK at 18. Demand for grade I is slightly stronger than that for the other varieties, on account of the cordage requirements of the United States. Some factors in the trade anticipate a further decline in this grade and those above, but consider that the lower grades are now near the bottom. Abaca production is low and, despite buyers' inactivity, stocks are not accumulating heavily. The market in general, however, seems to still possess latent strength and might recover strongly with any general renewal of buying interest.

INDIA

The monsoon or rainy season has reached Bombay, and consequently business is expected to slow down for a while, according to advices from Trade Commissioner Donald Renshaw, Bombay. Speculation in the stock market of that city during the week ended June 6 depressed stock prices throughout all India. A better feeling prevails in the money market and it is anticipated that money will be cheaper.

India's imports and exports during April, exclusive of reexports, aggregated 184,700,000 and 320,800,000 rupees, respectively. As compared with April of last year, exports showed an increase of 26,500,000 rupees,

but imports declined 18,000,000. Of the April, 1925, trade, 64.5 per cent of the imports originated in Great Britain, 5.5 per cent in Germany, 7 per cent in Japan, and 5 per cent in the United States, while 28 per cent of the exports of Indian merchandise went to Great Britain, 16 per cent to Japan, 10 per cent to Germany, and 10 per cent to the United States. All principal items of import, except colored piece goods, automobiles, and certain types of iron and steel, registered declines as compared with April, 1924. Exports of tea, pig iron, linseed, raw cotton, manufactured jute, wheat, and cotton showed increases, while shipments of raw hides, raw jute, rice, shellac, and wool declined.

Latin America at a Glance

ARGENTINA

A slight improvement in Argentine exports was shown in the week ended June 6, but the scarcity of export bills is weakening peso exchange, and the shortage of cargo is depressing freight rates. There is lessened activity in import trades. Commerce and industry have again requested the repeal of the employees' pension law, with probability of favorable action. The \$10,000,000 American loan due this month has been renewed for one year, with interest at 4½ and commission of ½ per cent. This loan, negotiated a year ago, was to provide funds for combating the locusts. (Commercial Attaché E. F. Feely, Buenos Aires, June 6.)

CHILE

The commercial situation in Santiago and Valparaíso is dull. The Nitrate Producers Association has fixed nitrate prices for June at 19s. 3d. for July at 19s. 4d., and for the remainder of the year the same as last year (19s. 5d. August 1 to 15, 19s. 7d. to August 31, 19s. 9d. to September 15, 19s. 11d. to September 30, 20s. 1d. to October 15, 20s. 3d. to October 31, 20s. 4½d. to November 15, 20s. 6d. to November 30, 20s. 7d. to December 15, 20s. 8d. to December 31, and 20s. 9d. to May 31). Labor disturbances in the north, accompanied by some bloodshed, have induced the Government to declare martial law in the Province of Tarapaca and Antofagasta. While the workmen at seven nitrate oficinas are on strike, the situation is now quiet. (Commercial Attaché R. H. Ackerman, Santiago, June 7.)

BRAZIL

Renewed activity in the coffee market in Brazil is resulting in a firmer exchange value of the milreis. An American steamer sailing for New York June 10 will carry 90,000 bags of coffee, the largest shipment on record to be carried by a passenger vessel. Cotton stocks at Rio de Janeiro are 26,469 bales. The port situation at Rio and Santos is unchanged. Employees of the city of Rio de Janeiro are threatening to strike because their salaries are three months in arrears. The money stringency continues. (Assistant Trade Commissioner Ogden Pierrot, Rio de Janeiro, June 6.)

PERU

After many weeks of dullness trade is improving in southern Peru, although as yet the activity has not extended to the central regions. (Commercial Attaché H. B. MacKenzie, Lima, June 6.)

COLOMBIA

Both coast and interior trade of Colombia is reported as good. The satisfactory operation for a number of years of the cableway from Maraquita to Manizales has led to considerable interest throughout the country in this means of transportation. The Antioquia Assembly has voted 20,000 pesos for the study of a cableway from Bolombolo to the Pacific. The Department of Caldas has already projected a cableway, and a contract has been let for one from Cucuta to the Magdalena River. The Ferrocarril del Norte, running from Bogota to Zipaquirá, was declared by Presidential decree of May 4 to be Government property. The municipality of Barranquilla has authorized a loan of \$4,000,000 in installments of \$500,000, the first of which is to be used for aqueduct work. The Antioquia Assembly is discussing a loan of \$2,000,000 for highway construction. (C. R. Hill, secretary to commercial attaché, Bogota, May 11.)

CENTRAL AMERICA

Commercial travelers report especially good conditions in Salvador and Guatemala, but they find trade less brisk in Costa Rica and in Nicaragua. Costa Rican crop prospects are good, however, and an increase in trade is expected toward the fall months. The tourist season in Panama is now ending, and this is having the usual slowing effect on retail trade. Honduras is still awaiting the results of pending reorganization efforts.

MEXICO

Markets in Mexico were generally very inactive during the week ended June 6. The grocery trade is reported as being more affected than other lines. The agricultural outlook is poor, due to drought and heat. The market for low-priced automobiles, which was good, has fallen off noticeably, and the textile mills report a marked dullness in their lines. (Trade Commissioner George Wythe, cable June 7 and weekly report May 29.) It is reported that the new cooperative societies of sisal growers will begin operations within a few days. (Vice Consul Hernan C. Vogenitz, Progreso, cable June 1.)

TRINIDAD

Business continues slack in Trinidad. The cacao movement is finished, and although complete figures are not available it is approximately 20 per cent short. In the sugar districts and in places where petroleum

developments have been most favorable there is a more prosperous condition of trade. The sugar crop is expected to approximate 70,000 tons, approaching the record figure of 1917. Sugar-producing interests are well satisfied with the results of the present season, notwithstanding the disappointment of lower prices, which the heavy production has more than counterbalanced in net financial returns. (Consul H. D. Baker, Port of Spain.)

DOMINICAN REPUBLIC

The Dominican Senate and House of Deputies have approved the new convention between the United States and the Dominican Republic. This convention abrogates the old convention of 1907 and was signed in Washington on December 27, 1924. It was confirmed by the United States Senate on January 21, 1925. Final ratification has not yet been exchanged. The new convention provides for a loan up to \$25,000,000 with which to refund and consolidate the four existing Dominican loans, and for the extension of the customs receivership until the amortization of the new loan. If the full amount is issued, it is expected that the loan will produce some \$10,000,000 for public improvements.

PORTO RICO

Local markets appear near saturation point. Collections are fair, with credits tightening. A decision handed down by the Federal court declares the excise

tax law unconstitutional. (Trade Commissioner L. W. James, San Juan.)

CUBA

Business continues slow in Cuba. President Machado delivered his first message to Congress on June 1 and in it he pointed out that the economic situation is not entirely satisfactory and for that reason it is necessary to carry out a conservative policy in governmental expenditures. The heavy rains have continued and some damage by floods has been reported. The number of sugar-mill closings has mounted steadily and Oriente is now the only Province with many mills grinding.

BAHAMAS

The export movement from the Bahamas while not large has exceeded that of last year. Imports have continued fairly steady with little variation in class. The vegetable season was fairly successful and yielded a moderate profit. Agriculture is losing ground in the colony and the conclusion has apparently been reached that the real future of the Bahamas lies in its development as a tourist resort. Pests have practically wiped out the citrus industry except on two or three islands, and the cost of producing what have deteriorated into a poor variety of pineapples is so high that the growers can not compete with the Cuban and Florida fruit. (Vice Consul William A. Smale, Nassau.)

MONTHLY CABLE REVIEWS

EUROPE

Samuel H. Cross, Chief, European Division

Gradual Retrenchment of French Industrial Production

Based on cable from Commercial Attaché Chester Lloyd Jones, Paris, June 6

The French Senate passed the budget for 1925 on May 30, with receipts amounting to 32,900,000,000 francs and expenditures 32,700,000,000 francs. The budget is not regarded as satisfactory in all quarters, however, since it includes receipts under the Dawes plan as budget income. The Chamber of Deputies is rapidly advancing in its consideration of the budget.

Financial Measures Discussed.

The Minister of Finance states that added taxes are necessary so as to raise additional income to the amount of 1,600,000,000 francs in the current year and 3,500,000,000 francs in 1926. Various measures to increase the available supply of ready money, with a view to reducing interest charges on the internal debt, are being discussed unofficially. The only official announcement, however, is to the effect that measures which will give flexibility to the management of treasury operations are necessary.

As a result of the prevalent financial uncertainty, the French franc has shown considerable weakness on the exchange market during the past week. On June 1 the quotation in New York City (demand rates) was $5\frac{1}{2}$ cents. By Friday, June 5, a low point of $4.65\frac{1}{2}$

cents was reached, while on Saturday a slight reaction occurred, with the closing rate at 4.75 cents.

Increased Note Circulation and Bank Advances.

The statement of the Bank of France for June 4 shows note circulation amounting to 43,640,000,000 francs, as compared with 43,409,000,000 francs on May 7, while advances by the bank to the Government advanced to 25,400,000,000 francs, as compared with 24,050,000,000 francs. The metallic reserve is unchanged, at 5,860,000,000 francs. Discounts had advanced to 5,170,000,000 francs from 4,870,000,000 francs on the earlier date.

Total debits and credits in the Paris clearing house during April declined to 55,700,000,000 francs, as compared with 58,000,000,000 francs for March, while the daily draft to cover decreased 1,115,000,000 francs, as compared with 1,122,000,000 francs in the earlier period.

Coal and Metallurgical Production Reduced.

Output of the French coal mines during April showed a slight decline as compared with the previous month, while coke and briquet production was correspondingly decreased. Coal stocks are accumulating at the mines, however, as a result of further industrial recession, while prices remain unchanged. French coal miners have refused to accept the producers' decision to discontinue after May 15 the wage increases that

were granted on January 15. French coke producers are offering price concessions.

Purchases of iron and steel are showing further recessions, and prices remain unchanged. Production of pig iron showed a slight reduction in April, as compared with March, while crude steel output was curtailed to a greater extent. The May output of both of these commodities is estimated at approximately the same as in April. April exports of all the principal iron and steel products, except rails, were lower than in the previous month. Imports also are declining.

Textile Markets Quiet.

The amount of raw cotton in the warehouse at Havre on May 28 was slightly lower than on May 1, and there was a smaller quantity afloat. The percentage of American cotton has been slightly reduced. The market for both raw materials and finished products in the cotton and wool industries is quiet, with a tendency to lower prices in the latter. Weavers' stocks of silk are low, but there is little forward buying. Factories remain active, though British purchases are declining.

Agricultural Machinery Active—Industrial Machinery.

The demand for French agricultural implements continues strong, but some slackness has developed in northern France and in the region about Bordeaux. The market for gasoline engines is active, and considerable quantities are being shipped to French territory in Africa. Imports of agricultural machinery during the first four months of the current year showed a marked decline.

The industrial machinery market continues quiet. Domestic machine tool factories are overstocked and are reducing their schedules. Imports of machine tools, however, increased 16 per cent during the first four months of this year over that period of 1924, the United States and Germany being the principal sources.

The Automobile Industry.

The automobile industry is manifesting further signs of depression which is affecting many lines of small standard machines. Payments are slower and dealers are tightening their credit terms. A further increase in prices of French tires is expected.

Other Industries—Unemployment Low.

The market for electrical equipment continues active, but competition among manufacturers is keen. Both imports and exports of electrical machinery recorded tonnage increases during the first four months of this year over the same period of last year. Shoe factories are busy, but few forward orders are on hand and retail sales are restricted by weather conditions. Prices are unchanged, but an increase is expected. The lumber market continues generally quiet, except in the neighborhood of Bordeaux.

In spite of unfavorable industrial developments unemployment in France remains at a very low level. The total reported as unemployed on May 23 was 11,700, as compared with 13,000 on April 25.

Continued Increase in Railway Receipts—The Wheat Crop.

The principal railways of France report total receipts in the amount of 3,353,000,000 francs through May 13 of this year, as compared with 2,907,000,000 francs during the corresponding period of last year. Average daily car loadings during the first three weeks of May numbered 60,165, as compared with 58,944 during the first four weeks of April.

The continuance of unfavorable weather conditions in France has retarded the development of the new wheat crop, which will probably be 15 days later than last year. Potatoes and beets are showing irregular growth, due to cold weather.

German Business Restricted Pending Industrial Reorganization

Cable from Assistant Commercial Attaché Douglas Miller, June 8

Moderate improvement in German industrial activity was recorded during May, as compared with the previous months. A permanent return to normal business volume, however, is considered wholly unlikely pending the decision of the Reichstag upon a series of measures of the greatest importance to German industry. These include the revalorization of depreciated public and private debts which, according to the present bill, now fixes revalorization of industrial mortgages at 25 per cent of preinflation value, and the ratification of the proposed tariff, fixing high rates upon foodstuffs and manufactured articles, which seriously affect prospects of American exports to Germany.

The Basis of Present Treaty Negotiations.

The return of German foreign trade to a most-favored-nation status in pre-war markets is the basis of present treaty negotiations and is considered an indispensable requisite to the revival of the pre-war volume of exports. Little prospect is seen of material reduction in total German taxes on account of the gradually increasing reparation burdens, but a shifting of the taxation burden from industrial production to general consumption is attempted so far as apparently practicable. A noticeable decline in wholesale prices during the past months has been the most favorable aspect of the situation, but the checking of the gradual rise in the German wage level is only temporary.

Tightness of Money Market—Bank Assets.

The exceptional tightness of the money market during the past monthly settlement period is reflected in the statement of the Reichsbank of March 30—when gold reserves fell from 46.1 to 38.9 per cent, and the total reserves from 61.5 to 59.5 per cent during the past week—and in the decline of the Berliner Tageblatt stock index to 80.5 per cent of the January figure, after a continuous fall during the past three months. The maturing of short-term industrial loans in New York and elsewhere abroad, without the probability of their extension, is expected further to affect exchange reserves, although ample provision against this contingency has been made by steady accumulation of exchange during the past eight months.

Continued expansion in bank assets is shown by the recently published bimonthly balance sheets of German banks as of April 30. Total assets of the six principal banks increased from 4,300,000,000 to 4,700,000,000 marks during the two months' period, with similar increases in discounts, current liabilities, and deposits.

Reorganization of German Export Industries.

Severe depression in the coal and iron business during the past year, combined with general severe financial stringency, has made inevitable a long period of consolidation and reorganization in the German Konzern groups, similar to that which has prevailed in

other branches of industry and commerce during the past year.

Overexpansion, lack of operating capital, and high overhead costs—typical of all German export industries—is reported in the annual review of the German Machine Tool Manufacturers' Association, just published. The closing of an important number of plants and the withdrawal of others from machine-tool manufacturing is continuing; a further reduction in the number of plants is expected before present excessive capacity is reduced to a measure proportionate to consumption. This process, which is occurring in practically all German export industries, is accelerated by the heavy tax burden and present high overhead, which hinder a return to competitive prices in export markets. Reorganization of production along American lines is being undertaken in the iron and steel, automotive, machine tool, office appliance, and other important export industries generally, after a thorough investigation of American production methods, made by specially selected German engineers.

Swedish Trade Balance More Unfavorable During April

Based on cable from Commercial Attaché T. O. Klath, Stockholm

Swedish foreign trade during April showed an expansion both of imports and exports—particularly of imports—with an attendant rise in the unfavorable balance of trade. The value of imports advanced from 112,500,000 crowns in March to 130,415,000 crowns during April. From a total value of 71,400,000 crowns for March, Swedish exports increased during April to only 85,752,000 crowns—thus increasing the adverse trade balance from the March figure of 41,100,000 crowns to 44,653,000 crowns.

Substantial Gain in Exports for Four Months' Period.

Compared with the first four months of 1924, Swedish foreign trade has shown some improvement, due to substantial gains in exports as a whole. An unfavorable balance of trade of 152,100,000 crowns for the first four months of 1924 decreased to 136,000,000 crowns for the corresponding months in 1925.

Chief Imports in April, 1925.

With few exceptions the various chief items of import registered increased totals during April, 1925, as indicated by the following crown values (with March figures in parentheses): Grains and products thereof, 17,203,000 (13,320,000); colonial products, 11,775,000 (10,235,000); minerals and mineral products, 16,028,000 (11,786,000); tallow, fats, and oils, 14,318,000 (8,991,000); metals, worked and unworked, 11,126,000 (9,188,000); and vehicles and machinery, 11,080,000 (9,845,000). The following items returned lower values during April: Manufactured textiles, 12,419,000

(13,357,000); textile raw materials, 12,898,000 (13,787,000); and miscellaneous foodstuffs, 8,453,000 (9,047,000).

Increases in Items of Export.

Of export, the most important increase was made in shipments of wood pulp and paper, the value of which advanced from 15,498,000 crowns in March to 26,570,000 crowns in April. Lumber exports increased from 7,576,000 crowns in March to 9,525,000 crowns in April; minerals, raw and manufactured, rose from 14,220,000 to 14,919,000; and vehicles and machinery from 7,514,000 to 10,135,000 crowns. A slight decrease occurred in exports of metals, worked and unworked, from 12,694,000 crowns in March to 11,725,000 crowns in April.

Rumanian Crop Outlook Favorable

Based on cable from Commercial Attaché Louis E. Van Norman, Bucharest, June 3, and other sources

Provisional figures as to the condition of the Rumanian fall and spring sowings of wheat and other grains show the following figures of total plantings: Wheat, 3,170,000 hectares; barley, 1,850,000 hectares; oats, 1,230,000 hectares; and corn, 3,620,000 hectares. The total acreage planted to these grains is, therefore, about 25 per cent less than in 1924. Favorable weather conditions give promise, however, of an excellent crop.

Government Finance.

The Finance Minister has submitted to Parliament two projects for new laws—one for extending and renewing for 30 years the existing note issue and other privileges of the national bank, and another for revalorization of the leu, and for liquidation of the State debt to the national bank of 10,500,000,000 lei over a period of 15 years. It is stated that during the next two years reparation payments from Germany in the form of railroad equipment, valued at 17,000,000 marks, are expected. Notes in circulation on April 25 were 19,100,000,000 lei, as compared with 19,000,000,000 on April 7.

Export Statistics—Cost of Living.

Exports reported for February show shipments of barley amounting to 6,000 metric tons; oats, 5,000; corn, 51,000; petroleum, 41,000; lumber, 45,000; firewood, 70,000; and livestock, 38,000. Ten months' figures of exports (April 1, 1924, to March 1, 1925) show a total of wheat, rye, and corn shipments, in spite of the poor wheat crop in 1924, of 859,768 metric tons, as compared with 322,192 tons for the corresponding 1923-24 period.

The Argus cost of living index at the end of May stood at 4,541, as compared with 4,498 in April and 4,384 in March.

An advance in prices of automobile tires from 10 to 12 per cent has recently been announced.

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

Business Conditions in Uruguay

Based on cable from Commercial Attaché Lew B. Clark, Montevideo, June 6

Business in general in Uruguay is fair. Consul O. Gaylord Marsh reports that declared exports to the United States during May amounted to \$370,000, of

which wool accounted for \$59,000. In May, 1924, the figures were \$532,000 and \$37,000, respectively. Leading imports during May, 1925, were 35,000 tons of coal, all British; 500 passenger cars, 92 trucks, and 29 tractors from the United States, and 4 passenger cars and 5 trucks from Europe; lumber, 800,000 pieces from the United States and 145,000 from elsewhere.

Lumber Market Quiet—Cattle, Hides, and Wool.

The lumber market is quiet, with difficulty in moving stocks, largely by reason of the competition of Brazilian pine due to recent depreciation of Brazilian currency. Prices on dock, duty paid, per 1,000 feet are: Oak, 180 pesos; pine, 80; fir, 75; Brazilian pine, 72.

Figures for cattle slaughtered during May are 73,780 for frigorificos and 32,447 for other establishments. Of total hide exports of 63,000 dry and 98,000 salted the United States took 23,000 salted. The hide market is quiet and stocks heavy. Prices are 44 pesos, Argentine gold, for frigorifico steer hides and 32 for saladero cows. Wool exports were 4,485 bales, Germany being the largest buyer, with 2,360, and the United States taking only 200.

The National Council has authorized the signature of a contract with the French firm of J. & G. Hersent for construction work, to commence next month, on the colonia port free zone.

Construction Stimulates Trade in Bolivia

Based on cable from Consul Stewart E. McMillin, La Paz, June 4

The market for foreign goods in Bolivia was somewhat stronger during May than at the beginning of April. Sales—especially of dry goods—increased and were better for the month than during May, 1924. The demand for mining supplies continued good; canned goods held strong; and demand for paints and various construction materials increased, due to activity in building and street construction work. Imports of cement, mainly German, were unusually heavy. Work on the paving of La Paz streets is being pushed in order to have them ready in time for the centennial exposition. Chilean flour, owing to proximity of country of origin and underselling, is giving American flour strong and increasing competition.

A greater activity in mining is noticeable, encouraged by higher prices of tin. Mineral export figures are not yet available, although it is known that exports in April were at least equal to those for March.

Exchange Improved—Good Crops.

Exchange continued to improve during May. The average for the month was 2.915. Crops are reported

to have been better than for several years past, and there seems to be a general confidence in the Government and in the financial condition of the country.

Import Trade Increasing.

April imports showed an increase over March, consisting principally of machinery from the United States, France, and Germany; steel railway ties from the Netherlands; cement and electrical supplies from Germany; cotton cloth and sewerage supplies from the United States; and wax, petroleum, and jute from Great Britain.

Revival of Trade in Ecuador

Based on cable from Consul R. P. Butrick, Guayaquil, June 4

Business is slowly improving in Ecuador, after a period of dullness caused by damaging rains and interrupted railroad communication. The reaction has been somewhat hastened by recent heavy shipments of cacao, of which sales were stimulated through a reduction of freight rates by tramp steamers.

Prospects are good for a heavy cotton crop, provided rains do not continue. The rice harvest is commencing, with every indication of good results.

Purchase of the Guayaquil-Quito Railway by the Ecuadorian Government was consummated on May 23. Through traffic on this road was resumed May 29.

Import and Export Trade—Exchange

During May, exports of cacao totaled 9,900,000 kilos, valued at 6,890,000 sucres, 23 per cent going to the United States. Exports of cinchona were 6,600 kilos, coffee 46,000 kilos, Panama hats, an estimated 4,000 dozen, hides 17,000 kilos, and kapok 7,000 kilos. The total of exports through Guayaquil was valued at 7,950,000 sucres. Export commodity stocks reported on hand, in Spanish quintals, with their prices are: Cacao, 74,000, at 44 sucres; cinchona, 50, at 50 sucres; coffee, 300, at 80 sucres; cotton, none, 38 sucres; hides, 600, at 55 sucres; kapok, none, 28 sucres; rice, very little, 22 sucres. May receipts of cacao are estimated at 140,000 quintals.

The selling price for dollars in Ecuador ranged from 4.35 sucres on May 1 to 4.18 sucres on May 30.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

Japan's Unfavorable Trade Balance Smaller in May

Based on cable from Acting Commercial Attaché A. B. Calder, Tokyo

The heavy excess of imports that has characterized the foreign trade of Japan since the beginning of the year is gradually disappearing. Preliminary returns for May show exports of 170,400,000 yen and imports of 204,700,000, giving an import balance of 34,300,000 yen. This is a smaller import excess than for any corresponding month of the past three years. In comparison with April exports increased 1,900,000 yen and imports declined 54,700,000 yen.

Improved Export Lines—Raw Cotton Import Decline.

The outstanding features of the May export trade were the continued heavy shipments of raw silk, cotton yarns, and cotton textiles, and the general improvement in all other important export commodities, with

the exception of iron and steel manufacture and machinery. The total of 15,200,000 yen for cotton yarns is particularly noteworthy, since it constitutes a record for the past four years.

The decline in imports was attributable largely to smaller arrivals of raw cotton, which were valued at 71,500,000 yen in May, compared with 118,500,000 the previous month. There were less important declines also in wheat, oil cake, woolen yarns, and woolen textiles, but increases in rice, lumber, iron and steel products, sugar, and volatile oils.

Smaller Import Excess—Summary of Trade.

The cumulative trade for the first five months of this year shows exports of 802,256,000 yen and imports of 1,297,105,000, giving an excess of imports of 494,849,000. This compares very favorably with the cor-

responding period of last year, there having been an increase of 139,980,000 yen in exports and of 4,138,000 in imports, causing a decline of 135,792,000 in the excess of imports.

In the following table the trade of the past two months is summarized by principal commodities:

Japan's trade by principal commodities during April and May, 1925

[All figures in thousand yen; 000 omitted]

Items	April	May
EXPORTS		
Rice and paddy.....	Yen ¹ 250	Yen ¹ 300
Sugar, refined.....	2,200	2,400
Waste silk.....	900	1,200
Raw silk.....	54,970	53,800
Cotton yarns.....	11,200	15,200
Silk textiles.....	8,800	11,400
Cotton textiles.....	34,000	32,700
Knit goods.....	2,240	2,600
Pottery.....	2,900	2,900
Aquatic products.....	1,220	1,400
Iron and steel.....	720	700
Iron and steel manufactures.....	1,360	1,100

Japan's trade by principal commodities during April and May, 1925—Continued

Items	April	May
EXPORTS—continued		
Machinery.....	Yen ¹ 1,010	Yen ¹ 800
Rubber tires.....	500	400
All other.....	46,230	43,500

FRANCE LEADING FACTOR IN MOROCCAN DEVELOPMENT

Rich Natural Resources—Agricultural Conditions Improving—Manufactured Goods Constitute Leading Imports

S. H. Cross, Chief European Division

The importance attached by European powers to the retention and development of their colonies and protectorates is again illustrated by recent events in Morocco. France, in particular, in recent years has been depending more and more on its possessions as sources of raw materials for its industries. In fact imports from its colonies during 1924 were instrumental in helping France to show a favorable trade balance for the first time in 19 years.

The development of agriculture in Morocco and the exploitation of the rich mineral resources of that country have attracted considerable attention during the past few years.

Politically Divided into Three Areas.

From an administrative and political point of view, Morocco is divided into three zones: First, and most important, the French protectorate, including approximately 85 per cent of both area and population, with Fez as the political capital and Casablanca as the leading port and commercial center; second, the Spanish protectorate, a narrow strip of land extending for about 300 miles from the Atlantic Ocean along the Mediterranean with Ceuta, Melilla, and Tetuan as the principal localities; and third, the international Tangier zone, an area of 150 square miles, ruled in accordance with the terms of the Paris convention of December 18, 1923, between France, Great Britain, and Spain.

Agricultural Production Increasing.

Morocco, essentially an agricultural country, must depend, however, upon timely rainfalls to reap the full benefit of the soil's possibilities. A practically total lack of irrigation and the crude implements used by the uneducated native population prevent the proper exploitation of the natural agricultural resources. The year 1924 was exceedingly favorable for the crops, as

it was marked by abundant rain; this is well shown by the fact that agricultural exports, including cattle, for the first nine months of 1924 totaled 356,000,000 francs, more than twice the amount for the corresponding period in 1923.

The most important agricultural products of Morocco, in order, are barley, wheat, beans, seeds (canary, coriander, and cummin), and chickpeas, all of which showed increases over 1923 figures. The leading products of the livestock industry are sheep, cattle, and hogs.

Forest Industry Retarded—Phosphate Mines Increase Output.

Over 3,000,000 acres of the total area are covered by forests, but only one-sixth can be exploited at present, owing to the lack of irrigation, poor transportation facilities, or constantly unsettled conditions in certain parts. Cork and gums are the main products from this source.

The development of the rich mineral deposits of Morocco is also retarded by the adverse conditions which affect the exploitation of the forests. No coal is to be found, but the phosphate mines in the vicinity of Casablanca are steadily increasing their output—over 400,000 metric tons in 1924 compared with 191,000 in 1923. These mines are exploited by the Government and under its monopoly. Iron mines in the Spanish zone are also being developed.

France Predominant in Both Import and Export Trade.

Practically the entire trade of Morocco, both in imports and exports, is carried on with France, Spain, and Great Britain. In the absence of official statistics it can be said that the value of the entire Moroccan trade for 1924 approximated 1,800,000,000 francs (\$94,262,400), with exports reaching a record mark of 650,000,000 francs (\$34,039,200), of which the French protectorate accounted for over 620,000,000

francs (\$32,468,160). Imports into the same zone aggregated some 930,000,000 francs (\$48,702,240), and represented over 80 per cent of the imports into the country as a whole. (Average rate of exchange for 1924: 1 franc=\$0.052368.)

Since it appears that the trade of the French zone is by far the most important and that the participation of the Spanish and Tangier zones is of relatively slight consequence, a consideration of the French protectorate alone will indicate the trend of Moroccan commerce.

Unfavorable Trade Balance—Heavy Expenditure for Public Works.

The trade of the French protectorate registered an unfavorable balance of 300,000,000 francs during 1924, although the dependence of France on its possessions for raw materials is shown by a balance of 4,000,000 francs in favor of the protectorate in its trade with the mother country. Shipments from France into Morocco amounted to 200,000,000 francs, while those from Morocco to France totaled 204,000,000 francs.

The total adverse balance is explained by the heavy expenditures on the part of the Moroccan Government for large quantities of equipment for ports, railways, and other public works. The necessary funds to meet these expenditures are deprived from local taxation and from the revenues of Government monopolies, such as the phosphate mines. At the same time, there were practically none of the so-called invisible sources of revenue, such as tourist expenditures, emigrant remittances, and foreign investments to offset, even slightly, this unfavorable balance.

European Element Chief Market—Manufactured Goods Lead in Imports.

The native population, comprising over 95 per cent of the whole, is very primitive, lives simply, and in consequence has few wants. Therefore, the only real market for manufactured goods, which are the most important items of Moroccan imports, is found among the European element of the population.

Among the leading imports into Morocco during 1924, sugar, tea, semolina, wines, cotton goods, kerosene, and coal showed increases over the 1923 figures. In the first three of these commodities France easily leads the field. The greater quantities of wines, however, came from Spain, with France second. The high sterling rate does not prevent England from supplying the bulk of cotton goods and coal. As in 1923, 80 per cent of the imports of mineral oils, kerosene, and other derivatives came from the United States. Imports of cement and other construction materials, of which France provides about 70 per cent, were less than in 1923, mainly on account of a slowing up in construction work and an increase in the local manufacture of cement, lime, and bricks. All told, France supplied 64 per cent of the total imports.

Agricultural Products Constitute Chief Exports.

The principal items of export from Morocco are agricultural products, livestock, cork, and phosphates. The last named is by far the most important, the entire 1924 output of over 430,000 metric tons being exported. France absorbed nearly 30 per cent of this total, Spain 25 per cent, and other European countries the remainder. The bulk of the barley exported went to France and England in equal proportion, while France imported 90 per cent of the wheat. Again France far leads the field in importing Moroccan beans, wool, goat

and sheep skins, cattle hides, gums, and seeds. In the livestock industry 85 per cent of the 171,000 head of sheep exported in 1924 were sent to France, as well as 75 per cent of the 12,109 hogs. Spain, England, and France took one-third each of the 32,823 head of cattle during the same period. All the items mentioned showed increases over 1923 figures. The share of the United States in Moroccan exports consisted mainly of cork, seeds, and some sheepskins.

Improved Transportation Enhances Opportunities.

In the last 10 years rapid progress has been made in the development of the transportation system, particularly in respect to the highways, which radiate to all parts of the country. Both passenger and freight traffic have benefited largely by this improvement, and possibilities are being opened for tourist trade.

Railroad construction has also advanced. All these developments are undoubtedly proving important factors in assisting France to reduce its dependence upon foreign supplies of raw materials.

Commercial Services Rendered by Bureau and District Offices

Correspondence Division, R. H. Brasel, Chief

The following table shows the number of commercial services rendered by the Bureau of Foreign and Domestic Commerce in Washington and its 10 districts offices in the United States during the period July 1, 1924, to April 11, 1925, and the week ended April 18, 1925:

Class	Period July 1, 1924, to Apr. 11, 1925	Week ended Apr. 18, 1925

AUSTRALIA PLANS UNIFICATION OF RAILWAYS

Local Prejudice and Huge Expenditure Necessitated Have Delayed Action in the Past—Unification May Result in Some Changes in Present Trade Routes, but Commonwealth as a Whole Should Profit

Emmett A. Chapman, Far Eastern Division

Work has been started in Australia to link Brisbane and Sydney with a railroad of uniform gauge so that travelers will be able to make the trip without changing trains at the border, as is necessary at present. Construction was commenced in January and will be completed in about two and one-half years, at an estimated cost of £3,500,000. The expense will be divided between the Federal Government and the State governments of New South Wales and Queensland, according to information received from Consul R. L. Rankin, Newcastle.

Present System Complicated and Inconvenient.

Unification of railway gauges is one of Australia's great needs. The country was cut up into separate units, and not united into a Commonwealth of States, when pioneer roads were established. Each unit was striving to work out its own destiny independent of the rest of the country, and consequently considerable rivalry existed. The large center in each unit felt that it would be advantageous to construct its railroads so that traffic would necessarily have to pass through it and not over the border to a rival trade center. Modern Australia, therefore, has a very complicated transportation situation. Passengers traveling from Brisbane down the east coast to Melbourne and across to Perth, on the west coast, a trip corresponding to a journey from Boston to Washington and across to San Francisco, must change cars seven times. Freight likewise must be transferred at each of these points. Aside from the inconvenience of travel under such conditions, the cost is greater, and considerable time is wasted in making changes and connections. With freight the cost is almost prohibitive if more than one transfer is to be made.

Water Transportation of Great Aid.

The handicap to the country's development has not been as great, however, as might be expected, since water transportation has been able to make up to a certain degree for the deficiency. Development has been along the coasts in an area known as the "fringe," which stretches down the east coast and across the southern end to the extreme western part of the Commonwealth. This fringe has a depth of 200 to 600 miles, depending upon the character of the region, and for a frontier country is well supplied with railroads which feed down to the coast, where grain and wool can be loaded on steamers for the overseas markets and goods coming into the country can be received for interior points.

Large Outlay and Local Prejudice to Be Considered.

The Australian Government for some years has been planning to standardize the gauge of the different State roads, so that passengers or freight can pass from one end of the country to another without transfer, but the estimated cost of conversion has been so great that little headway has been made. A royal commission, appointed to look into the cost of unifying all the roads, reported after several months of investi-

gation that it would be around £57,200,000. Aside from the great outlay required to make the different sections uniform, the authorities must contend with local prejudice, which is still strong in certain sections and will take time to overcome. The linking of Sydney with Brisbane, for example, is expected to divert a large amount of traffic from Sydney to Brisbane. Heretofore Sydney has been almost the sole market for the rich northern districts of New South Wales, but with the completion of the new link it is expected that Brisbane will become the trading center for this area. The conviction in this regard is so strong that towns in northeastern New South Wales are already constructing roads to connect with the new link.

Commonwealth as a Whole Should Profit.

The same situation doubtless will arise in other sections. Ports nearest the consuming areas and those with superior facilities for docking ships and handling cargo will profit at the expense of others where conditions are not so favorable. While the changes will establish new trade routes, and certain centers necessarily will suffer, the Commonwealth as a whole should profit greatly. Through lower transportation costs producers will receive more for their products in overseas markets, and for the same reason imported goods should cost the consumer less.

Wider Distribution of Local Products Expected.

The Commonwealth's industrial community also will be benefited by having its domestic market broadened. At present a plant finds that high transportation costs, due largely to transfer charges, confine its market, for the most part, to the State in which it is located, and that it can not compete in other sections of the Commonwealth with overseas products. With the necessity for transfer removed, it is believed that many of Australia's factories will be able to distribute over a wider area, and through increased production lower their costs to a point where they can better meet prices of overseas goods.

Settlement of Sparsely Settled Sections Facilitated.

The distribution of immigrants to outlying sections will also be facilitated by better means of transportation. At present the immigrant who is brought in for the purpose of settling in the agricultural areas too often remains in the large centers and seeks employment in one of the trades. As a result of this trend almost half of the Commonwealth's total population lives in urban centers and 42 per cent in the six capital cities. One-fifth of the total resides in Sydney and one-third in Sydney and Melbourne together.

Transportation alone is not responsible for this concentration of population, but it has undoubtedly been a considerable factor. With the freer and less expensive means of travel that will come from the unification of the railroads and the interchange of rolling stock it is expected that the inhabitants, and especially those newly arrived, will push on to the frontiers and to the sparsely settled districts, where it is difficult at present to induce settlers to locate.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

WORLD TRADE IN BUTTER AND CHEESE

British Market Absorbs Three-fourths of World's Butter and Half of World's Cheese Supply—Tendency Toward More Rigid Inspection to Insure High Standard of Quality in Exported Products

M. A. Wulfert, Foodstuffs Division

Conditions in the dairy industry throughout the world in 1924 were generally good, and the trade of the leading countries indicates that a somewhat larger quantity of both butter and cheese entered world commerce than in the previous year. This increase is due in part to the heavy demand of Germany for these products and the large quantities of butter exported from Russia. Also, many of the other European countries which were adversely affected by the war are making great strides in the reestablishment and further development of their dairy industries.

Rigid Regulations Require High Standard of Quality.

During 1924 about 775,000,000 pounds of butter entered world trade (supplied chiefly by Denmark, New Zealand, the Netherlands, Russia, Australia, and Argentina), against about 700,000,000 pounds in 1923. The Baltic States have placed great stress upon their dairy industries, and during the past few years their exports of butter have grown steadily. The Baltic States, Denmark, the Netherlands, New Zealand, and Australia have rigid regulations governing the butter which is destined for export, and by this means these countries have established a reputation for quality, have strengthened their foreign markets, and have received comparatively good prices for their product.

The Danish dairy industry is organized with a view to stabilizing and furthering the export of dairy products, principally butter, and consequently there has been a large increase not only in production, but in the exportation of these products. The Danish butter trade in 1924 showed a marked increase, the exports rising from 246,158,000 pounds in 1923 to 269,212,000 pounds in 1924. Shipments to Germany increased in 1924 to 56,716,000 pounds, from 3,413,000 pounds in the previous year. The heavy shipments to Germany absorbed a considerable quantity of the butter which under normal conditions would have gone to England, and Danish shipments to England dropped from 203,285,000 pounds in 1923 to 190,037,000 pounds in 1924. About 80 per cent of the Danish butter production enters foreign trade.

The Danish butter which is exported bears the "Lur" brand, established originally for the use of members of the Danish Butter Mark Society. However, within a few years after its organization, nearly all creameries in Denmark were members of this society and their butter was going out under this brand, and later a law was passed making the use of the "Lur" brand compulsory on all Danish butter exported. The quality of this butter is known throughout the world, and there is a demand for it not only in European but also in American countries.

Great Britain the World's Chief Butter Consumer.

Great Britain is the principal butter market and consumes about 75 per cent of the total world exports,

The conditions on this market reflect in a general way the status of the dairy industry not only in the countries from which its supplies are drawn but also in the other dairying countries. The diversion of large quantities of Danish butter to Germany resulted in a stronger demand on the British market for butter from other sources, and this was met by larger imports from the Baltic States, Canada, Argentina, and Australia. The total imports of butter into Great Britain in 1924 (592,789,000 pounds) were the largest on record, being 18,756,000 pounds more than in the year before.

Butter entering the British market from the countries in the Northern Hemisphere—except from Denmark, whose shipments are uniform throughout the year—comes into but little competition with the butter from the Southern Hemisphere. The seasons of heavy production vary, and supplies from the northern and southern sources alternate.

Dutch Butter Bears Stamp of Quality.

Butter exported from the Netherlands ranks with the best on the world markets. Most of this product is made in the dairies under Government inspection and is marked with an official stamp guaranteeing its genuineness and purity. About one-third of the total production is exported. Most of the exports are divided between England and Germany, the remainder going to other European countries and to the Dutch possessions in the East Indies and elsewhere. The butter exports from the Netherlands were 45 per cent larger in 1924 than in 1923.

The increased purchasing power of the German people, brought about by generally improved economic conditions in that country in 1924, affected the butter trade of practically every large butter-exporting country, as is evidenced by the large imports of butter into Germany, the bulk of which came from the Netherlands and Denmark. Imports from Denmark increased from 1,533,000 pounds in 1923 to 56,633,000 pounds in 1924, and those from the Netherlands rose from 1,152,000 pounds in 1923 to 32,172,000 pounds in 1924, the total imports reaching 117,896,000 pounds in 1924 against but 2,903,000 pounds in 1923.

Leading Producers of Southern Hemisphere.

In the Southern Hemisphere Argentina, New Zealand, and Australia have become factors in world trade in butter and now supply about 35 per cent of the total world exports, New Zealand furnishing a little more than the other two countries together. Butter from this source goes principally to the British market. These countries have been active in their efforts to improve the quality of the butter which they supply to their foreign trade.

A national brand of butter—"Kangaroo"—has been adopted in Australia, which exports approximately,

one-third of its butter production. In order to be permitted to use this brand, producers must make the very choicest butter, subject to all Federal inspections. It is estimated that about 80 per cent of the total exports from Australia are under this brand. All butter intended for export must be inspected by Government inspectors and is graded according to quality.

New Zealand Exports 90 Per Cent of Its Butter Output.

Dairy products are the chief exports from New Zealand, constituting about one-third of its oversea shipments. The Dairy Product Control Board, which recently made a survey of conditions of butter production and marketing in the principal countries of the world, has control over the sale and shipment of New Zealand dairy products, the bulk of which go to Great Britain. Special care is exercised that only butter of the highest quality is exported, and as a result the prices obtained on the London market are but little lower than those Danish butter commands and are higher than prices paid for butter from other countries.

Exports of butter from New Zealand rose from 34,945,000 pounds in 1920 to 100,630,000 pounds in 1921, and since that time there has been a continued increase. About 90 per cent of the total butter production of New Zealand goes to foreign markets.

In Argentina there is a movement to improve the quality of its butter for export by employing experts for this specific purpose. This has resulted in a recent shipment of Argentine butter receiving a classification on the British market equal to the best butter from New Zealand. During the latter part of 1924 a prolonged drought curtailed production and consequently reduced exports of butter from 68,120,000 pounds in 1923 to 65,265,000 pounds in 1924. Argentina exports about 72 per cent of its total creamery butter production.

World Trade in Butter, 1923 and 1924.

The following table shows the quantities of butter entering world trade, and the principal countries participating in that trade during 1923 and 1924.

Leading Producers of Cheese.

The volume of the world cheese trade, which is not so large as that of butter, amounted to 670,000,000 pounds in 1924, compared with 620,000,000 pounds in 1923. The principal countries which produce cheese for export are New Zealand, the Netherlands, Canada, Italy, Switzerland, and France. Cheese from these countries does not compete to any great extent, inasmuch as many of the countries produce types peculiar to themselves, and each consequently supplies a dis-

tinct market. For instance, the cheese exported from New Zealand, Canada, and Australia is practically all of the Cheddar type, while the exports from the Netherlands consists mostly of Edam and Gouda. France ships large quantities of Camembert and Roquefort; Switzerland sends out principally Emmenthal or Swiss cheese; and the exports from Italy consist mainly of Parmesan, Pecorino, Grana, Lodisian, Reggiano, and Gruyere of the hard types, and Caciocavallo, Gorgonzola, Stracchino, and Fontina of the soft types.

British and German Markets Lead in Cheese Consumption.

Great Britain furnishes the best market for cheese and consumes about 45 per cent of the total world exports. Canada, New Zealand, and Australia furnished 283,651,000 pounds of the total British imports of 323,620,000 pounds in 1924. Small shipments were also made to England in 1924 by Switzerland, Italy, France, and the United States. Every type of cheese enters the British market, but the bulk of it is Cheddar cheese.

Germany is the second largest importer of cheese, eighth-tenths of which consists of hard types. The 1924 imports, the largest on record, amounted to 96,702,133 pounds, 44,898,443 pounds of which were imported from the Netherlands, 17,155,756 from Denmark, and 15,653,321 from Switzerland.

United States Ranks Third as Cheese Importer.

The United States ranks third as an importer of cheese, but the types brought into this country consist for the most part of those not made on a sufficiently large scale to meet the demand, or of types not made at all in this country. The largest imports come from Italy, Switzerland, and France, in the order named.

The French cheese trade is large, in both imports and exports, but the imports, which are made up of types not made in France, always exceed the exports. Both the Netherlands and Italy export considerable cheese to France, the Netherlands furnishing annually more than half of the total French imports. There is a good demand for French cheese in other countries and many lands (principally the French colonies in Africa, the United States, Great Britain, and Belgium) are numbered among the purchasers.

New Zealand Tops World Export Trade in Cheese.

Of the exporting countries, New Zealand has been the world's largest shipper of cheese for many years, with the exception of 1920, when the Netherlands held the leading place. New Zealand cheese goes chiefly to Great Britain, which took 177,648,240 pounds of a total shipment of 178,639,552 pounds in 1924, the remainder of which went to British possessions in the Pacific Ocean and in Asia, and to the United States.

Cheese from the Netherlands has a wide distribution, reaching more than 30 countries, with Belgium, France, Germany, and Great Britain as the largest buyers. The Dutch export trade in cheese has had a steady development. The pre-war exports averaged 127,378,611 pounds. After a decline during the war and readjustment periods they reached 136,645,500 pounds in 1923, and in 1924, 170,352,000 pounds were sent to foreign countries. Cheese from the Netherlands is Government inspected and marked before it enters export trade.

United States Takes Half of Italy's Cheese Exports.

Canadian cheese exports have always been large, with Great Britain as a steady market. Out of a total export of 130,790,240 pounds in 1924, Great Britain

took 123,627,392 pounds and the United States 3,749,648.

The United States is the best customer for the many types of Italian cheese, taking a little more than half of the total exports. Great Britain also purchases from Italy a considerable quantity of cheese. The exports in recent years have gradually increased but did not reach the pre-war annual average of 60,560,000 pounds until 1924, when the exports reached 71,906,000 pounds. About one-third of the cheese exported from Italy is of soft types.

Swiss Cheese Industry Again on Exporting Basis.

The cheese industry of Switzerland has had a struggle to survive the postwar depression, but is now gradually assuming its former position as an exporter. Much emphasis is placed on maintaining the high standards for Swiss cheese, the high quality of which is claimed to be due to the character of the milk used in its manufacture. The most remarkable feature of the Swiss foreign trade in cheese in 1924 was the recovery of the German market. That country purchased from Switzerland 13,253,614 pounds of cheese in 1924, compared with 1,325,185 pounds in 1923. The decline in the purchases by some of the foreign countries, including the United States, is said to be due to the fact that Swiss cheese is being made in these countries which meets in a measure the demand for this type of cheese. The exports from Switzerland are far below those of the pre-war period, when an average of 70,257,515 pounds was exported yearly, compared with 42,797,458 pounds in 1924.

In Argentina many types of cheese are made. Exports are destined principally to the United States, France, and Italy. The year 1924 was not very satisfactory for cheese production, partly owing to a drought, and exports dropped from 12,684,865 pounds

in 1923 to 2,831,636 pounds in 1924. This was the smallest quantity of cheese exported from Argentina since 1916.

World Trade in Cheese, 1923 and 1924.

The following table gives the quantity of cheese entering world trade, together with the principal exporting and importing countries for the years 1923 and 1924.

TOBACCO

Tobacco Section, Foodstuffs Division

THE TOBACCO SITUATION IN SYRIA

Based on report by Vice Consul Paul H. Alling, Beirut

The Société de Régie Cointeresseé des Tabacs, whose contract with the Turkish Government was recently canceled, still controls all phases of the tobacco industry in Syria, except in the territory included in Mount Lebanon, where it has never had the right of exploitation. The regie is a joint-stock company, financed at Paris and controlled largely by French interests. It has a capitalization of 40,000,000 francs (all paid in), which is divided into 200,000 shares of 200 francs each.

Tobacco Manufacture—Cigarette Industry.

The regie maintains factories at Bierut, Damascus, and Aleppo. Private factories (which are not allowed to operate in those parts of Syria where the regie has control) are located in Lebanon. The principal ones are at Zahleh, Bikfaya, and Antilyas. Cigarettes constitute the principal output of both monopoly and private factories.

In Lebanon the grower is often financed by cigarette manufacturers or tobacco dealers, who advance sufficient funds to enable the farmer to plant, cultivate, and harvest the crop. In return for such assistance the

manufacturer takes an option on the tobacco. No control of production is exercised in Mount Lebanon, but in other sections of the country a farmer desiring to plant tobacco must obtain a license from the Regie des Tabacs.

Tobacco Production in Syria.

The following table shows the production of tobacco in Syria in 1913 and from 1919 to 1924, inclusive:

Tobacco production in Syria

Years	Lebanon	Damascus	Aleppo	Alouites	Total
	<i>Pounds</i>	<i>Pounds</i>	<i>Pounds</i>	<i>Pounds</i>	<i>Pounds</i>
1913.....	360,000				360,000
1919.....	256,000				256,000
1920.....	167,091	128,668	38,467	502,698	836,324
1921.....	244,879	175,657	6,822	1,935,952	2,363,310
1922.....	218,907	152,258		1,943,889	2,315,054
1923.....	1,223,800	1,150,000		1,200,000	1,237,800
1924.....	1,242,800	1,150,000		1,210,000	1,262,800

¹ Estimated by Regie des Tabacs.

Prices and Stocks—Use of Imported Tobacco Limited.

During the season of 1924 the growers in Greater Lebanon received for their tobacco an average price

equivalent to 23 cents a pound, while those in Alouites in and about Latakia received from 11 to 14 cents a pound. At the close of 1924 the Regie des Tabacs had 67,338 pounds in its warehouses in Greater Lebanon. Data showing stocks in other parts of the country are not available, but considerable quantities of contraband tobacco are said to be held by dealers throughout the country.

On account of the heavy taxes which must be paid by the regie not much tobacco is imported, and none comes from America except a few cigars. Should the monopoly be discontinued, however, it would undoubtedly be possible to introduce low-grade cigarettes and perhaps a small quantity of smoking tobacco, although the latter is little used in Syria. The smoking of cigars is limited, and unless an extensive advertising campaign were carried on, it would hardly be possible to sell them in large quantities.

Turkey Adopts Banderole System for Tobacco

Trade Commissioner Julian E. Gillespie, Constantinople

On March 23 the Grand National Assembly of Turkey passed a law adopting the banderole system for manufactured tobacco products. The banderole system

manufactured tobacco products. While the law as passed does not fix the time at which the system becomes effective, the date will probably be March 1, 1926. The new system will replace the present Government monopoly and will permit the free manufacture of cigarettes and other tobacco products.

In view of future business, American machinery companies are already forming contacts with cigarette manufacturers who will probably be interested in Constantinople as soon as the banderole system is put into operation.

The present tobacco monopoly in Turkey was controlled by a French company prior to March 1, 1925. When the contract with the French company was canceled, measures were adopted toward making the monopoly thoroughly Turkish. Hence, until the banderole system becomes effective, the manufacture and sale of tobacco in Turkey is strictly a Government monopoly, and it is generally believed that the Minister of Finance will soon announce regulations governing the manufacture of cigarettes and other tobacco products.

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

ARGENTINA THE PRINCIPAL MARKET FOR AGRICULTURAL IMPLEMENTS

More than 25 Per Cent of American Agricultural Implements Exports Destined to Argentina—
Threshers, Plows, and Wheel Tractors the Principal Items

Assistant Trade Commissioner Sherwood H. Avery, Buenos Aires

Argentina is now the largest foreign market for American agricultural implements. Exports of such implements from the United States to Argentina in 1924 amounted to \$16,806,516, which comprises more than one-fourth of the total exports of implements from the United States. This was also approximately \$4,000,000 greater than the amount exported to Argentina in 1923, and was almost \$9,000,000 greater than the amount exported to Canada in 1924. The exports of implements to Argentina in 1924 were greater than the combined exports to France and Canada, which countries rank with Argentina among the three largest purchasers of American implements.

Principal Articles Shipped to Argentina.

The principal articles shipped to Argentina were 4,085 threshers, valued at \$3,753,025; 46,497 plows, valued at \$2,153,953; 2,428 wheel tractors, valued at \$1,770,019; and 4,874 harvesters and reapers, valued at \$1,570,615. Other important items were cultivators, drills and seeders, mowers, harrows, and windmills. The purchase of these items exceeded \$300,000 in each case.

American Implements Predominate.

It is estimated that about 80 per cent of the implements imported into Argentina in 1923 were of American origin, but no figures are yet available for 1924 for comparison on that basis. The demand for Ameri-

can farming equipment is strong in practically all lines of implements of cultivation, harvesting machinery, seed separators, and repair parts. Most of the tractors imported were purchased from the United States, and this is also true of windmills, hay balers, water pumps, and wheelbarrows. Imports from Germany have shown an increase in plowshares, hoes, and corn shellers, but have recorded considerable decreases in plows, mowers, hay balers, wine presses, windmills, and small tillage implements. Small gains were made by Great Britain in supplying plowshares, plow repairs, and binder twine.

Small Imports of German Implements.

The share of German manufacturers in the Argentine market is frequently overestimated; only a few houses import German implements. The most important German firms in the market are Rud. Sack and Felix Kraft. Purchases of German implements have been small, except in 1922. The 1923 purchases were about 50 per cent less than in 1922. Imports from Germany led in hand rakes and scythes, and there was a small sale of German gang plows and disk and section harrows. A relatively large number of German plows is imported, although the bulk of this trade is held by the United States. The most popular type of German plow is the moldboard gang plow, of two 16-inch bottoms. Quite a few German sulky plows are also sold.

Imports of British Implements Decrease.

Purchases of British implements have declined since 1913. Prior to that time, many threshing machines and harvesters and reapers were sold in Argentina, but a great part of this trade has been lost, chiefly to American manufacturers. Purchases of Canadian plows seem to be increasing. The most popular plow imported from that country is a moldboard gang plow, with two 14-inch bottoms and an attachable third beam and bottom. One of the most important items of agricultural machinery sold in Argentina is a combined harvester-thresher, which is manufactured in Canada.

Implements Manufactured on Small Scale.

The manufacture of implements in Argentina is not important, but there are about 50 concerns making various types of farming implements. Most of these establishments, however, are merely shops specializing in one or two particular articles.

There is only one large plow factory in the country. The designs of implements produced in Argentina are generally copied from popular types of American and European models. An important activity of the Argentine plow concerns is the manufacture of plowshares and parts for American plows already on the market. Windmills are manufactured by seven Argentine firms, which produce about 2,000 windmills annually.

Production of Wheel Plows and Walking Plows.

One firm produces about 1,000 wheel plows and 2,500 walking plows per year, the principal types manufac-

tured being the 12 and 14 inch moldboard gang plows, and 5 to 12 inch moldboard walking plows. This company has contracts with several established dealers to take the entire factory output and, consequently, maintains no sales organization. Prices of the plows made by this firm are about 10 per cent lower than those of American manufacture. They are durable and considered good, but are not so well finished as similar American models.

Other Implements.

Other firms manufacture limited quantities of implements, such as land rollers, stalk cutters, harrows, hand pumps, seed separators, seeders, etc. Several firms manufacture wooden wheelbarrows, and one fairly large firm produces a tubular steel wheelbarrow. Some firms manufacture on a small scale and supplement their lines by importations from the United States, Canada, and Europe.

Additional information regarding agricultural implements appears in this issue under the following sections:

Cable review, Europe: Gradual retrenchment of French industrial production.

Tariffs and trade regulations:

Czechoslovakia—Relaxation of import restrictions on certain agricultural implements.

Poland—Temporary reductions in import duties on certain agricultural implements.

INDUSTRIAL MACHINERY

EXPORTING MACHINERY ON CREDIT

W. H. Rastall, Chief, Industrial Machinery Division

American manufacturers of industrial machinery for well over a decade have frequently been told that they must extend unusual credits if they wished to promote their export business. Such instances as the following are familiar:

The expansion of business relations between the United States and Brazil depends fundamentally upon two factors: Teaching firms in the United States that longer credits must be granted for the payment of bills. * * * A company selling plant equipment can not expect to succeed in Brazil unless they are willing to offer more than the usual 90 days for settlement. Europeans are willing to grant six months or even one or two years for textile installations, railway supplies, and purchases of a similar kind. One firm recently offered to sell railway equipment on a 15-year basis, agreeing to take State bonds.¹

German manufacturers and later on also the English machinery makers are making almost incredibly easy terms of payment, extending credit even up to five years.²

Letter from a Business Man in Germany.

The following is from a letter of a business man in Germany to another in New York:

As I told you when in Thoun, German machinery manufacturers have not only offered but accepted payments for machines delivered from three to five years. * * * Some British manufacturers have offered to sell at the same conditions. You know Spanish conditions well from your former

visits to that country and you will doubtless remember that even before the war German manufacturers made always very easy terms and extended long credits.³

An Item in a Technical Magazine.

A further example is from an item in a technical magazine:

In spite of the catastrophal, economical, and political conditions prevailing in Germany, the German ironmasters conduct their fight of competition abroad now as before, with undiminished vigor. Not only very low prices are made, but almost incredible and ridiculous terms of payment are granted. Thus, for instance, the General Electric Co. of Berlin (A. E. G.) recently received an order from China * * * for which the General Electric Co. of Berlin made the following terms of payment: One-fourth of the total price of installation one year after arrival at the plant at Shanghai, the rest within the following four years, without payment of interest. The price at which the German concerns sold this machinery installation was about 25 per cent below the net cost to the Swiss company. Swiss manufacturers could never accept such terms of payment, so your correspondent was told, as every bank would at once withdraw every credit from firms practicing such business transactions.

The testimony contained in the above quotations is so persistently supported in newspapers, technical magazines, consular reports, and by returned travelers that an examination of the subject is of great interest to those engaged in exporting American machinery.

² American Machinist, August 30, 1923, page 320.

³ Letter from Editor Condit of American Machinist, October 20, 1923.

Credits Not Demanded from All Countries.

Insistent as the demand for credit may be, and coming from many widely separated countries, it is not universal. No instances are recalled where such credits have been demanded from the United Kingdom, from France, from Belgium, or Canada. Many American machinery manufacturers, accustomed as they are to the practice of prompt payment in the domestic market, have been disturbed by the insistent demand that machinery for export be sold on credit. In some instances, this has resulted in causing certain managers to lose interest in export business, while in other instances it has resulted in the acceptance of export business on terms that were scarcely businesslike.

Export Business Attractive.

All of this is most unfortunate, as American machinery manufacturers have every reason to be proud of their export business, and the terms on which it has been handled. In spite of the high wages paid American mechanics, the United States at present is probably the world's most important exporter of machinery, having shipped more than \$130,000,000 worth of such equipment in 1924, generally distinguished for superior engineering merit and usually commanding prices far above material offered from other countries. Probably 90 per cent of this large volume of machinery is fully paid for in cash to manufacturers before it leaves the United States.

Properly handled, American machinery manufacturers should find their export business the cleanest and most attractive executed by their plant, for payment is usually made promptly against American delivery, and petty demands from customers for service and other trivialities are reduced to a minimum; the sales expense is commonly carried by machinery dealers in foreign countries, and in many other ways these export transactions should be found most desirable. Obviously, the business should not be handled on a credit basis by the manufacturers unless there are special considerations making this necessary.

Factory Equipment Versus Merchandise.

At a recent foreign-trade convention at least two speakers in discussing export trade made the statement that no manufacturer should consider going into the export business unless he was prepared to grant credits to foreign buyers. Such sweeping statements are unfortunate and unfair unless commodities are mentioned, as terms of sale may be applied to some which are not appropriate to others. The writer happens to know that one of these convention speakers had in mind office supplies and the other shoes. Obviously, shoes or collars when shipped abroad will ordinarily pass into the hands of dealers who may reasonably expect to convert stocks into cash in time to meet his maturing obligation.

Machinery as Plant Investment.

In contrast to this, machinery as purchased by a factory, railway, or mine becomes plant investment and 90 days' credit should be of little importance to the buyers. If the promoters of the enterprise are to have the cash with which to pay three months after delivery, presumably they have it when delivery is made. If not, it is possible that they are overextended and not only lack the capital required to pay for the machinery but also working capital as well. Quite probably, it is no kindness to furnish such buyers with machinery on credit, as the enterprise may be doomed from its in-

ception. It is much better business for all concerned to require the promoters to find funds fully to equip their enterprise before passing beyond the stage where equipment is purchased.

Paying for Machinery Out of Profits.

In some instances it is felt that machinery can be sold on long credits in such a way as to enable the buyer to pay for it out of profits, but for the ordinary transaction this would probably, in effect, mean that the machinery manufacturer virtually becomes a stockholder in the enterprise, with the further restriction that he would not be in a position to receive dividends. He would be carrying his full share of the risk without being in a position to receive a corresponding share of the profit. Transactions of this sort are too risky.

Reasons for Extending Credits—Guarding Against Abnormal Competition.

Altogether, the manufacturer probably gets prompt payment for 75 per cent of the machinery entering into international trade, but inasmuch as there remains an important volume sold on credit, it would seem desirable for the American manufacturer to adopt a flexible policy in this connection and export on credit at times if it can be done on a businesslike basis.

However, the manufacturer should be on his guard against adopting this policy to meet what may be termed abnormal competition. For example, in 1924 most German manufacturers were heavily stocked with machinery that had been made while the mark was depreciating, produced at perhaps 25 per cent of what it would have cost to build it in America. Later, following the stabilization of German currency and the inauguration of the Dawes plan, these manufacturers found themselves short of working capital. They could afford to sell this machinery at ridiculous prices and on any terms that would convert it into liquid funds. The result was that reports were received from all over the world of transactions involving prices that appeared ridiculous and terms that seemed absurd.

Result of British Trade Facilities Act.

England also furnishes a case in point. Following the armistice, there was great unemployment, and in order to hasten the recovery of business, the British adopted the so-called trade facilities act, which made it possible for manufacturers to secure Government guaranteed loans, and machinery was exported to Poland, India, and certain other countries on credit which these loans made it possible to grant and with the terms supported by Government guaranty.

Experience under the above act, by the way, provides an interesting opportunity to estimate the importance of credit transactions in connection with machinery exports. During approximately three years that it has been in operation it appears that the facilities of this act have been employed in connection with export machinery transactions in only three or four instances. One of these was for a large volume of textile machinery shipped to Poland, and another was for hydroelectric equipment shipped to Bombay. Early in 1925, the British Government reported that during the life of the then existing ministry—that is, from October, 1924—out of 1,123 applications under this act, only 84 were sanctioned, the value involved being £447,207; the average transaction represented £5,324. Many of these transactions applied to work inside the United Kingdom and the sums applied in promoting the export of British machinery were negli-

gible. These facts suggest that the demand for credits in connection with the sale of machinery are not so active as some of the above quotations suggest.

Instances Where Credits Are Extended.

At the annual meeting of Platt Bros. & Co. (Ltd.), well-known British manufacturers of textile machinery, the chairman included the following paragraph in his speech to the stockholders:

Sundry debtors at £1,005,682 compares with £1,133,335 a year ago. The amount is large, because it is necessary in these days occasionally to give extended credits. Our policy is to help the cotton trade over its difficulties, where such a course is necessary or desirable, rather than to harass those who are temporarily unable to pay and that policy has been justified by results in past years.

Certain business interests in Spain regularly extend credits on machinery transactions extending from six months to three years. In Latin America and certain other parts of the world a similar business situation is encountered, resulting in a form of competition that is exceedingly difficult for the smaller American machinery manufacturer to overcome. This situation suggests that business houses regularly extending these credits have discovered a method that makes such business possible, and it would be of great interest to American manufacturers to discover such a method on behalf of their own interests.

Complications in Connection with Collections.

In this connection it should also be remembered that foreigners extending such credits are not necessarily more successful in their export business than are American manufacturers that content themselves with a more conservative policy. All over the world are instances where machinery has been sold on credit, only to develop complications in connection with collections. In China, Poland, Rumania, Spain, and in India there are outstanding examples of such experiences. Clearly it is desired that manufacturers refuse to sell on credit unless they can discover methods that will make it possible to handle such business safely and cleanly. On the other hand, it would promote American interests in the face of world-wide competition if methods could be discovered making such credits possible.

Credits on Certain Machinery Transactions Necessary.

Still, it is undoubtedly true that by extending credits, particularly in certain countries, a largely increased volume of export business can be secured, and there are reasons why machinery purchasers in these countries wish to buy on credit.

For example, in Brazil there is a great need for capital if industry is to be developed. As yet no business processes have been developed there to take care of the financing of industry through long-time industrial loans in foreign countries, and there is no means for raising capital through investment securities in the local market. Consequently, industrialists in Brazil find it necessary to raise all of their own capital or else arrange to finance themselves through their suppliers. Where a manufacturer in the United States would raise capital for any industry by the sale of mortgage bonds, a similar manufacturer in Brazil must plan to reach the same end by pushing the burden on to the machinery dealer. Otherwise expressed, the demand from Brazil and certain other countries for long-time credits in connection with machinery transactions represents a demand on the part of the

industrialist there that the machinery manufacturers shall participate in his business to the extent of the investment represented by the deferred payments on the machinery contract.

Relations Between Bankers and Manufacturers in Europe.

It should be remembered that the business communities in European countries have a very different form of organization from those known in the United States. On account of interlocking directorates the relationship between banks and manufacturing enterprises in Europe is often very intimate. European banks also are not restricted in the manner common under certain American laws, and consequently are in a position to handle business that here might prove illegal. It is not uncommon in Europe for a bank to hold control over an industry through ownership of a majority of its stock, and in some instances these interests are very extensive, with ramifications into many countries. It is understood that in some instances these European banks will discount the paper of machinery dealers who have sold such equipment on the terms indicated in the above quotations. In cases where the machinery manufacturer can discount such paper at his bank without recourse it is clear that credit business becomes very attractive.

If a German salesman in Ceylon accepts an order involving six months' credit, it is possible that the manufacturer will execute the order in the usual way, sending the usual documents forward with the consignment. On arrival of the goods the salesman secures from his customer an acceptance which in turn is discounted at some bank, thus providing funds to meet the draft accompanying the consignment, and the transaction ends with the manufacturer fully paid and the bank extending a credit to the local industry on the security of an acceptance. If this acceptance is discounted without recourse, the manufacturer has no further responsibilities whatever. There are countries where customs make it possible to handle business in this manner, but there are other countries where it would be found difficult. Another way has been for the German manufacturer, for example, to discount on his own part in the London market. In pre-war days it was sometimes possible to do this on something like 3 per cent, so that by lending his credit the German manufacturer was able to make from 3 to 5 per cent interest on the deferred payments during the life of the credit in addition to his usual manufacturing profit. Under such conditions credit transactions were probably attractive, although they involved the manufacturer in serious contingent liabilities.

Methods by Which Credits Can Be Extended.

Investigations made by the Bureau of Foreign and Domestic Commerce suggest that generally speaking American manufacturers should demand payment on exported machinery before the equipment leaves the United States. This rule will probably be found entirely satisfactory 90 per cent of the time, and 90 per cent of our machinery manufacturers should find this method entirely satisfactory for all of their business.

No machinery manufacturer should consent to export machinery on any other basis unless he has a well-developed export department, which is fully equipped and fully competent to handle foreign business of this character. Under conditions existing in various foreign countries these credits have sometimes been subject to serious abuses and the process of collecting for

such items in case of difficulty are complicated and intricate and call for very careful work.

Foreign Manufacturers Have Transactions Guaranteed.

Experience also indicates that where credits are extended foreign machinery manufacturers frequently arrange to have the transaction guaranteed. In Spain and Poland and certain other countries banks are accustomed to such business and are prepared to make these guaranties.

German industry has long been supported vigorously by German banking institutions employing methods that could scarcely be used in the United States, so that even if German manufacturers are in a position to sell machinery on credit, it does not necessarily follow that American manufacturers would be in a position to handle their business on a like basis.

Certain American industries that have felt the need for credit in connection with their export business have organized special institutions to finance these credits. Similar financial institutions have been organized in Europe.

Six Months' Credit Might Be Arranged.

It is also possible for an American machinery manufacturer to arrange for credit in connection with his export transactions by having these credits insured through companies equipped to underwrite such transactions. So far as is known, such insurance protects only against bankruptcy and present facilities cover transactions involving six months or less. Credits of this kind might be a great convenience to a machinery dealer abroad who would thereby be enabled to collect from his customer before finding it necessary to meet all payments in connection with the transaction. Manufacturers might find it profitable to study facilities of this character now in existence, and where it is found that a six months' credit is adequate, would possibly be able to promote their foreign business by employing such methods. Such transactions, however, imply that the manufacturer be adequately organized for the handling of such business.

Relation of Export Department to Foreign Credits.

Before determining the policy to be used in connection with its export business, a manufacturing organization should consider how this policy will tie in with its other business. Although some of our machinery manufacturers have very elaborate organizations, most find it necessary to content themselves with modest office forces, and when all business is conducted on terms involving payment f. o. b. factory, a very simple type of office organization will suffice. So soon, however, as a manufacturer undertakes to handle his foreign business on lines involving quotations for delivery in foreign countries, a much more complicated organization is necessary, involving a foreign sales department, equipped for world-wide activities. Obviously, the office that is organized on an f. o. b. factory basis can scarcely measure up to the responsibilities involved in extending credits abroad, while, on the other hand, an organization fully developed on the export side will probably find it possible to consider not only making c. i. f. quotations but to handle a certain amount of this business on credit.

At any rate, a manufacturer should consider carefully the change in responsibility in making c. i. f. quotations, as distinguished from f. o. b. factory proposals, and take all necessary precautions in order that his business may be properly handled under these

changed circumstances. Correspondingly, if he allows his foreign customers 90 days, after arrival, in which to make payment, he will similarly find it necessary to include in his export department such organization as is necessary to consecutively follow the credit standing of his foreign customers, and if circumstances do place him in a position where he wishes to grant three years' credits in connection with machinery transactions he should simultaneously expand his export department so that it will be correspondingly in a position to protect his interests.

Present Business Practices.

Careful study of the present situation shows that there is very little demand that machinery for export be sold on credit—and this applies to British and continental manufacturers as well as those of the United States. There is almost no occasion to sell machinery on credit in any European country, with the exception of Poland and Spain, although there have been times when requests of this character have come from Germany, Austria, and Czechoslovakia. Most machinery sold in Asia is sold for prompt payment. In South America there is some request for credit, but quite commonly the business can be done on conservative lines. For example, in most of these countries it will be found that the machinery dealer sells to his customer on some such basis as one-third with order, one-third on delivery, and one-third after test. Such terms enable the dealer to operate with almost no capital. For, after making delivery, he has outstanding only one-third of the contract price minus his own profit, while during the early months of the period involved he has had the use of his customers' money to the extent of one-third of the contract price. It is felt that such terms are entirely businesslike and protect the interests of all parties of contract.

Too Liberal Credits Cause Failures.

During the war, as a military measure, allied interests arranged for the liquidation of certain German firms engaged in business in Hongkong and Singapore, and those in charge of these liquidations have reported that they found many of these German companies in a most unsatisfactory position. Credits had been extended unwisely and companies that had seemed to be prosperous were in reality found to be almost worthless. Time and again foreign markets have been demoralized by the too liberal extension of credit. Not long ago a firm in Spain was liquidated, involving a number of American manufacturers in serious losses. Large companies and small companies, British and German, as well as American, have suffered serious losses through the too liberal extension of credit in connection with export business.

Keeping the Export Business on the Right Basis.

The export manager will find it much more difficult to secure satisfactory credit information than will his associates handling domestic business, and in general it is felt that great caution should be exercised in following recommendations to be liberal with credit. The greatest effort should be made to keep export business on a basis that is clean and attractive. Properly handled, these export orders should be the most attractive received in the shop, but if the export business is allowed to become involved it will also be found that collections are difficult, litigation hampered, and prospective profits will quickly melt away and may become serious losses.

AUTOMOTIVE PRODUCTS

Percy Owen, Chief, Automotive Division

Foreign Automobile Trade Statistics

Owing to the different methods of presenting trade statistics by various foreign governments it is difficult to make comparisons of trade in automobiles. It is especially desirable to secure statistics in such form as to assure the most practical use being made of them. This means that number or pieces are preferable to weight as units of volume measurement; also, where detailed classifications by categories, such as divisions into price or weight groups, are used that these should depict a clear-cut picture, whether showing import or export trade.

AMERICAN SHARE IN 1924 SPANISH AUTOMOBILE IMPORTS

Based on report from Commercial Attaché Charles H. Cunningham, Madrid

Passenger cars numbering 13,469 and weighing 12,225 metric tons were imported into Spain during 1924, according to preliminary figures embodying customs statistics secured from the Consejo de Economía Nacional. Corresponding data on trucks are not available, because they are classified with tractors and other lines. It is only possible to state that trucks, tractors, and their allied products were imported during 1924 to the volume of 4,816 metric tons.

The most valuable feature in the data as made available is the classification of passenger-car imports by weight groups—six in all—which, when studied in conjunction with the units of volume (number) and the classification according to countries of origin, offer an excellent opportunity for detailed analysis.

United States Leading Passenger Car Supplier.

The 1924 passenger car import statistics for Spain show that the United States is distinctively the leader, accounting for 6,600, or 49 per cent, of the total imports in this line. This predominance is marked in every weight group where volume has been attained, except that classification from 800 to 1,200 kilos, in which France is the leader. In the two latter classifications, namely, 2,200 to 2,400 kilos and over 2,400 kilos, the United States stood second and third, respectively, but under these classifications the total units imported from all sources amounted to only 223, as compared with 13,246 for all passenger cars up to 2,200 kilos in weight.

In detail, according to the different weight import classifications followed, the United States supplied the following proportions to the total in each case: Up to 800 kilos, 56.7 per cent; 800 to 1,200 kilos, 29.6 per cent; 1,200 to 1,600 kilos, 62.4 per cent; 1,600 to 2,200 kilos, 69.8 per cent; 2,200 to 2,400 kilos, 25.2 per cent; and over 2,400 kilos, 7.7 per cent.

Competitors in Passenger Car Market.

Outside of the United States, Spain has confined its foreign passenger-car purchases to eight countries. Of these all are recognized as producing countries in varying degrees of importance, with the single exception of Portugal. However, of the remaining sources of origin none are serious competitors of the United States, outside of France and Italy, which accounted

for 39.5 and 9.6 per cent of the total trade, respectively. Even the United Kingdom—the fourth ranking competitor in this market during 1924—failed to bring its share of the total trade over 1 per cent. Below this point, Belgium, Germany, Austria, Portugal, and Switzerland all came in for relatively smaller portions of the Spanish market for foreign cars.

France offered the strongest competition in the import classes 800 to 1,200 kilos, over 2,400 kilos, 2,200 to 2,400 kilos, and up to 800 kilos, in the order listed. Italy was strongest relatively in the two classes 800 to 1,200 kilos and 2,200 to 2,400 kilos, wherein its share of the total was 23.7 per cent and 22.4 per cent, respectively.

Features of the Spanish Import Trade in Trucks.

The United States had a larger share of the Spanish import trade in trucks, buses, tractors, and allied products than was the case with passenger cars. However, in this case the comparison must be made on the basis of weight rather than pieces or units. The United States supplied 57 per cent of the total Spanish trade in these categories. France was again the leading contender of the United States, but Italy was displaced from its third position by Switzerland, and the United Kingdom by both Switzerland and Germany. To make up the volume of French and Swiss importations in this line, heavy trucks are predominant, whereas the larger weight total credited to the United States is composed primarily of light trucks.

Imports by Country of Origin.

The following tabulation sets forth the details of the Spanish import trade in passenger cars and trucks during 1924:

Passenger car and truck imports into Spain, 1924

Country of origin	Up to 800 kilos		800 to 1,200 kilos		1,200 to 1,600 kilos		1,600 to 2,200 kilos

¹ Classification includes trucks, autoelectric carriers for distributing merchandise, omnibuses, tractors, and truck engines. Truck import statistics not available separately, according to number and weight.

Canada Not Participating in Trade.

Every major automobile-producing country of the world found some outlet for its products in Spain during 1924 with the exception of Canada. This is explained by the fact that Canadian motor vehicles had to pay the highest tariff rates, while the United States, France, Italy, and the United Kingdom enjoyed more favorable rates.

Additional information regarding automotive products appears in this issue under the following sections:

Cable review, Europe: Gradual retrenchment of French industrial production.

Cable review, Far East: Present conditions in South China.

Tariffs and trade regulations: Poland—Temporary reduction in import duty on heavy chassis for trucks, automobile chassis, and trucks.

Foreign trade opportunities.

ELECTRICAL EQUIPMENT

OPPORTUNITY FOR ELECTRICAL ACCEPTANCE CORPORATIONS ABROAD

R. A. Lundquist, Chief, Electrical Equipment Division

Frequently, foreign representatives of American manufacturers write long communications to their home offices complaining of losing business because more favorable terms of payment than they were able to extend were granted by foreign competitors. On a recent trip to Mexico this same complaint was heard by the writer, and several recent instances were cited to him.

Suggested Sales on the Installment Plan.

In the United States, manufacturers of certain classes of goods such as automobiles, phonographs, sewing machines and radio apparatus have worked out plans whereby purchasers are able to secure their products on installment payments running over a period of a year or more, and even outside of the United States a few products of these classes are being successfully marketed on the same plan.

It is appreciated, of course, that selling conditions abroad differ from those at home, and that foreign laws dealing with the installment plan of purchasing are not the same as ours, but as automobiles can be sold on this basis it would seem that buyers of electrical apparatus could receive similar treatment. Safeguards with which the transactions could be surrounded would be ample.

Credit Terms on Capital Expenditure.

Electrical manufacturers may say that they are not bankers and that they do not believe long credit terms should be granted on items of capital expenditure, but manufacturers of automobiles seem able to sell bus operators their necessary equipment on a time basis, and this assuredly comes under the head of capital expenditure.

Motor-car manufacturers have been able to do much of this through acceptance corporations, and it is possible that similar organizations may well be developed to serve electrical manufacturers when it seems advisable to provide some means whereby prospective purchasers can buy American electrical apparatus on

as favorable a basis as they can secure similar products from European manufacturers.

American Manufacturers Might Overcome Foreign Competition.

Looking at the subject from a manufacturer's standpoint, it would seem that as foreign manufacturers can sell goods in this manner where good business judgment warrants such transactions, American manufacturers with their greater resources, should be able to meet competition. In technical development and manufacturing efficiency they certainly are not excelled, and surely ought to be able to develop financial methods at least to the point reached abroad.

However, the writer has not in mind the financing of promotions and the like, but merely the application of means whereby power plants and the industrial establishments that are soundly organized may receive something approaching the same support the foreign manufacturers obtain from their bankers.

Government Control of Broadcasting in Denmark

Vice Consul Ellis A. Johnson, Copenhagen

Government control of all broadcasting activities in Denmark for the period of one year, namely, from April 1, 1925, to March 31, 1926, was recently put into effect. A special board of some 27 members, including, among others, Government officials, representatives of the various radio organizations, the press, and prominent professional singers has been appointed to take charge of the preparation of all radio programs.

License Fees Charged.

Another feature of the Government control is the payment of license fees by all holders of radio apparatus in Denmark. Such licenses cost 10 crowns for owners of crystal sets, 15 crowns for tube receiving sets, and 200 crowns for receiving sets equipped with loud speakers for use in public places. (The crown is now worth \$0.19.) The license expires March 31, 1926, but anyone securing radio receiving sets prior to that time will be obliged to pay the full yearly license fee. Failure to license radio apparatus will make the offender subject to fine and his apparatus to confiscation.

Radio in Country Homes.

During the summer season in Denmark a large percentage of city dwellers go to the coast and country districts, and this year a campaign directed toward having all such vacationists take their radio sets with them has been carried on by local radio dealers.

Market for Radio Sets in Barbados

Consul John J. C. Watson, Bridgetown

The colonial secretary of Barbados has just announced that the Colonial Government has decided to amend the law governing the use of wireless and that a bill providing the necessary legislation will shortly be introduced into the House of Assembly. It is the intention of the Government to provide a system of license for those who desire to use radio receiving sets. The control of all wireless apparatus and the issuance of licenses is to rest with the Pacific cable board, which is under the British Post Office. Rules and regulations governing the use of wireless by commercial firms and amateurs have been drafted by the Pacific cable board and will be published as soon as they have been approved by the post office. It is rumored that these regulations will be similar to those in force in England.

Appointment of Agents—Provisional Orders.

While it might not be advisable for American firms to ship radio sets into this colony before these rules and regulations are published, time might be saved by the appointment of local agents and provisional orders placed with them, for shipment upon receipt of cable. American firms which contemplate entering this market should bear in mind that local dealers are not familiar with the mechanics, operation, installation, and repair of radio receivers and they should take proper steps to familiarize their representatives with their products.

[A list of possible radio dealers in Barbados may be obtained from the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., by referring to No. 170573.]

Important Developments in Telephone System of Birmingham, England

Consul John F. Jewell, Birmingham

There are at present 50,000 telephones in the Birmingham area, an increase of 15,232 over the number in use on January 1, 1922.

The telephonic requirements of Birmingham and the surrounding districts have been based on the probable development that will take place during the next 25 years. This will result in the establishment of automatic telephone exchanges at Birmingham, Dudley, Walsall, and Wolverhampton. All exchanges within a 7-mile radius of Birmingham Cathedral will be included in the Birmingham group, and this will necessitate the opening of six new exchanges.

Plans for Converting Telephone System Made.

The engineering work in connection with the proposed conversion of the Birmingham telephone system to automatic working is of such magnitude that preparations are made for it long in advance. The underground cable system in the center of the city is gradually being arranged and enlarged to meet the

prospective conditions and considerable installations of underground conduits for future cables are being made. Sites for the new exchange buildings have been fixed, plans for the buildings drawn, and the erection of some of them will commence in 1925.

Market for Electric Vacuum Cleaners in Uruguay

Consul O. Gaylord Marsh, Montevideo

Electric vacuum cleaners are being used in Uruguay in the better homes and larger hotels. Although sales are limited, it is believed that the use of this household appliance will gradually become more general.

The vacuum sweepers now on sale in Montevideo are of American, German, Swedish, Dutch, and French manufacture. With perhaps one exception, these vacuum cleaners are but indifferently understood by the dealers, poorly exhibited, and inefficiently demonstrated. The Swedish vacuum cleaner has exclusive representation, is given a very good demonstration and gives good service.

Advantages of American Product.

The finish, motor, and general operation of those of American manufacture is, however, regarded as superior to the European product. Local retail prices (in pesos) of vacuum cleaners are: American 60 to 80; Swedish, 60 to 120; Dutch, 55; German and French, 50 to 70 (peso=about \$1). It would appear that a light, efficient, well demonstrated, and reasonably priced American vacuum cleaner would find a fair market in competition with the more expensive European models.

At present, electric vacuum cleaners are, with the exception of the Swedish, which has an exclusive representative, imported and sold by hardware dealers, carpet merchants, and dealers in electrical supplies and equipment. It is not unlikely that important furniture dealers might also be induced to accept an agency.

Control of Sao Paulo's Electric Power

Trade Commissioner W. E. Embry, Sao Paulo, Brazil, May 4

As a result of the serious power shortage which has existed in Sao Paulo for several weeks, President Carlos de Campos recently signed a decree providing that the production and distribution of electric power in the State of Sao Paulo should be under the direction of the State Ministry of Agriculture, Commerce, and Public Works.

Electric Power Development in Nagoya, Japan

Consul H. F. Hawley, Nagoya

The great development of electric power in the territory surrounding Nagoya, Japan, is shown by the marked increase in the number of hydroelectric power stations sanctioned by the Government. The number of sites, both operating and not operating, increased from 138 in 1914 to 937 by the end of 1923. The total capacity of these plants increased from 85,100 kilowatts to 630,764 kilowatts during the same period.

Daido Electric Power Co. Plans Expansion.

A considerable increase occurred in the number of kilowatts produced in this territory; the new Oi Station of the Daido Electric Power Co., for example, hav-

ing been put in operation in November, 1924, with a capacity of 43,000 kilowatts. The total development capacity of this concern alone in the Nagoya district reached 154,800 kilowatts in 1924, and it is making preparations for still greater exploitation of water power in this territory. Its allied company, the Toho Electric Power Co., has now under way in Nagoya the construction of a steam power plant which will develop 50,000 shaft horsepower. A very large steam turbine generator has been ordered for this plant from an American manufacturer.

Future Utilization of Power Development.

The great development of electric power in the Nagoya district, in addition to being used locally, is drawn upon by the great industrial centers of Osaka and Tokyo. It is also believed that this power will be utilized very largely to supply the current required for the electrification of the Government railways on the Tokaido line. Furthermore, these plants will play a large part in Japan's superpower scheme which is at present under discussion.

Rural Electrification.

A very practical development is the experimenting that has been done in this district and elsewhere in Japan during the past two years in connection with

the application of electricity to agriculture. This work has been carried on with the support of the prefectural governments and the encouragement of the Farm Electrification Society. In view of the availability of electric power in this district and its comparative cheapness, it seems probable that it will eventually attain widespread use, especially for irrigation and drainage. The Toho Co. is doing a good deal of propaganda work to popularize this movement.

Large Purchases of American Electrical Equipment Expected.

American manufacturers have in the past received large orders from this district and they will undoubtedly be called upon in the future to supply a large share of the great quantity of electrical machinery and equipment that will eventually be required.

Additional information regarding electrical equipment appears in this issue under the following sections:

Cable review, Europe: Gradual retrenchment of French industrial production.

Tariffs and trade regulations: Poland—Temporary reductions in import duties on electric cables.

Foreign trade opportunities.

CONSTRUCTION NEWS

Compiled in Industrial Machinery Division

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by mentioning the country and reference number given. Where no reference number is given, further information is not available.]

School Construction Projects in Canada.

Recent school construction projects announced in Canada, as reported by Assistant Trade Commissioner Walter J. Donnelly, Ottawa, include two school buildings, costing \$85,000 and \$100,000. Awards have been made for two other schools costing \$37,000 and \$70,000. Among schools now under construction are four, which involve a total expenditure of \$550,000. Tenders to be called for shortly for the erection of schools and additions are also mentioned. Further information on other projects and work under construction are available at the Bureau or its district offices to accredited American concerns under reference Canada 35X.

Concentrator Plant to be Erected in Canada.

The immediate construction is announced of a concentrator plant to treat the tailings on the dump of an abandoned mine in Canada. The plant will be of 500 tons capacity. Reference No. 170960. (Consul Norton F. Brand, Fernie, British Columbia.)

Projects for the Construction of Roads in Peru.

A concession for building a Peruvian automobile highway approximately 113 miles in length has been granted to a Lima firm which contracts to complete a macadamized road 4½ meters wide within a period

of three years. The concessionaires have been granted the exclusive right to charge toll on this highway for 15 years after completion, after which time the highway becomes the property of the Government. Reference No. 171525. (Vice Consul Nelson R. Park, Callao-Lima.)

Preliminary Contract Made for Control of River in Greece.

A preliminary contract with the Greek Government for the control of the Vardar (Axios) River, which flows into Saloniki Bay, has been awarded. Local banking interests are contributing funds for preliminary studies. The whole work will amount to \$20,000,000 or more. It will include the dredging of silt which is rapidly closing the bay. Reference No. 35X. (Commercial Attaché Ray O. Hall, Athens.)

Funds Appropriated for Construction of Bridges in Chile.

A decree has been issued appropriating 37,000,000 paper pesos for the construction of 240 bridges throughout Chile. No fixed time is set for the completion of the program but the work will be carried on in accordance with priorities established by the President and subject to certain changes. The funds for financing this project are provided for by the imposition of certain new import duties and internal taxes. Presumably the progress of the project will be governed by the receipt of the new revenues. It is somewhat doubtful if the program will be carried out without some changes by subsequent Governments inasmuch as this decree involves a decided increase in taxes. (Col. James Hanson, Military Attaché, Chile.)

COAL

Charles P. White, Chief, Coal Division

THE COAL EXPORT SITUATION

Renewed Uncertainty in British Coal Industry—Italian Market Quiet—French Mines Supplying Increased Percentage of Domestic Requirements

Exports of bituminous coal from the United States during April, 1925, including shipments to Canada, still approximated the low level for 1924 and 1925, and amounted to 886,484 tons, compared with 918,746 tons in the preceding month and 962,323 tons in April, 1924. Anthracite shipments, amounting to 229,588 tons, registered a slight improvement over the low point of 200,963 tons in March. Shipments of coke fell off materially from the record of 65,980 tons attained in the preceding month and aggregated 52,819 tons. Total coal exports for April totaled 1,116,072 tons, compared with 1,119,699 tons in March, 1925, and 1,207,399 tons in April, 1924.

Destination of Exports.

The following table shows the distribution of overseas exports of bituminous coal and coke:

United States exports of bituminous coal

Expected Improvement in British Industry Does Not Materialize.

There was no change in the British coal industry in the week preceding June 5, according to a radiogram of that date from Trade Commissioner Charles E. Lyon, London. This was probably owing to the Whitsun holidays. The meeting on June 4 of eight allied unions at the instance of the coal federation is not expected to provide a basis for joint action. All districts

report slack conditions and a new depression following the recent promise of improvement.

An earlier dispatch, dated May 28, from the same source stated that the British coal industry during the first half of May maintained the improvement which started at the end of April with good demand, price increases, and general optimism. This condition was still further emphasized when the workers' conference decided not to urge at present a new wage agreement on a higher scale. The miners' federation had decided to withdraw their demand for advanced wages and shorter hours pending a full joint survey of the industry. The coal trade and general industry are greatly relieved and coal operators are hopeful of a general improvement.

Renewed Uncertainty—Decreased Shipping.

Toward the end of May it was evident that the improvement which started at the end of April would not be maintained which resulted in renewed uncertainty, a further decline in prices, little forward contracting, and concessions on prompt business. Sellers are trying to hold firm, but there are few foreign orders. The industry is encouraged with the successful bidding on 150,000 tons of steam coal for Swedish railroads against keen German competition.

Conditions in South Wales are weakening, while those in Scotland, Yorkshire, and the northeast coast are a little better than at the worst of the depression. About 5,000 miners are involved in expected early pit closings. There were 262,000 tons of shipping at South Wales taken up during the past week, a decline of 162,000 tons from the preceding week, with 84 vessels compared with 124 in the week before.

Freight Markets Depressed—Economies Suggested.

Freights to the River Plate show a recent increase on account of few return grain cargoes. From Wales to the River Plate they are 16s. 6d. (\$4.01), and 17s. 6d. (\$4.25) to Rosario. The freight markets are generally depressed.

In withholding higher wage demands workers suggest a needed improvement in management with its present excessive staffs, salaries, antiquated methods, duplication, bad selling methods, uneconomic power production, and wide margin between producer and consumer, but the correction of these faults is too slow to meet the present emergency.

British Production and Exports Generally Lower.

Recent British coal-production figures were as follows for the week ended:

	Long tons		Long tons
Apr. 11.....	4,493,000	May 9.....	5,074,100
Apr. 18.....	3,273,300	May 16.....	5,031,900
Apr. 25.....	5,268,100	May 23.....	4,858,000
May 2.....	4,948,100		

There was a slight decrease in the exports of coal from the United Kingdom during April as shown in the following table:

British exports of coal, coke, and patent fuel

[Long tons]

Items and destination	March, 1925	April, 1925
Coal:		
France.....	1,004,974	954,972
Italy.....	652,956	630,589
Germany.....	336,300	337,602
Netherlands.....	98,236	117,514
Belgium.....	268,700	227,943
Argentina.....	246,983	220,499
Brazil.....	96,116	77,552
Chile.....	3,687	3,942
Uruguay.....	34,966	34,893
Other.....	1,629,342	1,754,301
Total.....	4,392,258	4,350,817
Coke.....	148,773	112,077
Patent fuel.....	97,333	96,674

Italian Coal Market Quiet.

The Italian coal market is quiet, and stocks are somewhat reduced but still abundant at Genoa, there being 150,000 metric tons on hand and 14 cargoes floating, cables Commercial Attaché H. C. McLean, Rome, on June 1. British steam coal is suffering from competition with American and German coals, which enjoy a noticeable price advantage. Prices are slightly lower, British best Admiralties being quoted at 35s. (\$8.51), American steam coal at \$7.30, and German steam at 32s. 3d. (\$7.84). British gas coal is quoted at 27s. (\$6.56) and American gas at \$7.25. Freight rates are 8s. 6d. (\$2.07) from the United Kingdom and \$2.85 from the United States.

Decrease in Belgian Production—French Market Calm.

Production of coal in Belgium during April amounted to 1,920,000 metric tons of coal, according to Commercial Attaché Fayette W. Allport, Brussels, in a radiogram dated May 26. There were also 373,000 tons of coke produced. Stocks on hand on May 1 were estimated to be 1,782,000 tons. Reparations deliveries during April were 239,000 tons. The higher sterling exchange benefits metallurgical and coal markets.

The French demand for industrial coal is calm, but the mines are operating well, supplying an increasing percentage of domestic consumption, according to Commercial Attaché Chester Lloyd Jones, Paris, in a radiogram dated May 29. Prices are unchanged. Household buying is good, the consumers taking advantage of the summer discount. Imports of coal, coke, and manufactured fuel into France in April amounted to 1,913,000 metric tons. Reparations coal is arriving as scheduled, and Orca coke receipts from May 1–19, inclusive, totaled 171,000 tons.

Dutch Coal Demand Augmented.

The coal demand in the Netherlands during May was augmented by the continued drop in coal prices and greater industrial activity, while present tightening prices forecast slightly higher quotations in June, cables Assistant Trade Commissioner Philip E. McKenney, The Hague, on June 3. Germany continues its predominance in the Dutch coal market, 1,643,000 metric tons being received from that country, against 337,000 tons from the United Kingdom, out of a total importation of 2,000,000 metric tons during the first quarter of 1925. Total coal exports (including

bunker coal) during the same period were almost 1,000,000 tons, of which 294,000 tons went to Belgium and 140,000 tons to France.

German Foreign Coal Trade Favorable—Egypt Market Active.

There were about 10,400,000 metric tons of coal produced in Germany in April and 2,300,000 tons of coke, according to Assistant Commercial Attaché Douglas P. Miller, Berlin, in a radiogram dated May 31. Of the above amounts the Ruhr produced 8,300,000 tons of coal and 2,000,000 tons of coke. Imports of coal (including brown coal) into Germany during March totaled about 886,000 tons and exports 1,026,000 tons, showing a favorable balance.

The Alexandria, Egypt, coal market during May continued active, cables William D. Mann, office of trade commissioner, Alexandria, on June 1. Prices for Cardiff coal are unchanged, while those for north country qualities have declined $5\frac{1}{2}$ piasters per ton. Arrivals during May amounted to 55,000 metric tons and stocks on hand are estimated at 75,000 tons.

German and American Coal Underquoting British in Argentina.

Imports of coal into Argentina from April 26 to May 22 amounted to 194,000 metric tons from the United Kingdom, 9,000 tons from Germany, and 6,000 tons from the United States, states Commercial Attaché Edward F. Feely, Buenos Aires, in a dispatch dated May 30. British coal is quoted at 39 shillings (\$9.48), American at \$8.35, and German at 34s. 6d. (\$8.39), all prices being c. i. f. quotations.

Rio de Janeiro Imports and Stocks Increase—Chilean Market Unchanged.

Imports of coal, coke, and manufactured fuel into Rio de Janeiro, Brazil, during May amounted to 30,000 metric tons from the United States and 45,000 tons from the United Kingdom, cables Commercial Attaché W. L. Schurz, Rio de Janeiro, on June 2. There are 55,000 tons en route, and coal stocks on hand are estimated at 105,000 tons. British coal is quoted at 36s. 6d. (\$8.87) and American at \$8. Freight rates from the United Kingdom are 15s. 3d. (\$3.71) and from the United States \$3.80.

The Chilean coal market is unchanged, according to a dispatch from Commercial Attaché Ralph H. Ackerman, Santiago, dated May 24.

See also Cable review, Europe:

Gradual retrenchment of French industrial production.

German business restricted pending industrial reorganization.

See also list of circulars issued by bureau.

Larger Shipments From Rio to the United States

Consul Robert R. Bradford, Rio de Janeiro

The total value of declared exports from Rio de Janeiro to the United States during the quarter ended March 31 amounted to \$4,907,798, as compared with \$3,972,729 for the corresponding period of 1924—an increase of \$935,069. This improvement is of particular interest, inasmuch as the total exports invoiced from the Rio de Janeiro consulate general for the entire year 1924 showed a decline of over \$500,000 from the total of the previous year—in spite of much larger coffee shipments—smaller shipments of manganese ore and hides and skins accounting for the reduced figure.

IRON=STEEL=HARDWARE

Luther Becker, Chief, Iron and Steel Division

Announcing a New Hardware Service

Data covering foreign markets for American hardware, tools, plumbing supplies, stoves, and the other commodities handled by the Hardware Section of the Iron and Steel Division, are now distributed to exporters through Commerce Reports, special circulars, and a bi-weekly bulletin. Because of limitations of space in these channels the longer and more comprehensive reports will be mimeographed under the title of "Special Hardware Reports" and distributed to those concerns known to be actually interested in them. Any American firm wishing to receive this service should notify the Bureau of Foreign and Domestic Commerce at Washington or the district or cooperative office in its territory.

Relative Standing of World's Largest Iron and Steel Exporters

The United Kingdom maintained its lead as an exporter of iron and steel during the first quarter of 1925, but its position was closely contested by France, whose export tonnage was scarcely 6 per cent below the British figure. The German foreign trade, although next in importance, was fully 35 per cent smaller than the volume of shipments credited to British manufacturers. Exports of iron and steel from the United States were equivalent to 42 per cent of the British trade, 45 per cent of the French shipments, and 66 per cent of the German consignments. The relative position of the Economic Union of Belgium and Luxemburg can not be determined, since official trade returns for this period have not yet been published.

Exports of Principal Countries Compared.

The following table has been compiled to afford a comparison, though not altogether accurate because of differences in nomenclature, of the exportation of iron and steel products from the United States, the United Kingdom, Germany, and France during the first three months of 1925:

Iron and steel exports during the first quarter of 1925

[In gross tons]

Articles	United States	United Kingdom	Germany	France
Pig iron and ferro-alloys.....	7,801	162,996	66,280	162,593

France Important as Shipper of Semifinished Steel.

Exports of pig iron from France and the United Kingdom weighed nearly the same, but those for Germany were only 40 per cent of that amount. About half of the French shipments consisted of semifinished

steel, such as sheet bars, etc., which went forward to Germany, while exports of pig iron and scrap comprised 38 per cent of the total French exportation. German Shipments More Diversified.

An analysis of the German trade shows that 19 per cent of the exports were shapes and bars, nearly 18 per cent were rails and accessories, 14 per cent were plates, and nearly 12 per cent were wire. Tubes also were a fair-sized factor. Sheets, galvanized and plain, and tin plate formed 35 per cent of the total.

Sheets and Plates Leading Items in British Trade.

Galvanized sheets was the largest single item of British export, constituting one-fifth of the entire shipments. All sheet and plate products, including tin plate, aggregated 42 per cent of the total. Seventeen per cent of the goods consigned to foreign lands were pig iron and ferro-alloys, 11 per cent were shapes, bars, hoops, bands, etc., and 10 per cent were rails and accessories.

Some Branches of Czechoslovak Iron and Steel Industry Show Improvement

Commercial Attaché James F. Hodgson, Prague, May 16

The situation in the Czechoslovak iron and steel industry, while still far from satisfactory, has recently shown improvement in some of its branches. Those plants engaged in the production of factory equipment, particularly sugar-mill machinery, are enjoying a fair degree of activity with orders from both foreign and domestic buyers.

Automotive and Railway Equipment Industries Active.

The domestic automotive industry is working at full capacity with sufficient orders to keep it busy for several months. This improvement has resulted in a corresponding increase in the demand for certain grades of steel and other supplies. The factories engaged in the manufacture of railway rolling stock are well occupied with orders for cars recently received from the Government railways as well as foreign contracts. The largest plant in this line has also been awarded contracts by the Prague electric street car lines and the Egyptian railways.

Iron, Steel, and Hardware Notes

Indian Foreign Trade in Iron and Steel.

Imports into British India during April included 400 long tons of iron bars and channels, 9,573 tons of steel bars, not cast, 5,135 tons of structural steel, and 2,453 tons of tubes, pipes, and fittings. Exports of pig

iron amounted to 40,013 tons, 59 per cent of which went to the United States. (Cable from Assistant Trade Commissioner Donald Renshaw, Bombay, June 3.)

Sluggishness Characterizes Belgian Metallurgy.

The strike in the Charleroi metallurgical mills which had been voted for June 1 was postponed until June 15. The first week in June found metallurgical markets slow despite the decline of the Belgian franc. English buyers were holding off awaiting eventual adjustments. (Cable from Commercial Attaché Fayette W. Allport, Brussels, June 5.)

Canadian Imports of European Steel.

Montreal representatives of American steel firms advise that the importation of steel products from England is not as heavy as during 1924. This decreased competition is offset by increased sales by German and Belgian producers. German steel imports have grown considerably, and indications point to greater receipts. (Assistant Trade Commissioner Walter J. Donnelly, Montreal, May 22.)

Continued Activity in Austrian Iron and Steel Industry.

The Alpinemontangesellschaft, which represents virtually the whole Austrian iron and steel industry, continued in April to show the progressive improvement evident since the first of the year and reported the following production: Pig iron, 38,424 metric tons; steel ingots, 28,327 tons; rolled products, 23,181 tons; and iron ore, 89,145 tons. The average monthly output for the first quarter of 1925 was 23,420 tons of pig iron, 22,620 tons of steel ingots, 17,400 tons of rolled products, and 24,700 tons of iron ore. (Assistant Trade Commissioner Elbert Baldwin, Vienna, May 7.)

Slackened Activity for French Siderurgy.

Although there have been further recessions in iron and steel buying, the prices of the French products remain unchanged. It is believed certain that domestic prices will still be controlled by the entente after June 30; however, this has not been officially confirmed. The number of blast furnaces active in France on May 1 was 139, those ready to operate 33, and those under construction or repair, 48. Production during April sank to 686,000 metric tons of pig iron and 587,000 tons of steel ingots and casting, compared with 689,000 tons of pig iron and 607,000 tons of steel ingots and castings in March. The May output is estimated to be practically the same as that for April. Compared with the March foreign trade, the exports of iron and steel in April showed declines for all principal articles excepting rails. Imports continued their decline. (Cable from Commercial Attaché Chester Lloyd Jones, Paris, June 6.)

Additional information regarding iron-steel-hardware appears in this issue under the following sections:

Cable review, Europe:

Gradual retrenchment of French industrial production.
German business restricted pending industrial reorganization.

Tariffs and trade regulations:

Czechoslovakia—Relaxation of import restrictions on certain iron and steel.

Peru—Shipping tin plate uncut for lowest duty.

Poland—Temporary reductions of import duty on certain iron and steel products.

List of circulars issued by the bureau Foreign Trade Opportunities.

SPECIALTIES

Edward J. Breyer, Acting Chief, Specialties Division

GROWTH OF TRADE IN U. S. SPECIALTIES

Increase in Exports of Metal Office Furniture.

The increase in the total exports of metal office furniture which has been so marked during the first three months of 1925 as compared with the corresponding period of 1924, continued in April. Exports of filing cases and other metal office furniture offset the losses sustained in safes and lockers. Shipments of filing cases rose from \$116,402 in April, 1924, to \$145,781 in April, 1925. The value of shipments in other metal office furniture gained approximately 20 per cent over the same month last year and totaled \$50,941, though this showed a decline from the exports of the month of March, 1925. The number of filing cases sent abroad in April was 3,945, valued at \$145,781, as against January exports of 3,813, valued at \$146,801.

Gains in Wooden Furniture Exports.

Gains in exports of wooden furniture during the first three months of 1925 over the corresponding period of 1924 continued during the month of April. Office-furniture shipments rose from \$21,869 in April, 1924, to \$32,052 for the same month of this year. Exports of refrigerators to the number of 1,166 represents a considerable gain over the month of April, 1924.

Exports of Pottery Increase.

Pottery exports in April showed large increases over those in the same month in 1924. Exports of electrical

porcelain rose from a value of \$160,837 to \$244,254 and shipments of table and sanitary earthenware also showed gains.

Gain in Exports of Hollow Glassware.

Exports of glassware for April, 1925, repeated the improvement which commenced last month. This increase was again accounted for by larger foreign shipments of glass containers, which amounted in April to 5,955,132 pounds, valued at \$294,450. Table glassware, plain and decorated, also registered export gains, but shipments of plate glass showed a decline.

Gains in Optical Goods, Toys, and Games.

Optical goods valued at \$278,022 exported in April, 1925, represented a gain of 25 per cent over April of the preceding year.

Exports of toys and games, valued at \$227,647, was an increase of 21 per cent over April, 1924. With the exception of dolls and parts, all items included in this classification showed gains. Rubber toys, balls, and balloons were the largest item, exports totaling \$144,050, a gain of almost 87 per cent.

Increases in Firearms, Athletic and Sporting Goods.

Exports in firearms and ordnance showed an increase of 15 per cent, revolvers and pistols making the biggest gains. Exports in athletic and sporting goods to the value of \$174,036 is an increase of 11 per cent over April, 1924.

Fishing tackle made the greatest gain in the sporting group, shipments amounting to \$54,352, an increase of 31 per cent.

Although foreign sales in amusement-park and playground devices valued at \$19,175, bicycles valued at \$20,915, and boat oars and paddles to the value of \$28,143 are small, each shows large gains over April, 1924.

Improvement in German Furniture Industry

Vice Consul Erik W. Magnuson, Stuttgart

The furniture industry in Germany is understood to be better employed now than last year. The demand for quality goods is especially noticeable, but even so orders are received only at closely calculated prices. It is uncertain how long the present favorable condition can be maintained, as the furniture business is largely dependent on building, the revival of which thus far has not come up to expectations.

Foreign Sales of German Furniture Restricted.

Furniture exports from Wurttemberg and Baden are not possible at present, it is stated. Foreign orders are received, but high freight rates increase excessively the cost of the products. The Saar and France, which formerly were good customers, have ceased entirely to buy, and the Swiss market, through import regulations, has practically been shut off, after an influx into Switzerland of German furniture.

Quality furniture is not cheaper in Germany than in Switzerland. It is true that wages are lower in Germany, but the various taxes make up for the difference. The wages in the German furniture industry, however, are higher than prior to the war, although real wages at this time undoubtedly are considerably lower. In 1914 the minimum hourly wage amounted to 52 pfennigs (12.4 cents), as compared with 73 pfennigs (17.4 cents) at present.

Piano Industry in Stuttgart Fully Occupied

Vice Consul Erik W. Magnuson, Stuttgart, Germany

The Stuttgart piano industry has more orders on hand than it can fill and the export business is unusually brisk. Great Britain is by far the best individual market for German pianos, with Australia as another important leading market. German pianos are sold principally in Europe, but large shipments are also made to British South Africa, Argentina, and Brazil.

The following table gives the numbers and values of pianos exported by Germany during the months of October, 1924, to February, 1925, inclusive:

German piano exports

Month	Number of pianos	Value in marks	Value in dollars
October, 1924	5,633	5,806,000	\$1,335,000
November, 1924	5,527	5,627,000	1,340,000
December, 1924	6,746	6,115,000	1,438,800
January, 1925	5,918	6,210,000	1,479,000
February, 1925	4,908	6,326,000	1,399,000

Continued Increase in Trossingen Accordion Exports to United States.

Accordion exports from Trossingen, Wurttemberg, to the United States, as declared at the Stuttgart consulate, increased substantially during the first three months of 1925, the value amounting to \$51,319, as compared with \$41,306 in the preceding three months and \$15,916 in the third quarter of 1924.

Declared exports of mouth organs dropped from \$169,325 in the last quarter of 1924 to \$96,603 during the first three months of 1925. The latter, however, exceeded the exports during the third quarter of 1924 by \$20,211.

American Purchases of Swiss Watch Movements

Consul C. M. Hiltch, Basel

The exports of watch movements from the Basel consular district to the United States were greater in January and February, 1925, than for the corresponding months of the previous year, but during March there was a marked decrease, the exports for that month being \$33,659, as compared with \$68,172 for the preceding month.

One of the leading watch manufacturers in Basel says the decrease is undoubtedly due to the new customs regulations in the United States, which increased the duty very considerably on movements of 16 jewels and more. The new regulations having been put into force about the 1st of March, American importers of watch movements anticipated the increase and placed large orders in January and February, in time to get their goods into the United States before the increase became effective. It is very probable that the exports of watch movements will be very light for the next two or three months.

The total exports of watch movements to the United States for the first quarter of 1925 were valued at \$172,256, as compared with \$192,165 for the first three months of 1924, while the aggregate exports of watches, watch movements, and watch materials for the same periods were \$210,728 and \$239,587, respectively.

See Tariffs and trade regulations:

Czechoslovakia—Relaxation of import restrictions on certain specialties.

Japan—Motion picture censorship fee established.

Poland—Temporary reduction in import duties on certain specialties.

List of circulars issued by the bureau Foreign Trade Opportunities.

Preparation of Catalogues for Province of Quebec

Catalogues and literature for distribution in Quebec should be prepared in bilingual form, and it is most important that the colloquial French spoken in the Province of Quebec be used, according to Assistant Trade Commissioner Walter J. Donnelly, Montreal. Many American manufacturers have already adopted this policy, and as a result they have obtained a very large share of the business available in the Province. Dealers strongly advocate that literature be printed in French, as well as in English, in order that the large French-speaking population of Quebec may be reached.

RUBBER

P. L. Palmerton, Chief, Rubber Division

THE GERMAN MARKET FOR RUBBER TIRES

Trade Commissioner William T. Daugherty, Berlin, April 23

The superiority of American tires recommends them for consumption in Germany, and a number of German concerns would welcome the representation of American makes. The current import embargo, however, makes it impossible to secure permits at present.

Like the German automotive industry, the German rubber industry, because of the capital invested and the opportunity it offers to keep surplus labor employed, can expect a high degree of protection from the proposed tariff, now in course of revision. It is significant that the present tariff on rubber tires, further backed by an import "prohibition," or control, is relatively high, i. e., 360 marks per 100 kilos.

Imports of Tires at a Minimum—Exports Comparatively High.

The import control has kept rubber tire imports at a minimum, while exports have been comparatively high. Generally speaking, import permits are only granted now for limited sets, and only after the authorities are satisfied that they are intended to equip the few foreign cars now in Germany. The local rubber tire industry, of which the Continental Co., of Hanover, is by far the leading factor, has been able to export within a wide range against foreign competition and even effectively in as distant a market as Argentina.

Germany as a Factor in World Market.

The following figures of imports and exports of inner tubes and casings for automobiles, trucks, and bicycles show the extent to which Germany has been a factor in exporting on the world market:

German foreign tire trade

Item	Imports		Exports	
	Inner tubes	Casings	Inner tubes	Casings
Tires for automobiles and trucks:	<i>Number</i>	<i>Number</i>	<i>Number</i>	<i>Number</i>
1922.....	1,388	6,736	158,890	191,642
1923.....	687	2,958	226,058	261,767
1924.....	5,788	8,044	182,174	142,927
Bicycle tires:				
1922.....	2,262	831	3,521,848	1,920,013
1923.....	4,450	2,094	3,483,986	2,062,011
1924.....	13,366	6,873	2,705,100	1,365,489

Effect of Currency Stabilization.

The effect of currency stabilization in 1924, with resultant higher costs and price, is reflected in declining exports in that year. On the other hand, imports, under permit, were increased. Certain tires of Italian or Austrian origin, it should be noted, are given preference on this market, by reason of special agreements between Germany and these countries. In ex-

change for purchases of German autos, parts, and accessories, a higher quota of imports is permitted from these countries. Thus, one finds many German automotive vehicles equipped with the Michelin tire, which—though a French manufacture—enters Germany from the Italian branch factory of the Michelin plant.

The single-tube tire is a minor product in German foreign trade. In 1924, Germany imported 6,461 and exported 4,724 tires of this kind.

Trade Currents—Sales to Argentina and Great Britain.

Germany is selling its most distant market, Argentina, more inner tubes for cars and truck tires than any other single customer. In 1924, Germany sold Argentina 36,817 inner tubes, while exporting to Switzerland 12,575, Netherlands 12,399, Great Britain 11,318, British India 9,919, Dutch East Indies 9,527, and Denmark 9,325. The same relative markets obtained in 1922 and 1923.

Great Britain was the largest market for casings in 1924, taking 19,563, followed closely by Argentina, 19,403; Dutch East Indies, 9,653; and Netherlands, 9,013.

Great Britain bought 788,577 inner tubes for bicycle tires from Germany in 1924, Denmark 601,430, and Netherlands 566,075. Denmark bought 375,180 casings for bicycles tires from Germany in 1924, Great Britain 214,279, Netherlands 148,231, and Czechoslovakia 109,844.

Leading German Producers.

The Continental Co., of Hanover, is the largest single producing factor in Germany. Most German automotive vehicles are equipped with Continental tires. Other producers include Peters Union, Frankfurt on the Main; Excelsior; Deka Pneumatic G. m. b. H., Berlin 112; (subsidiary of Die Deutsche Kabelwerke A. G.); Asbest u. Gummiwerke Alfred Calmon A. G.; Hamburg (Calmon); Gummiwerke Fulda A. G. Fulda; Vorwerk & Sohn, Barmen.

Use of Reclaimed Rubber—Substitutes for Rubber.

Economic conditions have forced German manufacturers to use reclaimed rubber to some extent in making their tires. The result is that local production has not been up to standard, nor have the German tires the life that American tires have.

When Germany was entirely cut off from raw material sources by the war, one of its most perplexing problems became the development of suitable substitutes for rubber for war needs. While some artificial processes or substitutes were developed, as for instance, the catalytic synthesis of methyl-Caoutchouc from acetylene (from calcium carbide) by the Hoechst Farbwerke and the Bayer plants during the war, this production was naturally abandoned after the war.

Consumption of Tires.

Germany's capacity for consumption of rubber tires may be roughly gauged from examining the local census of automotive vehicles, taken annually for the last four years as of July 1.

The number of touring cars, trucks, and motor cycles on July 1, 1924, was 132,179, 60,629, and 97,965, respectively. On the same date in 1923, the respective

figures stood at 100,340, 51,736, and 59,389; and for 1922 the numbers were 82,692, 43,711, and 38,048.

See Tariffs and trade regulations: Czechoslovakia—Relaxation of import restrictions on certain manufactures of rubber.

ties.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

PROTECT YOUR FOREIGN TRADE WITH GRADE MARKS

"Why do not American lumber exporters grade mark their lumber, thereby protecting the foreign consumer from grade juggling and at the same time build up a reputation for their brands?" asks one of the most important agents for American lumber abroad in a letter to the Lumber Division. The absence of grade marks has led to unfair competition among exporters, and importers have taken advantage of these conditions by buying one grade and selling it for another more expensive grade. The consumer has paid too much for some unbranded lumber under the belief that the quality purchased from the foreign importer is the same grade as that furnished by the manufacturer in the United States. Consequently the reputation of the American exporter has suffered, and his sales have decreased.

Practice Already Adopted by Some—Makes Repeat Orders Easy.

Grade marking of lumber is unquestionably the most important step which can be taken to improve and stabilize our export trade and to reduce the cost of distribution. Happily, there are several leading exporters in the United States who have grade marked their lumber for years.

Our keenest competitors in foreign countries have grade marked their lumber for a century or more. Once a grade mark is established, repeat orders are placed with regularity, and it takes a very substantial decrease in price for others to get a foothold. So long as the foreign importer and consumer are convinced of the conscientious grading of lumber on the part of exporters they are slow to make complaints. Unbranded lumber has no such advantage; it invites close inspection, because it is not sold on reputation but on price alone. There is not an honest importer or consumer anywhere who would not welcome the grade marking of American lumber, and the Lumber Division therefore hopes that our exporters will give thought to the suggestion made by the agent who appeals for their consideration of this matter.

Noteworthy Advance in Rumanian Lumber Exports

Commercial Attaché Louis E. Van Norman, Bucharest, May 5

In rather striking contrast to other exports there has been a noteworthy movement of lumber from the Rumanian ports during the past three or four months. The Danube was open for navigation almost all winter,

permitting shipments to be made so that the lumber business in Rumania took on something of a boom character. It still faces many obstacles in the form of Government restrictions and lack of general policy. In spite of these, however, it is now showing considerable activity.

Increased Exports Attributed to Three Factors.

The activity in lumber export has come chiefly as the result of three factors: The drop in leu exchange; a much larger number of cars available for transporting lumber on account of the small grain movement; and the sudden reduction in prices. The drop in exchange during recent months proved a boon to the lumber exporters. It has facilitated the outward movement of many millions of feet of lumber that had been lying for months on the docks of Galatz unsold.

Greece and Egypt Are Largest Purchasers.

The principal foreign markets for Rumanian lumber at present are Greece and Egypt. One Greek firm in Galatz owns both forests and sawmills and transports on its own railroad large amounts of softwood for boxes, for shoring up irrigation ditches, for the construction of houses for refugees in Greece, and some for parquet flooring. Egypt is using large quantities of Rumanian spruce and fir. For the past year there has been an average of from 2,000 to 3,000 metric tons of lumber per week shipped to Alexandria from Galatz. The southern French market during April was slow, but business in northern France, centering at Dunkirk, was good and several full cargoes also went to England.

Improved Conditions in German Lumber-Consuming Industries

Assistant Trade Commissioner Margaret L. Goldsmith, Berlin, May 11

Decreasing unemployment is reflected in relatively favorable conditions in the various German lumber-consuming industries.

Sawmills throughout the Reich currently report considerable activity. Mills are especially busy in East Prussia and other districts where large quantities of logs were cut because of the moth, so prevalent in German forests several months ago.

Veneer and plywood factories report increased activity and a growing demand for their products on various European markets. It is reported by plywood manufacturers, furthermore, that a considerable amount of German plywood has been exported to England during the last few months.

Slight Improvement in Building—Lack of Uniformity in Cooperage.

Furniture factories, as a whole, still complain of hard times. Plants manufacturing specialty articles, on the other hand, such as small tables, bookracks, and other novelties, report greater activity. The recent slight improvement in the building industry is reflected in a better demand for millwork.

Conditions in the railway-car industry have improved somewhat during the last few months, but orders are still said to be relatively scarce.

Business in cooperage is not uniform at present; a number of manufacturers report particularly good business, whereas others have been forced to close down for lack of orders.

Piano Prices Advanced—Overproduction in Match Industry.

Business in musical instruments is satisfactory, and the German Association of Piano Manufacturers has recently increased general sales prices by 10 per cent. The domestic demand was apparently not in any way affected by this rise, and exports are not particularly large at present.

Overproduction in the German match industry has continued during the last few months, and business

throughout the trade is poor in consequence. A number of manufacturers are continuing their effort to bring about some sort of cooperation within the industry, but others, especially among the smaller producers, are strenuously objecting to such a step.

Toy Exports Decreasing—Shipbuilding Stocks.

There is little business being done in wooden toys in Germany. Conditions are particularly unfavorable in Thuringia, and the entire trade is affected by decreasing exports.

Shipbuilding companies evidently have sufficient lumber stocks for work on hand for their demand has decreased considerably during recent weeks.

Additional information regarding lumber appears in this issue under the following sections:

Tariffs and Trade Regulations:

Greece—Duty-free imports of portable wooden houses permitted.

Guatemala—Export duty imposed on ordinary wood.

List of circulars issued by the bureau.

Foreign trade opportunities.

MINERALS

Gay C. Riddell, Chief, Minerals Division

POLISH PETROLEUM AND REFINING INDUSTRY IN 1924

L. J. Cochrane, office of commercial attaché, Warsaw

There was an increase in the output of Polish crude petroleum oil and refined products during 1924. Although there was a decrease in the number of wells drilled, and developments in the Bitkow fields did not fulfill expectations, it is reported that a sufficient flow of crude was obtained both on proved ground and in new territory to justify the feeling of local operators that the Polish fields in general are far from being exhausted.

The Ministry of Industry and Commerce, in which the control of the oil industry was centralized at the beginning of 1924, is making every effort to encourage new drilling by modifying the former terms for leasing concessions, and by submitting a proposition to Parliament to permit the exportation of crude under certain conditions.

Economic Union Organized—Capital Invested.

The Economic Union of Petroleum Refineries was organized during December for the purpose of controlling the distribution of crude to its members, establishing the field in which each may operate, and fixing the price for both domestic and export sales in relation to the cost of crude. This movement was undertaken to relieve a situation brought about as a result of competition among the refineries.

There has been little increase in Polish capital invested in the industry during 1924. French capital continues to be predominant, while American participation is represented by two companies, both of which are going ahead with a strong drilling program.

Production of Crude Oil—Wells Producing.

Polish crude production during 1924 totaled 770,790 metric tons, valued at 60,661,673 zloty (the zloty has a par value of \$0.193), as compared with 737,180 tons, valued at 64,871,840 zloty, in 1923 and 1,113,660 tons, valued at 100,229,400 zloty, in 1913.

Figures covering the number of oil and gas wells producing and being drilled in 1924 vary somewhat. Most reliable sources, however, place the number of wells producing at 1,834, as against 1,880 in 1923. Wells being drilled are given as 160, as compared with 216 in the preceding year. Test wells dropped from 64 in 1923 to 45 in 1924.

Government Expected to Encourage Drilling.

In general, oil men, while not attaching much importance to the slight increase in production during 1924, are somewhat disturbed by the decline in drilling operations, which, they say, may have no immediate effect in 1925, but will doubtless result in the eventual decline of already insufficient production unless drilling operations are intensified at least by 1926. The chief reasons for the lessened activity are the shortage of operating capital, prohibition of the export of crude oil, and the excessive cost of drilling in view of high prices prevailing in Poland during 1924.

The Government is seeking to encourage further drilling, especially in undeveloped territory, and, besides financial assistance and more favorable terms for drilling concessions, now proposes to permit during a period of 10 years the export of 25 per cent of crude oil produced from a new well located at least 1 kilometer from any old well. This proposition has not

as yet gone into effect, being still before Parliament, but its adoption is looked upon as probable.

Production of Natural Gas.

Gas production during 1924 is estimated as around 432,000,000 cubic meters as compared with 370,000,000 in 1923 and 600,000,000 in 1913. Monthly production in the Drohobycz, Jaslo, and Stanislawow districts averaged 36,000,000, 4,000,000, and 12,000,000 meters, respectively. Difficulty is being experienced in using all this gas and a great deal of it escapes and is lost. At Bitkow, for instance, although wells produce about 255 meters of gas per minute, but 66 meters can be used and the rest passes off into the air. Plans are on foot to remedy this condition, including the construction of a pipe line to Lemberg.

Production and Deliveries Summarized.

As compared with 1923, the total production of petroleum products increased slightly by 18,199 tons, or about 3 per cent. Gains were registered for gasoline, gas oil, lubricants, paraffin and candles, vaseline, coke, and hard grease, while the output of kerosene, asphalt, and semirefined products declined. The following table contains data for production, consumption, and exports in 1924:

Movement of petroleum products in Poland during 1924

Products	Production	Domestic consumption	Exports	Consumed by refineries	Increase (+) or decrease (-) in stocks
	<i>Metric tons</i>	<i>Metric tons</i>	<i>Metric tons</i>	<i>Metric tons</i>	<i>Metric tons</i>
Gasoline.....	91,095	20,401	78,302	1,192	-3,006
Kerosene.....	197,292	100,715	101,918	700	-4,514
Gas oil.....	113,341	28,440	83,538	1,941	-445
Lubricants.....	119,231	43,278	71,522	2,348	+5,578
Paraffin.....	34,011	7,785	26,544	456	+798
Candles.....	510	557	81	-----	-90
Vaseline.....	369	217	125	8	-72
Asphalt.....	7,835	1,342	3,552	248	+2,849
Coke.....	9,036	95	6,181	1,071	+1,715
Semirefined.....	54,093	6,742	34,140	43,126	-23,528
Hard grease.....	1,116	1,028	115	16	+28
Total.....	628,529	210,700	404,988	51,106	-----

Refining Capacity Estimated—Handicaps.

Last year's production of 628,529 tons is far below the capacity of the Polish refineries, which is estimated at nearly 1,500,000 tons. This capacity is divided between 15 larger refineries, each of which can produce from 20,000 to 300,000 tons of petroleum products yearly (the largest, "Polmin," the Government refinery at Drohobycz), and 20 smaller ones, whose possible yearly output ranges from 3,000 to 10,000 tons.

The principal limiting factors which have prevented the refineries from operating at capacity during the year have been: The scarcity of crude oil; business depression; and restricted exports owing to strong foreign competition.

Figures obtained from the ministry of industry and commerce show that 43,000,000 cubic meters of gas were used during 1924 to produce 3,435 metric tons of gasoline. These figures compare with 19,077,000 meters of gas used in 1923 to produce 2,075 tons of gasoline. Production of gasoline in 1924, therefore, increased 1,360 tons.

Petroleum Export Increased in 1924.

Total exports of petroleum products during 1924 amounted to 404,981 tons—an increase of 89,281 tons,

or 28 per cent, over 1923. This expansion was partly due to the necessity, during the early part of the year, of unloading stocks of refined products wherever possible and at whatever price could be obtained.

The principal amounts exported during 1924 were 133,674 metric tons, including 27,230 of semirefined products to Czechoslovakia; 104,290 to Germany; 59,568 to Danzig; 53,507 to Austria; 22,587 to Switzerland; and 17,227 to Hungary. Kerosene comprised 49,154 metric tons of the petroleum products sent to Czechoslovakia and 20,017 metric tons of the amount for Germany. Gasoline accounted for 34,676 metric tons of the exports to Czechoslovakia and 24,237 of the exports to Germany. The totals in metric tons for exports of the several products were: Gasoline, 78,303; kerosene, 101,918; gas oil, 83,533; lubricants, 71,523; and paraffin wax, 25,544.

[The 1922 record of Polish production was covered by Trade Information Bulletin No. 135, Polish Petroleum Industry in 1922, and the 1923 developments were discussed in articles published in COMMERCE REPORTS, March 24, 1924, and May 12, 1924.]

Additional information regarding minerals appears in this issue under the following sections:

Cable review, Far East: Present conditions in south China.

Foreign trade opportunities.

British Market Active for Softwoods

The softwood lumber market in Great Britain is very active, consumption and import being good, particularly in house specifications. Government authorities announce a decision to encourage wooden houses. Hardwoods are less active with stocks heavy. (Cable from Acting Commercial Attaché Mowatt M. Mitchell, London, dated May 28.)

American Consular Officers on Leave

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name	Post	Expiration of leave	Address
Albrecht, Charles H.	Bangkok, Siam.....	June 23	217 South Forty-sixth Street, Philadelphia Pa.
Burri, Alfred T.	Puerto Cortes, Honduras.	do	Department of State, Washington, D. C.

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF

Sheep Census in Uruguay.

An official census of sheep in Uruguay shows the present number of sheep in the Republic to be 14,514,060 as compared with 11,472,852 in 1916, an increase of 3,041,208 in 8 years, or an average annual increase of 380,151. The figures show 10,749,099 animals over 1 year of age and 3,764,961 under 1 year. Reports indicate a great improvement in the quality of the animals. (Consul O. Gaylord Marsh, Montevideo, May 8.)

Stocks of Wool in United States Bonded Warehouses.

Stocks of wool in United States bonded warehouses continued to increase, amounting to 117,453,643 pounds on April 30, compared with 110,805,271 on March 31. A small decrease was noted in carpet and clothing wools, while the largest increase occurred in combing wool. The April total comprised the following classes: Carpet, 8,880,183 pounds; clothing, 20,880,272; combing, 81,906,656; mohair, 3,851,326; alpaca, cashmere, etc., 1,935,206.

Indian Cotton-Cloth Production Slightly Exceeds Imports.

During the 10 months April, 1924, to January, 1925, inclusive, cotton mills in India reported a production of 1,638,861,000 yards of cotton cloth, this figure slightly exceeding the amount imported during the same period, 1,472,286,000 yards. Comparable figures for the corresponding period of 1923-24 are 1,481,156,000 yards of cotton goods produced and 1,212,048,000 imported. (Consul William L. Jenkins, Calcutta, April 23.)

Wool Stocks in Northeastern Persia Exhausted.

Shipments of wool from the Khorassan district ceased in March, as old stock has become exhausted. The spring season will begin in June. The Persian wool is of great interest to American companies, and a British firm shipped 1,500 bales to Philadelphia in February. Another British carpet firm purchased about 170 tons in Meshed for the manufacture of their carpets in other Persian and Indian cities, most of these carpets being destined for American markets. Wool exports to Russia during February amounted to 200 bales, the price being about \$60 per ton. (Vice Consul George Gregg Fuller, Teheran, April 27.)

Exports of Cotton Cloth from Japan.

Exports of cotton cloth from Japan during the period January 1 to April 20, 1925, totaled 250,210,000 yards, valued at 77,882,405 yen (yen approximately \$0.41 at current exchange), according to reports of the Japan Cotton Merchants Union and the Cotton Yarn and Cloth Exporters' Union, Osaka. These exports comprised 34,706,000 yards of drills; 38,997,000, jeans; 69,986,000, gray shirtings; 46,359,000, gray sheetings; 20,417,000, white shirtings; 19,465,000, T cloths; 20,280,000, nankeens. The principal destinations of these exports and the amounts sent were: Manchuria, 44,101,000 yards; India, 42,982,000; Shanghai, 31,151,000; Dutch East Indies, 22,979,000; Tientsin, 17,899,000; Hongkong, 11,276,000; Dairen, 10,050,000.

Italian Wool Manufacturing Industry Well Occupied.

Wool-combing and worsted-spinning mills in Italy are busy with orders, especially from foreign markets. Weaving mills are actively engaged in getting out goods for summer delivery and in preparing the sample lines for next winter's stock. Domestic consumption is weak, but the looms are busy with orders from abroad. Rumors of the existence of large stocks of raw wool, although repeatedly denied, have not failed to have their effect on local wholesale dealers in wool goods. The Italian manufacturers, however, believe that a stabilization of the market is in sight, and are optimistic as to the outlook for the future of the industry. (E. Humes, clerk to commercial attaché, Rome, May 9.)

Cuban Imports of Underwear Largely from the United States.

About one-half of the men's underwear sold in Cuba comes from the United States, it is estimated, while the balance is divided about equally between imports from France, chiefly knitted underwear, and locally made products consisting principally of two-piece athletic suits. The United States also supplies approximately 50 per cent of the women's underwear and about 90 per cent of the children's underwear imported into Cuba, according to a report from Assistant Trade Commissioner O. R. Strackbein, Habana. Cotton is the principal material used in men's undergarments, about 65 per cent of which are knitted, while in women's underwear woven garments of sheer cotton, handkerchief linen, and silk are popular, only about 25 per cent of the women's underwear sold being knitted. A list of the larger import houses in Habana dealing in underwear will be made available to American firms upon application to the district offices of the Bureau of Foreign and Domestic Commerce or the Textile Division at Washington, D. C.

Brazil Offers Fairly Large Market for Laces.

A fairly large market exists in Brazil for laces, the imports of cotton laces having amounted to 2,933,840 milreis in 1923, compared with 1,662,547 in 1922 and 2,249,630 in 1921, while those of silk laces were valued at 68,105 milreis, 147,998, and 71,355, respectively, during the same years. (The average exchange value of the milreis was \$0.102 in 1923, \$0.129 in 1922, and \$0.131 in 1921.) Although small quantities of cotton lace have been imported from the United States, they have not attained the popularity of laces of French manufacture, according to a report from Consul General A. Gaulin, Rio de Janeiro. The trade in silk and metal laces is practically monopolized by the French, and managers of local department stores have expressed the opinion that in order to enter this market silk laces of American manufacture would have to be of excellent quality and design and compete with the French article in price. Lists of dry goods importers in Brazil will be made available upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington, D. C.

SIBERIAN FUR TRADE AND INDUSTRY

Boris Balevsky, European Division

Siberia is one of the world's important sources of furs, and, according to official estimates of the Russian Government, supplied the following quantities to world markets in 1910: Squirrel, 15,000,000; hare, 5,000,000; ermine, 700,000; marten, 150,000; skunk, 150,000; sable, 70,000; brown bear, 6,000. No comparable figures are available for recent years, but an official estimate published in 1923 gives the potential annual catch of the principal fur-bearing animals in the Russian Far East (Kamchatka and Commander Islands, Yakutsk, Transbaikalia, Amur, Maritime, and Sakhalin Provinces) as follows: Sable, 10,900 to 11,500; Arctic fox, 25,000 to 33,000; blue fox, 1,300; other species of fox, 25,000 to 30,000; squirrel, 1,410,000 to 1,530,000; brown bear, 4,500 to 4,650; white bear, 300; otter, 1,600; fur seal, 1,000; wolf, 450 to 500; sea beaver, 35. The Yakutsk Province furnished the bulk of these skins, being credited with 20,000 to 25,000 of the Arctic fox, 10,000 to 12,000 of other species of fox, and 600,000 to 700,000 of the squirrel.

Government Restrictions on Hunting Found Necessary.

Hunting is still of considerable economic importance over large portions of Siberia, particularly in the tundra and forest regions. In some localities it is the chief means of livelihood, while in others it supplements fishing and farming. Extensive forests, almost inaccessible mountains, and the sparse population of Siberia are factors favoring the propagation of fur-bearing animals, but the supply is progressively decreasing as the country becomes more thickly settled. The growth of the timber trade has resulted in new sections being penetrated by man, thereby reducing the area available to wild animals. In consequence of the increase in the number of hunters, and the more intensive methods of hunting, fur-bearing animals are being killed in Siberia faster than they multiply. In many localities which formerly furnished great quantities of valuable skins the number has dwindled alarmingly while in other districts fur-bearing animals have practically disappeared.

This condition of affairs led the Russian Government to enact legislation regulating and restricting the hunting of wild animals and birds. Animal sanctuaries, where hunting was forbidden, were established, one in the western section of Siberia in the Tobolsk Province, and two in the east in the Maritime Territory. It is difficult, however, to enforce hunting laws over such a vast territory inhabited by so primitive a people.

Principal Varieties of Fur-Bearing Animals Native to Siberia.

The most important fur-bearing animals of Siberia are sable, squirrel, hare, ermine, bear, marten, and fox. The sable, formerly very common in the forests of Siberia from the Ural Mountains to the Bering Sea, is now found only in the most remote and unfrequented sections. The poorest quality of sable skins, both in color and thickness, comes from the western part of Siberia; the color becomes gradually darker and the fur softer in the regions farther east. In 1899 sable skins brought to the Irbit Fair numbered 61,000; in 1904 they totaled 20,200; and in 1913 only 11,050. More than one-third of all the Russian sables came from the Russian Far East, and of these over one-half

came from the Kamchatka regions, where the locality known as "Kronoki" (between the Kamchatka River and the seacoast, from Zhupanova River to Chazhma River) is a natural breeding place for sables.

Squirrels abound in Siberia wherever spruce and cedar trees grow, the fur becoming darker and more downy in regions toward the east, being gray in the Ural Mountains and grayish blue in the Nerchinsk region of the Transbaikalian Territory.

The fox is found not only in wooded localities but also on the steppes. The Siberian fox is larger than the European, its color being deep yellow in the Lena River region and a dark reddish brown in Kamchatka. The fox of the steppes, called "korsak," has a soft, thick, very warm fur of brownish white or yellow color. The Arctic fox with a dense white fur, very rarely, almost bluish white in color, is found along the Arctic coast, the best coming from the Lena River region. Silver foxes are also found in Siberia. They formerly brought up to \$2,000 apiece, but the top price at present is about \$450.

Hares are abundant in the open and level localities of the steppes. The fur of the Siberian hare is thicker and the skin stronger than that of the European. The best quality of hare pelts comes from western Siberia. Ermine also grows better and larger in western than in eastern Siberia. The best quality of skunk skins is secured in eastern Siberia, of bears from Yakutsk, and of marmots from Transbaikalia. Marmots skins are in great demand in Leipzig because they are well adapted for making imitations of various other furs.

United States Imports of Furs from Russia.

A large portion of Siberian furs, which make up the bulk of the Russian fur trade, is exported through European Russia and credited to the latter in official foreign trade statistics. Until recently some furs of Russian and Siberian origin were imported into the United States from Germany, Great Britain, Estonia, Latvia, Lithuania, Poland, China, Japan, and other countries. Although it is impossible to estimate with any degree of accuracy the volume of these indirect shipments, undoubtedly a considerable quantity formerly entered the United States through those channels. During 1923 furs valued at only \$821,425 were imported from European and Asiatic Russia. This figure was about \$90,000 larger than the average for the fiscal years ended June 30, 1910 to 1914, but represented only 1 per cent of the total United States imports whereas in the five-year period, 1910 to 1914, approximately 5 per cent of the total came from Russia. In 1924 the United States imported \$80,394,000 worth of undressed furs, of which \$6,752,000 were credited to Russia in Europe and only \$5,000 to Russia in Asia. The principal classes of furs, including the number of skins of each variety and their value, imported from European Russia in 1924 were as follows: Fox, other than silver or black, 546,439, \$2,081,513; squirrel, 2,660,441, \$2,602,468; hare, 368,221, \$104,666; marten, 15,596, \$228,119; all other 1,077,194, \$1,735,306.

[A more detailed report on "The Siberian fur and game trade and industry" has been sent to the New York district office of the Bureau of Foreign and Domestic Commerce where it will be made available to interested American firms.]

Russia Buying Czechoslovak Cotton Goods

Although Czechoslovak cotton-weaving mills working for the domestic trade are receiving fewer orders and report some cancellations, the demand from foreign countries is still quite satisfactory. German purchases have been well maintained, but collections from that country are reported slow. More goods were exported to Rumania in April than in March, and recently Russia has been buying Czechoslovak cotton goods, both directly and through agents located on the border States. Some of the Russian orders have been large, one for \$500,000 having been reported. English and Italian competition with Czechoslovakia is becoming keener, particularly in the Balkan States, where Italian mills are said to be securing business which formerly had been placed in Czechoslovakia.

(Commercial Attaché James F. Hodgson, Prague, May 14.)

CHEMICALS

Charles C. Concannon, Chief, Chemical Division

CHINA AS A MARKET FOR DYES

Trade Commissioner G. C. Howard, Shanghai

The most important items in the dye trade of China are aniline dyes and artificial indigo, these two constituting about 85.8 per cent of the total value of dyes imported during 1913, which is considered the last normal pre-war year, and 84 per cent in 1923. In 1913 Germany supplied 82.6 per cent of the value of aniline dyes, and approximately 80 per cent of the artificial indigo imported. It is estimated that 20 per cent of the latter came from Switzerland although this is not shown by import statistics.

The preeminence of German manufactures was due to the fact that Germany, in addition to being the most important manufacturing country, had been long in this market, had thoroughly worked the field, established its brands on a sound footing, and had a very efficient system of distribution throughout the territory.

During the war, while Germany was unable to export dyes abroad, American manufacturers began to sell their dyes in China, 1918 marking the first serious entry of the United States into the market. Then American manufacturers, their position strengthened by their great progress during the time when Germany could not supply the American market, began earnestly to seek a share of the China trade, with the result that American brands are now becoming well known in the China markets.

Imports Into China from Germany and the United States.

In the following table the net imports of dyestuffs into China from all countries and from the United States are compared for the years 1913, 1920, and 1923.

Net imports of dyestuffs into China

Mangrove Bark Leads Among Nonsynthetic Products—Sapanwood.

Natural dyes comprise but a small part of the total dye imports into China, and a comparison of figures for the years shown indicates an increasing tendency in favor of synthetic products. Of the nonsynthetic products, mangrove bark is the most important in both volume and value, and is used both in tanning and dyeing. In dyeing it is employed in connection with iron sulphate for a cheap coloring in black. Gallnuts are used for the same purpose, and sometimes combined with mangrove bark.

Sapanwood is next in importance. This is one of the redwood family—usually imported in chips which are ground to sawdust and then soaked with water to form an extract. It can be used for wool dyeing and,

therefore, is very likely among the "natural dye-stuffs" sometimes employed in the rug industry. It yields varying shades ranging from red to bluish red, depending on the mordant used. It can be employed as a silk dye also.

Cinnabar and Vermilion—"Dyes and Colors Unclassed."

Cinnabar and vermilion are both red sulphide of mercury, classed differently to differentiate between the crude ore as cinnabar and a refined grade which is termed vermilion. Red sulphide of mercury is largely used in China in the preparation of the red paste that serves as a stamp pad for "chops." It is also used as a pigment to some extent.

Under the customs heading, "dyes and colors, unclassified," are included chrome yellow, cobalt oxide, emerald green, Lakawood, Prussian blue, ultramarine, and a wide variety of lakes and pigments, mostly dry colors, largely used in the paint industry. No detailed figures are available.

Synthetic Indigo Largest Aniline Item—Dye Containers.

The most important individual item in the China aniline dye trade is synthetic indigo (20 per cent paste) which, in 1923, constituted approximately 50 per cent of the total value of dye imports. Prior to 1905 there was practically no synthetic indigo used in China. About that time two German firms began to import it, and soon it succeeded in displacing to a large extent the natural product.

Approximately 95 per cent of all aniline dyes sold in this market reaches the consumer in small tins. The following packages are usual: 8-ounce tins, 200 to the case; 1-pound, 100 to the case; and 20-ounce, 100 to the case. Dyes sold in bulk are contained in barrels of 133 $\frac{1}{3}$ to 500 pounds, with the Chinese preference strongly in favor of the small barrel.

Distribution Effected Through Chinese Dealers—Terms.

Dyes are imported into Shanghai by the manufacturer's own office or agent and sold to Chinese agents or dealers in Shanghai. These agents and dealers have branch offices or agents in outports throughout the interior, and effect distribution through them. Dyes which are imported in tins are generally sold under the manufacturers' chop, this, of course, being a Chinese chop taken out especially for this market. Those dyes which are imported in bulk and repacked by the Chinese dealer or agent are sold under his own chop. Manufacturers of all nationalities appoint Chinese houses to handle certain chops of which the Chinese houses have control and which are sold only through them. It is reported that German companies make a practice of putting up the same color under different chops and giving different dealers control of the various chops, thus effecting distribution on the same brand of dye through many dealers.

Chinese firms handling aniline dyes very often also handle indigo, but a great many firms selling indigo do not sell aniline dyes. On the other hand, a great many of the firms handling indigo are at the same time consumers, having a dye shop attached.

Dyes are generally sold by the importer to the dealer or agent on a 10-day native order, although this is by no means an absolute rule, credits being given from 30 to 90 days, according to the reliability of the dealers and their relations with the importer. Longer credits are given on indigo than on other dyes, as a general rule. The Chinese generally sell on open credits which are settled four times yearly on the appointed settle-

ment days, although, of course, there are variations from this rule.

Germany Dominates Aniline Market—Colors in Demand.

The Germans may be considered as practically masters of the aniline dye market. Out of a total gross import into China in 1923 amounting to 8,534,710 haikwan taels, Germany (including cargo from Belgium and the Netherlands), supplied 6,337,050 haikwan taels, without taking into consideration imports from Hongkong, practically all of which were of German origin. In the case of indigo the German predominance is much less marked, although Germany has made wonderful strides in regaining its large trade lost during the war. Sulphur black has made considerable progress in China during the past few years and the bulk of this business is divided between Japan and Germany, with German cargo gradually replacing Japanese.

Markets for various colors are divided according to the colors popular for wear in the various sections of China. In certain districts, for instance, women wear red trousers almost exclusively and the sales of red dyes in these sections are very much heavier than in those where the use of other colors is predominant. Direct blues and blacks are the most popular, followed by reds, scarlets, then basic violets, greens, and blues.

German Position Attributed Largely to Use of Well-Known Chops.

American dye importers state that, test for test, American dyes are equal to the German product, and they attribute the hold which German dyes have on the market largely to the fact that their chops are better known, due to having been in the market longer. The matter of chops is said to be of far greater importance in the dye trade than in the indigo trade and, therefore, the older chops on the market have an enormous advantage over the newer. The position of American brands will undoubtedly be strengthened from year to year, provided the manufacturers continue to show the interest displayed at present.

Crude Beet Carbonate of Potash Offered

A firm in Madrid, Spain, is desirous of making connections with American concerns interested in the purchase of crude beet carbonate of potash, according to Commercial Attaché Charles H. Cunningham, Madrid. Further details can be obtained upon application to the Chemical Division, Bureau of Foreign and Domestic Commerce, Washington, D. C.

See Tariffs and trade regulations:

Czechoslovakia—Relaxation of import restrictions on certain chemicals.

Poland—Temporary reduction of import duties on heavy chemicals.

German Firm Gets Colombian Governmental Order

The Krupp firm of Germany has been given the order by the Colombian Government for 1,000 tons of rails to be used by the Ferrocarril del Pacifico on the southern branch from Aganche to Popayan, and from Zarzal to Armenia. This is the first time that firm has come into this market on Government orders. (Curtis R. Hill, office of commercial attaché, Bogata, May 4.)

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

BELGIAN LEATHER INDUSTRY SLOWLY RECOVERING

Lucian Putnam, office of trade commissioner, Brussels, May 15

The Belgian tanning industry is now slowly recovering, and the fears expressed in the trade press regarding a continued stagnation in the industry did not materialize. The industry is escaping the disastrous situation which existed because of the high cost of raw materials and low sales prices for finished leather. At present cheap leather stocks in the hands of shoe manufacturers, which were bought in 1924 at rock-bottom prices, have been used, and leather is now being bought at the highest price levels. At a recent meeting Belgian tanners voted to curtail production in order to aid prices and achieve a firmer market. Raw hide prices have a tendency to decline, and the tanners are very optimistic in regard to the future.

Changing Styles Cause Difficulties.

The market for upper leathers is still suffering from the extraordinary variations in styles. The shoe manu-

facturers are trying to increase sales by producing extremely fancy shoes, and tanners are experiencing difficulty in following the trend of fashion. This tendency toward extreme fashions is aggravating style competition among shoe manufacturers, and since new models are created nearly every week, much unfavorable stock accumulates, often causing considerable losses. Kid leather is regaining very rapidly, and for this reason few sales are made in patent leather. All colors of kid are in great demand, and many sales have recently been made in black calf leather and in the extreme fancy novelties, lizard being the most sought.

Additional information regarding hides and leather appears in this issue under the following sections:

Tariffs and trade regulations:

Argentina—June export duty changes.
Czechoslovakia—Relaxation of import restrictions.
Poland—Temporary reductions of import duty on tanned sheep and goat skins.
Spain—Exports of hare and rabbit skins restricted.
Foreign trade opportunities.

SHOES AND LEATHER MANUFACTURES

A. B. Batman, Chief, Boot and Shoe Division

DEPRESSION IN BRITISH LEATHER GLOVE INDUSTRY

Consul S. Reid Thompson, Bristol, England, May 9

Depression in the English leather glove industry centered at Yeovil, Somersetshire, which followed the war and still continues, is given as the basis of an application for the imposition of import duties on gloves under the Safeguarding of Industries Act. In 1913 the number of workers employed at Yeovil was estimated at 9,500, of which more than half were home workers, while at present there are about 6,000 employed, and the factories are working on half time.

Keen Foreign Competition—Chief Demand for Women's Gloves.

Not only have the industry's export markets been taken by continental glove makers, but the local industry finds itself unable to compete in the home market. Lower wages, longer hours of work, and lower overhead charges are given as causes for cheaper production in Czechoslovakia, Italy, Belgium, France, and Germany, which are underselling the English makers in this market. Imports of gloves into Great Britain are stated to have increased from approximately 3,500,000 pairs in 1921 to 10,500,000 in 1924.

The demand is greatest for women's gloves of light weight and price is the chief consideration. The quality of the imported glove, however, is said to be equal if not superior to that of the English. Imports of heavier-weight gloves are now coming in, although in these lines the English article is admittedly superior.

INCREASE IN BRITISH BOOT AND SHOE EXPORT TRADE

The boot and shoe export trade of the United Kingdom during the first four months of 1925 amounted to 329,514 dozen pairs compared with 268,532 dozen pairs in the corresponding period of 1924. The predominating market, the Irish Free State, purchased 115,546 dozen pairs, or 35 per cent, of the total. Other important markets and the quantities taken by each were as follows: New Zealand, 47,672 dozen pairs; British South Africa, 46,459 dozen pairs; Australia, 24,099 dozen pairs; and the Netherlands, 16,192 dozen pairs. Among the other countries it is noted that Canada and the United States purchased 11,471 and 5,888 dozen pairs, respectively.

Irish Free State Leads in April Purchases.

During April, 1925, the exports of leather boots and shoes amounted to 81,218 dozen pairs, valued at £383,090. Leading markets were the Irish Free State, British South Africa, and New Zealand, with respective purchases of 35,486, 11,760, and 8,756 dozen pairs. The United States received 1,282 dozen pairs, valued at £18,995, and Canada, 3,016 dozen pairs, valued at £20,300.

Shipments to United States Decline.

Compared with April, 1924, the exports increased about 20,000 dozen pairs, owing principally to a larger demand from the Irish Free State (approximately 14,000 dozen pairs). The trade with British South Africa showed a decrease of nearly 700 dozen pairs.

that with the United States about 500 dozen pairs, and that with the Netherlands 1,300 dozen pairs. British East Indies increased its purchases by 400 dozen pairs, and New Zealand by 6,000 dozen pairs. Canada also made larger purchases during April, 1925.

Increase in United States Production of Footwear Other Than Rubber

The United States production of boots and shoes other than rubber in April, 1925, amounted to 29,836,220 pairs, compared with 29,971,908 pairs in the preceding month. This trend follows that of the previous three years, with the production peak being reached in March and a slight downward tendency in the succeeding month. Women's footwear constituted 9,401,884 pairs and men's represented 7,433,085 pairs of the total.

Greater Proportional Increase in 1925.

During the first four months of 1925 there were 113,285,626 pairs of footwear manufactured, representing an increase of 2.8 per cent over the output in the corresponding period of 1924. Of the quantity manufactured 31.9 per cent were for women, 26 per cent for men, and 12.7 per cent for misses and children. It is noted that the January, 1925, production was approximately 200,000 pairs less, while that for February, March, and April was 400,000, 1,100,000, and 1,800,000 pairs more, respectively, than the output of the corresponding months of 1924.

See Tariffs and trade regulations: Czechoslovakia—Relaxation of import restrictions on leather footwear and certain other leather goods.

Foreign trade opportunities.

PAPER

John Matthews, jr., Chief, Paper Division

SIDE RUNS OF THE PAPER TRADE

Increased Purchases of Belgian Photographic Paper by Austria.

Austrian imports of photographic paper from Belgium increased from 5,732 pounds in 1923 to 12,125 pounds in 1924, according to a report from Commercial Attaché H. L. Groves, Vienna.

Competition in the Colombian Market.

Swedish newsprint is being offered on the Cartagena market at prices considerably under those quoted by American firms. Strong competition is also being met from Austrian and German firms in cheap grades of bonds, ledgers, book, and wrapping papers. (Consul Lester L. Schnore, Cartagena.)

Hongkong Market for Overissue News Quiet.

Arrivals of overissue news at Hongkong have been almost negligible during the past few months, according to a report from Consul A. E. Carleton. Stocks on hand amount to approximately 10,000 bales, which at the present rate of consumption will take care of the local demand for the next few months. Disturbances in the Chinese Provinces where a considerable amount of this class of paper is used are reported to have curtailed sales during the past eight months.

Decreased Imports of Foreign Papers into Kobe.

Imports of newsprint into the port of Kobe, Japan, declined slightly from 14,920 tons in 1923 to 14,778 tons in 1924, according to a report from Consul E. R. Dickover. During the same period imports of packing and wrapping papers increased from 12,726 tons to 21,083 tons. The trade in this class of paper is monopolized by Sweden, Germany, Great Britain, Norway, and the Netherlands. Imports from the United States consist chiefly of high-grade writing paper, bond paper, and similar lines.

Market for Wrapping Paper in New Zealand.

The demand for wrapping paper in the Wellington market is about evenly divided between Kraft and sul-

phite papers, the latter being used chiefly in the grocery and fruit trades, according to a report from Vice Consul J. C. Hudson. A comparatively small amount of this class of paper is received from the United States, the bulk of the wrapping paper shipments coming from Canada and of paper bags from the United Kingdom, both of these countries being favored by the preferential tariff.

Exports of Canadian Newsprint to South America.

Exports of Canadian newsprint to South America during the 11-month period ended February 28, 1925, amounted to 3,310 short tons, and represented an increase of 46 per cent over the same period ended February 29, 1924. More than half of the last years' shipments were to Argentina, other points of destination being British Guiana, Colombia, Peru, Venezuela, and Uruguay. Consul Ernest L. Harris, of Vancouver, states that 1,400 tons of newsprint are reported to have recently been shipped from British Columbia to Buenos Aires.

Market for Paper and Paper Products in Western Mexico.

Imports into the west coast of Mexico from the United States through the Arizona customs district during 1924 reached a total value of \$230,502—an increase of approximately \$2,000 over the previous year, according to a report from Consul H. D. A. Damm, Nogales. Imports consisted of 951,260 pounds of newsprint, 977,737 pounds of wrapping paper, bags, and cartons, and 123,494 pounds of writing paper, stationery, and envelopes. In addition to these classes, which reached a total value of \$159,747, books and other printed matter to the value of \$17,469 and other paper and paper manufactures valued at \$53,286 were imported.

See Tariffs and trade regulations:

Czechoslovakia—Relaxation of import restrictions on wood pulp, cardboard, and manufactures of paper.

Poland—Temporary reductions in import duties on wood pulp and vegetable pulp.

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

THE PRESENT BOLIVIAN DEBT

C. A. McQueen, Special Agent

A statement prepared from official records by the Bolivian Permanent Fiscal Commission, maintained under the terms of the loan contract of 1922 with American bankers, shows the status of the Bolivian public debt at the end of 1924.

Principal Amounts Outstanding.

The funded external debt is now payable wholly in dollars. The balance of the sterling loan of 1908 was redeemed on July 1, 1924, and the £600,000 loan secured early in 1925 is not considered part of the funded debt. The principal amounts outstanding of the three dollar loans at the end of last year were:

Refunding loan of 1922 (8 per cent).....	\$27, 446, 500
Dollar gold external 6's of 1917.....	1, 936, 500
Sanitation bonds of 1920 (6 per cent).....	1, 607, 000

Total 30, 990, 000

The first is the only general foreign obligation of the nation, as the second and third are served primarily by local revenues of the Departments of La Paz and Cochabamba. The original principal amount of the refunding loan of 1922 was increased in 1924 by \$5,000,000, issued exclusively to provide for the completion of the railroad from Atocha to Villazon under contract with an American firm. Operations of the sinking fund have reduced the total issue of \$29,000,000 to \$27,446,500.

Increase in Internal Funded Debt.

The internal funded debt totaled 19,501,833 bolivianos at the end of 1924 as compared with 12,372,962 at the end of 1923. (Boliviano=approximately \$0.33 at present exchange rate.) Most of the increase was due to the issuance of internal bonds to take up the sterling loan of 1908. The bonds thus issued (bonds of the State, 1924), in accordance with a law of January 12, 1924, bear 8 per cent interest and have a cumulative annual sinking fund of 1 per cent. During the year these bonds were put out to the amount of 7,247,700 bolivianos and 313,392 bolivianos were amortized. Another small new issue of 500,000 bolivianos (railroad claim bonds of 1924) was made in accordance with a law of December 12, 1923. The volume of older internal bonds was reduced by the operation of their sinking funds. The status of the internal funded debt at the end of 1924 was:

	Bolivianos
Bonds of the internal debt, 1907 (3 per cent).....	1, 498, 925
Military compensation bonds, 1909 (8 per cent)....	1, 865, 100
Acre indemnity bonds, 1911 (3 per cent).....	245, 500
Bonds of the State, 1914 (8 per cent).....	8, 463, 000
Bonds of the State, 1924 (8 per cent).....	6, 934, 308
Railroad claim bonds, 1924 (3 per cent).....	495, 000

Total 19, 501, 833

Floating Debt Reduced.

The floating and short-time debt, wholly internal, was reduced to 14,224,739 bolivianos at the end of 1924 as compared with 17,204,045 the year before. Excepting one item of 7,250 bolivianos in old customs notes, which presumably have been lost or destroyed, the

above sum is due to the Bolivian banks on account of current or special advances. (A five-year loan of £600,000 obtained from local mining interests early in 1925 is supposed to have been applied in part to the cancellation of such bank advances as were used for work on the railroad now being built from Potosi to Sucre.)

[The statistics in the preceding article supplement those given in Chapter II of the bureau's recent publication, Bolivian Public Finance, Trade Promotion Series, No. 6.]

Chinese Emigrants' Remittances Through Amoy

Consul Leroy Webber, Amoy, China

A conservative estimate places the amount of oversea Chinese remittances handled through Amoy during 1924 at approximately 45,950,000 silver dollars (1 silver dollar averaged \$0.52407 in 1924)—an increase of about 5.5 per cent over the 1923 returns. Practically all of this money was sent in payment of goods or as family remittances. About 38 per cent was handled by the letter hong; 30 per cent by the native banks; and 27 per cent by the foreign banks, while the balance was brought back by returning Chinese.

The remittances are generally made in the form of drafts, payable in local currency, the banking profits being made in the exchange rate at which they are converted. Delivery to payees in the interior is carried out by regular carrier service maintained by the letter hong at Amoy. Considerable amounts of foreign bank notes and gold coins are brought in by the returning Chinese.

Statistics Showing Countries of Origin of Remittances.

The following table shows the amount and the country of origin of remittances received in this port during 1924 as compared with 1923:

Countries of origin of Chinese emigrants' remittances through Amoy

Countries of origin	1923	1924
Straits Settlements and British India.....	<i>Silver dols.</i> 18, 260, 000	<i>Silver dols.</i> 19, 400, 000
Philippine Islands.....	14, 840, 000	16, 500, 000
Netherlands East Indies.....	11, 500, 000	11, 050, 000
Total.....	43, 600, 000	45, 950, 000

The mediums for these remittances were as follows:

Mediums for Chinese emigrants' remittances through Amoy

Mediums	1923	1924
Letter hong.....	<i>Silver dols.</i> 16, 200, 000	<i>Silver dols.</i> 16, 500, 000
Native banks.....	13, 400, 000	12, 700, 000
Foreign banks.....	11, 200, 000	14, 200, 000
Returning Chinese.....	2, 800, 000	2, 550, 000
Total.....	43, 600, 000	45, 950, 000

See also list of circulars issued by bureau in this issue.
See Cable reviews from Europe, Latin America, and the Far East.

TRANSPORTATION

P. E. D. Nagle, Acting Chief, Transportation Division

SHIPPING

Colombo, Ceylon, Harbor Development

Assistant Trade Commissioner Don C. Bliss, Jr., Bombay, India, May 8

The policy of the Colombo Port Commission with respect to deepening Colombo Harbor has always been to keep well abreast of the program of the Suez Canal authorities, according to the secretary of the commission. At present there are two berths available in each monsoon for vessels drawing 33 feet, and it is hoped that in 18 months three more berths in each monsoon will be available for vessels of this draft. The authorized draft for vessels passing through the Suez Canal is only 32 feet.

Plan for Deepening Harbor.

As a result of a scheme formulated by the Suez Canal authorities whereby vessels of 35 feet draft will be allowed to pass through the canal, the question of deepening the Colombo harbor has been under consideration. The present program is to deepen the outer areas of the harbor to 36 feet and the areas near the fore-shore to 33 and 30 feet, respectively. All the berths in the 36-foot area are expected to be available in about eight years, but the deepening of the northern entrance will take longer.

Report of British Imperial Shipping Committee.

In dealing with the subject the British Imperial Shipping Committee recently reported as follows: Our conclusion is that there is no present justification for a general deepening of Colombo Harbor, if it should appear on the completion of the survey in progress that the cost is likely to be very large. The utmost which the present outlook would in our opinion justify is a program limited to one or two deeper berths if they can be provided at a cost which will not involve any increase in the dues.

No difficulty is anticipated in providing one or two berths in Colombo Harbor for vessels drawing 35 or 36 feet. One such berth can be made available in about two years.

Decision Reached on Grand Canal of Alsace

Consul Chester W. Davis, Strasbourg, France, May 4

The Central Rhine Commission which has been considering questions pertaining to the construction of a lateral canal parallel to and west of the Rhine, from Basel, Switzerland, to Strasbourg, France, has reached a decision which is in the nature of a compromise between the French proposals and those of the German and Swiss.

Regulation of Main Channel of the Rhine.

Under this ruling, the main channel of the Rhine will be regulated to facilitate navigation between the north-

ern end of the first section of the lateral canal, already authorized, and Strasbourg. This work will be performed by the Swiss, with or without German co-operation. France will assist in the technical and administrative portions of the work. In addition to the 100,000 electric horsepower expected to be developed at the lock at Kembs, France, if the remaining seven sections of the lateral lock are completed, approximately 700,000 horsepower from the seven stations—or 800,000 horsepower in all—will be developed.

Development to Have Great Economic Influence.

This development will have great economic influence on Alsace-Lorraine and the whole east of France. It is understood that in view of the fact that the decision of the commission makes the Rhine the main highway of navigation from Strasbourg to Kembs, a concession has been made to the French allowing a current in the lateral canal of 1 meter 20 per second, which is greater than originally approved and will facilitate the production of electric current.

Projected Canal Construction in Poland

A number of canal projects are being considered by the Ministry of Labor of Poland. The first is the construction of a canal to connect the Dombrowa region with the lower reaches of the Vistula; the second canal is to connect with Warsaw; and another project is for a canal to connect Poland and Rumania. (La Bulgarie, Sofia, April 29.)

New San Francisco-South Sea Service

An American company announces the inauguration of an express service from San Francisco to Honolulu, Pago Pago (for Apia), Suva, and Sydney. Sailings will be June 16, July 7, and July 28. Accommodations are offered for both passengers and freight and the vessels are equipped with refrigerator and fan ventilation.

New Warehouse Facilities for Habana

Vice Consul William B. Murray, Habana, Cuba

The Compania Cubana de Almacenes has recently inaugurated a service to shippers which permits merchandise to be shipped to Habana and stored in their warehouse without the immediate payment of duties by the shipper. The merchandise will be held by the company for a reasonable time and the duties paid when the consignees are ready to remove the merchandise from the warehouse. Merchandise may also be taken out in lots and proportionate duties paid. The company has no facilities for cold storage.

RAILWAYS

Re-establishment of German Fast Freight Schedules

Vice Consul C. E. Macy, Coblenz, April 29

After the armistice and during the economic depression following the German railway system was handicapped in operation by poor fuel as well as by lack of motive power and rolling stock, which rendered it incapable of restoring long distance fast-freight traffic to anything like its pre-war status. Before the war, for example, the fast-freight schedule between Cologne and Berlin was 20 hours; since the armistice it has taken from 28 to 30 hours for the same trip. Conditions are now so improved, however, that with the new schedule, effective June 1, several fast freights with a scheduled speed of 60 kilometers an hour are to be restored.

New Services Scheduled.

The new services will include the following: Cologne-Berlin, three trains in each direction with a schedule of 15 hours, as against 28 to 30 hours at present. Two of these trains will be routed via Duisburg-Dortmund-Hanover and one via Elberfeld-Soest-Magdeburg; Cologne-Hamburg, via Duisburg-Wanne-Osnabruck-Bremen, one train in each direction, daily, on a schedule of 12 to 15 hours, as against 27 to 28 hours at present; Cologne-Mainz-Frankfort-Darmstadt, via left bank of the Rhine, with connections at Darmstadt for Baden, Wurttemberg, Basel, and Bavaria (via Aschaffenburg), two trains a day in each direction, with a schedule of 5½ hours between Cologne and Mainz and 8 hours between Cologne, Frankfort-on-the-Main, and Darmstadt. The present schedule averages 10 to 12 hours between Cologne and Mainz only.

Improved Forwarding of Freight.

Improvements in the handling of short-haul traffic also are planned. Facilities for forwarding fast freight from all stations at least twice a day are to be provided, and delays through rehandling are to be avoided, so far as possible, by the use of through cars. A new fast freight is to be put on between Cologne and Trier, via Euskirchen, as well as between Cologne-Niederlahnstein-Frankfort (right bank of the Rhine), Munich-Goldbach (Aachen)-Kaldenkirchen, Cleve-Crefeld-Duisburg-Essen-Dortmund, and Neuss-Dusseldorf-Elberfeld-Hagen.

Increased Italian Freight Rates Protested

Commercial Attaché H. C. MacLean, Rome, May 12

Agitation against the increase in freight rates by the Italian State Railways, which became effective May 1, continues. The Association of Italian Corporations has called on its members to supply evidence on which to base formal protests. The Confederation of Industry has adopted resolutions which, after pointing out the importance of railway tariffs in the economic development of Italy on account of its geographic configuration, and calling attention to the fact that whereas prior to the change freight rates were already four times what they were before the war, the new schedule represented an increase of at least six times, appealed to the Government for a revision of the new tariffs.

Traffic on Northern Railway of France During 1924

Consul Paul Chapin Squire, Lille

While the Northern Railway (Chemin de Fer du Nord) is the smallest of the French lines, it is the most concentrated and the richest. Receipts for 1924 aggregated 1,433,552,739 francs (about \$75,072,290), an increase of 204,835,665 francs over 1923. The statement for the year indicates a reduced deficit, which might actually have been transformed into a surplus had the operation of the Paris suburban lines been less burdensome. Although the number of passengers carried increased from 150,000,000 to 154,000,000, the large number of commuters of suburban Paris who were transported at reduced rates accounted for an operating loss of 54,000,000 francs.

The operation of the Northern Railway, which indicated a shortage of 261,000,000 francs in 1921, 126,000,000 francs in 1922, and 180,000,000 francs in 1923, almost attains a balance for 1924. If the situation with respect to the Paris commuters could be remedied, it is probable that a surplus would result. The outlook on the whole is distinctly encouraging.

Motor Bus Service Affects Norwegian State Railways

A. E. Fenselau, office of commercial attaché, Copenhagen

During the past few years the Norwegian State Railways have reduced the number of their employees by from 5,000 to 6,000. This reduction has been due to keen competition from motor buses, and as a result it has been decided to confine new construction and improvements to the main lines, leaving the buses to take care of the traffic in sparsely populated country districts. Further reductions in personnel are planned.

Exhibits Available

Persons interested in the following reports may obtain them from the Transportation Division or through the district and cooperative offices of the Bureau of Foreign and Domestic Commerce by referring to the specific exhibit number:

171614—Montevideo.—Annual report of the Central Uruguay Railway Co. for 1923-24, the latest report issued by this company. (Transmitted by Consul O. Gaylord Marsh, Montevideo, April 13.)

171211—Stockholm.—Annual report on State and Private Railways of Sweden for 1924, including final report for 1923. (Transmitted by Consul General Claude I. Dawson, Stockholm, May 7.)

171840—Belgrade.—River Navigation in Yugoslavia, detailed report as to navigability, floating stock, traffic, etc. (Transmitted by Consul K. S. Patton, Belgrade, May 7.)

171503—Tahiti.—General description of transportation facilities between the Society Islands. (Consul Lewis V. Boyle, Tahiti, April 30.)

233—Moscow.—Movement of vessels in ports of Soviet Russia in 1923-24. ("Foreign Trade," Moscow, April 17.)

27912—Warsaw.—New regulations regarding port charges at all Polish ports. (Transmitted by Commercial Attaché L. W. Rogers, Warsaw, May 2.)

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

CANADIAN INDUSTRIAL DISPUTES INVESTIGATION ACT AMENDED

Trade Commissioner Lynn W. Meekins, Ottawa

The Canadian House of Commons on May 13 passed an amendment to the industrial disputes investigation act, 1907. The original act was declared ultra vires of the Dominion Parliament by the judicial committee of the privy council at London, January 20, in a judgment allowing the appeal of the Toronto Hydro-Electric Commission against the decision of the Ontario appellate court, which upheld the validity of the act in connection with a local wage dispute. Briefly, the privy council maintained that the Dominion Parliament was justified in instituting such legislation only in case of a national emergency.

Applies to Federal Government's Jurisdiction—Scope.

The amendment is designed to validate the act by making it applicable to those industries and conditions of controversy in any industry coming within the jurisdiction of the Federal Government and not within the legislative authority of any Province.

The scope of the act is indicated by the following reference to its application:

1. Any dispute in relation to employment upon or in connection with any work, undertaking, or business which is within the legislative authority of the Parliament of Canada, including navigation and shipping, whether inland or maritime; railway ferries between Provinces or between any Province and any British or foreign country; and various other undertakings of a similar nature.

2. Such works as, although wholly situate within the Province, have been or may be declared by the Parliament of Canada to be for the general advantage of Canada, or for the advantage of two or more of the Provinces.

3. Any dispute which the governor in council may by reason of any real or apprehended national emergency declare to be subject to the provisions of this act.

4. Where a dispute directly affects employees in more than one Province and such employees are members of a trade union having a general committee authorized to carry on negotiations between employers and employees and so recognized by the employer, and the chairman or secretary of such committee declares that all efforts to secure a satisfactory settlement have failed.

5. Works, undertakings or business belonging to, carried on, or operated by aliens, including foreign corporations immigrating into Canada to carry on business.

Features of the Amendment.

Among the features of the amendment are the following:

1. Any Province may take advantage of the provisions of the Dominion act if desired.

2. Employers and employees shall give at least 30 days' notice of an intended or desired change affecting wages or hours.

3. In the event of a dispute it will be unlawful for the employer to make proposed changes or for the employees to strike until the dispute has been investigated by a board.

4. A fine of not less than \$100 and not more than \$1,000 per day will be imposed upon an employer declaring a lockout or making effective a change in wages contrary to the provisions of the act.

INCREASED PRUSSIAN RENTAL TAX

Consul A. W. Kliefoth, Berlin

By a Prussian emergency decree of March 28, 1925, the rental tax is considerably amended, effective April 1, 1925. The rental tax is a State tax created by the Third Emergency Decree on Taxation of February 14, 1924, to compensate the German Federal States for the loss of certain income from the Federal taxes. The tax is borne by the tenants.

Half of Revenue for Promotion of Building—Reductions.

The rate of the tax in Prussia is increased from 600 per cent to 700 per cent of the Prussian land tax—equivalent to 28 per cent instead of 24 per cent of the peace-time rental value. Half the revenue from this tax, or seven-fourteenths per cent, shall be applied toward the promotion of building; of the balance, the communities shall receive two-fourteenths and the State of Prussia five-fourteenths per cent.

If the real estate on July 1, 1914, was not mortgaged, or was mortgaged only to the extent of 20 per cent of its value, the tax may be reduced to 500 per cent of the land tax, and if living houses occupied exclusively by the house owner himself are involved, to 400 per cent.

Interest on Revalued Mortgages Paid Directly—Legal Rent.

The decree, furthermore, alters the method of interest payment on revalued mortgages. Interest has been payable since January 1, 1925. House owners heretofore were allowed to deduct such interest from the rental tax. To reduce the amount of clerical work resulting from this method, interest on revalued mortgages shall be paid henceforth by house owners in full and directly, but by way of compensation the legal rent has been increased proportionately. Until April 1, 1925, the legal rent amounted to 66 per cent of the peace-time rent. This rate has been increased from April 1, 1925, from 75 per cent to 78 per cent, and will further be increased with the entry into effect of the new revaluation bill, as under its provisions the rate of revaluation with respect to mortgages is raised.

Argentine Registration of Trade-Marks Advised

A cable from Commercial Attaché Edward F. Feely, Buenos Aires, advises the registration of American trade-marks in use in Argentina, in view of several difficulties experienced within recent months in the matter of protecting trade-marks in that country. The Argentine law regards the first registrant of the trade-mark as its legal owner. No proof of user is required in order to entitle one to the registration of a trade-mark. Unless the trade-mark is registered, therefore, its appropriation becomes easy and the right thus acquired is very difficult to contest. American manufacturers exporting to Argentina should take the precaution to register their trade-marks as early as possible. The registration should be made in the name of the American concern and not an agent, distributor, or branch house located in Argentina.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

GENERAL TARIFF CHANGES

BRITISH HONDURAS

Consul William Wallace Early, Belize, April 25

Measure Providing for 10 Per Cent Surtax Defeated.

The measure providing for a temporary surtax of one-tenth of the import duty on products imported into British Honduras failed to pass the Legislative Council, and consequently will not be imposed, as stated in *COMMERCE REPORTS* for April 6, 1925.

GREECE

Cable from Commercial Attaché R. O. Hall, Athens, June 9

Enforcement of New Tariff Again Postponed.

The enforcement of the new Greek customs tariff has been postponed until December 31, 1925.

[Notices of previous postponements of the new tariff appeared in *COMMERCE REPORTS* for December 22, 1924, and March 9, 1925.]

HAITI

Trade Commissioner H. P. Macgowan and Vice Consul Arthur F. Tower, Port au Prince

Proposed New Customs Tariff Presented.

A draft of the proposed new customs tariff in Haiti was made public on May 19 by the Receiver General of Customs at Port au Prince. The aim of the revision is to simplify the present customs tariff and make such adjustments as seem desirable in the duties on particular commodities as will yield, in total, the same volume of revenue as heretofore.

Broadly speaking, the tariff has been adjusted so as to increase the duties on certain luxuries and decrease those collected on necessities, such as cotton goods, foodstuffs, and machinery. The present tariff has been considerably reconstructed, the new schedule consisting of a much larger number of items more definitely differentiated and more systematically arranged. One of the features of the revision is the consolidation into the one duty of the various surtaxes, tonnage, wharfage, and port charges hitherto constituting additions to the basic duty, only the wharfage and related dues to the Compagnie du Wharf at Port au Prince to continue to be separately collected.

In presenting the proposed draft for the new tariff the Haitian Receiver General of Customs at Port au Prince indicates his readiness to receive written suggestions regarding the increase or the decrease of the duties projected, provided that these suggestions are accompanied by the well-considered reasons which prompt them. The proposed tariff is subject to the approval of the legislature, and the present expectations are to make it effective in the fall.

YUGOSLAVIA

Consul K. S. Patton, Belgrade, May 5

Increased Custom Coefficient.

By a ministerial decree, effective on May 1, 1925, the coefficient (or agio) by which Yugoslavia customs duties are multiplied when paid in paper dinars, has been increased from 11 to 12.

[It is intimated that this increased agio is a forerunner of the new customs tariff which is expected to be promulgated shortly.]

IMPORT AND EXPORT RESTRICTIONS

CZECHOSLOVAKIA

Commercial Attaché J. F. Hodgson, Prague, May 18

Further Relaxation of Import Restrictions.

In conformity with the announced policy of the Government of Czechoslovakia to eliminate as rapidly as possible the existing import restrictions, the Czechoslovak Ministry of Commerce has announced that a large number of items, the importation of which has heretofore been hampered by the necessity for complying with certain technicalities prior to entry of the shipment, will in future be permitted unrestricted entry, subject only to the payment of the regular customs duties and other fees.

The changes apply, for the most part, to items which have been on the so-called "notification list" up to the present time, i. e., the importation of such goods was free of restriction provided the Ministry of Commerce was notified in advance of the shipment by the importer.

The following is a list of the principal commodities affected by the present decree which, according to the announcement, became effective on May 25, 1925:

Corn; lard; bacon.
Cotton yarn; cotton goods made of yarn No. 50 or less; hemp yarn; felt and felt goods; woolen manufacturers for technical purposes; silk and half-silk ribbons and bands.
Wood pulp; cardboard weighing 300 grams or more per square meter; manufactures of paper, cardboard, and wood pulp (excepting printed matter, luxury articles, and paper toys).
Toys of soft India rubber; India rubber shoes; manufacture of hard India rubber; rubberized fabrics.
Horse and cow leather, goat leather, sheep leather, and other leather not specially provided for; leather footwear; leather weltings and leather for bicycle saddles; leather goods for technical purposes excepting leather belting.
Glassware and enamel ware.
Artificial grindstones and whetstones.
Rolled and drawn iron wire 2.5 millimeters or more in thickness; fittings of wrought iron over 25 millimeters in diameter; railway car wheels; sickles; files and rasps; sheets and plates of lead and pewter; rods, bars, and wire of base metals.
Crude and crystallized soda; calcined soda; artificial calcium carbonate; strontium carbonate; barium carbonate excepting calcium carbide and barium chloride; potato starch.
Iron slag.

It is reported that the Ministry of Commerce will, in the near future, remove the restrictions on about 60 additional items, at the same time abolishing the so-called "manipulation fee," which, as a rule, amounts to one-half of 1 per cent of the invoice price and is collected by the Ministry of Commerce at the time of granting the import license or of the notification.

SPAIN

Cable from Commercial Attaché Charles H. Cunningham, Madrid, Gaceta de Madrid, May 12

Exportation of Hare and Rabbit Skins Restricted.

Exportation from Spain of untanned rabbit and hare skins is temporarily prohibited, and the exportation of hair thereof is likewise prohibited up to the amount required for national consumption, by a royal decree of May 10, effective May 13, 1925. Permission

for exportation of hair beyond the amount required for national consumption may be secured from the Director General of Customs.

TARIFF CHANGES ON SPECIFIC ARTICLES

ARGENTINA

Cable from Commercial Attaché Edward F. Feely, Buenos Aires, June 2

Changes in Export Duties for June.

The following changes have been made in the Argentine export duty schedule for the month of June:

Articles	Duties in gold pesos per metric ton		Articles	Duties in gold pesos per metric ton	
	Former rates	New rates		Former rates	New rates
Oats.....	1.04	1.07	Entre Rios wool.....	37.40	17.61
Corn.....	1.77	1.78	Southern wool.....	27.05	12.68
Linseed.....	3.75	3.23	Cordoba wool.....	36.05	20.69
Barley.....	2.32	1.84	Western wool.....	32.40	26.00
Wheat.....	2.39	2.35	Quebracho log.....	.71	.69
Sheepskins.....	35.95	32.25	Quebracho extract.....	.92	1.01

The duties on other commodities subject to Argentine export duties remain unchanged.

[For changes in export duties for May, see COMMERCE REPORTS for May 11, 1925.]

CANADA

Cables from Trade Commissioner Lynn W. Meekins, Ottawa, May 13, 15, and 19, and Customs Memorandum No. 50, Revised, May 14

Further Proposed Changes in the Tariff and Sales Taxes.

The budget proposals for modifications in the tariff and sales taxes, provisionally in effect from March 25, 1925, and reported in COMMERCE REPORTS for April 13, were adopted by the House of Commons on May 12, with a few minor changes.

Import schedule.—Item 588a, covering gas for heating, cooking, and illuminating, has been defined to apply to gas for such purposes "imported by pipe line," these words being added to the item.

Drawback provisions.—Item 1049 of Schedule B, which provides for a drawback of 99 per cent of the import duty on bituminous coal, is modified by striking out the words "during any calendar month when the average ratio during that period is less than 1,300 pounds of coke from 2,000 pounds of coal," and inserting in lieu thereof the following: "On coal converted into coke at a gas retort plant or at plant using any other process than the by-product coke process."

Sales taxes.—Dies for boots and shoes have been added to the list of articles exempted from the sales tax, so that the item as published in COMMERCE REPORTS for April 13 relating to lasts, etc., should now read: "Lasts for boots and shoes, including rubber footwear, and patterns and dies for boots and shoes, including rubber footwear."

The above modifications, like those previously submitted, are provisionally in effect from March 25, 1925, subject to assent by the Governor General.

Appraisers' Bulletin No. 3050, Ottawa, May

Condenser Tubes and Tobin Rods Admitted Free as Non-competitive.

On the ground that such products are not at present being manufactured in Canada, free admission has been granted by the department of customs and excise for the importation into Canada of condenser tubes

and Tobin bronze rods in what is known as the "Piston rod finish" (such rods are turned in a lathe true to size and used for piston rods and shafting such as to drive a yacht propeller, etc.).

According to the provisions of the Canadian customs tariff, imported articles may be declared temporarily exempt from import duty, as well as any special or "dumping" duty (to which goods are liable when sold to Canada at more than 5 per cent below the home-market value) when it is established to the satisfaction of the Minister of Customs that such articles are not made or sold in Canada in substantial quantities, and that they are offered for sale to all purchasers on equal terms, under like conditions.

COSTA-RICA

Consul Roderick W. Unckles, San Jose, April 28

Reduction of Import Duty on Refined Petroleum.

The import duty on refined petroleum has been reduced from 0.40 colon to 0.10 colon per gross kilo by a Costa Rican decree of April 23, 1925, published in *La Gaceta* April 25.

CZECHOSLOVAKIA

Cable from Commercial Attaché J. F. Hodgson, Prague, June 8

New Sliding Scale of Duties on Agricultural Products.

The Czechoslovak Government has decreed that a new sliding scale of import duties on agricultural products shall become effective immediately.

These duties are dependent upon the internal wholesale price of the commodities. Lard will continue free of duty so long as the price remains above 11.50 crowns per 100 kilos (present price, 15.50 crowns). Wheat will also be free of duty until the price drops below 1.80 crowns per 100 kilos (present price, 2.52 crowns). Flour will be dutiable only when wheat becomes subject to duty.

GREECE

Assistant Trade Commissioner C. E. Dickerson, jr., Athens, April 1

Duty-free Importation of Portable Wooden Houses.

Portable wooden houses, as well as all indispensable parts, accessories, etc., thereof, may be imported into Greece free of duty up to December 31, 1925, according to a decree published in the *Official Greek Gazette* for March 24, 1925.

MEXICO

Cable from Trade Commissioner George Wythe, Mexico City, June 2

New Graduated Export Taxes on Henequen.

The following graduated export taxes on henequen are imposed by a Mexican decree effective May 30, 1925:

The tax is to be 2 centavos per kilo (2.2 pounds) when price at port of shipment is 6 centavos per pound. This is increased by two-thirds of 1 centavo for each rise in price of 2 centavos per pound until a maximum tax of $4\frac{2}{3}$ centavos per kilo is reached. Stocks of the *Comision Exportadora* at Merida and Progreso and pending contracts are subject to the old rates.

[The total amount of the previous taxes was about 19 centavos per kilo, including a State production tax of 12 centavos per kilo and a Federal export tax of 2 centavos per kilo. See COMMERCE REPORTS of February 9, 1925.]

PERU

Commercial Attaché H. Bentley MacKenzie, Lima, April 29

Shipping Tin Plate Uncut for Lowest Duty.

In view of the practice of some exporters in the United States of shipping tin plate to Peru in ready-

cut sizes for manufacturing purposes; attention is called to the fact that the Peruvian rate of duty on uncut sheets of tin plate is 0.02 sol per gross kilo, while on tin plate cut into small pieces it is 0.40 sol per gross kilo. It is advisable, therefore, to ship tin plate to Peru in whole sheets unless a special request from the importer for tin plate in small-sized pieces has been received.

POLAND

Consul General T. Jaeddel, Warsaw, April 27

Temporary Reductions in Import Duties on Various Articles.

Effective until August 1, 1925, the import duties on a large number of articles in the Polish tariff have been reduced, according to a decree of April 11 published in the Dziennik Ustaw of April 20, 1925. During this period a number of articles may be imported free of duty while others pay only a certain percentage of the normal duty. The reductions on articles of possible interest to American exporters are as follows:

Free of duty.—Rice (except polished); wheat and rye flour; corn meal; potatoes¹; meat, fresh, salted, or frozen; bones; certain ferro-alloys; scythes and sickles; and mowers, binders, harvesters, and their parts.

Paying 10 and 20 per cent of normal duty.—Leaf tobacco; condensed milk; manufactured animal fats; tanned sheep and goat skins¹; heavy chemicals; vegetable oils; iron and steel plate; grooved rails; brass tubes; tempered cylinders and pipes of cast iron; manufactures of copper wire²; locomotives and tenders; most all kinds of machinery of a type not manufactured in Poland¹; heavy chassis for trucks; cotton tissue for embroideries; and fishing nets.

Paying 25 to 60 per cent of normal duty.—Polished rice; miners' lamps and parts; electric cables coated with lead, over 45 mm. in diameter; sewing machines; automobile chassis; trucks; and silk yarn.

Paying 80 per cent of the normal duty.—Salted salmon; pure cod-liver oil; margarine and other butter substitutes; oils obtained from coal tar; tanning extracts in paste or liquid; copper wire; wire nails; electric cables coated with lead, 45 mm. or less in diameter; shovels, forks, spades, and picks; wood pulp; vegetable pulp; wool and cotton; cotton yarn; peasants' cloth; and knitted stuffs.

[Notices regarding the establishment and extension of Polish tariff reductions appeared in COMMERCE REPORTS for September 1, 1924, and April 27, 1925. The full list of articles having temporary reduction of import duty is on file in the Division of Foreign Tariffs, and further information may be obtained upon specific request.]

COMMERCIAL TREATIES AND AGREEMENTS

FRANCE—POLAND

Cable from Commercial Attaché L. W. Rogers, Warsaw, June 6

Revised Commercial Treaty Affects American Trade.

Important changes in the Polish duties on American goods are brought about by the revised commercial treaty between France and Poland, signed at Paris on December 9, 1924, which has just been ratified and is now effective. By virtue of the new treaty France is granted, in addition to most-favored-nation treatment, more extensive reductions in the Polish tariff than provided in the treaty of 1922, in return for which Poland is to get French minimum and intermediate rates of duty on a larger number of articles than provided for in the former treaty.

The Polish conventional reductions established by this treaty with France are extended also to the products of other countries having most-favored-nation ar-

rangements with Poland. Among the countries at present entitled to the Polish conventional duties are the United States, Great Britain, Belgium, Denmark, Czechoslovakia, Austria, Switzerland, Italy, and Japan.

Compared with the former schedule of Polish conventional duties, the changes provided in the new treaty are as follows:

Conventional reductions withdrawn on—Tobacco; sole and belting leather; cut or sewn leather for footwear; heavy footwear; certain manufactures of leather; lard and soft rubber manufactures; locomotives, turbines, and lifting apparatus; certain textile machinery; spun silk yarn; articles of artificial silk or half silk; knitted goods; men's wearing apparel; fancy and toilet articles; and accessories for writing, drawing, and painting.

Larger conventional reductions on—Pastes and condiments; vanilla; confectionery; fine cheese; sardines; oysters; varnished skins; gloves and leather for gloves; articles of porcelain; cosmetics and perfumery; articles of gold and silver; textile machinery not specified; automobiles weighing from 700 to 1,100 kilos; certain articles of silk.

Smaller conventional reductions on—Glue and gelatine; wood manufactures; medicinal chemicals in doses; copper wire; printing-trade materials; electric machines; motor plows; bicycles; automobiles weighing less than 700 or more than 1,500 kilos; cotton and woolen tissues; ordinary underlinen and clothing for women and children.

New conventional reductions established on—Polished rice; goat and kid upper leather; glove skins; artificial leather; tanned fur skins; cloth footwear; tires and tubes; dyeing extracts and preparations; ferroalloys; aluminum kitchen utensils; hand tools; woodworking machines; certain scientific instruments; photographic plates; electrical instruments and apparatus; parts of vehicles, including automobile chassis and bodies.

The conventional reductions remain unchanged on—Fish glue; olive oil; toilet soap; liquid inks; shoe and metal cleaning substances; cinematograph films; motor cycles; and common toilet articles.

[Information regarding the specific percentages of reduction on the various commodities may be obtained from the Division of Foreign Tariffs upon request.]

CUSTOMS REGULATIONS

ESTHONIA

Cablegram from Commercial Attaché C. J. Mayer, Riga, June 8

Censorship Certificate Required on Imported Films.

Cinematograph films imported into Esthonia must now be accompanied by a censorship certificate issued in the country of origin.

PERU

Consul Nelson R. Parks, Lima, April 30

Fumigation of Potatoes Required.

Upon arrival in Peru, shipments of potatoes from United States must be fumigated in the holds of the steamers under direction of the Seed Inspection Bureau, according to a decree of the Peruvian Minister of Agriculture, effective April 17, 1925.

SPAIN

Gaceta de Madrid, April 23

Details of Invoice Requirements.

After June 1, 1925, importers of foreign merchandise are required to present, at the time of clearance of their goods through the customhouse, the original invoice, with a copy on plain paper on which the name of the seller and purchaser may be omitted. After the copy has been checked with the original invoice the latter will be returned to the person concerned, or his agent, and the copy will pass to the appraisement officer. The invoice and its copy are to be considered confidential.

¹ Importation subject to a permit from the Ministry of Finance.

and for the exclusive official use of the appraisement officer.

When an invoice contains various items of the same class of merchandise with different prices for each of them, they may be grouped on the copy, provided the grouping does not confuse two or more tariff items. The price of the items grouped may be stated in a lump sum, in accordance with the prices shown on the original invoice, and the total amounts shown on the copy and on the original must be exactly equal.

By the original invoice shall be understood the invoice sent by the seller to the Spanish importer, and upon it shall be specified with due clearness the merchandise which is covered.

The invoice shall for the present be exempted from stamping and consular visa, and may be presented in Spanish, French, English, or Italian.

If at the time of customs clearance the importer or his agent does not have the original invoice and its copy, he must give a guaranty that he will present

them before the expiration of two months, beginning on the date of dispatch, for shipments of European origin, and before the expiration of a period of three months for shipments of non-European origin.

For failure to present the original invoice and its copy, as prescribed in the order, a fine of 5 per cent of the total amount of the duties, which shall in no case be less than 25 pesetas, shall be levied by the customs officials.

INTERNAL REGULATIONS AFFECTING TRADE

JAPAN

Cable from Acting Commercial Attaché Frank Rhea, Tokyo, May 29

Motion Picture Censorship Fee.

The National Centralized Motion Picture Films censorship regulations, which become effective in Japan on July 1, 1925, provide censorship fees of 5 sen (about 2½ cents) for each 3 meters of original films and 2 sen on duplicate films.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

JAPAN'S FIRST-QUARTER TRADE BY COUNTRIES

Paul P. Steintorf, Far Eastern Division

A review of Japan's foreign trade by countries for the first three months of 1925 reveals a number of changes in the distribution of shipments compared with the corresponding period of 1924.

Larger Export Trade with Most Countries.

Exports to nearly all of the leading countries recorded gains owing to the more favorable conditions obtaining this year. The largest increase occurred in shipments to the United States—which retained its position as the leading country of destination, having taken 41 per cent of the total exports during the quarter. The largest relative improvements, however, were recorded for the Netherlands East Indies, with totals of 10,392,000 and 19,391,000 yen for the 1924 and 1925 periods, respectively, or an increase of 86 per cent, and British India, shipments increasing from 22,252,000 yen to 35,770,000, or a gain of nearly 70 per cent. There was a substantial expansion also in export trade with the Asiatic mainland, as shown by the totals for China, Hongkong, and Kwangtung Leased Territory.

Shipments to Europe increased approximately 25 per cent over the 1924 quarter, owing to larger exports to Great Britain, Germany, and Italy, although there were declines in the totals for France and Belgium. Total shipments to South America were slightly above the corresponding period last year, the increases in exports to Chile and Argentina having more than balanced declines in exports to Peru and other South American countries.

The Import Movement.

Imports from Asia showed considerable improvement over the 1924 period, owing principally to heavy arrivals of raw cotton from India and slight gains in the totals of Kwangtung Leased Territory and the Netherlands East Indies. Declines occurred, however, in receipts from China, Hongkong, Federated Malay States, and the Philippines.

There was a decline of approximately 10 per cent in imports from Europe, the largest individual decreases being noted for arrivals from Germany, which fell off nearly 19 per cent in comparison with the 1924 quarter, and Belgium, which dropped from 11,278,000 yen in the first quarter of 1924 to 2,910,000 during the corresponding period this year. France was the only important European country which succeeded in increasing its shipments during the 1925 quarter.

Imports from the United States were valued at 235,783,000 yen during the past quarter—a decline of 7 per cent compared with the 1924 period. Although this is a fairly large decline, it becomes of less importance when it is remembered that during the first three months of last year the special customs duty exemptions were in effect and imports of reconstruction materials were at their highest point. Comparison with the same period of 1923, when conditions were more nearly normal, shows an increase of nearly 115,000,000 yen, or 95 per cent.

There was a slump of more than 50 per cent in imports from South America, but a very substantial increase in arrivals from Africa, owing principally to heavy purchases of Egyptian raw cotton. Australia also recorded a marked increase during the 1925 period.

Trade by Countries Compiled.

In the following table the value of the trade by leading countries is given for the first quarters of 1924 and 1925:

Japan's foreign trade by countries during first quarter of 1924 and 1925

Trade Conditions in South China

Based on dispatch from Trade Commissioner Osborne S. Watson, Canton, May 27

Import and export business is generally quiet throughout the district.

Flour Markets—Silk—Cotton and Woolen Piece Goods.

Stocks of flour in Hongkong are estimated at 420,000 sacks and a steady tone prevails. In Canton the flour market is stagnant, owing to alleged attempts at collection of a flour tax by unauthorized soldiers.

The silk-filature strike has ended. According to latest reports the outlook for this year's crop is not promising. Due to bad weather and the strike among the filature workers the silk season began late. The market is inactive. Silk shipments during the season ended May 1, 1925, totaled 61,500 bales of raw silk, of which the United States took 31,400 bales, France 29,700, and England 500; and 51,700 bales of waste silk, of which the United States took 25,600 bales, France 15,500, and England 7,400.

The cotton and woolen piece-goods markets are quiet. Yarn demand around Canton is good.

Kerosene Sales Restricted—Metal Market Dull—Automotive.

The tax on kerosene is still in effect, with sales being restricted by foreign companies. A Russian ship has arrived in Canton with a cargo of Russian kerosene and gasoline.

The metal market is dull and weak prices prevail.

Imports of motor cars into Hongkong for the first quarter of 1925 totaled 169, of which 106 were from the United States and 53 from Great Britain. During this period 37 motor cycles were imported, Great Britain supplying 19 and the United States 5.

See "Australia plans unification of railroads" in this issue.

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

LARGE INCREASE IN BRAZILIAN EXPORTS TO UNITED STATES

Consul Robert R. Bradford, Rio de Janeiro

The total value of exports from Brazil to the United States during 1924, as recorded at all the American consulates in Brazil, was \$189,504,817, a net increase of \$40,534,492—nearly 30 per cent—over that of 1923.

The increase was almost entirely due to higher coffee prices, shipments from the ports of Santos and Victoria accounting for \$45,212,689 out of a gross increase of \$46,601,317 in declared exports for all Brazil. Coffee shipments from the two above ports totaled 825,209,352 pounds in 1924 as compared with 825,895,620 pounds in 1923, a decrease of 686,268 pounds, while the value rose from \$104,742,430 in 1923 to \$149,900,699 in 1924.

Aside from Santos and Victoria, Manaus was the only consulate to show an increase in 1924 declarations, as a result of larger shipments of Brazil nuts and a resumption of consignments of caucho balls.

All other consular offices in Brazil showed decreases in declared exports in 1924 as compared with 1923.

Total Value of Exports to United States by Consular Offices.

A comparative statement of the value of exports to the United States from the various consulates follows:

Value of exports certified at American consular offices in Brazil for United States

Consulate	1923	1924
Bahia.....	\$8,533,714	\$7,281,418
Para.....	4,344,680	3,832,550
Manaos.....	4,259,990	5,648,618
Maranhao.....	55,274	42,970
Rio de Janeiro.....	19,634,711	19,127,568
Victoria.....	5,225,432	10,947,910
Pernambuco.....	4,244,001	1,763,387
Ceara.....	1,601,075	1,159,689
Porto Alegre.....	268,936	9,249
Rio Grande do Sul.....	501,038	288,324
Santos.....	99,820,290	139,310,501
Sao Paulo.....	481,184	92,663
Total.....	148,970,325	189,504,817

Decreases in Cacao, Skins, and Rubber Shipments.

Smaller cacao and skin shipments were largely responsible for the decline in exports from Bahia.

Lower prices for crude rubber and decreases in shipments of timber and deerskins are accountable for the drop in exports from Para.

Fewer shipments of deerskins and none of goatskins chiefly caused the decrease from Maranhao.

Smaller Exports of Manganese, Hides, Sugar, and Carnauba Wax.

Smaller shipments of manganese ore and hides and skins accounted for the decline from Rio de Janeiro. Coffee shipments were, however, much larger than in 1923.

Sugar and skin exports from the Pernambuco district decreased.

Fewer shipments of goat and sheep skins and carnauba wax were reported from the Ceara consular agency.

Disturbances Affected Trade in Some Districts.

Declared exports from the Alegre district declined in value \$259,687 in 1924, as compared with 1923. Unsettled political conditions, resulting in a total cessation of green cattle hide shipments, accounted for the difference. Exports to the United States were virtually wiped out, values dropping from \$268,936 in 1923 to \$9,249 in 1924.

Similar conditions adversely affected the export trade in the districts of the consular agency at Rio Grande do Sul and of the consulate at São Paul.

Increased Trade Movement Through Nuevo Laredo, Mexico

Consul Harry L. Walsh, Nuevo Laredo, May 12

Nuevo Laredo, the Mexican port across the border from Laredo, Tex., ranks as Mexico's second port of entry. In 1923 it handled 39 per cent of all the imports intended for Mexico City, being second only to Vera Cruz with 52 per cent. Other border ports averaged only about 1 per cent each.

Imports During 1924 Show Substantial Increase.

An increase of 12 per cent in the importation of American goods into Mexico through Nuevo Laredo occurred in 1924 as compared with 1923. This net gain was achieved despite a large decrease in foodstuffs, such as wheat flour, eggs, and lard. In round figures, the import movement amounted to 187,000 metric tons in 1924 as compared with 166,000 tons in 1923. The increased tonnage was made up chiefly of mineral products, vehicles, and chemicals.

Chemicals Show Largest Gain.

Probably the most significant increase in value of imports was that of 60 per cent in chemicals and drugs. The chemicals making up this movement were muriatic and sulphuric acid, carbide, soda ash, drug supplies generally, peroxide, magnesia, and arsenic.

Mineral Products, Vehicles, and Electrical Apparatus Increase.

Mineral products showed a gain of 14,000 tons, almost entirely through larger imports of crude petroleum for the use of the Mexican National railroads. The movement of bulk oil increased more than 400 carloads over 1923 figures.

Imports of vehicles increased by about 10,000 tons, made up largely of railroad equipment, stock cars, tank cars, and passenger coaches. Automobiles and

trucks also recorded gains, totaling 90 carloads. Electrical machinery, electrical apparatus, and hardware contributed to the increase in machinery imports.

Importations of Textiles Much Larger Than Last Year.

Imports of textiles increased from 979 tons for 1923 to 1,489 in 1924. Figures for the carload commodity movement across the international bridge at this point indicate that this increase was contributed to by bagging and army supplies, such as leggings and haversacks. A greater part of the textiles imported through Nuevo Laredo are composed of less-than-carload shipments, for which no detailed statistics are available.

Exports Increase in 1924.

The export movement for 1924 totaled 14,887 tons as compared with 14,396 tons in 1923. Ores, onions, tomatoes, and vegetable fibers, chiefly ixtle and palm work, constitute the bulk of exports.

Business in Colombia Gradually Recovering

Consul Maurice L. Stafford, Barranquilla, May 6

The United States continues to take the greater part of the country's exports. There were 11,000,000 pounds of coffee, approximately 17,000 hides, gold bullion to the value of \$47,000, and good shipments of tagua nuts and tropical gums invoiced to the United States during April by the Barranquilla consulate.

Buying of Food Products Unsteady.

The trade in American provisions, especially lard and flour, has been affected by price fluctuations. When the price for flour rose, buyers placed orders sufficient to meet immediate needs only, and when the price dropped in April they began to hold off for further declines. The result was a rather disappointing month for the agents of American mills. Business in packing-house products, canned goods, and fancy groceries has been in the usual moderate but steady volume. The London and River Plate Bank, already operating in Bogota and Medellin, established an agency in Barranquilla to look after the coast business.

Port Development

The volume just issued entitled "Port Development," by Roy S. MacElwee, commissioner of port development, Charleston, S. C., and former Director of the Bureau of Foreign and Domestic Commerce, deals mainly with questions of government administration, traffic, and solicitation, and is to be followed by an amplified edition of the author's previous work on "Ports and Terminal Facilities." The volume contains many instructive illustrations, geographical and statistical charts, and will be useful to those engaged professionally or commercially or as students in the intricate relations of seaports to foreign and domestic commerce. A map of the United States, superimposed on a map of Europe, showing the great continental seaports and the territories which they serve is employed by the author to demonstrate the inadequate number of developed American seaports compared with those required to dispatch the water-borne trade of the many nations of Europe. While Doctor MacElwee's book contains many facts concerning European port development, it is designed mainly to arouse an interest in the subject in the United States. The part dealing with free ports will be of special interest in connection with the free-port movement in the United States.

EUROPE

Samuel H. Cross, Chief, European Division

BRITISH GOVERNMENT FURTHER ASSISTS TRADE

Trade Commissioner Charles E. Lyon, London

The British trade facilities act, 1921-24, has now been in operation a sufficient length of time to show repayment of some of the loans. Most of them cover a period of 10 to 30 years, but in a few cases a sinking-fund provision makes serial repayment possible. Altogether, the guaranties, principal and interest, total \$56,577,811 up to May 1. On March 31, 1924, the sum of £169,614 had been repaid, and on March 31, 1925, this total had been increased to £959,711. All of the guaranties, as approved, are not taken up and some of them are later reduced or increased.

The Act as an Unemployment Relief—Trade Guaranties.

Originally this act was drawn up with the idea that these loans would enable capital projects to be put into effect—preferably within the Empire—and would call for manufacture of British material which, in turn, would bring about fuller employment of British labor. In this way the act fulfilled its object as an unemployment relief. Just how much of the reduction in unemployment may be attributed to the activity resulting from the enterprises that have been in the market for over £50,000,000 can not be determined, but unemployment is still well over a million.

After the present Government took office, the whole principle of trade guaranties was up for discussion in Parliament and numerous criticisms were made. Since the present limit of \$65,000,000 is so nearly approximated, it has apparently been decided to leave any new features until such time as appeal is made for an increase in the limit to which guaranties may go. There has been no detailed statement as yet as to the administration costs to the Government or as to the sums which it has been necessary to write off.

Lower Cost of Loans.

One strong feature of the principle, in the minds of the petitioners for assistance, is the lower cost of the loans when they carry the Government indorsement. Another feature is the large proportion of guaranties that are an extension of the sum originally approved, although it is not clear from the returns whether such extensions point to prompt or tardy success in the operation of the assisted companies.

COMMERCIAL INTELLIGENCE

A. S. Hillier, Chief, Commercial Intelligence Division

TRADE LISTS AVAILABLE

The Commercial Intelligence Division has recently compiled the following trade lists, of which mimeographed copies may be obtained from the Bureau of Foreign and Domestic Commerce or its district or co-operative offices by referring to the titles and file numbers:

DRY GOODS

Importers and dealers:

Bahamas	LA-34100.
Ceylon (revision)	FE-22013-B.
Denmark (revision)	EUR-2009-B.
Dutch Guiana (revision)	LA-17005-A.
Guadeloupe, French West Indies	LA-35202.
Hawaiian Islands (revision)	FE-26005-B.
Madagascar	EUR-20001.
Rumania (revision)	NE-1012-A.
Scotland	BE-4014.
Venezuela (revision)	LA-22019-B.

CLOTHING

Importers and dealers:

Bahamas	LA-34101.
Ceylon	FE-22024.
Denmark	EUR-2045.
Egypt	NE-14055.
England	BE-2067.
Rumania	NE-1021.
Venezuela	LA-22036.

DEPARTMENT STORES

Canada	BE-1057.
Ceylon (revision)	FE-22008-B.
Egypt	NE-14054.
England (revision)	BE-2033-B.
Jamaica, British West Indies	LA-34704.
Scotland	BE-4016.

DRY GOODS AND CLOTHING

Importers and dealers:

British Guiana (revision)	LA-16010-B.
British Honduras (revision)	LA-26009-A.
Canary Islands	EUR-19002.
Palestine (revision)	NE-10009-B.
Persia	NE-12004.

Japanese Emigrants' Remittances to Japan

During the 12 months ended November 30, 1924, Japanese emigrants remitted to Japan approximately 33,800,000 yen through the Yokohama Specie Bank, according to statistics compiled by the bank. Of this amount, 20,600,000 yen were sent from the United States, 4,200,000 from British overseas territories, 3,500,000 from Brazil, 2,300,000 from Chile, 200,000 from Argentina, 1,000,000 from Peru, 200,000 from the South Sea Islands, and 1,800,000 from other countries.

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The Department of Commerce announces the following figures covering basic industrial and commercial movements in May and further figures for the month of April:

Industrial Indicators.

Early reports on business conditions in May showed declines from April in the principal industrial indicators, such as the output of pig iron, receipts of wool, deliveries of silk, and orders for locomotives and passenger cars, but orders for freight cars increased. Trade and financial indicators also declined, including mail-order sales, business failures, new incorporations, and new security issues, but prices of stocks averaged higher than in April.

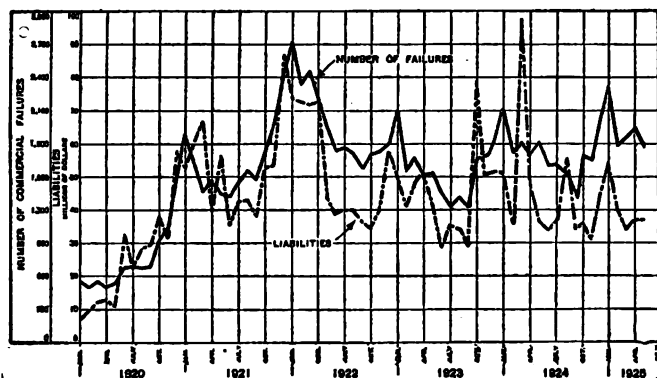

Compared with May, 1924, early industrial indicators increased, such as pig-iron production, freight-car orders and deliveries, and stocks of silk, while wool receipts and orders for locomotives and passenger cars declined.

Trade and Financial Items.

Trade and financial items were generally higher than a year ago also, including mail-order sales, new incorporations, new security issues, stock prices, call-money rates, and liabilities of failing firms. Decreases from a year ago occurred in number of failed firms, commercial-paper interest rates, the public debt, and Government expenses.

NUMBER OF BUSINESS FAILURES AND DEFAULTED LIABILITIES

(May, 1925, last month plotted)

Data from Survey of Current Business.

The following table gives such data from the June issue (No. 46) of the Survey of Current Business as have been received up to June 4, 1925.

All items given in the following table correspond with similar information in the issue of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the Survey, where specific descriptions of the data and their sources are given. In addition to figures given from Government sources, there are also incorporated for completeness of service the figures from other sources generally accepted by the trades, the authority and responsibility for which are noted in the monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for \$1.50 per year.

¹ Revised.

GREAT VARIETY OF CIRCULARS ISSUED BY BUREAU

Many special circulars in mimeographed form are issued by the bureau in addition to its various regular and special publications. These circulars are distributed to those interested, including persons and firms whose names are on the Exporters' Index, and copies may be obtained from the bureau or its district offices. The 65 circulars listed below were issued by 19 different divisions during the week ended June 8.

AGRICULTURAL IMPLEMENTS DIVISION

- No. 3. Here and There in the Implement World.
No. 16. Monthly Export and Import Bulletin—April.

AUTOMOTIVE DIVISION

- No. 44. Automotive Foreign Market News Bulletin.

CHEMICAL DIVISION

- No. 63-B. Foreign Coal-Tar Products Market News.
No. 63-D. World Notes on Paints, Varnishes, and Pigments.
Imports for consumption through New York and other ports of the United States for May, 1925, dyes, synthetic aromatic chemicals, medicinals, pharmaceuticals, intermediates, and other coal-tar products.

COAL DIVISION

- No. 327. Hungarian Coal Industry in 1924.
No. 330. Exports of Welsh Anthracite to United States and Canada, March, 1925.
No. 334. Notes on Foreign Coal Trade.
No. 335. Egyptian Coal Markets.
No. 337. Canadian Coal Situation.

COMMERCIAL LAWS DIVISION

- No. 86. Trading Under the Laws of Austria 1.

FAR EASTERN DIVISION

- No. 40. Far Eastern Trade News.

EUROPEAN DIVISION

- No. 44. European Economic and Trade Developments.

FOODSTUFFS DIVISION

- No. 70. British Dried Fruit Trade in 1924.
Foodstuffs 'Round the World:
World Dairy and Poultry News.
Canned and Dried Fruits.
Foreign Notes on Meats, Fats, Oils, and Livestock.
Grain and Grain Products.

- Foodstuffs 'Round the World—Continued.
Fishery News.
Tropical Products.

HIDE AND LEATHER DIVISION

- No. 404. Exports of Hides and Skins from British India during 1924.
No. 465. Market for Tanning Materials in Germany.
No. 467. Increase in United States Leather Exports during the First Quarter of 1925.
No. 476. Cause for Increased Prices of Divi-Divi from Venezuela.

INDUSTRIAL MACHINERY DIVISION

- No. 511. American and German Machinery Trade with the Dutch East Indies.
No. 515. Ice-making and Cold Storage Plants in China and Chosen (Korea).
No. 541. Reduced Sales in British Machine Tool Market.
No. 542. The South African Market for Home Knitting Machinery.
No. 547. Road-making Machinery Catalogues Requested.

IRON AND STEEL DIVISION

- No. H-11. Foreign Hardware Bulletin.

LATIN AMERICAN DIVISION

- No. 55. "Latin America at a Glance."
No. 173. Living and Office Operating Expenses in Peru.

LUMBER DIVISION

- No. 327a. Swedish Invention to Prevent Discoloring of Lumber.
No. 431a. 1924 Exports of Poles and Piling by Customs Districts.
No. 445. French Walnut.
No. 452. The Rumanian Lumber Market in March.
No. 462. Construction in Cuba and Costa Rica and Cuban Lumber Imports.

(Continued on p. 680)

FOREIGN TRADE OPPORTUNITIES

Reserved information may be obtained from the Bureau and its district and cooperative offices by firms and individuals on the Exporters' Index upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

Commodities	No.	City and country	Purchase and agency	Commodities	No.	City and country	Purchase and agency
Agricultural implements:				Iron, steel, hardware—Contd.			
Agricultural implements, cultivators, and fodder machines.	*15462	Miskolc, Hungary	Purchase and agency.	Crucibles of about 100 pounds capacity for foundry heat.	*15449	Amoy, China	Purchase.
Dairy machinery.	†15461	Dunedin, New Zealand.	Do.	Dies and punches for lock work, small.	*15449	do	Do.
Plows for road building.	†15451	Madrid, Spain	Agency.	Hardware.	†15431	Bucharest, Rumania	Purchase and agency.
Tractors.	†15463	Melbourne, Australia.	Do.	Hardware specials, box hinges, and shipping room supplies.	†15448	Winnipeg, Canada	Agency.
Tractors, small, for hilly country.	*15464	Palermo, Italy	Purchase.	Hotel and restaurant equipment.	†15461	Dunedin, New Zealand.	Purchase and agency.
Automotive products:				Household utensils.	*15409	Stockholm, Sweden	Do.
Automobile accessories.	*15470	Liverpool, England	Agency.	Iron, sheet, sorted; galvanized corrugated iron roofing; boiler sheets; green wire netting; wire nails, etc.	*15446	Harbin, China	Purchase.
Automobile bearings and bushings, and anti-skid tire chains.	†15459	Durban, South Africa.	Do.	Iron sheets, galvanized, plain, and corrugated.	†15447	Copenhagen, Denmark.	Agency.
Automobiles.	*15463	Melbourne, Australia	Do.	Kitchen ware, enameled.	†15414	Arecibo, Porto Rico	Do.
Automobiles, medium priced.	†15457	Prague, Czechoslovakia.	Do.	Lamps, automobile.	†15459	Durban, South Africa	Do.
Automobiles, small, and light delivery trucks.	*15458	Frankfort, Germany	Do.	Metal fittings for furniture.	*15444	Melbourne, Australia	Do.
Automobiles, motor trucks and accessories.	*15462	Miskolc, Hungary	Purchase and agency.	Metal sheet and metal-working tools and machines.	†15476	Friburg, Germany	Agency.
Automobiles and accessories.	*15456	Hamburg, Germany	Purchase.	Metal stampings and sheetings.	†15461	Dunedin, New Zealand.	Purchase and agency.
Motor cycles.	†15438	Frankfort, Germany	Agency.	Pipe, black and galvanized, gas, steam, and water.	†15445	Berlin, Germany	Purchase.
Motors of 1 and 1½ horsepower.	†15460	Casa, France	Do.	Pipes and fittings.	†15443	Paris, France	Agency.
Motors, marine.	*15441	Santos, Brazil	Do.	Pipes and fittings, all kinds.	†15431	Bucharest, Rumania	Purchase and agency.
Chemicals:				Razors, safety.	†15406	Prague, Czechoslovakia.	Agency.
Bichromate of potash and soda.	†15407	Barcelona, Spain	Do.	Tin plate in 100-ton lots.	†15445	Berlin, Germany	Purchase.
Caustic soda and soda ash.	†15442	Rio de Janeiro, Brazil.	Do.	Tools.	†15426	Vienna, Austria	Agency.
Chemicals, heavy.	†15415	Callao, Peru	Do.	Tools and tool kits.	†15494	Berlin, Germany	Do.
Chemicals, industrial, and fertilizers.	†15392	Vienna, Austria.	Do.	Wire.	†15481	Rio de Janeiro, Brazil	Do.
Dyes.	*15405	Montreal, Canada.	Purchase.	Wire, plain and barbed.	†15442	do	Do.
Lead, white.	†15422	Rio de Janeiro, Brazil.	Agency.	Wrenches, drop forge.	†15469	Durban, South Africa	Do.
Naval stores.	†15392	Vienna, Austria.	Do.	Zinc plate.	*15446	Harbin, China	Purchase.
Rosin and turpentine.	*15399	Genoa, Italy	Do.	Leather:			
Solvents and wax substitutes.	*15405	Montreal, Canada.	Purchase.	Shoe and glove leather.	*15490	Copenhagen, Denmark	Agency.
Turpentine.	†15504	Ottawa, Canada.	Agency.	Lumber and products:			
Drugs and pharmaceutical preparations:				Barrel staves, white oak.	*15435	Bordeaux, France	Do.
Medicines, prepared.	†15417	Montreal, Canada.	Do.	Dowels, brook.	*15437	Liverpool, England	Purchase or agency.
Medicines and pharmaceuticals.	†15396	Mexico City, Mexico.	Do.	Handle blanks and stock in carload lots.	*15430	Walkerville, Canada.	Purchase.
Toilet preparations.	†15406	Prague, Czechoslovakia.	Do.	Southern pine lumber.	†15481	Rio de Janeiro, Brazil.	Agency.
Toilet specialties and perfumes.	†15396	Mexico City, Mexico.	Do.	Machinery:			
Electrical appliances:				Bakers' and butchers' machinery.	†15461	Dunedin, New Zealand.	Purchase and agency.
Cables, electric.	†15448	Paris, France	Do.	Bolt, nut, and screw machines, automatic.	†15445	Berlin, Germany	Purchase.
Dish washer, electric, for hotels.	†15451	Madrid, Spain	Do.	Cranes, electric, on movable track.	*15433	Montevideo, Uruguay	Do.
Electrical appliances.	†15428	Vienna, Austria	Do.	Drill-grinding machines, twist, automatic.	†15428	Berlin, Germany	Agency.
Radio sets and parts.	†15450	Oslo, Norway	Purchase.	Engines, internal-combustion, and gas producers for same.	*15465	Durango, Mexico	Purchase.
Do.	*15453	Catania, Italy	Agency.	Engines, producer gas.	*15432	do	Do.
Transformer substation equipment.	*15500	Montevideo, Uruguay	Purchase.	Explosives manufacturing machinery.	*15434	Montevideo, Uruguay	Do.
Wires, resistance, for electric irons, etc.	*15452	Sao Paulo, Brazil	Purchase.	Fishhook manufacturing machines.	*15449	Amoy, China	Do.
Foodstuffs:				Kettling machinery, laundry.	†15420	Mexico City, Mexico	Do.
Canned fruits.	†15373†	Helsingfors, Finland.	Agency.	Ice-making machines.	†15422	Madrid, Spain	Do.
Confectionery (lozenges, licorice, and gum).	*15390†	Antwerp, Belgium	Purchase.	Incinerators.	*15421	Kingston, Canada	Do.
Confectionery and chocolates, best quality.	*15394†	Stuttgart, Germany	Agency.	Lathes, turret, automatic machines, and special machines for automobile industry.	†15479	Dresden, Germany	Agency.
Flour.	†15481†	Rio de Janeiro, Brazil	Do.	Machinery.			
Flour, wheat and rye.	†15391†	Oslo, Norway	Do.	Machines, piston-working and grinding.	†15425	Mainz, Germany	Do.
Flour, hard wheat.	*15396†	Quayaquil, Ecuador	Do.	Machines and tools, and material-testing machines and planers.	†15429	Vienna, Austria	Do.
Flour and farina, best quality.	*15395†	Mannheim, Germany	Sole agency.	Machine tools.	†15433	Frankfort, Germany	Do.
Fruits, canned and dried.	†15397†	Prague, Czechoslovakia.	Agency.	Do.	†15425	Mainz, Germany	Do.
Fruit freshes, (apples and oranges).	†15393†	Helsingfors, Finland.	Do.	Machine tools, small.	*15427	Paris, France	Do.
Greases for soap making.	*15399†	Genoa, Italy	Do.	Machine tools and metal-working machinery.	*15463	Melbourne, Australia	Do.
Do.	†15415†	Callao, Peru	Do.	Metal shaping and sawing machines, drilling and milling machines and disk lathes.	†15477	Leipzig, Germany	Do.
Lard.	†15397†	Prague, Czechoslovakia.	Do.	Metal-working machines, special purpose.	†15424	Berlin, Germany	Do.
Do.	*15398†	Quayaquil, Ecuador	Do.	Milling machines, gear hoppers, revolving lathes, and circular grinding machines.	†15478	do	Do.
Oils, cottonseed and soya bean.	†15401†	Callao, Peru	Do.	Milling machines for manufacture of sewing machines.	†15475	Cologne, Germany	Do.
Oils and fats.	*15392†	Vienna, Austria	Do.	Motors, marine and stationary.	*15441	Santos, Brazil	Do.
Packing-house products and rice.	†15400†	San Jose, Porto Rico	Do.	Sawmill, complete.	*15418	Durango, Mexico	Purchase.

DISTRICT OFFICES CAN HELP YOU

District offices of the bureau were established to expedite the distribution of commercial information, to ascertain the needs of the business men of the country, and to establish closer cooperation between Government and private agencies interested in the extension of foreign trade.

Each district office has on file confidential information regarding trade opportunities, lists of importers in foreign countries, trade directories, etc.

Each district office receives specifications, samples, exhibits, etc., for a limited time, and these may be inspected by interested persons.

Each district office arranges conferences between exporters and consular officers, commercial attachés, and trade commissioners when the latter visit commercial centers during leave of absence in this country.

Each district office keeps on file all publications of the bureau, as well as publications of other branches of the Government that will be of assistance to American exporters. Each office acts as sales agent for the Superintendent of Documents, Washington, D. C., for the sale of the bureau's publications.

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

JULIUS KLEIN, Director Bureau of Foreign and Domestic Commerce

Editorial Board: Griffith Evans, Grosvenor M. Jones, E. Dana Durand, Eugene S. Gregg, and Archibald J. Wolfe

Why the Trade Dispute?

An analysis of trade complaints submitted to the Division of Commercial Laws over the period of the past three years discloses some interesting points.

In the first place, the legitimate complaints founded on fact against reputable American concerns are comparatively few. The "fly-by-night" concern which relies on the distance of the prospective victim and the occasional carelessness of the credit department causes trouble in all countries. A firm either in the United States or abroad which is victimized by such export parasites usually has its own carelessness to blame. There are ample sources of credit information at home and abroad, and confirmed irrevocable credits can always be demanded as a protection in doubtful cases.

The chief cause of trade disputes, omitting collections of overdue accounts, is the absence of "the meeting of the minds" in the original sales contract. The failure to comprehend fully just what the other party desires, or the disregard of these desires, plants the seed at the outset for future dissatisfaction and dispute. The original sales contract should be detailed and comprehensive.

Certain items should be clearly understood by both parties. First the quality and quantity of merchandise should be definitely agreed upon. In many cases quality can not be agreed upon without the use of samples. Subsequent shipment should conform strictly to samples submitted. In specifying quantity care must be exercised so that misunderstandings as to the meanings of terms will not subsequently arise. If the American exporter sells in terms of tons, hundredweight, etc., it should be understood by both parties just what is meant by these terms.

In the second place terms of payment ought to be set down clearly. Instructions to the bank should be detailed, and definite extensions should be granted when circumstances warrant, but if such extensions are granted promiscuously customers are apt to develop "chronic extensionitis." It is inadvisable to overload

your customer with goods which he can not move in time to meet his drafts. The writer personally favors (and the laws of many countries compel) the drawing of a new draft rather than an extension of the old one.

The time of shipment is an element of trouble, and the language of the contract should leave no room for doubt on this point. In case the exporter can not make shipment on the agreed date it should be ascertained by cable whether the buyer will accept later shipment. Many firms go ahead with shipments several months late, only to have the goods refused upon arrival at the distant port. Clearly the exporter has broken his contract and has thus placed himself at the mercy of the foreign consignee. A cabled acceptance of late shipment would have protected the shipper.

Packing instructions should be included in the original agreement and strictly adhered to. If the exporter is not prepared to meet the buyer's desires, he should not accept the order. Methods of packing which may seem peculiar to the exporter are probably requested by the buyer for good reasons. Once the method of packing is agreed to in writing it must be accurately followed. If the method requested by the customer is more expensive than that usually employed by the exporter the matter of additional charge should be covered in the agreement.

The matter of price must be definite. The agreement should state whether the price quoted is c. i. f., f. o. b. (named point), or f. a. s., and the "minds must meet" as to just what any one of the above quotations means.

Finally the exporter should keep all records of each transaction completely and separately. Copies of all documents, including the signed copy of the original agreement, should be kept in a separate file for a reasonable time after the completion of the transaction. Then, should a subsequent dispute arise, the exporter has his side of the case complete and readily available. Should it be necessary to resort to litigation, the exporter's attorney has the complete story and can proceed quickly and intelligently to settlement.

Many of the above points are elementary and well known to all export managers. They have been con-

stantly reiterated and emphasized, yet breach of these very points causes most of the disputes brought to the attention of the Commercial Laws Division.

A falling market or a rising exchange rate often makes a foreign consignee regret what turns out to be for him a loss. Human nature seeks a way out of a bad bargain. A definite written agreement specifically covering the points enumerated above prevents the buyer from breaking his contract with impunity.

[HAROLD DE COURCY.]

American Interests in London

Sales technique in Great Britain is perhaps more complicated than in any other export market. A manufacturer when selling in that field is confronted not only with a thoroughly organized system of local industrial establishments, but also a completely established commercial representation of other foreign competing nations. The American commercial community alone has from 1,500 to 2,000 representatives in London, and this constitutes our largest representation overseas. Many of these representatives not only have charge of their company's sales in the United Kingdom but also cover an area including continental countries and outlying portions of the British Empire. The organization of the British sales market is close-knit, and for this reason American companies must avail themselves of every advantage presented.

Many helps occur in the ordinary line of business and are hence known best by the commercial interests themselves. There are some few, however, of which full advantage is not taken, and among these attention is called to the benefits that will accrue to American business from closer cooperation with the foreign officers of the Department of Commerce.

Often the commercial attaché hears of opportunities for sales which are not known in the open market. American companies when making arrangements for their representation in Great Britain, whether these arrangements be for the original introduction of their goods or a change in representation of such lines as have already been established in that market, should advise the American commercial attaché stationed at Bush House, Aldwych, London W. C. 2, and whenever possible should promote closer personal relationship between their agents and the representative of the Department of Commerce.

Other American organizations in London which assist our business community located there are the consulate general and the American Chamber of Commerce. This latter institution disseminates regularly to the American business representatives information relative to developments in the British market and has furthered, in many ways, our commercial relations in that market.

On account of the complex nature of the British market, it is absolutely essential that American interests cooperate freely with one another. The three organizations mentioned are the principal agencies through which this cooperation is effected. Hence, American exporters and manufacturers should be sure that their British representatives work in close collaboration with these three institutions in London.

[HUGH D. BUTLER.]

Commercial Services Rendered by Bureau and District Offices

Correspondence Division, R. H. Brasel, Chief

The following table shows the number of commercial services rendered by the Bureau of Foreign and Domestic Commerce in Washington and its 11 district offices in the United States during the period July 1, 1924, to May 30, 1925, and the week ended June 6, 1925:

Class	Period July 1, 1924, to May 30, 1925	Week ended June 6, 1925
Total services rendered (The above total includes the following classified services in addition to many others which could not be identified under a specified group.)	1,862,755	138,407
Commodity:		
Agricultural implements.....	43,160	1,000
Automotive.....	164,805	8,081

¹ Does not include services rendered by foreign service of the bureau (32 posts, 80 representatives) and by the cooperative offices maintained by the bureau in 32 chambers of commerce and boards of trade in the United States.

² Including petroleum.

³ Information reserved from "Foreign trade opportunity" announcements printed in each issue of the COMMERCE REPORTS. (Name and address of foreign inquirers interested in the purchase of American goods, including references, cable addresses, and other details.)

Sugar Campaign Finished

The sugar campaign in Trinidad is finished. May petroleum production exceeded that of previous months. Plentiful rains have been favorable to crops. A fair increase in cacao prices may tend to relieve dull business conditions. (Vice Consul A. L. Demorest, June 13.)

World's Commercial News in Brief

The following are brief items compiled from data cabled by Government representatives stationed abroad, from official foreign publications, and from other sources. Countries included in the "Monthly Cable Reviews" are omitted from this section.

European Economic and Trade Developments

For reasons of Bureau administration, this heading includes also Canada

CANADA

Practically all Canadian crops are in better condition than at this time last year, according to the Dominion Bureau of Statistics. The present condition of wheat promises the highest yield since 1921. Spring wheat flour prices in Montreal remain unchanged. Extremely hot weather in eastern Canada has considerably stimulated retail business, which has shown also a marked revival in the west. Export activity in the automotive industry is increasing. Large quantities of European steel products are coming in through Montreal and Vancouver, principally from France, Belgium, and Luxemburg, at very attractive prices. The season's wool clip is beginning to arrive at western warehouses. The Dominion Bureau of Statistics combined index number for 51 common stocks was 106.2 in May as compared with 104.4 in April, the rise being due chiefly to the advance of textile, mining, and power securities. The miners' strike in Nova Scotia is assuming more serious proportions, but the employers are still insisting on a 10 per cent wage reduction.

DENMARK

The gross profit of the Danish State Railways for the fiscal year ended March 31 amounted to 5,360,000 crowns and the depreciation of property and equipment to 5,660,000 crowns, leaving a deficit of 300,000 crowns on the year's operations, as against a profit of 3,300,000 crowns for the preceding fiscal year, according to the preliminary accounts. Exports of bacon recently have been very low, and also the export movement in general, because of the continued internal difficulties resulting from recent labor conflicts.

FINLAND

One of the provisions in the gold revaluation plan is the repayment of advances of about 365,000,000 Finnish marks made to the Government by the Bank of Finland. This transaction may oblige the Government to seek a new foreign loan. It is felt that the success of the revaluation scheme will in a large measure depend upon the ability to secure financial assistance from abroad. The money market remains comparatively easy, with a slight decline in loans and discounts and a diminution in outstanding notes. It is expected that the new gold revaluation scheme will become effective early in the autumn and that no considerable commercial expansion will be undertaken before that event.

FRANCE

The general problem of French financial rehabilitation continues to be of primary domestic interest. The Finance Ministry has announced its intention to allow receipts under the Dawes plan to continue in the regu-

lar budget for the current year. The Government gives assurance that the 1925 budget will be balanced and that the 1926 budget will provide a surplus, and reiterates its intention to adopt whatever measures may be necessary to defend the franc. Domestic shares on the Paris Bourse maintain practically unchanged values, and quotations on foreign shares tend to advance. The statement of the Bank of France for June 11 indicates a decline in discounts to 3,770,000,000 francs, as compared with 5,170,000,000 francs on June 4. The wholesale price index at the end of May showed an advance of 8 points to 531, based on 1914 prices. The most striking advance in foodstuffs occurred in vegetables, which rose from 469 to 543, while animal foodstuffs showed a much smaller advance and colonial products a slight decline. The index of industrial materials dropped 5 points to 584. The index of retail prices in Paris advanced during May to 418, 9 points higher than on May 1.

GREAT BRITAIN

The first application by the present ministry of the safeguarding of industries act in Great Britain will be the imposition of safeguarding duties of 33⅓ per cent ad valorem on all lace materials, hand or machine made, separate or on garments. The French lace industry will be most affected by this tariff. Trade Commissioner Lyon, London, reports the British coal situation very quiet; heavy stocks are not diminishing, and price concessions are said to be easily obtainable, but buyers decline to come into the market. Prices are moving downward, according to the Times' index basic, and it is generally felt that the decline is the result of sound economic changes rather than of the return to the gold standard. Recent price cuts in iron and steel have not particularly stimulated orders, although pig iron is now selling at a figure enabling close competition with the Continent. Finished iron and steel prices continue to fall. A leading investment trust has been buying a considerable quantity of securities in the American market.

GREECE

The refugee situation in western Macedonia is progressing favorably, with some 20,000 families established and beginning to produce, according to Assistant Trade Commissioner Dickerson, Athens. A number of products not previously grown in that region are being cultivated with modern accessories and fertilizers. The area planted to tobacco has been measurably increased.

HUNGARY

Somewhat easier conditions are reported in the Hungarian money market, but only first-class credit risks have as yet succeeded in securing foreign loans at rates

lower than the local figure. Wholesale prices on a gold basis remained practically unchanged during April. The coal industry continues depressed, production during the first quarter of 1925 being 24 per cent less than during the first quarter of last year. Only 13 per cent of this production is actual cost, the remainder being lignite and peat. Budapest flour mills have produced at only 25 per cent of capacity during the last year. The Hungarian National Bank has reduced its discount rate to 9 per cent, which is 2 per cent lower than the Austrian rate.

ITALY

The unusually heavy importation into Italy in the early months of the year was terminated in May—at least so far as wheat, the principal item, was concerned. Industrial production is still maintained at a higher level. A seasonal decline in the demand for iron and steel has not yet diminished production in that industry. The crop outlook has been greatly improved by recent weather conditions.

LATVIA

The production of sugar from local sugar beets in Latvia appears to be assured by the conclusion of a contract between a Latvian sugar company and a Czechoslovak machine-building works. It is reported that the necessary machinery is to be purchased for one-third cash, with a guaranty by the Latvian finance ministry for the remaining two-thirds of the total sum

of 1,800,000 lats. The factory plans eventually to produce sufficient sugar to satisfy between 70 and 80 per cent of the domestic demand.

NORWAY

The Norwegian Government proposes to increase revenues by 1,700,000 crowns through the abolition of the postage exemption for Government departments, municipalities, etc. Considerable opposition to this measure has developed, however. Government expenditures for services on the national debt will be materially reduced when the 20,000,000-dollar loan, bearing 8 per cent, is redeemed in October. The calling of this loan will also make possible a reduction in very high amortization payments. Accompanying a further rise in the rate of the crown, the gold surtax on import duties has been lowered to 60 per cent.

YUGOSLAVIA

Reports from the Zagreb district in Yugoslavia indicate favorable crop conditions. Recent dispatches state that construction has already begun on several important railway projects. These include direct access to the Adriatic for Serbia, and Croatia is to be connected with the ports of Sebenico and Spalato. Negotiations for a Greco-Serbian alliance have ended. The Greeks refused to accede to the demands of the Serbs concerning the Salonika free zone and the Ghevgeli railway. A treaty of commerce and navigation between Yugoslavia and Japan was signed in Belgrade on May 27.

Far Eastern Trade News

CHINA

The commercial situation in China is responding to recent political disturbances, according to the weekly cable from Assistant Commercial Attaché A. H. Evans, Peking. Business in the Shanghai district has been affected by the seamen's strike, which has tied up coastwise and river shipping, and Hankow, of course, is similarly affected. Business in Tientsin and other northern ports reflects the Shanghai situation, while Canton reports that trade is coming to a standstill as a result of the local warfare. Railway communications have not been interrupted, but there is some strike agitation among railroad employees.

JAPAN

The Japanese Government has approved the formation of two companies with a capitalization of 10,000,000 yen each, to exploit the coal and oil resources of northern Saghalien, according to the weekly cable from Acting Commercial Attaché A. B. Calder, Tokyo. Preliminary trade returns for the first 10 days of June show exports of 64,700,000 yen and imports of 78,500,000. In comparison with the corresponding period of May there were increases of 8,700,000 and 15,500,000 yen in exports and imports, respectively. The import excess, totaling 13,800,000 yen, was 6,800,000 yen greater than during the corresponding period in May.

PHILIPPINE ISLANDS

The demand for copra continues active in the Philippine Islands, with almost all factors participating, according to the weekly cable of June 12 from Assistant Trade Commissioner E. B. George, Manila. Prices

again are very high, and the provincial price of rescado (dried copra) is now equivalent to 15.25 pesos per picul of 139 pounds, on the basis of delivery at Manila. Production has slightly improved, following the close of the elections; however, bad weather is interfering with the harvesting of the crop. Slackened conditions prevail in the abaca market. Prices declined heavily, particularly high US grades, which fell 5 pesos per bale (278 pounds) during the week. UKAY and low US grades are slightly firmer. Grade E was priced at 35 pesos per picul; grade F at 33; I, 29.5; JUS, 21.5; and JUK, 18. Because of the low prices obtaining, production has been below normal.

INDIA

The advance of the monsoon is slowing business considerably in India, according to the weekly cable from Trade Commissioner Donald Renshaw, Bombay, June 13. Everyone in a position to do so is leaving for the hill sections, and many of the foreign residents are sailing for vacations overseas. The rupee is firm at the advance and money is somewhat easier, with lower rates expected. So far, the progress of the monsoon has been satisfactory.

AUSTRALIA

The Australian Commonwealth Federal Parliament, which opened on June 10, has a number of important matters for consideration, including tariff and arbitration revision and the appointment of a commission for investigation in Northern Australia, according to cable advices from Trade Commissioner E. G. Babbitt, Melbourne. The area to be studied by the commission of

experts includes the Northern Territory, Northwestern Australia, and northern Queensland. It is anticipated that the commission will recommend the creation of a northern State. The wool situation remained unchanged during the week ended June 13, and wheat at the seaboard was selling at 6s. The latest development of the strike of the seamen's union is the de-

registration of that organization by the arbitration court.

On July 1 the Bureau of Foreign and Domestic Commerce will open a new office at Sydney, New South Wales, which will head the bureau's Australian organization. The office already existing at Melbourne will function as a branch of the Sydney office.

Latin America at a Glance

ARGENTINA

The cereal and wool markets in Argentina continue depressed, but meat exports are in excess of those of a year ago. It is estimated that there are 200,000 tons of shipping awaiting cargoes. Imports are increasing. (Cable from Commercial Attaché E. F. Feely, Buenos Aires, June 14.)

CHILE

The commercial situation in Chile, which has of late been adversely affected by restrictions of credit and a general lack of confidence, is now slightly improved because of more active retail purchasing. The energetic action of the Government in recent labor crises in the nitrate fields has contributed to the betterment through a renewed feeling of stability. Traffic movement over the southern lines of the State Railways during the month of May amounted to 386,000 metric tons. Customs collections for May were 8,605,000 gold pesos. (Commercial Attaché R. H. Ackerman, Santiago, June 14.)

URUGUAY

Interest in the wool market in Uruguay has revived slightly. Fine crossbreds are bringing from 7 to 7.50 pesos per 10 kilos. There is no interest in merinos. (Cable from Acting Commercial Attaché L. B. Clark, Montevideo, June 13.)

PERU

Peruvian trade has improved to a point where it may now be considered as satisfactory and the value of the Peruvian pound has risen to 4.09 to the dollar. A large cotton mill in Lima has closed down in order to dispose of its stocks of textiles accumulated during the recent depression. (Commercial Attaché H. B. MacKenzie, Lima, June 13.)

CENTRAL AMERICA

Conditions are generally good in Central America except in Honduras. Exchanges are steady, though there is not a large movement of coffee exports at this season of the year. The import market is not active, as the only crop being exported is that of bananas, which are controlled principally by large corporations, with fairly uniform production and pay rolls throughout the year.

HONDURAS

General business conditions in Honduras were poorer during May than in the preceding months, despite the decided increase in banana exports. Many merchants are overstocked and goods continue to arrive. Collections are slow and credits should be carefully considered. Military operations continue to destroy confidence. Production of silver during the first four months of the present year amounted to 789,000 ounces

and that of gold to 1,460 ounces. Banana shipments in May were about 1,800,000 bunches to the United States and 273,837 to Great Britain, making a total of about 2,000,000 bunches, which is some 800,000 bunches in excess of exports for April and almost double those of May, 1924. (Cable from Consul George P. Shaw, Tegucigalpa, June 12.)

MEXICO

Markets in Mexico are inactive and manufacturing plants are running at only part capacity. An agreement has been reached whereby the Guanajuato Reduction Co. will be able to continue operations. The strikes at the mines in Lower California have been settled. The Legislature of the State of Tamaulipas has granted a telephone concession to an American company, providing for a modern automatic system to be installed in Tampico, and several consolidations will be effected in Tamaulipas and eventually connected with American lines at Matamoros. A United States chain grocery system has recently opened its fourth store in Mexico City. American capitalists are establishing in the Federal District of Mexico a plant to produce artificial silk. (Trade Commissioner George Wythe, Mexico City, June 6.)

PORTO RICO

The commercial situation in Porto Rico is unchanged. Collections are fair and credits tightening. Little reduction has been made in stocks.

American Consular Officers on Leave

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name	Post	Expiration of leave	Address
Albrecht, Charles H.	Bangkok, Siam	June 23	217 South Forty-sixth Street, Philadelphia, Pa.
Burri, Alfred T.	Puerto Cortes, Honduras	do	Department of State, Washington, D. C.
Funk, Ilo O.	Genoa, Italy	July 11	Care Mr. Norman W. Funk, 333 Corona Street, Denver, Colo.
Lee, Frank O.	Bradford, England	June 28	1825 Phelps Place, Washington, D. C.
Orr, George	Panama City	July 1	115 South New Hampshire Avenue, Atlantic City, N. J.
Spamer, Carl O.	Amsterdam, Netherlands	July 30	4109 Alto Avenue, Windsor Hills, Baltimore, Md.
Waterman, Henry S.	San Jose, Costa Rica	June 26	2914 Clay Street, San Francisco, Calif.
Williams, Herbert O.	Brussels, Belgium	Aug. 6	241 Cross Street, Woodland, Calif.

MONTHLY CABLE REVIEWS

EUROPE

Samuel H. Cross, Chief, European Division

Industrial Expansion in Germany Depresses Business

Based on cable from Assistant Commercial Attaché Douglas Miller, Berlin, June 12

Passage of New Provisional Tariff Delayed.

Continued improvement in a number of German finishing industries, including aluminum, automotive, cotton, and textile machinery, weak-current electrical equipment, and also in the potash and nitrate industries, is reported during the past month. This improvement, together with favorable crop prospects—the best in 10 years—gives expectations of a decrease in both total imports and the present heavy import surplus. The situation of the heavy industries, however, remains extremely depressed in spite of the export surplus of the iron and steel industry during the new year. World-wide slackness in coal and iron and steel, together with adverse domestic, financial, and sales conditions, have placed the principal operators in such a position that considerable difficulty is expected in meeting short-term liabilities coming due this summer, both in Germany and abroad.

Domestic and commercial issues have temporarily given precedence to the security pact and the disarmament note in Reichstag debates, so that the passage of the new provisional tariff, to be used as a basis for commercial treaty negotiations, has again been delayed. Its passage substantially as proposed is, nevertheless, expected after a delay of several weeks, according to responsible information.

Coal Industry Overexpanded.

The German coal industry, which suffers from the competitive lignite and electrical power industries developed since the war, at present has a large part of its operating capital tied up in the 9,000,000 tons of coal stocks, valued at approximately 135,000,000 marks, and at present difficult of disposal. The extremely mild winter has been the immediate cause of the critical situation of the Ruhr coal industry, which extends to even the most efficient producers.

Iron and Steel Industry's Situation Serious.

The iron and steel industries, which during the past year have been consistently underbid by Belgian and French competition, have, since French stabilization measures, shown some improvement on both the domestic and foreign markets, but they still remain in a serious condition. Lack of adequate capital (due to investment in plant expansion during the inflation period and to the small profits of the postwar period of industrial expansion, and also decreased consumption) account for present financial stringency. The coal and iron industries are the bases of German industrial organization, and consequently have a most important effect upon continued German economic improvement. The most favorable aspect of the situation is the success which has attended the organization of the new Coal Syndicate and the new Steel Union and

A-products, and the Tube Cartel, the most important of the raw steel cartel subsidiaries. Permanent resuscitation of pre-war production levels is dependent, however, upon international understandings in these industries, in addition to organization of production and sales on the domestic market, which are progressing satisfactorily.

Public Finance Remains Favorable.

The status of the Reichsbank, as of June 6, shows a notable improvement in liquidity, the gold cover increasing from 38.9 per cent to 40.8 per cent, and combined gold and exchange reserves from 51.9 to 54.4 per cent during the previous week. This improvement was largely due to the decrease in discounts from 1,648,000,000 to 1,522,000,000 marks, and in note circulation from 2,609,000,000 to 2,488,000,000 marks. The present stringency in industrial circles has been effectively met by the Reichsbank by means of heavy reserve of exchange accumulated in anticipation of the present contingency, and no resultant reaction on exchange is therefore to be expected. Gradual reduction in the Government debt of the Rentenbank has reduced this figure from 1,172,000,000 to 1,140,000,000 marks, as of May 31. The Prussian State Bank has reduced its loan rate from 11 to 10 per cent and increased its limit for advance against securities quoted on the Berlin Bourse from 50 to 60 per cent of the market value.

Private Finance Shows Improvement.

The May monthly settlement period, together with the maturing of short-term industrial credits, has resulted in permanently increased tightness of the money market. Time money is now 10.5 per cent plus banking charges, as compared with 9.4 per cent the first week of May; while the private discount rate remains at approximately 8 per cent. A number of measures tending to lessen private financial restrictions include the reopening of dealing in futures on the Berlin Bourse, which is expected by the 1st of July. After a conference of the Stempel-Vereinigung (The Association of German Bankers) with brokers and commercial houses, a reform in the present method of dealing in stocks has been agreed upon, involving the creation of a central stock depositary and the substitution of settlement by depositary check for the present method. This is expected to result in a marked relief in Bourse technical operations and to release a considerable amount of credit for business purposes.

Foreign Credits Decrease.

A noticeable decline in foreign credit extensions on the Berlin market is evident. A number of special acceptance credits have been reported as accorded to Rhenish-Westphalia from England and the Netherlands. Other measures designated to relieve financial stringency include the release of insurance reserves for a wider field of agricultural and business investments, the reduction of the gold discount bank rate from 8 to 7 per cent, and general reductions in all private bank-

ing commissions. The general liquidation of security holdings are a result of the effect of industrial illiquidity has reduced the Berliner Tageblatt stock index of June 7 to 79 per cent of the January average. In spite of the recovery of May 11, the market closed on May 12 in a state of marked depression.

Unemployment Decreases.

Unemployment figures fell from 321,000 on May 1 to 281,000 on May 15. This decrease is seasonal and does not show the continued dismissal of an important number of employees in some of the larger industrial plants and mines, and fails to reveal the unfavorable condition of heavy industry. A further increase in general wage levels was effected during April, amounting to approximately 3 per cent of the previous figure. These increases will, however, be nullified by the passage of the proposed food duties, which will shift an important part of the taxation burden from direct taxation of industrial production to indirect taxation of general consumption.

German Taxation Extremely Heavy.

The weight of present taxation is shown in figures presented by Doctor Godhein, showing that total taxation in Germany amounts to 11,800,000,000 marks, while national income is estimated at from 27,000,000,000 to 34,000,000,000 marks. Actual taxation, therefore, amounts to from 39.4 per cent to 38.5 per cent of total national income, as compared with 25 per cent in England, 15 per cent in France, and from 8 to 10 per cent in America, if domestic debt charges—negligible in Germany—are not included.

Revalorization of Paper Mark.

Agreement in principle of Government coalition parties has been effected concerning the revalorization of paper-mark bonds and mortgages and certain other debts, public and private. Present proposals provide revalorization of industrial mortgages at 25 per cent, on municipal bonds at from 5 to 25 per cent, according to financial ability, and on Government bonds at 5 per cent, conditioned upon the fulfillment of reparation obligations. These measures replace the similar provisions of the third emergency decree but can not be regarded as a definite settlement of the revalorization question. A number of provisions in the bill compromise the plan, which is further complicated by the contradictory decisions of various judicial courts in Germany on revalorization cases. A gradual return to the constitutional requirements of payment in value received, as contrasted with paper-mark settlements, is the most important aspect of the revalorization problem.

Americans Affected by Bill.

Other parts of the revalorization bill revive mortgage obligations of those having title of real estate, or ownership in German concerns, and prejudice the security of credits based on such values.

Expansion of American banking in Germany is facilitated by the new law of deposits now under consideration by the Reichstag. Relaxation of present restriction on deposit and trust business in Germany, formerly necessary to control the flight of capital, is provided. These new regulations will probably be effective July 1, and will be valid until January 31, 1927. Other laws forbidding export of necessary commodities, the charging of excessive prices, withhold-

ing of goods from the market, and forcing sales at fixed prices will shortly be repealed by the terms of a bill submitted by the cabinet.

Little Improvement in Belgian Business

Based on cable from Commercial Attaché F. W. Allport, Brussels, June 13, with cooperation of the consul general at Antwerp

The expected improvement in the Belgian industrial and commercial situation failed to materialize during May, and there has been no relief from the commercial and industrial dullness of the past weeks. The continued depression is due partly to the renewed fluctuation of the exchange.

Financial Uncertainty Increases.

The fluctuations of the gold exchanges resulted in a 5 per cent net depreciation of the franc. Government bonds declined two points during the month and few securities showed increases. Bank, coal, and textile securities were lower than in April, while glass and colonials showed an improvement. The rediscount portfolio of the national bank showed a continued decrease, declining from 1,268,000,000 francs on May 7 to 1,126,000,000 francs on June 4.

Demand liabilities of the national bank recorded a further decline to 7,719,000,000 francs on June 4, compared with 7,792,000,000 on May 7 and 8,027,000,000 at the end of December. The successful flotation of a second \$50,000,000 loan in New York is welcomed as a further step toward assisting the Belgian exchange. The terms of this loan are considered satisfactory. Private banks are calling in outstanding paper and thereby forcing the liquidation of industrial stocks.

Exchange Fluctuations Harmful to Metallurgical Industry.

The fluctuations of the exchange caused metallurgical markets to mark a new depression after two weeks of relatively better business. Although the mills quoted higher franc prices to correspond with the higher sterling rates, this action met with no success, and buyers were reluctant to place orders. Large mills are still covered for two months, but the smaller concerns were giving liberal concessions from official prices to obtain orders. The labor situation in the Charleroi district is still unsettled, with employees and employers trying to come to an understanding on the basis of The Government plan involving a 5 per cent wage decrease, effective June 15, and an equal division of the funds set aside previously from wages.

Slight Improvement in Coal Markets.

Coal markets showed a slight improvement during May, although imports were less on account of the high rate of exchange of sterling and a threatened strike on the part of French miners. Extraction was also slightly reduced during that period.

Glass Industry Strong—Textiles Unsatisfactory.

The exchange movements were of considerable help to the window-glass industry, sales during May amounting to 19,500,000 feet out of a total production of 20,000,000 feet. The June sales are exceeding the production.

The textile industries, however, derived no advantage from the fall of the franc, and cotton spinning was the only branch showing a fair amount of activity. Flax spinners and linen weavers were operating on short time with no indication for a renewal of export busi-

ness. The situation among cotton weavers continued unsatisfactory, some mills considering shutting down altogether.

Diamonds Still Leading Article of Export to the United States.

Exports from Belgium to the United States, declared through American consulates during May, amounted to \$5,900,000, as compared with \$4,991,000 during April. Diamonds continued to be the leading item of export, showing a figure of \$1,807,000. Other leading commodities were steel products, valued at \$612,000; rabbit skins, \$560,000; plate glass, \$409,000; creosote oil, \$266,000; and cement, \$250,000. All these commodities, except plate glass and cement, showed appreciable increases over the April figures.

Available statistics on the Belgian foreign trade for the first two months of 1925 show that imports from the United States amounted to 316,000,000 francs, which is slightly less than during the corresponding period of 1924. Total imports for the same period totaled 2,671,000,000 francs, as compared with 2,775,000,000 francs for the first two months of 1924. The value of exports for the first two months of this year represents 77 per cent of the imports, with the latter showing an excess over the former of 625,000,000 francs, as compared with 818,000,000 francs in January and February, 1924, when exports were 70 per cent of the imports.

Evidences of Partial Improvement in Spanish Situation

Based on cable from Commercial Attaché Charles H. Cunningham, Madrid, June 11, with cooperation of American consuls in Spain

Indications that the general dullness in Spain is beginning to disappear have been noted in certain lines of Spanish business, although the textile industry around Barcelona and the iron mining industry in the Bilbao sector continue to be unsatisfactory. Buying in all branches is somewhat restricted as a result of seasonal dullness.

Improved Banking Situation.

The banking situation has grown decidedly better as a result of greater confidence. This is largely due to the fact that the directors of the bankrupt Banco de la Union Minera deposited within the period required by law 92,000,000 pesetas in guaranties. This practically insures the depositors against losses but offers no certainty of recovery to stockholders.

Bank clearings at Madrid during May totaled 1,500,000,000 pesetas, an average of 65,000,000 pesetas per business day, as compared with 46,000,000 pesetas per day during April. Total debits and credits at Barcelona amounted to 1,300,000,000 pesetas as compared with 1,090,000,000 pesetas in the previous month, while clearings at Bilbao also increased, reaching 146,000,000 pesetas as compared with 143,000,000 pesetas.

Stock Exchange Transactions Unchanged.

The volume of transactions on the Madrid and Barcelona bourses during May was practically the same as in April. At Bilbao, however, a 25 per cent decrease in transactions occurred. Industrial securities, with the exception of hydroelectric shares, were generally weak. Rails also tended to decline as a result of the Government policy of supporting extensive loans for the construction of new and competing lines. While public debt issues tended to decline, banking

stocks were strong, reflecting the substantial earnings of Spanish banks and the improved banking situation.

The value of the peseta on the exchange market was maintained with little variation throughout May. The recent steadiness of the currency and the comparative cheapness of the dollar as a result of peseta advances during the previous month favored American exports to Spain, and an increase in this trade is noticeable.

Note Circulation Increases.

The statement of the Bank of Spain for June 6 shows discounts 46,000,000 pesetas higher than a month earlier, while guaranteed credits showed a rise of 130,000,000 pesetas, and note circulation increased 50,000,000 pesetas. The debit balance of current accounts, on the other hand, decreased by 100,000,000 pesetas. During the month the Government contracted an overdraft of 66,000,000 pesetas with the Bank of Spain—an amount that represents roughly the deficit in Government operations for the month.

New Loan Favorably Received.

The dependence of the Government on advances by the Bank of Spain was ended on June 5 by the flotation of a 500,000,000 peseta short-time loan which had been authorized about May 20. This loan was ten times oversubscribed, indicating the continued liking of the Spanish people for Government issues, and also the favorable yield of the present issue in comparison with the 4 per cent consolidated debt and the short-time obligations bearing a lower interest rate. The chief oversubscriptions came from Bilbao, Pamplona, and the Basque Provinces. Present short-time obligations outstanding totaled 4,825,500 pesetas.

The expense of operations in Morocco continues to be a considerable item in Government administration. During May new credits amounting to 65,000,000 pesetas were opened for the Moroccan war, covering the purchase of supplies, especially of sanitary, automotive, aviation, and military equipment.

Budget Carried Over to New Fiscal Year.

A decree of June 1 prorogues the budget for the year 1924-25 to cover the forthcoming fiscal year which begins on July 1. However, certain authorizations have been made for necessary increases in expenditures.

Receipts and Expenditures.

Official figures covering budget results in the first seven months of the current fiscal year show collections 46,000,000 pesetas under budget estimates, while expenditures are 120,000,000 pesetas in excess of the budget. A deficit of 335,000,000 pesetas is shown for the period, covered by short-term obligations floated during the period.

Of the total expenditures, 46 per cent were used for military operations and 54 per cent for ordinary Government expenditures, the former being considerably in excess of the budget. For the 11 months ended May 31 the Government announces total collections 100,000,000 pesetas in excess of those for the corresponding period of the previous year. No figures, however, are available for expenditures during this longer period.

A new fiscal arrangement has just been signed between the Central Government and the Basque Provinces settling a long-time dispute. The settlement is expected to increase State revenues by 30,000,000 pesetas per year.

Public Improvements—Hydroelectric Facilities.

The municipality of Murcia is contemplating a loan of 36,000,000 pesetas for public improvements. The Seville Electric Co., which controls hydroelectric facilities throughout southwest Andalucia, has announced that it will issue a 6 per cent loan in the amount of 10,000,000 pesetas for the carrying out of a broad program of hydroelectric extension involving the purchase of foreign equipment. The metallurgical plant at Mieres is borrowing 40,000,000 pesetas at 6 per cent some time this month.

Metallurgical Industry Prosperous—Iron Ore Unsatisfactory.

The metallurgical manufacturing industry at and around Bilbao is prosperous, with bookings reported six months in advance. The iron-mining industry, on the other hand, is in a very unsatisfactory position. The foreign demand for Spanish iron ore—especially that from Great Britain—is weak. Total iron-ore exports to England to April 30 of this year amounted to 760,000 tons as against 815,000 tons during the similar period of last year.

The coal-mining industry is active and output is well adjusted to Spanish demands. Lead, red oxide of iron, copper, and other metals are reported as showing a good degree of activity.

Continued Depression in Textile Industry.

No relief from the depression that has long affected the Barcelona textile industry is in sight. Imports of raw cotton in May totaled only 19,000 bales as against 37,000 bales in May, 1924.

The shoe industry is moderately prosperous. As a result of conservative buying no large supplies of leather are on hand.

The lumber situation is unchanged, with importation of Swedish lumber continuing slack, though large cargoes are expected during the summer. Douglas fir is finding ready sale. The stave market is depressed as a result of poor demand from wines.

Better crop prospects have resulted in a slightly improved activity in sales of harvesting implements. The industrial machinery market, however, is depressed.

Agricultural Situation Improved.

Heavy rains throughout May have improved prospects for the cereal crop and wheat is now believed to be 90 per cent of normal. Olive-oil prices are tending upward and substantial exportations to Latin-American countries have been effected. The limitation by Government decree of imports of oilseeds and oils has improved the local market for olive oil. The situation on the east coast is moderately prosperous as a result of the disposal of the orange crop at good prices. Prices for nuts are stiffening because of the expectation of a small crop resulting from a long-continued drought in the Mediterranean section.

Poor Sales at Barcelona Auto Show.

The recent automobile show at Barcelona was larger and better attended than any previous exposition. French cars ranked first in the number of exhibits, with American cars second. Few purchases were made and general dissatisfaction at the results of the show has been expressed. European manufacturers featured light cars, while American moderate-priced and expensive cars showed substantial superiority.

Netherlands' Business Activity Continues

Based on cable from Commercial Attaché F. W. Allport, The Hague, June 13, with cooperation of the American consuls at Amsterdam and Rotterdam.

The generally satisfactory degree of activity in the Netherlands' industries continues. A certain slackness which prevails in a few trades has been offset by increased production in other lines. The approach of general elections has caused no slackening of business activity, as little change in the composition or policy of the Government is expected.

The new schedule of import duties which was determined upon about six months ago will take effect definitely on July 1. The period of uncertainty with regard to the duties is thus ended and as the new schedule is higher an increase in importation up to July 1 is expected.

General Financial Aspect Satisfactory.

The note circulation of the Netherlands Bank reached a low level of 887,000,000 florins on June 8, as compared with 916,000,000 florins on May 11, and the percentage of metallic cover has now risen to 55. The loan and discount portfolios of the bank declined somewhat but discounted foreign bills increased to 167,000,000 florins, as compared with 163,000,000 florins on the earlier date. The omission of the May issue of treasury bills released additional investment funds. New capital issues of 27,000,000 florins were absorbed and conversion loans were also issued, the chief of which was the Rotterdam municipal issue of 32,000,000 florins. The Amsterdam 3 per cent loan in the amount of 5,000,000 florins on May 29 was greatly oversubscribed.

Increased Security Sales—Commercial Failures Decline.

The stock market has shown considerable more activity, with interest centering on colonial securities and industrial shares. The artificial silk, margarine, and electric-lamp industries have shown particular strength. Private discount rates are unchanged at 3½ per cent.

Commercial failures continue to be somewhat lower this year than last. Through June 4 the total number has reached 1,830, as compared with 1,901 in the corresponding period of last year.

Advance in Government Revenues.

Government revenues during April showed an advance to 37,000,000 florins as compared with 36,000,000 florins during March and 3,300,000 florins in February. During the first four months of the year revenues have totaled 146,000,000 florins, as against 134,000,000 florins last year. The increase is due chiefly to better yields of the bicycle tax, the sugar and beer excises, and the property tax.

Further Reduction of Unemployment.

The downward trend of unemployment in the country, which has now continued for several months, shows no tendency to relax. The total number of unemployed on May 3 was 51,000, as against 63,000 on April 11 and 73,000 on March 14. This improvement is due in part to greater activity in the building industry. The strike of brickmakers, painters, and builders for a 10 per cent increase in wages is now interfering with building programs.

Industrial Trends Mixed.

A number of important Dutch industries, including the artificial silk, margarine, and electric-lamp manu-

facturers, are showing increased activity. The cotton textile industry, however, is embarrassed by the downward tendency of prices and the falling off in home and foreign demand. The accumulation of stocks fore-shadows a necessity of early curtailment in production. The downward tendency of hide and leather prices is causing shoe manufacturers to buy only for immediate needs, leaving tanners overstocked with hides purchased at high prices. A slump in the furniture industry, due principally to seasonal factors, has adversely affected lumber markets. Coal production showed a slight decrease during May.

Rotterdam Exports to United States Advance.

Declared exports to the United States during the period January to May, inclusive, reached a total of \$6,500,000, as compared with \$5,400,000 in the corresponding period of last year, according to a report from Consul E. A. Dow at Rotterdam. The principal items for the current year are block tin, valued at \$1,847,000; antiques, at \$613,000; pig iron, at \$229,000; rough diamonds, at \$176,000; and fresh herring, at \$140,000.

Amsterdam Shipments Also Increase.

Consul General W. H. Gale at Amsterdam reports a similar advance in shipments to the United States from that port. May exports to the United States reached \$5,500,000 as against \$4,300,000 in May, 1924. The leading items, with values in dollars, are as follows: Polished diamonds, \$2,288,000; tobacco, \$1,697,000; creosote oil, \$505,000; crude rubber, \$132,000; pig iron, \$56,000. All of these items represent substantial increases over May, 1924, especially the last three commodities, no shipments of which were made to the United States in May of last year.

Polish Trade Still Unfavorable

Based on cable from Commercial Attaché Leighton W. Rogers, Warsaw, June 11

The Polish adverse trade balance continued during May. Holdings of the Bank of Poland were reduced by 44,000,000 zloty, or 20 per cent, during the month. The budget situation continues strong, the receipts for

April showing a surplus of 20,000,000 zloty over expenditures, due chiefly to increased returns from the alcohol and tobacco monopolies.

The harvest in Poland should be good, from present indications, and the Government is taking steps to cooperate in the work of insuring the success of the export grain program. On the other hand, Germany and Czechoslovakia, two of Poland's most important markets, are planning to raise their import duties on grain. Germany also plans a reduction, beginning June 15, from 1,000,000 tons to 250,000 tons in its monthly orders of Polish coal.

Lower Railway Rates to Help Exports.

A lowering of export duties and of railway rates on export shipments, with additions to the previous list of commodities affected, are some of the measures adopted by the Government to cope with the present situation. At the same time luxury imports are being limited and sharp increases made in duties on non-essentials. United States trade is affected to the extent of curtailed imports by Poland of foodstuffs and leather. Means for financing export trade are also provided through larger credits to export industries and increased facilities for discounting foreign commercial paper. Delay in discounting commercial paper, due to the shortage on the money market, has caused much inconvenience in local business circles.

Certain of the above measures have formed the basis of complaints by importers. On the other hand, the effect of these steps is already reflected in a jump in exports. Industry at present is operating on a basis of only 50 to 70 per cent of capacity.

Note Circulation Lower.

The note circulation in May was slightly reduced, to 557,000,000 zloty, from 567,200,000 in April and 563,200,000 in March. The cost of living index also dropped, from 183 in April to 180 in May, while the wholesale commodity index was 137, against 138 in April. Car loadings in May were 10,033, an advance over the April figure of 8,307, though still below the March loadings of 10,248 cars.

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

PROPOSED IMPROVEMENT OF MADRAS LEATHER INDUSTRY

The continued production of the present class of half-tanned leather at a cheaper rate in Madras, India, is recommended by a Madras Government committee appointed to examine into conditions in the leather industry, according to the London Leather Trades Review. It was considered possible to produce fully finished leather, but there is a limited domestic consumption of the finished product, and most foreign countries, other than the United Kingdom, do not accept tanned leather and have a tariff in favor of raw, or in some cases partly tanned hides.

Experimentation and Research Encouraged.

However, practical experiments by the Leather Trades Institute, with a view to the manufacture of new and improved kinds of half-tanned and finished

leather, are encouraged. If successful, it is intended that efforts should be made to establish a market for the improved variety. The institute, which is a Government institution, already has high-standard courses of instruction for operatives. And, in addition, it is proposed to establish a properly equipped research laboratory and an adequate staff to initiate systematic research and investigation.

Additional information regarding hides and leather appears in this issue under the following sections:

Cable review, Europe: Netherlands business activity continues. Tariffs and trade regulations:

Canada—Prohibition of imports from Jamaica of hides.

French Guiana—Establishment of taxes on imports and exports.

Lithuania—Removal of export duty on prepared hides.

Norway—Reduction of gold duty surtax.

Bureau's special circulars available.

AGENCIES IN THE FAR EAST AND AUSTRALASIA

Four Types of Representation Usually Available—The Bureau Offers Advice in the Selection of the Most Effectual Medium

Prepared in the Far Eastern Division

The success of an exporter unquestionably depends in large measure upon the proper selection of his agencies. In the Orient, especially, where language and customs present obstacles and where credit ratings and reputations often are difficult to ascertain, this matter of agents is of the utmost importance. Throughout the Far East and Australasia the American exporter has the choice of four types of representation: Agency connections with American, native, or other foreign firms, or the formation of a subsidiary of the home organization.

American Agency in China Usually Efficient—Hong.

In China approximately 600 firms are registered as American, the majority in good repute and with readily ascertainable standing in the community in which they operate. These firms handle practically every commodity produced and exported from the United States. They are generally wide-awake, and, in the majority of instances, American exporters will find it advisable to place agencies with them.

Next to the American firm, the Chinese merchant offers, perhaps, the best outlet. His methods often appear slow to the American, but they are sure and are based upon the expectancy of dividends over long years to come. The Chinese hong, with an old-established reputation and pride in its "face," is trustworthy and dependable. Hong merchants know their territory and, once they have accepted a line, they are tenacious in holding to the connection.

There are some American lines in which foreign producers can not profitably compete, and in these cases it may be advantageous for American firms to put their agencies in China in the hands of reputable foreign firms of experience which have large organizations in the country. As a rule, however, such connections should be entertained only when no suitable American agent is available.

Japanese-Incorporated Head Office or Branch Dominant.

In Japan both Government finance and that of the leading Japanese industrial interests necessitate the exercise of the utmost discretion in determining the sales policy of American manufacturers and their choice of agents. The Japanese Government is in large measure an operator in public utilities and in control of industry through part or complete ownership. Purchases on Government account, accordingly, are negotiated so that practically all needs of the Government are supplied through head offices or branches incorporated as Japanese companies. These firms include native American and other foreign organizations.

The American manufacturer can not do better than to secure agency agreements with such companies, as they have the confidence of the Japanese Government and of the purchasing community. They are prepared to accept sole agencies, to maintain stocks if necessary, and to take into their organization a direct representative of the manufacturer to supervise sales in the territory. Furthermore, they have good financial ratings. More often than not they will offer to pay the manufacturer in full upon delivery of shipping documents.

In some instances payments are made f.o.b. factory. It is advisable in every case where the amount of business warrants to provide for the supervision of sales work by a factory representative, who will become a member of the Japanese sales organization. If the material is highly specialized and competition limited, it may be advisable for the manufacturer to maintain a resident agent with no affiliations, who should endeavor to secure approval of his products by the Government and their inclusion in specifications, so that he can quote to all other parties who are on the Government preferred list.

Australian Importers Seek American Products—New Zealand.

The placing of American agencies in Australia is comparatively easy. Australian importers are always on the lookout for good American lines, and many of them do not wait to be approached. Automobiles, of course, lead, but practically any article that sells in the United States sells equally well in Australia, since topography, climate, language, and standards of living are almost identical with our own. Most Australians either emigrated from Great Britain, or have relatives there, and, for that reason, frequent visits are made to England. Most of them go to Australia by way of Suez, and, therefore, they like to make the return trip by way of America. Numerous American lines of goods have been taken back to Australia by these travelers and, in almost every instance, the connection has been satisfactory and the prestige of American products has been enhanced. Agencies are placed in all the principal centers of Australia, but Sydney offers perhaps the best opportunities.

While New Zealand and the neighboring islands are sometimes included in agencies placed in Australia, many American connections are made direct with New Zealand itself. It is believed that the latter method is generally preferable. In both countries the character of the commodity to be represented determines whether or not agency rights should be granted for the entire country or for one or more States only.

Proper Placing of Agencies in India Difficult.

Few American firms handling general lines are to be found in India, and, generally, the agency has to be placed with English or Indian merchants if the American exporter is not in a position to establish his own branch outlet. If placed with a British firm there is always the danger that the line will be neglected in favor of competing English goods, although considerable quantities of American goods are being sold in India through such mediums, and many of these connections are highly satisfactory.

Generally speaking, the Indian firm makes the best distributor for American lines, but great caution must be exercised in appointing such an agency. While unpromising prospects often develop into excellent connections, on the other hand, firms having all the facilities for pushing the line are sometimes disappointing in their performance. For this reason a thorough investigation should always be made prior to placing

an agency with an Indian firm. The Bureau of Foreign and Domestic Commerce maintains offices at both Bombay and Calcutta, which are prepared to give valuable assistance in this connection.

Dutch Importer a Good Distributor in Java.

The American manufacturer wishing to place agencies in Java is confronted by a wide variety of nationalities. Through the Dutch importer and the Chinese retailer he must cater to the taste of millions of Javanese, Malays, and Arabs, as well as a few Europeans. Generally it will be found advantageous to appoint a Dutch firm as distributor, leaving it to deal with the retailer along approved Javanese lines. While the Dutch importer is generally a good credit risk, he has his own ideas as to how the distribution should be effected, and does not take kindly to suggestions. In

other words, the American exporter must adapt his ideas to the business methods of the Dutch firm.

Bureau Lists and Advice Offered.

The Bureau of Foreign and Domestic Commerce has available up-to-date lists of prospective agents in all of the far eastern and Australasian countries, which American manufacturers and exporters may consult with profit prior to entering into agency agreements. These lists contain much pertinent information concerning individual firms, which is kept current by constant revision. The bureau's foreign offices located in the principal trade centers of the Far East and Australasia, as well as the many consular officers throughout the area, are also well situated and qualified to advise American firms with reference to the selection of agencies.

IRON=STEEL=HARDWARE

Luther Becker, Chief, Iron and Steel Division

BRITISH SOUTH AFRICAN CONSUMPTION OF FOREIGN IRON AND STEEL

Increase in Importation—Purchases from the United States Double—Plans to Expand Domestic Industry

G. E. Phoebe, Iron and Steel Division

Imports of leading iron and steel products into British South Africa totaled 176,228 long tons for 1924, an increase of nearly one-fifth over the figure for the preceding year. Fencing wire, wrought pipes, and light rails were the lines which registered the heaviest gains.

Increased Trade in 1924.

The following table gives details of the 1924 trade and affords a comparison with the importation for 1923:

Imports of chief iron and steel products into British South Africa

Articles	1923	1924
	<i>Long tons</i>	<i>Long tons</i>
Pig and ingot.....	2,461	2,801
Cast iron (including rough and finished castings, not pipe fittings).....	258	69
Bar, bolt, and rod.....	18,933	21,183
Angle, channel, and T.....	4,769	5,979
Girders, beams, joists, columns, and structural shapes.....	2,769	1,199
Galvanized flat sheets.....	9,637	8,912
Galvanized corrugated sheets.....	32,807	36,145
Other sheets.....	1,598	2,569
Tin plate.....	5,892	4,712
Other plate.....	14,018	15,621
Hoop.....	1,808	1,618
Light rails.....	5,093	10,164
Wrought pipes.....	16,236	20,993
Wrought pipe fittings.....	1,167	2,339
Cast iron pipes.....	6,380	6,404
Cast iron pipe fittings.....	1,206	733
Fencing wire.....	23,940	34,887
Total.....	148,492	176,228

Considerable Purchases of Wire and Nails.

In addition to the tabulated items, during 1924 there were imported into British South Africa 382 tons of ferro-alloys, 20,362 tons of wire rope and wire other than for fencing purposes, and 3,802 tons of drill and tool steel. The official statistics of South Africa do not give the corresponding data for 1923.

A higher value was placed on receipts of nails, screws, bolts, nuts, etc., in 1924 than in the preceding year. The 1924 imports of wire nails were valued at £50,799, other nails and screws at £128,320, and bolts, nuts, and rivets at £148,074. During 1923 the foreign shipments into British South Africa included wire nails valued at £58,469, other nails and screws valued at £100,777, and bolts, nuts, and rivets valued at £154,084.

American Share in Trade Increases—Heavy Rail Orders.

The extent of American shipments of iron and steel to British South Africa made rapid strides during 1924, that market absorbing 1.7 per cent of the entire United States exports of these products. This represents more than double the tonnage shipped to those dominions in 1923. All told, 31,277 long tons of iron and steel left American ports for British South Africa during 1924, according to the United States customs offices records.

The most notable feature in the trade of the year was the spurt in shipments of heavy rails that occurred in November and December when 5,978 tons and 15,964 tons were consigned to the British possessions in southern Africa. Up to November not a single ton of rails had gone forward.

Prominence of American Wire and Wire Manufactures—Miscellaneous.

Exports of barbed wire held second place among the American shipments to British South Africa, a total of 5,002 tons having been attained for the year. This product was supplemented by 25 tons of woven-wire fencing. Galvanized-wire shipments aggregated 207 tons; plain wire, 37 tons; wire rope, 7 tons; and iron and steel insulated wire and cables, 38 tons. The importance of the South African market for meshed wire products is demonstrated by the fact that 100 tons of American wire cloth and screening were sent

there. Other manufactures of wire exported to that region amounted to 81 tons.

Consignments of plates and sheets from the United States totaled 1,120 tons, 587 tons of which were galvanized sheets and 512 tons were tin plate. Car wheels and axles weighing 1,034 tons and rail accessories amounting to 638 tons were the only other shipments of separate classes of goods aggregating more than 500 tons; however, exports of 327 tons of bolts, nuts, rivets, and washers were noteworthy.

Union of South Africa to Strengthen Domestic Industry.

There was considerable talk of expanding the iron and steel industry of the Union of South Africa in 1924. The engineering interests of the country became apprehensive that the shortage of scrap iron would severely hamper their activities. Fear was expressed in the Johannesburg press that unless South African pig iron should be made available within the following six months the industry would be mainly dependent upon overseas sources of supply for its raw material. This would mean increased cost of production for the manufactured articles.

The welfare of many other industries, including the important mining interests, is dependent upon the availability of iron and steel products at reasonable prices. Recognizing the advantages in this respect to be gained from a thriving domestic manufacture of raw iron and steel, the Union Government passed an act in 1922 granting a bounty of 15 shillings per ton of pig iron or steel produced from ores mined in the Union. This act even permits advances to the producer prior to reaching the stage of production.

Amalgamation of Two Large Producing Units.

An opinion has been advanced that the only solution of the raw-material shortage is to produce pig iron on a large scale in South Africa. With that end in view, representatives of the Union Steel Corporation and the Newcastle Iron and Steel Works met in December to consider amalgamation. It was hoped that their combination would enable them to start producing pig iron within a few weeks.

Accessibility of Raw Materials.

The Newcastle plant, at which it was intended to begin the production of pig iron, has a capacity of 50,000 long tons of pig iron per year. The blast furnace of the company, which was erected about three years ago and dried out preparatory to lighting, is capable of turning out 150 tons of pig iron per day. The accessibility of raw materials is a factor that emphasized the practicality of continuing activities at this plant. One of the farms owned by the company contains a deposit of 50 per cent iron ore, estimated at 2,000,000 tons, which is located almost on a coal field and close to an abundant supply of water.

Capacity Output Exceeds Domestic Demand for Pig Iron.

The South African consumption of pig iron at present is said to be about 2,000 tons per month. Therefore, if the Newcastle works were running at capacity there would be a surplus production of about 1,500 tons of pig iron per month. An export trade would have to be built up to take care of this surplus for the time being. It is hoped that ultimately the local market will absorb all of this output and perhaps demand more.

Certain Types of Domestic Articles Show Increasing Sales.

Already domestic competition is felt by merchants for foreign-made goods in several lines of finished iron and

steel products, according to Trade Commissioner Perry J. Stevenson. Wire rope is one of these, although it is still largely furnished by the United Kingdom. Between 1923 and 1924 the consumption of the locally made rope increased from £55,425 to £86,642, whereas the imported article decreased from £194,955 to £158,626. Similarly in bar steel and other steel the South African industry is offering stronger competition, even though it is still relatively unimportant.

While in 1924 Germany was not a prominent factor, British competition has tended to be more severe. Swedish drill steel has been selling very extensively and is curtailing the market for both British and American drill steel. In addition to possessing a very high quality, the Swedish product is offered at very attractive prices.

United States Exports of Horseshoes and Horseshoe Nails

The exportation of horseshoes (224 tons) and horseshoe nails (283 tons) from the United States during the first four months of 1925 was about one-fourth below the average of the exports in 1924. The principal markets for horseshoes in 1925 were Canada, which took 63 tons; Cuba, 51 tons; the Philippine Islands, 38 tons; and Australia, 26 tons. Shipments of horseshoes to the Far East aggregated 66 tons.

Far East Largest Purchaser of Nails.

Australia was the largest market for horseshoe nails and accounted for 50 tons in the first four months of 1925. Colombia, which was first in 1924 with 160 tons for the whole year, fell to second place in 1925 with 44 tons. The total shipments to the Far East were 118 tons, while those to South America amounted to 78 tons.

Improvement in United States Trade with Japan

Exports of American iron and steel to Japan witnessed a recovery in April, 15,052 long tons having gone forward to that country. While not nearly so large as January shipments, the April trade so much surpassed that for February and March as to be 44 per cent above the monthly average for the first quarter of 1925.

Some Items for April Exceed Three Months' Total.

The bulk of the April exports comprised wire rods (1,010 tons), black steel sheets (2,550 tons), tin plate (3,918 tons), heavy rails (1,311 tons), and welded black pipe (3,031 tons). It is interesting to note the tonnage of heavy rails, no shipments of which commodity had been made during the entire first quarter. April exports of rail joints, splice bars, etc., amounted to 117 tons as against only 38 tons for the first three months of the year. Welded black pipe is another item whose consignments exceeded the total for the January-March period.

Sheet and Plate Products Most Important.

An analysis of the April exports shows that more than one-half of the entire amount comprised sheet and plate products, including tin plate. One-fifth of the total was pipes and fittings. Scrap, semifinished steel, and rails and accessories accounted for more than one-fifth, and the remaining tonnage was divided among the various other items of finished goods.

Finnish Market for Foreign Iron and Steel

Consul J. F. McGurk, Helsingfors

Imports of the major iron and steel products into Finland during 1924 amounted to approximately 97,200 metric tons, a loss of 7 per cent from the figure for the preceding year. A comparison of the trade for these two years and also for 1922 is afforded by the following table:

Finnish imports of iron and steel

[In metric tons]

Articles	1922	1923	1924
Pig iron.....	10,700	15,000	18,300
Bar iron, beams, angles, and other hot-rolled products.....	29,100	41,800	28,500
Galvanized sheets.....	2,200	3,500	4,500
Other sheets and plates.....	8,800	9,300	12,600
Tubes and pipes, other than cast.....	3,500	4,800	
Wire, woven wire, and unmounted springs.....	1,800	1,200	1,000
Wire nails.....	1,200	3,800	1,100
Rails.....	17,800	16,000	24,600
Railway car wheels and tires.....	2,100	6,600	3,300
Forgings and castings, black.....	2,200	2,800	3,300
Total.....	79,400	104,800	97,200

Canadian Market for Tin Plate Extensive

Consul Felix S. S. Johnson, Kingston, Ontario, May 20

American tin plate is largely used in the Kingston consular district, especially by canners and hardware merchants with a tinning department. The canning companies buy their entire year's requirements in December each year. Hardware merchants and jobbers have no set seasons but buy as required.

United States and United Kingdom Sole Competitors.

Tin plate is not manufactured in Canada, being imported in large quantities from the United States and England. In the past few years there have been no importations from any other countries. During the 11 months ended February 28, 1925, Canada received 29,429 long tons of tin plate from the United Kingdom and 19,646 tons from the United States, against 23,169 tons and 28,731 tons, respectively, for the corresponding period ended February, 1924, and 29,443 tons and 14,564 tons, respectively, for the corresponding period ended February, 1923.

Improvement in British Foreign Steel Trade

Cable from Acting Commercial Attaché Mowatt M. Mitchell, London, June 15, 1925

Exports of iron and steel from Great Britain during May totaled 322,140 gross tons, an increase of 8 per cent over the volume of foreign shipments for May of the preceding year. Rails, plates and sheets, tin plate, and wrought tubes, pipes, and fittings showed the heaviest gains.

Imports Decline About 25 Per Cent.

Only 205,424 tons of iron and steel were imported into Great Britain in May. This is fully one-fourth less than the receipts for April, which had reached 274,424 tons. Semifinished steel accounted for much of the drop, although losses in sales of foreign-made pig iron, steel bars, rods, angles, and plates and sheets also declined considerably.

A comparison of the British foreign trade in the different classifications of iron and steel for these two months is afforded by the following table:

British foreign trade in iron and steel in 1925

[In gross tons]

Articles	Imports		Exports	
	April	May	April	May
Pig iron and ferroalloys.....	28,250	20,383	46,345	47,303
Ingots, blooms, billets, and slabs.....	127,074	84,805	6,036	932
Iron bars, rods, and angles.....	22,951	23,283	2,514	3,200
Steel bars, rods, and angles.....	26,984	21,407	21,084	23,886
Structural steel.....	10,251	6,993	4,153	6,081
Hoops and strips.....	5,329	4,524	4,923	5,585
Plates and sheets.....	18,057	13,603	21,647	27,925
Galvanized sheets.....			63,319	60,404
Tin plate.....			35,268	42,705
Cast tubes, pipes, and fittings.....	2,665	3,010	11,120	7,966
Wrought tubes, pipes, and fittings.....	4,153	3,893	11,171	19,188
Rails.....	7,321	3,175	13,575	28,220
Railway material, other than rails.....	1,974	1,278	18,483	10,307

Wire manufactures, not elsewhere specified.....	855	735	1,924	1,705
Nails, tacks, rivets, and washers.....	1,136	489	1,292	1,709
Bolts and nuts, including screws for metals.....	677	761	2,506	2,705
Iron and steel castings in the rough.....	937	448	113	135
Iron and steel forgings in the rough.....	752	715	106	136

More Steel Produced in May.

There were 568,000 tons of pig iron and 651,600 tons of steel ingots and castings produced in the United Kingdom during May, compared with an output of 569,800 tons of pig iron and 597,600 tons of steel ingots and castings during April. At the end of May 157 blast furnaces and 272 open-hearth furnaces were in operation, which points to a letting up in activity at some works. There had been 158 blast furnaces and 278 open-hearth furnaces active at the close of April.

Depression in Belgian Metallurgy

Cable from Commercial Attaché Fayette W. Allport, Brussels, June 13

After two weeks of relatively better business the Belgian metallurgical markets are again depressed, owing to exchange fluctuations. Mills are quoting slightly higher franc prices, with correspondingly higher sterling rates, but this maneuver has been unsuccessful and buyers are reluctant to place orders. Large mills are still covered for two months ahead, but the smaller concerns are giving liberal concessions from the official prices in order to obtain orders. French producers are again offering serious competition. The labor situation at the Charleroi mills is unsettled, with the employees and the employers now deciding relative to the modified Government plan which involves a 5 per cent wage decrease effective June 15 and the equal division of the funds set aside previously from wages between the mills and the employees.

Peruvian Hardware Dealers Overstocked

Commercial Attaché H. Bentley MacKenzie, Lima, May 13

It is apparent that the Peruvian hardware trade is heavily overstocked, and greatly restricted buying may be expected for the next few months. This is particularly true in the provincial cities and towns, according to reports circulating among the Lima trade. It is stated that in addition to heavy stocks held by regular hardware dealers, hardware is now seen on the shelves of small shops of all kinds throughout the country, notably small grocery stores and other shops which have not previously handled hardware.

Much Merchandise of German Origin.

Most of this hardware is understood to be of German manufacture and to be comprised chiefly of the smaller and cheaper lines of shelf hardware, such as nails, locks, knobs, hinges, small tools, etc. No definite information as to the source of this merchandise is available, but it probably represents the results of an intensive sales trip through the country of some traveler, either representing directly a German hardware exporter or some Lima wholesaler. Prices on these articles are said to be extremely low.

Lower Prices Appeal to Principal Buying Class.

It is claimed that at present German prices on hardware and tools in the regular line of trade are averaging from 15 to 20 per cent below American prices on similar articles, and that the German material is being sold in somewhat larger quantities than formerly. The inferior quality of the German hardware is generally admitted, but despite this fact price is a determining factor with the individual buyer of the poorer class, who in Peru represents a very large part of the consuming public.

United States Builders' Hardware Popular.

An outstanding exception to this is American builders' hardware, which has been installed in practically all of a number of new office buildings, hotels, and Government buildings constructed in Lima in the past year. Nevertheless, the lower priced German locks and hinges are found in many of the new homes of native residents.

Additional information regarding iron, steel, hardware appears in this issue under the following sections:

Cable review, Europe:

- Evidences of partial improvement in Spanish situation.
- Little improvement in Belgian business.
- Industrial expansion in Germany depresses business.

Tariffs and trade regulations:

- Czechoslovakia—Further removals of import restrictions.
- French Guiana—Establishment of taxes on imports and exports.
- Latvia—Reduced duties on bicycle chains.
- Norway—Reduction of gold duty surtax.

Foreign-trade opportunities.

AUTOMOTIVE PRODUCTS

Percy Owen, Chief, Automotive Division

TREND IN LEADING MARKETS FOR AMERICAN TRUCKS

Japan, United Kingdom, Canada, Australia, Mexico, and Cuba Are Consistent and Important Markets

The movement of truck exports from the United States to its 15 leading markets during the years 1913 and 1920 to 1924, divided into continental groups, reveals a growing tendency toward equal continental distribution of the export trade in this line. This trend was especially marked in 1924, when no one continental group of market leaders accounted for more than 21.7 per cent of the total truck exports.

Tendency Toward Equal Continental Distribution.

During 1924 the Continents of South America, Europe, North America, Asia, and Oceania, with a decreasing number of individual market leaders in the order listed—but accounting for many units in each case—exhibited a remarkably even distribution, especially when the widely divergent economic standards existing between them are considered.

The nearest approach to 1924 in this respect was 1920—a record year for truck exports—29,136 having been shipped to all foreign markets, when the leading markets of that year found Europe the largest factor to the extent of 25.4 per cent of the total trade. Yet in 1920 the first markets of South America (the leader in 1924) and of Oceania (which averaged well in 1924) accounted for no more than 8.4 per cent and 3.4 per cent, respectively.

Opposite tendencies looking toward greater concentration were prevalent during the remaining years of the six-year period. In 1913 North America, largely because of the predominant position which Canada held, found its leading markets accounting for 54.2 per cent of the total exports; in 1921 this same continent

was again considerably ahead on the same basis of leading markets; and in 1922 and 1923 Europe was the best truck field by a comfortable margin.

Absence of Market Concentration in 1924—Marketing Policies.

Absence of market concentration in 1924 is further brought out by the fact that Japan, the leading individual truck market for that year, accounted for only 3,053 trucks out of a total of 27,351 exported to all markets, or approximately 11 per cent. This ratio contrasts greatly with Canada's share of the total trade in 1913, when that country was predominantly the largest individual market to the extent of 49.3 per cent, or with Belgium in 1922, when our exports to it represented practically one-fourth of the total shipments of trucks.

Marketing policies which result in a comparatively equal volume of sales being effected in the various continental groups can not help but augur well for American truck exporters because, if maintained, no great loss would follow should any one important continental market fail to keep pace with the others.

Consistent Market Leaders.

Six individual countries were consistently among the 15 leading truck markets of the United States during the period 1913 and 1920 to 1924. These markets were Japan, United Kingdom, Canada, Australia, Mexico, and Cuba, in the order of total volume of shipments to them during the six years. However, on an average percentage basis, taking into account each market's share of the total truck exports over the six years, it is found that the order of ranking would be Canada, Japan, United Kingdom, Mexico, Australia, and Cuba.

The six-year average is as follows: Canada, 15.6 per cent; Japan, 9.5 per cent; United Kingdom, 8.4 per cent; Mexico, 7.6 per cent; Australia, 7.2 per cent; and Cuba, 3.9 per cent.

North America, by placing the three countries of Canada, Mexico, and Cuba among the 15 leading markets for the entire six-year period, has made the best showing among the continents. These three consistent markets accounted for 18,854 units out of a total of 101,262 shipped to the entire range of truck markets during the six years.

The Canadian, Mexican, and Cuban Markets.

Canada at no time took less than 5.2 per cent of our total truck exports, which occurred in 1924. In 1913 this market accounted for almost one-half of the total trade. There has been a natural decrease, of late years, due to the increased establishment of American branch factories in Canada. The proximity of this market, however, and other favorable factors have kept it up among the leaders during these years, ranking fifth in 1923 and sixth in 1924.

Mexico also found its poorest year in 1913, when its share of the total was 3.5 per cent, but it became the world leader in 1921, when the United States shipped to this one market almost one-fifth of its total truck exports.

Cuba had its high and low points in 1920 and 1913, accounting for 6.7 per cent and 1.4 per cent, respectively, of our total foreign trade in trucks.

United Kingdom, Japan, and Australia.

Of the three remaining consistent market leaders—United Kingdom, Japan, and Australia—the former made its best record in the earlier years. The decrease in the later post-war years is explained by the establishment of American branch factories in Canada and of foreign assembly plants primarily for developing the markets of the United Kingdom and its dominions.

Extra large truck exports to Japan during 1923 can be traced to the need for transportation facilities following the earthquake. Australia in 1924 made its largest single year record in the purchases of trucks from the United States. The year 1913 stood out for both Japan and Australia as the year of lowest truck exports from the United States.

Markets of Greater Fluctuations—Belgium, Brazil, and Sweden.

Belgium, Brazil, and Sweden are cases of sizeable markets for trucks made in the United States, but at the same time they represent far wider fluctuations in respect of their failure to keep within the 15 leaders year after year than has been the case with Canada, Japan, United Kingdom, Mexico, Australia, and Cuba.

Belgium was the leading truck market of the United States in 1922, taking more than twice the number of trucks its nearest rival Canada accounted for, and in 1923 it was next to the leader—Japan—in rank. The failure of Belgium to keep up the pace in 1924 set in the American export records of complete trucks shipped in the two earlier years can be traced to the increased direct supplying of American trucks to this market during 1924 from American foreign assembly plants. Prior to 1922, Belgium was not an important factor—being counted among the 15 leading markets only in 1921 when its share of the total trade was 2.3 per cent.

Brazil was among the leaders for every year except 1922 and 1923, being an important market factor in 1913, 1920, and 1924.

Sweden was prominent first in 1922 and for the two years following, ranking sixth in 1922, fourth in 1923, and seventh in 1924.

Nine Other Markets.

Markets which were numbered among the 15 leaders once in the six-year period were nine in number. These were Venezuela, Russia in Europe, Rumania, France, British South Africa, and Jamaica, which reached their positions of prominence in 1913; British West Africa in 1920; and China and the Netherlands in 1921. Argentina in 1913 and 1924, Dutch East Indies in 1920 and 1921, and Italy in 1923 and 1924, were the individual markets that were among the leaders in two years out of the six. In all, 29 different countries were involved in making up the 15 leading markets for each year of the six-year period.

Exports of Motor Trucks to 15 Leading Markets.

A table showing the movement of truck exports from the United States to its 15 leading markets (for each year) for the years 1913 and 1920 to 1924, according to countries and continental groups, follows:

Exports of motor trucks from the United States to 15 leading markets

Total.....	1,260	11.0	2,492	10.0	2,958	10.8
Total 15 leading countries.....	9,785	85.6	21,363	86.0	22,195	81.2
Other countries.....	1,653	14.4	3,496	14.0	5,166	18.8
Grand total.....	11,443	100.0	24,859	100.0	27,351	100.0

Not only does the foregoing table show a more uniform distribution among the leading markets as having been accomplished in 1924, but also the tendency of these leaders—in spite of their upward progression in point of volume—to account for a smaller proportion of the total United States truck export trade than formerly, with the exception of the year 1920, when almost every country was a market for American trucks. This proportion in 1924 was 81.2 per cent, 86 per cent in 1923, 85.6 per cent in 1922, 84 per cent in 1921, 76.2 per cent in 1920, and 95.1 per cent in 1923.

Increased Truck Exports in Spite of Foreign Competition.

Competitive practices, as followed by some European producers of trucks, have not always been able to seriously hinder the volume of truck exports from this country. These practices have often taken the form of appeals based on comparative capacities and prices of American and European trucks. American trucks are rated by dealers abroad as they are in this country—on the basis of capacity to protect them from undue overloading. Salesmen of European products have, in many instances, taken advantage of this quoted specification to make it appear that American trucks of approximately the same price as their own products do not compare favorably in rated capacity. Depreciated European exchange has had the effect of favoring the sale of their trucks in nonmanufacturing markets. American small-sized trucks and busses would appear to have a bright future in world markets.

Additional information regarding automotive products appears in this issue under the following sections: Cable review, Europe: Evidences of partial improvement in Spanish situation. Bureau's special circulars available.

ELECTRICAL EQUIPMENT

HEATING APPLIANCES IN NEAR-BY LATIN MARKETS

Increasing Use of Heating and Cooking Appliances—Principal Markets for American Articles

R. A. Lundquist, Chief, Electrical Equipment Division

Tropical Latin America is seldom thought of as a possible market for electric heating and cooking apparatus and appliances, but while the demand is spotty and varies considerably according to the interest shown by the central station, there is a growing appreciation of such appliances.

It is true, of course, that in many cities in Venezuela, Colombia, Central America, and Mexico (countries recently covered by the writer) the flat rate of charging often in effect is a serious handicap to the development of the use of appliances. However, in spite of all the drawbacks, the use of electricity for home purposes is increasing.

Use of Electricity Favored—Charcoal Increasingly Expensive.

Most of the cooking in Latin American homes is done with charcoal, but in recent years there has been a steady increase in the cost of charcoal and this, combined with the difficulty of satisfactorily operating the primitive cooking devices commonly found in such

homes, has encouraged the use of electricity. Only limited facilities, as a rule, are provided for heating offices and often times none. It may be thought that heat of any kind is not often necessary in these tropical countries, but when it is realized that most of the important cities are in the interior, and at an elevation of from two to five thousand feet, it will be appreciated that artificial heat of some kind is very pleasant especially during the early morning and late evening hours.

Charcoal is burned by persons of small means, and is usually brought into the cities from considerable distances on the backs of burros. As the distance from the producing to the consuming point increases, the price of charcoal will necessarily be greater.

Disk Stoves Sold in Venezuela, Colombia, and Costa Rica.

In Venezuela and Colombia, due to a combination of flat rates, high charges, and a shortage of power, the use of current by householders other than for lighting

is limited. However, disk stoves have been sold to some extent as a result of a considerable increase in the price of charcoal, and a few reflector type heaters are in use, especially in Caracas and the interior cities of Colombia.

San Jose, Costa Rica, probably shows the greatest domestic heating and cooking development of any of the Central American cities visited. In that city two competing water-power companies have built up a considerable range load, a three-hole type with an average rating of 880 watts being the most popular. So well established is electric cooking that native cooks now inquire whether the proposed employer has an electric stove. Other electrical heating devices, such as disk stoves and reflector heaters, are also used to a fair extent and one of the larger hotels of San Jose operates its so-called hot-water system by electricity.

Development Limited in Nicaragua—Opportunity in Salvador.

In Nicaragua there is little development in the use of electrical heating devices, excepting for a few irons. It will probably be some time before much can be done in that country toward promoting the use of electric heating and cooking devices.

In Salvador there is a more extensive use of electrical heating appliances, but it is confined largely to the more common appliances found in most American homes. However, there is a fair quantity of low-priced disk stoves sold in the larger towns, and there is a possible market for the sale of reflector heaters.

Electric Sales Promotion in Guatemala.

The merchandising activity of the American company operating central stations in some of the more important Guatemalan cities has been a big factor in the promotion of electric heating devices in that Republic. While the development is by no means as great as in San Jose, there are a fair number of electric ranges in service and a considerable number of table stoves. It was said that much of the business had been done with foreigners resident in the country, but recently an increasing use has been noted among Guatemalan families. Reflector heaters are having a small sale, and a number of electric heating pads are being bought by doctors and hospitals.

Mexico Offers Good Market.

The demand for electric heating devices in Mexico varies with the location of the city and the interest displayed by the local central station in building up its load. As an indication of what can be done, one of the larger electric companies sold approximately 450 reflector type heaters during a short cold spell. Considering the country as a whole, disk stoves and reflector heaters are probably the most popular electrical heating devices, apart from the electric iron. There is also a considerable demand for immersion type heaters and many cheap heaters of this type, with clay bodies, are made locally. In fact, one type of immersion heater has the element wound on a hardwood body. The largest cities in Mexico have well organized electrical dealers and with good cooperation from local central stations it is believed that a considerable amount of electrical heating device business can be done.

In analyzing the possibilities in any of these Latin American markets it must be appreciated that many of the countries are small and have limited populations and that the purchasing power of the average person is considerably below that of the average user of elec-

tricity in the United States. Nevertheless, there is a certain field which American manufacturers can well cater to.

Australia's Electrical Imports

Trade Commissioner E. G. Babbitt, Melbourne

Official figures for the year ended June, 1924, show that Australia imported during that year the following electrical equipment:

Australia's electrical imports for the year ended June 30, 1924

Item	From United Kingdom	From United States
Dynamo-electric machines, static transformers, induction coils, fans and parts thereof.....	£725,000	£338,000
Regulating, starting and controlling apparatus.....	243,000	281,000
Switches, fuses, lightning arresters.....	121,000	87,000
Electrical heating and cooking appliances.....	9,000	8,000
Other electrical appliances.....	255,000	179,000
Telephone apparatus.....	211,000	214,000
Covered wires and cables.....	1,185,000	13,000
Total.....	2,752,000	1,120,000

Trade with Japan, Netherlands, Denmark, and Sweden.

In addition £4,000 worth of switches, fuses, and lightning arresters were imported from Japan, £1,000 worth of electrical appliances from the Netherlands, £8,000 worth from Denmark, and £5,000 worth of telephone apparatus from Sweden. Imports of incandescent lamps, by value, totaled £338,000. Of this total, the United Kingdom supplied £173,000, the Netherlands £123,000, and the United States £36,000. The value of measuring and recording instruments imported into Australia reached £176,000.

Exports of Electrical Machinery.

Total exports of Australian-made electrical machinery during the year ended June 30, 1924, were valued at only £8,000, as against £88,000 during the previous year.

Swiss Firm Finances Austrian Electric Company

Commercial Attaché H. Lawrence Groves, Vienna

The construction of a 60,000-volt transmission line in the Province of Salzburg from Fuschler-Baerenwerke over Bruck-Kitzloch-Lend of Plankenau will be financed, according to reports from Salzburg, by the Swiss firm of Aluminium A. G. at Neuhausen. The proposed loan will be made to the provincial government direct and not to the Salzburg electric company. It is assumed that the principal part of the material for the construction of this line will be furnished by the Swiss firm making the loan.

Electrical Trade Notes

Indian Radio Club Growing Rapidly.

The Burma Wireless Club is now well established with headquarters at No. 14 Lancaster Road, Rangoon. Its present membership of 100 is increasing rapidly. It has been able, with a 4-tube receiving set, to give a satisfactory demonstration of wireless reception on a loud speaker. The club has already secured a license which permits it to import radio apparatus and it has also applied for a broadcasting license. (Assistant

Trade Commissioner Don. C. Bliss, jr., Bombay, May 8.)

Sale of Electrical Devices in Ontario, Canada.

The Ontario Hydro Electric Power Commission, whose home office is in Toronto, has established a chain of electrical stores throughout the Province, which will give excellent sales outlets for various electrical devices not at present well presented for sale. Electric washing machines are selling well. (Consul F. S. S. Johnson, Kingston, May 19.)

Keen Competition in French Electrical Industry.

The French market for electrical equipment continues active. Prices are steady but there is keen competition among the manufacturers. Imports and exports of electrical machinery for the first four months of 1925 show an increased tonnage over that of the corresponding period of 1924. (Cable from Commercial Attaché Chester Lloyd Jones, Paris, June 6.)

PAPER

John Matthews, jr., Chief, Paper Division

IMPORTS OF FOREIGN PAPERS INTO CHINA

A Gain of 20 to 25 Per Cent in Chinese Purchases of Foreign Papers During 1924. Germany, Scandinavia, Italy, and Japan the Chief Sources of Printing and Wrapping Papers

B. M. Frost, Paper Division

Notwithstanding the disturbed conditions in the latter months of the year, imports of foreign papers into China during 1924 were considerably above those of the preceding year.

Increased receipts at the port of Shanghai, which in 1923 represented 65 per cent of China's paper imports, were registered chiefly in book, coated, M. G. cap, writing, and wrapping papers. Increases in similar classes also occurred in the imports at Tientsin, exceptions being in writing paper, receipts of which decreased 16 per cent compared with the previous year, and bank-note paper, which increased from \$107,582 to \$289,192, in contrast to a loss from \$224,836 to \$73,609 in the Shanghai district.

Imports of Paper and Board Into China.

Statistics covering imports of paper and board into the leading ports of China appear in the following tables, which have been furnished by American field officers at the ports mentioned:

Increased Purchases of Newsprint.

Receipts of the various classes of printing papers at Shanghai in 1924 were considerably above those of the preceding year, with the exception of art printing papers, which decreased in value from \$114,467 in 1923 to less than \$3,000 in 1924. The market for newsprint was keenly competitive, Japan ranking first as a source of supply with 24 per cent of the 1924 receipts, followed by Italy and Sweden with 20 per cent each, and Norway and Germany with 15 per cent.

Chief Gains Made by Germany and Italy.

The most notable gains in this market were made by Germany and Italy, each of which increased its sales by 25 per cent, and by Japan, which exported 12 per cent more newsprint to Shanghai during 1924 than in the preceding year. While Sweden and Norway furnished an important amount of this class of paper in 1924, receipts from both countries were substantially less than in 1923.

Printing Paper Imports from Great Britain.

The chief increase in the printing-paper imports in 1924 was in book paper, which gained 46 per cent in value over the preceding year. Approximately one-half of these imports came from Great Britain, and the remainder from Italy, which supplied 17 per cent; Sweden, which supplied 11 per cent; and Germany and Japan, which furnished 6 per cent each. Germany and Italy were again the chief countries to benefit by the increased purchases of this class of paper, imports from these countries showing gains of between 75 and 80 per cent over 1923. Great Britain and Japan were the leading sources of supply of art printing and M. G. poster papers, and Germany of other classes of printing paper.

Scandinavian Countries and Germany Chief Sources of Supply of M. G. Cap.

The market for M. G. cap paper ranks second only to newsprint in the Shanghai market. Practically all of the bleached sulphite and over two-thirds of the other M. G. cap papers were received from Norway and Sweden, the former having supplied 40 per cent and the latter 28 per cent of the total 1924 receipts. Next to the Scandinavian countries as sources of sup-

ply were Germany, which furnished 5,450,000 pounds, followed by Japan and Italy with 2,007,000 pounds and 1,894,000 pounds, respectively. Germany, Great Britain, Sweden, and Italy increased their sales of this class of paper in the Shanghai district during 1924, the largest gains being made by Germany and Sweden.

Italy Leader in Sales of Simili.

Nearly one-half of the imports of simili paper during 1924 came from Italy, which increased its sales by 72 per cent. The remaining receipts were principally from Japan and Sweden, which furnished nearly 20 per cent each, and from Germany and Norway, which supplied approximately 10 per cent of the 1924 imports. Receipts of simili paper at Shanghai were 10 per cent less than in 1923.

Germany Leading Source of Supply of Wrapping Papers.

Japan, which ranked first as a source of supply of miscellaneous wrapping papers in the Shanghai market in 1923, dropped to fourth place in 1924, its lead being taken by Germany, which supplied 3,174,000 pounds of the total imports of 9,362,400 pounds. Sweden and Norway ranked second and third, respectively, with sales aggregating 3,000,000 pounds, and Japan next with total shipments of 982,400 pounds. The remaining imports came chiefly from Italy, Great Britain, and the Netherlands, which supplied 677,000 pounds, 492,000 pounds, and 410,000 pounds, respectively.

Imports of waxed and grease-proof papers increased in value by \$65,680 during 1924. Receipts of this class of papers were from Great Britain, and Italy, each of which supplied approximately 20 per cent, and from Belgium and Norway which furnished approximately 16 per cent each of the total 1924 imports. Germany supplied only 8 per cent of these papers during 1924, purchases from that source having fallen 14 per cent under those of the preceding year. Great Britain, which furnished \$4,572 worth, and Germany, which furnished \$1,264 worth were the leading suppliers of imitation parchment papers.

United States, Great Britain, and Japan Chief Competitors in Fine Paper Market.

Imports of most classes of fine papers increased during 1924, and, in contrast to the cheaper grades, this upward movement continued during the second half of the year. Receipts of coated paper at Shanghai increased 56 per cent, those of writing paper 43 per cent, and those of colored papers 10 per cent over 1923. The largest item in the fine-paper group was cigarette paper, imports of which were valued at \$1,570,968 during 1924. The British Empire furnished the bulk of the cigarette-paper imports, approximately half of the receipts coming from Great Britain and an additional 17 per cent from British India. The nearest competitors to Britain in this field were Germany, which furnished 21 per cent, and France, which furnished 16 per cent.

Writing Paper Imports from Germany and Italy Increased.

Nearly one-third of the writing-paper imports came from Germany, its nearest competitors being Great Britain, with 990,000 pounds, and Italy, with 966,000 pounds. The United States, which ranked fourth from the standpoint of quantity, stood first in the value of its shipments, which exceeded those of Great Britain and Germany by 12 and 20 per cent, respectively.

Only Germany and Italy, among the important competing countries, increased their sales during 1924.

The value of the imports of writing paper from the United States fell off 6 per cent during 1924 and those from Great Britain 11 per cent. The most severe losses were from the Scandinavian countries and Japan, whose sales were reduced approximately 70 per cent. Over 60 per cent of the imports of coated paper last year were from the United States, which more than trebled the value of its sales, the nearest competitor being Japan, which supplied 14 per cent of the total receipts. The remainder came from Great Britain, Germany, and Italy, whose sales decreased 20 to 50 per cent compared with 1923.

Board Importations Chiefly from United States and Japan.

Imports of board into Shanghai decreased by 25 per cent in 1924, the greatest losses being sustained by American and Japanese exporters. The United States and Japan, nevertheless, remained the chief sources of supply, the former furnishing 84 per cent of the cardboard and the latter 84 per cent of the strawboard during 1924. Italy ranked third as a shipper of board to Shanghai, imports from that source consisting of 429,465 pounds of paper board and 59,600 pounds of strawboard, with a total value of \$30,900. Of the remaining competitors, Great Britain and Norway show a loss of 50 per cent in their shipments during 1924 and Germany 4 per cent. The total value of the imports of board from the United States into Shanghai last year was \$299,155, while from Japan it was \$118,148.

Miscellaneous Papers.

Imports of toilet and blotting paper were principally of American origin, the United States supplying 53 per cent of the former class of paper and 30 per cent of the latter. Japan was the chief competitor in toilet papers and Great Britain, Germany, and Italy in blotting papers. Practically all of the receipts of wall paper were from Great Britain, which supplied \$42,326 worth out of a total importation in 1924 amounting to \$68,648.

Northern Markets Supplied by Japan—Shanghai Market Keenly Competitive.

The paper trade in northern China is monopolized to a great extent by Japan, according to Vice Consul D. C. Berger, of Tientsin, who reports that 52 per cent of the 1924 imports of paper and paper products were of Japanese origin, compared with 19 per cent from the United States, 10 per cent from Germany, and 9 per cent from Great Britain.

The trade in the southern districts is more keenly competitive, and no country holds a predominating place in the market. During 1923 Norway and Japan ranked first and second, respectively, in the value of their exports to Shanghai, followed by Great Britain, the United States, Sweden, Germany, and Italy in the order named. During 1924, however, while the second place was still held by Japan, Norway yielded first place to Great Britain, Sweden ranked third, and the United States fifth, Germany and Italy retaining the places held by them in 1923, namely, sixth and seventh. The value of the receipts from each country did not vary to a notable extent, however, Great Britain having furnished 19 per cent, Japan 16 per cent, and the remaining countries mentioned between 11 and 13 per cent of the 1924 imports.

Increased Demand Anticipated by Chinese Importers During 1925.

Although no statistics are at hand of the importations of paper and paper products into Shanghai during the first quarter of 1925, indications point to a larger trade than in 1924. The market has been steady since the first of the year and prices have shown an upward tendency. The latest report from Trade Commissioner G. C. Howard states that the paper market has been active and early May importations have gone into consumption rapidly at higher prices. Vice Consul D. C. Berger, of the Tientsin district, also reports that dealers in that section are looking forward to an even larger business during 1925 than in 1924.

Side Runs of the Paper Trade

German Competition in Mexican Market Less Keen.

Competition from Germany in wrapping and writing papers is not so keen in Mexico as at the beginning of 1924. The inferior quality of the German papers, together with the inability of German exporters to make prompt deliveries, is alleged to have offset the lower cost of their papers. (Consul General A. W. Weddell, Mexico City.)

Norwegian Pulp and Paper Exports.

Norwegian exports of pulp and paper during April, according to a cable from A. Fenselau, office of the commercial attaché, Copenhagen, comprised 72,000 tons of mechanically ground wood, 19,000 tons of chemical pulp, and 22,500 tons of paper, including 13,000 tons of newsprint. The total value of the shipments amounted to 28,800,000 crowns (\$4,645,440).

Belgian Paper Industry Active.

While Belgian paper exports during April were under normal, the domestic market was brisk and mills throughout the country operated on a full-time basis. The production of fine quality papers was not pronounced, and the demand for writing paper and paper for commercial documents was lighter than in the preceding month. On the other hand, Belgium elections stimulated the demand for newsprint and poster paper, and exports were necessarily restricted by the domestic needs. Belgium paper continues to be purchased by German firms for reexport to South America. (Consul General J. H. Harrington, Brussels.)

Imports of Printing Machinery into Spain.

Spanish imports of printing machinery during 1923, the latest year for which statistics are available, were valued at \$1,483,589. Imports, as classified by the Spanish Government, were as follows: Up to 100 kilos (220 pounds) weight, valued at \$93,831; from 100 kilos to 1,000 kilos (220 to 2,205 pounds) weight, valued at \$405,983; over 1,000 kilos weight, valued at \$982,775. No information is at hand as to the countries of origin of these imports. During the same year receipts of printing inks from foreign countries amounted to 474,414 pounds, valued at \$78,065.

See list of "Bureau's special circulars available," in this issue. See also "Foreign trade opportunities."

RUBBER

P. L. Palmerton, Chief, Rubber Division

HIGH-PRICED RUBBER WILL CAUSE GREATER USE OF SUBSTITUTES

Production, Consumption, and Extent of Use of Reclaimed Rubber

E. G. Holt, Assistant Chief, Rubber Division

The manufacture of reclaimed rubber is a considerable industry in the United States, and the present crude-rubber situation suggests several questions.

Extent of the Use of Reclaimed Rubber.

To what extent can reclaimed rubber be used in place of crude rubber? What relation does the use of reclaimed rubber bear to the price of crude rubber? At what price for crude rubber is reclaimed rubber used to the greatest extent practicable? About how much reclaimed rubber is produced annually in America, and what is the present production capacity of reclaimed-rubber manufacturing plants in the United States? Finally, if the consumption of reclaimed bears a definite relation to the price of crude rubber, how much may our crude-rubber requirements be reduced by increased use of reclaimed, with crude-rubber prices at above \$0.40 per pound?

Exact answers to these questions are perhaps not available, but statistics which have been compiled since 1919 by the Rubber Association of America (Inc.) are worthy of special consideration.

Consumption of Crude and Reclaimed Rubber.

When the Stevenson rubber export restriction scheme became effective in British Colonies the Rubber Association of America gathered data from United States and Canadian rubber manufacturers covering the consumption of crude rubber and reclaimed rubber in America during the years 1919 to 1922, inclusive. The figures are as follows:

Consumption of crude and reclaimed rubber in the United States and Canada

Year	Crude rubber	Reclaimed rubber	Ratio reclaimed to crude
	<i>Long tons</i>	<i>Long tons</i>	<i>Per cent</i>
1919.....	202,303	73,535	36.4
1920.....	196,270	75,297	38.4
1921.....	169,308	41,351	24.4
1922.....	283,271	54,458	19.2

United States Consumption of Crude Rubber and Production and Shipments of Reclaimed Rubber.

For 1921, 1922, and 1923 the domestic production only of reclaimed rubber was reported; since that time the stocks, production, and shipments of reclaimed rubber have been reported quarterly. The following table shows the reported consumption of crude rubber and production of reclaimed rubber during each period, and the shipments of reclaimed rubber since the beginning of 1924:

Rubber Association reports on United States crude rubber consumption and reclaimed rubber production and shipments

Period	Crude rubber consumed	Reclaimed rubber		Ratio of reclaimed to crude—	
		Pro-duced	Shipped	Pro-duced	Shipped
1921:	<i>Long tons</i>	<i>Long tons</i>	<i>Long tons</i>	<i>Per cent</i>	<i>Per cent</i>
First half.....	53,919	14,968	(1)	25.4	(1)
Second half.....	95,369	19,188	(1)	20.0	(1)
1922:					
First half.....	114,623	25,824	(1)	22.5	(1)
Second half.....	139,560	27,964	(1)	20.0	(1)
1923:					
First quarter.....	87,098	19,168	(1)	22.0	(1)
Second quarter.....	80,544	15,017	(1)	18.6	(1)
Third quarter.....	50,059	15,108	(1)	30.2	(1)

Second quarter.....	68,107	12,297	11,285	18.1	16.6
Third quarter.....	75,432	16,678	15,231	22.1	20.1
Fourth quarter.....	83,391	25,263	20,864	30.3	25.0
1925: First quarter.....	87,642	25,353	22,922	28.9	26.2

¹ Not reported.

Consumption of Crude and Reclaimed Rubber—Prices.

The table below combines the Rubber Association report for the United States and Canada for the years 1919 to 1922 with the reports for the United States alone for 1923 and 1924. For 1923, the "production" of reclaimed rubber as shown above is used in the column for consumption of reclaimed, and for 1924 "shipments" is the figure employed since it is probably nearer the actual consumption.

The absolute consumption of reclaimed rubber in 1924 appears to have been greater than for any previous year, although the relative use of reclaimed as compared to crude was at a low level throughout most of the year.

The average market price per pound of crude rubber (ribbed smoked sheet) is also shown, and in addition the average value per pound of crude rubber imported into the United States, as computed from official import statistics.

Consumption of crude and reclaimed rubber

Year	Crude	Re-claimed	Ratio of re-claimed to crude	Average market price of ribbed smoked sheet	Average value per pound of crude imports
	<i>Long tons</i>	<i>Long tons</i>	<i>Per cent</i>		
1919.....	202,303	73,535	36.4	\$0.487	\$0.40
1920.....	196,270	75,297	38.4	.363	.43
1921.....	169,308	41,351	24.4	.163	.18
1922.....	283,271	54,458	19.2	.170	.15
1923.....	274,956	69,534	25.3	.296	.27
1924.....	301,778	76,072	21.9	.260	.24

Relation Between Use of Reclaimed Rubber and Value of Crude Rubber.

Charts may be drawn to compare the ratio of reclaimed rubber used in recent years with either the average market price of ribbed smoked sheet or the average value per pound of crude rubber imported into the United States. The latter figure has been chosen as representing more nearly the cost of rubber to the average large manufacturer, and also because the trend shown by this chart is believed to be more nearly correct.

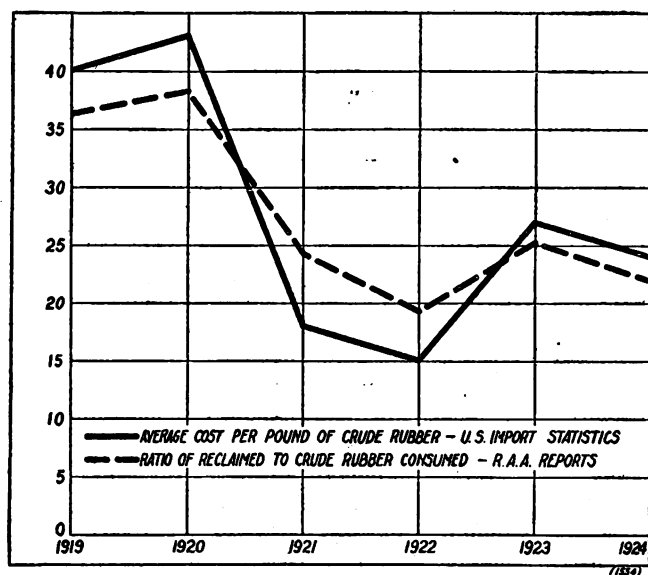

CHART I.—Relative use of reclaimed rubber compared to cost of crude rubber

The table and chart show that when crude rubber was above \$0.40 per pound in 1919 and 1920 from 36 to 38 per cent as much reclaimed rubber was consumed as of crude rubber. With low-priced crude rubber in 1921 and 1922, crude rubber was used to an increased extent in place of reclaimed, and the ratio of reclaimed to crude fell below 20 per cent. An average market price of \$0.296 in 1923 brought about a larger use of reclaimed rubber, which held up fairly well in 1924 in spite of a slightly lower average cost for crude.

Factors Affecting the Use of Reclaimed Rubber.

There are many different standard grades of reclaimed rubber for use in the manufacture of different rubber products. For certain purposes it is frequently said that reclaimed rubber is fully equal if not superior to crude rubber; for such purposes reclaimed rubber finds a steady use regardless of the price of crude rubber. For certain other purposes, where reclaimed and crude rubber may be used interchangeably, reclaimed rubber of standard but more expensive grades finds a considerably increased use with crude rubber prices between \$0.30 and \$0.35, and with crude rubber prices at higher levels it becomes economically worth while to develop special grades of reclaimed rubber to use in place of crude for products which ordinarily require the use of crude rubber almost altogether.

Furthermore, the percentage of reclaimed utilized in the production of a specific product may be varied between certain limits, as the price of crude rubber fluctuates and renders such variations desirable. Every large rubber manufacturer has at least two sets

of formulas for use in preparing the compounds for his products, and a high price for crude rubber results in the use of the formulas calling for increased amounts of reclaimed rubber in place of crude.

Consumption of Reclaimed as Compared with Crude.

There is a fairly definite relation between the price of crude rubber and the use of reclaimed. It appears from available data for the years 1919 to 1924 that reclaimed rubber has never been used four-tenths as much as crude, and its use has never fallen much below two-tenths as much as crude. Between these points its use has fluctuated according to crude-rubber prices. With crude rubber slightly above \$0.40 per pound, the use of reclaimed rubber may amount to about 37.5 per cent as much as crude; with \$0.15 rubber, only 20 per cent reclaimed is used; when crude rubber is around \$0.30 per pound over an extended period about one-fourth as much reclaimed as crude is used. Apparently it becomes economical to employ considerably increased quantities of reclaimed rubber when the price is between \$0.30 and \$0.35, and at \$0.35 probably about one-third as much reclaimed as crude would be consumed.

Fluctuation of Reclaimed Rubber in Accordance with Price of Crude.

In order to show in a more detailed manner how the production of reclaimed rubber in the United States has fluctuated in accordance with the price of crude rubber since 1919 the Chart II is presented, based on the combined United States and Canada report for 1919 and 1920, and periodical reports of the Rubber Association of America covering United States manufacturers alone for semiannual and quarterly periods in subsequent years, compared with the average cost per pound of crude rubber imported into the United States during the various periods.

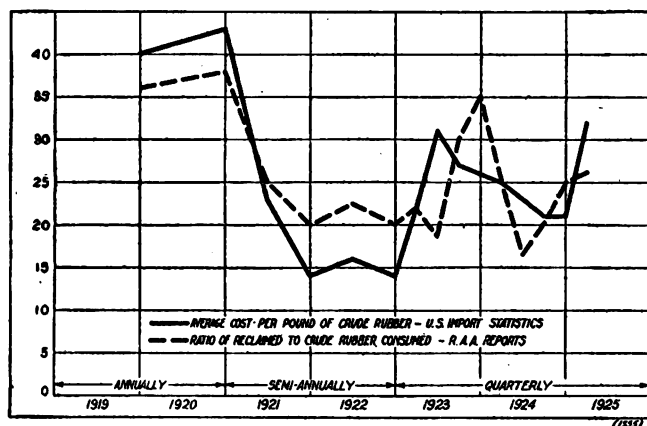

CHART II.—Relative use of reclaimed rubber compared to cost of crude rubber

In Chart II the ratio of reclaimed to crude rubber is computed on the same basis as in Chart I, except for 1921 and 1922, for which years the "production" of reclaimed was necessarily used in computation, semi-annual statistics of "consumption" or "shipments" of reclaimed not being available. It will be noted that the relative use of reclaimed rubber increased considerably during the last half of 1923, following higher prices for crude rubber in the first half of the year, fell off thereafter with the declining price of the raw product in the first half of 1924, and has constantly increased since that time in conformity with advancing

rubber prices. High priced crude rubber causes an increased use of rubber substitutes.

Reclaimed Rubber Production Capacity.

The reports of the Rubber Association of America show a total production of 76,072 long tons of reclaimed rubber in the United States in 1924. How close this comes to the production capacity of the manufacturers can not be accurately stated, but it is generally understood that reclaimers were not operating at anywhere near capacity in 1924, and a reasonable estimate of the production capacity of present equipment is between 125,000 tons and 150,000 tons a year. Doubtless plant extensions could rapidly increase the latter figure.

Increased Use of Substitutes Indicated.

During 1924, the United States imported about 328,000 long tons of rubber; the average cost per pound, according to import statistics, was around \$0.24; the ratio of reclaimed rubber consumption to crude was about 22 per cent. At prevailing prices, there is bound to be an increased use of substitutes. If we would have used say 400,000 tons of crude and 100,000 tons of reclaimed rubber, or one-fourth as much reclaimed as crude, with the price around \$0.30, we are much more likely to use 375,000 tons of crude and 125,000 tons of reclaimed rubber or one-third as

much reclaimed as crude at prevailing prices, and there is a further increase possible in the relative use of reclaimed rubber which might reduce our crude rubber requirements for the year another 10,000 tons.

Continued high prices for crude rubber over a period of years would undoubtedly stimulate the use of reclaimed rubber still further. The reclaimed rubber of to-day is considerably improved as compared with the product in 1919, and there is a possibility that the use of reclaimed rubber could be increased to 45 or 50 per cent as much as crude rubber. Such stimulation would result only from a fairly long period of high crude rubber prices, because of plant extensions necessary for manufacturers of reclaimed rubber, and because of experimentation and readjustment of formulas for compounds on the part of manufacturers of rubber products.

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

PRINCIPAL TYPES OF IMPLEMENTS USED IN ARGENTINA

Assistant Trade Commissioner Sherwood H. Avery, Buenos Aires

[This article is supplementary to the one entitled "Argentina as a market for agricultural implements," which appeared in the June 15 issue of COMMERCE REPORTS. That discussed the general aspects of the Argentine trade in implements, the chief sources of imports, and the extent of the domestic manufacturing industry. This article considers in some detail the types of the principal implements used in Argentina.]

Modern implements are used extensively in Argentina and that country has made greater progress in the adoption of modern methods of agriculture than any other Latin American country. The use of modern types of plows is widespread and the estimated sales average about 20,000 walking plows annually, and some 22,000 to 27,000 wheel plows, including gang moldboards, sulkies, and disk harrows. More than 70 per cent of the gang plows of the moldboard type sold in Argentina have two bottoms, to which a third beam and bottom may be attached. The demand for this type of plow is increasing and there is a preference for two-bottom plows of 12 and 14 inches. The gang plows used in Argentina differ in some cases from those used in the United States and some American manufacturers have designed plows especially for Argentine use.

Special Types of Plows Used in Argentina.

The plows used in Argentina are heavier and stronger than those employed in the United States, and the beam braces are adjustable to allow an increase or decrease in the cut of the furrow. High beam and great fore and aft clearance has always been a notable feature of the Argentine gang plows. There are a number of gang plows of German manufacture on

the Argentine market, which undersell American and Canadian plows some 10 or 15 per cent. Two-gang plows of Canadian manufacture are also on the market, but these do not differ much from American plows. Sales of sulky plows have been declining for many years, and it is now estimated that the average annual sales are around 4,000, whereas in former years they averaged about 18,000. The greatest present demand is for the 16-inch bottom sulky plow, and these are employed most in the Chaco district in the Province of Entre Rios. As in the case of gang plows, there are also two makes of German sulky plows on the Argentine market, which are cheaper than American or Canadian plows. Their sales, however, are small.

Walking Plows Sold.

A large number of walking plows is sold annually, and about three-fourths of them are moldboard-turning plows and the remainder middle breakers. Most of the moldboard plows have from 6 to 9 inch bottoms. There is in wide use in Argentina a one-handled type of moldboard plow of American and Canadian manufacture which is more or less peculiar to Latin American countries. This is a cheap, serviceable plow of sturdy build, of few parts, weighing from 40 to 85 pounds, and retailing from \$10 to \$25.

Disk and Moldboard Types Used.

The size of the middle breakers most in demand are those with 10, 12, and 14 inch bottoms. Annual sales of disk plows are estimated at \$3,000 to \$3,500. About one-third of these have two disks and about one-third

three disks. Upon this basis it appears that only about 15 per cent of the wheel plows sold annually in Argentina are disk plows. The demand for such plows is greatest in the western and northern sections of the country. Between 85 and 90 per cent of the tractor plows employed in Argentina are of the moldboard type, the others being of the disk type. The moldboard tractor plows are of two, three, four, and five 14-inch bottoms, and there are a few 12-inch plows of the 3 and 4 bottom type. Four, five, and six disk plows are used with tractors. Nearly all of the tractor plows imported into Argentina are of American make and a few are imported from Canada. At present there are no motor plows sold in Argentina.

Increasing Demand for Harrows.

There is a heavy and increasing demand in Argentina for disk harrows and reversible disk harrows, as well as for U-bar and type-bar harrows, with or without levers. The annual sales are estimated as follows: Disk harrows, 2,500; reversible disk harrows, 800; leverless spike-tooth harrows, 3,400; and spike-tooth harrows with levers, 6,750.

Grain Drills Common in Argentina.

Grain drills are used in Argentina for sowing wheat, linseed, oats, barley, rye, alfalfa, and birdseed, and the sales amount to about 4,000 a year. Most of the grain drills sold are of the single-disk double-run feed type, with 20 and 22 disk markers. The sales of broadcast sowers reach about 750 per year. The greatest demand is for the 14-foot wide walking force-feed machine, which sells for about \$100. Other sowers, in 10 and 12 foot sizes, are somewhat cheaper. Special alfalfa seed machines are sold to a small extent, the average price for such machines being about \$225.

Planters and Cultivators Generally Used.

Corn is one of the important crops of Argentina and the number of corn planters sold annually is about 4,000, the largest demand being for the three-row type. These machines should be of strong construction and adjustable to plant rows from 24 to 32 inches apart. The demand for cotton planters has been limited up to the present, as most of the cotton has been planted by hand. The recent increased acreage of cotton and the great interest now shown in this crop presages a growing market for cotton planters.

Annual sales of cultivators amount to about 6,750 in a normal year. Most of the corn cultivators sold in Argentina are made especially for that country, and should be adjustable to rows of 24, 26, 28, and 30 inches. The most popular cultivator in Argentina is the adjustable arch pivotal axle riding cultivator, which straddles one row and cultivates two middles. The chief demand for small walking cultivators is in the northern districts of Argentina, where they are used for cultivating orchards, gardens, and cotton fields.

American Threshers Lead in Argentine Market.

Argentina offers an important market for harvesting machinery and a large number of threshers are sold annually. Threshers operated by kerosene tractors are used, as well as those operated by steam power. The use of kerosene-operated threshers predominates, however. American threshers have controlled the market since the war; it is estimated that from 85 to 90 per cent of the threshers sold in Argentina are of American manufacture. The others are mostly British. Sales of threshers are diminishing, due to the

growing popularity of the combined harvester-thresher, of which more than 6,000 have been sold in Argentina within the past two years. There are three American houses selling these combined machines in the Argentine market, and they are encountering serious competition from one Canadian firm, which is securing about 25 per cent of the sales. The demand for binders and headers has also greatly decreased, as a result of the growing use of the combined harvester-thresher. Most of those sold are of American manufacture. Stripper harvesters have gone out of use almost entirely.

Opportunity for New Type of Harvester.

A suitable corn harvester has not yet been developed for the Argentine market. Corn is planted in thick stands and in narrow rows. The stalks grow very tall and slender, and a large percentage fall over before harvest time. Potato diggers are not much used and the sales are estimated at about 200 a year.

Alfalfa Fields Require Many Implements.

More than 20,000,000 acres are devoted to alfalfa in Argentina, which is cut from three to five times a year. There is, therefore, a good demand for hay tools. The Argentine market generally absorbs in a year 7,000 mowers, 6,000 hayrakes, and 300 hay presses, all of which are imported. Nearly all the stackers used are made in Argentina and only a very few are imported. The market for tedders is negligible. The 4½-foot mower is most in demand. There is a small sale for the 3½-foot size, and a somewhat larger demand for the 5-foot mower. The types of mowing machines sold are the same as those used in the United States. The self-dumping hayrake of American manufacture is generally demanded. About two-thirds of the rakes sold are imported from the United States and most of the others are of German manufacture. Very few side-delivery rakes are sold. Practically all hay balers used are imported from the United States. The greatest demand is for the 14-inch by 18-inch horsepower baler, employing two horses.

Windmills Popular—Other Farm Machinery Locally Made.

Argentina uses many windmills and most of those imported come from the United States. The use of windmills is confined almost exclusively to pumping water for watering stock and for household use. The imports of wagons, carts, and carriages into Argentina are insignificant. Nearly all vehicles of this sort are manufactured in Argentina by wagon and carriage factories and also by numerous small shops. There is practically no demand for manure spreaders, and possibly less than 50 have been imported within the last 10 years. Soil pulverizers and cultipackers have a limited sale and a considerable portion of the demand is supplied by local manufacture. The largest sales are among the solid cylinder rollers. Imports of winnowers are decreasing, but most of those purchased are of American manufacture.

Comparatively Large Sales of Mills and Corn Shellers.

Sales of power-feed grinders amount to about 500 during a normal year. Ninety per cent of these mills are made with iron burrs, and the rest are stone mills. The motive power is generally furnished by kerosene-burning engines of 3 or 6 horsepower. There are thousands of small hand grinders sold. The demand for corn shellers was considerable in 1924 and comparatively large purchases were made from the United States. About 1,000 small hand corn shellers are made in Argentina annually.

Silos—Dairying and Poultry Equipment Limited.

Silos are little used in Argentina, as cattle are pastured throughout the year. Several American firms have imported small numbers of silos and have made efforts to popularize them. Only very few ensilage cutters have been sold.

Considerable interest has been shown in dairying in recent years, and imports of dairying equipment from the United States were large from 1918 to 1920, but since then a considerable share of this business has been lost to German and Swedish manufacturers. Sales of poultry equipment are limited, although several American, Swedish, German, and British manufacturers are represented in the market.

Use of Tractors Constantly Increasing.

It is estimated that there are approximately 6,000 farm tractors in actual use in Argentina. About 95

per cent are wheel tractors, and the others are track-laying. Most of the tractors imported have been of American make, and a very large proportion are of the light-wheel type. The principal use made of tractors is for breaking and plowing land, and in road-construction work. They are not commonly employed for belt work and little hauling is done by them. The principal factors militating against the use of farm tractors have been the high cost of fuel and oil, the cheapness of draft animals and feed, and the scarcity of mechanics and operators in the agricultural districts. However, knowledge of gas engines is increasing rapidly in Argentina and the number of tractors in use is constantly increasing.

COAL

Charles P. White, Chief, Coal Division

DOWNWARD TREND OF THE BRITISH COAL EXPORT TRADE

Trade Commissioner Charles E. Lyon, London, May 15

Only 4,359,817 long tons of British coal were exported during April, 1925, or more than 32,000 tons less than in March and 703,000 tons less than in April, 1924. For the first four months of the present year exports were 17,462,134 tons, a figure that compares unfavorably with the corresponding period of 1924, when 20,768,891 tons were sent abroad.

Shipments Decline Despite Gains in Certain Quarters.

Total exports continue to decline, although Finland, Norway, Spain, Greece, Egypt, Portuguese West Africa, Chile, Gibraltar, Aden and dependencies, and Canada are taking more coal than they did in either 1922, 1923, or 1924. In addition to these countries Italy and Brazil during the early months of the present year were ordering more than in 1924, but have not yet reached the high level of 1923. Russia took 4,000 tons in April, its first purchases in 1925, small in total but interesting as an indication that a way has been found to arrange credits with the same country whose appeal for a loan hastened the downfall of the labor government in Great Britain.

Real Explanation Lies in Decreased Shipments to Continent.

The real explanation of the decline in April shipments in this year from April, 1924, and of the decrease of 2,481,606 tons from the same month of 1923 is furnished in the following table of exports to selected continental customers:

British coal exports to selected markets

Countries	April, 1923	April, 1924	April, 1925
	<i>Long tons</i>	<i>Long tons</i>	<i>Long tons</i>
Germany.....	1,715,215	517,602	337,602
Netherlands.....	450,572	141,726	117,514
Belgium.....	699,257	203,621	227,943
France.....	1,542,627	1,281,030	954,972
Total.....	4,407,701	2,143,979	1,633,031

In April, 1913, these same countries received 2,263,393 tons of British coal, so that the normal trade with them is still disrupted.

Reduced Value of Coal Exports.

The situation with respect to values is more serious than the tonnage factor, as the costs of producing coal are much heavier and make it imperative that the bulk should not be diminished if the industry is to cease producing at a loss. The value of four months' exports in 1925 was £18,345,059, which is 28 per cent below the 1924 figure of £25,596,619, and 41 per cent below the four months' value, £30,876,234, which was reached in 1923. The value is higher than the pre-war figure of £16,112,496 for the first four months of 1913, but the value of money has changed, so that the present year's returns really represent less purchasing power.

Coal the Great Balancing Commodity of British Trade.

Coal was formerly the great offset for British imports of raw materials. Before the war coal exports offset over 6 per cent of the value of total imports and 16 per cent of the cost of raw materials and articles mainly unmanufactured. In 1925 coal receipts are paying for less than 4 per cent of the cost of total imports and for about 11 per cent of raw materials and articles mainly unmanufactured purchased. This reduction in the amount of outgoing cargo increases the freight cost on homeward cargoes and thereby lowers the general purchasing power of the British people.

How much of the recent decline may be attributed to the lack of demand on the part of industry and how much arises from lower costs of competing continental coal can not now be determined.

No Improvement Reflected in Recent Conditions.

The recent situation in the industry is summarized in a radio letter dated June 11, which states that the British coal position is exceedingly quiet following the lengthy Whitsun holiday. Heavy stocks are not diminishing and price concessions of 3 to 6 pence are easily obtainable, but buyers are holding off, with the result that forward business is lifeless. Welsh best Admiralties broke to 25s. 9d. (\$6.26), while Tyne

primes are quoted at 16s. 9d. (\$4.07). The local arrangements between owners and workers to avoid closing are progressing, and both sides are conciliatory. The miners' federation has failed to secure the sympathetic support of associated workers. An owners' meeting on June 19 to consider a policy respecting the agreement after June 30 will probably indorse the present cooperative trend. All markets report heavy depression, but the situation is obscured by the recent holidays and the summer season.

Unsatisfactory Situation of Belgian Coal Industry

Assistant Trade Commissioner Leigh W. Hunt, Brussels

The situation in the Belgian coal industry is causing considerable concern in industrial circles. Domestic coal is suffering from the competition of foreign coal which is being imported at cheaper prices. The reason for this condition is the higher cost of producing Belgian coal, and this is chiefly attributed to the excessive wage cost. Stocks of coal in the country increased over 130 per cent in the six months preceding March 31 in the face of the depression in the local industry. Assuming that the normal consumption continued, this would indicate that users are accumulating stocks of imported coal at lower prices than those prevailing on the domestic market. The increased importation of French, British, German, and Dutch coal, which is being sold practically on the ground of the Belgian coal mines, would seem to substantiate this view. Important reductions in price have not improved the situation of Belgian coal in competition with the imported product.

Increased Foreign Competition.

Prior to the war Belgium annually imported about 5,500,000 tons of coal, chiefly industrial grades. These

imports were more or less balanced by exports of Belgian domestic grades of coal. In 1924 exports of coal from the Belgian-Luxemburg Union did not reach 2,200,000 tons, while imports totaled around 9,300,000 tons. A large part of the 1924 imports were reparations deliveries from Germany, and the price of such coal is systematically established beneath the current prices quoted for Belgian coal. The United Kingdom, owing to very favorable prices, was able to deliver 2,800,000 tons of coal to Belgium in 1924. The coal production in the Pas-de-Calais has surpassed pre-war figures and because of lower production costs the French were, during 1924, able to deliver over 1,000,000 tons of coal in Belgium.

Little Opportunity to Cut Cost of Production.

There is little chance of cutting production costs in the Belgian coal mines by more modern methods. Belgian mine owners are constantly introducing modern machinery into their installations, but they can hardly be expected to discard their old machinery, sink new pits, and, in short, cast aside their present installations for replacement along more up-to-date lines at a great outlay of new capital. The miners appear to think that some such action would solve the problem of reducing the price of coal without cutting wages, as, in their contention for maintaining wages at their present level, they constantly refer to the poor equipment of Belgian mines as the reason for the high cost of production.

CHEMICALS

Charles C. Concannon, Chief, Chemical Division

TRADE IN CHEMICALS IN NORTHERN SUMATRA

Vice Consul Sydney B. Redecker, Medan

Almost all of the chemicals imported into Northern Sumatra are for use in the large European-managed plantation industries, which constitute practically the entire economic life of the Medan district. The country, only recently developed, is witnessing a remarkable expansion. New estates are being laid out, older ones enlarged, and new products cultivated. Vast areas, nevertheless, still are undeveloped. No chemicals are produced. With the continued growth of the district's industries, a further increase in the demand for chemicals may be expected.

Fertilizers Constitute the Leading Import Item.

Fertilizers laid among chemical imports—3,846 tons in 1919 and 16,620 in 1923. The figure for 1924 is reported to be still larger. The chief demand—75 per cent of the total according to estimates—is for mixed fertilizers, composed of varying percentages of nitrogen, phosphate, and potash. Sulphate of ammonia is used on tobacco estates, and, to a great extent, on the large rubber plantations of an American company. Imports in 1923 totaled 1,486 tons. The rubber estates

have experimented with the use of sodium nitrate. Its importation has been very irregular—1,717 tons in 1920, none in 1921 and 1922, and 2,318 in 1923. Over 2,000 tons of superphosphates were received from foreign countries in 1923.

It is estimated that probably 80 per cent of the total importation of fertilizers into Sumatra is manufactured in the Netherlands and the remainder comes chiefly from England, British India, Belgium, Germany, and France. Phosphates have been furnished by France, England, and Germany. The United States has never participated in the trade in mixed fertilizers, but has furnished considerable quantities of ammonium sulphate.

Continent Supplies Most of Insecticides, Disinfectants, and Industrial Chemicals.

England, Germany, and the Netherlands supply most of the insecticides, disinfectants, and industrial chemicals which are used on tobacco, rubber, tea, oil-palm, sisal-fiber, and other estates of the district. It appears that the American participation in this trade—now

limited to certain items—might be increased. Accurate import statistics are not available for many chemicals, which are grouped under the general heading, "chemicals not specified elsewhere." Items in this classification in 1924 had a total value of 311,092 florins (1 florin averaged \$0.3821 in 1924).

Insecticides Must Conform to Strict Specifications.

All of the insecticides imported are used by the tobacco industry. Tobacco producers work in very close association. All of the estates are members of the Deli Planters' Association, an organization designed to promote the interests of the industry as a whole. This association maintains an elaborate research and experimental station (proefstation), which studies the requirements of each estate for fertilizers and chemicals, specifies the exact analysis of the chemicals to be used, and analyzes imports upon their arrival to insure their exact conformity with the specifications. Those governing insecticides are very strict.

Most of the insecticides come through general importing firms in Medan. It is the practice of the tobacco companies to call for tenders for their entire yearly requirements in the spring, usually April or May, for delivery to the estates the following November or December.

The total lead-arsenate requirements, according to the Deli Proefstation, approximate 175,000 kilos per year, the bulk coming from Germany and a small amount from England. Shipments are usually made in drums of 50 kilos net weight.

Imports of Paris green, next in importance, amount to approximately 70,000 kilos yearly. Most of last year's receipts came from England. It is used largely as an insecticide in tobacco cultivation.

Disinfectants in Sumatran Market.

A number of disinfectants, for use in and around drains, cesspools, and the like, for combating diseases of rubber trees, and for hospital and general purposes, are on the market in Sumatra, many of them patented or trade-marked. Ordinary creoline, a coal-tar preparation, is the most popular. It is imported chiefly from the Netherlands, in drums of 300 kilos. Its advantage is its abundance and exceeding cheapness compared with other perhaps superior disinfectants. The leading importer of creoline is reported to have received 12,000 kilos in 1924.

Acetic Acid Leads Industrial Chemicals—Liquid Ammonia.

Acetic acid is the most important industrial chemical used in Northern Sumatra. Large quantities are required as an agent in coagulating the liquid rubber (latex). It is supplied in demijohns of 20 kilos' net weight. The Province of the East Coast of Sumatra imported 332 tons in 1922, 270 in 1923, and 497 in 1924, chiefly from Germany and the Netherlands. Lately, however, its demand is reported to have decreased, owing to the development of the spraying method of processing rubber, and the competition of formic acid which is cheaper, and which is claimed by its manufacturers to be fully as efficient for latex coagulation. A Dutch factory, furthermore, has been conducting a campaign to introduce formic acid.

Liquid ammonia is used by the rubber estates as an agent (anticoagulant) to prevent latex from coagulating. This commodity comes almost entirely from Germany, but it is understood that an American rubber company has imported quantities from the United States. One company alone is said to use 18,000 kilos

monthly—10,000 for use on its rubber estates in Sumatra and 8,000 for those in the Federated Malay States. Formalin is also used as an anticoagulant, but its consumption is very limited. Only one firm is known to handle this product, and imports 7,000 kilos (40 per cent formaldehyde) per year.

Sodium Bisulphite—Alum—Caustic Soda.

Sodium bisulphite is used extensively for bleaching crêpe rubber and sheet rubber in the factories on the rubber estates. It comes from Germany and England and is usually supplied in drums of 50 kilos. No accurate statistics are available, but the demand is considerable.

Alum is used almost exclusively by natives in Sumatra for coagulating rubber grown by them independently on their small patches of ground. In view of the increasing production of crude rubber by the natives, however, the imports of alum have risen from 17,052 kilos in 1921 to 250,704 in 1924.

Caustic soda is imported mainly for the manufacture of soap, a comparatively recent industry, although small amounts are consumed on the rubber estates. With the increasing manufacture of soap there has been a corresponding increase in the imports of caustic soda, the receipts in 1924 amounting to 194,264 kilos, of which the United States furnished approximately one-half and England practically the balance.

Drugs and Pharmaceutical Products Largely from Germany.

The value of the total trade in drugs and pharmaceutical chemicals in northern Sumatra is estimated at 60,000 to 70,000 florins per year. Germany supplies most of the imports. A few leading German manufacturers send their Far Eastern traveling agents to Sumatra. The United States furnishes certain special articles, but its share of the trade is negligible. Drugs for treating diseases and ailments peculiar to a tropical climate are most in demand.

Several druggists in Medan import drugs, but one firm with branches in most of the leading centers of the Netherlands East Indies is reported to control approximately 75 per cent of the colony's trade. Drugs and hospital supplies are also imported direct by some of the leading hospitals. A number of these, situated throughout northern Sumatra, are staffed by European doctors. Nearly all are maintained either singly or jointly by the plantations for their European personnel and native laborers, for whom the law requires that the estates provide free medical attention and hospital facilities. Approximately 200,000 coolies are employed by all of the estates combined. The hospitals are by far the largest purchasers of drugs and pharmaceutical chemicals, as, in addition to their own requirements, most of the drugs used throughout the district are secured from them rather than from the retail drug stores.

[More detailed information regarding the chemical requirements of northern Sumatra, and trade lists, may be obtained upon application to the Chemical Division.]

Additional information regarding chemicals appears in this issue under the following sections:

SPECIALTIES

Edward J. Breyere, Acting Chief, Specialties Division

DEVELOPMENTS IN THE UNITED STATES TOY INDUSTRY

Large Variety Produced—Import and Export Trade

J. M. Calvin, Specialties Division

In making a short survey of the toy industry in the United States, the outstanding feature is the rapid growth of this comparatively new industry, which has developed mainly in the last 20 years. In 1923 production totaling \$56,066,432 in value was more than ten times that of 1904, an increase of 905 per cent in that period. Production in 1923 was more than four times that of 1914, an increase of about 307 per cent.

Numerous Products Included Under Toys and Games.

According to the Bureau of the Census, the classes of products manufactured by establishments included in the toy and game industry are numerous and varied. They include, among others, all games for adults, except (a) those classifiable under sporting and athletic goods and (b) those played with ordinary playing cards; all children's games, dolls; stuffed toy animals; toy furniture and utensils; playground goods; toy building blocks; children's driving reins; rattles and floor-rolling chimes; toy drums; jig-saw and other puzzles, hobby horses and rocking horses, kites; magic lanterns and slides; magical apparatus, tricks and novelties; masks; mechanical toys; toy railways, engines, and cars; toy savings banks; play suits; wigwams; doll clothing; marbles; fabric and leather-covered balls; educational boards; and toy tools, balloons, canes, pistols, and bells.

Children's Carriages and Sleds Classified Separately.

The percentage of increase appears to be actually higher than 905 per cent in 20 years, as velocipedes and tricycles included in toys and games in the 1914 and 1921 production figures were not included in the 1923 figures (\$56,066,432), but were listed with children's carriages and sleds, a group containing items closely allied to the toy industry. This classification is comprised of baby carriages, walkers, go-carts, sleds, doll carriages, and children's velocipedes and tricycles. The value of products in 1923 in this group was \$34,172,976. It is not known what per cent of this total are sleds, doll carriages, express wagons, auto cars, and children's velocipedes and tricycles. The production in this group, however, in 1924 was almost three times that of 1914, an increase of about 191 per cent.

Over this period manufacturing costs have been greater than material costs and have apparently maintained a steady ratio. The value added to products by manufacture was 58 per cent of the total value, both in 1914 and 1923.

Foreign Competition and Foreign Trade.

The United States is the world's greatest toy market and is a constantly growing one. The following table shows the import situation over the last decade:

American imports of toys—1914-1924¹

Year	Germany	Japan	All other countries	Total
Fiscal:				
1914.....	\$7,718,854	\$436,931	\$928,234	\$9,084,019

¹ Statistics obtained from Commerce and Navigation.

Trend of the Japanese Trade.

Toy exports from Japan gradually increased in the last decade, due primarily to the war, until 1920, when its exports of toys to the United States, valued at \$5,663,399, exceeded Germany's by almost \$1,500,000. However, since then there has been a phenomenal yearly decrease in the importation of Japanese toys into the United States, and in 1924 their value totaled only \$202,058.

The following table of Japanese toy exports shows the volume finding outlet in the United States market:

Japan's exports of toys—1913-1923¹

Year	Total toy exports	To United States	Per cent taken by United States
	Yen	Yen	
1913.....	2,489,792	828,869	33.29
1914.....	2,591,715	1,034,027	39.89
1915.....	4,533,486	1,100,709	24.23

¹ From Japanese Finance Yearbook.

United States Toy Production and Export.

The exportation of toys made in the United States has been small in comparison with the total production and shows little variation over the last 10 years, amounting to a little less than \$3,000,000 in 1924. However, the first four months of 1925 show United States toy exports larger than imports. The following table gives the United States exports, by leading countries, for 1924 and the first four months of 1925:

United States toy exports by leading countries

Country of destination	Dolls and parts	Mechanical	Rubber	Other toys	Total
YEAR 1924

Total.....	24,003	12,731	462,078	261,019	759,831

Imports from Germany Decreased.

In 1904 purchases from Germany were almost equal to United States production. In 1914 Germany supplied 85 per cent of our total imports (value \$7,718,854) which was an amount equal to 56 per cent of our total production. In 1923 Germany supplied 88 per cent of our total imports (value \$7,423,725) which, however, was only 13 per cent of our total production. In 1924 German exports to the United States, valued at \$4,332,065, were less than two-thirds those of 1923.

During the year 1924, changing conditions in Germany made it impossible for that country to undersell other nations, as it was able to do immediately succeeding the war, to the obvious advantage of the manufacturer in the United States.

The situation in the German toy industry in the first months of 1925 was considered serious, according to recent reports. It appears that the industry is suffering from money stringency, excessive taxation, high freight rates, and above all, from the falling off of orders from the United States. In the opinion of the German manufacturers, the latter is due chiefly to the competition of the American toy industry.

Sources of Imports.

As indicated in the table below, Germany is far in the lead as a supplier of toys to the United States:

United States toy imports by leading countries of origin, for 1924 and the first four months of 1925

Country	1924			First four months of 1925		
	Dolls and parts	Other toys	Total	Dolls and parts	Other toys	Total

INDUSTRIAL MACHINERY

W. H. Rastall, Chief, Industrial Machinery Division

GERMAN MACHINERY SALES IN CZECHOSLOVAKIA

Vice Consul Erik W. Magnuson, Stuttgart, Germany

While sales of German machinery registered heavy declines in practically all world markets in 1924 in comparison with the preceding year, exports to Czechoslovakia decreased by only 2 per cent last year, indicating that the Czech market is favorable to the use of German machine equipment, if figures for the past two years only are considered. German machinery exports to Czechoslovakia in 1923, however, represent about 50 per cent of such exports in 1922 and 65 per cent of shipments made in 1920. A comparison of postwar and pre-war figures is not possible, as statistics for 1913 include the entire Austrian Empire.

Comparison of Czech Market with that of Other Countries.

Germany exported 11,959 metric tons of machine equipment to Czechoslovakia in 1920, 14,455 tons in 1922, 7,742 tons in 1923, 7,586 tons in 1924, and nearly 2,000 tons during the first three months of 1925. In

comparing exports of German machinery to other foreign markets it is observed that Czechoslovakia absorbed in 1924 more German machinery than Great Britain, which bought 7,369 tons of this equipment; Spain, 6,708 tons; France, 5,992 tons; and Belgium, 5,949 tons. In 1923, on the other hand, these last three countries absorbed much more German machinery than Czechoslovakia, while Great Britain bought about 200 tons less.

German Textile Machinery in Demand.

The outstanding feature of Germany's machinery trade with Czechoslovakia is the demand for textile machinery in the Czech market. This trade has shown consistent increases during the past four years. In 1920 only 7½ per cent of Germany's total machinery exports to Czechoslovakia consisted of textile machinery. In 1924 it was 29 per cent and this percentage was maintained during the first three months of 1925. Exports rose from 901 metric tons in 1920 to 1,852 tons in 1923, and to 2,193 tons in 1924. The leading items

of textile machinery shipped to Czechoslovakia in 1924 were: Sewing machines, 667 metric tons; textile finishing equipment, 529 tons; spinning machinery, 447 tons; looms, 393 tons; and knitting machinery, 157 tons. The largest growth is noticed in the demand for sewing machines, spinning and knitting machinery, and looms, while the demand for textile finishing equipment fell off approximately 20 per cent under 1923.

Exports of Heavy Machinery Decline.

German shipments to Czechoslovakia of locomotives and engines, which represented a considerable export item in 1920 and 1922 have ceased entirely since 1923. Exports of German heavy machinery such as mining, lifting, brewing, refrigerating, and flour-mill equipment have declined considerably and in certain items have fallen off completely. Statistics do not show exports of German internal-combustion engines to Czechoslovakia at any time.

Metal and Woodworking Machinery Sales Decrease.

Although Czechoslovakia is considered a good market for German metal-working machinery, exports of this equipment amounted to 1,727 tons in 1924 in comparison with 2,946 tons in 1920. The 1924 figure was an increase of nearly 100 per cent over the business done in 1923. Exports of woodworking machinery declined from 313 metric tons in 1920 to 198 tons in 1923, and to 139 tons in 1924.

[Detailed figures giving German exports of industrial machinery to Czechoslovakia for the last four years may be had on application to the Industrial Machinery Division. United States export figures showing the volume of American machinery sales in this market are also available to interested firms.]

Improvement in Czech Machine-Tool Market

Commercial Attaché James F. Hodgson, Prague

Importers of machine tools into Czechoslovakia report a steady increase in the demand for American equipment. The improvement in the market for this machinery is generally attributed to the tariff concession as provided in a law recently passed designed to give local manufacturers an opportunity to modernize their plant equipment.

New Tariff Law Favorable to Imports.

While the new law grants substantial reductions on machinery which is noncompetitive with that of domestic manufacture, it is expected that other machinery items will be affected at a later date. A special tariff counsel, the names of the members of which have not yet been announced, is expected to confer with the Ministry of Finance and make recommendations regarding the items coming under the revised tariff.

American Trade Stimulated by Personal Contact.

Additional stimulus to the trade in American machine tools has also been noted as the result of visits to this territory by factory representatives of a number of large American manufacturers. In several instances these salesmen have been directly responsible for the closing of contracts and in every case have left the local agent better qualified to sell his line through educational work done on his behalf.

[A complete statement of the new tariff may be seen by referring to the foreign tariffs section of COMMERCE REPORTS issue of June 8, 1925.]

See list of "Bureau's special circulars available," in this issue. See also "Foreign trade opportunities."

CONSTRUCTION NEWS

Compiled in the Industrial Machinery Division

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by mentioning the country and reference number given. Where no reference number is given further information is not available.]

Bridges Projected in Uruguay.

Details covering bridges projected in Uruguay, giving information relative to location, materials, length of bridges and spans, width and length of approaches, etc., have been received from Consul O. Gaylord Marsh, Montevideo, and are available to accredited American concerns. (Reference No. 171890.)

Japanese Company in Java to Extend Factories.

A Japanese sugar manufacturing company in Java intends to extend its plantations and factories considerably in the near future. The plans include also the renewal of existing factories, laying of railways, etc. Reference No. 27132. (Trade Commissioner J. F. Van Wickel, Batavia, Java.)

Personnel of Highroads Commission in Newfoundland Announced.

The names of the newly appointed members of the Highroads Commission of Newfoundland, which has summary powers with respect to highroads, right of way, and building, are now available. It is understood that the Highroads Commission will convene immediately for organization purposes, and as soon as possible

thereafter will map out the program for the coming summer. Reference No. 171063. (Vice Consul George H. Barringer, St. Johns, Newfoundland.)

Projected Water System in Dutch West Indies.

Further information is now available regarding the water system project for Willemstad, Curacao. (See Construction News, issue of May 19, 1924.) The total cost of the scheme is estimated at about 1,000,000 florins (\$402,000), and is to be financed through the sale of bonds. There is no supply of skilled labor on the island for concrete mixing or construction work and firms intending to bid on this work should be prepared to bring in all skilled labor which may be required. The supply of common labor is also not abundant, but some men with experience in pipe laying may possibly be obtained from the oil fields of Venezuela. Reference No. 172146. (Consul Thomas W. Voetter, Curacao, West Indies.)

New Bank Building for Melbourne, Australia.

A new bank building is to be erected by the National Bank of Australasia (Ltd.), according to a report from Trade Commissioner E. G. Babbett. No builder has as yet been appointed, as tenders have not been called. (See Construction News, issue of March 30, 1925.) Information relative to the architects and the name of the proper bank authority to approach in this

matter is available to accredited American concerns. Reference No. 35X.

Time Extended on Bids for Slaughterhouse in Argentina.

The time limit for bids on the new municipal slaughterhouse for Rosario has been extended and will close on August 26, 1925, at 10 o'clock. (See Construction News, issue of November 24, 1924.) In view of the interest being shown in the new slaughterhouse, city authorities are considering its ultimate enlargement to include a refrigerating plant for the conservation of meat for local consumption. (Consul Robert Harnden, Rosario.)

Construction of Free Port in Uruguay Planned.

The National Council of Uruguay has authorized signature of a contract with a French firm for the con-

struction of a free port at Colonia. Work will commence next month. (See Construction News, issue of Jan. 26, 1925.) Reference No. 28317. (Acting Commercial Attaché Lew B. Clark, Montevideo, Uruguay.)

Proposal to Erect Modern Hotel in San Salvador.

A group of local capitalists in cooperation with a representative of the International Railways of Central America have recently formed an association for the erection of a modern hotel in San Salvador. A building of at least 125 rooms with all modern conveniences is proposed to be constructed in such a way that expansion may be made in the future if needed. The sum of \$600,000 has been subscribed for the undertaking with the promise of a further like amount if it is needed. Reference No. 171917. (Consul W. J. McCafferty, San Salvador, Salvador.)

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

CHILEAN SHOES OFFER KEEN COMPETITION IN PERU

Humberto Camilloni, office of trade commissioner, Lima

Competition offered by Chilean shoes in the Peruvian shoe trade is becoming constantly stronger. This competition has affected the local shoe industry to such an extent that manufacturers are producing much below their capacity. Large lots of Chilean shoes are reported to be indirectly introduced into the country and placed for sale on the local market at prices lower or on a level with those prevailing for the domestic products.

Agitation for Increased Import Duties.

It is claimed by local manufacturers that the present import duty on shoes is not adequately protecting the native industry against foreign competition. This is particularly true in the case of children's shoes, a duty of 4 sols per kilo for ordinary leather shoes barely representing a charge of 1 sol per pair. As a result of the present situation, profits of the local factories are insufficient to justify capital investments, and it is claimed that some manufacturers will have to go out of business.

Imports of shoes from other sources are also falling off because of the above conditions.

Finnish Shoe Industry Largely Supplies Local Demand

Consul S. E. McGurk, Helsingfors, April 27

The Finnish shoe industry still complains of the high prices of raw materials and labor and of the cost of production in general, in spite of the fact that the financial results obtained in 1924 were better than in 1923. Particular emphasis is placed upon the detrimental effect of the increased imports of foreign boots and shoes; however, this is not as serious as it would appear to be from the reports of Finnish manufacturers.

Importations Less Than in Pre-War Years.

The quantity of shoes imported increased only slightly, or from 79,801 kilos in 1923 to 86,773 kilos in 1924, and the corresponding values increased from

8,676,654 marks to 9,628,148 marks. Neither of these quantities are as great as in 1913 (in 1913 half-finished boots were also included in the import statistics), but it is understandable that the revival of competition of foreign firms, which was eliminated during the war period, is not regarded favorably by the shoe interests of Finland, though the value of imported shoes amounts to only about 4 per cent of the gross value of production of the domestic factories.

Domestic Product Compares Favorably with Imported.

The domestic shoe manufacturers contend that their products are on a par as regards quality with the foreign article, but the discriminating class of purchasers prefers the imported shoe, though somewhat higher in price. The Hammer shoes of German origin are particularly in vogue at the present time, while patent-leather shoes and fancy footwear of various kinds are imported from France. These latter two, however, do not constitute an important item of trade.

Canadian Imports of Leather Footwear Increase

Canada during the first four months of 1925 imported 246,040 pairs of boots, shoes, and slippers with leather uppers, comprising 114,468 pairs for men, 75,296 pairs for women, and 56,276 pairs for children. Compared with imports of similar goods in the corresponding periods of 1924 and 1923, this represents an increase of 14.5 and 33.4 per cent, respectively.

The United Kingdom supplied 70,570 pairs of the men's shoes and the United States 43,265 pairs. Of the women's shoes, two-thirds, or 50,190 pairs, were purchased in the United States, which demonstrates the unquestioned popularity of the shoes for women manufactured in the United States. Children's shoes of English manufacture predominated, as shown by the importation of 35,358 pairs against 12,853 pairs imported from the United States.

During April of 1925 Canada imported 24,253 pairs of shoes for men, valued at \$75,833; 21,997 pairs for women, valued at \$65,732; and 7,200 pairs for children, valued at \$6,970.

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF

Hair to be Offered at Leipzig Auctions.

Horse and cow hair are to be offered at the Leipzig auction in June. Approximately the following quantities are already on hand: Horsehair—long tails, 5,000 kilos (kilo=2.2046 pounds); short tails, 1,500; cuttings, 11,500; combings, 6,000; manes, 4,000; and cow hair—tails, 4,000. (Vice Consul F. van den Arend, Leipzig, May 19.)

Wool Consumption in Uruguay.

The annual domestic consumption of wool in Uruguay is estimated at 3,500,000 to 4,000,000 kilos (kilo=2.2046 pounds), according to a recent official statement. (This wool is used principally in the manufacture of wool fabrics, mattresses, cushions, rugs, and saddle blankets. (Morris N. Hughes, consular clerk, Montevideo.)

Cotton-Goods Imports into South Africa.

Imports of cotton piece goods into South Africa during January, 1925, were valued at £264,686, of which the United Kingdom furnished £185,867. The United States ranked second, supplying goods valued at \$34,431. The United States also ranked second as a source of cotton hosiery and underwear imports. (Assistant Trade Commissioner Floyd E. Sullivan, Johannesburg, May 6.)

Exports of Rayon from Italy Exceed Imports.

Exports of rayon from Italy during 1924 amounted to 5,594,000 kilos, valued at 318,345,000 lire (kilo=2.2046 pounds; lire=\$0.044 at 1924 average exchange), or approximately five times the value of the imports of this product. The principal markets during 1924 were Great Britain, Austria, and France, ranking in the order named. The leading markets in 1923 were Great Britain, Switzerland, and the United States.

Canadian Wool Production.

Wool production in Canada during the year ended March 31, 1925, is estimated at 15,111,719 pounds, of which 5,625,265 were exported. Net imports during the year amounted to 13,544,482 pounds, making 23,030,936 retained in Canada for manufacturing purposes, or 4,832,170 pounds less than during the previous year. (Consul General Albert Halstead, Montreal, May 23.)

Soviet Sales of Flax.

During the past two weeks Soviet Russia has sold over 7,000 tons of flax from stocks held in Belgium and England, according to local press reports. Prices realized were considerably lower than those provided for by the Latvian-Russian flax convention, on which an agreement was reached recently at Moscow, but for which no formal contract has been concluded. (Commercial Attaché C. J. Mayer, Riga, May 11, 1925.)

Lace Manufacturing in New South Wales.

Lace making has been established in New South Wales by a Nottingham manufacturer. At present, the firm's products are being brought in the web from the Nottingham mills and finished off in New South Wales, but later it is hoped to use Australian raw cotton. A number of experts from England are now teaching the art of lace finishing to Australians. (Trade Commissioner E. G. Babbitt, Melbourne.)

India Principal Supplier of Peruvian Bagging Requirements.

British India continues to hold first place as a source of Peruvian imports of bags. During 1923, bags weighing 6,904,051 kilos (kilo=2.2046 pounds) with a value of 265,380 Peruvian pounds (Peruvian pound=\$4.12 at current exchange) were imported into Peru. India's share in this supply was 71 per cent of the total, followed by Great Britain with 25 per cent, while the United States furnished less than 2 per cent. According to a large Peruvian company, the cost of jute bags from Calcutta, including all charges, is approximately \$0.24 each. (H. Camilloni, clerk to trade commissioner, Lima, May 19.)

Latvian Flax Market Quiet.

The Latvian flax market continues quiet. Lack of confidence in the stabilization of flax prices has made English and continental weavers and spinners reluctant to purchase the fiber or yarn despite their limited stocks. The difference between current flax quotations on the world's markets and the high prices paid to the growers caused the Latvian Government to sustain heavy losses. The Latvian Cabinet of Ministers, therefore, decided on March 17 to lower the prices payable to farmers for flax purchased by the Government. Approximately 2,000 tons of flax were delivered to the Government warehouses in Riga during the first three weeks of March. The stock on hand amounts to about 8,000 tons. (Commercial Attaché C. J. Mayer, Riga, May 15.)

German Manufacturers of Upholstery Material Well Occupied.

The most favorable situation among the various branches of the German textile industry is reported by the manufacturers of fabrics for upholstery purposes. This industry is well occupied with production for both domestic and foreign markets, and orders on hand are sufficient to assure operation for some months ahead. Prices have not been increased in proportion to the rise in production costs, thus resulting in somewhat smaller profits than last year. Prospects for future business on the domestic market are not considered so favorable as it is assumed that the German consumption can scarcely continue in the same volume as at present. Continued good sales, however, are expected by those mills engaged chiefly in making specialties for foreign markets. (Consul Christian T. Steger, Dresden.)

COTTON GROWING IN THE LAGUNA DISTRICT, MEXICO

-Consul Bartley F. Yost, Torreon, Mexico, April 30

The Laguna district, the largest cotton-producing region of Mexico, lies to the east and north of Torreon and comprises about 1,000,000 acres. The rainfall is almost negligible. Originally a desert waste, the district has gradually been converted into one of the richest agricultural sections of Mexico by an extensive system of irrigation of the "bolsa" or flooding type.

Conditions in Laguna District Similar to Nile Valley.

For irrigating purposes the land is divided into tracts of 30 to 100 acres, depending upon the topography, by means of dikes or embankments of varying heights. During the flood season the water from the river is turned into the canals and upon the tracts to be irrigated, sometimes to a depth of several feet. If the supply of water permits, the process is repeated. The sediment deposited on the ground with each flooding renders the use of commercial fertilizers unnecessary. In fertility of soil, methods of irrigation, and crops produced the Laguna district is often compared to the valley of the Nile.

The flooding is usually done during the autumn months, or whenever the rains occur in the mountains of Durango. The 1924 flood waters came in September and October, long before all the cotton had been picked, with the result that the water could not be turned upon the cotton fields, but had to be diverted to the wheat fields, which had been harvested, and other fallow lands, which thus became the cotton acreage for 1925.

Irrigation from Wells Proves Profitable.

When these flood waters have receded and the ground is sufficiently dry, cultivation of the land begins. A crop of cotton can be produced, even with only this one flooding, long before the planting of the seed, although light rains during the growing season, or irrigation from wells, will insure a much better crop. The secret is that the water stored in the subsoil gradually works toward the surface. Owing to the great scarcity of river water during the years 1921 to 1923, pumping plants for lifting water from shallow wells for irrigating the cotton lands have come into quite general use, there being at least 125 in the Laguna district. Many new wells are being drilled, as there is a seemingly inexhaustible subterranean water supply comparatively near the surface. Internal-combustion engines using crude oil have been found to be the most economical for pumping the water from the wells. There are cases on record where farmers have produced as high as two bales of cotton per acre by the use of well water at the crucial period.

Planting Usually Done Early—Cotton Picking.

Cotton is planted in this district from February to April. In recent years, however, the middle of March usually has been the latest, owing to the farmers' anxiety to avoid the ravages of the pink bollworm by early picking. For the same reason the cotton land is seldom irrigated after July 1, as it has been found that late watering aids the pink bollworm and its destructive work.

Cotton picking begins in July and continues at intervals to the end of the year, depending on weather

conditions and whether or not the land is flooded. As in the United States, picking is paid for by weight, the average rate during 1924 having been about \$0.025 per kilo (2.2046 pounds), although some farmers paid more. A peon can pick about 70 kilos in a day of seven hours.

Cost of Production High—Damage Caused by Cotton Pests.

Only an approximate estimate of the cost of producing cotton, per acre, in the Laguna district can be made, owing to the many factors involved and the varying conditions under which cotton is grown. An average made from several estimates places the cost at about \$7,500 per lote of 247.1 acres, or about \$30 per acre. The heavy expense of building ditches and borders, charges for water for irrigating, the high price of implements and tools, and the inefficiency of labor are some of the factors tending to make Mexican production costs high.

The cotton growers in the Laguna district have to contend with more destructive pests—among the worst being the pink bollworm, the boll weevil, and the army worm—than do the planters in the United States. The pink bollworm does not attack the crop in this district until September, as a rule, and farmers are able to pick the early crop before it appears. As a result of the extremely dry weather during the months of May, June, and July, 1924, only small losses were caused by the ravages of the boll weevil. The damage done by the pink bollworm, however, is estimated to have reached at least 20 per cent. The army leaf-cutting worm did but little harm in 1924, but some fields were seriously injured by a small louse, or insect, which secretes a gummy substance on the under side of the cotton leaf.

1925 Acreage Very Small.

After a careful study of the probable conditions that might affect the yield of the 1924 cotton crop, and knowing the approximate area planted, the Torreon consulate estimated in April, 1924, that the yield would reach 150,000 to 200,000 bales. The final result was 172,000, or an average of 0.57 bale per acre for the estimated acreage of 296,400. Comparative figures for 1923 were 66,717 acres planted and 35,000 bales harvested, or 0.52 bale per acre. Only 86,485 acres have been planted this year, according to information obtained from the Torreon Chamber of Agriculture and the local cotton exchange. This will necessarily mean a short cotton crop, even with a good yield per acre. The volunteer crop from last year's fields may materially alter the aggregate returns, as a leading cotton grower claims that 30,000 acres of that season's cotton were left standing. At the close of April the volunteer crop looked fairly promising, although no rain had fallen. The 1925 planted crop started out under good growing conditions, and the increased acreage irrigated from wells this year may result in a better yield.

Laguna Cotton Mostly Short Staple—Factors Affecting Prices.

Owing to the extreme dryness of the Laguna climate and, more particularly, the entire absence of night dews during August and September, when the cotton is ready to pick, the staple of cotton grown in Laguna is generally shorter and weaker than that produced in the United States. The percentages of the different

grades represented in the 1924 crop were as follows: Middling and strict middling, each 20 per cent; low middling and strict low middling, each 15 per cent; good ordinary and strict good ordinary, each 10 per cent; good middling and ordinary, each 5 per cent. Long staple does not bring a sufficient premium in Mexico to compensate for the loss in yield.

While it would seem on first thought that cotton prices in Mexico would be governed entirely by the quotations for that commodity in the American and European markets, artificial barriers in the form of import duties and export taxes eliminate this factor to some extent. The duty of \$0.05 per pound on cotton imported into Mexico, together with freight charges amounting to about \$0.02 per pound from points in the United States to Mexico City, where most of the cotton mills are located, gives Mexican-grown cotton an advantage of about \$0.07 per pound, minus the local freight, over the nearest-produced foreign cotton.

Cotton Consumption and Exports—Import and Export Duties.

Although it is not the purpose of this report to treat the subject of cotton production and consumption from a national scope, it is deemed of general interest to include the consumption of Mexican cotton mills, five of which are located in the Torreon consular district. No official figures on the consumption by Mexican cotton mills are available, but a local broker estimates that they consumed 83,000 bales in 1917, 152,000 in 1922, 131,000 in 1923, and 140,000 in 1924.

Only about 41,000 bales of the 1924 crop were exported to Liverpool, Bremen, and other European cotton ports. The export tax was reduced from \$0.03 to \$0.015 per gross kilo (exclusive of a surtax of 12 per cent) by a presidential decree of July 31, 1924, which was published on August 6, 1924. Both import and export tariffs may be changed by executive decrees without previous notice to interested parties. The cotton mills, however, exert much influence in determining the amount of these taxes.

[Further details regarding cotton growing in Laguna are contained in two very comprehensive reports from Consul Bartley F. Yost, which will be made available to interested persons upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington, D. C. Refer to file Nos. 128547 and 169888.]

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

MARKET FOR CANNED FOODSTUFFS IN NEWFOUNDLAND

Based on report by Vice Consul George H. Barringer, St. John's

The trade in canned foods in Newfoundland is relatively high in proportion to the population, and the tendency seems to be toward an increased consumption of certain classes of such goods. The canned foods entering into this trade may be divided into three classes—condensed or evaporated milk (referred to as canned milk), canned meats, and canned fruits and vegetables.

United States Leads in Canned Milk Trade—More Canned Meat Imported.

According to customs statistics, 1,445,107 pounds of canned milk, valued at \$153,586, were imported by Newfoundland during the fiscal year ended June 30, 1924, about 65 per cent of this coming from the United States and 35 per cent from Canada. The total amount was about 120,000 pounds greater than that for 1923. The proportion supplied by United States and Canada was practically the same in both years. The market for canned milk is capable of some expansion.

For the year ended June 30, 1923, imports of canned meats into Newfoundland reached 158,140 pounds, but increased to 311,549 pounds for the year ended June 30, 1924. In 1923 the United States easily led in the imports of canned meat, with Canada next, but in 1924

the United Kingdom and South America combined furnished about 75 per cent. The market for canned meats is stated to be favorable.

The duty on canned meats is three-eighths of a cent per ounce, plus a 5 per cent sales tax on the invoice cost.

Present Market for Canned Fruits and Vegetables Limited.

Detailed statistics for canned fruits and vegetables are not available, but reliable estimates by a large importer in Newfoundland indicate that probably 80 per cent of the canned fruits and vegetables come from the United States and the remainder from Canada.

In 1924 about 70 per cent of the canned fruits came from the United States, 20 per cent from the United Kingdom, and 10 per cent from Canada. The total value of this trade was \$62,319, but under the present system of classification specific data can not be given.

No statistics can be obtained regarding the importation of canned vegetables, as these are included under a classification which includes other goods, such as general groceries. It is believed that tomatoes constitute the principal item in canned vegetables.

The duty on canned fruits and vegetables, under the new tariff of April 9, 1925, is 50 per cent ad valorem, plus 5 per cent sales tax on the invoice cost.

The large construction camps engaged in projects now under way were probably responsible for the con-

sumption of a large proportion of the canned foods imported into Newfoundland during the past year, but the growing logging camps and hydroelectric developments, as well as some 35,000 fishermen, may tend to increase the canned-food imports from year to year.

Export Trade in Brazil Nuts

Consul Jack D. Hickerson, Para

For a number of years the United States has taken an average of 60 per cent of the Brazil nuts exported from Brazil. About 80 per cent of the remainder goes to Great Britain, and Germany and France account for the rest. Exports of these nuts from Brazil rose from 4,113 metric tons (value, \$797,306) in 1913 to 23,443 metric tons (value, \$4,590,178) in 1923, while in 1924, according to unofficial figures, the exports reached 35,865 metric tons.

The 1924 crop of Brazil nuts was the largest in the history of the country. While there is no official forecasting service for Brazil nuts, it is stated that the current crop will probably be 30 to 50 per cent smaller than that of 1924. Most of the estimates calculate exports for this year from Para at approximately 10,000 metric tons, and from Manaos, the other leading port, at 9,000 metric tons. Unofficial statistics covering the first quarter of 1925 show exports of 789 metric tons (estimated value, \$208,324) to the United States and 4,517 metric tons to Europe.

Exports of Brazil Nuts to United States and United Kingdom.

The following table, compiled from official sources, shows the exports of Brazil nuts to the United States and the United Kingdom during recent years:

Brazil nut exports to United States and United Kingdom

Years	To United States		To United Kingdom	
	Metric tons	Value	Metric tons	Value
1913.....	1,799	\$539,306	2,024	\$377,047
1919.....	15,198	3,418,670	9,797	1,902,107
1920.....	5,836	1,821,004	3,405	1,015,853
1921.....	14,320	2,151,357	7,519	1,132,717
1922.....	18,425	2,654,182	15,047	2,071,983
1923.....	14,144	2,855,824	8,031	1,517,202
1924.....	21,945	3,164,941	13,981	(9)

MINERALS

Guy C. Riddell, Chief, Minerals Division

PETROLEUM MARKET IN FINLAND

Assistant Trade Commissioner Emil Kekich, Helsingfors

Finland's importation of petroleum and petroleum products, over 80 per cent of which originates in the United States, has almost doubled in the past three years. According to present indications, the trade as a whole will manifest a further gradual increase, chiefly on account of the development of the motor-vehicle market. Total imports of petroleum products, exclusive of waxes and fats, during 1924 amounted to 65,397 tons, valued at 120,000,000 Finish marks (equivalent to \$3,010,536 at the average rate of 39.86 marks to the dollar during that year), against 37,265 tons, valued at 86,000,000 marks (approximately \$1,845,000, figured at 46.62 marks to the dollar) in 1922. During the three-year period from 1922 to 1924 gasoline imports quantitatively increased over threefold—from 5,672 tons, valued at 25,000,000 marks (\$536,250) to 16,439 tons, valued at 45,193,000 marks (\$1,133,793).

Three Years' Trade Compared.

A summary of Finland's petroleum trade during 1922, 1923, and 1924 follows:

Finnish imports of petroleum products

Products	1922	1923	1924	Products	1922	1923	1924
	Metric tons	Metric tons	Metric tons		Metric tons	Metric tons	Metric tons
Crude.....	4,132	4,162	5,574	Lubricating			
Gasoline.....	5,682	7,753	16,439	grease.....	538	315	(1)
Kerosene.....	20,620	27,147	33,459	Paraffin wax.....	405	576	581
Gas and fuel oil.....	4,132	4,162	5,574	Natural mineral			
Lubricating oils:				wax and ceresin.....	21	16	(2)
Mineral only.....	6,831	6,778	9,936	Petrolatum.....	111	127	(3)
Mixed, chiefly mineral.....	1,052	473	199	Asphalt, etc.....	1,211	1,381	(3)

¹ Not listed separately.

America Supplies More Than Four-Fifths of the Imports.

Direct kerosene imports from the United States increased from 15,277 tons in 1922 to 23,664 in 1924, while imports from Poland, including shipments from Danzig, advanced from 2,000 tons to 5,600. Gas oil and light fuel oil from the United States totaled 1,294 tons in 1924, a decrease of more than 50 per cent from 1922, while imports from Poland increased somewhat, totaling 1,453 tons in 1924. According to the best information available, more than 80 per cent of the petroleum products entering into Finnish trade is of

American origin, much of this being transshipped from other countries, particularly from Germany and Denmark.

Larger Gasoline and Smaller Kerosene Consumption Probable.

Although the kerosene trade in Finland has been showing consistent gain during the past several years, in proportion of increase from year to year as well as in value during 1924, it was surpassed by gasoline. There is every likelihood, moreover, that gasoline consumption in the country will continue to grow rapidly, while that of kerosene will slowly decline. As in other countries, kerosene is chiefly used in Finland for illuminating purposes, although a considerable amount is also required for stationary engines and motor boats. Electrification in the country, however, is progressing as rapidly as time and money will permit, making it probable that any increase in the use of refined oil or kerosene for engine use will be materially offset by the decrease incident to increased availability of electric lighting.

The increase in Finland's gasoline trade is almost entirely attributable to the sudden expansion in the use of motor vehicles. In 1920 there were only a few hundred of these in the country. Present registration figures for cars and trucks show more than 7,000 and bid fair to pass 10,000 in the present year and 15,000 to 20,000 in the next several years. The share of the United States has been consistently predominant, in 1924 amounting to about 80 per cent, including transshipments.

Gasoline Imported During Last Three Years.

The following table gives the imports of gasoline into Finland from various countries since 1922:

Finnish gasoline imports by sources

Sources	1922	1923	1924
	<i>Kilos</i>	<i>Kilos</i>	<i>Kilos</i>
Poland.....	16,240	137,852	510,264
Russia.....	21,709	49,896	752

United States.....	1,938,102	5,597,108	10,870,825
Mexico.....			1,727,200
Total.....	5,682,338	7,753,347	16,436,873

Increase in Lubricating Oil Receipts.

Business in lubricating oil has kept pace with gasoline consumption, imports having increased from about 7,000 tons in 1922 to 10,000 in 1924. The largest share came from the United States, and Poland was the nearest competitor. No doubt this trade also will show great improvement in the next few years. The chief consumers of lubricating oil are automobile owners, although its industrial use, particularly in paper and saw mills, is gradually increasing.

Finnish Petroleum Needs Met Entirely by Imports—Distribution—Prices.

As Finland is not an oil producer, its petroleum supplies are wholly imported. The trade is largely in the hands of representatives of an American oil company, the Finska Petroleum Aktiebolaget "Masut" (a Royal Dutch-Shell concern), and Finska Polnaft A. B., Dan-

zig, a Polish enterprise. Of these firms the first two mentioned are the most important importers. In recent years Finska Petroleum Aktiebolaget "Masut" has imported considerable of its refined oil and gasoline from the United States.

Imports are chiefly in bulk, and pumped to storage tanks. Inland distribution is by railroad tank cars. The cars carry the oil to more important centers along railway lines and discharge into storage tanks, of which the largest company owns 23 throughout the country. Oil for the outlying districts is distributed in wooden containers, with a capacity of 150 kilos for kerosene and 175 for gasoline, on account of the comparative ease with which such barrels may be handled.

Prices for petroleum products in Finland have been more or less stable during the past few years.

Official Report on South African Mineral Development

Trade Commissioner Perry J. Stevenson, Johannesburg, April 29

The popular view that the Union of South Africa has reached the peak of development of its mineral resources and that the Union's future expansion must come from agriculture and industry is far from true, according to a report recently issued by the Minister of Mines and Industries. In spite of the great value of the country's present mineral production, it is clear that with the stimulation of production, the removal of obstacles to exploitation and development, and the greater utilization of the Union's raw mineral wealth through local manufacture, the mineral output could be greatly increased. This is the expressed opinion of a committee of Government experts who, for the past year, have been studying these aspects of the mining industry and its resources.

Exploitation of Many Minerals.

To date only gold, diamonds, cement materials, copper, and tin have been extensively exploited. Partial or intermittent exploitation has been devoted to a long list of products—including antimony, arsenic, asbestos, clays, corundum, glass sand, lead, magnesite, manganese, marble, mineral ochre and paints, ornamental stones, phosphates, soda, sulphur (pyrite), talc, and vanadium. So far silver, mercury, tungsten, and some other minerals have been discovered only in negligible quantities, if at all.

Indirect Rather Than Direct Government Assistance Advised.

The committee has recommended that the government should continue or organize assistance through the identification of rocks and minerals, cheap assays and analyses, geological information and advice, and larger appropriations for general mineral investigation. Direct financial investment or aid is not considered necessary, nor is financial help to prospectors. It advises, rather, that the State should aid by promoting such basic conditions as will stimulate the investment of private capital, which should in the early and costly development period be free from taxation on stores and equipment, either by tariffs or freight rates. Indirect assistance of several types is also recommended, such as low freight rates, both rail and ocean, bounties, protective tariffs, and publicity.

Removal of Present Legal Obstacles Recommended.

In addition, the committee has given consideration to the removal of existing obstacles that hamper the ex-

pansion of mineral development, and recommends that the laws now governing landowners and prospectors in the Transvaal should be altered so as to permit free prospecting under adequate safeguards, and that claim licenses should also be revised. Another serious obstacle to mineral development is the reservation of mineral rights to the Crown in all grants of government land issued since 1903, and even in many issued prior to that year. As a result, on about 5,400,000 acres the rights were locked up from 1912 to 1920. Marketing problems often constitute a handicap, and the attraction of capital for investment could be improved through alteration of taxation. The lack of roads, organization among producers, and adequate information were also discussed in the report.

Domestic Consumption Can Be Increased—Development Important.

At present the domestic consumption of minerals produced in South Africa is limited, but is capable of expansion, principally through government purchases and the establishment of branch factories of oversea enterprises. The gold industry and the distillation of oil shale are put forward as presenting promising fields for domestic industrial development, in view of their outstanding importance, both actual and potential.

How far the government will follow this large program can not be forecast. The report, representing the considered opinion of acknowledged experts, at least has served to focus attention upon the fundamental importance to South Africa of its abundant mineral resources and the necessity for their further development.

Copper Market in Austria

Consul Robert W. Helngartner, Vienna, May 11

Copper, generally, is not mined in large quantities in the Austrian Republic, although minor deposits of this metal are very numerous, being found in all parts of the Austrian Alps. At present only one important deposit is under operation—the so-called "Mitterberger," south of Salzburg, one of the oldest copper mines in Europe. The copper content of the "Hauwerk" or crude ore found there is, in general, 2.4 per cent, but at times runs as high as 10 per cent. The copper content of the prepared ore averages 10 to 11 per cent. It has been estimated that there are 74,096 metric tons of copper in this mountain.

The highest number of copper mines reported in operation in Austria was 11 in 1916, when the production peak was reached with 99,184 tons of copper ore. Since 1919 the industry has been gradually recovering from the decrease in output which followed the peak, and the 1924 total, 84,598 tons, was a larger amount from the 5 mines then operating than the total from 7 or 10 in the immediately preceding years.

Varieties of Copper Produced—Smelting.

Two main varieties of copper are produced in Austria—electrolytic (97 per cent) and the so-called "Waltz" and "Hammer" (3 per cent). Although most of the copper crude ore smelted in Austria in 1923 was of domestic origin, there were also small imports of ore from Czechoslovakia, Italy, Yugoslavia, and Spain. The Austrian pyrite mines have to compete with low-priced offers from Spain and Italy, ac-

cording to recent reports. On the other hand, small quantities of Austrian copper ore, especially ore mined in Tyrol, are exported to Germany. The metallic copper made in Austria, however, is not only produced from ore chiefly of Austrian origin, but also from the resmelting of scrap copper, which is partly imported from abroad.

There are only three copper-smelting plants in Austria. The largest, belonging to the Mitterberger Kupfer A. G., in 1923 produced 4,630 tons of electrolytic copper, or more than 96 per cent of Austria's total output in that year. In 1924 this plant was hampered by enlargement and reconstruction operations and had a decreased output.

Output of Austrian Copper Industry Limited.

In the territory of the present Republic of Austria, 2,779 tons of metallic copper were produced in 1913, 6,624 in 1916, 648 in 1919, 4,833 in 1923, and 3,908 in 1924. Although the industry is believed capable of greater development, it will probably never meet the country's requirements. At present the production of copper is comparatively expensive and the Austrian mines and plants are pressed by foreign competition. As compared with the world production of 1,458,737 tons in 1924, Austria's output amounts to less than one-third of 1 per cent.

Since 1916, when 99,184 tons of crude ore were mined and 6,624 tons of copper were produced, the Austrian production of metallic copper has never reached 5,000 tons. The total requirements for 1924, when the country's industries worked on the average at only about 50 per cent of capacity, on the other hand, was estimated at 13,767 tons, increasing from 4,592 in 1920. Foreign producers, chiefly American, therefore, have gained a sound footing in the Austrian market. Assuming that general conditions in the country will improve during 1925, it may be estimated that copper consumption during the year will amount to 16,000 to 18,000 tons.

Imports Largely from the United States—Raw-Copper Exports.

Imports of foreign copper rose from 10,470 tons in 1923 to 15,278 in 1924, an increase of almost 46 per cent. Most of the copper imported in recent years has come from the United States, which furnished 11,476 tons in 1924. Italy is next in importance, but a considerable amount of the copper officially designated as Italian came from the United States via Italy. The official statistics, moreover, include scrap to an unknown extent, both imports and exports.

Although the domestic production is quite inadequate, Austria exports considerable quantities of raw copper, Vienna being the natural trade center for Central and Eastern Europe, and especially for the territory formerly included in Austria-Hungary. The copper exports for 1924 amounted to 5,419 tons, of which 3,358 went to Germany.

American Sales Organization Well Organized in Austria—Terms.

According to reliable information the sale of American copper in Austria is well organized. Frequently, American copper companies keep copper consignment stocks with large Austrian metal firms, so as to enable the Austrian company to draw on these stocks whenever copper is needed. These stocks are sometimes sold to outside buyers and not exclusively to the firm hold-

ing the consignment, but transactions of this kind do not weigh heavily in the total amount of business done. The smaller consumers buy through the agents of American concerns. It appears that Austrian consumers generally prefer to buy from an agent rather than from a dealer, because, by so doing, they can get the copper cheaper. The agent can do business on a narrower margin of profit than the dealer, owing to lower overhead expenses, less risk, and less need of capital.

As a rule, American copper exporters sell only against cash in New York. This is one of the factors which is said to hinder the development of direct sales of American copper in Austria. Many other foreign copper importers, especially German and English, grant credits up to six months without a bank guarantee.

Trieste Usually the Port of Entry for American Copper—Outlook.

Most American copper imported into Austria comes via Trieste, by the Italian line which maintains a regular service between Trieste and New York, al-

though there are some shipments via Hamburg and Rotterdam.

It is evident that there is an active market in Austria for American copper. Demand for it will probably grow in proportion to the growth of Austrian industries and those in neighboring territories. Austrians further believe that the United States should be able to increase its sales of copper alloys and sheet copper in this market, provided prices and terms of payment are competitive.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

EFFECTS OF RUSSIAN COMPETITION ON FINLAND'S LUMBER TRADE

Assistant Trade Commissioner Emil Kekich, Helsingfors, Finland

In spite of sluggish prices, advance sales of Finnish lumber have mounted to over half of the season's production, which was figured at about 940,000 standards (1,861,200 M feet) at the beginning of May. During April, however, selling markedly fell off, owing to a combination of factors which reacted on the market and caused some speculation as to the actual probability in the coming summer or fall of long-anticipated price stability.

Generally Lessened Production in Northern Europe.

British lumber importers have apparently contracted for unusually large quantities of Russian stocks, which at least temporarily resulted in a reflex against Finnish production. Operators in Finland seem disposed to view the situation as one which may adjust itself more or less owing to the lessened output which is expected throughout all northern Europe, with the possible exception of Russia. However, it is believed increased Russian production in any event is not likely to be heavy enough to bring about a serious check to price levels ensuing from excess of supply over demand.

Heavy Russian Sales in British Market.

Immediate prospects are not encouraging for a price appreciation in Finnish lumber, owing to the present slack demand in the United Kingdom, to which heavy Russian sales in the beginning of this year greatly contributed, and to dull market conditions on the Continent, particularly in France. Future developments will undoubtedly largely depend on the extent of the curtailed production this year in Finland and Sweden and the ability of exporters, especially the smaller ones, to weather any temporary depression incident to

Russian competition, and on conditions in the buying countries.

Producers Favor Curtailment of Stocks.

There still seems to be much speculation as to the effect this summer and fall of Russian production, and it is still too early to attempt any prediction as to Finland's actual stocks this year. However, there is an evident tendency to bring down production in conformity with unfavorable market conditions in order to avoid as much as possible the probabilities of losses. If present conditions continue, it would not be surprising if the larger operators in Finland made the attempt to curtail stocking, so that the production will not exceed 900,000 standards.

Repeal of Export Restrictions Expected to Facilitate Austrian Lumber Exports

Assistant Trade Commissioner Elbert Baldwin, Vienna, May 2

Austrian wood exports have been subject to nominal export restrictions and the payment of an export tax of 1 gold crown (20 cents) per 424 board feet, primarily a revenue measure. Effective May 1, export licenses and the tax imposition were abolished for lumber but are retained for timber and logs. This step follows agitation on the part of exporters and is probably influenced by considerations of heavy trade deficits—\$200,000,000 in 1924—which greater lumber exports will serve to modify.

Shipments of Softwood Lumber Lead.

Wood exports in 1924 showed a notable increase. Exports of hardwood logs and round timber rose from 594 to 3,898 metric tons; softwood logs and round timber, from 42,375 to 107,057 tons; wood for staves, from 965 to 1,945 tons; hewn softwood, from 29,969 to

49,608 tons; hardwood lumber, from 4,154 to 5,710 tons; and softwood lumber, from 643,583 to 955,788 tons. The only decrease was in railroad ties, which fell from 67,145 to 33,264 tons. In all, wood exports in 1924 totaled 1,296,238 tons, valued at \$20,000,000, compared with 829,784 tons and \$13,000,000 in 1923.

Larger French and Italian Purchases.

Italy, France, and Germany afforded the principal markets, followed by Switzerland and Hungary. The increase was primarily because of greater French and Italian purchases. In addition, exports of furniture and other wood products, excluding pulp, totaled 425,500 tons, valued at \$7,600,000 (366,300 tons and \$6,000,000 in 1923). During the first three months of 1925 the export license office reports authorized exports averaging 30,000 tons weekly compared with an average of 24,600 tons in 1924.

Diversified Conditions in French Lumber Trade

Vice Consul Alfred D. Cameron, Paris, France, May 22

French statistics of foreign trade in lumber and timber for the first quarter of 1925 show that the total import tonnage declined 1 per cent, while total exports increased 5 per cent compared with the corresponding period of 1924. Imports from the United States were 12,121 metric tons and 15,325 tons for the respective periods. Of this decline 2,000 tons is accounted for by the item of oak staves. There has been a marked increase in exports of oak logs and ties compared with the first quarter of 1924.

Most Important Wood-Using Industries Calm.

The most active woodworking industries at present are: Railroad car building and repairing; wagon and farm implement repairing; box, pail, and handle manufacturing; and small boat building. The furniture, cooperage, and building trades are calm. The railroad tie market is calm with falling prices.

Cut-Offs

Strong Demand for Building Lumber in South Africa.

The building industry in South Africa has assumed great activity resulting in a strong demand for lumber and furniture, according to a cable dated June 1 from Trade Commissioner Perry J. Stevenson, Johannesburg.

United States Imports of Philippine Mahogany.

Imports of Philippine mahogany into the United States during April, 1925, consisted of 594,000 board feet of sawed lumber. No logs were imported. (Division of Statistics, Bureau of Foreign and Domestic Commerce.)

British Desire Cost of Ready-Cut Houses.

The new method of house construction committee of the British ministry of health desires to learn the approximate cost of ready-cut wooden houses similar to the typical brick semidetached cottages now in vogue in Great Britain. A plan of these brick cottages has just been received in the Lumber Division from Act-

ing Commercial Attaché Mowatt M. Mitchell, London, England. Copies are available to American exporters.

Scotland Mainly Purchases North European Lumber.

Lumber imports into Dundee, Scotland, during the first quarter of 1925 amounted to 2,618,000 board feet, compared with 6,292,000 board feet during the corresponding period of 1924, and 3,474,000 board feet during 1923. Practically all the lumber imported comes from northern Europe. The approximate amount of southern pine lumber will not exceed 1,200,000 board feet annually. Russia, one of the largest sources of supply, has been absent from this market since 1913. (Consul Maxwell K. Moorhead, Dundee.)

Brazilian Pine Offers Competition in Uruguayan Market.

Lumber imports into Uruguay during May included 800,000 pieces of American lumber and 145,000 pieces of other lumber, according to Consul Marsh. The market was quiet with difficulty being experienced in moving stocks, owing to the decline in prices in the United States and the competition of Brazilian pine. The latter condition was caused by the recent depreciation of Brazil's currency. Comparative prices on dock, duty paid, per thousand feet, are for oak, \$186; for pine, \$82.75; for fir, \$77.50; and for Brazilian pine, \$74.50. (Cable from Commercial Attaché Lew B. Clark, Montevideo, dated June 3.)

Reports and Catalogues Available

A report relative to the Chinese typewriter, accompanied by a descriptive booklet, has been received by the Specialties Division from the Shanghai office. This report will be loaned to interested firms upon their request. File No. 28210.

A report entitled "Market conditions for American fountain pens in southwest Germany," which has just been received from the American vice consul at Stuttgart, is on file in the Specialties Division and will be loaned to interested firms upon their request. Report No. 172243.

A new catalogue of French furniture for household and office use is on file in the Specialties Division and will be loaned on request.

Dairen's Foreign Trade in 1924

The total foreign trade of Dairen amounted to \$201,792,507 in 1924 compared with \$198,692,066 in 1923. The trade increased in spite of such adverse factors as economic depression in Japan and military activities in certain sections of China, which obstructed the natural flow of staple product into Dairen.

Dairen's trade with the United States for the year reached \$19,479,106, against \$15,563,345 for 1923. Exports increased from \$3,390,109 in 1923 to \$4,147,089 in 1924, and imports totaled \$15,332,017 in 1924 compared with \$12,173,236 during the previous year.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

NEW CHILEAN LAW ON STAMPS, SEALS, AND STAMPED PAPER

Commercial Attaché Ralph H. Ackerman, Santiago

A new decree, increasing the stamp, seals, and stamped paper tax, was recently enacted in Chile and published in the *Diario Oficial* March 18. The text of this new law covers the tax on all classes of commercial paper. The following points especially are of interest to American firms doing business with Chile:

Foreign firms desirous of establishing branches in Chile must pay a tax of 2,000 pesos when authorization is granted and 2 per 1,000 on the capital declared.

On letters of credit prepared in Chile a tax of 20 centavos for each 100 pesos is levied, but the total paid will not exceed 20 pesos.

On certificates, receipts, or vales for deposits of money on time or at sight with interest, 5 centavos for each 100 pesos must be paid.

On checks, 10 centavos each and 5 centavos for indorsements are levied.

Brokers' contracts on purchases or sales of real estate, public property, memorandum notes, or any document which replaces them will carry a 50-centavo stamp.

Telegraphic drafts sent to points within the country require a 20-centavo stamp; to foreign countries, 2-peso.

On bills of exchange, drafts, or notes drawn and payable within the country, on the original and each duplicate, the following stamps must be affixed: Banking—10 centavos for each 1,000 pesos or fraction thereof, the tax to be not less than 20 centavos; commercial—20 centavos for each 1,000 or fraction thereof.

On bills of exchange, drafts or notes drawn in Chile on foreign countries, on original and each duplicate at time of issue and on the equivalent in paper pesos, a tax of 30 centavos for each thousand pesos is levied.

Bills of exchange, drafts or notes drawn abroad and payable in the country are taxed one-half the sums mentioned in the immediately preceding paragraph, assessed when paid, when accepted, or when protested. The tax is payable on the copy presented.

On indorsements on documents mentioned in the three preceding paragraphs the tenth part of the tax assessed must be paid.

On protests on drafts, letters of exchange, or to-order notes, a tax of 5 pesos is assessed on the original.

On accounts, invoices, or sales memoranda for sums exceeding 50 pesos but not more than 1,000 pesos, on the original and all copies, a tax of 50 centavos is levied; for sums above 1,000 pesos, 1 peso. These accounts, invoices or sales memoranda must be taken from books, the pages of which previously have been stamped by the internal revenue bureau in such a way that a part of that stamp remains with the stub and the other is on the paper delivered.

Books of accounting, as required by the Civil Code, must have each page stamped with a 10-centavo stamp.

Receipts of deposits of merchandise in warehouse are taxed 50 centavos.

Tax on Trade and Commercial Marks Revised—Operation of Law.

Of widespread interest to American commerce in general is the revision of the tax on trade and commercial marks. Registrations of these or their renewals are taxed 100 pesos; duplicates of registration, 10 pesos; application for registration, 1 peso for each mark, and for transference of marks, 20 pesos.

In the law no mention is made of the date on which it will become effective. Regulations governing it are to be prepared and published at a subsequent date, how-

ever, and it is presumed that when these are announced, the date will be fixed.

Law Amended as to Checks, Indorsements, and Subsidiary Books.

An amendment to the Chilean law on stamps, seals, and stamped paper, published in the *Diario Oficial*, April 24, 1925, provides that checks will carry a stamp of 15 centavos each, instead of 10 centavos, and 5 centavos for indorsements, and that subsidiary books which take the place of a diary must have on each page a 10-centavo stamp in the same manner as other books of account.

[Copies of the law and amendment are on file in the Division of Commercial Laws.]

Chilean Commercial Mark and Patent Law

Assistant Trade Commissioner Clarence Brooks, Santiago

The organic law creating the Chilean ministry of agriculture, industry, and colonization provided that the service of commercial marks, industrial design, and patent registration should be performed by this new ministry. The Council of Government (*Junta de Gobierno*), therefore, on March 17, decreed Law No. 358, which establishes in the ministry of agriculture, industry, and colonization a subdivision known as the office of industrial property, and charges this dependency with all the functions formerly performed by the separate bodies. This decree law was published in the *Diario Oficial* on April 3 and became operative from that date on. Prior to its promulgation the registration of commercial marks in Chile was intrusted to a semiofficial body, known as the National Agricultural Society, while the granting of letters of patent was one of the functions of the office of the director general of public works.

[A translation of the decree-law creating the office of industrial property, and regulating the procedure to be pursued and the requirements to be fulfilled in registering patents, marks, and industrial designs, is on file in the Division of Commercial Laws and may be consulted.]

Trade Monopolies Granted in Peru

Commercial Attaché H. Bentley MacKenzie, Lima

"Patentes de introducción" are concessions granted to individuals and companies which establish an industry in Peru not previously existing in the country, by which the organizers are assured that no one else may undertake the same industry in Peru for a certain period of years. Competition is thus restricted to imported merchandise. During recent months several patentes de introducción have been granted, the most important being for the manufacture of hosiery of all kinds and the manufacture of antiseptic absorbent cotton. There is some question as to the constitutionality of these patents, but it is apparently the intention of the Government to continue granting them.

Potential Investment Stipulated—Other Provisions.

A recent presidential decree provides that in order to obtain such a patent the petitioner must prove to the ministerio de fomento the ability to invest at least 10,000 Peruvian pounds in the establishment and exploitation of the industry. He must also deposit as security for carrying out the program indicated the sum of 500 Peruvian pounds, which will be forfeited to the Government if he fails to establish the industry in the time specified. (Peruvian pound=\$4.14 at current exchange.) Unless the concession is utilized within one year in the Departments of Loreto, San Martin, and Madre de Dios, the concession is void as to those departments. In addition to the publication of the petition in the *Diario Oficial*, it is necessary to publish it in a newspaper in the capital city for 10 consecutive days, in order that objectors may have an opportunity to be heard.

[A copy of the decree is on file in the Division of Commercial Laws.]

Provisional Tax Reduction in Germany

Consul A. W. Killefoth, Berlin

The German Federal Minister of Finance, by a circular instruction dated March 24, 1925, ruled that wageearners, persons engaged in the so-called "independent professions" (such as physicians, dentists, attorneys, notaries, forwarding agents, and artists), and persons drawing incomes from the renting or leasing of landed property shall make their quarterly advance payments on the income tax for the first quarter of 1925 (due April 10), at the rates provided in the *Steuerueberleitungsgesetz*. These rates are—10 per cent of the first 2,000 marks, 15 per cent (instead of 20 per cent) of the second 2,000 marks, and 20 per cent of the income in excess of 4,000 marks.

Period for Advance Payments Extended.

The period fixed for a business man's or corporation's option to make the advance payments on the income or corporation taxes on the basis of the property or the turnover which was to expire on April 10, 1925, furthermore, has been extended until April 24, 1925. The alternatives are: To pay either 1.5 per cent of the turnover less the sum total of wages and salaries paid, or 0.75 per cent of the value of the property so far as corporations are concerned, and 1.5 per cent of the turnover after deducting a lump sum of 25 per cent to cover wages and salaries, so far as single business men or undertakings liable to the income tax are concerned.

Spanish Tax on Foreign Securities

Commercial Attaché C. H. Cunningham, Madrid

A Spanish royal order of April 8, published in the *Gaceta de Madrid*, April 22, provides that in the future interest and dividends from foreign securities paid by or through Spanish banks shall be taxed according to the second tariff of the Spanish utilities tax, in conformity with article 2 of the text of the law of September 22, 1922. The tax on dividend or share, according to the percentage of the rate of dividend or share of profit to the respective capital, is as follows:

Pesetas	Per cent
Not over 5	5.50
Between 5 and 6	6.60
Between 6 and 7	6.90
Between 7 and 10	8.05
Between 10 and 14	9.20
Between 14 and 20	10.35
Between 20 and 25	11.50
Over 25	17.25

Banks Deduct Tax at Time of Payment.

According to this ruling, Spanish banks paying these coupons, dividends, or interest, shall deduct the amount of the tax from the amount paid as dividends, etc., at the time payment is made. The banks shall make quarterly reports of these payments to the Government, and shall deposit quarterly the amount of the tax thus collected with the Treasury.

This decree states that the fact that similar or other taxes are imposed upon the interest or dividends in the country of origin shall not be considered as a reason for not imposing the tax, above described, in Spain. Furthermore, exceptions in the above-mentioned Law of Utilities of September 22, 1922, shall not be applicable to this decree.

Commercial Law Briefs**Newfoundland Income Tax Law Repealed.**

The Newfoundland income-tax law of 1922 was repealed just before the assembly was prorogued on May 7, 1925, leaving the Province without any provincial income-tax law whatever. (Vice Consul George H. Barringer, St. John's.)

Western Samoa Tax and License Ordinance Received.

Ordinance No. 3, 1925, of western Samoa, settling the rates for the store tax, salary tax, business license fees, professions, and launch and lighter licenses, transmitted by Vice Consul Quincy F. Roberts, Apia, is on file in the Division of Commercial Laws, and may be consulted. Refer to No. 171654.

Quebec Decision on Resale Prices.

A decision just rendered in the Quebec Court of Appeal, in the case of *Berliner Gramophone Co. (Ltd.) et al. v. Musical Merchandise Co. (Ltd.)*, holds that even when products have a standard and advertised selling price retailers not bound by contracts to manufacturers may sell them at any price. A digest of the opinion is on file in the Division of Commercial Laws. (Assistant Trade Commissioner Walter J. Donnelly, Montreal.)

Adverse Arbitration Award in Mexico.

A board of arbitration of the National Chamber of Commerce of Mexico City handed down a decision that the 5 per cent extra consular fee paid on goods entering Mexico, and known as "derechos consulares," should be paid by the seller making quotations c. i. f., a decision which is contrary to general practice. Although the award has no legal effect, and does not constitute a precedent even for other arbitrations of the same issue, nevertheless, it is advisable for American exporters to specify clearly that consular "derechos" or fees are to be paid by buyer. (Trade Commissioner George Wythe, Mexico City.)

See also list of "Bureau's special circulars available."

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

SHIPPING

British Yards to Build Ships at Sacrifice

Acting Commercial Attaché Mowatt M. Mitchell, London

The Blue Star Line, owned by the Vestey meat interests, operating refrigerator ships between the United Kingdom and Argentina, recently asked for tenders for eight new vessels. On the original bids, the lowest Continental offers ran as much as £80,000 per ship lower than the highest British tenders, and the lowest (unacceptable) British offer was as much as £20,000 higher than the lowest acceptable Continental bid. Upon a second opportunity being given the British yards to scale down their bids, the results were still against them. As a patriotic gesture, nevertheless, and in the belief that their action would do much to relieve unemployment and stimulate ship-building, the Vestey interests have decided to place the order for all eight ships in Great Britain, although it entails a direct loss to them of nearly £300,000, and a smaller loss—which probably amounts to all profits—to the contracting shipyards. Four of the contracts already have been closed with Scottish yards, and the other four probably will be divided between British and North Ireland firms.

Germans Seek Shipping Base at Dover, England

Harold A. Burch, office of the commercial attaché, London

German shipping interests have made advances to the Dover Harbor Board for the restoration of the old competitive trans-Atlantic service via Dover. Although the Germans claim that they are interested only in the passenger-carrying trade, British interests take the attitude that the German scheme of improving the Dover Harbor facilities to accommodate their large liners and making it a regular port of call, means intensive competition with British trans-Atlantic shipping. This is viewed with much concern because the German lines enjoy a State subsidy, possess ships built during the days of currency manipulation, and have to pay far less in wages to their seamen than British companies. These conditions would place German companies in a strong position to compete, and, in the event of rate wars, to cut rates to levels that might result in serious losses to British companies.

Improvement of the Port Required.

The Dover Harbor Board, however, take a different attitude, as it is their duty to make the port popular and well equipped. Aside from the German proposals,

the port must be improved if the new coal, iron, and steel industries recently located there are to have ample services. The improvements necessary to admit German ships are: Blocking the western entrance of the port; dredging the harbor; making the present Admiralty entrance the chief entrance and exit; constructing berths by the detached mole; connecting the new berths to the Southern Railway Line. These developments will necessitate the expenditure of about £500,000. It is reported that negotiations are now so far advanced that only official negotiations with the Admiralty, who are owners and controllers of the port, are necessary.

The four German steamship companies which are advancing this project are the Hugo Stinnes Line, Hamburg-Amerika Line, Hamburg-Sudamerikanische, and Norddeutscher Lloyd. These companies propose to use the port of Plymouth first, on account of the low costs there, while the port of Dover is being improved.

Oil Pollution of Navigable Waters

Mowatt M. Mitchell, Acting Commercial Attaché, London

At a meeting of the Oil Discharge Committee of the International Shipping Conference in London, it was found that the oily water nuisance has to a large extent been overcome. The committee has resolved to continue its efforts until the time is ripe for reconsideration, and in the meantime recommends that ship-owners of all countries give instructions to their masters to take every precaution in order to prevent as far as possible any cause for complaint.

Exhibits Available

Persons interested in the following reports may obtain them from the Transportation Division or through the district and cooperative offices of the Bureau of Foreign and Domestic Commerce by referring to the specific exhibit number:

28230—*Riga*.—Regulations defining gross and net weight and "weight including immediate packing" in clearing imported goods in Latvia. (Transmitted by Commercial Attaché C. J. Mayer, Riga, May 9.)

171540—*Mazatlan*.—Imports and exports at port of Mazatlan, Sinaloa, Mexico, for quarter ended March 31, 1925. (Transmitted by Consul W. E. Chapman, Mazatlan, April 29.)

172574—*Copenhagen*.—Port dues at Copenhagen. (Transmitted by Vice Consul Julius C. Jenssen, Copenhagen, May 6.)

RAILWAYS

Railway Projects in Bengal, India

Assistant Trade Commissioner Don C. Bliss, jr., Calcutta

A number of important railway improvements are planned for the Province of Bengal in and near Calcutta. An overhead electric railway is to be constructed in Calcutta from the Sealdah station of the Eastern Bengal Railway to the center of the city, in the vicinity of Clive Street. This railway will be in the form of a double line on a viaduct and will be connected at Sealdah with the main electric lines to Kanchrapara and to the southern section for Diamond Harbor and Budge Budge. The Eastern Bengal Railway is also considering the electrification of the Sealdah-Kanchrapara, Sealdah-Diamond Harbor, and Salygunge-Budge Budge sections, with a possible extension into the new King George's Docks.

Reduction in Size of Marshalling Yard.

In connection with the improvement of communications between Calcutta and the northern suburb of that city, and the widening of the road bridges over the Chitpur Yard, a scheme is being prepared for reducing the size of the marshaling yard at Chitpur. A new yard is proposed to deal with the marshaling of inward and outward traffic now handled at the Chitpur and Sealdah yard, in order to effect the proposed reduction in the size of the Chitpur yard and the improvement of facilities at Sealdah.

Diversion of a Branch—New Station.

Connected with the electrification of the suburban services of the Eastern Bengal, the construction of a new marshaling yard, and the remodeling of Sealdah is the question of the diversion to the south of a portion of the Budge Budge branch between Kalighat and Brace Bridge. It is also proposed to construct a new station in the vicinity of Russa Road South, thus giving a connection between the railway and tramway service to the city. This station will replace the one existing at Kalighat.

Extensive Works Sanctioned or in Hand.

Among the extensive works sanctioned or in hand are the replacement or strengthening of weak girders, the extension of the "train control" system to Parbatipur, and the extension of the broad gauge from Parbatipur to Salligari. It is also proposed to construct a siding from the Barrackpore station to the new race course which is being constructed in Barrackpore. Five new lines also will be constructed on the Eastern Bengal.

Other Projects.

Projects either completed or sanctioned include the extension of the broad gauge from Santahar Junction, 178 miles from Calcutta, to Parbatipur, 233 miles from Calcutta; conversion to broad gauge of the narrow-gauge line between Churni Ghat and Santipur; remodeling of the station yard at Ishurdi Junction just north of the Hardinge Bridge; construction of refuge loops at two stations south of Ranaghat; extension of the "train control" system; linking up Calcutta with Santahar; and installation of electric lights and power

at Saidpur. It is also contemplated to provide 72 broad-gauge locomotives, 106 bogie passenger cars, and a large amount of four-wheeled rolling stock. All locomotives are to be fitted with electric headlights.

Results of European Railway Conference at Prague

Commercial Attaché James F. Hodgson, Prague

At a conference of European railway representatives at Prague during May, 1925, the following resolutions were adopted: Beginning July 1, 1925, both the value of the shipment and the transportation costs may be collected from the consignee. The shipper may divert the consignment or alter the terms of payment at any time prior to the delivery of the shipment. Full or partial payment of the freight costs will be at the shipper's option, the remainder of a partial payment to be collected from the consignee. The states which participated in the conference agreed to apply the provisions of the Bern convention to all transit traffic of the signatory nations.

Through Freight Rates Between Czechoslovakia and Poland Discussed

Commercial Attaché James F. Hodgson, Prague, May 23

The introduction of through freight rates between Czechoslovakia and Poland was discussed at a recent conference of representatives of the two countries. The Czechoslovak Chambers of Commerce have been called on to submit lists of commodities which they desire considered for direct railway tariffs with Poland, and to indicate the frontier stations through which the mutual direct railway routes should pass.

After these negotiations are completed, discussions will be instituted on the subject of reopening several frontier mountain passes which have been closed for railway traffic since the war.

Canadian Railway Freight Rates to be Investigated

Assistant Trade Commissioner Walter J. Donnelly, Ottawa

For the purpose of equalizing freight rates in all parts of Canada, the Board of Railway Commissioners for Canada was instructed by an order in council, passed June 5, to conduct a thorough and complete investigation of the railway freight-rates question in the Dominion. The order in council is the direct result of a petition presented by the governments of Alberta, Saskatchewan, and Manitoba, as an appeal from the ruling of the board of commissioners which set aside the Crow's Nest Pass rates. Recent protests from the Maritime Provinces probably were considered also in formulating plans for the investigation.

All Phases of the Question to be Studied—Rates on Grain and Flour.

The order in council called attention to the fact that the only manner of dealing equitably with all parts of Canada so as to facilitate the interchange of commodities

ties, as well as the encouragement of industry and agriculture and the development of export trade, would be to study all phases of the question and render a fair decision. The only stipulation is that the maximum rate on grain and flour fixed by the Crow's Nest Pass act is not to be exceeded. Realizing that grain and

flour form one of the principal assets of the Dominion, in order to foster this business the framers of the order in council made it known that a definite maximum cost of transportation of these products should be determined but the established rate should not be exceeded.

COMMUNICATIONS

The German-Atlantic Cable Co. During 1924

Consul A. W. Kliefoth, Berlin

The German-Atlantic Cable Co., having reached agreements with the Commercial Cable Co. and the Western Union Telegraph Co., whereby it will be able to restore its trans-Atlantic cable connections, has published its balance sheet for 1924. The company simultaneously announced its new gold balance sheet as of January 1, 1924, together with its paper mark balance as of December 31, 1923. The paper mark capital of the company is converted at the ratio of $6\frac{2}{3}$ to 1—in other words, the pre-war capital of 24,000,000 gold marks will be reduced to 5,625,000 marks of original shares and 20,000 marks of preferred shares. The reserves of the company are similarly reduced from 19,240,000 gold marks in 1913 to 560,000 gold marks at present.

Substantial Losses as Result of the War.

However, the substantial losses which this enterprise suffered through the outcome of the war are still essentially heavier if one takes into consideration that the property made a considerable profit by amortizing its extensive pre-war bond debts, which in 1913 totaled 18,380,000 against 5,100,000 at present. The losses occurred especially in cables, which are shown in the balance sheet at only 6,850,000 gold marks as compared with 44,030,000 in 1913.

Dividend on Preferred Shares.

The balance sheet of December 31, 1924, after a deduction of 429,768 gold marks shows a surplus of 7,799 gold marks, out of which a 6 per cent dividend is to be distributed on the preferred shares, while 6,597 gold marks will be carried forward. There are no funds for the distribution of a dividend on the company's original shares.

Emden-London Cable Profitable—New Construction Projects.

The cable between Emden and London was established in February, 1924, and its receipts are up to expectation. Increased revenues may be expected during the current year, as messages can now be sent via that cable to Portugal and Spain and the other European countries on the Mediterranean.

The cable connecting Emden and London will be followed by a cable to Vigo, the laying of which has been authorized by the Spanish Government. The laying of this cable, however, will be delayed pending the completion of the Emden-Horta cable, which is the essential link in the important direct cable connection between Germany and the United States. The latter cable will be connected on the Azores with those of the Commercial Cable Co. and the Western Union Telegraph Co. The cost for the completion of the Emden-Azores cable will be met by a bond loan (with mortgage security) in the amount of \$4,000,000.

Danzig to Have Ocean Postal Service

Consul Edwin C. Kemp, Free City of Danzig

The Postal and Telegraph Administration of the Free City of Danzig is reported to have arranged for an ocean postal service between Hamburg and Brazil, via the steamships *Artus* and *Hohn*, both of Danzig registry. Both steamers will fly the Danzig postal flag. Letters and other ordinary mail matter will be received in special letter boxes installed on the ships, and stamps will be on sale by the pursers. The stamps of the country where the vessel is calling when the article is mailed will be used, and Danzig stamps will be used on the high seas and in the port of Danzig.

Radio Exhibition to be Held in Norway

Negotiations have been going on for some time between the Norwegian Association of Radio Dealers and the Norwegian Radio Association regarding an exhibition of Norwegian and foreign radio equipment, together with apparatus assembled by amateurs. It was originally planned to hold this exhibition in May of the current year, but due to the lack of available space, postponement was necessary. Arrangements have now been completed to hold the exhibition in Oslo from September 1 to 15, 1925. (A. E. Fenselau, Secretary to Trade Commissioner, Copenhagen, May 15.)

Increase in Japanese Bank Deposits

Deposits, as reported by the banks comprising the 18 clearing houses of Japan, on March 31, 1925, the end of the fiscal year, amounted to 5,086,106,000 yen—a decrease of 47,986,000 from December 31, 1924, but an increase of 198,312,000 over the figure for March 31, 1924. Advances, which include loans on securities and bills, overdrafts, and discounts, but not call loans, amounted to 5,396,951,000—an increase of 93,602,000 over the December 31, 1924, figure, and 179,642,000 over the year previous. Security holdings increased 38,778,000 yen during the March quarter and 224,182,000 during the fiscal year, while call loans at 465,102,000 were up 88,699,000 and 86,186,000 yen, respectively. Cash holdings, however, declined 215,060,000 yen during the final quarter and 6,384,000 during the year.

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

POSTAL SAVINGS IN JAPAN

Consul C. R. Cameron, Tokyo

The Deposits Bureau (Yokinbu), of the Japanese Department of Finance, receives money deposited in the Government postal-savings banks as well as funds from various other sources and has been accustomed to advance loans to various enterprises, both public and private. Funds of the Deposits Bureau on March 31, 1925, are compared with those of preceding dates, as follows:

Funds of the deposits bureau of the Japanese Department of Finance

Items	1924		Mar. 31, 1925
	Mar. 31	Nov. 30	
Funds in deposit account (liabilities):			
Postal-savings deposits and transfers	Yen 1,166,000,000	Yen 1,163,000,000	Yen 1,137,700,000
Savings securities sales deposits	11,200,000	19,500,000	6,900,000
Reconstruction savings securities sales deposits			29,400,000
Special Government accounts deposits and other deposits	172,400,000	204,600,000	243,600,000
Reserves of deposit bureau	183,200,000	201,500,000	238,700,000
Total	1,522,800,000	1,588,600,000	1,656,300,000
Use of the funds (assets):			
National bonds	211,700,000	252,900,000	306,200,000
Prefectural and municipal bonds	135,000,000	152,600,000	165,700,000
Hypothec Bank bonds	156,600,000	190,900,000	197,400,000
Industrial Bank bonds	123,000,000	123,500,000	123,800,000
Other securities	63,600,000	75,500,000	85,100,000
Chinese Government bonds	11,600,000	11,600,000	11,700,000
4 per cent Chinese Government indemnity securities	30,300,000	29,700,000	29,100,000
British Exchequer bonds	194,700,000	149,500,000	158,500,000
British Treasury notes	19,300,000	19,300,000	
Loans to the Imperial Railway Department and other	227,800,000	235,100,000	367,900,000
Deposits abroad	57,200,000	58,000,000	64,800,000
Deposits in Japan	292,000,000	290,000,000	146,100,000
Total	1,522,800,000	1,588,600,000	1,656,300,000

New Regulations Specify Conditions for Investment.

Heretofore these funds have been almost entirely under the control of the Minister of Finance. The Imperial Diet, however, during its recent session passed a law promulgated on March 28, requiring that the funds of the deposits bureau in the future shall be employed after consultation with the Deposit Bureau Fund Employment Commission (Yokinbu Shinkin Unyo Inkas). The personnel of the committee is composed of a chairman and 15 members, including high ranking officials of the Department of Finance. Under the new regulations the funds will be invested only as follows:

1. In national and local bonds.
2. In loans to general or special budget.
3. In debentures issued by special corporations, stipulated by law.
4. In debentures issued by special banks, stipulated by law.
5. In foreign government bonds.
6. In deposits of the Bank of Japan to be held abroad.

If these new regulations are strictly adhered to it will mean that various enterprises heretofore accustomed to securing loans from the deposits bureau will be unable to do so in the future.

JAPANESE PUBLIC DEBT

The Japanese national debt on March 31, 1925, the end of the fiscal year, amounted to 4,329,735,132 yen, as compared with 3,896,690,917 on March 31, 1924. The domestic portion of the debt amounted to 2,822,958,450 yen, an increase during the year of 246,760,550, while the amount of foreign obligations increased by 186,283,665 to a total of 1,506,776,682. The advance in foreign obligations resulted from two loans floated during the year in New York and London—for \$150,000,000 and £25,000,000, respectively—part of the proceeds of which were used to refund other outstanding obligations.

Position of Debt on March 31, 1924 and 1925 Compared.

The following table gives the position of the public debt on March 31, 1924, and March 31, 1925:

Japanese public debt

Items	Mar. 31—	
	1924	1925
DOMESTIC		
5 per cent national bond	Yen 250,974,000	Yen 381,629,100
5 per cent national bond, extra	137,840,050	135,100,400
5 per cent national bond "A"	443,119,400	429,023,700
4 per cent national bond, first series	171,317,800	171,100,500
4 per cent national bond, second series	96,696,400	96,584,650
5 per cent treasury notes	1,396,248,750	1,529,520,600
Railway bonds	79,999,500	79,999,500
Total	2,576,195,900	2,822,958,450
FOREIGN		
4 per cent sterling loan, first series	92,748,500	92,748,500
4 per cent sterling loan, second series	244,063,479	244,063,480
4½ per cent sterling loan, first series	174,072,338	
4½ per cent sterling loan, second series	177,124,814	
5 per cent sterling loan	224,543,532	224,543,532
4 per cent French loan	173,627,550	172,993,095
4 per cent sterling loan, third series	107,393,804	107,393,805
Former railway company sterling loan	9,763,000	9,763,000
South Manchuria Railway Co. sterling loan	117,156,000	117,156,000
6½ per cent American dollar loan		294,033,270
6 per cent sterling loan		244,075,000
Total	1,320,493,017	1,506,776,682
Grand total	3,896,690,917	4,329,735,132
Extraordinary exchequer notes	525,481,725	533,280,075
Rice notes	11,900,185	38,093,995

Postwar Increases Compiled—Per Capita Debt.

The increase of Japan's public debt since the close of the war is indicated by the following totals for each year ending March 31:

	Yen		Yen
1918	2,498,744,000	1922	3,543,871,000
1919	2,579,946,000	1923	3,808,661,000
1920	2,793,561,000	1924	3,896,691,000
1921	3,244,044,000	1925	4,329,735,000

With a population of 56,000,000 for Japan proper, the per-capita debt amounts to approximately \$31 as against \$16 in 1918—which compares with a per-capita debt of \$187 for the United States and \$795 for Great Britain.

Final Japanese Budget Estimates

Consul C. R. Cameron, Tokyo

The budget estimates of the Japanese Government for the fiscal year ending April 1, 1926, as finally approved by the Imperial Diet on March 28, 1925, provides for total expenditures of 1,523,427,428 yen—a reduction of approximately 62,000,000 from the figures for last year. Ordinary receipts are estimated at 1,299,321,318 yen and extraordinary at 224,107,000. In the extraordinary revenues is included a bond issue of 100,000,000 yen which will be required to balance the budget.

Expenditures for 1925-26 Compared with 1924-25.

The following table shows in detail the expenditures for the ordinary and extraordinary budget compared with the final estimates of last year:

Expenditures in budget estimates of the Japanese Government

Items	1924-25		1925-26	
	Ordinary	Extraordinary	Ordinary	Extraordinary
	Yen	Yen	Yen	Yen

Bonds of the Norwegian Hypotecary Bank

A. E. Fenselau, office of commercial attaché, Copenhagen

The Norwegian Hypotecary Bank's bonds, of the series of 1900, 1902, and 1909, during recent months have been the object of considerable speculation, particularly in France, with the result that quotations have shown marked improvement. These loans, to the original amount of 70,000,000 crowns, were made by French banks. The face value is given in francs, marks, and crowns, and, in addition to being payable in Norway, they are also payable in Paris, Hamburg, Copenhagen, and Stockholm. It appears from press reports that at present organized action is under way in Paris to demand amortization of these bonds in Swedish crowns, on the grounds that the Norwegian Government pays its sterling bonds in pounds.

Bank Will Redeem Bonds Only in Norwegian Crowns.

In a statement that it can not concede such claims the Norwegian Hypotecary Bank points out that the term "crown" refers only to the Norwegian monetary unit even if the bonds are payable in places other than Norway. The bank, therefore, will redeem the bonds only in Norwegian crowns or in francs at the option of the holder. Demands for payments in marks will not be allowed, as the old German currency has lost its entire value, and it is not considered that the new German "Reichmark" is applicable in the payment clause. If demands for payment in gold are actually

made, the Hypotecary Bank will take the stand that it is not bound to make payments in gold as long as the Bank of Norway, under the Act of December 15, 1923, is relieved from such obligation.

Austrian Savings Deposits Steadily Increasing

Commercial Attaché H. Lawrence Groves, Vienna

The steady increase in savings deposits in the principal Austrian banks is encouraging evidence of recovery in the economic condition of the country. Deposits in the principal Vienna banks and savings institutions advanced more than 8 per cent during April. Interest rates on savings deposits now range from 8 per cent to a maximum of 10 per cent in the larger Vienna banks. These rates are substantially higher than the income to be obtained from the purchase of local stocks, which partly explains the steady increased savings and the lack of business on the Vienna stock market.

The amounts of deposits in the principal Vienna banks and savings institutions on April 30, 1925, with comparative figures for March 31, 1925, and December 31, 1924, follow:

Deposits in principal banks and savings institutions in Vienna

Institutions	Dec. 31, 1924	1925	
		Mar. 31	Apr. 30

Samoan Exchange Situation Reported

The premium on Samoan dollar exchange continued to drop during the first quarter of the year, following the rise of sterling in the New York-London cross rate. Sterling, quoted at \$4.77 on January 2, rose to \$4.82 by the end of March. The increased value of the pound had little effect, however, upon imports into Western Samoa. The local bank deducts $4\frac{1}{8}$ per cent discount from dollar bills and $4\frac{7}{8}$ per cent discount on London bills sold in the local market. Apia merchants, consequently, are purchasing considerable quantities of English goods with London credits from copra sales, in order to eliminate the heavy charges on transferring money from London to Apia. (Vice Consul Quincy F. Roberts, Apia, Western Samoa.)

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

GENERAL TARIFF CHANGES

FRENCH GUIANA

George F. Wadley, office of consulate general, Paris, May 13

Establishment of Taxes on Imports and Exports.

A tax of 2 per cent on imports and a tax of 1 per cent on exports have been established in French Guiana, according to a decree of May 6 published in the French Journal Officiel of May 10, 1925. These taxes are in addition to the regular import and export duties, and are to be collected by the customs at the time of importation or exportation. Exemptions from the taxes have been provided for used clothing, used furniture, articles for the State, and articles declared for temporary importation. The value on which the taxes will be levied will be the value of the goods at the time they are presented to the customs, less the import or export duties.

NORWAY

Cablegram from A. E. Fenselau, trade commissioner's office, Copenhagen, June 11

Reduction of Gold Duty Surtax.

The Norwegian gold surtax for the payment of specific duties in paper crowns has been reduced from 70 per cent to 60 per cent of the duty.

[Previous changes in this gold surtax have been announced in COMMERCE REPORTS from time to time.]

COMMERCIAL TREATIES AND AGREEMENTS

AUSTRIA-GREECE

Commercial Attaché H. L. Groves, Vienna, May 20

Commercial Treaty Provisionally Effective.

The most-favored-nation treaty between Austria and Greece, signed on April 18, 1925, was placed in effect in both countries on May 12, subject to later ratification in each country.

A special reduction on Greek currants was conceded by Austria, which by most-favored-nation arrangements applies also to United States currants.

[Announcement of this treaty was made in COMMERCE REPORTS for June 1, 1925.]

BELGIUM-SPAIN

Commercial Attaché Fayette W. Allport, Brussels, May 12

Reduced Conventional Rates on Dried Fruits, Nuts, Fish, and and Spices.

By the *modus vivendi* between Belgium and Spain, effective from May 1, 1925, rates below the minimum duties on a number of commodities in the Belgian tariff have been established, according to the official text of the agreement published in the *Moniteur Belge* for May 1, 1925. These reductions, which apply also to products from the United States and from other countries having most-favored-nation status with Belgium, are shown in the following table:

Belgian tariff No.	Articles	Import duty (francs per 100 kilos)			
		Former basic	Minimum coefficient	New basic	Minimum coefficient
ex 64	Paprika (Spanish pepper).....	20	3	20	3

693	Cork stoppers.....	40	4	40	3

¹ Per hectoliter.
The basic rates must be multiplied by the coefficient of increase in order to arrive at the correct duties.

[For notice regarding the Spanish concessions to Belgium in the *modus vivendi*, see COMMERCE REPORTS for May 11, 1925. This was prepared from cable information from Madrid and full details on Belgian concessions were not contained in the cable.]

CZECHOSLOVAKIA-GREECE

Commercial Attaché J. F. Hodgson, Prague, May 2

New Provisional Most-Favored-Nation Commercial Treaty.

A temporary commercial treaty between Czechoslovakia and Greece was signed at Athens, April 8, 1925. This treaty is of the reciprocal most-favored-nation type, with certain special concessions on the part of each.

Czechoslovakia has granted a special concession to Greek currants whereby they will be admitted (within the contingent amount) at the rate of 130 crowns per 100 kilos (general rate 350 crowns).

The following Greek products will be permitted to be imported into Czechoslovakia in the specified annual quantities or contingents:

(Item 9b) Dried figs, 6,720,000 kilos; (item ex 10) currants (raisins de Corinthe), 4,000,000 kilos; (item 104) olive oil, etc., 500,000 kilos; (item ex 108b) certain liqueurs and French brandy, 15,000 kilos; (ex 109) raisin wine, 35,000 hectoliters; and vermouth, 3,000 hectoliters).

Special privileges are granted by Czechoslovakia for the importation of Greek wines.

The duty on knotted woolen carpets (item 257b) imported into Czechoslovakia from Greece will be at the rate of 3,375 crowns per 100 kilos (present conventional rate).

If the exchange relation of the crown to the dollar and the pound sterling should exceed by more than 10 per cent the average exchange relation during the year 1923, the above duties are to be adjusted accordingly.

The Czechoslovak Government guarantees that the Tobacco Monopoly shall purchase up to 2,000,000 kilos of Greek tobacco and cigarettes per year, at the same prices that similar quantities and qualities may be obtained from other sources. It is agreed that the monopoly shall have the right to purchase direct from producers and dealers and that no restrictions, formalities, or taxes that do not apply to similar exports to other countries shall govern their purchases.

Greece, in return, grants to Czechoslovakia the benefits of most-favored-nation treatment to all imports from that country, both under the present and under the proposed new Greek tariff. Czechoslovak firms shall be on equal footing with other foreign firms in bidding for orders for playing cards de luxe, and for matches, while Greek tobacco dealers are free to buy cigarette paper in Czechoslovakia on the same condition as in other countries.

Each country reserves from the treaty provision concessions to border traffic, and Czechoslovakia reserves concessions which may be made to Austria and Hungary under the terms of the peace treaty.

The treaty is to be ratified by the two governments and become effective upon exchange of ratifications. In the meantime it will be put into effect provisionally (pending ratification) 15 days after signature—that is, April 22, 1925—and will continue effective for six months, to be renewed tacitly for periods of three months unless denounced by one party three months before the end of the first six months, or two months before the end of any succeeding three-month period, or unless replaced by a definite commercial treaty.

IMPORT AND EXPORT RESTRICTIONS

CANADA

Trade Commissioner: Lynn W. Meekins, Ottawa, June 3 and 11

Prohibition on the Importation from Jamaica of Livestock, Hides, Raw Animal Products, Hay, and Straw.

The importation into Canada from Jamaica of cattle, sheep, and other ruminants, swine, hides, raw animal products, hay, and straw is prohibited by order of the Canadian Department of Agriculture, dated June 2, under the provisions of the Animal Contagious Diseases Act, because of the existence of the foot-and-mouth disease in Jamaica.

[Similar restrictions imposed on September 19, 1922, were removed by order of January 3, 1925. See COMMERCE REPORTS for February 2.]

Removal of Import Restrictions on Livestock from all States Except California, Nevada, and Arizona.

The import restrictions on cattle, sheep, swine, and goats from all States, except California, Nevada, and Arizona were removed by order of the Department of Agriculture dated June 10, effective from June 15.

[See article in COMMERCE REPORTS for March 9 for reference to earlier relaxations of the quarantine restrictions on livestock.]

CZECHOSLOVAKIA

Commercial Attaché J. F. Hodgson, Prague, May 23

Further Removals of Import Restrictions.

In furtherance of its policy to remove the restrictions upon imports as rapidly as possible, the Czechoslovak Government announced on May 21, 1925, the removal of the restrictions on the importation of the following commodities from June 2:

Pepper and pepper dust; ginger; ground cinnamon; cardamom; saffron; vanilla; dates; bananas; coconuts and similar fruits; olives; beet and other kinds of sugar; molasses; structural iron and steel; chains; needles; spring feather steel; manufactures of nonmalleable iron not specified; sawed zinc plates; sheets and plates of base metals, gilt, silvered, gold or silver plated; sheets of base metals, polished, varnished, nickelled, etc.; tin foil and lead foil; manufactures of tin, tin-coated lead, and lead alloys; manufactures of tin and lead not specified; manufactures of base metals mounted with precious metals; textile machinery for cotton, cotton and wool waste, flax, jute, and hemp.

[Other announcements of the relaxation of restrictions upon imports have been made in COMMERCE REPORTS from time to time.]

PALESTINE

Official Gazette, April 18

Regulations Governing the Importation and Exportation of Tobacco.

In accordance with the provisions of the Palestine tobacco ordinance, 1925, which became effective on May 1, 1925, an excise duty of 25 piasters per kilo is leviable on tobacco, including imported tobacco, manufactured and sold in Palestine. Tobacco exported from the country is subject to an export duty of 1 piaster per kilo if unmanufactured and 2 piasters per kilo if manufactured.

Tobacco may be imported only at prescribed ports or places of entry and can not be imported over the land frontiers unless a permit is obtained from the Director of Customs, Excise, and Trade. Manufactured tobacco must be imported in containers weighing not less than 20 kilos each, unless permission is given by the Director of Customs, Excise, and Trade to import in some other manner. Tobacco may be exported from Palestine only under license and in containers weighing not less than 20 kilos.

Importations and exportations by post are to be made under such conditions as may later be prescribed.

TARIFF CHANGES ON SPECIFIC ARTICLES

CANADA

Customs Memorandum No. 54, Ottawa, May 22

Breeding Ewes from the United States Temporarily Free of Duty.

All grade breeding ewes from the United States will be exempted from the payment of import duty from September 1 to November 30, 1925, inclusive, by order in council of May 10, subject to regulations by the Deputy Minister of Customs and Excise and to any quarantine or other regulations that may be issued under the Animal Contagious Diseases Act. The following statement, subscribed to by the importer or his

agent, should appear on the reverse side of the usual form of entry for home consumption (B 1):

The animals described in this entry are grade-breeding ewes and are imported in good faith for breeding purposes.

[See COMMERCE REPORTS for March 9, 1925, and this issue, under "Import and Export Restrictions," for announcement of quarantine restrictions at present in force affecting livestock.]

JAPAN

Thirteenth Supplement of the Brussels Edition of the Tariff, April, 1925

Amendments to the Luxury Tariff.

Effective April 1, 1925, the following articles ceased to be subject to the 100 per cent ad valorem import duty, imposed by the Japanese luxury tariff of last summer, and became subject to the import duties as formerly provided in the general or conventional tariffs as the case may be.

(32) Pouchong tea; (94) hide powder for chemical analysis; (95) orange essence and 24 other essences;¹ (134) musk; (135) artificial musk; (136) nard and spikenard; (137) cloves; (229) acetate of Linalol and 5 other articles;¹ (299-5 Ex C-2) tissues weighing not more than 17 kilograms per 100 square meters, and having in a square of 5 millimeters side, more than 40 threads, in warp and woof; (299-6 Ex B-2) same as previous item in regard to weight and number of threads; (301) tissues containing not more than 5 per cent by weight of silk; (347) rubber gloves; (355) Chinese shoes; (392) copies of calligraphies and pictures; (412) precious stones shaped for industrial use;² (413) crystal, uncut and unpolished and semiprecious stones intended for industrial use;² (553) instruments for cinematographs, microscopes and aeronautics; (636) films for radiography (X rays).

LATVIA

Commercial Attaché C. J. Mayer, Riga, May 23 and June 8

Reduced Duties on Bicycle Parts.

The Latvian Minister of Finance has given instructions that bicycle parts and inner tubes which have heretofore been dutiable as rubber manufactures, at 2 lats per kilo, shall be considered as bicycle spare parts and subject to a duty of 1.50 lats per kilo.

Bicycle chains imported in long rolls of one piece are no longer to be classed as spare parts of bicycles (duty 1.50 lats per kilo) but as manufactures of iron and steel with a duty of 0.20 lat per kilo.

The reduced duties become effective May 11, 1925.

Proposed Reduction in Duties on Certain Petroleum Products.

It has recently been proposed that Latvian duties on imported naphtha, petroleum for distilling purposes, and lubricating oils be reduced by about 30 per cent of the present duties, to take effect several months hence.

LITHUANIA

Commercial Attaché C. J. Mayer, Riga, May 2

Removal of Export Duty on Prepared Hides.

The Lithuanian Government has decided that after May 1, 1925, no export duty shall be levied on prepared hides.

¹ A detailed list of the 24 essences referred to in tariff number 95 and the 5 articles referred to in tariff number 229 will be published in COMMERCE REPORTS as soon as received.

² Uncut and unpolished precious and semiprecious stones, as well as unwrought amber, intended for the manufacture of engineering and industrial goods, are only partly exempt from the 100 per cent duty. The duties applicable to such goods will be published in COMMERCE REPORTS as soon as received.

SALVADOR

Consul W. J. McCafferty, San Salvador, April 30

Samples Without Value and Advertising Matter Duty Free.

Samples of no commercial value and printed matter for advertising purposes are exempted from import duty in Salvador by a decree of April 14, 1925. Under advertising matter are included books, catalogues, pamphlets, chromos, posters, cards, and other articles of paper, pasteboard, or cardboard which are printed, engraved, or lithographed in such a manner that their use is obviously for advertising purposes.

The above articles are subject, however, to the regular handling charges in force in Salvador.

Samples of no commercial value or printed advertisements sent by ordinary or registered mail will be delivered after examination, if such examination shows that they are included among the articles which are permitted exemption from import duty.

[Samples of no commercial value shipped to Salvador have been subject to an import duty of 3 cents (gold) per gross kilo, whether sent by parcel post, express, or freight.]

SWITZERLAND

Eugene A. Masuret, office of trade commissioner, Paris, May 21

Establishment of Export Duty on Swiss Cheese.

An export duty of 10 Swiss francs per 100 kilos has been established in Switzerland on serac (a Swiss cheese), according to a notice to importers published in the French Journal Officiel of May 17, 1925. Shipments weighing under 5 kilos will be exempt from this duty.

UNITED KINGDOM

Cable from Acting Commercial Attaché M. M. Mitchell, London, July 13

Import Duty Imposed on Lace and Embroidery.

The British Parliament has passed a bill to become effective July 1, imposing, for a period of five years, a 33 $\frac{1}{3}$ per cent ad valorem duty on all imports into the United Kingdom of both machine and hand-made lace and embroidery, whether forming part or attached to garments or other articles or otherwise. The duty does not apply, however, to solid dress fabrics made on lace-making machines.

This action is taken in accordance with the recommendations of the special committee recently appointed by the British Board of Trade to investigate the need and advisability of placing an import duty on lace goods, etc., in accordance with the Government scheme whereby meritorious individual industries (except foodstuffs) were to be considered for tariff protection, if found upon investigation to be suffering from exceptional foreign competition.

[Previous notices have been published in COMMERCE REPORTS for May 18 and May 25 with respect to the British Government's plan for granting protection to certain industries and to the lace and embroidery committee's recommendations.]

CUSTOMS REGULATIONS

ITALY

Cablegram from Commercial Attaché H. C. McLean, Rome, June 11

Marking on Paper Labels on Canned Fruits and Vegetables Allowed.

The Italian Ministry of Commerce has ruled that the markings required on canned fruits and vegetables after August 1, 1925, may appear on the printed paper label, which may be gummed on the can instead of being imprinted into, lithographed on, soldered to, the can as is required on canned fish and meats. Care should be taken to see that the labels are properly gummed, so that they will not become detached from the cans.

[For an announcement of the markings for certain canned or preserved fruits and vegetables, see COMMERCE REPORTS for March 9, 1925.]

PARAGUAY

Consul Digby A. Willson, Asunción, April 20

Real Value Must be Shown on Invoices.

According to the new Paraguayan tariff, the customs authorities are permitted to demand from the importer all documents and correspondence relative to the purchase, in order to verify the value declared in the consular invoice. Should the importer fail to comply within two days, the customs authorities can elect to use the value shown in the catalogue of the exporter, less the legitimate discount.

If prices at time of order are different from those quoted in the catalogue, the manufacturer or exporter should so inform the importer at time of shipment, plainly stating price and discount allowed, in order that valuation can be verified. It is imperative that this letter should be in Spanish.

INTERNAL REGULATIONS AFFECTING TRADE

FAROE ISLANDS

Deutsches Handels-Archiv, Berlin, May 1

New Excise Taxes on Beverages, Tobacco, and Confectionery.

A law of March 28, 1925, provides for a new schedule of excise taxes to be levied on certain beverages, tobacco, and confectionery manufactured in or imported into the Faroe Islands, effective immediately and to remain in force until April 1, 1930.

The schedule includes taxes on the following articles:

		Crowns
Nonalcoholic fruit wines (with less than 2¼ per cent of alcohol by weight) and similar beverages, made from fruit juices, mineral water, lemonade, citron water, or the like.....	per liter.....	0.08
Tobacco, cigars, cigarillos, and cigarettes:		
(a) Smoking tobacco whose selling price, minus the freight and taxes, amounts to, at the most, 5 crown.....	per kilo.....	.20
(b) All other smoking tobacco.....	do.....	1.00
(c) Twisted chewing tobacco.....	do.....	.40
(d) All other chewing tobacco and snuff tobacco.....	per kilo.....	2.00
(e) Cigarettes.....	per 100 pieces.....	1.00
(f) Cigars.....	do.....	2.00
(g) Cigarillos.....	do.....	1.00

Sugar wares of all kinds, such as chocolate, bonbons, barley sugar, sweetmeats, marchpane, pastilles, sugar drops, and the like..... per kilo..... .25
(Sirup, loaf sugar, cut sugar, moist sugar, powdered sugar, and all other household sugars, candy sugar and cocoa powder without the addition of sugar are tax free.)

JAPAN

Consul C. R. Cameron, Tokyo, April 14

Export Guilds to Set Standards of Production and Export.

The Japanese Imperial Diet during its last session passed two laws which aim to stimulate the exportation of merchandise from Japan and to improve and standardize such exports. The first law, which is called the "exports guild law," provides for the organization of the exporters of a certain district, or the exporters of a certain kind of commodities, into a sort of guild, which have certain powers regarding the selection, classification, and packing of merchandise for export, subject to the supervision of the Government. The second law, which is called the "export manufacturing guild law," provides for the organization of the manufacturers of the principal Japanese export merchandise into guilds, the principal function of such guilds being the inspection and supervision of factories, equipment, and other facilities of the members, as well as supervision of the manufacture and sale of the output of members. These guilds are also subject to Government supervision. Both sorts of guilds are by virtue of the laws themselves exempted from the business and export taxes.

TURKEY

Trade Commissioner Julian E. Gillespie, Constantinople, May 4

Reduced Consumption Tax on Cotton and Woolen Goods.

The director general of Turkish customs announced on May 3, 1925, the amendment, effective immediately, of the recently imposed consumption tax on cotton and woolen textiles classified under tariff numbers 270 and 323. Hereafter, instead of a consumption duty equal in amount to the present import duties on these articles, i. e., the rates of duty provided in the customs tariff of 1916 augmented by coefficients of 5 or 12, as the case may be, the consumption tax is to be the equivalent of the rates of duty provided in the customs tariff of 1916 without the coefficients of increase.

[For previous notification and articles affected by the consumption duty see COMMERCE REPORTS for April 20, 1925.]

FOREIGN MAILS AND PARCEL POST

PALESTINE

Official Gazette, April 15

Abolition of Duty on Goods Exported by Parcel Post.

Effective April 15, 1925, the export duty on all goods exported from Palestine by parcel post is abolished, with the exception of the export duty of 10 per cent ad valorem on antiquities.

See also Cable review, Europe: Netherlands business activity continues.

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

INCREASED TRADE VALUES FOR BRAZIL IN 1924

Assistant Trade Commissioner A. Ogden Pierrot, Rio de Janeiro

Statistics of Brazil's foreign trade totals for 1924, just issued, show an increase over the four preceding years in the value of both imports and exports. Export values in recent years have been as follows:

1919.....	£117,388,347	1922.....	61,317,216
1920.....	82,345,857	1923.....	68,562,498
1921.....	45,410,955	1924.....	86,735,000

Volume of Imports Greater Than of Exports.

As in past years, the volume of Brazil's exports was less than that of imports, because heavy products, such as coal, heavy machinery, etc., made up the bulk of the imports. Exports were 394,000 tons less than those of 1923, the great increase in the value of coffee more than compensating for this decrease in exports. Coffee prices on the Rio de Janeiro market registered an increase in December, 1924, of 96 per cent over those in January of the same year, while New York prices increased in the corresponding period by 106 per cent. Of the 26 principal exports produced, only five registered an increase in quantity during the year, while the value of eight increased during 1924.

Exports of Animal, Mineral, and Vegetable Products Decreased.

Exports of animal products diminished by 37,455 tons and 63,376 contos in 1924 compared with the previous year. Mineral exports decreased by 76,638 tons and 9,117 contos, due chiefly to smaller shipments of manganese. Vegetable products, which make up about 90 per cent of the exports of Brazil, decreased by 378,478 tons, but the value of these shipments increased by 638,085 contos over the previous year. This is due to the coffee exports, which were as follows: 1923, 14,466,000 sacks valued at 2,124,000 contos (£47,078,000); 1924, 14,226,000 sacks valued at 2,928,000 contos (£71,833,000).

In spite of the restrictions on entries of coffee into the exporting ports, the quantity actually shipped was but 240,000 sacks less than in 1923.

Values of Exports Increase in Certain Commodities.

As a result of higher prices for herva matte, the value of the exports of this product also increased over 1923, although the amount shipped was less than in the preceding year by about 9,000 tons. Exports of tobacco, vegetable oils, fruits, cacao, and rubber all increased in value in 1924.

Sugar, the second most important export in 1923, fell to eleventh place in 1924, decreasing by 118,709 tons and by 111,627 contos, or £2,402,000 in value. Hides and skins combined are of sufficient value to rank second in 1924 exports. Cotton follows, with a decrease in exports from the year before of 12,706

tons, representing a decrease in value of 80,150 contos or £1,638,000.

Exports of rice also fell greatly during 1924, decreasing 27,604 tons, with a consequent loss in value of 19,269 contos or £409,000.

The following are the principal export commodities with their 1924 amounts:

Principal Brazilian exports in 1924

Commodity	Quantity	Value	
		Contos	£ sterling
Coffee.....	Tons 853,560	2,928,572	71,833,000
Hides.....	52,048	103,290	2,553,000
Oil seeds.....	96,791	100,676	2,530,000
Cacao.....	68,574	98,174	2,426,000
Chilled meat.....	78,312	88,575	2,250,000
Herva matte.....	78,750	87,952	2,179,000
Rubber.....	21,568	79,212	1,962,000
Tobacco.....	29,586	74,796	1,845,000
Cotton.....	6,464	33,989	1,003,000

Coffee Cultivated to the Exclusion of Other Crops.

Perhaps the most significant fact shown by the 1924 figures of exports is that, excluding shipments of coffee, the value in sterling of exports of all other products during the year is lower than that of all Brazilian exports, excluding coffee in 1913—indicating that too much attention is being given to the development of the one great crop of Brazil at the expense of all others. An undue amount of dependence is being placed on coffee, and any considerable fall in the price of this commodity would result unfortunately for Brazil's economic stability.

The following table shows the exports of coffee from Brazil compared with those of other products:

Coffee exports from Brazil compared with those of other products

Years	Quantity			Value		
	Coffee	Other products	Total	Coffee	Other products	Total
1913.....	Tons 796,000	586,000	1,382,000	£40,770,000	£24,672,000	£65,451,000
1919.....	778,000	1,130,000	1,908,000	72,697,000	57,478,000	130,085,000
1920.....	692,000	1,409,000	2,101,000	52,822,000	54,699,000	107,521,000
1921.....	742,000	1,177,000	1,919,000	34,694,000	23,893,000	58,587,000
1922.....	760,000	1,362,000	2,122,000	44,242,000	24,336,000	68,578,000
1923.....	868,000	1,361,000	2,229,000	47,078,000	26,108,000	73,186,000
1924.....	854,000	981,000	1,835,000	71,833,000	23,270,000	95,103,000

Brazilian Imports in 1924.

The volume of imports into Brazil increased by 21.4 per cent in 1924 over 1923; the increase in value was 24 per cent in terms of Brazilian currency and 36.2 per cent in pounds sterling. General totals of imports in 1923 and 1924 are as follows: 1923, 3,575,872 tons, valued at 2,270,437 contos (£50,613,000); 1924, 4,340,981 tons, valued at 2,815,630 contos (£68,949,000).

Bahia Enjoying Prosperity

Consul Homer Brett, Bahia, Brazil

The low exchange value of Brazilian currency that has prevailed for the last few years has been very stimulating to production in Bahia and to the export trade. The commercial value of exports from the State for 1924 was estimated at more than 300,000,000 mil-reis. Imports during the last two years have only been about one-fourth the value of exports. The State government has used its increased revenues from these exports to pay off large portions of the internal debt with the result that the State is enjoying an almost unprecedented prosperity.

Record Exports to the United States.

The value of commodities exported from Bahia to the United States during the first three months of 1925 was greater than for any similar period since the collapse of the postwar boom in 1920. While the valuation for the years 1919 and 1920 were greater, they were inflated both by war prices and high milreis exchange and represented a movement of produce no greater than that of this year. Exports to the United States from Bahia for the first quarter of the last four years have been: \$1,815,143 in 1922; \$2,359,147 in 1923; \$1,372,902 in 1924; and \$2,702,594 in 1925. The most notable increase was in coffee. An important gain was also made in the shipments of miner's black diamonds, which have practically doubled in value in recent months.

Imports from the United States.

Unusually large sales have been made of American sewing machines. American typewriters are holding their market on quality, despite competition from several European countries, and the same is true of many other specialties, such as cash registers, phonographs, photographic apparatus, and fountain pens, and the trade in motion-picture films—almost exclusively American—is constantly increasing. In cruder products, such as steel rails, iron pipes, sheets, and rods, European manufacturers are getting the business on lower prices.

Diversification of Imports from United States.

The largest items of American products purchased in Bahia are kerosene, gasoline, and lubricating oils, wheat flour, barbed wire, automobiles, and rosin, in most of which there is no competition. During 1924 there developed a tendency toward greater diversification of imports from the United States, and this is still continuing. During January and February, 1925, asphalt, steel articles, codfish, drugs, tin plate, hardware, tools, machines, electrical material, railway material, notions, phonographs, caustic soda, textiles, toys, cement, cutlery, confectionery, wrapper tobacco, condensed milk, toothpicks, paper, and clocks all appeared in the list of imports from the United States, though mostly in smaller quantities than similar articles received from Europe.

State Finances Improved.

Between March 29, 1924, and December 31, 1924, the indebtedness of the State was reduced by 30,000,000 mil-reis, or over \$3,000,000, even at the present low rates of exchange. This money went into commercial channels and had its part in stimulating business. State revenues continue high and further debt reductions are in prospect.

Brisk Trade in Para

Consul Jack D. Hickerson, Para, Brazil

The trade of the Para district during the quarter ended March 31 was brisk. Rubber exports, under the influence of exceptionally good prices, increased approximately 50 per cent over the corresponding quarter of 1924, amounting to 9,513,686 pounds for the entire Amazon Valley, as compared with 6,831,311 pounds during the March, 1924, quarter. Brazil nuts, the second export product of the district, decreased about 50 per cent in the volume of exports from last year, but prices were high and the money value of shipments for the past quarter was not far below last year's level.

Import Trade Increases.

Imports at Para during the first two months of 1925 increased approximately 125 per cent, according to semiofficial statistics. A large part of this increase was caused by the receipt of unusual quantities of coal from the United States and salt from England. Imports of nearly all products increased during the first quarter.

United States Share of Trade.

A heavier proportion of Para exports was sent to the United Kingdom and the Continent than usual, but shipments to the United States also increased. The value of exports invoiced from Para to the United States in the first quarter of 1925 was \$868,785, and at Manaus \$1,603,789, in comparison with \$794,090 and \$1,342,132, respectively, for the corresponding quarter of 1924.

[A review of the commercial situation in Para during the year 1924 showing the preeminent position of the United States in the trade may be obtained upon application for Special Circular No. 176—Latin American Division, Good Trade Movement, Para, Brazil, in 1924.]

Trade Conditions in Western Nicaragua

Consul Harold Playter, Corinto

Merchants in western Nicaragua complain that business during the first months of 1925 has not been so good as during the early months of 1924, despite the fact that statistics show an increased circulation of money and increased Government revenues derived from imports for this year as compared with last. Other conditions, however, have had a depressing effect upon business in general.

Lack of Transportation and Small Crops Limit Trade.

The railroad from Corinto to the interior was not operating through trains from October to the early part of March, which materially reduced exports during this period. Also this season's coffee crop has been small and while with the high prices received the total cash value of the crop will not show any decrease, the money obtained will not be so widely distributed. A large coffee crop, sold at comparatively low prices is much more favorable to local business than a small crop sold at high prices, since the money from a large crop is so distributed as to increase the purchasing power of a greater number of laborers. Also the price of sugar has been low.

Market Conditions.

Since a small coffee crop and other factors have contributed to a limited distribution of money, it is prob-

able that many merchants are overstocked, but these stocks consist principally of such staples as cotton goods and hardware, which will be disposed of without loss. An increased number of automobiles imported will be disposed of to the wealthier planters, who are profiting by the high prices received for coffee. Two years of prosperity have so strengthened the merchants that no fears are entertained as to the disposition of surplus stocks.

Shipments of Coffee.

The 1924-25 coffee crop, some 7,000,000 pounds of which were shipped up to the middle of April, is estimated at from 20,000,000 to 22,500,000 pounds. The 1923-24 crop reached approximately 40,000,000 pounds.

Exports from Rio to United States Decline

Consul Howard Donovan, Rio de Janeiro

The decline in exports from Rio de Janeiro to the United States, which began in February, continued throughout the month of April, with but little prospect of improvement before the movement of the new coffee crop in July. The absence of manganese ore exports during April contributed to the unusually small value of declared exports which amounted to only \$320,281. Totals for March and February amounted to \$690,038 and \$1,655,524, respectively. In April, 1924, declared exports were valued at \$1,393,914.

Business Conditions Good in Salvador

Consul W. J. McCafferty, San Salvador, May 15

Business conditions in Salvador continue to be very good and increased activity in most lines is reported as compared with the early months of the present year. Imports have been heavy and the export trade good.

Outlook for the Next Coffee Crop Excellent.

Coffee growers are looking forward to an excellent crop for the coming season, provided weather conditions continue favorable. The coffee market was extremely quiet during April, and on May 1 there remained to be shipped from Salvador approximately 100,000 quintals of coffee (1 quintal=101 pounds).

Railroad Work Active.

The building of the new line of the International Railways of Central America to Guatemala is being rushed and extra laborers have been employed in order to hasten construction before the arrival of the heavy rains. This railway has also been given permission by the Salvadorean Government to extend the proposed line from Ahuachapan in the northwestern part of the Republic to the Guatemala frontier to connect with the line from Escuintla, Guatemala.

Considerable progress has also been made on the paving and sanitation work of the city of San Salvador.

See also list of "Bureau's special circulars available," in this issue.

EUROPE

Samuel H. Cross, Chief, European Division

ECONOMIC DEVELOPMENTS IN TURKEY

Prepared from reports of Trade Commissioner Julian E. Gillespie, Consul Charles D. Allen, Constantinople, and Consul Samuel W. Honaker, Smyrna

General business conditions in Constantinople during the first quarter of 1925 remained stagnant. Imports were confined to necessities, as the small amount of money in circulation prevented extensive buying. The Government policy as regards foreign capital and internal improvements—particularly agriculture and transportation—projected an element of optimism in the situation. The Grand National Assembly voted a match monopoly for the Government and abolished the tobacco régime.

Budget Shows Deficit—Exchange Improves.

The preliminary budget for 1925-26, as accepted by the budget committee, outlines expenditures at £T158,980,222 and revenues at £T149,496,854—with a consequent deficit of about £T9,500,000. The Turkish paper pound, which declined considerably during February and March, improved during April, although it did not reach the average of the fourth quarter of 1924.

Constantinople Banking Facilities Improved.

The Bank for Foreign Commerce of the Union of Socialist Soviet Republics was inaugurated at Con-

stantinople on March 30. This is said to be the first branch of a Russian bank opened abroad since 1917. Announcement is also made of the approaching foundation at Constantinople of a Trades and Guilds Bank with a capital of £T200,000 (\$104,000), having as its object the improvement of the small trades of the city.

On May 22 the Minister of Finance and a representative of the Ottoman Bank signed, after approval by the council of ministers, an agreement providing for the extension of the bank's concession for a term of 10 years. This agreement must be ratified by the Grand National Assembly before becoming valid.

Assistance Given Agriculturalists—Cereal Exchange Inaugurated.

As farming operations are considered the mainstay of the Republic, considerable attention is being paid to the building of roads, extending rural credits for the purchase of seeds, etc., and agricultural implements, through the agricultural bank, to the introduction of farm machinery, to the revision of the tithe system, and to the establishment of agricultural schools. Not only are agricultural machines and farm implements

admitted free of duty, but similar customs privileges have been accorded gasoline used in the operation of trucks and other accessories. The Grand National Assembly passed a law abolishing the tithe system as of February 28, 1925, and substituting a 10 per cent tax on agricultural products carried to market, but exempting from taxation those products consumed at the place of production. There is to be a multiplication by eight of the six per thousand land tax, the 1915 valuation, except in certain specific cases, serving as a basis.

A Cereal Exchange was created on February 21. This exchange, known as the cereal bourse, is to have exclusive jurisdiction over all purchases of cereals, vegetables, etc. For the present it will deal with wheat, flour, bran, barley, corn, rye, millet, linseed, flaxseed, sesame, broad-beans, lentils, beans, chick peas, and peas.

Beet-Sugar Industry to be Established.

The ministry of commerce announces the formation of a private company, *La Société Anonyme Turque d'Uchak pour le Developpement Agricole*, at Uchak, near Smyrna, with a capital of £T300,000,000 (\$156,000,000) for the establishment of the beet-sugar industry in Turkey. The Turkish Government has subscribed and paid into the company 50 per cent of its authorized capital. Sugar-beet seeds were ordered from France and Austria for planting this spring.

Tobacco Regie Abolished.

The Grand National Assembly on February 28 voted to abolish the tobacco monopoly as from March 1, 1925, and on March 28 adopted the "banderole" system (internal revenue stamps) for manufactured tobacco products. However, it is not believed that the newly established system will actually go into effect until March 1, 1926.

Transportation Improvements Progressing.

The Turkish Government has recently been devoting considerable energy to improving transportation facilities. On March 11 the Grand National Assembly voted £T500,000 (\$260,000) for the construction of the Ak Serai Railway. The Smyrna Aidin Railway Co., having realized a net income during the last half of 1924, is stated to have under consideration the construction of a branch line. Extensive improvements are said to be in progress for the Anatolian Railway system. Information has also been received to the effect that materials have been shipped for the construction of a line connecting the Arghana copper mine with a point on the Bagdad Railway west of Nisibin. Progress is reported in the construction of a narrow-gauge line connecting Kara Dereh with the Black Sea port of Ereğli, tapping an important timber region.

The road tax for the Province of Constantinople was increased on March 24 from £T3 to £T6 per person—a measure that is expected to permit extensive repair and construction of streets and roads in the immediate future.

Turkey's Trade Balance Remains Unfavorable.

The total value of imports during the first six months of 1924 stood at about £T62,533,000 (\$32,830,000 converted at the average exchange value of the Turkish paper pound during the first half of 1924, £T1 equals \$0.525); and of exports at about £T31,850,000 (\$16,721,000), showing an adverse balance of £T30,683,000 (\$16,109,000), or 49.1 per cent. As compared with the corresponding period of 1923, imports recorded an increase of about £T22,000,000, or almost 35 per cent, and exports an increase of about £T25,000,000, or about 78 per cent. This increase in imports is particularly noticeable in the case of cotton goods, cereals, woolen goods, dyes and chemical products, machinery, hides and leather, and vegetable oil. Increased exportation is noticeable in the case of fruits (figs and raisins), tobacco and tobacc, cotton, prepared skins, hides and wool (chiefly mohair).

Italy continued to hold first rank in Turkey's trade during the first half of 1924, followed by the United Kingdom, France, and Germany, in the order mentioned. Italy's trade with Turkey during the first half of 1924 showed an increase of 106 per cent as compared with the corresponding period of 1923. Other countries whose trade with Turkey increased during the period under review are United Kingdom, 51 per cent; France, 108 per cent; Germany, 119 per cent; Rumania, 138 per cent; Russia, 214 per cent; Czechoslovakia, 244 per cent; and Greece, 180 per cent.

Trade with the United States Declines.

The United States occupied fifth place in Turkey's foreign trade during the first half of 1924, the same as during the corresponding period of 1923. The total trade, however, fell from £T10,178,000 (\$6,524,000 converted at the average exchange value of the Turkish paper pound during the first six months of 1923, £T1 equals \$0.641) during the first six months of 1923 to £T9,048,000 (\$4,750,000) during the corresponding period of 1924—showing a decline of about 11 per cent, the comparison being made in Turkish pounds. This decline, however, is owing to the large decrease in imports from the United States (over £T2,000,000), while Turkish exports to the United States increased over £T1,000,000.

Exports Declared to the United States.

Exports declared to the United States through the American consulates in Turkey were valued at \$14,743,709 during the year 1924, as against \$10,459,031 during 1923—an increase of over 40 per cent. This increase was represented chiefly by heavy shipments of fruit (figs and raisins) and tobacco to the United States. Exports declared through the American consulates at Smyrna during the first quarter of 1925 were valued at about \$732,000, as compared with about \$574,000 during the corresponding period of 1924.

COMMERCIAL INTELLIGENCE

A. S. Hillyer, Chief, Commercial Intelligence Division

TRADE LISTS AVAILABLE

The Commercial Intelligence Division has recently compiled the following trade lists, of which mimeographed copies may be obtained from the Bureau of Foreign and Domestic Commerce or its district or co-operative offices by referring to the titles and file numbers:

Business firms	
Algeria	EUR-14000
British East Africa	BE-6077
Rumania	NE-1022
Indo China	FE-16017
Electrical and radio supplies	
Importers and dealers:	
British Guiana	LA-16021
Haiti	LA-33023
Latvia	RD-80026
Motion pictures—theaters, laboratories, exchanges and trade papers	
Sweden	EUR-12050
Switzerland	EUR-13039
Pens, pencils, and small office supplies	
Importers and dealers:	
England	BE-2064
Uruguay (revision)	LA-21029-A

Stationery	
Importers and dealers:	
Cuba (revision)	LA-31028-A
Sweden	EUR-12051
Typewriters, cash registers, calculating and duplicating machines and supplies	
Importers and dealers:	
England	BE-2065
Uruguay (revision)	LA-21039-A
Automotive products	
Importers and dealers: Newfoundland (revision)	BE-1040-B
China, earthenware, glass, and glassware	
Importers and dealers: Chile	LA-13073
Coal	
Importers and dealers: Rumania	NE-1020
Department stores	
Italy (revision)	EUR-6036-A
Manganese	
Exporters: India	FE-21056
Railways	
Haiti	LA-33021
Spinning mills	
Macedonia, Greece	CI-1504
Textile mills	
Ecuador	LA-15036

BUREAU'S SPECIAL CIRCULARS AVAILABLE

Numerous mimeographed circulars are issued by the bureau in addition to its various regular and special publications. These circulars are distributed to those interested, including persons and firms whose names are on the Exporters' Index, and copies may be obtained from the bureau or its district offices. The 68 circulars listed below were issued by 21 different divisions during the week ended June 15

AGRICULTURAL IMPLEMENTS DIVISION

No. E-50. Market for Internal Combustion Engines in the Netherlands East Indies.

AUTOMOTIVE DIVISION

No. 45. Automotive Foreign Market News Bulletin.

CHEMICAL DIVISION

No. 63-A. World Notes on Industrial Chemicals.
No. 63-C. World Notes on Drugs, Medicinals, and Toilet Preparations.
No. 63-E. World Notes on Fertilizers.

COAL DIVISION

Overseas Coal Export Situation, June 1, 1925.
No. 302. British Coal Situation.
No. 310. Storage of Coal in France and Cooperative Agencies.
No. 319. Notes on Foreign Coal Trade.
No. 324. Foreign Countries in the British Coal Market.
No. 340. Bunker Coal Supplied Steamers in Foreign Trade.
No. 341. Coal Trade at Malaga, Spain.
No. 343. Coal Production in Slovenia in 1924.
No. 344. Notes on Foreign Coal Trade.

COMMERCIAL LAWS DIVISION

No. 84. New Polish Law of Negotiable Instruments.

ELECTRICAL DIVISION

No. 371. Registration of American Firms in Egypt.

EUROPEAN DIVISION

No. 45. Economic and Trade Developments.

FAR EASTERN DIVISION

No. 41. Far Eastern Trade News.

FOODSTUFFS DIVISION

Foodstuffs 'Round The World:
Grain and Grain Products.
Foreign Notes on Meats, Fats, Oils, and Livestock.
Tropical Products.
Fresh Fruits.
Fishery News.
Canned and Dried Fruits.

HIDE AND LEATHER DIVISION

No. 480. The Livestock Industry and Production of Hides and Skins in Para, Brazil.
No. 482. Livestock Statistics of Important Cattle-Raising Countries.

INDUSTRIAL MACHINERY DIVISION

No. 543. German Machinery Trade with Great Britain Declines.
No. 544. The Becker Quick Steam Boiler.

IRON AND STEEL DIVISION

Exports of Alloy Steel Bars from the United States.
No. 364. Chilean Trade in Tin Plate.
No. 370. Average Value Per Ton of Products in British Foreign Steel Trade.

LATIN AMERICAN DIVISION

No. 56. "Latin America at a Glance."

LUMBER DIVISION

United States Exports of Gum Lumber, 1924.
Candidate for Lumber Trade Commissioner.
No. 346. Exports of Plywoods and Veneers, 1924.
No. 480. New Lumber Operation in Saltillo Consular District, Mexico.
No. 482. Market for Lumber in French Morocco.
(Continued on p. 744)

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The Department of Commerce announces the following figures covering basic industrial and commercial movements in May and further figures for the month of April:

Production and Prices.

General declines from the high April levels were noted in the industrial and commercial movements in May, as reported to the Department of Commerce, but increased activity over May, 1924, was manifested in almost all lines. Activities of the iron, steel, tin-consuming, wool and silk textile, lead, automobile, and shipbuilding industries were less than in May, while, zinc, lumber, and locomotive outputs increased. Only in tin deliveries and locomotive output were decreases made from a year ago among the important data now available. Unfilled orders for steel and for locomotives declined during May, the former exceeding a year ago and the latter decreasing therefrom. Outside of grains, wholesale prices averaged lower in May than in April.

Trade and Finance.

Indicators of retail distribution, such as mail-order sales, chain-store trade, postal receipts, and bank debits outside New York City, all declined from April, largely due to seasonal conditions. Car loadings increased, however. Most of these trade indicators were about 8 per cent higher than in May, 1924. Interest rates declined from April, security prices were higher, business failures less, and a slight decrease occurred in the Federal reserve banking ratio. Compared with a year ago, interest rates were 9 per cent lower in May, stock prices about 30 per cent higher, business failures slightly less, but liabilities greater, and Federal reserve banking ratio and discounts, note circulation, and reserves all less.

Data from Survey of Current Business.

The following table gives such data from the June issue (No. 46) of the Survey of Current Business as have been received up to June 11, 1925.

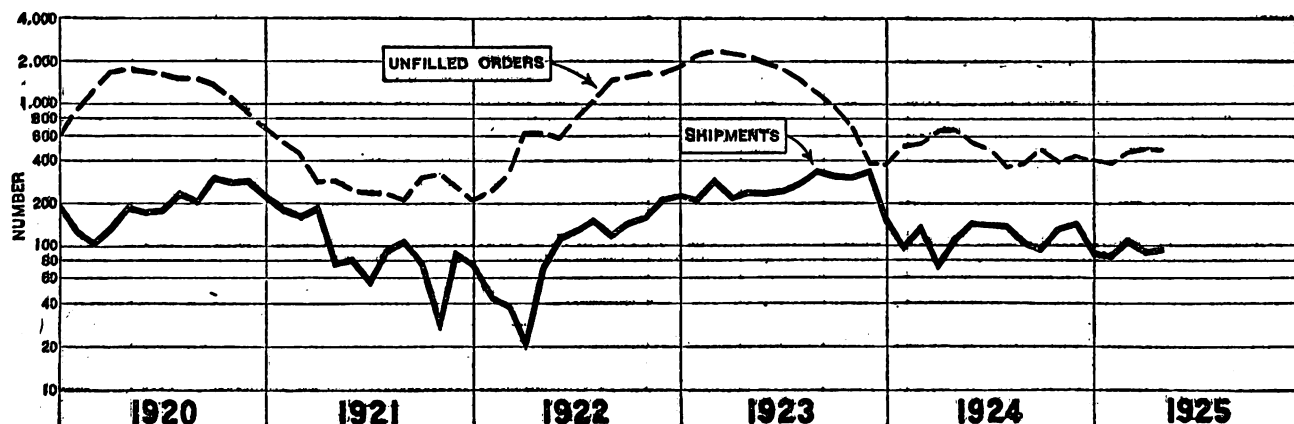

All items given in the following table correspond with similar information in the issue of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the Survey, where specific descriptions of the data and their sources are given. In addition to figures given from Government sources, there are also incorporated for completeness of service the figures from other sources generally accepted by the trades, the authority and responsibility for which are noted in the monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for \$1.50 per year.

FOREIGN TRADE OPPORTUNITIES

Reserved information may be obtained from the Bureau and its district and cooperative offices by firms and individuals on the Exporters' Index upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: *Reported by American consular officers; †Reported by commercial attachés and trade commissioners; ‡Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should be careful to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

SALES INFORMATION SERVICE

The Commercial Intelligence Division of the Bureau maintains a classified World Trade Directory Index of foreign merchants for the purpose of assisting American firms seeking contacts with foreign buyers and agents.

From the information collected by the foreign representatives of the Departments of Commerce and State, lists of firms engaged in practically every line of business in any part of the world can be furnished. A large number of these lists indicate the relative size and importance of each firm in its community, nationality of owners or managers, character of business, and the various commodities handled. These lists are great aids to traveling salesmen and firms undertaking advertising campaigns.

Further data, such as the countries from which firms make most of their purchases, date of establishment, bank and trade references, number of employees, and other confidential data that can only be obtained by representatives on the ground are also available and can be secured by requesting sales information reports on specific firms.

Knowing what agencies are handled by the different foreign firms, the Commercial Intelligence Division is well equipped to select and recommend the names of agents or firms who could properly represent American exporters.

This confidential sales information service is available to all American firms who have their names recorded on the Bureau's Exporters' Index.

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

JULIUS KLEIN, Director Bureau of Foreign and Domestic Commerce

Editorial Board: Griffith Evans, Grosvenor M. Jones, E. Dana Durand, Eugene S. Gregg

Services of Export Commission Houses

American exporters should not overlook the fact that our present enviable position in foreign trade is due in no small measure to the pioneering efforts of the American export commission house.

These pioneers, some of whom are as well known now as they were 50 or 60 years ago, placed a large number of American products on the world's markets and, by consistent and well-planned sales effort, doubtless laid the foundation for the substantial volume of trade which we are now enjoying in our dealings with merchants overseas.

It is not the object of this article to enter into a discussion of such a controversial subject as direct versus indirect selling to foreign markets, since it is assumed that American firms already engaged in exporting or those contemplating such effort have taken steps, or will do so, to ascertain the relative merits of the various sales methods that are available. The Bureau of Foreign and Domestic Commerce, whose functions are to assist in the development and maintenance of American foreign trade, is a source of information on this subject.

It seems opportune, however, to point out that the American exporter should not overlook certain advantages that may accrue to him in making use of the services of the export commission house in one way or another, as it may frequently appear to be advantageous to the foreign buyer to have the commission house handle the shipping and financing of his buying indents.

Most of the reliable and well-established commission houses in this country have as many lines to-day as they can consistently handle, and such houses are reluctant to take on additional lines for sales effort. These houses, it will be found, have sales organizations established in many of the foreign markets and know to whom to sell and, what is more important, how much to sell to prevent the overstocking of any line in certain sections.

There is a share of business in every foreign market for practically every American exporter. What that share is can be determined only by the most exhaustive effort to learn the best way of creating and main-

taining a demand and, when that has been ascertained, by the utilization of every reliable method of sales development and distribution, including those in existence in our own country as well as in the foreign markets themselves.

[A. S. HILLYER.]

New Zealand as a Market for American Goods

Owing to the rapid strides being made by New Zealand in hydroelectric development, railway construction and public works generally, larger quantities of material are being imported into the Dominion every year, according to Consul General Edwin N. Gunsaulus, who has just returned to the United States after an 18 months' tour of duty at Wellington. The New Zealand market, in the opinion of Mr. Gunsaulus, is well worth the careful consideration of the merchants of the United States and should be energetically cultivated. Though apparently remote, this market is actually only 20 days from our west coast, making the United States several days nearer to it than Europe.

Taking into consideration the comparatively small area and population of New Zealand, which is scarcely as large as the State of California and a population which numbers only 1,400,000, the Dominion offers a very good opportunity for American traders, both importers and exporters.

The country is essentially agricultural and pastoral, devoted to cattle and sheep raising, with a fair proportion of the land in the Southern Island—particularly the Canterbury plains in the vicinity of Christchurch—given over largely to wheat, oats, and other cereals. Thus primary products, such as wool, meat, butter, and cheese, constitute the great source of the Dominion's wealth.

There is not a wide range of industrial activity in the country, the field being limited almost entirely to the treatment of primary products. However, in a few lines such as milling, furniture and cabinet making, and the manufacturing of rugs, blankets, clothing, and boots and shoes there is considerable activity. The output of the dairy industry, which leads all others in the value of products exported, has quadrupled in the last 10 years and now contributes more

than one-third to New Zealand's total overseas shipments. Wool is next in importance on the export list, followed by frozen meats—principally lamb and mutton—hides and skins, timber, hemp, kauri gum, etc.

Excluding Great Britain, the United States takes more of New Zealand's exports and supplies more of its overseas needs than any other country. Exports to all countries from New Zealand during 1924 reached £52,612,711, while total imports amounted to £48,527,603—a considerable increase over the preceding year's trade and the highest since the record year of 1919, when unusual prices were received for practically every item of export. Exports to the United States during 1924 aggregated £3,458,350, against imports from the United States valued at £7,551,000.

New Zealand takes from the United States a wide variety of items, such as automobiles and trucks, refined petroleum, machinery, iron and steel, rubber manufactures, canned and dried fruits, chemicals, and cotton manufactures. In fact, practically every item which finds sale in the United States is imported into the Dominion. Great Britain and the British Dominions and colonies enjoy the benefit of a preferential tariff ranging from 10 to 20 per cent. Despite this preference and the inclination of New Zealanders to buy goods manufactured in the mother country, American products have won for themselves an enviable place in the market, and there has been for several years a very material and satisfactory increase in imports from the United States. [EMMETT A. CHAPMAN.]

World's Commercial News in Brief

The following are brief items compiled from data cabled by Government representatives stationed abroad, from official foreign publications, and from other sources. Countries included in the "Monthly Cable Reviews" are omitted from this section.

European Economic and Trade Developments

For reasons of Bureau administration, this heading includes also Canada

AUSTRIA

The Austrian business outlook is becoming more optimistic, according to a cable from Commercial Attaché H. L. Groves, Vienna. Foreign trade has maintained its improved position, and it is expected to attain an even better development as a result of an investigation shortly to be held by a committee of experts. Credit conditions are becoming better. Out of the international loan, \$18,000,000 has been allotted for continuing the electrification of the railways. The sound-money reserve of the Austrian National Bank now covers 48.6 per cent of the circulation and deposits. Unemployment decreased 7 per cent during May. Unfilled orders in the iron and textile industries remain at a high level, although somewhat less than the highest point reached this year. The crop prospects are reported to be good.

BELGIUM

Business in Belgium has not shown the improvement expected as a result of the price advantage in export markets derived from the decline of the franc. The threatened strike of metal workers in the Charleroi has begun, and a number of blast furnaces have been closed down. Similar strikes are threatened among Belgian iron workers in other districts and by coal miners. The present issue is a proposed wage reduction of 5 per cent.

CANADA

The moderation of recent warm weather has brought Canadian retail and wholesale demand nearer to normal, but it is expected that business in general will be better this summer than last. Tourist travel so far this season has exceeded that of last season. Steel

plants are operating steadily, contrary to early predictions. The optimism prevailing in the Prairie Provinces appears to be reflected in all industries. The Canada-West Indies Trade Conference convened in Ottawa on June 19. The Government has decided to defer for the present further discussion of the report of the committee to investigate ocean freight rates.

DENMARK

The final settlement of labor troubles has materially relieved the commercial crisis in Denmark. During the labor troubles it was contended that Danish exchange was undervalued relative to domestic price levels and the favorable position of the Bank of Issue. The appreciation of the crown since the labor settlement has to some extent supported this contention. The crown is now about 2 per cent higher than the maximum rate contemplated by the exchange stabilization plan. Shipments of farm produce are now moving in very large volume, bacon exports during the last week having attained the highest weekly figure on record. There has been some recession in prices of Danish farm produce in foreign markets, but the appreciation of the English pound has practically counter-balanced this movement. The Danish crown has risen considerably during the last few months relative to the dollar, with the result that purchases in this country have become cheaper. The money market continues tight, in consequence of the policy of deflation pursued by the Bank of Issue.

ESTHONIA

Esthonia is endeavoring to fund its debt of \$17,700,000, including interest. The Government is also negotiating for a foreign loan for reconstruction purposes.

FINLAND

The credit situation in Finland has recently improved and it is expected that exporters will be able to secure increasingly satisfactory facilities. The timber situation, however, is at present depressed. There is no disposition toward an early reduction of the discount rate.

FRANCE

The effort to secure a balanced budget continues to dominate French commercial and economic discussion. The Finance Ministry insists upon concluding budgetary discussion by June 30. The franc has reacted adversely, to the general uncertainty of the Government's fiscal situation. The Government, however, continues its assurances that all requisite measures will be taken to defend the franc against speculation. French trade developments continue the favorable trend of the early months of the year, with a steady increase in the export balance.

GERMANY

Short term credit maturities at present impending dominate the German financial situation and have caused a marked depression on the Bourse. The persistent depression in the coal and iron industries has made impossible the accumulation of the means necessary to meet obligations maturing, for a number of concerns, during the summer. Foreign credits are not available in sufficient quantity to extend these obligations on a long term basis. A recent decision in the courts that sales between two companies in a Konzern constitute sales subject to the turn-over tax, has presented a new obstacle to the cartels. A general revision of legal regulations may place the Konzerns upon the same basis as independent nonintegrating manufacturers, with very important effects upon the general character of organized German industry. The provisional tariff bill, now before the Reichstag, is being opposed by interests which object to the food duties contemplated in the bill. The high foodstuffs duties desired by the supporters of the bill are said to be a part of the German program to expand agricultural production by means of the more extensive mechanization of agriculture. The expected high rates on semi-finished iron and steel have not been passed. The May deficit of 17,000,000 marks was in part due to the postponement of payments on important taxes, in accordance with the new plan of cutting down the excessive number of tax payments and placing some of them on a quarterly basis.

GREAT BRITAIN

As the date approaches for notice of termination of the wage agreement, the British coal situation is becoming increasingly uncertain. There appears to be no firm price basis, which results in heavy concessions to clear congestion. Unemployment continues to increase. Of recent increases, the cotton textile industry is credited with 15 per cent, and increases have occurred in the engineering, shipbuilding, and coal industries.

HUNGARY

The economic depression in Hungary, which followed the stabilization of the currency and the reform of Government finances, is still severe and has generally reduced business activity and the ability of Hungarian industry to compete in foreign markets.

But reconstruction is proceeding very satisfactorily, according to a cable from Commercial Attaché H. Lawrence Groves, dated June 20, and it is expected that good crops will greatly improve business conditions.

ITALY

It is felt in Italy that a continued decline in the lira would seriously disturb the present satisfactory industrial and commercial situation. There is at present a great scarcity of money and credit and a marked shortage of foreign currencies. The \$50,000,000 credit recently extended by American bankers to Italian banks of issue is held in reserve to defend the lira against a speculative attack. Italian importers, who postponed meeting their dollar, sterling, and other exchange bills in the hope of an improvement in the lira, were unable to secure enough foreign bills to cover their commitments. There, then, ensued a selling movement that developed rapidly and was a principal contributing influence in the decline of the lira. The financial position of the Government continues to be stronger than last year, and the present exchange situation is not a reflection of any serious commercial disorder or of a crisis in public finance. There has been a general rise in money rates during the last week, including the raising of the discount rate from 6½ per cent to 7 per cent.

LATVIA

American business relations with Latvia will be facilitated by the recent appointment of a Latvian Minister to the United States. A new weekly newspaper, in English, is to be published in Latvia, and will be devoted largely to commercial information. The use of agricultural machines and implements is steadily growing.

LITHUANIA

There has been no marked improvement in the general economic situation of Lithuania. All industries connected with timber are seriously depressed, and the situation is further complicated by reason of the inadequate agricultural crops of 1924. These two industries are the bases of Lithuanian economic life, and there is serious concern over the prospects of 1925 crops. The general crop outlook, however, is thus far good.

NETHERLANDS

Government revenues in the Netherlands continue very satisfactory, collections during May having attained the highest figure for the year. The value of the guilder is being maintained practically at par in the New York exchange market, and the fluctuations are unimportant.

NORWAY

Prices in Norway during May suffered a considerable decline, following the sustained appreciation of Norwegian currency. This decline will facilitate the renewal of wage agreements in the principal industries in August. All industries are operating on full time, and orders in reserve are sufficient to insure full activity during entire year. The financial position of the various enterprises is gradually improving.

POLAND

Little change is reported in the trade depression through which Poland is passing, but there are indications that the wheat and rye yield will be larger than

for 1924. It is expected that the budget will shortly be passed by the Diet. A Government bill has been introduced which proposes to establish Government guarantees up to \$40,000,000 for foreign credits offered to Polish industrial enterprises.

RUMANIA

The Finance Ministry of Rumania has announced that revenue collected during the first three months of 1925 was \$1,379,269,592 lei in excess of that in the corresponding period of last year. It is reported that an agreement has been concluded between the Rumanian and British Governments and the Commonwealth of Australia whereby the Rumanian Government undertakes to redeem within 15 years, beginning in 1930, Rumanian relief bonds that fell due on January 21, 1925, at an annual interest rate of 5 per cent on outstanding amounts as from the latter date.

SOUTH AFRICA

Depression in the produce markets has adversely affected the general tone of business in South Africa. There are, however, indications that the situation will be improved. Merchants appear to be deferring purchases until the effect of the new tariff and of the return to the gold standard is more clearly evident. The maize crop has been retarded by the heavy rains, but it is not likely that the total crop yield will be materially diminished. Prices at the first Durban sale this season were satisfactory. Wool markets are quiet and sellers are declining offers based on London prices. Mohair prices are tending downward. There is not yet any serious indication of a strike in the gold fields, although the wage controversy is not settled. New diamond discoveries are reported from Pretoria.

SPAIN

The general situation in Spain has improved slightly, in spite of continued depression in the iron ore and textile industries. The principal improvement has come in lead and copper mining, the former being due

to higher world prices which enable the Spanish lead mines to work at a profit despite the inadequate transportation system.

SWEDEN

Although there are no material changes in general conditions, Swedish public finance is undergoing a very favorable development. It is expected that a slight tax reduction may be authorized. Foodstuff prices remain high, but there has been a decline in the price levels of industrial articles. Timber prices are still receding and sales are slow. Preliminary figures indicate an export surplus of about 15,000,000 crowns for May, owing principally to diminished imports. Crop prospects are better than average.

SYRIA

It is reported that the French code is shortly to take the place of the Ottoman code in Syria.

TURKEY

A German source has announced that a preliminary agreement has been signed between the Turkish Government factories and a German industrial group, according to a report from Trade Commissioner Gillespie, Constantinople. The newly organized company will specialize in the manufacture of industrial machinery and implements, road-construction materials, materials for bridge construction, etc. The raw materials are to be furnished by the interested German group at prices yielding not more than 5 per cent profit. At the expiration of the 30-year concession, the property shall revert to the Turkish Government. It is reported that the fig and raisin crop outlook in the Smyrna area is excellent. The Ottoman Bank concession has been extended for 10 years, and the institution will be known as the Turkish Bank. Prospects for large cotton production in the Adana area are reported to be very good. Turkish railways are being repaired and extended, and the construction of a number of houses in Angora is contemplated.

Latin America at a Glance

ARGENTINA

There was a slight improvement in export demand in Argentina during the past week. The total imports to date for 1925 show an increase estimated at 100,000,000 gold pesos as compared with last year. Federal revenues have increased 10 per cent. The budget has been fixed at 626,000,000 paper pesos for 1926. The import trade is quieter. (Cable from Commercial Attaché Edward F. Feely, Buenos Aires, June 20.)

BRAZIL

The coffee market in Brazil was firm until June 19, when the demand fell off. The price of Santos 4's had risen to 38:850 milreis per 10 kilos. Exchange continues to improve, the milreis closing Saturday at 8.920 to the dollar. Cotton prices have been firm and the market active. The automobile market continues dull. European competition in steel products is growing stronger, and underquoting of American prices by 15 to 30 per cent is occurring in some lines. Americans are out of the tin-plate market, due to sacrifice prices quoted by British concerns as a result of the dissolution of the British combine. The Minas State railways are ordering locomotives. The Santos and Rio de Janeiro

port situations continue bad and there is increasing dissatisfaction with the former. A new petroleum company has been formed to drill in Sao Paulo and Parana. (Cable from Assistant Trade Commissioner A. Ogden Pierrot, Rio de Janeiro, June 20.)

CENTRAL AMERICA

General conditions continue fair in Central America, though the market is somewhat inactive.

MEXICO

Business continues cautious in Mexico with a slight improvement noted in the northern states. The general feeling is more optimistic than a few weeks ago. The grocery trade in Mexico City has been somewhat disorganized by the failure of one of the largest grocery houses. The wholesale business in clothing is quiet, as the summer demand has been met and it is too early for the winter buying. The automobile market continues slack. The threatened strike of the street-car employees has been called off. The long drought has been broken by rains, which did considerable damage to roads and railroads. (Trade Commissioner George Wythe, Mexico City, June 20.)

CUBA

The budget for the coming fiscal year was accepted by the Cuban Congress on June 17. Total revenues are estimated at \$84,791,065 and expenditures at \$83,016,297. The budget provides \$10,038,875 for service on foreign debts. It does not include the special public works plan, which is submitted separately and is approved in principle by the Senate, providing for a comprehensive scheme of public improvements in highways, waterworks, and sanitation covering a period of 10 years and involving about \$300,000,000. The budget provides for the repeal of the import duty on gasoline and imposes a sales tax of \$0.10 a gallon on this product. It also increases the general sales tax to 1½ per cent and provides for a horizontal increase of 10 per cent of the existing import duties on luxuries and 3 per cent on other articles of luxury to be defined by the President. (Commercial Attaché Carlton Jackson, Habana, June 18.)

LEEWARD ISLANDS

The situation continues unchanged in Porto Rico and business is slow.

The economic situation in St. Kitts is fairly good but not likely to improve until an increase in the level of sugar prices. Business is about the same as in 1924 with small orders the rule and no failures; col-

lections are generally prompt. The sugar crop is estimated at about 16,000 tons with about 640,000 imperial gallons of molasses as a by-product, compared with 10,000 tons of sugar and 420,000 imperial gallons of molasses in 1924. About half of the sugar has been shipped, all to the United Kingdom. Drought has retarded the progress of the new cane as well as the cotton crop, reducing the estimated amount of the latter to 130,000 pounds as compared with a normal 300,000. The price is good with no stocks on hand.

Business in Nevis and Anguilla is dull. Imports into the Presidency of St. Kitts-Nevis for the year 1924 were valued at £297,000, of which approximately 36 per cent was furnished by the United Kingdom, 26 per cent came from Canada, and 25 per cent from the United States. Exports amounted to £252,000, 80 per cent going to Canada and 11 per cent to the United Kingdom. The total revenues of the Presidency for the fiscal year ended March 31, 1925, were £88,000, as compared with £93,000 for the preceding year. (Trade Commissioner H. P. MacGowan, Antigua, Leeward Islands, June 17.)

PERU

Business in Peru is good, with cotton trading active. Sugar prices have fallen and as a consequence producers are suffering financial losses. (Commercial Attaché H. B. MacKenzie, Lima, June 20.)

MONTHLY CABLE REVIEWS

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

Unsettled Conditions in China

Based on cable from Assistant Commercial Attaché A. H. Evans, Peking

Efforts of radical elements to force a general strike among all workers in China have met with little success so far, in spite of strikes in some of the most important cities. In Peking the general strike has been postponed until June 30. The strikers in Peking plan to cause a complete cessation of all commercial and industrial activities for one-half day. Railway labor continues to contribute funds to support other strikers. The most serious strikes are among the seamen and textile workers.

Outlook for Crops.

The present outlook in the Tientsin, Shanghai, Hankow, Mukden, Dairen, and Harbin consular districts indicates a fair crop yield this year. A normal acreage was planted except in some of the not extensive sections that were flooded during the past year. The wheat harvest in the Tsinan and Nanking consular districts is poor. The winter-wheat yield in Shantung Province is estimated to be between 30 and 40 per cent of an average crop. However, later rains give improved outlook for other crops in this district.

Transportation Difficulties.

Although active warfare in Canton has been suspended, conditions remain uncertain and business is being carried on under difficulties. Due to the strike among seamen, shipping throughout the Yangtze

River valley has been seriously affected and the situation in Hankow remains tense. Conditions in Tientsin are orderly, but business is slow and is handicapped by cancellation of approximately 50 per cent in coastal shipping schedules. Railway transportation is yet very unsatisfactory from a shipping viewpoint. On June 7 the ministry of communications announced that military leaders held 210 passenger cars, 2,237 freight cars, and 84 locomotives, compared with 244 passenger cars, 2,760 freight cars, and 100 locomotives on May 12.

Increased Value of Exports in 1924.

During 1924 the customs valuation of total exports amounted to 771,784,000 haikwan taels, according to the Chinese Maritime Customs Abstract of Statistics. This is an increase of 18,867,000 haikwan taels over the 1923 returns. Percentage of exports by principal commodities are as follows: Bean and bean products, 19.17; raw silk and cocoons, 15.85; raw cotton, 5.24; groundnuts and products, 3.92; silk piece goods, 2.89; skins, hides, and furs, 2.79; tea, 2.74; coal, 2.66; cereals, 2.39; wood oil, 2.30; egg albumen and yolk, 2.16; cigarettes, 1.99; sheep's wool, 2.82; timber, 1.73; cotton goods, except yarn, 1.67; fresh and preserved eggs, 1.28; tin, slabs, 1.18; pig or unmanufactured iron, 1.16; bristles, 1.13; cotton yarns, 0.97; all other, 24.95.

Gain Also Registered in Imports.

Customs valuation of total imports for the same period totaled 1,018,210,000 haikwan taels—a gain of 94,807,000 haikwan taels in comparison with 1923.

Percentages of principal import commodities during 1924 follow: Cotton goods, 15.16; sugar, 7.50; metals and minerals, 6.66; rice and paddy, 6.21; kerosene, 5.68; raw cotton, 4.82; cotton yarn, 3.35; flour, 2.96; fish and fish products, 2.91; cigarettes, 2.71; tobacco, 2.43; machinery, 2.17; artificial indigo, 2.12; jades, 1.97; woolen goods, 1.74; wheat, 1.74; timber, 1.58; coal, 1.49; wool and cotton unions, 1.74; all other, 25.06.

The share of each country's trade with China follows:

Participation of Various Countries in Chinese Trade.

Almost one-fifth (18.4 per cent) of China's imports in 1924 came from the United States, according to an incomplete tabulation.

Of Chinese exports, 26.1 per cent in 1924 were destined to Japan (Formosa), 22.4 per cent to Hongkong, 13.1 per cent to the United States, 6.5 per cent to Great Britain, 6 per cent to Russia and Siberia, and 5.8 per cent to France.

Japan Markets Quiet

Based on cable from Acting Commercial Attaché A. Bland Calder, Tokyo

Trade conditions in Japan have been generally quiet during the past month, on account of weakening exchange and restricted credit facilities. A fair amount of business, however, has been done in machinery and rubber goods. Orders for electrical equipment have been irregular, averaging about 70 per cent of normal. Sales of radio equipment continue active. Sales of construction equipment have been gradually decreasing during the past six weeks and this condition has been reflected in imports of iron and steel, which amounted to only 5,200,000 yen in May, less than one-half the total for the same month last year.

The extension of preferential tariff rates to goods originating in Kwantung Leased Territory became effective June 18.

Larger Wheat and Barley Crops Expected—Takata Reorganization—Rail Electrification.

Owing to the favorable weather conditions obtaining during the spring months an increase of 8.80 per cent in this year's wheat crop is shown by the first official forecast. Similarly, the production of barley is expected to exceed last year by 4.5 per cent and an increase of 21 per cent is indicated in the production of oats.

The controversy over the payment of bills of lading arising from the failure of Takata & Co. is approaching solution since some of the Japanese banks which signed guarantees have recognized their responsibility and have commenced to make payments. The latest plan for the reorganization of Takata & Co. contemplates the introduction of new capital and the inclusion of many of the former shareholders.

The electrification of the Tokyo-Odawara Line, the first link in Japan's extensive rail-electrification program, has been practically completed and an initial test is scheduled to take place the end of June.

Bank Clearances Smaller—Exchange Weakening.

A slight decline in commercial activity is indicated by bank clearances during May, which totaled 6,580,000,000 yen, compared with 6,760,000,000 the previous month.

Japanese exchange was fairly steady during May, the New York buying rate fluctuating between \$0.4207 and \$0.4169, the average for the month being \$0.4191. Later there was a sharp decline, the yen reaching a low of \$0.4030 on June 11, since which time it has strengthened slightly.

National Debt Increased—Note Issue—Postal Savings.

The national debt of Japan at the close of May amounted to 4,951,000,000 yen (including short-term loans), of which 3,449,000,000 represented domestic and 1,502,000,000 foreign loans. In comparison with April there was an increase of 51,000,000 yen in domestic obligations and a decline of 4,000,000 in foreign loans, causing a net increase of 47,000,000 yen in the total national debt.

Outstanding notes of the Bank of Japan amounted to only 1,189,000,000 yen at the end of May—a decline of 54,000,000 in comparison with the previous month and the lowest month-end total recorded during the past four years. In addition, there were outstanding at the end of May 21,000,000 yen in Government small notes and 20,000,000 in notes of the Bank of Japan held for retirement of issues of the Bank of Chosen. The total outstanding note issues for the Empire, including notes of the Bank of Chosen and the Bank of Taiwan, amounted to 1,342,000,000 yen.

Postal savings accounts at the end of May amounted to 1,128,000,000 yen, an increase of 44,000,000 over April and the highest total recorded since November, 1923.

Raw-Silk Shipments Larger—Cotton Stocks Increase.

Raw-silk exports during the month of May aggregated 28,500 bales of 1 picul each (picul=133.3 pounds), of which 28,100 bales went to the United States and 400 to other countries. In comparison with April there was an increase of 600 bales, of which 400 represented shipments to the United States.

The recent heavy arrivals of raw cotton (aggregating 201,683,000 pounds in March and 186,353,000 in April) has caused a marked increase in warehoused stocks, the total for the end of May having been 457,000 bales (of 400 pounds). This represents an increase of 6,000 bales over the previous high mark reached in April and indicates that present stocks are heavier than at any time during the past few years.

Cotton-Yarn Production—Cost of Living.

Production of cotton yarns by member mills of the Japan Cotton Spinner's Association amounted to 203,000 bales during May. Although this is a drop of 2,000 bales from the record production in April, it is substantially larger than for any other month during the past three years. It is probable, however, that the political disturbances in China, the principal export market, will limit production during June, although this adverse factor will be partially balanced by the present downward trend of exchange. Warehoused stocks of cotton yarns at the end of May amounted to 25,000 bales, a drop of 1,000 during the month.

May witnessed a continuation of the downward trend of living costs which has been apparent since the early part of the year, the wholesale index of the Bank of Japan having been 264, against 267 for April. This represents a drop of 22 points, or approximately 8 per cent, from the high point recorded in January.

Warehoused Stocks Smaller.

Increased exports, smaller imports, and a slight improvement in domestic consumption combined to

cause a reduction in warehoused stocks during May, the Mitsubishi report showing a total of 620,800,000 yen at the close of the month, against 638,400,000 for April. The most important changes during May were declines in stocks of domestic rice, sugar, paper, steel products, American raw cotton, cotton yarns, machinery, and silk yarns, and increases in Indian raw cotton, foreign rice, cotton textiles, woolen textiles, and chemicals.

In the following table the value of stocks of principal commodities is shown for the months of April and May:

Warehoused stocks in Japan
(All figures in thousand yen 1—000 omitted)

Items	End of—		Items	End of—	
	April	May		April	May

¹ Average value of yen: April, \$0.4176; May, \$0.4191.

Slight Decline in Declared Exports to the United States.

Declared exports to the United States, according to Consul General Nathaniel B. Stewart, Tokyo, amounted to \$29,300,000 during May—a decline of only \$100,000 in comparison with April. The principal articles contributing to the May total were: Raw silk, \$25,300,000; waste silk and textiles, \$988,000; chemicals and drugs, \$163,000; cotton manufactures, \$167,000; and earthenware and glass, \$316,000.

Indian Business Hesitant

Based on monthly cable from Assistant Trade Commissioner Donald Renshaw, Bombay, June 21

The Indian situation, both political and economic, continues quiet. Commodity markets have been dull during the past month and imports, particularly of piece goods, have been restricted. The present commercial depression is real but apparently unwarranted. The principal difficulty appears to be reluctance of the public to part with cash. The early appearance of the monsoon this year is causing some uneasiness throughout agricultural districts, as it is thought that unfavorable conditions may develop later. Optimism, however, prevails in most quarters, and it is believed that another successful monsoon will result in heavy buying.

The labor situation, except in the case of the Northwestern Railway, where 10,000 men are still out, is satisfactory. From January to March, 1925, inclusive, total strikes throughout India numbered 36 and affected 20,000 workmen. The present labor supply is about equal to the demand.

Money Market Easier—Exchange Steady.

The money market is easier, although a considerable demand for funds continues. The Imperial Bank rate was lowered to 5 per cent on June 18, as anticipated, and call money stands at 4½ per cent. The Bank's percentage of cash to liabilities now stands at 24.71 as compared with 18.60 at the middle of May.

Exchange remains steady. After maintaining exchange at 1s. 6d. per rupee for some time, the government raised its buying rate three times during the past week. According to reports the unusual amount of £24,000,000 has been purchased by the government during the past two weeks.

Silver Outlook Uncertain—Gold Market Dull.

Recent unexpected movements in the silver market have been due mainly to erratic reports from Shanghai. Forward rates are inclined to be easy, but June settlements are showing signs of strength, due to meager stocks which are estimated at not more than 2,000 bars. The outlook is uncertain, but easier rates are expected because of the small demand and the relatively cheap price of gold.

The gold market is disposed to be dull and below parity. The offtake is substantial, but no important changes are expected soon, as stocks are ample.

Customs Revenue Reported—Share Index.

During May the gross customs revenue reached 35,500,000 rupees, as compared with 35,600,000 in May of the preceding year. Increases were noted in revenue collected on imports of iron, steel, liquors, cutlery, hardware, silk, government stores, and on exports of jute and rice. Excise duties collected on piece goods, kerosene, and gasoline also registered increases. Decreases were noted in duties collected on imports of yarn, piece goods, tobacco, railway material, nonferrous metals, sugar, match splints, and veneers.

The April share index indicated a weakened market, particularly in cotton mill, cement, bank, electrical, and miscellaneous stocks. Cement shares declined 16 points during the month. As the result of a panic following overspeculation the Bombay share market recently was closed for two weeks. Commercial interests and the press are demanding that the Government take some action to curtail future speculation. A sensational advance in tea shares at Calcutta is reported.

Cotton Gins Regulated—Cotton Market.

The new Government rules regulating cotton gins from August 1 of this year are being received favorably by the trade. These rules are designed to prevent irregularities in the marketing of cotton and to allow growers of long staple to realize full benefit from the production of better grades. Heretofore there has been no particular inducement to improve the quality, as all grades brought the grower about the same price.

The cotton market is fluctuating mildly in sympathy with the American market and without any signs of the development of a definite tendency. Japan continues to buy, but business with Shanghai is impossible because of unsettled conditions in China. Local Indian mills are buying conservatively, owing to a lack of demand for cotton yarn and cloth. The piece-goods market is dull, due to heavy stocks and lack of confidence in present prices, financial stringency, Japanese competition, and uncertain exchange. Both local and imported goods are affected. When the monsoon definitely begins and is reported favorably in

the consuming centers, it is expected that piece goods will move better.

Yarn Prices Lower—Cotton Mills—Jute Crop.

Yarn prices have declined in sympathy with cotton and the present demand is unsatisfactory. Short up-country stocks, however, together with optimistic reports on the progress of the monsoon, are expected to bring out purchasers.

The present position of cotton mills is regarded as the worst in 17 years. Mill owners are making an additional plea for relief, but the situation is complicated by opposition outside Bombay to imperial preferences.

According to reports, premonsoonal rains have caused 10 per cent damage to the jute crop. Prices for early deliveries are higher than it is thought are warranted, and Calcutta mills are reported to be buying sparingly.

Shellac—Hides and Skins—Foodstuffs.

The shellac market continues quiet and prices have an easier tendency.

A pessimistic tone in London has resulted in hides moving slowly, but skins are in fair demand at firm prices.

Paddy arrivals at Rangoon are poor, with the market firm. Cleaned rice is showing considerable speculative strength. The better qualities of tea are in good demand, but poor grades are being neglected. Ceylon tea is firmer at better prices. Chemicals are quiet at extremely low prices, due to keen competition.

Tata Report Encouraging—Bazaar Lines—Automotive Sales.

The annual report of the Tata iron and steel interests is more encouraging in consequence of government aid and the successful funding of its short-time obligations. The iron and steel market is quiet and prices are weak.

General bazaar lines are seasonally normal except at Bombay, where the demand is poor. Automotive sales and stocks are normal and prices low, with British cars offering keen competition.

Australian Situation Seasonally Quiet

Based on cable from Trade Commissioner E. G. Babbitt, Melbourne, June 20

Unemployment is abating somewhat in Australia, but the shipping situation following the deregistration of the Seamen's Union is giving some concern, particularly in New South Wales. A general maritime strike may occur. General conditions are considered as financially sound, but business in most lines is seasonally quiet.

Financial Conditions Reported.

Sterling-dollar exchange was selling at \$4.8375 on June 19—a slight increase as compared with this time last month—while the buying exchange was quoted at par. Telegraphic transfers on London were quoted at 5s. discount for buying, and selling at par. Money is easier, but banks are limiting accommodations to the highest type of firms.

On June 17 the Federal Loan Council designated the Commonwealth as sole oversea borrower during the financial year and decreed also that there should be no public borrowing in Australia during the period of conversion of the war loan, which falls due in December, 1925.

Favorable Trade Balance Continues.

In spite of reduced shipments of wool, Australia's trade balance for the fiscal year continues favorable.

During the 10-month period from July, 1924, to April, 1925, inclusive, imports aggregated £131,910,000, against exports during the same period amounting to £139,587,000, leaving a favorable merchandise balance of £7,677,000. During the corresponding period of 1923-24 imports and exports reached £116,646,000 and £104,260,000, respectively. From these figures it is noted that the position has changed from an unfavorable balance of considerable proportions to an almost equally favorable showing.

Origin of Imports—Increases Noted.

During the first quarter of the calendar year Australia's imports originated 43 per cent in the United Kingdom and 30 per cent in the United States as compared with 45 and 24 per cent, respectively, during the corresponding three months in 1924. About one-third of the imports coming from the United States during the first quarter of 1925 consisted of species.

Imports for April, 1925, reached £14,539,000, against exports of £14,020,000, as compared with £16,698,000 and £15,656,000, respectively, during the preceding month. All principal items of import during April, except dressed and undressed timber, registered increases in value over the corresponding month in 1924. Cotton and linen piece goods increased from £558,785 to £803,000, motor chassis from £885,685 to £1,024,000, motor bodies from £102,567 to £109,300, motorcycles from £51,185 to £73,300, petroleum spirits from £301,714 to £401,000, and machinery from £927,485 to £1,017,000. Dressed timber declined from £101,815 to £61,600, and undressed timber from £223,330 to £148,400.

Most Export Items Show Gains—Trade Summarized.

On the export side all items except flour, greasy wool, and scoured, registered increases over April, 1924. Greasy wool declined from £3,204,700 to £2,361,000, and scoured from £649,314 to £331,800, the lower figure in both instances being accounted for by the reduction in offerings during the month under review. Notable increases occurred in exports of frozen beef, dried fruits, butter, and wheat. Frozen beef increased from £51,166 in April, 1924, to £405,900 in April, 1925; dried fruits from £244,600 to £453,200; and wheat from £1,567,139 to £6,150,600.

The following table shows the principal items of import and export for April, 1925, as compared with the corresponding month in 1924:

Australian trade in April, 1924 and 1925

	April—			April—	
	1924	1925		1924	1925
IMPORTS			EXPORTS		
Cotton and linen piece goods.....	£558,785	£803,000	Greasy wool.....	£3,204,716	£2,361,700
Motor chassis.....	885,685	1,024,000	Scoured wool.....	649,314	331,800

			Pig lead.....	337,958	302,900

Local Wool Situation Unchanged—Wheat and Flour.

Wool exports from July to May, inclusive, reached 1,619,000 bales. Production figures based on receipts in store are not yet available. The local wool situation remains unchanged.

Wheat and flour exports during April amounted to 499,900 and 20,800 long tons, respectively. The local grain market continues dull, with the nominal seaboard price at 6s. 2d.

Decline in Philippine May Business

Cable from Assistant Trade Commissioner E. B. George, Manila, June 21

The import business of the Philippine Islands for May showed little change from the April level. Many import lines continued dull—possibly owing in part to the elections and to early typhoons. A number of textile staples were badly overstocked, but business in the copra market became more active, especially in early June. Abaca (manila hemp) prices were weak and continued to decline. Collections were generally slower, particularly in the abaca, copra, and tobacco districts. Chinese failures were more numerous, and credits became slightly stricter.

Review of the Export Market—Sugar, Abaca, Copra.

The sugar grinding season is rapidly approaching a close. Luzon centrals, and all but five centrals in Negros province have completed operations. Accurate figures are not yet available, but estimates place centrifugal production at 500,000 metric tons. Weather conditions have continued favorable for the planting of the new crop, and barring possible setbacks during the next two months the 1926 output is predicted to at least equal that of 1925.

The abaca market was weak throughout May and early June. Prices declined steadily, although UKAY and medium US grades braced slightly during the last few days. On account of prevailing low prices production declined; however, supplies are still greater than demands, and stocks at export centers have advanced to approximately 185,000 bales.

Dullness in the copra market continued throughout the entire month of May. Buying in small lots resumed early in June, followed by general and increased activity, in which all factors participated. Prices slumped slightly during the dull season, but have now recovered to extremely high levels. Production increased slightly after the early June elections, but is not yet commensurate with demand.

The local tobacco market continued dull, and prices of rice remained steady.

Automotive Sales—Flour and Sardine Imports.

Trade in passenger cars remained practically unchanged compared with April sales. Business in light trucks improved, and staple accessories are selling readily. The tire trade is generally satisfactory.

Arrivals of flour during May approximated 191,000 bags, of which 110,000 were from the United States. Australian arrivals were unusually large, exceeding 70,000 bags. The market was dull throughout the month and characterized by continued dumping, particularly of old stocks. A sharp upward reaction, however, was noted in early June. Buying increased and the stock situation in all brands was easier, possibly under 500,000 bags. Local prices varied greatly during the month.

Imports of canned sardines declined from 25,700 cases in April to 17,000 in May. Consumption was smaller, due principally to the closing of the harvesting season. The market is slightly stronger, although sacrifice selling continues.

Decline in Exchange—Bank Statement.

The banks' selling rate for telegraphic transfers declined during May from $1\frac{1}{8}$ per cent premium to $\frac{1}{2}$ per cent premium, and recovered gradually thereafter to $\frac{7}{8}$ per cent premium, at which point it has remained with little variation. This recovery was owing to the strong past position of the banks and to weaker exports. Exchange amounting from 400 to 33,000 United States dollars was sold by the Insular Treasurer on demand in New York.

The auditor's statement of May 29, covering all Manila banks, showed total resources of 236,000,000 pesos (\$118,000,000); loans, discounts, and overdrafts, 143,000,000 pesos (\$71,500,000); investments, 23,500,000 pesos (\$11,750,000); deposits, 28,000,000 pesos (\$14,000,000); and working capital of branches of foreign banks in Manila, 19,000,000 pesos (\$9,500,000).

Dutch East Indian Conditions Satisfactory

Cable from Trade Commissioner J. F. Van Wickel, Batavia, Java, June 15

The volume of Dutch East Indian business transacted in May was smaller than that of recent months, but basic conditions continued favorable. The share market was more active, owing to lower bank-loan rates and favorable annual reports of plantations and industrial and trading companies, which have recently been issued.

May sales from importers' stocks were decidedly lower than in April, in which month sales were increased because of the native New Year celebrations. The month's business in retail sales of imported products, however, compared favorably with that of May of last year. Low prices of tea and rice were responsible for the curtailment of native buying in Java, but good prices of rubber, pepper, and coffee enhanced sales in the outer districts. Indications now are that native spending will increase during the third quarter of the year.

Imports Show Increase.

There are no overstocks in import lines, despite the fact that imports into the Islands from January to April were much heavier than during those months in 1924. The increase in textile imports alone amounted to 3,500,000 florins. The collection of import duties during this period was nearly 4,000,000 florins higher. This, however, was partly due to the increased tariff of last September.

Export Market Conditions.

The rubber market in May experienced wide price fluctuations for standard grades. Premiums were offered for early deliveries and forward positions were neglected. Dealers are now expecting a price recession. March rubber exports totaled 21,000 metric tons, of which 6,200 were destined for the United States.

Prices of Tea, Sugar, Coffee, and Other Products.

Tea prices lowered in May with the appearance on the market of unsatisfactory qualities. Sugar experienced a dull month with easier prices. Grinding results are reported better than last year. Coffee, which opened the month weak, closed firmer. Kapok stocks were low on a steady market. After a strong month pepper stocks are now low and prices rising. The season's rice yield has been heavy and prices low. Good inquiry for Dutch East Indian gums in May rendered the market steady. Demand for tin was only nominal.

April tin shipments from Batavia amounted to 1,100 tons.

Exchange Practically Normal—Government Loan Offered.

The exchange rate of the Java florin was steady in May at 2.495 florins to the dollar, or \$0.4008 to the florin, which is virtually the normal value of \$0.402.

The Dutch East Indian government is inviting subscription to a 10,000,000-florin short-term treasury note issue.

Hawaiian Crops and Other Developments

Based on cable from Ernest B. Clark, secretary Honolulu Chamber of Commerce, June 20

Hawaiian sugar-plantations estimates have been exceeded by about 10 per cent, according to latest compilations, and it is now thought likely that the total output for the year will reach 725,000 short tons—a record harvest for the Islands. At the middle of June it was estimated that the sugar harvest was 80 per cent complete.

Kona Coffee Crop Satisfactory—Pineapple Harvest Begins.

Contrary to expectations, the Kona coffee crop this year has been quite satisfactory. Normally, a good crop is followed by a poor one, but, owing to unusually favorable weather, the yield this year was about the same as that of the preceding season. The high prices which are being received for Hawaiian coffee are tending to rehabilitate the formerly declining industry.

The pineapple harvest has commenced and canneries report that the fruit is of excellent quality. From all indications the pack is being satisfactorily absorbed. Weather during May and the first 20 days of June was exceptionally favorable to growing crops, and bumper outputs in all lines appear to be assured for next year.

Business Normal—Rubber Prices—Cattle.

Business during the past month has been normal and collections have improved. Owing to increased rubber prices, stock quotations on four Hawaiian-owned rubber plantations in Sumatra and Malaya are advancing.

Hawaiian ranches have imported 17 prize-winning bulls from continental United States with a view to improving the islands' cattle stock.

Construction Projects Contemplated—Other Developments.

It is estimated that a total of \$5,000,000 will be expended during the next two years on public buildings, roads, wharves, and harbors throughout the islands. The supervisors of the city of Honolulu have authorized the construction of a new city hall at Honolulu which will call for an expenditure of about \$1,000,000. Interisland traffic facilities will be greatly improved during the next few months, according to present plans. Two new ocean-going tugs needed for towing pineapples from outlying islands to the canneries have recently been added to the fleet. Capitalization of the interisland line has been increased from \$1,500,000 to \$6,500,000.

A new irrigation project on the island of Kauai, which has required two years to complete, was finished this month. Water is brought a distance of one mile through a tunnel from the Hanalei River, to irrigate 3,000 acres of cane land in the Wailua basin. Several other irrigation projects are in course of construction, one of which, also on the island of Kauai, will require

more than five years to complete. In the latter project water will be dropped 1,250 feet and, in addition to irrigating many acres of cane land, will furnish power for two hydroelectric power stations. Water will be collected in a giant reservoir and will benefit all windward plantations on the islands.

New Zealand Business More Stable

General confidence, due to recent governmental changes, is tending to stabilize business conditions in New Zealand, according to cable advices from Consul General W. L. Lowrie, June 20. Retail trade continues fair, and shipping and labor conditions are normal. Real estate was still active during the month, and the business of the railroads good. Money rates were hardening at the middle of June.

Decline in Total Trade.

New Zealand's total overseas trade during May declined almost £2,000,000, as compared with the preceding month, due largely to seasonal slackness. Exports to the United Kingdom during May aggregated £4,000,000, as compared with £5,700,000 in April, while imports from the United Kingdom declined from £2,000,000 in April to £1,700,000 in May. Exports to the United States in May amounted to only £425,000, as compared with £615,000 in the preceding month, but imports from America increased from £670,000 in April to £765,000 in May, despite general declines in all other directions.

Siam May Trade Inactive

Cable from Vice Consul C. C. Hansen, Bangkok, June 15

The trade depression of Siam, which has characterized recent months, continued throughout May. Approximate figures of import through the port of Bangkok were valued at 11,752,000 ticals, a decrease from the three preceding months, the values of which were 13,200,000, 14,800,000, and 13,500,000 ticals, respectively. The decrease was wholly due to a decline in general merchandise or goods subject to 3 per cent duty. Exports of Siamese products to foreign countries approximated 16,310,000 ticals in value, a decline of 2,334,000 ticals—due to decreased shipments of rice—from the April level. However, comparing the values of both imports and exports, there was a trade balance amounting to 4,558,000 ticals favorable to Siam.

Business Men Optimistic—Exchange.

Despite slackened conditions, business men are still hopeful for a speedy improvement in the trade situation and placed orders accordingly.

Exchange value of the tical remained the same as for April, the quotations of which were \$0.44 selling rate and \$0.455 buying rate.

British Malayan Trade Advancing

Vice Consul George F. Dickens, Singapore, June 19

Generally improved business conditions in British Malaya, which have prevailed during 1925 and the latter months of 1924, continued the upward trend throughout May. Money was in good demand, consequently exchange rates were higher, and business stim-

ulated accordingly. Dealers prophesy a continuation of the high price of rubber.

Export and Import Trade.

Total trade, both in exports and imports, advanced over preceding months, the increase being especially noticeable in exports, the approximate figure of which totaled 87,829,000 Straits dollars. Imports, amounting to 68,567,000 dollars, maintained a favorable credit balance of 19,262,000 dollars.

Tin Exported—Exchange Tendency Steady.

May exports of tin amounted to 7,740 long tons, 54 per cent of which went to the United States, 28 per cent to the United Kingdom, and 17 per cent to continental Europe. The average price obtained for this commodity was 123.07 Straits dollars per picul of 133½ pounds.

Exchange value of the Straits dollar showed a steady tendency, with a high rate of \$0.56½, and a low rate of \$0.56¾ on the gold dollar.

EUROPE

Clayton Lane, Acting Chief, European Division

Austrian Business Men More Optimistic

Based on cable from Commercial Attaché H. Lawrence Groves, Vienna, June 20

Credit conditions in Austria are gradually improving. Foreign trade shows a much diminished adverse balance, and a further betterment is expected. The sum of \$18,000,000 has been allotted from the remainder of the proceeds of the international loan and is to be used during the next three years in electrifying 300 additional kilometers of railway and purchasing 70 electric locomotives. Crop prospects throughout Central Europe are good. Agreement has been reached between the political parties on an adjustment of the financial and administrative relations between the Federal Government and the States and it is expected that all the laws required for carrying out the reconstruction program will be passed at an early date.

Financial Conditions Better.

The sound money reserve of the Austrian National Bank on June 15 covered 48.6 per cent of the total of circulation and deposits, as compared with 44 per cent on May 15, 42 per cent on April 15, and 40 per cent on March 15.

Austrian savings deposits increased 5 per cent in the month of May, at the end of which they amounted to \$55,000,000, showing a continuance of the upward curve.

Government finances registered an operating deficit for April amounting to \$103,000—the first month of this year which has had such a deficit. In the same month, the capital expenditure for public works and improvements amounted to \$870,000.

Unemployment Lower—Prices Rise.

Unemployment decreased in the month of May by 7 per cent and at the end of the month stood at 131,000, as compared with 189,000 at the end of February and 68,000 a year ago.

The official weighted index of wholesale prices, which decreased 6 per cent in the first four months of the current year, rose three points, from 138 on May 14 to 141 on June 14. The index of stock quotations, omitting mining stocks, stood at 640 on June 13, as compared with 683 on May 13, and 710 on April 13—a continued fall.

Industrial Production and Orders Satisfactory.

The Alpine Mining Co. reports an increase in its production of both iron and steel each month this year. Its production of iron in the month of May amounted to 40,000 tons and of steel ingots to 32,000 tons, and its unfilled orders at the end of May to 41,000 tons, which is higher than for any month since January, 1924—

except March, 1925, when they amounted to 48,000 tons and January, 1925, when they were a little over 41,000 tons.

The unfilled orders of the cotton-spinning mills at the end of April amounted to 12,400,000 pounds, maintaining the high level reached at the beginning of this year—much higher than at any time in the year 1924, but slightly lower than at the end of March, 1925, when they reached the record figure since the war, 14,500,000 pounds.

The April production of paper was 15,700 tons and that of chemical wood pulp 14,300 pounds—a slight decrease from 16,000 tons and 14,500 tons, respectively, in March, but higher than the average in 1924.

The April production of lignite was 240,000 tons, as compared with 260,000 tons in March.

The Federal Railways showed a performance of 1,030,000,000 freight-ton kilometers in the month of April and average daily car loadings in January of 6,200 and in February of 6,250, including nonrevenue freight.

Foreign Trade Improvement Continues.

The improvement in Austrian foreign trade shown by the figures for January and February is maintained and even slightly accelerated by those of March, when imports were valued at \$34,000,000 and exports at \$26,600,000—leaving an adverse trade balance of \$7,400,000, as against an average trade balance of \$7,600,000 for January and February, 1925, \$16,600,000 for March, 1924, and \$17,600,000 for the monthly average of the year 1924.

The improvement in foreign commerce thus indicated is greater than might be expected to result from the observed revival of industry and commerce, and it is possible that a considerable part of it is only apparent, resulting from a recent change in the basis of the statistics. Most of the Austrian import and export duties have been specific and not ad valorem, and importers and exporters were not required to declare the values of the goods. For the purpose of the official statistics, values were estimated by a commission of experts who had not the advantage of an intimate and detailed knowledge of the goods or their actual prices. Since the beginning of the year 1925 values are declared by the exporters and importers and may be regarded as more reliable.

Exports to the United States.

Exports from Austria to the United States in the month of May, as declared through the United States consulate and reported by Consul Heingartner, were valued at \$472,000, as compared with \$374,000 in April and \$590,000 in March.

Summer Dullness Felt in Swedish Business

Based on cable from Commercial Attaché T. O. Klath, Stockholm, June 19

Due to seasonal domestic slackness, no improvement has been noted in Swedish business conditions during the past month. Industrial operations, although favored by better labor conditions, are somewhat retarded by restricted domestic demand and extensive foreign competition. Industrial earnings are small in most cases.

Government finances indicate a strong position, with a prospect of a slight tax reduction. Stock exchange remains dull, while the money market has undergone some improvement. Foreign trade during May underwent the expected seasonal improvement.

Most Industries Depressed—The Lumber Trade.

Industrial operations have proceeded at a fair degree of activity since the adjustment of the labor conflicts early in April, but in spite of this condition depression persists in the majority of industries. This is particularly noticeable in the lumber trade, where a steady decline in prices has taken place. This movement has to a certain extent, however, been equalized by the recent rise in the English pound, as practically all timber business is transacted in that currency.

Sales of lumber for forward delivery up to the middle of June are estimated at 1,148,400,000 standards, which is somewhat higher than the figure a year ago.

Owing to the prevailing depression, Swedish lumber companies have been operating with considerable difficulty, and a large mill, "Yttersfors Munksund A-B.," which was capitalized at 16,000,000 crowns, has gone into bankruptcy.

Conditions in the iron and steel industry are far from encouraging. Prices remain low, and foreign competition is keen. A somewhat similar situation obtains in the machinery and engineering trades.

Wood Pulp and Paper Industries Active—Other Industries.

Wood pulp and paper industries, on the other hand, continue to do a good business with steady prices. This is also the case in the Swedish iron ore industry, which is now operating on a pre-war basis. The electrical equipment industry is also quite active. The "Ericsson" Telephone Co. has received a large order for the installation of an automatic exchange in Angora.

Money Market Unchanged—Note Circulation.

Several demands have recently been made on the domestic money market by municipalities and certain industries. The last large loan amounted to 6,000,000 crowns, which was made to an important wood-pulp mill. The investment market, on the whole, is dull, although there was an increase in new issues during May, when the total was 18,800,000 crowns as against 8,100,000 crowns for April.

A small increase occurred in the note circulation during the past month, to 473,000,000 crowns, which was counterbalanced by an addition to the metallic reserve which increased from 233,250,000 crowns to 235,542,000 crowns as of June 13.

The Bank of Sweden and Commercial Banks.

A slight increase occurred in May in the foreign-exchange holdings of the Bank of Sweden, from 81,055,000 crowns to 94,254,000 crowns. Monthly clearings for the Bank of Sweden for the entire country rose slightly during May to a total of 1,806,000,000

crowns, as compared with 1,706,000,000 crowns for April. There was no change in the quotation of the Swedish crown, which remains at a discount of one-half of 1 per cent. The total national debt was reduced by 1,000,000 crowns to 1,733,000,000 crowns.

The rise in loans and discounts of Swedish commercial banks from 4,861,000,000 crowns as of April 30 to 4,373,000,000 crowns as of May 31 was significant. Deposits of commercial banks, however, underwent further contraction and totaled 3,644,000,000 crowns on May 31, as against 3,674,000,000 crowns for April. Rediscounts with the Bank of Sweden declined from 294,287,000 crowns in April to 275,746,000 crowns for May. The foreign-exchange reserves of commercial banks registered a further decline to 21,039,000 crowns as of May 31.

Stock Exchange Weak.

While there was a slight expansion in the total turnover of stocks and bonds during May, the trend is reactionary. The total turnover for May was 18,224,000 crowns as against 14,698,000 crowns for April. The indexes of the various classes of securities declined from May 12 to June 16 as follows: Industrials 102 to 99, and banks 86.6 to 85.2.

Price Levels Dropping.

As there was a further decline in general price levels, particularly in the case of manufactures, the wholesale price index dropped from 160 to 158 for May. Foodstuffs prices, on the other hand, remained comparatively high. The number of commercial failures was 314 as against 303 for April. The value of protested notes during April, numbering 5,762, was 2,991,000 crowns, as against 5,519 and 3,991,000 crowns for April.

Exports Higher.

The principal export items during May showed higher returns than during April. In the following statement, in metric tons, May totals are compared with April figures in parentheses: Iron and steel, 22,482 (20,120); matches, 2,872 (2,817); wood pulp, 120,673 (88,743); paper, 34,272 (21,351); and iron ore, 772,206 (597,214). Shipments of rough lumber expanded appreciably, from 43,303,120 board feet in April to 206,609,262 board feet in May. Exports of cream separators declined from 2,825,000 crowns in April to 2,545,000 crowns in May, while the value of exports of ball bearings rose from 1,602,000 crowns in April to 2,020,000 crowns in May.

Sustained Shipments to the United States.

The declared exports to the United States during May were practically identical with the April returns at \$3,852,000, according to statistics issued by the American consulates. The value of the important items was as follows (April figures in parentheses): Wood pulp, \$2,463,000 (\$2,014,000); paper, \$540,000 (\$471,000); iron and steel, \$392,000 (\$518,000).

Crop Outlook Good—Shipping Dull.

Crop prospects, according to the first official survey, are said to be above average, particularly in the case of wheat and rye. Shipping remains in a rather unfavorable position. Although the seamen's strike has been settled, the current freight rates are too low to provide any reasonable margin of profit to the shipping companies.

May Trade Balance Favorable.

From preliminary returns it appears that Swedish foreign trade underwent an improvement during May. The favorable balance is estimated at 15,000,000 crowns as compared with an import surplus of about 45,000,000 crowns for April. Imports during May were, on the whole, somewhat lower, as is indicated by the fol-

lowing comparisons (April figures in parentheses) in metric tons: Sugar, 3,483 (6,964); wheat, 22,275 (30,400); cotton, 974 (2,419); sulphur, 1,058 (3,143); iron and steel, 18,051 (17,125); mineral oils, 26,654 (32,878); coal and coke, 313,807 (223,060); and copper, 1,497 (1,337). Imported automobiles increased from 1,615 in April to 2,814 in May.

TRADE PROSPECTS IN SOUTH PACIFIC ISLANDS

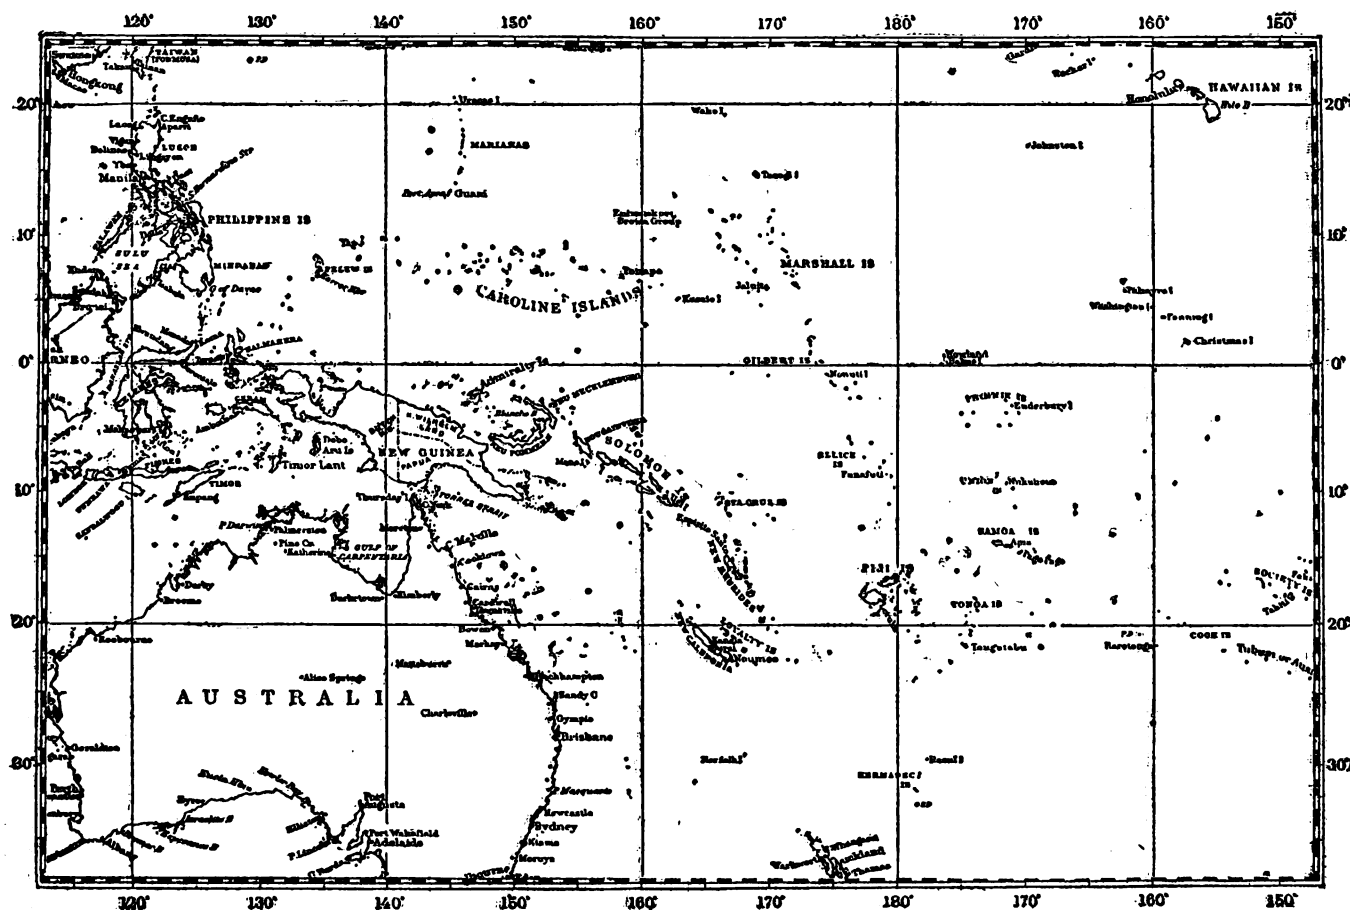

Raw Materials of Islands Find A Ready Market in United States—Increased Purchasing Power Widens Market for Manufactured Articles

Emmett A. Chapman, Far Eastern Division

The increasing demand in world markets for tropical products is bringing prosperity to such out-of-the-way areas as the South Pacific Islands, and making them more attractive as prospective purchasers of manufactured goods. Owing to their isolation the products of these islands were not sought in world markets to any great extent prior to 1914. During

Improved Transportation Encouraging.

Merchants of the United States have traded with the South Pacific Islands for several decades, but it is only within the past few years that transportation has enabled the market to develop along modern lines. Formerly, merchants had to depend largely upon itinerant tramp ships for transportation, and could not

Australia and islands of the South Pacific Ocean

the war, however, there was a good demand for practically every product of the region, and considerable development resulted. With the exception of a temporary slump following the close of the war, this trade has continued, and, as a result, the purchasing power of the islands has increased steadily until they now afford a considerable market for a wide variety of manufactured articles.

always estimate with any degree of certainty just when delivery could be made. Under such circumstances it was difficult to build up solid trade relations. Within the past few years, however, regular lines with frequent sailings have been established between the United States and these island groups, making it possible for importers and exporters interested in the trade to transact business on a more stable basis.

United States Has Fair Share of Islands' Trade.

As might be expected, most of the islands' trade is with Australia and New Zealand, on account of their proximity and the more frequent sailings to and from those countries. During 1922, nevertheless—the latest year for which tonnage figures are available—America shipped to the main islands of the group a total of 7,562 tons of "principal commodities," including 1,498 tons of petroleum and 234 of lumber. This total represents only bulk articles and would be considerably larger if all miscellaneous items were included. It is estimated that during 1924 the United States supplied about 21 per cent of the volume of imports into the islands, and in return took about 35 per cent of the exports.

Until recently, the bulk of the cargo passing from the United States to the South Sea Islands—which include the Society, Solomon, Fiji, Friendly, Gilbert, and Loyalty Islands, New Caledonia, Samoa, and other groups of lesser importance—has consisted of only a few items of importance, such as petroleum and lumber. Better transportation facilities and more frequent sailings, however, have resulted in the importation of a wider variety of commodities, among them hardware, piece goods, iron and steel, flour, ropes, stationery, and leather.

Islands' Exports Readily Purchased in America.

Exports from the islands consist of copra, chrome ore, mother of pearl, vanilla beans, coconut oil, phosphates, sugar, and the usual line of other tropical products, practically all of which find a ready market in America. Exports to the United States during 1922 aggregated 41,874 tons and accounted for about one-third of the total. Of this amount, 26,677 tons consisted of copra; 12,905, chrome ore; 60, wood; 30, cacao; 1,278, coconut oil; 219, coconut; 294, shell; and 25, tin. All of the copra was consigned to San Francisco, except 855 tons to Portland and 2,929 to New York, while the chrome ore was divided equally between Baltimore and New York City. A total of

24,802 tons of principal items was consigned to the port of San Francisco.

Additional Shipping Facilities Should Stimulate Trade.

The preceding figures indicate that the east coast of the United States receives a considerable proportion of the imports into America from this area and it is reasonable to believe, therefore, that the Panama Canal will have a stimulating effect upon both American imports from and exports to the South Pacific region.

As yet, lines from the United States make stops only at the more important ports of call. Pago Pago (port of Apia) and Suva (Fiji), which serve as entrepôts for the neighboring islands, are usually included. Island products are collected at these ports from outlying groups, and shipments from the United States are distributed from them by the many interisland lines of steamers and sailing vessels.

As the region grows in importance it is believed that additional lines will be established, and that ships making the run from the United States to Australia and New Zealand will make more stops in the islands. Additional facilities undoubtedly will tend to stimulate the interest of American exporters in the region and will cause importers of the islands to look to the United States for more of their needs in manufactured articles.

While it is true that exporters of Australia and New Zealand and certain European countries are well established in the market, there is no reason why the United States should not increase its share of total imports into the region. With the possible exception of cotton piece goods, there is hardly an article which could not be supplied at competitive prices by American manufacturers, and the United States affords a market for practically every product of the islands.

[The Bureau of Foreign and Domestic Commerce has available a list of the principal importers and exporters of the South Pacific Islands group, as well as information relative to shipping lines serving this area.]

GERMAN FOREIGN TRADE IN 1924 BY COMMODITIES

Pre-war Export Average Not Maintained—Increased Exports Hindered

Commercial Attaché Charles E. Herring, Berlin

The record-breaking adverse trade balances of the past few months and the necessity for increased exports of highly finished goods, if raw material purchases are to continue indefinitely, makes interesting a comparison of the foreign sales of the chief German export industries in 1913 and in 1924, the first full year of currency stability. It shows that in the case of every important export industry the value of exports has been actually less; and if the decline in gold value since 1913 is considered, the 1924 figures are still less favorable.

Important Industries Affected.

The three most important groups of export industry—namely, steel and machinery, textiles, and chemicals and dyestuffs—have been particularly affected. Heavy industry is more dependent upon foreign raw materials than before, and the dye industry and some branches of the chemical trade have lost some of their best foreign markets through the development of foreign industries during the war. The textile industry

also has suffered from the expansion of competitive industries in former important markets.

These are permanent factors adversely affecting German industry, but in addition there have been temporary conditions whose removal should in the future assist German export trade and industry to equal or exceed its pre-war net exports. These included the admission until January 10, 1925, duty free, of metallurgical, textile, and other products from Alsace-Lorraine; the restrictive provisions of the Peace Treaty affecting Germany's ability to negotiate commercial treaties until the same date; the abnormal price levels which followed currency stabilization; and the extremely tight money market prevailing last year, which prevented the granting of as favorable credit terms for export as competing nations.

Industry Overorganized.

While all these factors may be considered more or less temporary, there is as yet no indication of falling prices, although interest rates have gradually declined

from their very high level of a year ago and taxes have been considerably reduced. German industry and trade are still overorganized, despite the many dismissals of the past year, and are still inclined to figure abnormal margins of profit as in the inflation days.

The still exorbitant interest rates and the difficulty of obtaining adequate export credits will presumably be remedied gradually, and in the meantime export price cutting for cash payments is more or less common.

Foreign Tariff Restrictions Relaxing.

The commercial treaty situation is developing, on the whole, rather favorably, and the obtaining of unconditional most-favored-nation treatment in most foreign markets should materially stimulate the export industries. Very high import duties in some countries will, however, tend to offset this advantage. The obligation to issue import licenses for Alsace-Lorraine products and to admit them duty free was terminated on January 10.

As an offset to the removal of these more or less temporary obstacles to German export during the past year, the prospective abolition of the import license system must be mentioned. The Government has long been committed to abandoning this form of protection as soon as the new customs tariff is adopted by the Reichstag. While many of the new duties will be much higher than at present, it is probable that increasing quantities of highly manufactured goods, including machinery, textiles, leather, automobiles, and various specialties, will be sold in Germany unless German production costs and prices are reduced. German industry has been encouraged for six years by import embargoes, the removal of which may cause some unpleasant readjustments.

Machinery Industry Registers Heavy Adverse Trade Balance.

The only important industries showing an increase in the actual value of exports for 1924 as against 1913 were the paper, porcelain, and fine mechanical goods (such as optical glass goods), but the woodworking industries diminished their import surplus. Textile equipment is the only machinery branch of which the export in 1924 exceeded the pre-war figure, although net exports were less. The poor showing of the German machinery industries is attributed to the wide development of competing industries abroad and the inability of German firms to grant long credits in competition with the United States and England. A considerable part of the machinery export was undoubtedly due to underbidding below domestic quotations. The showing of the electrotechnical industry is better than that of many other machinery branches, but it is believed that the 1925 exports can, because of growing foreign competition, be increased only with great difficulty.

Poor Showing of the Textile Industries.

The relative showing of the textile industries is the worst of any, and there is no indication of a lower price level which would encourage export. Price levels in both the cotton and woolen industries are very far above those in any other industry, as compared with pre-war, and except for the Saxon knit-goods industry the great bulk of production is absorbed by the domestic market at prices sometimes approaching the fantastic. According to common report, the enormous import surplus in the cotton and woolen indus-

tries would be even greater were it not for sacrifice sales abroad at prices considerably below home market quotations.

Dye Exports Decline.

The trade balance for chemical products as a group has been greatly improved by the nonimport of Chilean nitrates, as before the war, because of the great development of air-fixed nitrogen.

The great decline in dye exports is, of course, largely due to the development of new industries in the various belligerent countries and the maintenance of very high tariffs or other restrictive measures at present. In Japan, for instance, there is practically an import embargo on German dyes, which the new commercial treaty will attempt to have abolished. The export surplus of dyes would be considerably larger if reparation deliveries were included in the official figures.

The 1924 export surplus in the leather industry, if relative gold values are considered, amounted to about half of pre-war.

Import Surplus of 287 Million Marks in 1924.

The foregoing—steel, machinery, copper, and other metal-working trades, electrotechnical, textile, chemicals, and leather—are the chief export industries, and a total of their net exports shows an import surplus of 287 million marks in 1924, against an export surplus of 1,387 millions in 1913. It is also a striking fact that in January of this year the import surplus amounted to 237 million gold marks, and in February to 106 millions—or together more than the entire adverse balance for last year. It is obvious that the abnormally high adverse balances of recent months must be compensated for by an early increase in export, or by a continuance of foreign credits or repatriation of German capital, if raw material imports are to continue on anything like the present scale.

Spanish Lumber Situation Unchanged

There is little change in the Spanish lumber import trade. Arrivals of Swedish softwoods are small, although the usual imports are expected during the summer. The demand for American southern pine and hardwoods is quiet, while that for Douglas fir is more active. The stave market is depressed because of the nonmovement of wines. (Dispatch dated June 12 from Commercial Attaché Charles H. Cunningham, Madrid.)

LUMBER

THE LUMBER EXPORT TRADE OF SWEDEN

Largest Exporter of Softwoods—Economic Methods of Manufacture—Efficient Export Selling Organizations

Axel H. Oxholm, Chief, Lumber Division

Sweden's position as an exporter of softwood lumber is unique in many respects, both because that country is the world's largest exporter of softwoods and also because the export trade is very efficiently handled and firmly established. It is, however, hardly possible to compare the conditions in the Swedish lumber industry with those in the United States. While Sweden has only two important woods, pine and spruce, we have nearly 100 different commercial species. This naturally makes our problem a great deal more complex, but at the same time we have a great advantage over Sweden in being able to cater to almost any demand for lumber. Sweden's position is that of a specialist, which has enabled that country to concentrate on its foreign sales efforts and to effect closer cooperation among Swedish lumber exporters.

Production for Export Likely to Remain Constant.

The Swedish lumber export trade has shown a remarkable stability during the last few decades. Naturally the war caused serious fluctuations, but Sweden is again on a pre-war basis so far as the volume of exports are concerned, and we shall likely have to count in the future on that country to furnish annually for export about 2,000,000,000 feet of rough and planed lumber of all kinds. This figure is not apt to change materially, because Sweden has a very firm hold on its principal markets, and because there are practically no new territories of importance remaining to be exploited. Above everything it must be considered that the operation of the Swedish forests is on a permanent yield basis. The only possible interference with the output of lumber is in the increased demand of the pulp and paper industry which draws on the same source of raw material. However, not much change in the pulp and paper industry in Sweden may be expected.

Pine and Spruce Make up Bulk of Exports.

North European pine (*Pinus sylvestris*), which possesses qualities similar to our Norway pine of the Lake States, is the predominating species in Sweden and also that which furnishes the bulk of the lumber exports. It is a very excellent general utility wood, although the presence of resin makes it a better construction wood for uses where the lumber is exposed to the elements and less desirable for interior finish. The percentage of clear lumber is very small, usually varying from 3 to 5 per cent.

The Swedish variety of spruce (*Picea excelsa*) is not unlike our common spruce in the East. It is this wood which furnishes the bulk of the raw material for the Swedish pulp and paper industry, and for that reason its importance in the lumber export trade is less than that of pine.

Close Utilization of Wood at Every Stage.

The close utilization of wood is most astonishing in Sweden. It starts with the careful selection of trees to be cut, this being done by skilled foresters with due regard to obtaining the greatest financial return on the investment and at the same time assuring a permanent supply of timber. The sawmills are all equipped with gang saws, usually of a smaller type than commonly seen in American mills, which are capable of sawing logs down to 3 or 3½ inch top diameter. The average top diameter of saw logs does not exceed 7 inches and the average length is usually in the neighborhood of 17 feet. That which can not be sawn is utilized in other ways, either by producing charcoal for the steel industry or by turning the waste products into pulp and paper. There is also an important chemical industry utilizing wood waste as a raw material.

Efficient Manufacturing Methods.

On account of the small dimensions of saw logs the mills are forced to cut a large variety of sizes in order to utilize the logs to the greatest possible extent. A mill which is unable to obtain at least 65 to 70 per cent of lumber from its logs can not continue operations under normal conditions. Credit must be accorded the Swedish sawmill operators with regard to the careful manufacture and seasoning of their lumber. Their grading rules do not admit any miscuts or scant lumber, even in the lowest grades. Every mill of importance in Sweden grade marks its lumber, and in many cases this has been done for almost a hundred years. All lumber is sold on the actual dry dimension and is so carefully sawn that it is never planed for the purpose of insuring uniform sizes. Swedish rough lumber is therefore paying rough lumber customs duties in foreign countries as the wood is not surfaced one side and one edge and, in spite of this, there is no trouble in regard to uniform sizes. On this point the Swedish operators have a very considerable advantage both because of the elimination of the waste in planing rough lumber and in the saving of planing-mill equipment and labor.

Planing Mills Equipped with Fixed Knives.

Swedish lumber is only planed when it is destined for interior finish, flooring, or other similar uses where an absolutely smooth surface is required by the customers. Every bit of sawmill waste is utilized. Some of the mills even consider their sawdust too valuable to be burned for the generation of power, and it is utilized for wood flour, etc., which is even exported to the United States. Most of the mills are electrically operated, the power being obtained from waterfalls. The Swedish planing mills are operated with machines having fixed knives, this being possible because of the accurate sawing practices. The knives slice off a thin sheet of wood the thickness of tissue paper and the

length and width of the board. This sheet is then run through rotary knives and turned into excelsior for packing purposes. Rotary cutters are used only for the tongue and groove and sometimes on the back of flooring, the knives merely touching off any rough surface. The manufacture of boxes and crates is also an important by-industry of the sawmill industry in Sweden.

Hardwoods Negligible.

Sweden possesses very small quantities of hardwoods. There is a little oak in the southern part of the country, but it is usually not very suitable for furniture purposes, being coarse-grained and hard. Birch is the principal hardwood in Sweden, but the supply is not sufficient for the requirements of the country and Sweden is therefore to some extent dependent upon other countries for its hardwoods.

Lumber Export Trade Association—Each Field in Charge of Specialist.

The Swedish lumber export trade has a nucleus in the Swedish Lumber Exporters' Association, no doubt the strongest lumber-export association in any country. The association has perhaps performed its greatest function by informing its members in regard to foreign market conditions. Its statistical service is unsurpassed in Europe. A very significant development in Sweden has been the grouping of a number of small mills into selling organizations, and thus the number of exporters is limited.

The Swedish lumber-mill operators realize that it is impossible for one man to take care of forestry, logging, sawmilling, and selling. Each department has its chief and the foreign sales are handled by specialists in that field. Even the Swedish Government, which operates several sawmills, has appointed an experienced exporter as its foreign sales manager, and the Government lumber sales are handled in the same manner as the sales of any private company. This has overcome the prejudice against Government competition.

Successful Export Sales Methods.

Few mills, if any, will sell direct to foreign consumers or importers. The rule is that such sales are handled by regularly established lumber agents who are allowed freedom to conduct their business in accordance with local customs in each particular field. If the Swedish exporters tried to sell direct to consumers, the effort would be sure to antagonize importers and agents. Some large Swedish exporters have established their own agencies abroad, employing their own salaried men, but it is not the rule.

Western Europe the Chief Export Market.

The chart appearing on the third page of cover shows that the bulk of Swedish wood exports consists of rough lumber and a very small percentage of unmanufactured timber. This is remarkable in view of the fact that Sweden is located within a very short distance of Great Britain, the largest consumer of pit-wood in Europe. It will also be noticed that box shooks and planed lumber are appreciable items in the Swedish exports.

From the 1924 statistics, which do not differ materially from those of pre-war days, it is seen that Great Britain is by far the largest market for Swedish lumber, taking over 700,000,000 feet of wood of all kinds. The other markets in western Europe, such as France, Ireland, Spain, Holland, and Belgium are also impor-

tant customers, each taking in excess of 100,000,000 feet yearly. Germany in pre-war days was a very important market, but the German trade has suffered severely and amounted to less than 50,000,000 feet in 1924. Of the northern European countries, Denmark is naturally very important owing to its proximity to Sweden.

African and Levant Trade Also Important—Asia.

British South Africa takes about 50,000,000 feet; Egypt about 20,000,000 feet, and the Canary Islands about 11,000,000 feet. Exports to the Canary Islands largely consist of box shooks and crates, in addition to building lumber. Algeria, taking about 10,000,000 feet, is also of importance as a growing market. There is some trade with the Mediterranean countries in Europe, but because of the perturbed conditions in the Levant this trade has not reached its pre-war status. The exception is Greece, which has materially increased its purchases of Swedish lumber owing to energetic sales efforts on the part of British exporters.

Sweden is shipping small quantities of lumber to British India and to Persia, chiefly box shooks to the latter. Australia and New Zealand imported in the neighborhood of 36,000,000 feet, including box shooks and planed and rough lumber. It is remarkable that Sweden can ship lumber to Australia, this being attributed to the excellent steamship connections. Exports to eastern Asia are negligible and there seems to be no market in that part of the world for Swedish lumber.

Unimportant Factor in American Markets.

Contrary to general belief, Swedish lumber is not an important factor in South America. Only 10,000,000 feet were shipped to Argentina in 1924, while shipments to other South and Central American countries were negligible. The United States imported in 1924 about 1,600,000 feet of Swedish lumber, both planed and rough, most of which was landed in New York and neighboring districts. The Swedish exporters realize that they can find a more profitable market in near-by countries, and therefore they have made no great effort to sell their lumber in the United States.

Recent Severe Competition of Neighboring Countries.

The Swedish exporters are in a very difficult position at the present time for many reasons. The country is surrounded by lumber-producing areas and the timber holders in those countries are usually working under a severe financial strain, which compels them to bend every effort to sell their products. Although Swedish lumber is considered of superior quality to most of the other European softwoods, the price difference has been too great and Sweden has suffered losses in many markets. It must also be remembered that the Swedish currency is on the gold standard, and it is very difficult to compete with countries having a depreciated currency. In addition to the forced production and sales of lumber by other European countries, there are unsatisfactory industrial conditions in the principal consuming areas. These conditions have depressed market prices to a level which makes it unprofitable for many Swedish operators to carry on their business.

Mills Operating Under Financial Strain.

Many of the mills incurred heavy obligations during and after the war; expensive equipment was installed and this, coupled with the high operating costs, has

put the mills under a severe financial strain. There has been considerable transfer of mill property in Sweden, and it will take some time before the industry is financially back on a pre-war basis. However, the desire of Swedish lumber exporters to build up permanent trade connections and to constantly improve mill equipment and methods of operation will insure the prominent position which they have enjoyed during normal conditions.

[NOTE.—A report entitled "Swedish Forest, Lumber Industry, and Lumber Export Trade," giving detailed information in regard to Swedish Lumber Conditions has been published by the Department of Commerce, as Special Agents Series No. 195, and may be purchased for 75 cents per copy from the Superintendent of Documents, Government Printing Office, Washington, D. C., or any of the Bureau's branch offices.]

Demand for Hardwoods Weak in Belgium

The demand for hardwoods has slumped in Belgium recently, owing to depression in the furniture industry, according to a dispatch dated June 13 from Commercial Attaché Fayette W. Allport, Brussels.

Additional information regarding lumber appears in this issue under the following sections:

Cable review, Europe: Summer dullness felt in Swedish business.

Tariffs and Trade Regulations:

Finnish import duties reduced.

German import restrictions further relaxed.

WORLD TRADE IN MEATS AND MEAT PRODUCTS

United States and Argentina Supply About Three-Fourths of World's Export Trade in Meats and Fats—European Markets for These Products Expanding

J. E. Wrenn, Foodstuffs Division

The following statistics of the most important items entering into the international trade in meats and meat products show the relative importance of the leading meat-producing and meat-consuming countries. The countries entering into this trade have been divided into two groups—the non-European surplus-producing countries and the European importing countries.

¹ Figures do not represent total meats and meat products as all items are not included in tables.

Theoretically the net export trade of the producing regions should balance with the net import trade of the consuming areas of Europe. But the movement of certain products in international trade lose their iden-

¹ The statistics include all meats and practically all of the important meat by-products, such as lard, tallow, oleo oil, oleo stearine, etc. Products such as red oil (oleic acid), stearic acid, or vegetable oils are, however, not included. Statistics are for calendar years excepting in the following instances: United States, fiscal years (beginning July 1) 1909 to 1917, inclusive, calendar years 1918 to 1924; Canada, fiscal years ending Mar. 31; Australia, calendar years 1909 to 1913, inclusive, fiscal years (beginning July 1) 1914 to July 1, 1923.

² Not reported prior to 1913.

³ Average for accounting purposes only.

tity in the statistics of the importing country, are classed as other items, or are not separately shown. Some of the products of exporting areas go to countries not included in the import group—for example, exports of pork and lard from the United States to Cuba and Mexico or countries other than to those shown in the two groups are not accounted for—and the same is true of shipments from other surplus producers. The net exports from producing areas therefore exceed the net imports of the areas of deficiency. The data do, however, disclose, collectively and individually, some interesting facts.

United States and Argentina Leading Producers.

For the period 1909–1913 the average annual exports of meats and fats from the United States exceeded the exports from Argentina, the next largest country in the non-European group, by about 154,000,000 pounds, and the share of the net export trade of the group was 37 per cent for the United States, as compared with 33 per cent for Argentina, 13 per cent, 10 per cent, 6 per cent, and 0.6 per cent, respectively, for Australia, New Zealand, Uruguay, and Canada.

Exports from all the producing countries increased during the war except from Australia, and New Zealand during the last two years, but beginning with 1920 a decline set in which was a forerunner of the postwar livestock depression. So far as the United States, Argentina, and Uruguay are concerned, the foreign demand increased again in 1923. In that year the United States, Argentina, Uruguay, New Zealand, Australia, and Canada supplied, respectively, 39 per cent, 36 per cent, 8 per cent, 7 per cent, 3 per cent, and 1.6 per cent of the total meat exports of the non-European group. Brazil, which in pre-war years had not been a factor, furnished in 1923 4.4 per cent of the net export trade of this group of countries. Increases in 1923 over the average pre-war period were as follows: The United States, 2 per cent; Argentina, 3 per cent; Uruguay, 2 per cent; and Canada, 1 per cent. Australia suffered a loss of 10 per cent and New Zealand a loss of 3 per cent.

These changes in the total export trade of producing countries are reflected in the import trade of European countries.

United Kingdom Largest Importer of Meats and Fats.

The United Kingdom is the largest consumer of the surplus meat and fat production of the world. This is best illustrated by the fact that for the five-year period 1909–1913 the principal consuming countries of Europe imported annually an average of 4,003,237,000 pounds of meats and fats, about 70 per cent of which (2,814,216,000 pounds) represented imports into the United Kingdom.

During the same period these European countries exported an average of 1,124,665,000 pounds of meats and fats. It should be pointed out that two surplus-producing countries—Denmark and the Netherlands—are included in this group, and the exports of these two, combined with reexports from Great Britain, largely made up this total, which, if deducted from total exports, left an average net import of 2,878,572,000 pounds. The average net import of the United Kingdom over this period was 2,492,494,000 pounds, or about 83 per cent of the total. This indicates to what extent the producing sections of the world were before the war dependent upon the growth, prosperity, and stability of the British market.

The country of next importance as an import market during the years 1909–1913 was Germany, whose average annual importation was 426,215,000 pounds of meat and fats, and its average annual net importation 421,613,000 pounds. From a strictly import standpoint the Netherlands, Russia, France, Belgium, Switzerland, Denmark, and Norway follow in importance in the order named. The Netherlands was, and is, largely a center for entrepôt shipments, as its exports exceeded its imports.

Shifting of Markets Since the War Years.

Disregarding the war period as too abnormal, it is of interest to note how markets have shifted in post-war years. The United Kingdom has continued to be the dominant factor, but instead of absorbing 83 per cent of the net import trade of Europe as in pre-war years, its share of an enlarged net import trade for the group has been respectively for 1920, 1921, 1922 and 1923 about 58 per cent, 76 per cent, 79 per cent, and 74 per cent. This indicates that during the years in question the import trade of the United Kingdom in meats and fats increased. However, imports into Germany, France, Italy, Belgium, Czechoslovakia, and Austria have also increased considerably above the pre-war amounts, and a larger share of the world's surplus meat production is finding a market in these countries. Also, while Dutch shipments are about 40 per cent less than those of the pre-war period, Danish exports have increased about 40 per cent.

The United States trade in fats has continued large, but American pork products (meats) have experienced increasingly severe competition from Denmark. Argentine exports of chilled beef have increased and their markets have extended to include Continental countries, but Australian frozen beef has lost in favor. New Zealand mutton exports have increased at the expense of the Australian and Argentine products.

Additional information regarding foodstuffs appears in this issue under the following sections:

Cable review, Europe: Summer dullness felt in Swedish business.

Cable review, Far East:

Indian business hesitant.

Decline in Philippine May business.

Dutch East Indian May conditions satisfactory.

Unsettled conditions in China.

Hawaiian crops and other developments.

Japan markets quiet during May.

Australian situation seasonally quiet.

Tariffs and Trade Regulations:

Woodenware Market in Scotland

The Lumber Division has received from Consul G. E. Chamberlain, Glasgow, Scotland, a comprehensive report on the market in Scotland for woodenware, tool handles, broom handles, clothespins, washboards, kitchen boards, and shade rollers. Copies are available to interested American firms.

AUTOMOTIVE PRODUCTS

Percy Owen, Chief, Automotive Division

TREND IN LEADING MARKETS FOR AMERICAN MOTOR CYCLES

Volume of Motor Cycle Exports Has Shown Great Variation

Foreign markets for American motor cycles have not displayed as great absorptive powers during recent years as have those for American cars and trucks. The Automotive Division will, in a series of two statistical studies, make an analysis of the factors that have affected motor cycle exports. The first study, found in this issue, represents a statistical analysis of our motor cycle exports to the 20 leading markets for each year of the six-year period, 1913 and 1920 to 1924. The second study, dealing with the competition which American motor cycles have had to meet from European producers in recent years, will be published later.

American motor cycles, although encountering increased foreign competition in late years, have been well received in the world's markets. With new markets coming in to swell the total volume of export trade and with a more complete line of motor cycles embracing the lighter and less-expensive models—necessary to uphold American leadership in the motor-cycle trade of the world—further progress is to be expected.

Pronounced Variable Trend in Exports.

Motor cycle exports from the United States during the six-year period, 1913 and 1920 to 1924, have exhibited a pronounced variable trend. The volume of these shipments amounted to 3,983 units in 1913, 37,622 in 1920, 11,001 in 1921, 15,976 in 1922, 22,112 in 1923, and 16,859 in 1924. The high point was thus reached in 1920. Over the five-year period, 1920 to 1924, inclusive, the yearly average of exports was almost 21,000 units. Exports during 1924 scarcely went over four-fifths of this five-year average. On the other hand, exports of passenger cars and trucks from the United States during 1924 were above their five-year average, amounting to 146 per cent and 124 per cent, respectively. Increasing competition from European producers—principally the British motor cycle industry which made great strides during 1924 in developing its export markets—has no doubt been the greatest single factor in keeping our motor cycle exports confined to this smaller volume.

Unit Values of Shipments Also Fluctuating.

Unit values by years over the six-year period revealed no greater uniformity in maintaining an approximate level than was the case with volume of shipments over each of the years. These values ranged from a low of \$188 in 1913 to a high of \$320 in 1921—a difference of \$132 per motor cycle. Leaving 1913 out of consideration, it is found that except in 1921 the trend in unit values has been steadily downward. This last development is the most encouraging feature of our motor cycle export trade, because with the increased stressing of low-price, light-weight motor cycles in foreign production—along with a steadily lowering price differential between small cars and motor cycles in foreign markets—the American motor cycle industry has been faced with the necessity of giving more attention to the market possibilities of the light-weight motor cycle.

Australia the Outstanding Foreign Market.

Over the six-year period, 1913 and 1920 to 1924, Australia has been the outstanding foreign market for American motor cycles, standing first in 1922, 1923, and 1924; third in 1920 and 1921; and twentieth in 1913.

Australia was, therefore, represented among the 20 leading markets for each year of the period taken. Australia's share of the total export trade in motor cycles was greatest in 1923 and 1924, when it accounted for 29.9 per cent and 24.7 per cent, respectively. For the other year in which it was a market leader—1922—its share was also high, being in excess of one-fifth of the total trade. The position of Australia as a market leader can best be grasped when it is found that this one market had 18,209 American motor cycles shipped to it over the broken six-year period out of a total of 107,553, or almost 17 per cent.

The Netherlands and Sweden Good Markets.

The Netherlands was only just behind Australia as a market leader, accounting for first place in 1921, second in 1920, 1922, 1923, and 1924. It took 17.6 per cent of the total exports in 1921, 13.9 per cent in 1922, and 13.8 per cent in 1920.

Sweden made a very good record as an export market for American motor cycles during the six-year period, only falling below Australia and the Netherlands in point of sustained leadership. This market held first place in 1920, second in 1921, sixth in 1922, eighth in 1924, and thirteenth in 1923. Its share of the total trade was highest in 1920 and 1921, amounting to 15.6 per cent and 12.1 per cent, respectively.

Italy and New Zealand Hold Steady Position.

Italy and New Zealand, the last two of the five leading foreign markets, both held a steady position throughout the six years, with a tendency to improve rather than lower their respective standings. The former country during the six-year period ranked at no time lower than seventh and higher than fourth. This record consisted of fourth place in 1924, 1923, 1922, and 1920, sixth in 1921, and seventh in 1913. New Zealand was just behind Italy in this respect, occupying third place in 1923, fifth in 1924 and 1922, sixth in 1921 and 1913, and eleventh in 1921.

Other Important Markets—United Kingdom.

Markets that were among the leaders every year out of the six-year period included, among others, the United Kingdom, Canada, Japan, and British South Africa. These countries accounted for 5.8 per cent, 5 per cent, 4.5 per cent, and 4.1 per cent, respectively, of the total six-year trade. Of this group the United Kingdom, although the leader in point of volume for the six years, gives evidence of becoming one of the lesser markets for American motor cycles in years to come. This is clearly brought out by the downward trend in motor-cycle shipments to this country from 1913 to 1924. In fact, exports to the United Kingdom

in 1924 were less than a third of those in 1913. This tendency to absorb decreasing numbers of our motor cycles is readily understood, however, when the growing importance of the British motor cycle industry is taken into account.

Exports to Canada Decreasing.

Canada seems to be falling in the footsteps of our own domestic market in so far as its purchases of motor cycles are concerned. With no domestic motor cycle industry of its own, United States exports to this market would seem to show a slackening interest in motor cycle transportation. In 1913 these exports amounted to 1,335; in 1920, 1,313; and for the following years an average of around 700 motor cycles have been shipped to this market—a very unsatisfactory record. In this connection there is no doubt that low-priced automobiles have grown to be more and more a serious competitive factor.

Possibilities in Japanese Market—British South Africa.

Of the four countries in the group of other important markets, Japan has exhibited the greatest market possibilities for American motor cycles with the passing of years. Outside of 1913—a year of low motor cycle shipments—when Japan ranked fifth, its progress as a leading market has been steadily upward. From fourteenth position in 1920, this improvement ran through ninth place in 1921, seventh in 1922, fifth in 1923, and third in 1924. British South Africa revealed a healthy growth, also, although in lesser degree than did Japan. Since 1921, its growth as an American motor cycle market has been very steady.

Lesser Markets—Latin-American Countries.

The Latin-American markets of Argentina, Mexico, Cuba, Brazil, and Chile have played but a small part in increasing United States' exports of motor cycles. Of these, Argentina has been the most important, being among the 20 leaders five years out of the six. Mexico followed next in order under this method of comparison, finding a ranking position in 1913, 1921, and 1922. The four remaining countries found place in 1913 only. In fact, the total takings of American motor cycles by these markets would not compare favorably with the 1924 exports to the single market of Australia.

Egypt and Straits Settlements—Other Markets.

Egypt and Straits Settlements are cases of other outstanding markets of low ranking. The two first countries displayed some strength in 1920 but this was the only year in which they have been factors. Russia in Europe, Poland, Czechoslovakia, and Austria bear watching, not because of the magnitude of motor cycle shipments to them, but rather because they have begun to show signs of market possibilities following improvement in their economic conditions.

Markets for Low and High Priced Motor Cycles.

A review of the 20 leading markets for each of the six years, 1913 and 1920 to 1924, reveals several interesting points when approached from the angle of comparative unit values of motor cycles shipped to them. Shipments to France in 1920, 1921, 1923, and 1924 had the lowest average unit value of motor cycle exports to any market. Furthermore, Sweden only was ahead of France in this respect in 1922. For each one of these five years the average unit value of motor cycles shipped to France was well below the average unit value of total motor cycle exports. Factors that account for this were the development of the cycle-car

industry in France, the products of which are directly competitive with the larger and more expensive motor cycles; the existence of good roads in that country, requiring a minimum amount of power; and the inability of the heavier type American motor cycles to undersell effectively similar French machines.

Switzerland, a neighboring market to France, offers the opposite extreme in the nature of our motor-cycle exports to it. This country took our highest-priced machines in 1921 and 1922. It seems that topography is the greatest single factor bringing about this situation, because with the mountainous roads that exist all over Switzerland nothing but the more expensive high-powered motor cycles will give the highest degree of satisfaction.

Twenty Leading Motor Cycle Markets.

The following table presents the 20 leading markets for American motor cycles for each year of the 1913, 1920 to 1924 period, showing the number and unit value of motor cycles shipped in each case:

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

TYPES OF AGRICULTURAL MACHINERY USED IN DENMARK

Consul Howard F. Withey, Copenhagen

Agricultural power machinery, both mobile and stationary, is employed extensively on farms in Denmark. Farms are equipped with various types of power machinery, including electric motors, internal combustion engines, stationary steam plants, windmills, tractors and traction engines. Returns obtained by the Danish Statistical Bureau from 194,000 farms, representing all but 3.5 per cent of the total, show that about 39,600 farms use electric power; 14,800, internal combustion engines; 700, stationary steam plants; 16,000, windmills; 2,000, tractors, and 7,400, steam and stationary engines.

Power Equipment Varies with Size of Farm.

The average size of the Danish farm is approximately 25 acres and usually it is equipped with only one form of power machinery. The use of electric motors and internal combustion engines, and of windmills, is not infrequent on large farms, and in many cases mobile power machinery, such as tractors and steam engines are employed for various purposes other than the ones for which such machines were particularly designed. The use of power equipment increases in proportion to the extent of the land, the medium and the small farms chiefly having electric motors. Internal combustion engines are employed considerably on the smaller farms, and the use of stationary steam plants, traction engines, and of tractors is confined almost entirely to the largest estates.

Threshers Used Extensively.

It is a common practice for neighboring farmers to combine in the purchase of high-power equipment. Threshers are employed to a greater degree than any other type of large machinery used on Danish farms, and threshing machines are to be found on about 112,000 farms, or approximately 60 per cent of the total number of farms reported upon. About every tenth farm uses large self-cleaning thresher machines, with separating roll; every fifth farm employs such machines without the separating roll; and about every third farm uses small machines without the self-cleaning attachments. Over 90 per cent of the farms over 500 acres in size use threshing machines, 50 per cent of them from 15 to 25 acres have this equipment, and 40 per cent of the farms from 10 to 15 acres are thus equipped. Only about 10 per cent of the farms under 5 acres have threshers.

Mowers, Reapers, and Binders Common.

Mowers are employed on 86,000 farms, or 45 per cent of the number of farms reported upon. Reapers are used by 13 per cent, and binders by 22 per cent. Both reapers and binders are used on about 6,500 farms. The type of harvesting machinery differs considerably, according to the size of the farm. Small farms, up to about 40 acres, generally employ mowers only, or at most a reaper. The number of binders, however, is increasing on the larger farms, and on those of over 40 acres there are more binders in use than reapers.

Grain-Sowing Machines Used Exclusively—Other Machinery.

About 85,000, or 44 per cent of the number of farms reported upon, use grain-sowers. Eighty-five per cent of the farms of over 150 acres use seed drills. Broadcasting machines are seldom found on the small farms, but about 50 per cent of the agricultural holdings of over 250 acres are equipped with this type of sowers. It is chiefly the large estates which employ both types of sowing machines.

The use of other field machinery, such as potato planters and diggers, horse-drawn spraying machines, and special fertilizer-spreading machines is largely confined to farms of over 75 acres. Miscellaneous machinery, such as turnip-washing machinery and milking machines, is found only on the largest farms. Chaff cutters are used on 90 per cent of all farms over 12 acres in size, the percentage being lower for the small farms. Feed grinding and mixing machines are sometimes seen on the small farms, but 40 per cent of the holdings of from 15 to 75 acres have machinery for grinding and mixing feed.

Increased Demand for Implements in Poland

Consul Donald R. Heath, Warsaw

The demand for agricultural machinery in Poland showed an increase in the first quarter of 1925, despite the comparative failure of the 1924 grain crop. The gain is due largely to more favorable credit terms which importers have been able to offer foreign manufacturers. The Government, through the Bank of Poland and the Agricultural Bank, has been enlarging its credits to the farmers and this has also stimulated the buying of implements.

Several important dealers report that they have made increased purchases abroad, which include harvesters, mowers, and tractors from the United States. The demand for tractors is slightly higher as a result partly of an increase in the price of horses and feed. Polish estate owners are coming to the conclusion that tractor plowing is more economical and efficient than horse plowing.

Increase in Rio de Janeiro Population

Consul General A. Gaulin, Rio de Janeiro

The population of the Federal District of Brazil (city of Rio de Janeiro and suburbs) is now 1,442,000, according to figures issued by the Public Health Vital Statistics Bureau. The census of September 1, 1920, gave the population then at 1,157,873. Birth rates during 1924 as compared with 1923 were 23.49 and 24.68, respectively, per thousand inhabitants. The death rate per 1,000 was 16.04 and in 1923 it was 18.35. These figures show a decided improvement in local health conditions. The increase of over 300,000 in the population was caused mainly, however, by immigration, both from the rural districts and from foreign countries.

TEXTILES

Edward T. Pickard, Chief, Textile Division

ITALIAN COTTON INDUSTRY PROSPEROUS

E. Humes, commercial attaché's office, Rome, May 16

Italian imports of raw cotton amounted to 201,435 metric tons (metric ton=2,204.6 pounds) in 1924 against 185,341 in 1923 and 177,696 in 1922. Takings of American cotton (116,877 metric tons or 515,330 bales) in 1924 constituted 58 per cent of Italy's total cotton imports compared with 62 per cent in 1923. Receipts of Indian cotton (61,978 metric tons) were particularly heavy, but the monthly statistics show that purchases of Indian cotton were largest during the early months of the year, and were probably made chiefly on account of the lower prices of Indian as compared with American cotton at that time.

Import Increase Recorded for First Four Months of 1925.

Imports of raw cotton during the first four months of 1925 aggregated 104,468 metric tons, of which 69,995 were of American origin, 22,803 Indian, and 9,267 Egyptian, compared with a total of 88,102, including 49,661 American, 29,277 Indian, and 8,171 Egyptian, for the corresponding period of 1924. Receipts were heaviest during March and April—31,480 and 29,723 tons, respectively.

Total arrivals of cotton at all Italian ports during March amounted to 176,616 bales, as against 166,660 during the corresponding month of 1924, of which 69,979 and 53,524, respectively, were from the United States. During March, 53,430 bales, including 1,750 American, were received at the port of Trieste, but the bulk of this cotton is destined for consumption in Central European States.

Present Position of Mills Good.

During the first six months of 1924, Italian yarn mills were spinning largely for stock, while the weaving mills were obliged to cut down their production on account of the difficulty of marketing the finished product with any margin of profit as long as the cost of raw cotton continued high. Later in the year, when cotton prices had declined, conditions in the Italian cotton industry improved. The mills were able to dispose of their accumulated stocks at a profit, and work began on new orders which were readily absorbed by the consuming markets. Manufacturers, however, continued to buy raw-material supplies on a hand-to-mouth basis, and avoided laying in large stocks of raw cotton. By the latter part of 1924, the industry was in a flourishing condition, and exports, particularly of yarns, were on the increase. The year closed with favorable reports from all the big mills, and the foreign-trade statistics for 1924 bear witness to the prosperity of the industry. The present position of the Italian cotton industry is said to be excellent, and reports from the mills state that they are well supplied with orders and that both production and exports are on the increase.

Imports and Exports of Cotton Yarns.

At the present time, Italy has 123 cotton-spinning mills with about 4,600,000 spindles and an annual pro-

duction of yarn approximating 330,000,000 pounds, according to the *Corriere della Sera*. The percentages of these spindles located in the various regions is given as follows: Lombardy, 58.5 per cent; Piedmont, 24.5; southern Italy, 6.2; Veneto, 5.8; Liguria, 4; central Italy, 1.

Exports of unmercerized-cotton yarns in 1924 amounted to 16,629 metric tons, an increase of 36 per cent over shipments abroad in 1923 and almost double the 1922 figure. Single yarns constituted three-fourths of Italy's 1924-yarn exports, which comprised 12,256 metric tons of grey, 653 of bleached, and 745 of dyed yarns. Shipments of ply yarns were as follows: Grey, 2,244 tons; bleached, 245; and dyed, 486. During the first two months of 1925, Italy exported 2,470 tons of unmercerized-cotton yarns compared with 1,919 for the corresponding period of 1924.

Principal Markets for Italian Yarn Exports—Imports Decline.

Germany, Bulgaria, Argentina, Rumania, and Yugoslavia, in the order mentioned, were Italy's best customers for cotton yarn in 1924. Germany took 14 times as much in 1924 as in 1923, and the following percentages of increase over 1923 figures were registered in the 1924 exports to other important markets: Yugoslavia, 38 per cent; Argentina, 27; Rumania, 21. Shipments to Bulgaria, however, declined 25 per cent as compared with 1923, but show a gain of 15 per cent over those of 1922. The accompanying table shows Italian exports of cotton yarn by countries.

Ply yarns constitute over half of the imports of unmercerized cotton yarns, which amounted to 743 metric tons in 1924 against 1,024 in 1923. The 1924 imports included 261 tons of single and 430 tons of ply yarns in the grey. Receipts of bleached and dyed unmercerized yarns are very small.

In 1924, Italy imported 373 metric tons of sewing thread, of which France furnished 262; Great Britain, 53, and Germany, 35. Italian purchases of foreign cotton thread aggregated 311 tons in 1923 and 401 in 1922.

Data on Italian Weaving Industry Reported.

The Italian Cotton Association has published 1924 statistics on looms, production, shipments, stocks on hand, and unfilled orders, based on returns made by 381 mills owning 113,623 looms, and representing about 93 per cent of the cotton-weaving industry. The total number of looms is estimated at slightly over 120,000. During 1924, the 381 mills reporting produced 595,885,000 yards of single-width goods (up to 39 inches in width) and 206,305,000 yards of double-width (over 39 inches in width), or a total of 802,190,000 yards, compared with 584,470,000 yards of single-width, and 203,460,000 yards of double-width goods, or a total of 787,930,000, for 1923. The weight of single-width goods produced in 1924 averaged about 4 ounces per yard and of double-width about 6.5 ounces.

Growing Export Trade in Cotton Piece Goods.

Unmercerized cotton piece goods form the most important item in Italian exports of cotton manufactures, shipments of this commodity having amounted to 50,215 metric tons during 1924 compared with 43,749 in 1923 and 27,678 in 1922. Although Argentina took about one-fifth of the total 1924 exports, sales to that country were 3 per cent below those of the previous year, but exceeded 1922 exports by almost 60 per cent. Shipments to some of the other important markets showed considerable increases over 1923 figures, but losses were registered in exports to Bulgaria and Yugoslavia. The quantities sent in 1924 and the percentages of increase or decrease compared with 1923 were as follows for the principal countries of destination: Egypt, 6,245 metric tons, plus 26 per cent; European Turkey, 5,965 tons, plus 3.8 per cent; Rumania, 3,599 tons, plus 47 per cent; Greece, 3,095 tons, plus 88 per cent; Asiatic Turkey, 2,246 tons, plus 47 per cent; British India and Ceylon, 1,605 tons, plus 65 per cent; Netherlands East Indies, 1,481 tons, plus 40 per cent; Austria, 1,106 tons, plus 240 per cent; Yugoslavia, 3,820 tons, minus 24.5 per cent; Bulgaria, 1,343 tons, minus 18 per cent.

Principal Markets for Italian Cotton Yarn and Piece Goods.

The principal countries of destination of Italian exports of unmercerized cotton yarn and piece goods are given in the following table for 1922, 1923, and 1924:

Italian exports of unmercerized cotton yarn and piece goods by countries

Countries of destination	Cotton yarn			Cotton piece goods		
	1922	1923	1924	1922	1923	1924
	Metric tons	Metric tons	Metric tons	Metric tons	Metric tons	Metric tons
Albania.....				264	414	491
Austria.....	71	19	253	451	325	1,106

Other countries.....	784	1,142	1,835	2,623	4,167	5,290
Total.....	8,665	12,220	16,629	27,678	43,749	50,215

NOTE.—No figures are available for some countries; hence, blanks do not necessarily indicate that there were no exports.

Export figures are only available for the first two months of 1925, but they furnish an index of the increased shipments of Italian cotton goods abroad. During the first two months of 1925 Italy exported 8,377 metric tons of unmercerized cotton piece goods against 5,851 for the corresponding period of 1924. A comparison of the shipments to individual countries for the two-month period shows that exports to Argentina rose from 1,395 metric tons in 1924 to 2,295 in 1925, while both Greece and Egypt almost doubled their purchases in 1925 and shipments to Turkey (both

European and Asiatic), Yugoslavia, British India, and Uruguay also showed a marked improvement.

Cotton Goods Imported from the United Kingdom and the Continent.

During 1924 Italy imported 2,008 metric tons of unmercerized cotton piece goods and 124 tons of high-grade velvets, of which Great Britain supplied over 50 per cent. France, Switzerland, and Germany, in the order named, were other important sources of imports of unmercerized cotton goods, and Germany ranked second as a supplier of velvets. In this connection, it might be noted that Italy exported 530 tons of common cotton velvets during 1924.

In point of value, Italy's exports of cotton yarns, cotton piece goods, and other cotton manufactures during 1924 were worth six times the imports of those commodities.

[Further details regarding the Italian production of cotton goods are contained in special bulletins, Nos. 314 and 367, issued by the Textile Division. Copies may be obtained from the district offices of the Bureau of Foreign and Domestic Commerce, or from the Textile Division, Washington, D. C.]

World Textile News in Brief

Spanish Firm Desires to Sell Rabbit Skins.

A firm in Valencia, Spain, desires to sell rabbit skins to American buyers, according to a report from Consul C. S. Edwards. Further information regarding this concern will be made available upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington. Refer to file No. 173015.

Conditions Favorable for Silk Crop in France.

The quantity of silk-worm eggs set for hatching in France during 1925 will probably not equal that of 1924, which was 84,000 ounces. It is estimated that the deficit will amount to about 5 per cent. Warm weather has caused the mulberry leaves to develop rapidly and conditions are now favorable. (Consul Hugh H. Watson, Lyon, June 3.)

London Spring Fur Sales.

The quantity of furs catalogued at the London Spring Fur Sales was much larger than usual for the season, and also larger than at recent sales. By far the greater part of the offering, however, was absorbed at prices which show a general decline from those established in January. American and French buyers were active, as well as the domestic trade. The next sale will open in London on October 8, 1925. (Harold A. Burch, office of the commercial attaché, London, June 4.)

Regulation Uniforms for Chauffeurs in Habana.

Notice has been given for the enforcement, beginning July 9, of the traffic regulation in Habana, which provides that all drivers of service cars must wear a uniform consisting of trousers, military coat, and cap, each piece to be made of Dutch linen or unbleached drill or blue or gray alpaca cloth. A company which has 10 or more cars in service may present special models of uniforms for the approval of the mayor. Between 8,000 and 9,000 service cars are registered in Habana. In the past, however, it has not been found feasible to enforce this regulation, and at the present time considerable opposition may be expected. (Assistant Trade Commissioner O. R. Strackbein, Habana, June 10.)

United States Exports of Cotton Cloth Increase.

Exports of cotton cloth from the United States during the first five months of 1925 amounted to 242,000,000 square yards, valued at \$38,000,000—a considerable increase over the 165,000,000 square yards, worth \$28,900,000 exported during the first five months of 1924. This increase was evident in all classes but was somewhat less marked in the exports of duck than in those of other cotton cloths.

Hosiery and Knit Underwear Imports into India Increase.

Imports of hosiery and underwear into India have shown a steady increase during the last three years, being valued at 11,000,000 rupees (rupee=\$0.36 at current exchange) for the year ended March 31, 1925; 9,000,000 during 1924; and 8,000,000 during 1923. The largest part of such goods comes from Japan, where

cheap underwear is a staple product. The United States is second in the trade, largely on account of the large quantities of low-priced silk hosiery imported from that country. (Assistant Trade Commissioner Don J. Bliss, jr., Bombay, May 19.)

Additional information regarding textiles appears in this issue under the following sections:

Cable review, Far East:

Japan markets quiet during May.

Indian business hesitant.

Australian situation seasonally quiet.

Cable review, Europe: Austrian business men more optimistic.

INDUSTRIAL MACHINERY

W. H. Rastall, Chief, Industrial Machinery Division

AUSTRIA COMPETES IN MACHINERY TRADE

Assistant Trade Commissioner Elbert Baldwin, Vienna

Business in machinery and technical goods at the fair held in Vienna in the spring of 1925 was not particularly good but was better than had been predicted. Sales of Austrian products were greater than German sales, although German industry was well represented at the exhibition. German manufacturers seem to have adopted more fixed sales policies and while they are still willing to furnish stocks of machinery on consignment in certain instances, they are refusing to lower prices.

Improvement Seen in Austrian Manufacturing Industry.

Machinery manufacturers claim increased sales to the Austrian Provinces, possibly because Austrian industrial concerns outside of the Vienna district have been less affected by the recent depression and are undertaking plant improvements. Buyers in the Succession States made extensive purchases of tools and fittings, Austrian products being preferred to German on account of lower prices. Satisfactory sales of leather and other novelties, articles of fashion, and toys at the fair indicated that the Austrian manufacturing industry is improving and that domestic products are popular. The fair also showed that Austria is able, in spite of adverse conditions, to compete as a manufacturer of machinery and technical supplies and to maintain its position as a supplier of such equipment to Balkan and near eastern countries. Austrian exhibits were characterized by quality products and specialties, rather than by cheap mass production articles.

Refrigerating, Confectionery, and Woodworking Machinery.

A large number of cooking, refrigerating, and heating appliances was exhibited and a fair volume of sales in these items was made to the Balkan and Near East countries. An American company had a prominent display of food products and refrigerating chambers. There were also many exhibits of confectionery machinery. A number of Austrian and German firms displayed sawmill equipment, while a certain make of American woodworking machinery, which finds a good

market in the Austrian box and veneer industries, was shown, through the Vienna representative of the American manufacturer.

Tendency Toward Permanent Building Construction.

The city of Vienna, where by far the majority of the building operations of the country are being undertaken, has abandoned experiments with cheap housing and building methods and is returning to the principle of permanent systems of construction for its tenement houses, hospitals, and other edifices. The former interest in cheap house construction and economical building methods is declining in the Succession States also. The growing tendency toward the construction of permanent buildings will doubtless react favorably on the market for construction equipment and materials.

Conveying Machinery Exhibited.

German exhibits of transportation and conveying machinery were conspicuous, especially those of Bleichert & Co. and the Honomag Co., of Hanover. A variety of specialties for use in industrial railways was shown by the firm of Lehmann & Leyrer, of Vienna. Another Austrian firm exhibited a line of industrial conveyors adapted for use by the milling industry. Other important exhibits included rotary pumps, road-cleaning machinery, and textile machinery.

Opportunities Offered American Machinery Manufacturers.

Industrial stabilization is showing gradual progress in Austria and noticeable improvement is seen in the quality of domestic manufactures. The fact that the efforts of certain American petroleum companies and several American automobile manufacturers to establish themselves in the Austrian market have met with decided successes is an indication of the possibilities awaiting the machinery manufacturer.

Kinds of Machinery Bought at Vienna Fair.

In reporting the nature of machinery orders placed at the Vienna Fair it was not possible to determine the nationality of the seller or his product, but an outline of the kinds of machinery bought and the countries of destination may give an indication of the nature of the

demand for machinery in markets close to Austria. Buyers from Czechoslovakia placed orders for knitting machines with automatic adjustment, refrigerating machinery, soap-making machinery to equip a large plant, turbines, and woodworking machinery. Orders for soap-making machinery to be shipped to Poland and Yugoslavia were also taken, the latter country buying in addition refrigerating plants, wine pumps and filters, steam turbines, woodworking machinery, and box-making equipment.

Rumania and Hungary bought several installations of confectionery machinery, the latter country purchasing in addition refrigerating equipment, soap-

making machinery, textile machinery, and brewers' equipment. Turkey was also on the market for candy-making machinery, wine-making machinery, and brewers' equipment. Interesting items in the report of sales were orders taken for soap-making machinery for shipment to British India and another for the sale of the same type of equipment for delivery to a buyer in Japan.

CONSTRUCTION NEWS

Compiled in the Industrial Machinery Division

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by American firms qualifying for the Exporters' Index. Mention the country and reference number given. Where no reference number is given, further information is not available.]

Construction Projects in Canada.

Recent construction projects announced in Canada, as reported by Assistant Trade Commissioner Walter J. Donnelly, Ottawa, include the establishment of a model town at a cost of \$500,000 by a provincial government, the building of two churches at an estimated cost of \$100,000 and \$150,000, respectively, and the erection of a 100,000 imperial gallon water tank on a 40-foot steel tower. Among the contract awards announced are the following: Construction of the superstructure of a large grain elevator and foundation work for a new department store addition. Information relative to these and other construction projects and awards is available to accredited American concerns at the bureau or its district and cooperative offices under Reference Canada 35 x.

Irrigation Project in India.

In Madras, the most recent plan that has now been sanctioned by the Government is the Polavaram irrigation project in the Godavary delta to irrigate 20,000 acres at a cost of 1,900,000 rupees (1 rupee is now worth \$0.36). The Government has also sanctioned the construction of new regulators at the head of the Ellore canal in the Krishna district. (Assistant Trade Commissioner Don C. Bliss, jr., Bombay.)

Moving-Picture Theater for Habana, Cuba.

Among new projects under consideration in Habana is an up-to-date moving picture theater to seat 3,000 persons, with possibly an apartment hotel in combination. Bids will probably be received by the middle of August, and work is expected to commence by September 1. Reference 35X^(A). (Trade Commissioner C. A. Livengood.)

Office Building to be Erected in Cuba.

Work on a 20-story office building in Habana is expected to begin at once. The approximate cost has been stated at \$3,000,000. Reference 35X^(B). (Trade Commissioner C. A. Livengood, Habana.)

Building Program of Birmingham, England.

The Birmingham city council has adopted a building program to meet the estimated minimum needs of the

city during the next 20 years, providing for the construction of 102,000 houses. To meet these requirements, it is calculated that private enterprise must build 1,100 houses each year, and the city 4,000 houses, making 5,100 as the average annual number of houses required for 20 years. The expenditure for house construction by the city of Birmingham for years to come will be about £1,600,000 (\$8,000,000), annually, and at the end of 20 years, if the program is fully carried out, the city will own about 90,000 houses and about a third of the population will be living in municipally-owned houses. Already, the capital liabilities of the city have reached the sum of over £25,000,000 (\$125,000,000). (Consul John F. Jewell, Birmingham.)

Building to be constructed in La Paz, Bolivia.

The Minister of Industry and Hacienda has called for bids for the immediate construction of a building intended to house all the offices of his department, and to be erected in La Paz on the corner of Indaburu and Bolivar Streets. It is likely to be a large structure, and worthy of the attention of American exporters and construction engineers. (Consul Stewart E. McMillin, La Paz.)

Irrigation Project in Northern Peru.

Operations have been begun on the Olmos irrigation scheme in Peru, according to a report in the London Press from Mr. Oscar V. Salamon, Consul General for Peru in London. The project involves the construction of the Carhuaquero dam, 75 kilometers from the port of Pimentel, by which 40,000,000 cubic meters of river water will reach the rice and sugar plantations of Chiclayo and Lambayeque. The scheme will cost £P5,000,000, will take five years to complete and will irrigate 120,000 acres. A striking feature of the undertaking will be the construction of a 9-mile tunnel, passing through the Andes, tapping the Huancabamba River and diverting it to the western side of the Andes, where, in combination with four or five other rivers, a permanent supply will be secured to the above-mentioned areas. (Alfred Nutting, office of the American consulate general, London, England.)

New Petroleum Reservoirs to Be Constructed in Rumania.

The director of the Constantza Petroleum Basin states that four additional reservoirs for petroleum products are to be constructed at once and three more

will probably be erected later during the present year. Most of these reservoirs are to be of 5,000 cubic meters capacity. There are 42 large and 6 small reservoirs in use in the petroleum basin at present, the large ones measuring 5,000 cubic meters and the small ones 2,000 cubic meters. (Consul Richard B. Haven, Con-

stantza.) The names of the oil companies for whom work is to be done, together with blue prints showing construction in the petroleum basin as of 1923 are available to accredited American concerns upon application to the Industrial Machinery Division. Reference 172692.

MINERALS

Guy C. Riddell, Chief, Minerals Division

GERMAN PETROLEUM INDUSTRY AND TRADE

Trade Commissioner W. T. Daugherty, Berlin

Imports of petroleum products into Germany in the first quarter of 1925 amounted to 312,154 metric tons—more than 90 per cent increase over those during the first quarter of 1924 and almost equal to the 1913 receipts for the corresponding months. The United States continues to supply the larger part of this market. Receipts of American oil during the first three months of 1925 represented about 68.5 per cent of the total importation. The average share of the United States in previous years was 65 per cent.

German Imports from the United States Compared with Total.

The following table shows the share of the United States in the imports of the various products and compares the totals with those for the first quarter of 1924:

German imports of petroleum products

Products	First quarter of—		From United States in 1925
	1924	1925	
	<i>Metric tons</i>	<i>Metric tons</i>	<i>Metric tons</i>
Lubricants.....	69,117	68,773	52,462
Light products.....	21,301	54,659	37,370
Kerosene.....	25,617	49,665	41,484
Gas oil.....	21,568	37,920	30,487
Crude.....	2,813	37,503	25,333
Heavy gasoline.....	18,141	36,703	4,123
Crude gasoline.....	5,006	26,931	22,970
Total.....	163,663	312,154	214,229

Increases Recorded—Other Countries of Origin.

Total imports of light products during this quarter of 1925 increased by 157 per cent over those for the corresponding period of 1924; kerosene, 93 per cent; gas oil, 76 per cent; crude petroleum and natural mineral tar, 1,233 per cent; heavy gasoline, 100 per cent; and crude gasoline, 400 per cent.

Of the foreign sources in addition to the United States, Poland furnished 9.6 per cent of the total imports; Mexico, 7.5 per cent; Dutch Indies, 4.2 per cent; Rumania, 3.4 per cent; Russia, 2.7 per cent; and Persia, 0.9 per cent. In quantity, receipts from Poland were more than twice those of the first quarter of 1924; from Mexico and the Dutch Indies more than four times; from Rumania six times; and from Russia about 50 per cent more.

Domestic Production Estimated.

An advance estimate places the 1924 production from the Hanover wells at 60,000 metric tons. Preliminary official estimates put it at 59,352 tons, or an increase of 17 per cent over the 1923 production of 50,800 tons. The gain in output can be traced to a new well opened at Nienhagen, Hanover, in March, 1924, at a depth

of 750 meters. This year the Greiserwerke G. m. b. H. of Hanover found another well in its immediate neighborhood which offers some promise. These new finds in Hanover Province, however, must be considered as comparatively unimportant. The present "flush" which is being discussed in the local newspapers is represented as being of an oil free from water and of a specific gravity of 0.980.

Germany's 1924 production of crude oil was 15 per cent less than the 71,400 tons produced in 1913 within the present German borders. Including the Pechelbronn fields of Alsace, formerly German, the 1913 production amounted to 121,000 tons.

Brazilian Petroleum Imports in 1924

In 1924 Brazilian petroleum imports totaled 363,345 metric tons, according to unofficial statistics. In the following table the approximate figures for the various items are compared with the official data for the two preceding years:

Petroleum imports into Brazil

Products	1922	1923	1924
	<i>Metric tons</i>	<i>Metric tons</i>	<i>Metric tons</i>
Gasoline.....	44,538	61,177	87,030
Kerosene.....	81,898	85,728	85,349
Fuel oil.....	151,975	161,751	164,244
Gas oil.....	284	229	9,069
Lubricating oil.....	19,722	23,229	22,235
Lubricating grease.....	677	519	755
Paraffin wax.....	890	716	804
Asphalt.....	3,145	3,996	3,820
Total.....	303,119	337,345	363,345

The imports of gasoline and kerosene in 1924 entered at 16 of the larger ports and several small ones. Rio de Janeiro received the largest quantities—14,130,750 gallons of gasoline and 5,988,640 of kerosene. The next highest totals were shown by Santos, followed by Rio Grande, Recife, and Bahia. The total receipts of gasoline and kerosene, expressed in gallons, were 81,334,180 and 28,165,130, respectively.

French Production of Bauxite

Vice Consul Alfred D. Cameron, Paris

The annual production of bauxite in France has been running well above 300,000 metric tons, attaining 340,000 in the calendar year 1924. Exports amounted to 167,081 tons in 1922, 192,508 in 1923, and 202,534 in 1924. During the first months of 1925 exportation was less than during the same period of 1924, the January and February total being less than two-thirds of that for those months in the preceding year. This is not peculiar to bauxite, however, a similar or more

marked decrease occurring in the exportation of all other nonferrous metals.

Principal Countries of Destination—Uses.

The principal countries of destination for the exported bauxite are Switzerland (for the great factories at Neuhausen) and Great Britain (largely for the British Aluminum Co. in Scotland). Germany, Norway, Italy, and the United States take smaller amounts, in approximately the order named.

It is estimated that nine-tenths of the French bauxite produced in 1921 was used to make aluminum. Since then a new element has entered into the industry—the quick-setting hydraulic cement known as “ciment fondu,” in which large quantities of bauxite are used.

No Export Prohibition Expected—Producing Centers.

There has been some question during the past year of prohibiting the exportation of bauxite from France. The rumors to this effect, however, have not been confirmed and it is not now expected that such an action

will be taken by the Government. It is true, however, that the French aluminum factories are expanding their productive capacity and, unless there is a considerable increase in bauxite production, prices of red bauxite suitable for refining may increase substantially in the near future.

The deposits of red bauxite are concentrated principally in the Departments of Var and Bouches du Rhone. The ore is shipped in cargo lots from St. Raphael (Var) and Port de Bouc (Bouches du Rhone).

Additional information regarding minerals appears in this issue under the following sections:

Cable review, Far East: British Malayan trade advanced.

Tariffs and Trade Regulations:

Bolivian export duty on coffee revised.

Cuban duty on gasoline removed and sales tax substituted.

“Foreign trade opportunities.”

IRON=STEEL=HARDWARE

Luther Becker, Chief, Iron and Steel Division

FURTHER DEPRESSION OF BRITISH IRON AND STEEL INDUSTRY

Acting Commercial Attaché Mowatt M. Mitchell, London, May 30

The price cuts on British iron and steel have not particularly stimulated orders, although pig iron has been selling at a figure enabling close competition with the Continent. Finished iron and steel prices have been on the downgrade. At the last of May two blast furnaces at Barrow and two at Milton closed down, leaving only 9 furnaces in blast in the North Lancashire and Cumberland district, as against more than 20 in constant operation in pre-war days. These furnaces were closed down in an effort to reduce the 30,000 tons of pig iron in stock.

Order Secured Through Quick Delivery.

Some measure of satisfaction was found in the fact that British builders secured practically the entire order for locomotives for the Egyptian State Railways, although all British bids were very substantially above German, French, and Italian offers. The British bids were accepted on the grounds that necessarily expeditious delivery could be secured only in Great Britain. If this is true, the elation at the securing of the orders should be more than offset by the realization that it is the idleness of British plants as compared with the activity of continental plants which made it possible.

Foreign Markets for United States and United Kingdom Iron and Steel

Despite the fact that the exports of iron and steel from the United States during the first quarter of 1925 were equivalent to only 42 per cent of the British exports, sales of the American products outstripped those of British goods in several important foreign

markets, notably Canada, Japan, Mexico, and Cuba. The principal purchasers of British iron and steel were India and Ceylon, Australia, Argentina, British South Africa, the United States, and New Zealand, in the order named.

Two Leading Markets are British Dominions.

The following table indicates the comparative strength of the two countries in their more important world markets during the first quarter of 1925:

Iron and steel exports from the United States and the United Kingdom during the first quarter of 1925

Countries of destination	United States		United Kingdom

Argentina is Best Market for United States Metal Lath

The United States exports of metal lath, which increased considerably in 1924 over 1923, were consigned mostly to Latin American markets. Shipments to Argentina totaled 446 gross tons, valued at \$76,822, outranking those to any other country. Mexico was next in importance with 275 tons, valued at \$49,238. Other prominent American markets were Cuba (165 tons), Brazil (158 tons), Peru (129 tons), Colombia (100 tons), Honduras (91 tons), and Venezuela (83 tons).

Notable Increases in Exports to Latin America.

Exports to Cuba amounted to only 28 tons in 1923; those to Brazil, 52 tons; Colombia, 42 tons; and Venezuela, 44 tons. Several of the lesser South American markets, which took little or no metal lath in 1923, consumed a fair tonnage the next year.

The improved trade in 1924 was especially noticeable in the case of Central America. The exports to Honduras increased from 1 ton in 1923 to 91 tons in 1924; while those to Costa Rica for the respective years were 8 tons and 70 tons; Nicaragua, 2 tons and 32 tons; Panama, 4 tons and 19 tons; Salvador, 10 tons and 13 tons; and Guatemala, 2 tons and 4 tons.

Heavier Shipments to the Far East.

Japan was the leading purchaser of American metal lath in the Far East, 167 tons, valued at \$31,525, having been shipped to that country during the year. China and Hongkong together took only 1 ton in 1923 but accounted for 154 tons, valued at \$20,553, in 1924. No shipments to Kwangtung were recorded in 1923, while those in 1924 amounted to 92 tons.

The chief markets, in the order of their importance, for United States exports of metal lath in the first quarter of 1925 were Argentina, Japan, Venezuela, Cuba, Canada, Australia, Brazil, Mexico, the United Kingdom, Colombia, and Peru.

Position of United States in the Chilean Iron and Steel Market

Imports of iron and steel from all countries into Chile during the first quarter of 1925 included 1,951 gross tons of pig iron, 4,750 tons of bars, 934 tons of corrugated galvanized sheets, 1,814 tons of steel sheets, 1,310 tons of tin plate, and 2,276 tons of wire. The United States exported to Chile in the same period 56 tons of pig iron, 334 tons of bars, 614 tons of galvanized sheets, 73 tons of steel sheets, 887 tons of tin plate, and 150 tons of wire, screening, rope, etc. However, the latter figures are from the United States customs statistics and are probably about a month in advance of their registration at Chilean ports as imports into that country.

Difference in Customs Classifications.

However, the total of iron and steel exported from the United States to Chile amounted to 7,521 gross tons. The explanation for the apparent discrepancy between this total and the total of the above items, which constitutes about 16 per cent of the total importation of similar goods into Chile, lies in the difference in customs classifications. Many important items in the United States steel exports to Chile, including some 2,470 tons of rails and accessories, 246 tons of cut nails, 612 tons of pipe of various kinds, and 1,056 tons of plain structural shapes and fabricated plates,

are not listed so as to be distinguishable in the Chilean import statistics. Consequently, it is impossible to determine exactly what share of the total trade is supplied by the United States.

Trade Maintained in 1925—Exports of Iron Ore.

Chilean imports of iron and steel totaled practically the same for the first quarter of 1924 as in the 1925 period, but were distributed as follows: 555 tons of pig iron, 7,268 tons of bars, 619 tons of corrugated galvanized sheets, 1,058 tons of steel sheets, 1,802 tons of tin plate, and 1,773 tons of wire.

During the first quarter of 1925, Chile exported 264,985 tons of iron ore. Imports of this article into the United States from Chile during the same period amounted to 225,700 tons, or 85 per cent by comparison. During the corresponding period of 1924, Chile exported 277,445 tons of iron ore.

Iron and Steel Notes

Australian Steel Companies Merge.

The Ryland Brothers (Australia) (Ltd.), manufacturers of wire and wire netting in Newcastle, New South Wales, has been merged with the Broken Hill Proprietary Co. (Ltd.), which controls the pioneer iron and steel works at Newcastle. The wire netting and wire rope manufacturing works adjoin the Newcastle steel works, where their supplies of steel have been obtained. The chief advantage to Rylands Bros. in the present merger is that it will be able to avail itself of the Broken Hill Proprietary Co.'s large selling organization and shipping facilities. (Trade Commissioner E. G. Babbitt, Melbourne.)

Important Iron Deposits in Western Australia.

An outcrop of hematite forming the crest of a ridge along the southern side of the Koolan Island on the northwest coast of Australia measures 100 feet thick at two points. This was apparently all solid ore, and it is estimated that the deposit contains 76,000,000 tons of ore above high-water mark. Analyses of four samples taken from the island showed the presence of 94, 92, 95, and 97 per cent of ferric oxide, no trace of sulphur, and of phosphorus only 0.14, 0.03, 0.03, and 0.02 per cent, respectively. (Trade Commissioner E. G. Babbitt, Melbourne.)

German Association Terminates Control of Galvanized Sheet Prices.

The Union of Rhenish-Westphalian Galvanized Sheet Trade has freed from its price control a district which includes the left Rhine bank and even extends to the right Rhine to include Dusseldorf and adjoining locations as well as the regions around Wesel, Rees, Emmerich, and Bochart, as far as the Dutch border. In these districts the German producers are now permitted to control their retail prices on galvanized sheets and also the wholesale prices on large orders direct to consumers. This action was taken as the result of Belgian competition. (Trade Commissioner William T. Daugherty, Berlin.)

SPECIALTIES

Edward J. Breysere, Acting Chief, Specialties Division

OFFICE-EQUIPMENT FAIR SHOWS GERMAN PROGRESS

Assistant Commercial Attaché Douglas Miller, Berlin

The fifth Office Equipment Fair, held in Berlin from April 30 to May 11, was primarily an exhibition of what German manufacturers are able to offer in these lines rather than an opportunity for the sale of equipment in large quantities. The fair was an excellent indication of the rapid strides that Germany is making in its return to normal business conditions. It also illustrates the great extent to which American ideas of office management have captured the German imagination.

Removal of Import Restrictions Creates Competition.

The most remarkable feature of the exhibit was in the large number of firms offering models of various types of office equipment but the inauguration of the new tariff which will probably become effective in July of this year, with the consequent removal of import restrictions on foreign machines, makes doubtful the possibility that the majority of German made machines will be able to survive direct competition with the outside world.

Many Makes of Typewriters Shown.

Fifteen makes of typewriters were exhibited at the fair. The Mercedes featured an electrically controlled machine and the A. E. G. had a number of small patented devices of doubtful value which, although familiar in the United States, have never attained any considerable success. Prices on the small portable machines varied from 200 to 300 marks while the larger makes were priced from 500 marks up. Many of the individual companies exhibited several models.

Adding, Calculating, and Duplicating Machine Exhibits.

Exhibits of adding and calculating machines were rather disappointing and very little business was carried on in this line. The Tasma, Rheinmetall, Bruns-viga, and Conti-Addi were the principal exhibitors. A large display of duplicating machines was in evidence and included the makes Millotype, Stuco-Klein, Roto-Rekord, Werbearbeit, Freho, and Dapag. This exhibit also included one British and one American duplicator and an interesting photostat apparatus of German manufacture, the Kontophot Goerz.

Filing Systems.

The following makes of German filing systems were in evidence: Metlipzky, Regis, Oda, Dehomag, Definitiv, Fortschritt, and Schroeder-Foerster. Although little business is being done by these firms, their plans are ambitious.

New German Duplicating Machine.

One of the most interesting exhibits was the new German duplicating machine, the Rotaprint, manufactured by the Deutsche Maschinenbau-Vertriebs-Gesellschaft, Berlin. The Rotaprint is operated on a new principle, a patent for which is already applied for in the United States. A machine costing about 2,400 marks is claimed to make 6,000 reproductions in

an hour without a specially trained operator. The Rotaprint reproduces type pages, printed pages, and pen and ink drawings. Steel engravings and prints of wood cuts can also be reproduced and the machine seems well adapted for such work as Chinese characters, architect drawings, and sheet music. Colors will not reproduce in more than one color at a time.

In the case of typed material a specially prepared sheet is placed in the typewriter and the machine is operated in the same manner as an ordinary stencilled copy for a mimeograph. The sheet is smeared with a chemical preparation and passed through a series of rollers, after which prints can be made from the same roll.

Decline of Thuringian Glass and Porcelain Industries

Assistant Commercial Attaché Douglas Miller, Berlin, Germany

The porcelain industry in Thuringia has had better business in the spring months than was expected. Table sets are in good demand, but at prices which allow little profit. The luxury tax, which is a 10 per cent turnover tax, has been keeping down sales of artistic porcelain, cut glass, and similar articles.

The electrical industry has placed its regular orders for porcelain for insulating purposes, but sales for export are slack. The price of kaolin has been increasing regularly during the last few months. Porcelain toys, such as dolls and animals, are in very poor demand. Business in these lines is practically at a standstill.

Glass Industry Becoming Concentrated.

The glass industry in Thuringia is also in fairly good shape. A number of furnaces, which were laid off last year, are working again. The Stinnes firm, which is operating a number of American patented machines, has been getting a large proportion of the business in glass tubing, so that small independent producers are finding increasing difficulties. A number of independent glass plants in Thuringia are already closing down. The industry is becoming increasingly concentrated.

Low Prices on Optical Goods.

The optical industry complains of low retail prices, which it is claimed are lower than before the war. Exports are also very slack in this line. The making of glass eyes has almost completely stopped. This industry was extremely important right after the war, but the demand has now been satisfied and large stocks are on hand. Satisfactory orders for Christmas-tree decorations are now being placed. A number of these articles are made from glass and are giving good business to the Thuringian factories. Large orders for this line of goods were placed at the Leipzig Spring Fair and during subsequent weeks.

In general the home industry in this district is on the decline, whereas more efficiently organized factories working on modern lines are getting a greater share of the business every year.

Report on Antwerp Ivory Sales Available

Sales of ivory, including hippopotamus teeth, in Antwerp, Belgium, amounted to 63,137 kilos and sales of rhinoceros horns totaled 75 kilos at the second quarterly ivory sale of the present year which was held in Antwerp in May according to a report from Consul General G. S. Messersmith. The sale was less active than the corresponding one held in 1924. A complete statement showing the quality and quantity of ivory sold is on file in the Specialties Division and will be

loaned to interested firms upon their request. Refer to file No. 172900.

RUBBER

P. L. Palmerton, Chief, Rubber Division

FINNISH MARKET FOR RUBBER PRODUCTS

Assistant Trade Commissioner Emil A. Kekich, Helsinki

Finland's trade in rubber goods has been developing rapidly during the past four years. Imports of rubber goods increased from 487,000 kilos, valued at 25,624,000 Finnish marks (about \$492,000 at the average dollar exchange rate) in 1921, to 656,000 kilos, valued at 34,779,673 marks (about \$872,000 at the average rate of exchange) in 1924. During this period tire imports increased from 64,626 kilos, valued at 5,701,048 marks (\$109,487), to 283,377 kilos, valued at 14,819,000 marks (\$371,776). The only rubber products of importance manufactured in Finland are footwear and belting, the former making up a large share of the trade.

Will Require Over 15,000 Automobile Casings This Year.

Finland is a comparatively new motor vehicle market—a development of the past few years. It is estimated that 10,500 casings and 12,000 tubes were consumed in the country last year. Registration figures of cars and trucks in the country are expected to increase during the current year to approximately 10,000, and of motor cycles to 4,000. It is therefore expected that between 15,000 and 20,000 casings and between 17,000 and 22,000 tubes will be consumed. The average replacement of tires is figured at about 2.5 to 3 tires annually per vehicle.

United States Tires in Lead.

Tires manufactured in the United States have consistently maintained the lead in Finland and controlled an average of 45 per cent of the market requirements during the past four years. Pneumatic tires imported from the United States increased from 12,000 kilos, valued at 1,394,000 marks (\$26,600) in 1921, to 82,110 kilos, valued at 4,897,350 marks (\$122,863) in 1924. The closest competitor of American tires in the past year was Dunlop, which leads in individual sales with about 30 per cent of the business.

Imports of solid tires increase from 17,000 kilos in 1921, to 71,894 kilos in 1924, the bulk being furnished by German and French manufacturers. However, the solid-tire trade in Finland provides no future outlook, since legislation will prohibit their use next year.

The second important item in Finnish imports of rubber goods is that of bicycle tires and rubber parts for bicycles and motor cycles, which increased from 112,000 kilos in 1921 to 153,000 kilos in 1924. The bulk of this trade is controlled by Great Britain, Denmark, and Germany.

Competition Keen in Tire Trade—Balloon-Tire Market Growing.

Dunlop, Michelin, and Englebert tires experienced record sales in Finland in the past year, although the volume of business of the latter two makes is still comparatively small. American tires have intermittently been subjected to price cuts on the part of European makes in the past, but for the present this situation is apparently more or less settled. The German Continental and Peters Union have been losing ground since 1923. The British Rapson tire has been introduced, but apparently is too expensive for the present market.

The demand for balloon tires is rapidly growing, since most of the imported cars are thus equipped, and these tires are adapted to Finnish road conditions, while solid and cushion tires have been ruled against as detrimental to the roads. The bulk of present requirements is for inch-clincher and straight-side tires. Metric sizes, which formerly prevailed on account of the large proportion of European cars, are falling off steadily in relative importance.

Outlook for the Tire Trade.

There are now some 10 well-known makes of American tires in Finland, and conditions in the motor vehicle trade will undoubtedly cause increased business for the American tire manufacturers represented. Whether or not financial returns will be commensurate with efforts is uncertain. Notwithstanding the limited market, highly competitive conditions prevail. Dealers have suffered losses, owing to price competition, and at best will probably be forced to operate on a comparatively small margin of profit for some time to come. Thus far there has been no organized movement for testing tires, and experience is still so limited that individual owners of cars and trucks are not able to judge qualities offered. Money conditions are still tight, and credit demand insistent, which also acts as a deterrent to profitable turnover in the tire trade. Once the market for cars and trucks has definitely expanded beyond what may be called the pioneering stage, it is probable that some of these difficulties will be obviated.

Locally Manufactured Rubber Footwear Increasing.

Finland has for many years been rather an important consumer of rubber footwear, and until recently

its requirements have been largely supplied by importation. Imports, which in 1924 totaled 105,000 kilos, decreased almost 50 per cent compared with the previous year. Prior to the war, Russia was an important supplier of rubber boots and shoes to Finland, but this trade amounts to nothing at present. In 1921, the United States supplied about 30 per cent of Finland's imports of rubber boots and shoes, which amounted to 101,303 kilos—due chiefly to the lifting of trade restrictions made following the war and the abnormal demand for all classes of merchandise at that time. At present, the American rubber footwear trade in Finland is negligible, the bulk of imports coming from Germany and Sweden.

Domestic production has been increasing rapidly in the past few years, indicating that foreign competition is likely to diminish in the future. In 1914, only 208,000 pairs of rubber boots and shoes were manufactured in the country, but in 1923 the production increased to 1,194,467 pairs, valued at 41,577,600 Finnish marks.

Increased Imports of Crude Rubber.

Imports of crude rubber and gutta percha increased from 185,000 kilos in 1921 to 506,000 in 1924. The manufacture of rubber goods is carried on by only one firm of any importance, namely, Finska Gummifabriks A/B., Nokia, Finland.

Outlook in Other Rubber Lines.

Finland is dependent on importation for rubber hose, rubber packings, surgical and sanitary articles, household articles, novelties, etc. The market for these products is still comparatively limited, and is characterized by lack of liquid capital, involving small turnover of stocks, and credit terms. Owing to their proximity to Finland, Germany and Great Britain control the trade in these products. American firms doing business in these lines and contemplating this market are best guided by the fact that geographically and in other respects Finland is part of the Scandinavian group of countries. The Finnish market may prove—and in certain cases does prove—to be worth while in conjunction with the business done in Denmark, Sweden, and Norway.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

GAIN IN U. S. TRADE IN LEATHER MANUFACTURED GOODS

The United States exported during the first five months of 1925 leather manufactured goods valued at \$9,141,638, an increase of 4.1 per cent over the trade in the corresponding period of 1924.

Leather Footwear Shows Appreciable Advance.

Exports of leather footwear amounted to \$7,319,850 and comprised 1,269,190 pairs of boots and shoes for men and boys, 1,102,097 pairs of shoes for women, 697,957 pairs of children's shoes, 67,012 pairs of slippers, and 33,223 pairs of athletic and miscellaneous footwear. The exports of this class of goods show an increase of 10.7 per cent in quantity and 7 per cent in value over those of the first five months of 1924.

A seasonal fluctuation prevailed, with a rise from 474,271 pairs of footwear in February to 725,251 pairs in March, followed by a slight downward trend to 718,788 pairs, valued at \$1,701,086, in May. The May exports of boots and shoes for men and boys (288,625 pairs) were about 4,000 pairs less than those for April; women's shoes, about 14,000 pairs less; and slippers, 4,000 pairs less. Children's shoes, however, show an increase of 10,000 pairs, and athletic, etc., about 4,000 pairs.

Leather Belting Trade Improves—Harness Exports Continue Decline.

Leather belting, second in importance, according to the value of exports (\$740,023), during the first five months of 1925 showed increases of approximately 70,000 pounds and \$90,653 over the corresponding period of 1924. The peak of the 1925 trade was touched in April and was followed by a decline in May.

The harness and saddlery export trade of 1925 continued to decrease, from 167,405 pounds exported in January to 53,256 pounds in May.

Other Leather Manufactures Register Increased Trade.

The exports of leather gloves in May show a slight increase over the quantity in April, but a decided decrease compared with the monthly average exports in the first five months of 1924. Bags, suitcases, pocket-books, and purses were exported in increased volume.

The following table gives comparative figures relating to the first five months' export trade of 1924 and 1925:

United States exports of leather manufactured goods

Articles	First five months, 1924		First five months, 1925		Increase (+) or decrease (-)
	Quantity	Value	Quantity	Value

Total.....	8,750,970	9,141,638	+390,668

United States Imports of Leather Footwear

The United States imported 691,758 pairs of leather footwear during the first five months of 1925, as compared with 884,811 pairs the corresponding period of 1924. The decrease in imports was due to smaller quantities of leather slippers and dutiable footwear brought into the United States as the leather boots and shoes (free) increased from 197,929 pairs to 307,697 pairs.

Leather Boots and Shoes.

The imports of leather boots and shoes during the first five months of this year rose sharply, from 37,700 pairs in January to 95,814 pairs in February, followed by a drop to 63,779 pairs in March, a slight upward tendency in April, and a decline in May to 37,656 pairs or practically the January level. The May, 1925, imports

comprised 18,717 pairs of leather boots and shoes for men and boys (value \$84,706), 16,834 pairs for women (value \$68,887), and 2,105 pairs for children (value \$1,982). The United Kingdom supplied 11,051 pairs, 9,287 of these being for men and boys, 1,636 pairs for women, and 128 pairs for children. The second important source was Switzerland, 8,574 pairs having been imported from that country, of which 5,686 pairs, valued at \$31,775, were for women. The third important import market was Germany, which supplied 7,967 pairs, comprising 4,054 pairs, valued at \$11,998, for men and boys; 2,632 pairs, valued at \$4,169, for women; and 1,281 pairs, valued at \$1,145, for children.

See "Foreign trade opportunities."

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

WIRING PRACTICES AND MARKET FOR WIRING MATERIALS IN SWEDEN

Trade Commissioner T. O. Klath, Stockholm

Sweden is very far advanced in the use of electricity for domestic and industrial purposes as well as in the manufacture of electrical machinery and supplies of various kinds. Throughout the country, power generated by numerous hydroelectric plants is in general use, and to meet the resulting large requirements for equipment an important domestic electrical industry has been developed. The largest concern, the Swedish General Electric Co. (Asca), as well as several smaller manufacturers, in addition to providing for most of the domestic demand, also export Swedish electrical products to foreign countries in considerable quantities.

Wiring Practice in Sweden Conforms to that of Germany.

Domestic manufactures consist principally of motors, generators, and large machinery rather than of wiring devices and accessories. German influence prevails in the entire Swedish electrical industry, but many electrical engineers employed by the Swedish manufacturers have studied in the United States and are familiar with American wiring devices and practices. However, existing legislation and rules governing installations appear to conform with German practices¹ and, consequently, wiring materials and devices made in Germany or manufactured in Sweden according to German standards control the market.

The excellent quality of many American electrical products of this class is admitted, but until existing regulations and customs are changed, or American products are modified to meet local requirements, there appears to be but slight opportunity to market them in Sweden.

Electrical Devices Not Inspected by Private Association.

Electrical devices and wiring materials are not inspected in Sweden by any private organization similar in its functions to the American Underwriters' Laboratories. There has been some demand for this service, however, and a movement is now on foot to form the necessary organization.

Swedish Government Issues Wiring Regulations.

At present, the Swedish Government issues regulations relative to wiring materials and prescribes rules for installation work, which must in all cases be carried out by recognized and approved firms or individuals. Swedish electrical experts are of the opinion that most devices made according to the wiring practices of the United States, particularly switches, do not fulfill the Swedish requirements, and, therefore, can not be sold. The Swedish Government, however, maintains a regular inspection service, Elektriska Inspektionen, a section of Kommerskollegium, Stockholm (Royal Swedish Board of Trade) and American manufacturers are at liberty to forward samples to that office for a decision as to their acceptability. This service is free of charge.

Insurance Companies Do Not Maintain Regular Inspection Service.

Insurance companies maintain no regular inspection service, but for their own protection make a practice of examining wiring in factories, stores, and other places, or requiring proof that the installations meet requirements. Subsequently, the insurance companies inspect factory wiring at irregular intervals, sometimes only every three years.

Municipal Ownership of Electric Service Prevalent in Sweden.

In nearly all cases electric service in Sweden is controlled by the municipalities or the National Government, and private ownership of utilities familiar in the United States is practically unknown. This situation facilitates inspection and uniformity of practice, but at the same time tends to make it very difficult to change or modify wiring rules and practices.

Bergmann Tubing and Iron Conduit Generally Used.

In wiring dwellings of the better class, Bergmann tubing and, to a lesser extent, rigid iron conduit are generally used, these being concealed in the walls and the ceiling under the plaster. This practice is followed almost exclusively in the larger cities, where most people live in apartment houses. In smaller towns and in the country the same rule applies for detached houses. In some buildings, especially in garages, rigid iron conduit is sometimes placed on the surface. Most buildings in Sweden are constructed

¹ See COMMERCE REPORTS, December 15, 1924, for "German wiring practice and market for materials."

substantially and are similar to average American houses and apartments.

Wiring on Porcelain Knobs Sometimes Used.

Wiring on porcelain knobs on the surface of walls and ceilings is sometimes used, principally in cellars and damp localities, but wiring in cleats is not common. The use of flexible twisted pair on small porcelain button insulators is still practiced, but it is probable that this mode of wiring will be prohibited in the future, while wiring on knobs and through tubes concealed in the walls is unknown. Armored cable is used only for special purposes. The use of lead-covered wire is permissible in stables and in localities exposed to dampness or corrosion, but it must be covered with iron armor. Wiring in wooden casing or molding is prohibited.

Metric Copper Wire Gauge is Standard in Sweden.

The metric copper-wire gauge is standard in Sweden, and the minimum wire permitted for use in wiring dwellings must have a cross-sectional area of 1 square millimeter. For fixtures and other devices, wire having a cross-sectional area of 0.5 square millimeter may be installed. The usual rubber-covered wire is required in all cases.

Rotary and Push-Button Switches Most Common.

Rotary switches and push-button switches are most commonly used. The tumbler type is also employed, but to a lesser extent. Edison screw sockets are always used, bayonet sockets being almost unknown. Special receptacles or connections near the floor, consisting usually of a porcelain two-pin fitting placed on the surface with a glass ring attached to the wall in back of it, are provided in most houses. Such glass rings, about 3 inches in diameter, also form the base of rotary switches.

German Diazed and Edison Screw Plug Fuses Used.

The fuses ordinarily used are the German Diazed and the Edison screw plug. American cartridge-type, "open link" and British "thumb-grip" types are not employed. Safety types of combined fuse block and switch units in metal boxes, as made in the United States, are unknown in the Swedish market, but this combination in cast-iron boxes is used to a great extent in industrial establishments.

Electric Meters Usually Installed in Each Household.

As a rule, electric meters are installed for each household or user of electricity. In some instances the consumer agrees with the electric-power company to pay an annual fixed rate per light or motor. In order to prevent the consumer using more current than he is paying for a special current control is installed, which after blinking a short time finally shuts off the current when the agreed limit is exceeded. Meters made in Germany appear to be universally used, the Siemens-Schuckert being one of the most common. The ordinary capacities of meters are from 3 to 10 amperes, the 5-ampere size being usually installed. The customary consumer's voltage is either 110 or 220 volts.

The wiring rules do not require that any special form of conductor be used for wiring old dwellings in Sweden.

Czechoslovak Regulations Governing Importation of Radio Apparatus

Commercial Attaché James F. Hodgson, Prague

Interest in radio is growing rapidly in Czechoslovakia and with the completion of the broadcasting station recently contracted for, a further stimulation of the popular demand for radio equipment is predicted. Czechoslovakia may be considered a growing, though limited, market for American radio equipment.

All radio apparatus imported into Czechoslovakia is subject to license granted by the Czechoslovak ministry of commerce acting in conjunction with the ministry of posts and telegraphs.

There are at present approximately 40 manufacturers of radio apparatus in Czechoslovakia. The total number of dealers and importers is about 200.

Preliminary Steps to Be Taken by American Shippers.

American firms desirous of placing radio apparatus on the Czechoslovak market must take the following preliminary steps: A blue print or other drawing, in triplicate, of the wiring of their receiving sets must be submitted to the radio section of the Czechoslovak ministry of posts and telegraphs for approval as to design. This blue print or drawing must be accompanied by a formal application for testing from a licensed Czechoslovak importer of such equipment. Documentary stamps with a value of five Czechoslovak crowns (\$0.15) must be attached. In lieu of submitting a design, the actual apparatus to be imported, accompanied by a formal application for testing, may be submitted for approval. The use of regenerative receiving sets is absolutely prohibited in Czechoslovakia.

Electrical Trade Notes

Austria to Electrify Additional Railroads.

Austria will, within the next three years, electrify an additional 300 kilometers of its railways, and will purchase upward of 70 electric locomotives. A total of \$18,000,000, part of the remaining proceeds of the International Loan for Austria, recently released for this purpose by the League of Nations finance committee, will be used to finance this electrification. (Cable from Commercial Attaché H. Lawrence Groves, Vienna, June 13.)

Telephone Concession Granted in Tamaulipas, Mexico.

The Mexican Telephone & Telegraph Co., which was established 37 years ago and now has 32,000 miles of line in 10 Mexican States, has been granted a telephone concession by the Congress of the State of Tamaulipas to install an automatic telephone system in Tampico. Further, several small lines in the State of Tamaulipas will be taken over, consolidated and ultimately connected up with existing lines. According to the concessions, work must be begun within eight months of the approval of the plans, and the Mexican Telephone & Telegraph Co. is obligated to have its lines into Matamoros within four years. Other companies, among which was the Ericsson Telephone Co. (Swedish) also placed bids for this concession. (Trade Commissioner George Wythe, Mexico City.)

CHEMICALS

Charles C. Concannon, Chief, Chemical Division

CHEMICAL NEWS IN BRIEF

German Imports of Cyanamide from Switzerland Limited.

In the treaty of commerce recently made between Germany and Switzerland, the amount of cyanamide originating in Switzerland, which can be imported to Germany, is limited to 2,500 tons per year. (Trade Commissioner Daniel J. Reagan, Paris.)

Increase in Chemical Imports into Mexico.

One of the most substantial and significant increases in the importation of American goods through Nuevo Laredo, Mexico, occurred in the movement of chemical and drug products—from 5,900 tons in 1923 to 9,700 in 1924, or a gain of more than 60 per cent. Commodities contributing to the increase included muriatic and sulphuric acids, calcium carbide, soda ash, drug supplies generally, hydrogen peroxide, and arsenic. (Consul Harry L. Walsh, Nuevo Laredo.)

Gum Copal and Indigo Exports from Soerabaya.

Exports of gum copal from Macassar to the United States dropped off considerably in 1924—only 3,120,317 pounds (\$188,730), as compared with 11,552,010 pounds (\$720,485) in 1923. Poorer prices were largely responsible. The United States still held first place as a purchaser. Exports of natural indigo showed a slight increase, about 8,500 kilos. Japan was the leading country of destination and Soerabaya the port of shipment. (Consul Rollin R. Winslow, Soerabaya.)

Synthetic Ammonia Price War in Germany.

A price war has developed between the Badische Aniline & Soda Fabrik and the Rombacher Huettenwerke. Liquid ammonia formerly was priced at 2 marks per kilo but Rombach competition has forced the Badische to meet it with an export price as low as 1.25 to 1.50 marks. It so happens that the Ammonia Sales Union, an integral part of the Nitrogen Syndicate, selling ammonia salts for fertilizer, does not include Rombacher Huetten. The existing German syndicates, conventions, and other organizations make it unusual for an "outsider" to break the market in this way. (Trade Commissioner William T. Daugherty, Berlin.)

South Africa a Source of Whale Guano.

Practically the entire output of whale guano at the Durban plant in South Africa is absorbed by the domestic market, and the local demand is still considerably larger than the supply. There will be no export at present accordingly, but Durban may represent a possible future source of supply. The guano exported to the United States from South Africa doubtlessly was shipped from Cape Town. The following quantities of whale products were exported to the United States in 1923: Whalebone meal, 604,000 pounds, valued at £1,510; whale manure, 731,680 pounds, valued at £3,321; and whale residue, 2,364,640 pounds, valued at £10,824. (Consul Harry M. Lakin, Durban, Natal.)

New Installations of the Claude Process in France.

The Société Chimique de la Grande Paroisse recently announced that the number of Claude units for the synthetic production of ammonia increased in 1924,

particularly at the Béthune mines, at the Saint-Etienne coal mines, and in Belgium and Italy. Other units are under construction at the Decazeville and d'Aniche mines in France, and at Felguera in Spain. Licenses also have been granted to the European Industrial Exploitation Co. for Poland and to the Azogeno Co. for Italy. The Grande Paroisse Co. has participated in the organization of the Ammonia Co. of Europe, which plans to exploit the Claude patent in Central Europe, and also of an American corporation which was recently formed for the exploitation of this process in the United States. (Trade Commissioner Daniel J. Reagan, Paris.)

Cold-Water Paint Market in Colombia.

American prepared paints dominate the Colombian market. Several other countries compete in this line of goods, but there is little sale of their products. British paint manufacturers, however, offer considerable competition in paints in the form of paste, at present purchased from England in larger quantities than from the United States, because of the lower cost of English paint in this form delivered in Cartagena. The difference in price is due to a slightly lower original cost, to lighter packing, and to cheaper freight. British paste paints are packed in heavy sheet-iron cans, holding 25 pounds each, and requiring no protective containers. The American, on the other hand, are put up in tin cans or pails similar to those used for liquid paints, which require protective containers for shipment—barrels or cases that add materially to the weight, and therefore to the duty, since duties are assessed upon gross weight of arriving shipments. (Consul Lester L. Schnare, Cartagena.)

Market for Toilet Preparations in Portugal.

There is a rather large and growing local manufacture of toilet preparations in Portugal, and owing to extremely high protective duties a comparatively large market is afforded mediocre goods of this class. The better grades, however, are imported chiefly from France. Prior to 1921 Portugal's total imports of this group approximated 200,000 pounds yearly. Since then they have dwindled to about one-tenth the former quantity and are now exceeded in value by exports. Of the local manufactures, amounting to over 35,000 pounds yearly, 60 per cent goes to Portuguese colonies and about 15 per cent to Brazil. Imports of American-made toilet preparations have fallen off considerably since 1920 as the result of bad exchange conditions and the reentry with fresh vigor of German and French exporters, whose exchange rates have been more favorable to the Portuguese trade. German, French, and English representatives, moreover, make calls in Lisbon, which, so far as is known, no American agent does, regardless of the nearness of his other European calls. A better market apparently is opened to American preparations—if they can be introduced at a reasonable price, so that the purchaser will be tempted to forego the French article. (Consul H. Tobey Mooers, Lisbon.)

Market for Prepared Medicines in Turkey

Trade Commissioner Julian E. Gillespie, Constantinople

During the last year or so the Turkish Government has opened 150 dispensaries in various districts in the interior and plans to open another 150 in the near future. The public-health authorities are studying various projects for introducing sanitary bodies, granting free doctor's services, and distributing drugs in various districts in the interior where malaria, tuberculosis, syphilis, and other diseases are seriously thinning the ranks of the population. This task is rendered extremely difficult because of the Government's lack of sufficient means and the very small number of Turkish physicians available. Doctors and druggists are reluctant to accept a position in a remote district. Local wholesalers of drugs and pharmaceutical products, nevertheless, state that they are receiving more orders for drugs and prepared medicines from districts where drugs had never been handled before.

Domestic Production of Prepared Medicines Negligible.

No industry for the production of prepared medicines exists in Turkey.

A very few of the larger Turkish pharmacies, however, during the last two or three years have attempted to specialize in the production of certain medicines which are easily prepared, and for which no expensive and up-to-date equipment, particular scientific knowledge, and technical experience are required.

Imports Estimated—Entering the Market.

Postwar statistics covering the Turkish importation of prepared medicines are not available. Estimates

given by various informants differ greatly. It would appear, however, that the annual imports of foreign prepared medicines during the last two years reached 1,250,000 to 1,500,000 Turkish pounds (about \$625,000 to \$750,000). Approximately 85 per cent of this trade was with France, Germany, and Great Britain. Direct sales from the United States comprised less than 1 per cent. Certain American products, however, were imported by way of European distributing centers, especially England, and the share of American firms, although indirect, was actually larger than shown by figures.

American prepared medicines are too little known in Turkey. Those firms, especially French, who do a large business, have acquired their success as a result of many years of efficient systematic operation in this market, as well as continuous, efficient, and ingenious advertising. The preference or prejudice for or against a certain product also in a large measure depends upon doctors' recommendations or warnings. In introducing a new line it is essential that American exporters follow the practice of European firms, who have studied the Turkish market for years and are familiar with its peculiar characteristics.

PAPER

John Matthews, Jr., Chief, Paper Division

THE PAPER MARKET OF ALSACE-LORRAINE

Consul Leslie E. Wood, Strasbourg

The Provinces of Alsace-Lorraine comprise the three departments of Haut-Rhin, Bas-Rhin, and Moselle, with a population of 1,800,000 inhabitants. Manufacturing is one of the important industries in this region, and among the principal consumers of paper are the textile, food products, clothing, glass, ceramics, and printing industries.

Paper Requirements.

Wrapping paper is in greatest demand in this district, the textile mills being the chief consumers. Many of the retail stores use little or no wrapping paper, old newspapers being substituted, or the customer bringing a basket or sack in which to carry away his purchases. The textile mills are important consumers of cardboard, which is used by them as centers for bolts of cloth, for skeins, spools, and cartons; and the food products industry uses wrapping paper, including cellophane and vegetable parchment, label paper, and board. The printing industry, centered at Strassburg and Mulhouse, is the second largest consumer of paper. There are three or four printing establishments with several hundred employees each in addition to a number of small plants. One newspaper has a daily circulation of 100,000, and there are 8 or 10 others with

an average daily circulation of 15,000 each. The pages of the newspapers are smaller than those in the average American newspaper, and the number of pages less, averaging only 8 to 12 pages to an issue.

The Domestic Paper Industry—Imports.

The paper industry of Alsace-Lorraine provides largely for the needs of the district, the local mills producing wrapping paper, fine white and colored papers for writing, printing, and chromolithographic work, linen paper, high-grade tissues, grease-proof and vegetable parchment papers, photographic paper, cardboard, and a number of paper and board specialties, such as spools, buttons, household articles of papier-mâché, lacquered fiber, and electric insulation material. Sweden and Germany are the principal sources of supply of imported papers, the former furnishing kraft wrapping paper and the latter newsprint. An imitation kraft paper manufactured by a firm in the Department of Nord is a close competitor of the Swedish kraft. The only American product observed on sale at Strasbourg was a brand of individual drinking cup carried in stock by a dental supply house.

Elimination of Wholesale Dealers in Paper Trade.

A recent number of the bulletin of the Strasbourg Chamber of Commerce comments on the decline during the past several years in the wholesale paper trade, due to the fact that the mills are willing to deliver

small quantities and to send their traveling salesmen to call on retailers. This movement, which had its origin in a direct contact between the mills and large consumers, has now spread to the smaller dealers, and there are consequently few wholesalers of paper left; those classified as such usually carry on a retail business as well.

Side Runs of the Paper Trade

Exports of Rags from Stuttgart District to United States.

Shipments of cotton rags from the Stuttgart consular district to the United States during 1924 amounted to 20,922,000 pounds, according to a report from Consul Conger Reynolds. Exports at the end of the year were unusually high, and it is understood that they have fallen off considerably at the present time owing to the advance in prices on the domestic market.

Growth in the Italian Newsprint Industry.

Exports of newsprint during the past two years have assumed an increasing importance in the Italian paper export trade, representing 38 per cent in 1923 and 44 per cent in 1924 of the total paper shipments. Approximately 90 per cent of the entire newsprint production is the output of one mill which utilizes poplar trees for the manufacture of pulp. France and South America are reported to be the leading markets for Italian newsprint.

Imports of Paper into Canton.

Receipts of paper, including cardboard, at the port of Canton during 1924, were valued at \$1,440,025, an

increase of \$400,308 over 1923 and of \$240,025 over 1922. Approximately one-fourth of the imports were from the United States, the remainder coming almost altogether from Japan and Sweden. Advertising by means of blotters is just beginning to be popular in this district. (Consul General Douglas Jenkins, Canton, China.)

Indian Mills Complain of Foreign Competition.

The paper industry of India has been passing through a critical period, judging from the testimony given before the Tariff Board; the mill owners are operating at a heavy loss, and unless some relief is afforded by the Government through the means of tariffs or bounties the industry will have to be abandoned. Indian paper consumption is estimated at 85,000 tons a year, of which 32,000 tons are produced in the domestic mills during normal years. The output during the past two years, however, has been somewhat under this figure owing to heavy imports of foreign papers. (Trade Commissioner Donald Renshaw, Calcutta.)

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

UNSATISFACTORY CONDITIONS IN BRAZILIAN LEATHER TRADE

Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro, June 15

Brazil is only buying kid, fancy kid (stamped), side leather, and sheepskins for lining from the United States. Business is slow at present, owing to the scarcity of money, and many large firms are selling at reduced prices in order to continue operations. Collections are slow and extensions are being asked. The market looks mainly to price and will, for instance, buy Argentine leather at 4 milreis in preference to the American, which sells for a trifle more, even though the difference in quality is in favor of the latter.

Situation in the Czechoslovak Hide and Leather Market

Commercial Attaché James F. Hodgson, Prague, May 30

The Czechoslovak leather market continues dull, with very few sales being reported. Collections are slow and the reluctance of dealers to extend credit is proving an important factor in the slackness of the leather trade. Leather prices are practically stationary but with any improvement in the demand would tend to rise, owing to the relatively high prices being paid for hides.

Notable Increase in Exports.

The value of exports of leather and leather goods in the first four months of 1925 was 167,000,000 Czech crowns, compared with 82,000,000 crowns in the corresponding period of 1924. The principal countries of destination for these products and the value of the trade are shown in the following table:

Exports of leather and leather goods from Czechoslovakia

Countries	First four months—	
	1924	1925
	Crowns	Crowns
Germany.....	16,000,000	61,000,000
England.....	19,000,000	25,000,000
Poland.....	7,000,000	21,000,000
Austria.....	9,000,000	11,000,000
Yugoslavia.....	11,000,000	9,000,000
Netherlands.....	2,000,000	5,000,000
United States.....	2,000,000	5,000,000

Additional information regarding hides and leather appears in this issue under the following sections:

Tariffs and Trade Regulations:

Swedish commercial treaty concession on Spanish hides.

Czechoslovak export restrictions on kid skins relaxed.

Removal of Hungarian hide export restrictions considered.

"Foreign trade opportunities."

List of "Special circulars available."

COAL

Charles P. White, Chief, Coal Division

DUTCH GOVERNMENT COAL MINES SHOW PROFIT

Consul Edward A. Dow, Rotterdam

The coal produced in the three Government mines in the province of Limburg, amounting to 2,942,717 metric tons, comprised about one-half of the total production in the Netherlands during 1924. The total output for 1924 is estimated at 5,900,000 tons compared with 5,600,000 tons in 1923. Sales in 1924 totaled 2,891,731 tons, while stocks at the end of the year were 38,020 tons.

Declare Dividend in Addition to Reserve Accumulation.

Gross profits of these public mines totaled 7,316,702 florins during 1924. After deduction of 3,816,702 florins for depreciation and 1,160,000 florins for reserves, the net profit was sufficient to provide for a dividend of 3 per cent on the capital invested, which is stated at 78,000,000 florins. The management states that a 4 per cent dividend could have been paid, but the difference was added to the reserve, in view of the unfavorable outlook for 1925.

It is hoped that within the next decade, Dutch coal mines, the deposits of which are plentiful, will yield an amount equal to consumption. At present, however, the excess of imports over exports equals about one-half of the local consumption.

British Coal Situation Increasingly Uncertain

Based on radiogram from Trade Commissioner Charles E. Lyon, London, June 19

As the date approaches when notice of terminating the present wage agreement can be given under its terms, the British coal situation is becoming increasingly uncertain with a hand-to-mouth business and no price basis, resulting in heavy concessions to clear the congestion. One order of best admiralties has actually been sold at 24s. 9d. (\$6.01), though nominal quotations are a shilling higher.

Termination Notice Likely to Be Given.

There are many rumors as to a wage policy. For example, owners may suggest an 8-hour day for 5 days of the week and 6 hours on Saturday, replacing the present 42-hour week, but workers strongly oppose this with the suggestion that German miners will strike in sympathy if there is a strike of British miners. Owners will probably give a termination notice on June 30, but a lockout need not result as day-to-day contracts are most likely to follow. Very important coal conferences of owners and workers covering future policies are to be held in the next few days.

Losses Experienced in Some Districts.

The official report for the first quarter of 1925 shows the net cost of producing coal at 18s. 0.17d. per ton and proceeds at 18s. 6.3d., leaving an average profit in all districts of 6.13 pence per ton, although owners say that 3 pence for necessary costs are not included. The above average includes losses in some districts:

Scotland, 1.4 pence per ton; Northumberland, 9.4 pence; Durham, 2.6 pence; and South Wales, 3.9 pence.

Decline in Total Export Trade—River Plate Market Demoralized.

Exports of coal from the United Kingdom during May amounted to 4,652,464 long tons and for the first five months of 1925 aggregated 22,114,598 tons. The decline in exports during May, 1925, from those in May, 1924, was about 827,000 tons. A decrease of about 1,200,000 tons occurred in shipments to 14 destinations, but exports to the remaining markets show a 500,000-ton increase, illustrating that trade is worse with leading customers, but better with a wide variety of smaller countries.

The River Plate market is demoralized with no homeward cargo offering and coal outward bound is bearing the burden. Rates from Wales to River Plate are 20s. (\$4.86) and from Tyne, 19s. 6d. (\$4.74), and many ships are returning in ballast.

Production during the week ended June 6 amounted to 2,784,700 tons.

Polish Coal Combine

L. J. Cochrane, office of commercial attaché, Warsaw, May 22

In line with the general tendency toward consolidation among Poland's major industries, already accomplished in the petroleum industry and well on the way to consummation in the iron and steel industry, it is now announced that a combine or syndicate is to be formed in the coal industry uniting the three separate producing areas of Dabrowa, Cracow, and Polish Silesia.

Expected to Improve Market Position.

The syndicate will regulate production and fix prices and selling terms for all its members. The latter will have the right to sell direct or through the syndicate but only in amounts and at the prices fixed by the syndicate. It is expected that the operations of the combine will result in higher coal prices on the domestic market, while lowering production costs and making possible certain price cuts with the aim of improving the position of Polish coal on the export markets.

Discovery of Coal in Panama

It has been reported by the Panama City press that a deposit of coal has been discovered about 4 miles east of Gatun Lake, on the Rio Indio, in Panama, and adjacent to the concession of the Colon Import and Export Co., according to a dispatch from the American Legation at Panama City. It is understood that the land will be leased to an American company, which will undertake the excavation and exploitation of the deposits. As the ports of Cristobal and Balboa offer a ready market for coal, substantial profits are anticipated, if the extent of the deposits is not exaggerated.

See "Foreign trade opportunities."
See also List of "Special circulars available."

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

FAILURE OF DEN DANSKE ANDELSBANK

Commercial Attaché A. B. Fenselau, Copenhagen, Denmark

When the difficulties of Den Danske Andelsbank (The Danish Cooperative Bank) recently became apparent a reconstruction program was contemplated. All Danish cooperative associations were urged to subscribe to new capital to the extent of 20,000,000 crowns (1 Danish crown=\$0.1887 at current exchange). It was expected that the various organizations would respond heartily to this appeal, especially as the boards of the organizations had approved the new financing.

Capital May Not Cover Losses—Deposits and Loans.

The response from the individual cooperative associations throughout the country, however, was not as favorable as expected, and it soon became evident that the necessary capital—20,000,000 crowns—would not be secured. Up to June 1 only about 10,000,000 crowns had been subscribed, and, therefore, on June 2 the Andelsbank announced that it would stop payments. No details regarding the present status of its accounts are available, owing to the nature of its organization, but as the capital of the institution undoubtedly will be insufficient to cover losses, the depositors probably will lose.

Deposits in the bank at the end of 1924 amounted to approximately 148,000,000 crowns, divided as follows—25,000,000 on current accounts, 22,000,000 on savings accounts, 90,000,000 on time accounts, and 11,000,000 on internal banks and savings institutions. By the end of April, 1925, deposits had declined by 12,000,000 crowns. Loans at the end of 1924 were distributed as follows—69,000,000 crowns in cash credits, 7,000,000 on current accounts (overdrafts), 20,000,000 on bills, and 26,000,000 against collateral. The bank apparently had but few foreign engagements.

General Financial Conditions Not Especially Affected.

Financial experts are unanimous in their opinion that the suspension of payments will have little, if any, effect on Danish economic and financial conditions in general. The cooperative bank was established in 1914 on the initiative of a few men, and apparently not with the whole-hearted support of the country's cooperative organizations, it being claimed that the institution could not grant more favorable terms to agricultural interests than other large Danish banks were offering. Ever since its formation a certain amount of uneasiness has prevailed concerning the financial status of the institution, and its general meetings always were stormy, with frequent changes of management and policy.

The failure of the cooperative associations of Denmark to come to the assistance of the bank in the hour of need is regarded as evidence that it did not enjoy the confidence of the agricultural interests. Other large Danish banks, it is evident, will proceed cautiously in the matter of credits to cooperative associations but there is no indication that the unfortunate experience of the Andelsbank will have any very serious influence on the movement. The contracts between the Andelsbank and other large Danish institutions, moreover, were of small importance, and it is not

thought that its collapse will have any effect on them. There has been no reaction on the Stock Exchange. Since the bank ceased business owing to the failure of reconstruction measures, there apparently is no possibility of reorganizing the institution.

Japan's Invisible Trade Balance

During 1924 Japan received "invisible" funds from abroad to the amount of 300,000,000 yen and sent abroad 190,000,000, according to a statement given to the press by the governor of the Bank of Japan. The balance of 110,000,000 yen in favor of Japan reduced the country's unfavorable merchandise balance from 646,367,000 yen to about 536,367,000. The following items appeared in the statement:

"Invisible" funds received from abroad during 1924:	Yen
Remittances from Japanese emigrants.....	60,000,000
Profit from Japanese enterprises abroad.....	80,000,000
Marine freights collected by Japanese companies abroad.....	100,000,000
Foreign insurance business of Japanese companies abroad.....	5,000,000
Spent by foreigners in Japan.....	50,000,000
Indemnity and interest on Japanese loans to China.....	5,000,000
Total of "invisible" funds received from abroad.....	300,000,000
"Invisible" funds sent abroad during 1924:	
Spent abroad by private Japanese.....	40,000,000
Spent abroad by Japanese embassies, legations, consulates, etc.....	50,000,000
Interest on foreign loans.....	100,000,000
Total of "invisible" funds sent abroad.....	190,000,000
Balance in favor of "invisible" funds received from abroad.....	110,000,000
Balance in favor of "invisible" funds received from abroad.....	110,000,000

Mexican Monetary System Unified

Based on a report from Trade Commissioner George Wythe, Mexico City

Under a presidential decree of April 29, 1925, the monetary system of Mexico has been unified. A description of the coins to be used in accordance with the law follows:

Peso.—At present there are four distinct peso pieces in circulation. The decree provides that after December 31, 1925, only the peso created by the law of 1919, with a fineness of 0.720 (marked on the obverse side), will be legal.

50 centavos.—Four distinct 50-centavo pieces are in current circulation. The decree provides that after December 31, 1925, only the piece created by the law of 1919, with a fineness of 0.720, will continue in circulation.

20 centavos.—There are now in circulation four distinct silver pieces and one bronze coin. The decree retires three of the silver ones and the bronze one, leaving only the silver piece of 0.720 fineness.

10 centavos.—The principal change is in the 10-centavo denomination. The decree retires the three silver pieces and one bronze piece now in circulation and creates a new "decimo" which is to have the same size as the piece coined in 1918 but which will have the mark 0.720 on the obverse side

to show its fineness. The weight of 10 of these "décimos" will be exactly that of the silver peso piece.

Suppressed Coins Not to Circulate—Small Coins.

All the suppressed coins will cease to circulate after December 31, 1925. The demonetized silver pieces will be exchanged for silver pesos of 0.720 fineness, but not for gold.

Bronze coins of 1, 2, and 5 centavos will continue in circulation. The present nickel 5-centavo pieces will circulate until the present supply is exhausted, but no new pieces of this material will be coined.

Establishment of New Banks in Uruguay

Commercial Attaché L. B. Clark, Montevideo

The application of the Bank of London and South America to the Uruguayan National Administrative Council for an extension for another 20 years of its charter, which expires on July 25, 1925, has given rise

to a resolution by the council that such authorization should come from the Congress, which, it considers, has exclusive jurisdiction in such matters. Meanwhile, the bank is granted a provisional extension of three months from the above date in order that the legislature may have ample time for consideration before acting. The council submitted a message to Congress, informing the latter body of its pronouncement.

The council also placed itself on record to the effect that in future any banking institution desirous of establishing itself in Uruguay or of extending a concession already in effect must solicit the prior approval of the national legislature (Congress).

See Cable reviews from Europe and the Far East. See also list of "Special circulars available."

COMMERCIAL LAW

H. DeCourcy, Acting Chief, Division of Commercial Laws

BRITISH TAX ON AGENCIES OF FOREIGN FIRMS

Trade Commissioner Charles E. Lyon, London

Definite form was recently given to the protest against inclusion of brokers and commission men under the category of agents for the purpose of British income-tax assessment, when the London Chamber of Commerce convened a conference of associations and individuals concerned in the tax. A committee was appointed to protect the interests of brokers in general and in particular of those engaged in transit trade through the United Kingdom.

Entrepôt Trade An Important Consideration.

The chairman of this committee recently appeared before the Committee on National Debt and Taxation and made a strong plea for an alteration in the law governing the liability of agents for the income tax of their nonresident principals. He stated that the competition of Hamburg, Amsterdam, and Havre for transshipment business already is very severe. The entrepôt trade—so important to English intermediaries and to the whole nation as a source of payments for services rendered, and which offsets the excess of imports—will be diverted from the United Kingdom, in his opinion, unless a more lenient incidence of the tax is arranged.

The representatives who transship goods are in a more favorable position than those who arrange for distribution within the United Kingdom. The entrepôt trade is specifically listed as one to be shown every consideration. Those who serve as middlemen in the distribution of goods to consumers in the United Kingdom, however, are most vitally affected by the tendency of the inland-revenue authorities, upheld by the courts, to reclassify as agents a number of representatives who regard their services purely as those of brokers.

Committee Noncommittal—Latest Information Available.

The Committee on National Debt and Taxation has been sitting for a long time and has heard testimony on every phase of the debt and tax questions. No indication has been given as to the date at which their report may be expected or as to the character of the recommendations which they will make.

Just as uncertain is the fate of the agents' case in the courts. Recent decisions have strengthened the Government's position. Appeal may be taken to the highest courts but no very early developments may be expected. It is desirable that American firms learn the full particulars as to their tax liability before they commit themselves to an arrangement for representation in the United Kingdom. The Division of Commercial Laws of the Bureau of Foreign and Domestic Commerce is keeping in touch with the latest developments and will be glad to assist firms that plan to place their goods in the British market.

Commercial Law Briefs

British Carriage of Goods by Sea Act Applies to Bahama Islands.

The British carriage of goods by sea act, 1924, applies to the Bahama Islands, according to a report from Vice Consul William A. Smale, Nassau.

Stamp Tax Exemption on Checks in Canada.

A telegram from Trade Commissioner L. W. Meekins, Ottawa, states that checks for an amount not exceeding \$5 will be exempt from the stamp tax, effective July 1, 1925.

Registration of Business in Turkey Required.

A law passed on April 21 by the Turkish Grand National Assembly provides that all merchants or commercial establishments whose constitutions conform to the laws, all exchange brokers, and private or officially sworn brokers are obliged to register at the chamber of commerce in their locality within a period of three months beginning from the official promulgation of the law. Those who do not comply with this prescription are subject for the first time to a fine equaling three times the amount of the annual registration fee; and if they continue to refuse to register, their firms will be closed by the Government at the request of the respective chamber of commerce. The law has not yet been officially promulgated. (Trade Commissioner Julian E. Gillespie, Constantinople.)

SHIPPING

Warehouse Facilities at Ports of Salvador

Consul W. J. McCafferty, San Salvador

Facilities for the storage of merchandise at the ports of Salvador are somewhat inadequate—especially during the busy season of the year, from December to May, inclusive. None of the ports have fireproof construction for their warehouses or proper protection against damage by fire, although the port of La Union has such construction that the risk of damage by fire is less than at Acajutla or La Libertad. An account of the facilities at the more important ports follows:

La Union.—Port and storage facilities at La Union are owned and operated by the International Railways of Central America, an American company. The floors and piers of the wharf are concrete and the shed is galvanized iron, supported by a heavy wooden frame. Storage capacity of the wharf is approximately 15,000 bags of coffee. There are also storage warehouses in the immediate vicinity of the wharf, which have space for 120,000 bags of coffee. These warehouses are of similar construction to the wharf shed. There is no protection against fire other than hand extinguishers, but owing to the heavy and more modern construction of the warehouses and sheds there is less risk from fire at La Union than at other ports.

La Libertad.—This port is an open roadstead, and ships must dock offshore. All cargoes are transferred to the wharf in lighters. Construction at the wharf consists of steel piles with wooden floors and superstructure. A narrow-gauge railway carries cargoes from the wharf to the customhouse. The wharf is owned and the port is operated by the Agencia Salvadoreña, a Salvadorean company. Storage capacity is about 600 tons of cargo, and loading and unloading capacity is from 300 to 400 tons per 8-hour day. An addition to the wharf is being built which will increase both the storage and loading capacity. There are three warehouses belonging to the Agencia Salvadoreña, the capacity of which is 1,365, 5,034, and 1,365 cubic meters, respectively. Construction is of wood and there is no protection against fire except by hand extinguishers.

Acajutla.—Like La Libertad, Acajutla is an open roadstead and ships anchor at a distance from shore, cargoes being transferred to the wharf in lighters. The wharf is constructed of steel piles, and the shed is wood. There is no protection against fire, except hand extinguishers. The wharf is owned and the port is operated by the Agencia Nacional Limitada, which is a subsidiary of the Salvador Railway Co., an English concern. The tracks of the Salvador Railway Co. extend out on the wharf and all incoming cargo is loaded directly on freight trains and brought to the customhouse at Sonsonate, about 15 miles inland. The railway company owns two warehouses at Acajutla, but these are used solely for cargo produced in Salvador, which is stored at the port while waiting for ocean transportation. The capacity of these two warehouses together is about 1,250,000 cubic feet. Construction is of wood. Incoming cargo brought through Acajutla is stored at Sonsonate while waiting distribution to the interior. Warehouses there belong to the customhouse and the Salvador Railway Co. There is no protection against fire, except by hand extinguishers.

Vizagapatam, India, Declared a Major Port

Assistant Trade Commissioner Don C. Bliss, Jr., Bombay

The Government of India has recently taken an important step in the development of transportation between the central part of the Indian peninsula and the outer world by declaring Vizagapatam a major port. This port is geographically the natural outlet of one of the richest tracts of India, and one which at present

is the largest land-locked area in the peninsula. Railways lie around it in a triangle. The line forming its base follows the coast of the Bay of Bengal from Kharagpur, near Calcutta, to Bezvada Junction, a distance of, roughly, 450 miles. The northern side of the triangle is the Bengal-Nagpur line from Kharagpur to Manmad, a distance of about 850 miles. Its southern side is the meter-gauge line from Manmad to Hyderabad (Deccan) and the broad gauge thence to Bezvada, a total distance of nearly 600 miles. Within this triangle lie rich coal and manganese fields, the great agricultural and forest areas forming the south-east of the Central Provinces, nearly all Orissa, and all the northeasterly portion of the Nizam's dominions. It includes more than half the length of the great valley of the Godaveri, the entire valley of the Mahanadi down to its delta, and the valley of the Indravati.

Natural Facilities Will Aid Construction.

Vizagapatam, like Bombay, has the natural makings of a port. A high promontory protects it from the southwesterly gales that prevail during a part of the year, and under the lee of this lies a deep swamp and estuary stretching a considerable distance inland and having a stream running through it. Across the mouth of it is a sandy bar. The project for creating a port consists primarily of dredging a passage through this bar and as much of the swamp as it necessary to provide room for shipping. A small portion will be dredged to start with, and extensions made as trade requires, wharves and other facilities being constructed simultaneously.

Broad Gauge Railway to Serve the Port.

Vizagapatam lies opposite the only practicable gap in the barrier of the Eastern Ghats. This forms the natural eastward outlet for the country within the triangle, and a good deal of traffic from the Central Provinces has for hundreds of years found its way through at this point, despite the inadequacy of the provision for transport.

An essential accompaniment of the port project is the provision of a broad-gauge railway through the gap in the hills to the center of the country. A line has been sanctioned from Rajpur, 160 miles east of Nagpur on the Bengal-Nagpur Railway, southeast, and then directly south through Parvatipuram to Vizianagram on the East Coast Railway, 30 miles from Vizagapatam. Its total length will be about 300 miles. The southern end has already been built, and the Indian Legislature during its recent Delhi session voted a grant in the railway budget for the construction on the remainder, which is now being proceeded with.

Extensive Canal System Proposed for Poland

Commercial Attaché Leighton W. Rogers, Warsaw

A Warsaw syndicate is advancing a project for the construction of canals in Poland, and, eventually, a canal system to connect the Baltic and Black Seas. The project is a large one and seems to depend con-

siderably on the revival of production and trade in Russia for its ultimate success. However, there are ramifications of the larger project which are confined wholly to Poland, and in which the syndicate at pres-

ent is especially interested. The company is seeking \$100,000,000 to finance its work. Copies of a pamphlet issued by the syndicate in connection with its project may be obtained from the Transportation Division.

RAILWAYS AND ROADS

Swiss Federal Railroads Prosperous in 1924

Commercial Attaché Chester Lloyd Jones, Paris, France

The year 1924 was exceptionally favorable for the Swiss railroads. Traffic increased, and the showing of the operation and profit and loss accounts was the best since the repurchase of the roads by the State.

Gain in Passenger and Freight Receipts.

Receipts for the carriage of passengers showed an improvement of 5,000,000 francs over 1923, a gain of approximately 4 per cent, the total receipts amounting to 132,450,507 francs. The improvement is largely due to increased tourist traffic, a development the more remarkable because of the very high rate of fares on Swiss roads. Freight receipts recorded a more rapid increase, gaining by 27,737,884 francs, and making a total for the year of 248,741,276 francs. This favorable showing is due to the revival of business that characterized the past year. Transit traffic also contributed to the result to an important degree, in spite of the increasing competition of other means of transportation.

Normal Increase in Operating Expenses.

The operating account of Swiss railroads declined steadily from 1920 to 1923 but rose in 1924 to 272,031,489 francs, an increase of 11,784,652 francs over 1923. This represents an advance of about 4½ per cent, which is considered normal, due to the increase of locomotive-kilometers traversed.

[Further information as to the activities and financial results of the Swiss Federal Railways during 1924 may be obtained from the Transportation Division by referring to Report No. 28441.]

Latvo-German Transit Trade Agreement

Commercial Attaché Carl J. Mayer, Riga, Latvia, May 22

The Latvian cabinet has recently passed regulations regarding the transit of German goods through Latvia, under which the Latvian Railway Administration agrees, for a certain compensation, to change the axles of German (normal) gauge railway cars to Russian gauge axles in Duenaburg, and to convey the trains through Latvia. The tariff is similar to that in existence for Russian transit goods. By handling the Russian traffic Latvia collects about 4,000,000 lats of foreign currency a year and hopes to derive an equal amount from conveying German transit goods.

Imports of Railway Plant and Rolling Stock Into India, 1924-25

Assistant Trade Commissioner Don C. Bliss, jr., Bombay

A remarkable decline in imports of railway plant and rolling stock into India was recorded during the fiscal year ended March 31, 1925. The largest decreases were in receipt of railway-plant equipment and freight cars—practically all of which are imported from the United Kingdom—locomotives, bridge work, steel rails, and railway ties; and practically every item was smaller in comparison with the previous year.

Decrease in Imports from Great Britain—United States Maintains Its Position.

As the bulk of this material is imported from Great Britain, the decline affects the figures for that country materially. The cessation of imports of railway ties is reflected in the totals shown for imports from Canada and Australia. The United States, however, although not supplying any large proportion of railway materials, has maintained its position, exports to India for 1924-25 being valued at 1,746,011 rupees compared with 1,756,032 rupees in the previous year.

Value of imports into India of rolling stock and railway plant equipment, fiscal years 1923-24 and 1924-25

Item	1923-24	1924-25
ROLLING STOCK		
Carriages and parts thereof.....	Rupees 60,903,269	Rupees 23,402,767
Wagons and parts thereof.....	27,637,959	13,410,737
Locomotive engines and tenders and parts thereof.....		8,751,584
RAILWAY PLANT EQUIPMENT, BY COUNTRIES OF ORIGIN		
United Kingdom.....	110,338,719	54,108,418
Belgium.....	2,101,939	1,770,938

Australia and New Zealand.....	1,803,310	
Other countries.....	837,058	3,130,114
Total.....	117,246,081	60,755,481

Development of Highways in Norway

Norway has 8,313 miles of main highways, and 12,924 miles of county highways which are well maintained and are constantly being improved for automobile traffic, according to a report recently published by the Director of Public Roads of Norway. During 1924, 450 bus lines with a total length of 7,700 miles were operated, while many motor truck lines carried farm products long distances to steamers and railroad lines.

Because of the mountainous character of the country, road construction is often expensive, but is considered so necessary to the country's development that the annual expenditures have increased 400 per cent in the last 12 years. The report describes the mountain roads of Norway and discusses the development of the highway system, methods of administration, finance, construction, maintenance, and the problem of keeping roads open in winter, and is illustrated by maps, charts, and photographs.

[Further information may be obtained from the Transportation Division or through the district and cooperative offices of the Bureau of Foreign and Domestic Commerce.]

Italian Railway Freight Traffic Increasing

Office of the commercial attaché, Rome

Italian State Railways carried 38,059,300 tons of freight during the first eight months of the fiscal year 1924-25, of which 34,991,900 tons comprise carload lots and 3,067,400 tons less-than-carload lots. The total carried represents an increase of 20.9 per cent over the 31,476,700 tons carried in 1923-24 and of 50.1 per cent over the 25,352,400 tons carried in 1913-14.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS

GERMANY-GREECE

Assistant Trade Commissioner C. E. Dickerson, Jr., Athens, May 16

Additional Provvisory Agreement.

By an additional provvisory agreement signed on May 15, 1925, between Germany and Greece, the conventional rates of the Greek tariff are extended to all German products. In return, Germany has reduced the import duty on Greek currants from 24 to 16 marks per 100 kilos.

[Imports from the United States into Germany are being granted all conventional reductions.]

GERMANY-SWITZERLAND

British Board of Trade Journal, June 4

Additional Agreement Relaxing German Import Restrictions on Swiss Goods.

As an additional agreement to that concluded between Germany and Switzerland on November 17, 1924, mutually relaxing certain import restrictions (see Commerce Reports for November 29, 1924), a further agreement was concluded on May 11, 1925, by which Germany undertakes to permit the importation of increased contingents of specified goods from Switzerland, including sugar, molasses, margarine cheese, artificial edible fats, canned cattle meat, cement, carbide of calcium, ferrosilicon, cyanide of lime, certain wool fabrics, and certain cotton yarns and fabrics, embroideries, boots and shoes weighing 600 grams or less each, and celluloid.

[The full list with the specified contingents is on file in the Division of Foreign Tariffs, and detailed information will be supplied upon specific request.]

SPAIN-SWEDEN

Chargé d'Affaires Alexander R. Magruder, Stockholm, May 22

Consul General Claude I. Dawson, Stockholm, May 20

Details of Commercial Treaty Granting Reciprocal Concessions.

The commercial convention between Spain and Sweden, which was signed on May 4 and ratified by the Swedish Riksdag on May 18, 1925, will enter into force 10 days after the exchange of ratifications, to be valid for 12 months, and thereafter until three months after denunciation by either party.

Swedish concessions to Spain.—Under the terms of this treaty Sweden grants most-favored-nation treatment on all goods from Spain, the Balearic and Canary Islands, and other Spanish possessions. In addition to this, Swedish duties on 49 Spanish products listed in Annex A are in no case to exceed the rates given in that list. These products include:

Rice; grapes, bananas, oranges, citrons, other fresh fruits; dried figs, raisins, nuts, almonds; candied fruits; tomatoes; onions; licorice; preserved sardines and tunny; anise, saffron; mineral waters; raw hides and skins; cork bark and cork products; wool; used sacks; revolvers and pistols; unmanufactured copper, lead and zinc; lead sheets and pipes; zinc sheets and pipes; works of art in common metals; unmanu-

factured silver; olive oil; citric and tartaric acid; tartrates of potassium, sodium and ammonium; table salt; mercury and its alloys; turpentine oil; vegetable tanning materials and extracts; tannic acid.

Spanish concessions to Sweden.—The Spanish duties on 120 Swedish products listed in Annex B are in no case to be higher than the rates indicated in that list. These rates are, with one exception, not lower than the conventional rates already granted to other countries. A new conventional rate of 0.80 gold peseta per 100 kilos has been established for (item 1021) mechanical wood pulp. (The present second tariff rate applying to United States pulp is 1 gold peseta per 100 kilos.)

In addition, Swedish products listed in Annex B and Annex C are subject to most-favored-nation treatment in Spain and the Balearic Islands. All other goods imported into Spain and the Balearic Islands from Sweden are subject to the second column rates of the Spanish tariff. All Swedish products are granted most-favored-nation treatment in the Canary Islands and other Spanish possessions.

General provisions and reservations.—Mutual most-favored-nation treatment is accorded in respect to import and export restrictions, the right to carry on industry and trade, commercial travelers and their samples, etc. Exceptions are made for favors granted to neighboring countries, to Denmark and Norway in the case of Sweden, or to Portugal, Morocco, and the Spanish-American Republics in the case of Spain.

Alcoholic beverage provisions.—In a protocol to this treaty Sweden agrees not to increase the duties levied on the alcoholic beverages included under items 183 to 190 of the Swedish customs tariff, and to give Spain the benefit of any modifications in the grading of wines applicable to Spanish wines up to 18 degrees, inclusive, and of any favors granted to any other country regarding the importation and sale of alcoholic beverages.

[According to a Swedish decree issued on May 12, 1925, the reduced rates provided in the above treaty for Spanish goods imported into Sweden are to be substituted in the Swedish tariff for the general rates now in force, effective on the day when the treaty comes into force. Goods from the United States are entitled to conventional rates in Spain which had been established prior to November 6, 1923.]

GENERAL TARIFF CHANGES

CUBA

Cable from Commercial Attaché Carlton Jackson, Habana, June 18

Horizontal Advance of Import Duties and Sales Tax.

The Cuban budget for the fiscal year beginning July 1, which was accepted by the Cuban Congress yesterday, makes several significant changes in import duties and internal taxes. The duties on luxuries are to be horizontally increased by 10 per cent and duties on other commodities by 3 per cent, the President of Cuba to define the articles to be classed as luxuries.

The existing import duty on gasoline of \$5.875 per 100 gross kilos general, and \$4.70 to the United States, is to be repealed and a sales tax of 10 cents per gallon imposed.

The general sales tax is to be increased from 1 to 1½ per cent.

These changes are designed to provide an immediate increase in the revenue, and plans for more thorough tariff revision continue.

GERMANY

Text of new tariff proposal

Further Announcements Regarding Proposed Tariff Revision.

The text of the proposed tariff schedule introduced into the German Reichsrat on May 19, as announced in COMMERCE REPORTS for June 1 and June 8, has been received and specific information on any particular points is available upon request.

Comparison of the text with the items published in the above-mentioned issues of COMMERCE REPORTS indicates the following corrections and supplementary explanations:

Corrections to the Item Published June 1.—The proposed rate of import duty on automobiles weighing less than 2,200 kilos, beginning July 1, 1926, should be 225 instead of 215 gold marks per 100 kilos.

Raw wool is not to become dutiable at the rate of 3.50 gold marks per 100 kilos, but is to continue free of duty, this proposed rate to apply to wool or other animal hair carded or combed, which is now dutiable at 2 gold marks per 100 kilos.

The pre-war conventional rates on rye, wheat, spelt, and oats, and the reduced rate of 2.30 gold marks per 100 kilos on barley, are not automatically to enter into effect on August 1, 1926, but are merely the minimum rates below which no conventional reductions may be made by commercial treaties: If no treaties embodying conventional reductions on these items should be concluded by that time, the full pre-war general rate of 7 gold marks per 100 kilos for rye, barley, and oats, and 7.50 gold marks per 100 kilos for wheat and spelt would enter into effect.

Fresh apples and pears are to be subject to the rate of 15 gold marks per 100 kilos only if packed; if unpacked, the proposed duty is 6 gold marks from September 25 to November 25, and 8 gold marks per 100 kilos for the rest of the year.

Corrections to item published June 8.—The proposed rate on flour to become effective August 1, 1926, is not 12.50 but the pre-war general rate of 18.75 gold marks per 100 kilos.

The proposed rate of duty on potatoes is correct as stated, with the exception that a rate of only 0.25 gold mark per 100 kilos is proposed for the period until February 14, 1926.

On molasses a reduced duty of only 1 gold mark per 100 kilos is proposed until August 1, 1926, after which the rate of 4 gold marks is proposed.

For tinned milk the rate quoted of 40 gold marks per 100 kilos is proposed only until August 1, 1926. Thereafter the full pre-war general rate of 75 gold marks per 100 kilos is to enter into effect.

The proposed rate of 500 gold marks a head applies to all horses and the rate of 30 to mules.

The proposed rate of 5 gold marks per 100 kilos applies to raw, not to refined, wood alcohol and acetone, which is equivalent to the present rate, so that no change is indicated.

YUGOSLAVIA

Cablegram from Consul K. S. Patton, Belgrade, June 20

New Customs Tariff Effective.

A new customs tariff was promulgated by the Yugoslav Government on June 20, 1925, to become effective at once. Among the changes in rates affecting American commerce are those on automobiles, tires, lard, gasoline, and kerosene. The new rates on these products are:

Automobiles, 20 per cent ad valorem (formerly 6 per cent); rubber tires, 2,160 dinars (formerly 1,320 dinars) per 100 kilos; gasoline (benzine) in tanks, 156 dinars (formerly 110 dinars) per 100 kilos; gasoline in barrels, 360 dinars (formerly 110 dinars) per 100 kilos; kerosene in tanks, 60 dinars (formerly 110 dinars) per 100 kilos; and kerosene in barrels, 84 dinars (formerly 110 dinars) per 100 kilos. (The new duty on lard was garbled in the cable and will be announced later.)

Only the conventional rates are given above, since they apply to imports from the United States.

[As soon as the text of the new tariff is received in the Bureau it will be announced in COMMERCE REPORTS, and information regarding rates of duty on particular commodities will be furnished upon request.]

IMPORT AND EXPORT RESTRICTIONS

CZECHOSLOVAKIA

Consul General C. S. Winans, Prague, May 18

Relaxation of Export Restrictions on Kid Skins.

The Czechoslovak Ministry of Commerce has decided to permit the exportation of three-fifths of the stocks of kid skins which dealers have been holding under the former prohibition against the exportation of such products. As a condition to this concession, the remaining two-fifths of the stocks must be supplied to the domestic leather-tanning industry at the rate of 32 crowns per piece for first-class goods. This matter has been under discussion for several months.

CZECHOSLOVAKIA

Commercial Attaché J. H. Hodgson, Prague, June 1

Further Relaxation of Import Restrictions.

Continuing its announced policy to remove as soon as possible the existing restrictions on imports, the Czechoslovak Government has published another list of commodities which will no longer be subject to license or the necessity for notifying the authorities of the intention to import such commodities. This decree, effective June 2, 1925, releases the following commodities for license-free importation:

Anise, cumin, and coriander seeds; coffee substitutes; cocoa powder; canned meat, canned fish, and crustaceans; colophony and pitch, not specified; crude ozokerite (mineral wax); cotton velvet and cotton curtains; linen damask, batiste, and gauze; manufactures of flax, hemp, and jute for technical purposes; woolen velvet and similar fabrics, woolen shawls, laces, etc.; embroidered silk and half-silk manufactures, silk velvet, gauze, and tulle; knit goods of finest grade; manufactures of straw, bast, and reed, mounted with precious metals; drawing paper, gilt and silvered paper, paper with gold and silver patterns, corrugated paper, embossed paper, paper and cardboard lined with cloth, paper wares lined with cloth, paper wares mounted with precious metals; automobile tires and tubes; weighing scales and their parts (except precision scales); phosphorus; Chile, saltpeter; white lead, etc.; animal fertilizers; aromatic alcoholic extracts; and tallow and wax candles, torches, matches, etc.

Removal of Restrictions on Certain Exports.

The same decree (mentioned above) permits the exportation of the following commodities from Czechoslovakia without license formalities from June 2:

Grapes, walnuts, and hazel nuts; anise, coriander, cumin, and fennel seeds; canned foodstuffs, bottled or in air-tight containers; tar, except brown coal tar and schist tar; semi-manufactures of precious metals; glue of all kinds; and fuses.

GERMANY

Assistant Commercial Attaché D. P. Miller, Berlin, May 30

Further Relaxation of Import Restrictions.

By a decree of May 20, 1925, published on May 25, and effective May 30, the following items of the German customs tariff have been released from the import license requirement:

(131a) Fish, seal, or whale oil, raw, refined, or oxidized, also in bottles or the like; (171a) palm oil.

(224a) Yellow ochre, bolus, Siena and Verona earth, raw.

(253a) Wax flowers, figures, fruits, heads, masks, and similar finely molded articles of wax, rifle plugs, artificial honeycombs, and all other articles of wax not specially mentioned; (253b) gramophone discs and rolls of wax; (257a) raw glycerin; (258) paraffin ointment, vaseline ointment, and vaseline, not scented; lanolin and lanolin compounds; (264) molded work of stearin, paraffin, or similar molding materials, combined or not with other materials, so far as it does not thereby become subject to higher rates of duty.

(ex 317a) Selenates, selenic mud, compositions of tellurium, lithium, uranium, and nickel, pyridin and other pyridin bases.

(427) Carpets made with indication for cutting (without sewing) or in the piece, printed or not, of dyed or undyed yarn of the hair of cattle, deer, dogs, hogs, or similar coarse animal hair, mixed or not with jute, manila hemp, aloë fiber, pineapple fiber, or coconut fiber without regard to proportion, also mixed with other vegetable textile materials, provided that the animal-hair yarn predominates; also carpets of plaited cloth list; (ex 437) trimmings of wool or animal hair (edgings, ribbons, cords, laces, tapes, and similar wares); (ex 469) the same, of cotton; (523) artificial flowers of textile materials; (524 and 5) umbrellas and parasols, so far as not liable to higher rates by reason of their combination with other materials.

(530) Hair nets of human hair and other wig-makers' wares of human hair and imitations thereof.

(533) Men's hats and caps of textile materials; (535) women's hats of textile materials other than partly or wholly of silk, trimmed or not, including those coated or impregnated with India rubber; (536) hats of waterproof tissues other than India rubber, trimmed or not.

(566) Stuffed animals and parts thereof, etc.

(577) Rubber shoes even with soles of other materials; (589) gramophone disks of rubber.

(590 and 592) Bottle covers and mats and floor mats of plaited material.

(ex 602 and ex 604) Articles wholly or partly of ivory and its imitations, or of tortoise shell and its imitations, not elsewhere dutiable by reason of combination with other materials, except opera and field glasses; (ex 606b) articles other than buttons, wholly or partly of mother-of-pearl, not elsewhere dutiable by reason of combination with other materials, except opera and field glasses; (607b) red corals worked or unworked, set or unset or combined with other materials; (611) molded, turned, or beaded buttons of horn, horn paste, or bone, with or without eyelets; (614) other articles of animal carving materials.

(ex 622) Wooden walking sticks; (ex 624) weavers' reeds and reed teeth of wood; (ex 628) coarse, rough wood forms for manufacturing haberdashery; (ex 630b) cane rulers; cigar and cigarette tips of wood.

(643) Bobbins, spindles, weavers' reeds, and reed teeth of cane; also cane fenders, combined or not with unpolished unlacquered iron; (644) walking sticks of cane; (645) beads and the like of vegetable materials for carving, other than wood or cork (except celluloid, etc.), strung on thread, string, or wire, and ready for use as ornaments without further preparation; also trimmings similarly prepared.

(658) Paper and cardboard, embossed, hand painted, or with pressed natural flowers or photographs, or ornamented in any way; (659) paper or cardboard covered wholly or in part with textile materials or with foundations or layers of textiles or wire gauze; (651) playing cards; (660) paper underwear, even if coated wholly or in part with woven fabrics or fitted with woven linings or layers; (669) albums.

(Ex 670) Artificial flowers of paper, cardboard, carton pierre, wood pulp, cellulose, vulcanized fiber, etc.; copy books and hand catalogues; (671 and 672) all other articles of these substances not classified under item 670; (676) pictures on paper produced by printing or other manifolding process, including photographs; (677) paintings on tissues of vegetable materials, or wood, base metals or alloys of base metals, paper, or stone; drawings, bound or not or mounted on paper, cardboard, cloth, or the like.

(Ex 759) Small glass plates, glass bugles and scales, glass drops and small glass balls; (761) glass beads, imitation gems of glass, glass paste, glass corals, and the like, sewn or strung on thread, cord, or wire, ready for use as ornaments; also trimmings of glass beads, etc., prepared in a similar manner; (762) articles made of imitation gems of glass, of paste or glass corals, not previously mentioned, combined or not with other materials, so far as not dutiable at higher rates on that account.

(Ex 776b) Walking sticks ornamented with silver.

(Ex 821) Railway switch and signal parts of iron or steel; (835) iron or steel furniture, not upholstered, other than those of nonmalleable art castings; gymnastic appliances; (839) springs of iron or steel, not specially mentioned; (841) needles and pins of iron or steel.

(Ex 844) Scrap aluminum.

(Ex 885) Rosaries and walking sticks entirely or partly of silvered base metals or alloys thereof; (897b) cloisonné ware; beads of base metals or alloys thereof, nicked or varnished.

(Ex 891) Gas meters, water meters without clockwork.

(893a) Steam locomotives not designed to run on rails, including street rollers but excluding steam-power ploughs; (897)

stands for sewing machines, knitting machines, etc., and parts thereof, including the table tops or tables belonging thereto; (906r) machinery for leather and shoe manufacture; (906n) book printing machines other than rapid presses for book printing.

(934a) French and hall clocks and all clocks fitted with clockwork not mentioned elsewhere (also those fitted with musical boxes and electric clocks), provided they are not elsewhere classified by reason of their combination with other materials.

HUNGARY

Commercial Attaché H. L. Groves, Vienna, May 27

Proposed Removal of Restrictions on Hide Exports.

The Hungarian Ministry of Agriculture is considering the advisability of removing the restriction on the exportation of hides from that country.

RUMANIA

Cablegram from Trade Commissioner Smith, London, June 22

Removal of Export Restrictions on Cereal Crop.

The Rumanian Council of Ministers has decided to remove all restrictions on the exportation of this season's crop of cereals. The export duties will, however, remain in effect.

TARIFF CHANGES ON SPECIFIC ARTICLES

BOLIVIA

Boletín Comercial, April 5

Revised Export Duty on Copper.

The President of Bolivia issued on March 25, 1925, a decree provisionally putting into effect a bill revising the schedule of export duties on copper, which had been approved by the Chamber of Deputies but could not be enacted into law during the absence of the National Congress in recess. By this decree the export duty on copper and copper ore is graduated according to the quotation of standard copper in London.

[The full text of this decree is on file in the Division of Foreign Tariffs and specific information as to the new rates will be given upon request.]

CANADA

Customs memoranda No 53 and No. 54, Ottawa, May 22

Temporary Importation of Sheep for Feeding Purposes.

Sheep may be imported into Canada temporarily, for feeding in bond, conditional upon their being warehoused for a period not exceeding one year and entered for exportation, without the payment of duty, under an order in council of May 19. Sheep so warehoused shall not be used for any other purpose, and the following statement is required to be made on the face of the entry for warehouse:

The sheep above described are imported for feeding purposes only, the bona fide owner being _____, resident in _____.
(Signature) _____

Sworn to before me _____

Collector.

[A copy of the regulations is on file in the Division of Foreign Tariffs, and additional information will be supplied upon request.]

ESTHONIA

Commercial Attaché C. J. Mayer, Riga, May 16

Increased Duty on Wheat and Flour.

It is reported that the Esthonian Government has increased the import duties on wheat from 0.04 gold franc to 0.10 gold franc; on unbolted wheat flour, from 0.09 gold franc to 0.14 gold franc; and on bolted wheat

flour, from 0.09 gold franc to 0.21 gold franc—all per gross kilogram.

FINLAND

Assistant Trade Commissioner Emil Kekich, Helsingfors, May 25

Reduction in Import Duties on Certain Articles of Wood.

The Finnish import duties on certain articles made of wood have been reduced as follows, by a decree of April 30, 1925, effective on the same date:

Item No.	Articles	Former duties	New duties
377	Articles of fir, pine, beech, birch, and alder, weighing per article more than 2 kilos net.	Finnish marks per kilo 4	Finnish marks per kilo 1
378	Articles of other kinds of wood, weighing per article more than 2 kilos net.	8	2
381	Articles of other kinds of wood, weighing per article not more than 2 kilos net.	12	4

PORTUGAL

Diário do Governo, Lisbon, April 25

Board of Trade Journal, London, May 28

New Stamp Tax and Import Duty on Matches.

A Portuguese law of April 25, effective April 26, 1925, in conjunction with a subsequent ministerial decree, provides for a stamp tax on all matches manufactured in or imported into Portugal. This tax will be fixed annually by the Government and must always exceed 0.005 gold escudo for every 40 matches (or fraction of that number) contained in each box. Up to July 24, 1925, the stamp tax is fixed at 0.05 gold escudo per 40 matches.

The same law provides that matches may be imported without restriction, subject to the payment of the above stamp tax and, in addition, an import duty to be fixed annually by the Government, of at least 0.002 gold escudo for every 40 matches (or fraction of that number) contained in each box, or for every 40 matches (or fraction of that number) when imported in bulk. Up to July 24, 1925, this duty is fixed at 0.0035 gold escudo per 40 matches.

In order to satisfy the needs of the market the Government is permitted, provisionally, to import matches free of any duty or taxes.

Portable lighters and tinder may be imported, subject to the payment of a stamp tax to be fixed by the Government, which is not to exceed 30 escudos for each one.

[Notice of the abolition of the match monopoly appeared in COMMERCE REPORTS for January 26, 1925.]

INTERNAL REGULATIONS AFFECTING TRADE

CZECHOSLOVAKIA

Cablegram from Commercial Attaché J. F. Hodgson, Prague, June 19

New Sales Tax on Wheat and Flour.

The Czechoslovak Government has placed a turnover tax on imported wheat and flour. The tax on wheat flour is 11 crowns per 100 kilos and on wheat is 2.50 crowns per 100 kilos. These taxes will be collected by the customs authorities at time of clearance.

[There is no import duty on wheat flour under the present prices of such products.]

PERU

Ambassador Miles Poindexter, Lima, May 4, 1925

Establishment of Match Monopoly.

A match monopoly has been established in Peru by a law passed April 18, 1925. This places under Government monopoly the manufacture and sale of matches and similar products, whatever may be their class and condition. No decision has yet been made as to what firm will take over the monopoly contract for the Government.

Industrial Alcohol Company Formed in Canada

The Quebec Industrial Alcohol Co., capitalized at \$2,000,000, has been formed in Montreal. This company plans to operate a distillery at Deep Water near Montreal for the production of 5,000 gallons of alcohol daily, using molasses for raw material. It expects to obtain 1 gallon of alcohol from 2.15 gallons of molasses. (Consul General Albert Halstead, Montreal.)

COMMERCIAL INTELLIGENCE

A. S. Hillyer, Chief, Commercial Intelligence Division

TRADE LISTS AVAILABLE

The Commercial Intelligence Division has recently compiled the following trade lists, of which mimeographed copies may be obtained from the Bureau of Foreign and Domestic Commerce or its district or cooperative offices by referring to the titles and file numbers:

ASBESTOS PRODUCTS

Importers and dealers:

Argentina	LA-10130.
Belgium	EUR-1051.
China	FE-13085.
Cuba	LA-31059.
Denmark	EUR-2047.
England	BE-2068.
Greece	NE-5038.
Italy	EUR-6049.

Importers and dealers—Continued.

Netherlands	EUR-8031.
Peru	LA-20058.

SEEDS AND BULBS

Importers and dealers:

Bulgaria	NE-2019.
Danzig	RD-75008.
Azores	EUR-18000.
British Guiana	LA-16020.
Costa Rica	LA-23039.
Dominican Republic	LA-32035.
Ecuador	LA-15035.
Finland	RD-60059.
Guatemala	LA-24046.
Haiti	LA-33022.
Hungary	EUR-5009.
Latvia	RD-80025.
Lithuania	RD-90009.
Morocco	EUR-17012.

FAR EAST

H. A. Butts, Acting Chief, Far Eastern Division

CHARACTER OF INDIAN-AMERICAN TRADE

While the American trade with India is small compared with the possibilities, America stands third on the list of countries supplying India's overseas needs. During the year ended March 31, 1925, India's imports from the United States amounted to 140,900,000 rupees as compared with 171,300,000 from Japan and 1,334,300,000 from Great Britain. Imports from the United States were considerably greater than during the preceding year and more than three times the amount of those in 1913.

Leading Commodities Imported from the United States.

The following table, published in The Review of the Trade of India in 1923-24, and furnished the bureau by Consul W. L. Jenkins, indicates the character and extent of India's imports from the United States as compared with the pre-war average:

Imports into India from the United States

Items	Pre-war 5-year average	1923-24
	<i>Rupees</i>	<i>Rupees</i>
Aluminum.....	426,000	1,860,000

Pre-war and 1923-24 Exports to the United States Compared.

The United States also stands third on the list of countries taking India's exports. During the fiscal years 1924-25 shipments to the United States were valued at 342,400,000 rupees as compared with 551,400,000 to Japan and 925,200,000 to Great Britain. The value of principal commodities exported to the United States during 1923-24 is compared with the pre-war average in the following table:

Exports of Indian produce to the United States

Java's Business Conditions Improved in 1924

Based on report of Trade Commissioner J. F. Van Wickel, Batavia

The general trade situation in Java during 1924 was more stable, with a decided improvement noted during the last half of the year, according to a report just issued by the Association of Importers, at Batavia. The demand by the native population increased to an appreciable extent, and apparently, they are learning to spend their money more advantageously than on automobile "joy rides" and the bioscope. An unfavorable factor is the participation in the pilgrimage to Mecca, which has an adverse influence on the buying capacity of the natives.

Fewer Commercial Failures—Larger Import Value Probable.

The number of failures among traders decreased from 154 in 1923 to 99 in 1924; limited-liability companies, from 41 to 31; and private individuals, 120 to 117. Bankruptcies within the Batavia district resulted in the loss of over 4,000,000 florins (par value of Java florin is \$0.402; average for 1924, \$0.37), but a considerable portion of this loss was charged to failures which took place during the previous year.

The value of 1924 imports, although not yet exactly known, will probably be in excess of the 1923 figure of 438,000,000 florins. Import customs receipts in Java and Madura amounted to nearly 41,000,000 florins, Tandjong Priok (Batavia) alone reporting 13,500,000 florins. A large number of import houses were established in 1924 and competition in trade circles became more pronounced.

See Finance: Japan's invisible trade balance.
See also List of "Special circulars available."

LATIN AMERICA

Richard F. O'Toole, Chief, Latin American Division

CAUSES UNDERLYING THE SLUGGISHNESS OF CHILEAN TRADE

Based on report of Consul General C. F. Delchman, Valparaiso

General commercial conditions in Chile in recent months can not be said to have been good. There has, in fact, been evident a general lack of optimism, reflected in the meager orders being placed for goods, and, with the exception of household necessities and foodstuffs, there has been little activity in the market.

A number of causes seem to contribute to this general depressed condition of business, some of which are the multiplicity of new taxes created since September 1, 1924, the Government changes expected to occur when the Constituent Assembly meets to amend the constitution, the presidential election, and the new labor and social laws enacted.

Textile Mills Closing Down.

Two mills in Vina del Mar, one a woolen mill and the other a cotton mill, being among the largest textile plants in the country, have closed down because of the limited demand for their products and also because of labor difficulties.

Another large mill in the Concepcion district, which makes woolen piece goods, operates but three days a week.

Business Being Put on Cash Basis.

One of the largest general import houses established in Chile has announced that hereafter it will sell only for cash; that is, for drafts which have been accepted by the buyer. Heretofore the firm has, like all others doing business in Chile, been selling on open account with 60-day terms, but owing to the strong and growing tendency of its retail clients to ask for unreasonably long credit terms—that is, anywhere from 90 to 150 days—the firm has decided to cut out all credit until retail merchants get on a sounder footing. The same policy will likely be adopted by practically all other general import firms.

Slight Improvement in the Industries of San Luis Potosi

Consul Don S. Haven, San Luis Potosi, Mexico

Some little improvement is noted in the industries of San Luis Potosi. A large rope, rug, and cordage plant reports that conditions in that industry are improving and that its monthly sales now amount to about \$50,000. The woolen mills report increased production and sales, particularly of blankets. However, the local match factory is running only part time and the flour mills have been unfavorably affected by the import tariff.

Bank Credits Restricted.

As generally throughout Mexico, there is a marked money stringency. The local branch of the Comision Monetaria is charging $1\frac{1}{2}$ per cent interest a month and is lending only upon 30, 60, and 90 day notes and requires two solvent signatures for security. The maximum loan without special authorization from the

main office in Mexico City is 3,000 pesos (\$1,500). Private banks are operating on practically the same basis except that they will loan up to 10,000 pesos. They will not accept real estate or other tangible property as security, but demand the signatures of persons known to be "good" in cash for the amount of the loan. The labor situation has shown little improvement and agitation and unrest are everywhere evident.

Cuban Government Desires Catalogues

The Cuban Department of Public Works is interested in acquiring a full set of catalogues, containing price lists whenever possible, relating to all kinds of supplies, machinery, etc., which may be needed by the Public Works Department. It is proposed to file these catalogues so that they may be readily available at all times in checking contracts and other uses. They are wanted as early as possible.

The information desired should cover the following lines: Material for construction; mechanical appliances; implements of construction; machinery for aqueducts, sewers, roads, bridges, transportation, public buildings, sanitary fixtures, etc.; drawing materials and instruments of precision; steam boilers, pumps, turbines, hardware, etc.; office fixtures; steam road rollers, concrete mixers, asphalt mixers, etc.

All catalogues should be addressed to: Negociado de Inspeccion General de Obras, Servicios y Suministros, Secretaria de Obras Publicas, Habana, Cuba.

British Guiana Trade in March Quarter

The total value of imports and exports of British Guiana during the March quarter was \$2,674,288 and \$2,756,247, respectively, according to the monthly journal of the chamber of commerce of the city of Georgetown. Imports from the United Kingdom amounted in value to \$1,203,807, while exports to that country reached a total of \$1,321,125. Imports from Canada and the United States amounted to \$715,264 and \$484,365, respectively, while exports to those two countries during the period under review were valued at \$714,095 and \$230,497, respectively.

Increased Movement Through Nuevo Laredo

Consul Henry L. Walsh, Nuevo Laredo, Mexico, June 6

Further recovery from the slump of 1922 is indicated by the figures on imports into Mexico through the port of Nuevo Laredo for 1924, given out by Mexican customs authorities. Imports through this port in 1921 approximated \$43,000,000 in value. In 1922 this fell by more than one-half to \$21,000,000. Since then there has been a gradual recovery to \$30,974,561 in 1923 and \$33,625,507 in 1924.

See Finance: Mexican monetary system unified.
See also List of "Special circulars available."

AFRICA

Clayton Lane, Acting Chief, European Division

TRADE IMPROVEMENT IN KENYA AND UGANDA

Consul Avra M. Warren, Nairobi, Colony of Kenya, Africa

The year 1924 recorded an improvement in the trade of Kenya and Uganda. Imports increased from £3,996,000 to £6,100,000. Rice advanced from 88,923 hundredweight in 1923 to 109,984 hundredweight; other grain and pulse, from 14,335 to 49,272 hundredweight; ale, beer, and stout, from 62,581 to 103,128 Imperial gallons; salt, from 107,294 hundredweight to 159,033 hundredweight; spirits, from 67,400 to 149,000 gallons; cigarettes, cigars, and tobacco, from 783,936 to 1,017,648 pounds; coal, from 3,581 to 16,613 tons; timber, from 15,405 to 36,353 cubic feet.

Increases in Various Imports.

There was a general but not a striking increase in imports of building materials and hardware, except in bricks and tiles, which fell from £257,000 to £10,000. Agricultural and horticultural tools increased, while electrical imports fell heavily and agricultural machinery slightly. Receipts of cotton piece goods unbleached decreased by nearly 2,000,000 yards to 17,210,841; bleached increased 600,000 yards to 3,436,074 yards; and "dyed in the piece" from 4,606,598 to 5,595,000 yards. Woollens increased in value from £17,859 to £35,828, and silks from £14,391 to £25,018. Jute bags and sacks and boots and shoes also increased.

Oils—Automobiles and Motor Cycles.

Fuel oil imports increased from 3,500,000 to over 5,300,000 gallons; lubricating oil, from 198,000 to 241,000 gallons; motor spirits, from 911,869 to 992,798 gallons; and illuminating oil, from 914,000 to 1,048,546 gallons. Motor cars numbering 945 were imported as against 309 in 1923, and 911 motor cycles, side cars, etc., as compared with 345. Many other classes of articles showed increases.

Gain in Exports—Greatest Increase in Cotton.

Among the exports, wheat increased from 96 hundredweight in 1923 to 1,847 hundredweight in 1924; maize, from 874,700 to 1,164,400 hundredweight; pulse, from 30,000 to 56,000 hundredweight; chillies, from 17,-

100 to 21,300 hundredweight; coffee, from 184,000 to 199,000 hundredweight; and tobacco manufactures, from 3,607 to 17,534 pounds. The greatest increase was in cotton, which advanced from 382,897 centals, valued at £2,093,776, to 515,095 centals, valued at £3,489,329. Sisal also showed a considerable increase—from 8,543 to 10,930 tons. Increases were reported in castor oil seed, cottonseed, linseed, copra, coconuts, gum copal, beeswax, hides and skins, wild rubber, and tanning bark. Slight decreases were shown in millet, cocoa, ghee, flax, groundnuts, coconut oil, and ivory.

Trade Conditions, First Quarter, 1925.

The quarter ended March 31, 1925, was marked by dullness in the exportation of cotton, coffee, and maize. Cotton picking was practically completed in Uganda in February, and the cotton began to move in such heavy quantities that the facilities of the Uganda Railway were overtaxed. The peak of the exportation will probably be reached early in June. A total exportation of 160,000 bales of 400 pounds is expected for this year, as compared with 135,000 bales last year. The principal exports to the United States during the quarter were: Chillies, cloves, goatskins, and sisal, having an approximate value of \$300,000.

Imports Slightly Above Average Volume.

Imports, with the exception of automobiles and the better classes of piece goods, were slightly above the average volume during the period ended March 31, 1925. During the last nine months there has been an increasing importation of automobiles, which is now reaching its peak. Importations during the past quarter were about 100 a month. Bicycles to the number of 1,200 per month were imported from Great Britain and Germany.

Banks—Agriculture—Railway and Harbor Facilities.

Banks report a slow decrease in the volume of outstanding loans, and agriculture generally is in a prosperous condition.

Railway and harbor facilities are slowly improving, and the completion of the first deep-water pier to accommodate two ships has relieved the port congestion at Mombasa.

SPECIAL CIRCULARS AVAILABLE

Many special circulars in mimeographed form are issued by the bureau in addition to its various regular and special publications. These circulars are distributed to those interested, including persons and firms whose names are on the Exporters' Index, and copies may be obtained from the bureau or its district offices. The 100 circulars listed below were issued by 25 different divisions during the week ended June 22.

AGRICULTURAL IMPLEMENTS DIVISION

- No. 4. Here and There in the Implement Trade of the World.
- No. E-51. Market for Internal Combustion Engines in Latvia.
- No. E-52. Market for Internal Combustion Engines in Tunis.

AUTOMOTIVE DIVISION

- No. 46. Automotive Foreign Market News Bulletin.

CHEMICAL DIVISION

- No. 64-A. World Notes on Industrial Chemicals.
- No. 64-C. World Notes on Drugs, Medicinals, and Toilet Preparations.

- No. 64-D. World Trade Notes on Paints and Naval Stores.
- No. 64-E. World Trade Notes on Fertilizers.
- No. 101. The Nitrate Situation in Italy.

COAL DIVISION

- General Survey of Conditions in the Coal Industry as of June 1, 1925.
- No. 309. Storage of Coal in Belgium and Cooperative Agencies.
- No. 345. Coal Industry of the Northeast Coast of England.
- No. 347. Decrease in Hull Coal Exports.

COMMERCIAL LAWS DIVISION

- No. 85. The Proposed Uruguayan Income Tax Law. (Continued on p. 798)

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The Department of Commerce announces the following further figures covering business movements in May:

Comparison with May, 1924.

The general increase of May business over a year ago was especially shown in the output of automobiles, the consumption of cotton, the award of building contracts, and the shipments of cement, according to additional reports to the Department of Commerce. Other increases occurred in coke production—in spite of smaller beehive output—in cotton stocks, and in production of Douglas-fir lumber and oak flooring. Newsprint production declined from May, 1924. All price indexes were higher than a year ago and foreign trade also increased except for imports of gold.

Comparison with April.

The decline in May production from April was further noted in reports showing decreases in cotton consumption, coke production, automobile output, the award of building contracts, and production of newsprint, Douglas-fir lumber, oak flooring,

and copper. Cement production and shipments increased in a seasonal movement. Foreign trade in merchandise and gold was less than in April, except for imports of gold. Wholesale prices declined from the April average, producers' prices of farm products were unchanged, while retail food prices were slightly higher than in April.

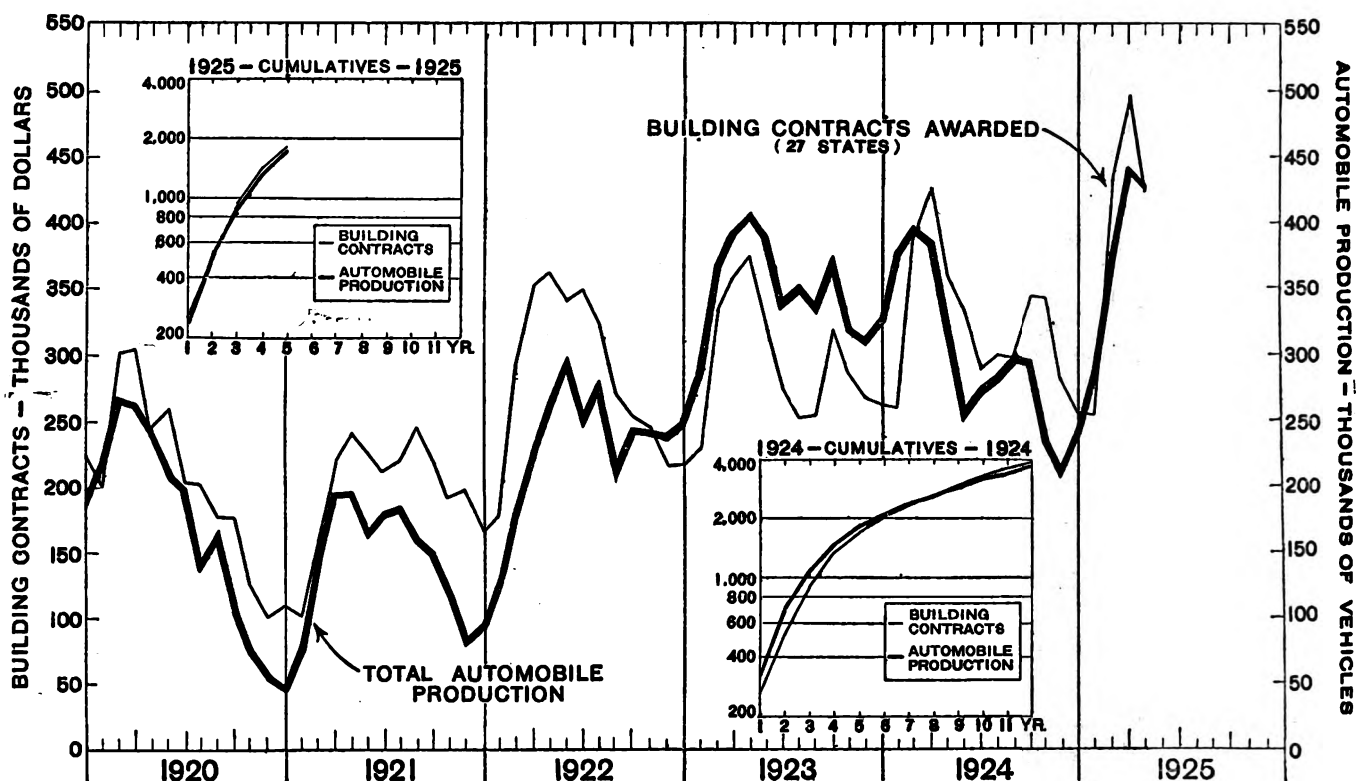

Data from Survey of Current Business.

The following table gives such data from the June issue (No. 46) of the Survey of Current Business as have been received up to June 18, 1925.

All items given in the following table correspond with similar information in the issue of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the Survey, where specific descriptions of the data and their sources are given. In addition to figures given from Government sources, there are also incorporated for completeness of service the figures from other sources generally accepted by the trades, the authority and responsibility for which are noted in the monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for \$1.50 per year.

COMPARISON OF AUTOMOBILE PRODUCTION AND NEW BUILDING CONTRACTS

SPECIAL CIRCULARS AVAILABLE

(Continued from p. 795)

ELECTRICAL DIVISION

- No. 375. Wiring Practice and Market for American Wiring Materials and Devices in Spain.

EUROPEAN DIVISION

- No. 35. Foreign Debts to Great Britain Since 1923.
No. 46. Economic and Trade Developments.

FAR EASTERN DIVISION

- No. 42. Far Eastern Trade News.

FINANCE AND INVESTMENT DIVISION

- No. 124. The Projected Czechoslovak National Bank of Issue.
No. 125. Municipal Finances of Marseille, France.

FOODSTUFFS DIVISION

- Foodstuffs 'Round the World:
Grain and Grain Products.
Foreign Notes on Meats, Fats, Oils, and Livestock.
Tropical Products.
Fresh Fruits.
Fishery News.
Canned and Dried Fruits.

HIDE AND LEATHER DIVISION

- No. 481. Classification and Prices of Raw Hides and Skins in Para, Brazil.
No. 483. Analysis of Brazilian Sole Leather.
No. 486. Method of Collecting and Marketing Hides and Skins in Para, Brazil.
No. 487. European Livestock Statistics.
No. 488. Number and Slaughter of Sheep in the Important Sheep-Raising Countries of the World.
No. 489. The Training Materials Available in Morocco.
No. 490. Lithuanian Livestock Statistics.

INDUSTRIAL MACHINERY DIVISION

- No. 513. 1924 Machinery Exports.
No. 540. List of German Manufacturers of Cans.
No. 548. French Foreign Trade in Pumping Machinery.
No. 549. Opportunity for the Sale of Saw Mill Equipment in British Columbia.
No. 550. Opportunity for the Sale of Cotton Textile Machinery and Equipment.
No. 552. Three Swedish Companies Consolidated to Market Refrigeration Invention.
No. 553. The Dutch Market for Woodworking Machinery.

IRON AND STEEL DIVISION

- No. H-12. Foreign Hardware Bulletin.
No. 368. "Krupp Reorganization."
No. 369. British Indian Import Statistics for January, 1925.
No. 371. British Steel Statistics for March, 1925.
Exports of Wood Screws from the United States—first four months of 1925.

LATIN-AMERICAN DIVISION

- No. 57. "Latin America at a Glance."

LUMBER DIVISION

- White Cedars and Southern Red Cedar.
No. 468. Lumber Press releases, two weeks ending May 23, 1925.
No. 486. Japanese Interest in Forest of Sakhalin and Siberia.
No. 491. Principal Exports of Lumber from Sweden, 1924.

MINERALS DIVISION

- No. 42. Foreign Trade Notes.
No. 207. March Exports of Crude from Maracaibo.
No. 208. World Gasoline Prices.
No. 210. Curacao Petroleum Industry in first quarter of 1925.
No. 211. Unpublished Statistics of Greek Petroleum Imports in February, 1925.
No. 212. Lydenburg Platinum District.
No. 213. Australian Imports of Petroleum Products.
No. 214. Imports of Petroleum Products into Chosen (Korea).

PAPER DIVISION

- No. 41. "Side Runs" of the Paper Trade.
No. 79. Market in Tampico for Printing Machinery and Accessories, and Printing Inks.
No. 80. Conditions in the German Paper and Allied Industries.
No. 81. Market for Printing Machinery and Accessories in Guadalajara.
No. 82. Market for Printing Machinery and Accessories in Nicaragua.
No. 83. Foreign Paper Trade of the United States during 1924.

SHOE AND LEATHER DIVISION

- No. 493. United States Exports of Leather Belting Manufactures Increase in Volume.
No. 494. Increase in the United States Footwear Export Trade.
No. 495. United States Imports of Leather Footwear.
No. 496. April Conditions in the German Shoe Industry.
No. 497. 1925 Imports of Leather Gloves Increase in Volume.
No. 498. April Shipments of Leather Footwear to Noncontiguous Territories.
No. 499. The Offenback Fancy Leather Goods Industry.
No. 500. Chilean Shoes Offer Keen Competition in Peruvian Shoe Trade.
No. 501. Depression in British Leather Glove Industry.
No. 502. Increase in the Production of Boots and Shoes (Other than Rubber) in the United States.
No. 503. Increase in United Kingdom's Leather Boot and Shoe Export Trade.
No. 504. Canadian Imports of Leather Footwear.

RUBBER DIVISION

- No. 913. Tire Exporters' Weekly News Letter.
No. 915. New Retail Tire Prices in Japan.
No. 916. Export Trade Notes on Rubberized Clothing.
No. 917. Austrian Exports of Rubber Footwear.
No. 918. Austrian Exports of Rubberized Piece Goods and Clothing.
No. 919. Austrian Exports of Hose and Machinery Belting.
No. 920. Austrian Exports of Tires.

SPECIALTIES DIVISION

- No. 130. Possible Market for American Fountain Pens.

STATISTICAL DIVISION

- Statement No. 61. Month of May, 1925.

STATISTICAL RESEARCH DIVISION

- Foreign Exchange Rates, 1924-25.

(Continued on p. 800)

FOREIGN TRADE OPPORTUNITIES

Reserved information may be obtained from the Bureau and its district and cooperative offices by duly registered firms and individuals upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.
